Mr. Jay's chapter, on "The Peace Negotiations of 1782-1783," continues the narrative from where Mr. Lowell leaves it. It must be regarded as of exceptional interest and importance, even in view of the fact that Mr. Jay has so recently traversed substantially the same ground in his address before the New York Historical Society in 1883, and his paper before the American Historical Association at Boston, in 1887. The reason for this is of course to be found in the gradual bringing to light of the materials necessary to a proper understanding of the period referred to. Four sources of information in particular, as elsewhere pointed out by Mr. Jay, are now within reach of the historical student. Of these, two are in print, Fitzmaurice's 'Life of Shelburne,' and the Circourt documents. The other two are the newly acquired Franklin papers at Washington, and the Stevens Collection of papers from the London and Paris archives, which have as yet but partially been placed before the public in print. Mr. Jay's chapter is an exhaustive marshalling of the occurrences lying between the dates of February 22, 1782, and September 3, 1783. Bearing in mind the part played in these transactions by his distinguished grandfather, the reader must admit that Mr. Jay has been singularly successful in avoiding the point of view of the advocate. The result of a reëxamination of the subject in the light of the new evidence is, however, to place in much higher estimation the services of the John Jay of 1782. The most strenuous aim of the present chapter is apparently to establish a necessary connection between the Vaughan mission to Shelburne in September, 1782, and the action almost immediately taken by the Shelburne Administration. Could this connection be established (and it must be said that the evidence is forcibly presented), the result is necessarily to connect with Jay's name the almost decisive act of the series of negotiations. This country was, however, fortunate in all three of its representatives in France, and to no one of them was the credit wholly due of making an honorable peace possible. "Had the affair been managed by men of ordinary ability" [only] says Mr. John Fiske, "the greatest results of the Revolutionary war would probably have been lost; the new republic would have been cooped up between the Atlantic and the Alleghanies; our westward expansion would have been impossible without further warfare; and the formation of our Federal union would doubtless have been effectively hindered or prevented."

It is interesting to compare with these great services of Jay, in which a successful issue crowned the negotiations, those later efforts of his, in 1794, which were quite as conspicuous for their failure to secure ratification. Jay's treaty with England, the story of which falls within the period of Mr. Angell's chapter, is examined by him at some length. His position, briefly stated, is that, while much of the criticism of the treaty was well founded, the "justification of the treaty is found in the fact that it saved the States from a war with Great Britain, for which they were entirely unprepared, and gave them years of peace, which in their weakness they so much needed. Looking back from our present point of view, we must admit that the completion of the negotiation was wise and fortunate." Mr. Angell's chapter, the scope of which is "The Diplomacy of the United States," from 1789 to 1850, nowhere involves the reëxamination of the subject in the light of new evidence to the degree which is true of the earlier chapters. Much of the ground, indeed, is already familiar, in the pages of Lyman, Trescot, Wharton, and others. Nevertheless, one of the desiderata in American political literature is a diplomatic history of the country in connected form from the beginning.

The consideration of the diplomatic bearings of the War of 1812 and other wars must be sought for in Mr. Angell's chapter on the diplomacy, rather than in Prof. Soley's on "The Wars of the United States," since the latter deals strictly, and very properly, with an exposition of these wars from the point of view of military engineering and strategy. Here, as in the case of Gen. Cullom's chapter in the previous volume, the advantage of having a technical subject treated by a technical authority is decidedly manifest. Other portions of the volume, which have a more or less close relation with the diplomatic aspect of the history, include not merely Mr. Winsor's "editorial notes" at the end of Mr. Jay's chapter on "The Fisheries," "Maps," etc., and Dr. Ellis's (appended to the same chapter) on "The Loyalists and their Fortunes," but also the very valuable "appendix" (of 36 pages of fine print), on the "Territorial Acquisitions and Divisions." In this skilful treatment of the "political geography" of the period, the editor has had the very serviceable coöperation of Dr. Edward Channing. The text is elucidated, not only with facsimiles of contemporary maps, but also with sketch-maps—like that at page 530—which are extraordinarily effective in representing the situation graphically to the eye. Considerable space is, of course, devoted to the successive changes of boundary within the limits of what was at first known as the Territory Northwest of the River Ohio. In this connection, reference might properly have been made to Mr. R. G. Thwaites's recent paper on "The Boundaries of Wisconsin" (in volume xi of the 'Collections' of the State Historical Society of Wisconsin), in which, by a series of eleven sketch-maps, he traces the successive changes from 1784 to 1848.

There is a question which has been widely canvassed—at times within the pages of this journal—namely, whether the Louisiana purchase extended beyond the Rocky Mountains. It is here very justly characterized as a "dispute without much ground on the affirmative side"; references being given, however, to the arguments in favor of the two views respectively. A similarly critical treatment is given to the conflicting claims as to the drafting of the Ordinance of 1787. There is still another question of boundaries, treated not in this appendix, but in one of Mr. Winsor's "editorial notes," to which a curious interest attaches. This is the northeastern boundary question, which formed the subject of successive negotiations with Great Britain, but was finally settled by the Webster-Ashburton treaty of 1842. It was during the consideration of this treaty by the Senate that something like a panic was created by an innocent little "red-line map" which Mr. Sparks had found in the French archives the year before. The construction then placed upon it is seen to be an amusing one, in view of the subsequent discovery of other maps with the "red line," one of which, that of Palairet, Mr. Winsor here reproduces. This very interesting episode in diplomatic history Mr. Winsor has treated more in detail in a communication to the Massachusetts Historical Society in 1887.

If unusual prominence appears to be given in this volume to the diplomatic and external phase of the country's development, and less to the political and internal, this is perhaps due to the fact that the latter is the more patent and familiar aspect of the two, rather than to any lack of skill in the treatment of the political history. Prof. Johnston's chapter on "The History of Political Parties" very well covers the ground, while Mr. Winsor's bibliographical appendix to it, of more than sixty pages, is of extraordinary value for reference. Among the other extended bibliographical notes in this volume may be mentioned one on "The Portraits of Franklin," and a much longer one on "The Portraits of Washington," which is almost encyclopædic in its character. Indeed, the minute acquaintance with details which underlies the editing of the work as a whole is well illustrated on page 75, where an editorial note, after citing various authorities on the military aspect of the Hessian aid to the British arms in this country, informs us also that the "Hessian fly," commonly supposed to have been brought here at that time, was not, but was "probably brought over by the German immigrants in Pennsylvania. Cf. *Science*, April 11, 1884, p. 432."

We began by stating that the present volume is an exemplification, not only of the excellences, but of the limitations of the method of historical composition for which it stands. Those limitations, indeed, are almost inseparably connected with its encyclopædic character, just touched upon, which, while very perfectly fitted to exhibit the nature and bearings of separate topics, does not lend itself with equal facility to the interpretation of certain great underlying currents of history. Such, in the period under consideration, is the course of

American history as affected by the slavery conflict. The subject of slavery has scarcely more than twenty pages assigned it in this whole volume; and yet, if the first half of the nineteenth century had any significance, it is surely this, that it witnessed the steady and unceasing growth, in the two sections, of two movements and tendencies which were not merely antagonistic, but were in their very nature irreconcilable. Nor is it less significant that the political leaders of the two sections were for the most part oblivious of this fact, and, when the jarring of factions in repeated instances seemed to threaten the existence of the Union itself, were apparently ready to believe in the sovereign efficacy of the latest "compromise." We were then, to quote from Prof. Lowell some trenchant sentences written in 1858, "very fond of this glue of compromise. Like so many quack cements, it is advertised to make the mended parts of the vessel stronger than those which have never been broken, but, like them, it will not stand hot water." With the close of the period covered by this history, the slavery question was still an unsolved problem. Another quarter of a century was to witness its violent but effectual solution.

That the 'Narrative and Critical History' does not accomplish, in instances such as we have cited, what might be desired, is no defect, considering it as an individual work. It is merely one of the inevitable limitations of this type of historical compilation—a type which has given us, in the instance under consideration, a work of monumental importance and value.

THE MYSTERY OF THE DIFFERENTIAL CALCULUS.

Elements of the Differential and Integral Calculus. By Simon Newcomb, Professor of Mathematics in the Johns Hopkins University. Henry Holt & Co. 8vo, pp. ix, 307.

To the large majority of persons of liberal education—of those who have deserved as well as received their college diplomas—the Differential and Integral Calculus is a *terra incognita.* Almost everybody of ordinary intelligence has some vague notion that geometry has to do with triangles and squares and circles and the shapes and sizes of things generally. Even "business colleges" teach enough algebra in a disguised form to enable their pupils to understand that rules which seem difficult and obscure when stated in words, become clear and practical when turned into formulæ, and they readily see (or think they see) that the same system might be extended to other things besides "principal" and "interest" and "present worth." Every graduate of a college knows that trigonometry treats of the measurement of triangles; and though many of them have never studied analytic geometry, yet they at least know that it is a method of treating geometrical questions in which algebra is extensively applied. But most undergraduates and graduates have exhausted their knowledge of the Differential and Integral Calculus when they have said that it is the name of a high branch of mathematics, that few study it, and that they believe it is "awfully hard."

This belief in the difficulty of the Calculus has become traditional. The tradition is handed down from class to class, and many things conspire to keep it alive. In the first place, many graduates who studied the Calculus while in college, and even acquired considerable facility in the use of its formulæ, yet confess that they never understood it, and regard the time spent in the study as lost. In the next place, the text-books themselves tend to foster this belief, although trying in various ways to show that it is groundless. De Morgan, in his 'Elementary Illustrations of the Differential and Integral Calculus,' says on the first page: "It is matter of common observation that any one who commences this study, even with the best elementary works, finds himself in the dark as to the real meaning of the processes which he learns until, at a certain stage of his progress, depending upon his capacity, some accidental combination of his own ideas throws light upon the subject." Mathematics is generally supposed to be *par excellence* the science of certainty. To the uninitiated it must seem very queer that success in the highest branch of that science should depend "upon some accidental combination of his own ideas" on the part of the learner, and that, too, a combination which may never occur. Mr. Todhunter, whose 'Treatise on the Differential Calculus' is, perhaps, more extensively used in England than any other text-book of the science, after remarking (p. 11) on the discouragement which the beginner often finds coming over him, and saying that "he is apt to imagine as a reason for it that he has not correctly understood the elementary principles of the subject," endeavors to encourage him with the assurance "that the difficulty of which he complains is probably owing much more to the nature of the subject than to his own want of comprehension." His advice as to the course the beginner should pursue may be summed up in the directions to leave everything to his teacher and "to labor and to wait." Professor Newcomb (p. 23) says: "In beginning the Calculus, conceptions are presented to the student which seem beyond his grasp, and methods which seem to lack rigor."

The result of all this is that the Calculus has become a sort of intellectual bugbear. The majority of undergraduates give it a wide berth. The minority who study it are made up, first, of those who suppose that it will be useful or indispensable in their future professional career as teachers, engineers, astronomers, etc.; secondly, of those whose natural gifts incline them strongly to the pursuit of every branch of mathematics; and, lastly, of those who, from a kind of intellectual pride, do not like to leave college confessing utter ignorance of any branch of learning which they were afforded the opportunity of pursuing. The number of those who study the Calculus is, however, rapidly increasing, and for their encouragement we can say that to those who persevere, the "accidental combination of ideas" almost invariably comes. When once they have got their faculties in the right train, they find themselves in possession of an instrument which seems to solve problems by a sort of magic, and to enable one to reach and handle the ultimate elements of things.

The only real difficulties of the Calculus are encountered at its very outset. As Professor Newcomb says in his preface: "The most difficult question which arises in treating the subject, is how the first principles should be presented to the mind of the beginner." Hence every new text-book that appears is at once more or less a matter of curiosity to those who have studied and are engaged in using or teaching the science. It might naturally seem impossible to convey to the general reader who has never studied the subject at all, an idea of what these difficulties are. We do not think this is so, but believe the matter can be rendered intelligible, and to a certain extent interesting, to any person of ordinary intelligence. Almost every one of adult age knows that when anything falls from a height, it goes faster and faster until it reaches the ground. There are, however, persons who are not aware of this fact. One of the fools who have sought notoriety by jumping from the Brooklyn Bridge, having heard that a body would fall sixteen feet in a second, inferred that, as the bridge is 144 feet high, it would take him nine seconds to reach the water. Of course, it took him just three seconds to accomplish the journey, and during the third second he fell eighty feet instead of sixteen. This increase in speed is, as the mathematicians say, continuous; that is, no matter how short an interval of time we take, be it but the thousandth or the millionth part of a second, the body is, in ordinary language, falling faster at the end of the interval than it was at the beginning. Although the motion of the body follows a certain mathematical law, which it is not necessary to state here, yet it is a law of continuous change. Take any two successive intervals of time, however short, and during the second interval it will fall further than it did during the first; and yet, almost everybody, educated or uneducated, has a notion that, at each particular instant, there is, in regard to the body's motion, something definite and susceptible of calculation. The morning after the feat of the bridge-jumper, the most ignorant persons might be heard saying they should like to know just how fast he was going when he struck the water. It is with such questions as this that the Calculus deals.

Again, take the case of curved lines. A curve changes its direction continuously. For no conceivable length is it anywhere straight. Its essence is to be curved. And yet, take any point in the curve, and of all the infinity of straight lines which can be drawn through the point there is one, and only one, the tangent, which will not cut the curve. Those acquainted with the elements of geometry know how to draw that line at any point in the circumference of a circle. But the Calculus takes up the problem in all its generalty, and shows how by one method that one line can be drawn through any given point of any curve which the mathematician can construct according to any fixed rule. Speaking generally, the Calculus seizes upon any given point in any thing or any process that is continually varying, fluctuating, changing, and tells us all about it at that particular instant.

So far as its methods of calculation are concerned, they are in most cases quite simple. If a problem is difficult, the difficulty generally consists in getting it into such shape that the processes of the Calculus can be applied. The real difficulty of the Calculus is to justify the methods by which it attains its results. Mr. Todhunter, in the extract we have quoted above, says the student "is apt to imagine that he has not correctly understood the elementary principles," and Professor Newcomb, that the "conceptions seem to be beyond his grasp." We do not think either of the great mathematicians has described precisely the state of the beginner's mind. What vexes and perplexes him is that he seems to himself to comprehend very clearly what he is doing, and to be doing what all his previous training had taught him he must not do. It all seems very easy, very simple, and very absurd. He is told to "take the limit" of one side of his equation by striking out a quantity because it "is approaching zero," while on the other side the same quantity must be carefully preserved because it is one of the terms of a ratio which is the very essence of the whole process. Neither does it help him much to be told that the value of a quantity presented in the form of a fraction does not de-

pend upon the size of the numerator and denominator. He knows very well that a "fraction with a million for numerator and a hundred for denominator equals ten thousand"; so also does a fraction with a hundredth for numerator and a millionth for denominator; so does a fraction with a millionth for numerator and a ten-thousand-millionth for denominator. But what is the value of a fraction with a hundredth or a thousandth or anything else for a numerator, and zero, that is nothing at all, for a denominator? What is the ratio of something to nothing? Again, when he is told that "the differential of a quantity is its infinitesimal increment—that is, its increment considered in the act of approaching zero as its limit, or of becoming smaller than any quantity we can name," how can he help asking, Whereabouts "in the act of approaching zero' am I to take it?

But suppose that, after much study of his text-book on the part of the pupil, after much pondering and puzzling, and after much disquisition and explanation on the part of his teacher, he sees, or thinks he sees, how a quantity may be something or nothing pretty much as you like, and he finds that, however queer it may all seem, he does get accurate results—not approximate and very nearly correct, but mathematically exact; he finds also that he has only just entered upon the consideration of the infinitely small. He is now called upon to "take the limit" of quantities in comparison with which the infinitesimals he tried so hard to comprehend are infinitely great. These infinitesimals of the second order are in turn succeeded by others of the third and fourth and fifth orders, until he is lost in the infinitely infinitesimal. But when he finds that he is gradually acquiring the power to answer quickly and easily questions which when first proposed seem too complicated to be answered at all; that he easily solves problems of the greatest importance in mechanics, in engineering, in astronomy; above all, when he finds that results which he had before obtained in particular cases by long and toilsome processes, he now obtains quickly by one all-embracing method, perhaps he will suspect that all this talk about the infinite is not merely a jargon of words. We advise him to turn his suspicion into a theorem, and to believe that, whether he can explain the philosophy of the thing in a manner satisfactory to himself and to others or not, he is all the while dealing with things as real and as large as the entries in the banker's ledger or the engineer's note-book.

Professor Newcomb evidently regards the difficulties that oppose themselves to a simple, direct, and easily intelligible exposition of the principles of the Calculus as insuperable. In his preface he tells us: "It is now well understood that the method of limits forms the only rigorous basis for the infinitesimal Calculus, and that infinitesimals can be used with logical rigor only when based on this method—that is, when considered as quantities approaching zero as their limit. When thus defined, no logical difficulty arises in their use; they flow naturally from the conception of limits." Nevertheless he adds: "But it is not to be expected that a beginner will fully grasp their principles until he has become familiar with the mechanical processes of differentiation and with the application of the Calculus to special problems." Accordingly, he says: "It may therefore be found best to begin with a single careful reading of this chapter [the second, in which the fundamental principles are explained], and afterwards to use it for reference as the student finds occasion to apply the principles laid down in it." At the beginning of this chapter he says: "The *method of limits* is an indirect method of arriving at the value of certain quantities which do not admit of direct determination."

There is involved in these statements, not a question of science merely, but also a question of fact. Does the method of limits, as explained in the Calculus, when presented to the beginner, seem either natural or logically rigorous? We believe, on the contrary, that a large portion, perhaps a majority even, of those who are skilled in the use of the Calculus—nay, even of those who write books about it—are conscious that there is something about it which they do not quite understand, that there is still room for explanation. Add to this that many great mathematicians hold that "the quantities approaching zero as their limit" and the "infinitely small quantities" or "infinitesimals" are but different names for the same things. Further, we believe that the quantities treated in the Calculus *do* "admit of direct determination," and that its principles may be so presented as to avoid the seeming absurdities and contradictions in which it is involved. For this, however, we must all wait.

Turning now to the consideration of Professor Newcomb's work as a text-book, designed to teach the present state of the science, we must regard it as in every way worthy of his great reputation as a mathematician. He says in his preface that it is "intended to contain about as much of the Calculus as an undergraduate student, either in arts or science, can be expected to master during his regular course." It is not a large book and is not crowded, and does not treat anything in an obscure or superficial manner. Fully equipped with what it contains, the student can attempt with confidence the perusal of the most advanced works either in English or in any foreign language with which he is acquainted. The only point in Professor Newcomb's treatment of the science in regard to the advisability of which we should be inclined to express a doubt, is the total postponement of everything concerning the Integral Calculus until he has finished the treatment of the Differential. But that is a matter which we have left ourselves no room to discuss.

RECENT LAW BOOKS.

Mr. Leonard A. Jones's 'Treatise on the Law of Liens, Common Law, Statutory, Equitable, and Maritime,' in two volumes (Boston: Houghton, Mifflin & Co.), is, if we mistake not, the first thorough and full work on this subject which has ever appeared. We have now the list of seven volumes which this learned and conscientious author has published, upon Mortgages of Real Property, Railroad Mortgages, Chattel Mortgages, Pledges, and Liens, which make a complete series on the general subject of what he calls "Property Securities." Mr. Jones has written "for the practising lawyer rather than the student," and has "sought to examine the subjects in such detail as to enable [him] to state and discuss all the difficult and doubtful questions that have arisen and been passed upon by the courts." He has dealt with all classes of liens—common law, equitable, maritime, and statutory liens—has considered them with reference to the different classes of persons who have a right to them, and has pointed out the leading statutory changes in the general doctrines of the law. His book embodies a vast amount of labor, and will be of the greatest usefulness to the profession.

Two or three points have occurred to us for criticism. In considering the old doctrine that there was no lien, at common law, where there was an agreement for a fixed price, the author has not observed what is apparently the true explanation of this, given by Professor Ames in the *Harvard Law Review*, vol. ii. p. 61, namely, that by the old law the lien was allowed to a man who had no right of action; the man who had agreed for a fixed price did have an action, while at a certain period he who had not so agreed had none. In regard to the so-called lien of the unpaid seller of goods, the author does not bring out plainly enough the anomalous state of the English law, of which Blackburn and Markby speak so strongly, and the difference between the English cases and our own. In § 802 he might well condemn some remarks which he quotes, and which gain undue value from his leaving them uncondemned; and, finally, his exposition of the doctrine of stoppage in transitu seems often to favor a common error that this right exists only where the seller had a lien. It is apparent, *e. g.*, in § 862, that the author recognizes that a seller who never had a lien may yet acquire one by stopping the goods in transitu; but his language in other places, like that of the courts, is unguarded upon this point. Notwithstanding these small deductions, this treatise appears to be one of the best of our practical hand-books of law, an honest and excellent piece of work.

Mr. F. J. Stimson's first supplement to his 'American Statute Law' (Boston: Chas. C. Soule) draws attention again to that very important book in which the provisions of the constitutional and statute law of the whole country are summarized. The supplement brings the work down to January 1, 1888. The ingenuity and pains which the author has shown in condensing and arranging his work, in providing full tables and indexes, and in compressing the results of two years of legislation into one hundred octavo pages, are worthy of great praise. The student of comparative legislation, as well as the practising lawyer, will find these labors of Mr. Stimson of great help to him. In the last two years, as we are told by the author, the principal changes have been in legislation "relating to marriage, divorce, aliens, married women's property and other rights, and mechanics' liens. In marriage and divorce the tendency has been conservative, . . . but in the other three subjects it has been notably radical, many Western States, in particular, having enacted alien laws entirely prohibiting the ownership by aliens of real estate." It seems odd to speak of this return to the old doctrine about aliens as "radical" legislation. Thirty or forty years ago this doctrine would have been conservatism.

Mr. Samuel Merrill's 'Newspaper Libel; A Handbook for the Press' (Boston: Ticknor & Co.) is not precisely a law book—its title shows that; but it is a sort of a law book. The author is described on the title-page as being "of the Boston *Daily Globe*, a Member of the Bar of Massachusetts and of New York"; and in his preface, "while disclaiming any intention of writing a text-book for the use of the bar," and remarking that he is no longer an active member of it, he yet intimates that he is discharging the debt which every lawyer owes to his profession. The legal part of the book appears to be done carefully and well; it is well written, and its full statements of many cases of newspaper libel, as illustrating the leading legal doctrines of the subject, make it a useful and very readable volume for all who publish what they or others write.

Dr. Bourinot's 'Manual of the Constitutional History of Canada from the Earliest Period to

the Year 1888' (Montreal: Dawson Brothers, 1888) is, in a large measure, a revised republication of certain chapters of the author's large book on 'Parliamentary Practice and Procedure in Canada.' The writer is clerk of the House of Commons of Canada. In an appendix he presents the existing fundamental law of the Dominion, *i. e.*, "The British North America Act, 1867," with two supplementary statutes of 1871 and 1875. The body of the work contains an exposition of the details and the working of the present system, with an interesting account of what preceded it. What will prove especially instructive to readers on this side of the border is the last five chapters, containing an account of the disallowance of Provincial Acts by the Governor-General in council; of the distribution of legislative powers between the General Parliament and the local legislatures; and of the judicial decisions on questions of legislative jurisdiction, with the rules and constitutional principles embodied therein. The "Constitution" of the Dominion, like the old charters of our colonies, proceeds from a political superior on the other side of the ocean: it does not originate in the soil and spring from the people themselves who are governed by it; but, like the charters, it is a true "constitution" in our sense of the word, since it lays down a rule for the highest legislatures of the country, a law for the lawgivers, which the courts are bound to enforce. The author informs us that the present work contains in an enlarged and improved form those parts of his larger book which are required for the study of political science at the University of Toronto.

Ecclesiastical History of Newfoundland. By the Very Rev. M. F. Howley, D.D., Prefect Apostolic of St. George's, West Newfoundland. Boston: Doyle & Whittle. 1888.

BESIDES the history of the Catholic Church in Newfoundland, this book contains a considerable portion of the political history of that island, and also an account of the discovery and early history of other parts of North America. The title, therefore, scarcely indicates its scope.

The Catholic Church in Newfoundland has had to contend against two great obstacles—the long-continued opposition of the British Government, and poverty. At the beginning of the last century, priests were forbidden to enter the island, though some did so in spite of the law. And considerably more than a century later, Catholics still labored under vexatious restrictions: they were not allowed to perform their own burial rites, and they had to pay fees to the Episcopal Church, which did them no service in return for their money. All the time, too, the great majority of Newfoundlanders, Catholic as well as Protestant, were poor, as, indeed, they are still. They depend on the fisheries for a livelihood, and cling to the rocky coast, leaving a good country all undeveloped behind them. Their poverty has been perpetuated and intensified by the pernicious supplying or credit system on which the fisheries are conducted—a system which makes a few "fish lords," and burdens and demoralizes the many. As the fisherman is charged at very high rates for his supplies, and credited with only the cash price for his fish, the system looks a good deal like those "private affairs" of ours at present attracting so much public attention. But our "private affairs" some of us know how to deal with, while the Newfoundland affair puzzles everybody who considers it. Some look for a change through confederation with Canada, but, even in advocating confederation, the argument of despair is largely used. Thus an editor in St. Johns once said that what Pipes roared down the chimney to Hatchway might be appropriately said to Newfoundland: "Turn out and be spliced, or lie still and be damned!" However, notwithstanding the poverty of her own adherents, and the long-continued opposition of Government, the Catholic Church prospered, and, after the grant of a local legislature, was able for a while to control it, and to keep great influence in politics always.

Many have been moved to tell the whole story to the world—the book before us is the fifth history of Newfoundland; and yet the story is not an easy one to tell truthfully, the political line of division having been for many years almost coincident with that of religion and race. Now, our author's predecessors were all Protestants. To be sure, no one of them could be called a bigot; and if we admit that they had prejudices, it is only because we believe that all men, including (Archbishop Whately to the contrary notwithstanding) even members of Parliament, are more or less prejudiced. But our author, being a Catholic, has, of course, read the works of his predecessors with "watchful jealousy." The Protestant reader is pleased to see that he makes few specific charges against them, and yet amused to note the generally mistrustful way in which he alludes to them. Moreover, he makes it plain that towards the writings of Washington Irving or Dean Stanley his mental attitude would be the same. The idea that all Protestant authors should be read with caution may be in part an inference from the consciousness of his own bias. At all events, whether conscious of it or not, biased he is. He lashes the British Government for its treatment of Catholics, but Catholic wrongdoing is either passed over in silence, or not adequately stated. He is very wroth with Sir Humphrey Gilbert for threatening to cut off people's ears if they should speak disrespectfully of Queen Elizabeth, but makes no mention of the actual cutting off of the ears of an editor of St. John's (and that, too, in the middle of the nineteenth century) for his criticisms of Catholic politics. He speaks contemptuously of the smallness of the pension allowed by the British Government to the first Catholic Bishop of Newfoundland—O'Donel—for "important services"; but he understates the nature of those services as the disclosure of a threatened "mutiny." What Bishop O'Donel did was to disclose a formidable plot, entered into by soldiers and civilians, to massacre many of the Protestants of St. John's and some of the "outports," while at church one Sunday. Indeed, our author seems to imply that it is really difficult for Catholics to perpetrate wickedness, which comes easy enough to Protestants. He quotes the fifth Bishop (Mullock) to the effect that he was unable to find evidence that any Catholics were implicated in the extermination of the Beothick Indians—both clergymen apparently forgetting that one is very likely not to find what he earnestly hopes he may miss. A man like the Mr. Murphy whom Matthew Arnold has told us about—that champion of "the Protestantism of the Protestant religion" who was afraid that the Catholic clergy had designs on Mrs. Murphy—would probably have been more successful.

Notwithstanding his strong bias, however, our author, we hasten to remark, is not disposed to be censorious towards Protestants, so long as they are not Papist-baiters. It evidently gives him pleasure to be able to state that, in the bad old times of persecution, Protestants were often the first to give priests warning of their danger if an English cruiser were seen near the coast; and he fairly exults over the circumstance that the fourth Bishop (Fleming) was the formidable and successful champion of religious liberty in behalf of the Methodists of Newfoundland. With due allowance for the fact that it was against the pretensions of the Church of England that Bishop Fleming made war on behalf of the Methodists—it being obviously one thing to believe that "Church, as they call it," should be tolerant, and quite another thing to believe that "*the* Church" should be so—we gladly admit that he was as liberal-minded as a "consistent" Catholic can well be.

The same may be said for our author, who is a modest man, as well as a comparatively liberal one. If he does not think that any of his predecessors has made a book which comes up to his standard of what a history should be, neither does he think that he has done so himself. He is conscious of a certain lack of unity in his book, due to his treatment of the early history of Newfoundland in connection with that of other parts of North America, and his confining himself to the affairs of Newfoundland in his treatment of her later history. The idea occurred to him that it might have been better to make two books out of his material than one; and we are ourselves of opinion that, from a literary point of view, it would have been better. He speaks, again, of "compiling" a history of the 'Life and Times of Bishop Mullock,' the present work ending with the death of Bishop Fleming. If he does write such a book, it will, in all probability, be no more a mere compilation than the one before us, which is not made out of other books, but is the result of many years' study and research among original sources of information. That portion which treats in detail of the history of Catholicism in Newfoundland, our author thinks will prove interesting only to Catholic Newfoundlanders. We are of opinion that he here underestimates his own powers of selection and narration. Many of those details have a human interest, and not merely an ecclesiastical or local one. No one could read unmoved the story of the building of the cathedral in St. Johns—one of the most imposing church edifices on this side of the Atlantic. The larger part of the work was actually done gratuitously by the poor. Even the women lent a helping hand, in a very different fashion from that familiar to us at fairs and chicken-suppers: they carried away in their aprons the gravel and clay which had to be removed before laying the foundations. So, too, the narrative of the pastoral visitations of Bishop Fleming makes a pleasing picture. The Bishop went from one settlement to another in a fishing-boat. His fare was fisherman's fare. He ate "fish and vang" (codfish and salt pork boiled together), and drank, presumably, "fisherman's tea" (strong tea liberally sweetened with molasses). At night he had to put up with such accommodations as some poor little fishing village afforded. Everywhere he met with a hearty and affectionate welcome, Protestants sometimes uniting with Catholics to do him honor, and merchants who had some bunting hoisting the Union Jack. In the more remote settlements the visit of a Bishop was a rare event indeed. In some of them they had to get along without a resident clergyman, pious women sometimes conducting simple religious services, and "hedge schoolmasters," or the like, if such learned persons were to be found, performing wedding ceremonies A story is told of one of these, whose custom it was, on such occasions, to recite all the Latin he knew, and that was the *De Profundis*.

The entire work will prove valuable to Catholics who wish to add to their knowledge of their Church, and to Newfoundlanders of all creeds who wish to add to their knowledge of their country; and the first half of it is worthy of attention from students of early North American history. General readers, especially if Protestants, will need to do some skipping; but they will find little in the book to offend, and much to interest them. Many of them, on laying it down, will regret the divisions of Christendom, however necessary they may affirm them to be. The style of the author is generally plain and direct, though there is here and there a little of the "fat of speech." Bishop Mullock is termed "colossal-minded"—an epithet which is commended to the attention of Republican politicians.

The volume is well printed, and neatly bound in green cloth; but it has no index, for which the good table of contents affords at best but a sorry substitute. A good index would at least double the value of the book to a student.

Sancta Sophia and Troitza: A Tourist's Notes on the Oriental Church. By Frederick William Holls, of the New York Bar. New York: Published by the Martin Luther Society. 1888.

The Land of the Nihilist: Russia—Its People, its Palaces, its Politics. A narrative of travel in the Czar's dominions, by William Eleroy Curtis. Belford, Clarke & Co. 1888.

The Russian Peasantry: Their Agrarian Condition, Social Life, and Religion. By Stepniak. Harper & Bros. 1888.

THE unpretending essay of Mr. Holls, read before the Martin Luther Society of New York, describes his visit to the mosque of Aya Sophia at Constantinople and the monastery of Saint Sergius at Troitza near Moscow, with those natural reflections called out by the author's religious tone of mind and the robust Protestantism of his audience. It is easy and not unpleasant reading, containing nothing new, nothing very striking, and nothing particularly objectionable.

It is with reluctance that we take up the book of Mr. Curtis, who has fairly outdone the feats of even French newspaper correspondents. With apparently an interest in his subject and a desire for information, he has succeeded in making at least one error in every important or material statement, and has given to a great number of the atrocious woodcuts with which his book is disfigured, false or misleading titles. And all this he has done, "although he had read every book he could find on the Russian Empire," in order to supply the want of a guide-book, apparently being unaware that the third revised edition of Murray was published in 1876 and can still be procured, and that a new and still better edition has just been issued, to say nothing of 'Studies in Russia,' by Augustus J. C. Hare, of the excellent guide-book by Baedeker published in 1883, and of a French guide besides.

The book of the Nihilist leader who conceals himself under the pseudonym of "Stepniak," deserves much more respect. It is in part new, in part reprinted with some changes from the *Times* and the *Fortnightly Review*. The opening of the columns of the *Times* to the arguments and statements of Nihilist writers is perhaps the greatest conquest brought about by all their bomb-throwing and explosions. It is a book, however, to be read with caution, and in a questioning spirit. Compare the interesting chapters on "Russian Religious Dissent" with the recent articles on the same subject by M. Anatole Leroy-Beaulieu in the *Revue des Deux Mondes*, which are the carefully weighed statements of an honest investigator. Although "Stepniak" is well informed and an acute observer, he is writing an argument to support a cause; and one cannot help feeling that the man who would throw the dynamite bomb of an assassin, would not stick at the lesser crime of making a false citation. Still, viewed simply as the argument of Nihilists, Radicals, Socialists (or Liberals, as they would probably prefer to be called, in order to avoid the prejudice attaching to their original designation) the book affords much food for serious thought. The author no longer endeavors to amuse the reader with the story of the "Revolution," and with the adventures and sufferings of foolish, enthusiastic, half-educated young men and women; but seriously sets himself about the task of explaining what are the problems, as he understands them, in Russian life and government which must some time be solved. Until these be fully understoood, it is too soon to talk about the remedies for evils in the Russian body politic—remedies which it will take long to apply, and which will probably in the end not be of the kind desired by "Stepniak" and his friends.

BOOKS OF THE WEEK.

TWELVE ENGLISH STATESMEN.

A series of short biographies designed to present in historical order the lives and work of those leading actors in English affairs who in their direct influence have left an abiding mark on the policy, the institutions, and the position of Great Britain among States.

In the list of subjects, the great movements of national history are made to follow one another in a connected course, and the series is intended to form a continuous narrative of English freedom, order and power.

"*Macmillan's admirable series—'Twelve English Statesmen.'*"—San Francisco Chronicle.

The Following Volumes are Ready.

WILLIAM THE CONQUEROR.

By Edward A. Freeman, M.A.

"Mr. Freeman has cleared away the tangle of prejudice and evil report that have so long attached to the Conqueror's name, and would restore to him the title of Great, which he bore in his own time. This brilliant and instructive biography ushers in the series most auspiciously."—*Boston Saturday Evening Gazette.*

"It is needless to say that the author's lucid and compact style makes the book exceedingly interesting, and that his knowledge of the subject makes it equally convincing. The series to which it belongs could not have been more happily inaugurated." — *Chicago News.*

"A little book of which the learning and solidity are beyond dispute. . . . This book has a definiteness of its own because Mr. Freeman has honestly endeavored to set William in his place as the chief among the makers of England. He has given an admirable account of William's training, William's character, and William's work—an account which could not be amended within its own limits."—*Saturday Review.*

"In a brief compass the thorough master of the period of the Norman conquest presents a perfectly trustworthy picture of that great event, and a thoroughly intelligible conception of the character of the man who was its chief actor."—*Christian Union.*

"We can advise our readers to lay hold of whatever bears on its title-page the name of Edward A. Freeman, but we can specially commend all that pertains to the earlier periods of the Anglo-Norman era."—*Churchman.*

HENRY II.

By Mrs. J. R. Green.

"A most admirable addition to this brilliant series, the complete success of which is already assured."—*Boston Post.*

"That remarkable work, 'Henry the Second,' by Mrs. J. R. Green."—*N. Y. Evening Post.*

"That the history of Henry II. is the history of our ancestors need not be argued in these columns. But it is this fact which gives to Mrs. Green's volume its title to special attention. The spirit in which the volume is written is excellent."—*Boston Beacon.*

"This excellent series cannot fail to do good service to the cause of public education, if the volumes yet to be issued shall be worthy to rank with those now published. People who have no time or opportunity for the study of English history will find in these volumes almost everything which it is at all important to know."—*Standard of the Cross.*

"The story of Henry's rule in England, of his victory over the barons, of his struggle with Thomas à Becket, and of the final ruin wrought mainly by the treachery of his sons, is told in brilliant style. No one can read it without getting a clear understanding of the time, and of the influences which Henry, despot as he was, molded in a way that brought forth good fruit of constitutional liberty more than a century later."—*San Francisco Chronicle.*

WOLSEY.

By Professor M. Creighton.

"In every way one of the most satisfactory monographs imaginable. It is clearly and elegantly written, with a complete mastery and a firm grasp of the subject, and it is especially noteworthy for the sharpness of outline with which the author draws character. The concluding chapter, which gives an estimate of Wolsey and his career, as a whole, is admirably done, and would in itself make the book worth especial notice."—*Boston Courier.*

"Dr. Creighton, like Prof. Freeman, has devoted years to the study of a period, and consequently in writing of Wolsey he draws easily from a great range of knowledge. He describes Wolsey as a man who was not understood by his contemporaries nor, in fact, for three hundred years. Yet to him was owing the station of England among the first rank of nations, and by him were laid the foundations on which the structure of the English Reformation was reared."—*New Haven Register.*

OLIVER CROMWELL.

By Frederic Harrison.

"Frederic Harrison's brilliant biography. . . . We venture to say that a reader can retain more that is vitally important from this biography than from reading any of the larger ones."—*Christian Advocate.*

"Let the reader not take this praise for momentary enthusiasm. Let him first read Frederic Harrison's present little book on Oliver Cromwell, and, ten to one, he will share the enthusiasm."—*New York Times.*

"A brilliantly written, appreciative, and thoroughly studied summary of the greatest statesman who ever ruled Great Britain."—*Independent.*

"A most powerful and stirring portrait of one of the most singular men that the English race has produced. The volume, as a whole, is one of the best which Mr. Harrison has written."—*Boston Post.*

"A brilliant bit of biography. . . . This volume by Mr. Harrison is an expression of the later and more enlightened opinion that has since gone out towards Cromwell."—*Boston Saturday Evening Gazette.*

"Henceforth any writer who seeks to overthrow Cromwell's position as one of the greatest of the world's constructive statesmen will have to begin by attempting the hard task of refuting this book, in which Mr. Harrison masses clear statements in an argument of great strength."—*Critic.*

WILLIAM III.

By H. D. Traill.

"One of the most satisfying accounts yet published of this remarkable man. . . . Mr. Traill has separated the wheat from the chaff, and has told his story in a spirit of fine independence, impartiality, and sincerity. The style is invariably strong, simple, and lucid, and the criticisms are keen throughout and just. The book is almost an education itself in the existing politics of the era with which it deals, and exceptionally interesting reading matter from beginning to end. . . . The volume is a valuable addition to the literature of biography, and is delightful and edifying reading throughout. If the other contributions to the series are as thorough and as unconventional as those which have already appeared, the set, when completed, will achieve a permanent and standard reputation."—*Boston Saturday Evening Gazette.*

"He has given in the brief space allotted him an excellent picture of the eventful career of William of Orange. It is perhaps the most impartial estimate that has ever been made of the man who has stirred such bitter controversies between rival religions and political faiths. . . . He was at times an unscrupulous politician, but he never violated the rights of the people, and it is to his great services as a constitutional sovereign that all English-speaking people owe him a debt of gratitude."—*San Francisco Chronicle.*

IN PREPARATION:

EDWARD I. By F. York Powell.
HENRY VII. By James Gairdner.
ELIZABETH. By the Dean of St. Paul's.
WALPOLE. By John Morley.
CHATHAM. By John Morley.
PITT. By John Morley.
PEEL. By J. R. Thursfield.

*** *New Lists of the Publications for the present season.*

IS IT TOO LATE FOR YOU TO GO TO SCHOOL OR TO COLLEGE?

(Are you too old, or too poor, or too busy?)

Would you like to be guided in a helpful, instructive course of reading?

The Chautauqua Literary and Scientific Circle is at present directing the reading of more than 60,000 persons. We quote a few words from these students:

"I can never tell all that the Chautauqua reading has been to me, with the cares of a large family on my mind, and almost all the work done by my own hands. With much sickness and sorrow, it has been my refuge and help, and almost my only recreation. I place the Chautauqua reading next my Bible in its influence on my life."—*Kansas.*

"I regret that I could not have had the advantage of such a course in early life; but it has brought so much comfort and happiness that I rejoice in the blessing, even though it came to me a quarter of a century late."—*Maine.*

BOOKS OF THE WEEK 343

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

When mailed in paper tubes, without creases, 50 cents per year extra.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

WILLIAM CRANSTON LAWTON

Will accept a few engagements for lectures on the Greek Drama, including such translations as have appeared in his recent Atlantic essays. Address Cambridge, Mass.

In any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes. Address Publisher of the *Nation*.

ELLIOTT'S THE UNITED STATES and the Northeastern Fisheries. The most complete and accurate history of the question. Endorsed by Messrs. Bancroft, Lowell, Lodge; Senators Hoar, Morgan, Davis, and other eminent authorities. Sent, postpaid, on receipt of 50 cents. Department of History, University of Minnesota, Minneapolis, Minn.

FOREIGN BOOKS.—*Russian, Polish,* Hungarian, Swedish, Danish, Hebrew, French, German, etc. H. ROSENTHAL & CO., 14 Cooper Union, N.Y.

SECOND-HAND

ENGLISH BOOKS.

Extensive and very interesting additions to our stock have recently arrived, including desirable editions of standard authors, beautifully illustrated works on botany, natural history, etc., and many rare and out-of-the-way books, some of them in fine bindings: comprising recent purchases abroad and from libraries. Prices moderate. Inspection invited.

THE DUTIES PROPOSED BY

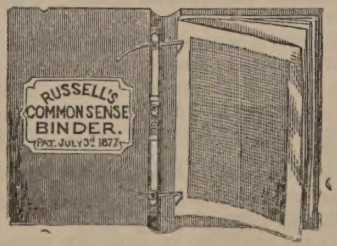
The Mills Bill,

COMPARED WITH PRESENT DUTIES.

A complete Table of Comparisons will be found in the New York WEEKLY POST of August 30. The same issue contains a reproduction in facsimile of the celebrated "Fat" circular appealing for Republican campaign funds, in which the admission is made that the manufacturers get "practically the sole benefit" of the tariff laws.

A third edition has been printed to meet the continued demand. Price 3 cents per copy, or $2.50 per hundred, postpaid. Address THE WEEKLY POST, NEW YORK.

Reading Case for the Nation,



To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of 75 cents.

WINTER RESORT.—FOR 138 YEARS Camden, South Carolina, has not had a case of yellow fever. It is 24 hours from New York, in the piney wood, sand-hill region. Mild and dry. Address THE HOBKIRK INN. Northern management. Circulars. Opens November 15. 7th season.

The Forum has taken the foremost place in public discussions because it has dealt with important subjects honestly, impartially, and at the hands of those who know something about them.—Boston Herald, Aug. 28, 1888.

THE FORUM.

CONTENTS FOR NOVEMBER.

IS THE POWER OF ENGLAND DECLINING? Prof. ARMINIUS VAMBERY of Hungary.—British supremacy in Asia in possible danger; the changed condition of the colonies; an insufficient navy and army; the importance to the world of England's continued far-reaching power.

CREATING CRIMINALS. CHARLES DUDLEY WARNER.—Our prison methods create and reproduce criminals; the remedy.

CANADA AND THE UNITED STATES. Prof. GOLDWIN SMITH.—Canadian politics; questions of race and religion; annexation to the United States; objections of politicians on both sides of the line.

THE STRUGGLE FOR SUBSISTENCE. EDWARD ATKINSON.—How the hours of labor have been lessened; in spite of which poverty has almost kept pace with progress; what is the outlook when the average earnings of the most prosperous people are only 40 cents per day *per capita?*

OUR BETTER HALVES. Prof. LESTER F. WARD.—The female the stable and the male the variable sex; the abnormal and unnatural development of men at the expense of women; the true evolutionist conclusion.

HOW THE TARIFF AFFECTS INDUSTRY. W. C. P. BRECKINRIDGE.—How American manufactures are restricted, the reward of labor lessened, and commerce hindered by our tariff; a reduction or a revolution inevitable; specific illustrations of the effect of the Mills bill.

AFTER US—WHAT? Rev. Dr. J. R. KENDRICK.—A review of the present social unrest.

ESOTERIC BROWNINGISM. ANDREW LANG.—Wherein the poetry of Browning is real; the harm done to its popularity by "wild asses," with "the brainless ingenuity of dullness," and the "abominations of desolations of pedantry."

POSSIBILITIES OF CULTURE. Principal J. DONALDSON of St. Andrew's University, Scotland.—The training of the natural appetites; a system of education to give experience rather than to teach facts.

THE LAST RESORT OF THE LANDLESS. H. J. DESMOND of Chicago.—In the land question are all the elements of an industrial revolution; what check can be placed on the action of the landless majority?

WATERWAYS TO THE PACIFIC. Commander H. C. TAYLOR, Supt. of the Nicaragua Canal Co.—The status of the Isthmian canal enterprises; how the direction of the world's commerce is likely to be changed.

THE FORUM PUBLISHING CO.,

253 FIFTH AVE., N. Y.

50 CTS. A NUMBER. $5.00 A YEAR.

JUST PUBLISHED:

UNDER FRENCH SKIES; OR, SUNNY FIELDS AND SHADY WOODS. By Mme. De Gasparin, author of 'Near and Heavenly Horizons.' 16mo, cloth, $1.25.

A collection of *historiettes*, the scene of which is laid on the French and Swiss frontiers.

"We have seldom read a professedly religious book so thoroughly free from dogmatism, so sympathetic in its tone, and so wholesome in its spirit of wide and truly Christian charity."—*Glasgow Herald.*

THE WORKING CHURCH. By Charles F. Thwing, D.D. 16mo, cloth, gilt top, 75 cents.

A careful treatise by a successful church administrator on the best methods of making the church organization an efficient instrument.

KEYSTONES OF FAITH; OR, WHAT AND WHY WE BELIEVE. By Wolcott Calkins, D.D. 16mo, cloth, gilt top, 75 cents.

This book is designed for young Christians and busy people who need a brief outline of the great doctrines of grace, in which *all evangelical denominations agree.* The two following uniform volumes consist of selected addresses delivered before the Evangelical Alliance Conference in Washington, and contained in National Perils and Opportunities.

PROBLEMS OF AMERICAN CIVILIZATION: Their Practical Solution the Pressing Christian Duty of To-day. By Presidents McCosh and Gates, Bishop Coxe, Rev. Drs. Pierson, Dorchester, McPherson, and Haygood; Hon. Seth Low, Prof. Boyesen, Col. J. L. Greene, and Rev. Samuel Lane Loomis. 16mo, paper, 30 cents; cloth, 60 cents.

CO-OPERATION IN CHRISTIAN WORK: Common Ground for United Inter-Denominational Effort. By Bishop Harris, Rev. Drs. Storrs, Gladden, Strong, Russell, Schauffler, Gordon, King, and Hatcher, President Gilman, Prof. Geo. E. Post, and others. 16mo, paper, 30 cents; cloth, 60 cents.

Sent, postpaid, on receipt of the price, by

THE BAKER & TAYLOR CO., Publishers,
740 and 742 Broadway, N. Y.

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York.

Importer of Foreign Books. Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

BABYHOOD.—*Devoted to the care of Infants.* $1.50 a year. 5 Beekman St., New York.

Scribner & Welford's

NEW BOOKS.

Lyrics from the Song-Books of the Elizabethan Age.

Edited by A. H. Bullen. New and revised edition in one volume. 16mo, gilt top, uncut edges, cloth, $1.50.

Irish Pictures.

DRAWN WITH PEN AND PENCIL.

With numerous illustrations. Imperial 8vo, cloth, $3.50.

The volume of the Pen and Pencil Series for 1888. In the engravings, which will be more numerous than in most volumes of the series, all the characteristic features of Irish architecture, art, scenery, and life will be depicted. In the letter-press special attention will be paid to the natural features, social customs, etc., exhibited in this remarkable country.

*** All previous volumes of the Pen and Pencil Series on hand.

John Standish.

OR, THE HARROWING OF LONDON. By the Rev. E. Gilliat. With numerous colored Illustrations. Crown 8vo, cloth, $2.00.

A remarkably interesting story of the time of the rebellion of Wat Tyler, reproducing, accurately and vividly, the manners and life of the English people of that day. The heroine of the story is Calote, the daughter of the poet Langland, and among the other characters are Chaucer, Gower, Langland, King Richard II., and the Fair Maid of Kent.

Mark Rutherford.

THE AUTOBIOGRAPHY OF MARK RUTHERFORD; and Mark Rutherford's Deliverance. With a New Preface, and the Addition of another paper. Second and Cheaper Edition, in One Volume. Crown 8vo, Cloth, $2.25.

The Life and Adventures of Edmund Kean, Tragedian.

By J. Fitzgerald Molloy, author of 'Life and Adventures of Peg Woffington,' 'Court Life Below Stairs,' etc. 2 vols., crown 8vo, cloth, $5.00.

"A really good biography of the gifted actor, whose life was so full of dramatic contrasts, and c me to so sorry an ending; a full, fa'r, carefully studied record, embellished, too, with sketches of the great little man's contemporaries eminently readable and sympathetic."—*London World.*

The Life of Benvenuto Cellini.

Newly translated into English by John Addington Symonds. With portraits. Revised and cheaper edition. 2 vols., crown 8vo, handsomely bound in cloth, $3.00.

"As a piece of workmanship, Mr. Symonds's translation deserves to rank among the best translations in the English language."—*London Athenæum.*

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** *The above sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested. New catalogue of choice and rare books ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Scribner's Magazine.

A Remarkable Number for November, containing:

GEN. P. H. SHERIDAN'S ARTICLE, "FROM GRAVELOTTE TO SEDAN." This paper deals with the author's experiences in the Franco-German war. During the war he accompanied the staff of the King of Prussia (afterwards William I. of Germany) as his special guest. The pictures he gives of the struggle are as vivid as his position for observing it was unusual.

ROBERT LOUIS STEVENSON'S NEW Serial Novel, entitled "The Master of Ballantrae," begun in this issue, is the first serial story ever written by its author for an American magazine.

THE EVERYDAY LIFE OF RAILROAD MEN, by Mr. B. B. Adams, jr., will be among the most widely popular of the Railway articles, it being sixth in the series. Mr. A. B. Frost has furnished 20 drawings to accompany the paper.

"MEMORIES OF THE LAST FIFTY YEARS," by Lester Wallack, is continued by a second instalment of the veteran actor's reminiscences. In this paper he touches upon his career both in England and America. With 20 portraits.

MR. AUGUSTINE BIRRELL contributes a short paper on MATTHEW ARNOLD, one of his bright, critical articles, with a full-page portrait taken from a late photograph.

GENERAL A. W. GREELY, Chief Signal Officer, writes upon a timely topic—"Where shall we Spend our Winter?"; Mr. STEVENSON'S paper will be entitled "The Education of an Engineer"; Mr. W. C. Brownell contributes a clever paper in the series of "French Traits" on "French Manners"; there are two short stories, one "The Port of Missing Ships," by John R. Spears, and "Barum West's Extravaganza," by Arlo Bates; closing chapters of the serial "First Harvests," by F. J. Stimson; Poems, by Mrs. James T. Fields and others.

The fourth volume of SCRIBNER'S MAGAZINE *will be completed by the Christmas number, bearing date December, 1888, which will be more elaborate this year than ever.*

The publishers of SCRIBNER'S MAGAZINE aim to make it the most popular and enterprising of periodicals, while at all times preserving its high literary character. 25,000 new readers have been drawn to it during the past six months by the increased excellence of its contents (notably the Railway articles), and it closes its second year with a new impetus and an assured success. The illustrations will show some new effects, and nothing to make SCRIBNER'S MAGAZINE attractive and interesting will be neglected.

$3.00 a Year; 25 cents a Number.

The Nation.

NEW YORK, THURSDAY, OCTOBER 25, 1888.

The Week.

THE Mills bill was passed by the House on the 21st of July. The Senate Finance Committee, which, according to the boast of its members, had not waited for the House to act, but had taken up the subject almost at the beginning of the session, did not report upon it until the 4th of October. Then it brought in an entirely new measure—a measure which purported to reduce the revenue by $75,000,000 per annum. Fifteen days later, the Senate abandoned this measure for the present, by passing a resolution of adjournment. So far as it has done anything, it has gone directly counter to the instructions of the Republican party in national convention assembled. In the way of reducing the surplus, it has done nothing. On the contrary, it has refused to allow any other branch of the Government to do anything. When we look at the public necessities, and especially at the daily and pressing need of stopping the inflow of money into a Treasury already gorged with $97,000,000, we are compelled to believe that the Republican majority of the Senate could not agree among themselves on the Finance Committee's bill, and that they resolved to adjourn in order to prevent an open disagreement.

Now let us take a glance at the situation which the Senate leaves behind. The surplus at the beginning of 1887 was $55,258,701. It is now $97,934,305, and is only kept down by large disbursements for bonds bought at high premiums. If the Senate had joined the syndicate of bond speculators, it could not have played into their hands to better advantage than it has done, for it has made known to them and to everybody that the Government must continue to buy bonds at prices fixed by the holders, under stress of a financial panic caused by sweeping into the vaults of the Treasury the money needed for moving the crops and carrying on the ordinary business of the country. The Secretary of the Treasury announced the other day that he had already bought the bulk of the bonds needed for the sinking fund of the present fiscal year, and Assistant Secretary Maynard has prepared a statement showing that, as matters now stand, the accruing surplus up to June 30, 1889, will be $109,854,000 *additional* to the amount now in hand, *i. e.*, about $207,000,000 next midsummer. The Republican Senators, in their endeavors to belittle the surplus, have counted all the extravagant appropriations of the present session as disbursements of the present year, when in fact but a small part of the river and harbor, public buildings, navy, and ordnance appropriations can be expended within the year.

Gen. Joseph R. Hawley is upon the stump for the Republicans in Connecticut, denouncing the Democrats as free traders for supporting a bill which places certain articles on the free list and reduces the duties on others. The only comment which seems called for upon such speeches from such a source is the republication of the following extract from a speech delivered by Joseph R. Hawley in the United States Senate on the 22d of January, 1883 (*Congressional Record*, Forty-seventh Congress, second session, Vol. xiv., Part II., page 1429):

"I speak for a great mass of men, capitalists and laborers, who are deeply and seriously involved in these matters of legislation. I belong to a people who believe in the theory of protection; who believe in its moderate and reasonable application; who desire a reduction of the tariff on many things, and who will gladly assent to many reductions on other matters; who will be very glad to reduce the duties on their manufactured goods if you will cheapen their raw material; who are ready to add very largely to the free list, but above all who reasonably ask the Congress of the United States for some sort of action. Their purposes are not concealed; their motives are not corrupt. A reduction of the tariff has been inevitable for the last four, five, six, or seven years. The people of Connecticut desire the question to be settled."

The general worthlessness of wages statistics as raw material for voters receives a fresh illustration in Senator Cullom's speech on the tariff on the 11th inst., for we find on the same page remarkable discrepancies between two separate statements of the wages of cotton operatives in the United States, both being presented by the Senator as correct. The first is a particularized statement showing twelve different kinds of service in cotton manufacturing and the wages thereof, and three in other mechanical labor employed about the mills. This is said to be "compiled from Volume 20, United States Census." The other is from the "Sixteenth Annual Report of Labor, by Mr. Carroll D. Wright," in which Mr. Wright does not deal with the particular branches, but lumps them together under the head "Cotton Goods." The two are presented in adjoining columns, and refer to weekly wages. The average of the twelve cotton-manufacturing employments in the first table is $8.66 per week; in the second it is $6.45 per week—a difference of 40 per cent. We judge that Mr. Wright's is the more nearly correct, because we observe that in the first of the two tables apprentices are set down as getting $15.30 per week, while mule spinners get only $9.21 and dyers only $6.51. Mr. Cullom gives us also the corresponding rates of wages in English cotton factories. It is worth remark that John Bull does not give apprentices so much advantage over skilled craftsmen as we do, although he holds them in higher estimation than dyers, paying them, according to this table, $5.08, while he allows dyers only $4.96 and strippers $4.45. Mule spinners, according to this table, get in England $6.96 per week. Mr. Blaine, in his celebrated report on the cotton-goods trade of the world, said that spinners in England were getting $7.20 to $8.40, master spinners running as high as $12, and in Massachusetts $7.07 to $10.30, the English working fifty-six hours per week and the American sixty hours. Upon the whole, we think that Mr. Cullom has added as much confusion to the wages question as anybody who has tried his hand at it.

It is not an agreeable task to expose Mr. Blaine's lies in his Western campaign. Nothing but dire necessity could induce us to touch such a Falstaffian mess, which grows more monstrous every day. For example, he said a few days ago that Secretary Fairchild had deposited a million dollars in Chairman Brice's bank, and that Mr. Brice was making $50,000 per year out of the use of this money. It turned out that "Chairman Brice's bank" never had a dollar of Government deposits, although the Chase National Bank, in which he has a small interest, and whose president is a Republican, did have a deposit. Secretary Fairchild said in his speech on the 13th inst. that he never knew that Mr. Brice was a shareholder in the Chase National Bank, nor did he ever know what were the party affiliations of any bank officers or shareholders. The only rules were that no bank should have more than $1,100,000, and that all should be treated alike, provided they put up United States bonds as security. Everybody knows that this was a true statement. Mr. Blaine knows this as well as other people. Mr. Fairchild showed also that a bank having $1,000,000 of such deposits, thus secured, instead of making $50,000 per year out of the use of the money, made only $5,650, against which was to be set the risk of depreciation of the security bonds; and that the banks were now voluntarily returning the money, because it was not, on the whole, worth their while to keep it.

At Chicago Mr. Blaine poured out another volley of untruths. Among others he said:

"But on a larger scale, and as between communities rather than individuals, look at what the Secretary has done. He has placed in the State of New York, in banks of his own selection, nearly thirteen millions of dollars of Treasury funds, and in this great Western body of States, comprising Illinois, Michigan, Wisconsin, Minnesota, Iowa, Kansas, and Nebraska, with double the population of New York, and in special need of ready money at this time to move the crops forward to market, the Secretary has given little over $5,000,000; the rule of the Secretary apparently being that to a State of political importance to the Administration, $13,000,000 are given, and to seven States with double the population, that are hopelessly Republican, considerably less than half that amount. [Applause.] Such political gambling and personal sporting with funds of the common Treasury of the people of the United States has never been dreamed of before in this country."

The answer to this is plain to every man of sense. As there was no discrimination made between banks, it follows that if $13,000,000 was deposited in banks in the State of New York and only $5,000,000 in seven Western States, it was because the said seven States applied for only $5,000,000, while the

one State applied for $13,000,000. There is no mystery about this. The security required was the same in all cases. Banking capital is more abundant at the East than at the West. When Mr. Blaine made his great cackle about savings-bank deposits in Massachusetts and Great Britain, he omitted to mention that such deposits in Massachusetts were greater than in all the States west of the Alleghanies and south of the Potomac taken together, including California. The reason for this is that the Western people can generally make better use of their earnings than to put them in savings banks. In like manner, Western national banks can generally make better use of their money than to buy bonds to put up as security for Government deposits.

The Boston *Commercial Bulletin* makes the charge that the Mills bill is a sectional measure. "It removes," says the *Bulletin*, "the duty on Northern 'raw materials' and on Northern manufactured articles made from Southern 'raw materials,' but leaves the duty on Southern 'raw materials' either untouched or substantially protected." Well, we beg to inquire, is not wool a Southern raw material? According to the official returns of 1887, the sheep in the State of Texas were valued at $9,281,890, while those of Ohio, the next largest, were valued at only $8,888,430. Is not turpentine a Southern industry? Turpentine is on the free list in the Mills bill. Is not lumber a Southern product? The truth, as everybody knows, is, that the great bulk of our uncut timber is in the forests of the Southern States; and lumber is on the free list in the Mills bill. Is not jute a Southern raw material? Mr. McKinley and Judge Kelley told us so with great vehemence in the present Congress. Is not cotton-seed oil a Southern product? That also is put on the free list in the Mills bill. Is not hemp a Southern product? That also goes to the free list. The charge that the Mills bill is a sectional measure will not bear investigation.

In its agitation over the decision in the ribbon case, the *Tribune* has forgotten its cue, and directly contravenes that great foundation principle of protectionist organs and orators, that a tariff is not a tax; and that if it be a tax, it is paid, not by the consumers in this country, but by the foreigner who produces the goods imported. Says the *Tribune*:

> "It is represented that duties amounting to more than $7,000,000 will have to be refunded by the United States to importers if the decision in the ribbon case is sustained by the court of last resort. Every dollar of this $7,000,000, more or less, will go into the pockets of importers, *for the ribbons have been sold to consumers at prices based upon the duty which the law was intended to impose.* Nobody imagines that the importers, if they get the $7,000,000 out of the Government, will refund the money to the purchasers of ribbons, if indeed that were possible."

We put in italics, as in rosemary, for remembrance, the *Tribune's* incautious admission that in this single matter of ribbons the sum of $7,000,000 has been paid, not by foreigners, but by the "consumers" in the United States, through increased "prices based upon the duty which the law was intended to impose."

The *Times* publishes interviews with members of the Faculty of Cornell University, which show that the President and thirty-four of the forty-four professors will vote for Cleveland. "It is a significant sign," says one of them, "to see the majority of our earnest thinkers and students, who were with the Republican party heart and soul in all questions relating to slavery, deserting that party in a body on the question of protection." In the past it has been the boast of the Republican party that the intelligence of the country was with it. Now it sneers at educated men, while it tries to bully and bribe poor and ignorant voters into its support.

We believe it is strictly accurate to say that Mr. Henry C. Lea of Philadelphia, whose attack on the President in the *Independent* we notice elsewhere, is the only man of his kind and standing, whether Mugwump or Democrat, in the Eastern States, who has gone over to the Republican camp in the present contest, after having been driven out of it by Blaineism in 1884. Against this solitary desertion of a man of talent, cultivation, and character may be set fully a score of open adhesions to Cleveland from the Republican ranks, by authors, professors, ministers, journalists of greater or less distinction. In fact, there is nothing more remarkable in the present canvass than the rapid transfer of intelligence from the Republican to the Democratic side, and the rapid transformation of the Republicans into the party of selfishness, ignorance, and brute force, such as the Democrats were before the war. The Republicans resist the revision of the tariff, as the Democrats resisted the abolition or restriction of slavery, simply and avowedly because the few think they can make more money by keeping things as they are. They appeal to the ignorant to resist it because it will bring them into competition with foreign "pauper labor," just as the Irish used to be urged to mob the anti-slavery men in order to keep "the niggers" from coming North to take away their work. They distribute the forged extracts and quotations, just as the pro-slavery newspapers used to put ferocious lies into the mouths of anti-slavery men and women. How like the charge that "Cleveland is the English candidate" is to the old pro-slavery "corker," "Do you want your daughter to marry a nigger?"

That little value is to be attached to any of the current estimates as to how men are going to vote this year, is strikingly illustrated by the claim of the Republican managers in Indiana that "the returns show that there are 65,000 young men in Indiana who will be eligible to vote for Presidential candidates for the first time this year," and that a considerable majority of these new voters will support Harrison. The "young men who will be eligible to vote for Presidential candidates for the first time this year" are those twenty-one, twenty-two, twenty-three, and twenty-four years old, and a glance at the census of 1880 would have shown these sapient managers that the number of native white males in Indiana twenty-one, twenty-two, twenty-three, and twenty-four years old in 1880 was far more than 65,000—no less indeed than 79,214; while the increase of population during the interval would carry the number of such young men at the present time considerably above 80,000. The Republican managers are probably no nearer right in their guess that a majority of these new voters are going to support Harrison. An army twice as large as that in Indiana has attained the voting age in New York State. The census of 1880 showed 157,087 native white males in this State twenty-one, twenty-two, twenty-three, and twenty-four years old, and the increase of population since 1880 must make the number considerably larger now. Here is a body of voters considerably larger than the whole number who went to the polls four years ago in both New Hampshire and Vermont, who have no record whatever in national politics. More than three-fourths were born after the close of the war, and have no associations with the issues of the slavery period. If a majority of them vote for Cleveland, he is certain to carry New York.

A lithographed copy of a letter from one John Hess, an English dealer in shoes, to somebody in this country, saying that he (Hess) has forwarded a sample of children's shoe, which he would like to export to the United States if it can be done at the price named (twenty-seven shillings per dozen), is being circulated in the shoe factories along the Hudson River, together with the startling information that the London price per pair is only 56 cents, while it costs 65 cents to make the same article here. This difference of 9 cents, says the circular accompanying the letter, "must fall on the wage-earner." As the Mills bill does not make any change in the tariff on boots and shoes, and as we export those articles in considerable quantities to the British colonies, in competition with Mr. John Hess and others, the value of the lithograph to any intelligent mind is nil. But such things are not addressed to intelligent minds. They are raw material for the "cyclone of fear" which has not yet come. But could anything be more disastrous to the city of New York than the idea, if it could ever be put in practice, that foreign trade is an injury to the country? This is what the circulators of this lithograph mean. They know that workingmen do not understand the petty details about the cost of children's shoes, about lastings, findings, nails, thread, trimmings, boxes, etc., but they think that workingmen will be frightened by a simple letter from an English merchant, sending a sample of his goods to this country to see if there is a market for them. In other words, they think that workingmen are afraid of foreign commerce or can be made afraid of it by a

facsimile of a letter. It is well to remind the workingmen of New York that the foreign commerce which passed into and through this city in the year 1887 (imports and exports) amounted to $763,000,000, and that any political party which should succeed in driving it away, would take the bread out of the mouths of one-half of the people who now find their living here.

Mr. Theodore Roosevelt has issued an "appeal" in behalf of the Republican candidate for Mayor, in which he says that if he had himself polled the full Republican vote when he was a candidate in 1886, he would have been elected by 6,000 plurality. He begs Republicans to be loyal to Col. Erhardt for this reason. Mr. Roosevelt's view of his own candidacy appears to be somewhat different from the one which he took shortly after his defeat. It will be remembered that he went abroad almost immediately. He was met in London, on November 27, 1886, by a *World* correspondent, with whom he talked freely; and in the course of his talk, after "paying a high tribute to the honesty and ability of Mr. Hewitt," said that "he was compelled to enter the race against Mr. Hewitt because, since he was selected, it was necessary that he (Roosevelt) should make a sacrifice for the sake of maintaining the party organization." One sacrifice that he made was the swallowing of his formerly emphatically expressed conviction that partisan considerations should not be allowed to enter into municipal elections. He ran in 1886, not because he expected to be elected, but to "maintain the party organization." That is what Col. Erhardt is running for now; and Mr. Roosevelt's appeal, like his candidacy, is a sacrifice in the interest of that tremendous public necessity.

The decision of Judge Lawrence in the Tilden will case, if sustained by the Court of Appeals, will put the city of New York in possession of the best public library in the world. Of course, there are many greater and more valuable libraries than any that can now be collected by any sum of money whatsoever, but the great libraries, like the Bodleian, the British Museum, the National Library at Paris, the German university collections, and the Library of Congress are not public libraries in the technical sense; they are not libraries from which every citizen can draw books and take them home to read. Nor is the Astor Library such an institution, still less the Lenox Library. The Tilden Library, as we understand the bequest, is to be in the fullest sense a library of the people. In this respect the benefaction is unique and unparalleled. The only things approaching it are the Newberry Library at Chicago, not yet fully established, and the Boston Public Library, an old and admirably conducted institution, which might well serve as a model for the Tilden Library when the trustees find themselves free to begin their work. The Tilden bequest is not only the foundation of the greatest public library in the world thus far, but it is the greatest benefaction that the city of New York or any American city has ever received. We do not recall any bequest to a municipality which can be compared with it, unless that of the Duke of Brunswick to the city of Geneva may equal it in amount. Every citizen of the Empire State will be proud of this noble monument of a great man when the intentions of the donor shall have been realized, and every one, whether his station be high or low, will be a partaker of the blessings which he intended to distribute.

The London *Economist* has been keeping a very sharp eye on the French copper syndicate. In its issue of October 6 it shows that the statistical position is very bad for the syndicate. The supplies of copper have gained on the demand every month since November, 1887. The increase of supply over demand during the year has been 45,580 tons, and the stock on hand is now between 100,000 and 120,000 tons. The *Economist* discusses the "claim" of the syndicate that the supplies in the hands of manufacturers and all the old scrap-copper that was available have now been worked off, and hence that there will soon be a reduction of the stock on hand. This position is considered fallacious for the reason that it makes no account of the abnormal supply from the mines stimulated by the increased price, the opening of new mines, or the lessening of demand consequent upon the high price maintained by the syndicate. The higher rates for money are also mentioned as an element of cost in carrying a stock in which $35,000,000 to $40,000,000 are now locked up. In order to restrict the output of the mines by 25 per cent. the syndicate have offered to advance the price of copper to the producers sufficiently to compensate them for the reduced output. But if this could be done without still further lessening the bona-fide consumption, it would operate still further to bring new mines into the field or to put new activity into old and abandoned ones. The *Economist's* conclusion is, that "the position of the syndicate is extremely doubtful, although it is impossible to say when the inevitable collapse is likely to happen. It may occur as suddenly as the collapse in the case of tin, or it may be postponed for months. But the end is certain."

Alexandre Dumas has been writing a preface to a book by Baron de Vaux on *Le Sport*, and a very amusing and characteristic discussion it is, for the only branch of the "sport" he treats is duelling, and this he makes a peg on which to hang wonderful stories (which recall the 'Voyages en Suisse' of forty years ago) of feats of muscular strength of both his father and grandfather. His father was such a wonderful shot that the Government had to withdraw the permission given him to shoot in the forest of Compiègne, in order to prevent the total extirpation of the game. He was such an athlete that when a cabman on a rainy night refused to carry him for the legal fare, he seized him, and put him on the box by main force. When a gigantic conductor of a diligence was insolent to the passengers, he kept knocking him down until he cried for quarter. His grandfather, the General, was equally wonderful on horseback. He would ride a horse into a gymnasium, take hold of the two rings, and raise himself up, lifting the horse also between his legs. In one of his fights with the Austrians, he charged twenty men, his bridle-reins between his teeth, and a pistol in each hand. He killed two men with the pistol-shots, then threw the pistols away, and killed one man and wounded eight with his sabre. The rest naturally took to their heels. In fact, he sabred the Austrians so much that they called him "The Black Devil." On another occasion, a young man having behaved impolitely to him at the opera, he threw him out of a box into the orchestra stalls. The grandson makes some fun of the present harmless style of French duelling, and thinks it might be suppressed by enacting as follows: "Duelling is lawful, but if any duel does not result in the death of one of the two combatants, or in a wound, disabling the person receiving it for both business and pleasure during a period of one month at least, the said combatants shall be liable jointly and severally to a fine of 10,000 francs, and imprisonment for two years." But the real, sanguinary duel he believes in, because it enables men to satisfy the passion of hatred, which he says is as "much a part of the human soul as love."

Dumas's ridicule of the present style of French duelling appears to have hurt the feelings of M. Albert Wolff, the well-known Parisian journalist, and he maintains in the *Figaro* that duels are not so harmless as they seem, and that the legislation proposed by Dumas would not suppress them. He shows, in the first place, that it would be very unfair to fine or imprison duellists for not killing each other, because some of the most desperate duels end harmlessly, owing to the skill of the combatants; he cites cases in support of his thesis. Moreover, duels do end fatally with reasonable frequency. Did not Viguier kill Caze, and Dichard kill Massas, and was not Labruyère run through the body by Melville, and was not Rocques of the *Courrier Français* put to bed for one month by a sword-thrust, just when everybody supposed the combat ended? Moreover, the pistol is not so harmless either as M. Dumas would have us believe. Was not Potter put to bed for two months by a ball from Carmona, and the painter Dupuis killed outright? And does not Meyer carry a ball in his abdomen, which kept him on his back for several months, and does not Gaston Jollivet carry to this day the marks of a ball which came near killing him? And was not Wolff himself present at a duel where one of the combatants, having fired his shot, stood waiting for his adversary's ball for fully a minute, but luckily was only hit in the coat-collar? The duel, in these times, when "people have so little respect for each other," Wolff thinks the only protection for one's personal dignity, and it is as fatal and bloody as any sensible man need desire, M. Dumas to the contrary notwithstanding.

A BARREN "ARRAIGNMENT."

Mr. Henry C. Lea of Philadelphia, a faithful and devoted friend of civil-service reform, but also a faithful, devoted friend of our present tariff, has a scathing article in the last *Independent* on Mr. Cleveland's record as a civil-service reformer. He sums up his charges as follows:

"Mr. Cleveland was elected under the pledge that he would carry out the reform. In place of that he has dealt it a blow which, though not mortal, will require years of earnest effort to recover from; for the prostitution of patronage in return for Congressional and other support has taken fresh root and more sturdy life than ever. His reëlection would signify the public acquiescence in this. It would mean that the people at large care nothing for reform; that they are satisfied to have political bosses foist their henchmen into office; that patronage is still, as of old, to be wrangled for between Congressional office-brokers; that office is still to be the coin in which to pay political debts and gain the service of political *condottieri;* that the conduct of public business is a secondary consideration, and that the Civil-Service Commission may remain as a convenient toy to amuse infantile reformers."

If the question which Mr. Lea is presenting to the voters were, "Shall we reëlect Mr. Cleveland, or go without a President for a few years, until we find one whom we can trust with the distribution of the patronage?" or if the voters were a great debating club, and the question for the day was whether Cleveland had fulfilled his pledges, or whether he had reformed the civil service, or whether he was a truly good or only a moderately good man, we confess Mr. Lea's arguments, or rather his "arraignment," would make considerable impression on us.

But the business before the voters is not academical discussion. It is political action. They are not called on to decide simply whether Mr. Cleveland has been all they expected him to be, but whether he is a better man, all things considered, for the place of President of the United States than Mr. Harrison. Consequently, nobody who sets before us, as Mr. Lea does, Cleveland's shortcomings, without telling us what he expects of Harrison, can be said to have contributed anything useful to the present controversy. Not one allusion to Harrison's record as a civil-service reformer does he make. Not one particle of information does he offer the wretched Mugwumps as to what use Harrison and his followers will make of the offices in case they get into power. Mr. Lea's diatribe, in fact, reminds us of a man who, finding a friend "in a hole," should stand on the edge, minutely describing to him the hole itself and all the horrors of his situation, but should carefully refrain from telling him how to escape, or offering him any aid in doing so.

It is our painful duty—we hate to be in the attitude of setting right before the public a man whom we respect so much as we respect Mr. Lea—to supply some of that information to civil-service reformers about the choice they have to make on the 6th of November which Mr. Lea has thought fit to withhold.

This choice lies between Cleveland and Harrison. Not to elect Cleveland is to elect Harrison. To "make an example of Cleveland" is to elect Harrison. Mr. Lea's simile —"When a farmer nails a chicken-hawk to his barn-door, he not only gets rid of a plunderer, but he gives a wholesome warning to its fellows"—is not apposite, because in the present case it is proposed to give another chicken-hawk the run of the barnyard. What kind of chicken-hawk is this other? That is the question. Let us have some light on it. We must remember, in the first place, that Gen. Harrison is not a new man in public life. He has been in the Senate six years, and during that period it is a matter of notoriety that the Capitol contained no more gluttonous office-seeker. One of the Cabinet jokes during Garfield's short term was that Blaine said "Harrison had asked for thirteen more first-class missions than there were." What Harrison's views were as to the use and abuse of the civil service were indeed sufficiently set forth by him in his letter of April 3, 1883, to Mr. N. Filbeck, touching the appointment of a revenue collector in Indiana. He said, in answer to the assertion that the appointment of a certain Carter had been made to oblige a certain Pierce, "I desire to say to you, this is not true. The appointment is made by me alone upon what seems to be the weight of [Republican] influence in the district." In other words, he has been an avowed spoilsman, pure and simple. In his letter of acceptance he approves of the Civil-Service Law, which we believe Cleveland has, on the whole, faithfully executed, and makes exactly the kind of promises Cleveland made as to appointments not covered by the law, but adds significantly: "I know the practical difficulties attending the attempt to apply the spirit of the civil-service rules to all appointments and removals. It will, however, be my sincere purpose, if elected, to advance the reform." We believe he does know these practical difficulties much better than Cleveland did when he took office, for he has been one of the difficulties himself; but there is in neither his career nor his character the smallest reason for supposing that he would make half the battle against them that Cleveland has done.

Nor is there anything in the attitude of his party in this canvass to warrant the belief that he, a weaker man than Cleveland, would have even as much help in meeting these difficulties as Cleveland has had. There is not in the Republican party a single prominent politician in good standing who can be called a warm advocate of the reform. More than this, there is not among the Republican newspapers a single journal of weight or prominence whose tone towards the reform is not one of more or less veiled derision, or which ever seeks to make it a pressing or important question. The contrast between what Cleveland's experience in these particulars has been and what Harrison's would be, is, indeed, very great. In this canvass, on the Republican side civil-service reform plays no part whatever, and no reference is ever made to it except for the purpose of illustrating what is said to be Cleveland's perfidy and hypocrisy. In the report on the civil-service abuses made by Senator Hale's Committee, there is no condemnation of these abuses on behalf of the public service. They are denounced simply as evidences of the President's bad faith. In fact, one finds nowhere, in looking over the field, the trace of a belief among leading Republicans that his delinquencies would be in the least degree culpable if he had not promised to abstain from them. This position was boldly taken by leading Republican Senators, at the beginning of his term, in the debate over "the papers," and has never been receded from. Moreover, the openly manifested contempt for the reform has even been carried so far as to cover the numerous Republicans who, contrary to all precedent since Jackson's day, have remained in office under the present Administration. They are actually spoken of as black sheep for retaining their places.

For all these reasons, and a great many others which we cannot for want of space produce here, we do not hesitate to express our belief, while admitting to the fullest extent the President's shortcomings, that his defeat by Gen. Harrison would be the signal for a "clean sweep" which, for promptness, completeness, and ruthlessness, has not been equalled since the outbreak of the war; that even the "painful inch" which we have gained during the past four years would be totally lost, and that the victory would be taken as a license to put the reform of the civil service out of sight during the present generation, and as a triumph over the reformers even more than over the Democrats.

SAVING TRUTHS FOR YOUNG POLITICIANS.

Mr. Moorfield Storey of Boston has an interesting article in the *Harvard Monthly*, on politics as a career and as a duty. Mr. Storey is abundantly competent to speak to young men on this question, because he has been a faithful observer of politics and politicians, and a faithful participator in political controversies, ever since he got his first taste of politics thirty years ago as the private secretary of Charles Sumner. He is now a leading member of the Boston bar, and has, from an uncompromising Radical Republican, become, by a process now very familiar, an uncompromising Mugwump; consequently he may safely be said to speak with knowledge on the question now presenting itself to so many educated young Americans, In what manner can I best promote the purity and efficiency of the American Government?

To many young men, with a taste for politics, and with a fair facility with the tongue or pen, the answer to this will seem simple enough. Nine out of ten of them will say that if they wish to make their abilities useful to the country in legislation or administration, they must seek to get themselves elected to office; that it is only in office that a man can make himself directly felt in the work of government; and that, as office can only be obtained through party service, they must, above all things, cultivate fidelity to party. This class, however, Mr. Storey puts through a terrible sifting process, for he tells all young men

who wish to call their souls their own, and give the country honest work, that they must not think of taking an elective office if they are obliged to depend on the salary for a livelihood. The temptations to which mere love of popularity and mere love of place and power expose the politician in a country of universal suffrage, are great enough in all conscience. It is not every character which is capable of resisting them; in fact, most men in public life, in a greater or less degree, yield to them. But from the man whose bread and butter, and those of his wife and children, are dependent on his getting a renomination, and whose renomination depends on his pleasing his local managers, independence and honesty are not to be expected. The strain is too great for ordinary virtue. There is hardly anything which even good men will not, in the last resort, surrender for a support. Therefore Mr. Storey excludes from his audience all young men who go into politics for revenue only. Concerning them, as the poet says, he argues not, but makes a note of them and passes them by.

After they are gone, there remains a certain number, which of late years has been increasing, of young men of inherited private fortunes, greater or less in amount, who, finding themselves relieved from the necessity of daily toil, and having a strong taste for public life, and being animated by more or less patriotic fervor, seek in politics a field for their ability and energy. These, largely we believe under the influence of the English tradition, can rarely persuade themselves that they are really "in politics" or really exerting an influence on the Government of their country, unless they are in possession of some sort of elective office, and especially a seat in some legislative body. That they are correct in this view, all practical politicians whom they consult are sure to impress on them. They accordingly take at once, as the first step in their career, to cultivating party loyalty and rendering party service by close attention to the nominating process, beginning with the primaries and ending with the conventions, by sinking individual views and preferences, and by the elimination from their mental habits of everything which makes concession to other people hard or distasteful. After the requisite amount of such training and service, and the payment of a certain sum of money, a nomination is pretty sure to come to a well-to-do young man in either of our great parties; and if he has connected himself, as he is pretty sure to have done, with the one which is the stronger in his locality, the election follows as a matter of course. There have been several conspicuous instances among us of late years of political careers begun in this way, and of the conversion of promising political young philosophers into very unpromising political partisans, through the belief that to make a creditable political career in this country you must, no matter what your talents or acquirements may be, hold office; and that without office, no matter what your talents or acquirements may be, you can have no influence on the march of public affairs.

It is to the victims of this which we may in some cases call soul-destroying delusion, that Mr. Storey mainly addresses himself. They are lured to their moral and political ruin by inattention to the most striking and in some ways most important political phenomenon of our time, the gradual decline of legislators in real power and influence, and the gradual withdrawal from them of all discretion in dealing with legislative problems, and of all share in moulding the opinions which are finally embodied in laws. We are far from saying that an educated young man does wrong in seeking a seat in Congress or the Legislature, or may not render the State good service while there. What we say is, that an educated young man who believes he will increase the weight or influence in affairs which his talents and character give him by getting an office, and makes the smallest sacrifice of conviction or independence in order to get it and keep it, commits a great mistake. On the contrary, in order to get the office, he in nine cases out of ten sacrifices everything which prevents the office from being a very degraded form of slavery.

Only very exceptional men, even in our day, stay in office through a party nomination without being ready, whenever called on, to defend all party doctrines and party acts. The more a party nominee plumes himself on his character, his culture, or his independence, the more eager will the managers be to put him on the stump as an apologist; and the first time he opens his mouth in obedience to their demands his moral value vanishes. Not only does his peculiar influence perish in the public eye the minute he proclaims himself a partisan, but his future becomes as insecure as that of the Christian gentleman who has paid his first instalment to a blackmailer. To the plain people whom he dazzled with his "culture" he becomes simply a useful charlatan, while to the class in which he was bred, and which he has deserted, he is simply a man who has sold himself without the wretched plea of necessity. It is to the unfortunates who feel tempted to tread this path of shame and failure that Mr. Storey addresses himself. May his remarks be blest to them! They are but an expression of the great saving truth, that "A man's a man for a' that."

THE EVOLUTION OF THE WAGES ARGUMENT.

THE most amusing thing about the present campaign has been to watch the protectionists storm one another's positions. Without a leader, and marching under heterogeneous banners, hardly a battery has been planted but that it has presently been found to be sending its shells into some section of the allied forces. It has now come to be recognized that the only munition that can safely be used is the pauper-labor bomb, which serves to fill the air with dust and scare such laborers as still believe that American wages are not really earned, but are charitably increased by a slice from capital's share of the product of our industries.

Yet this wages argument, though endorsed by the united intellect of living protectionist leaders, appears almost ludicrously strange when contrasted with the utterances of the protectionist fathers. During the first fifty years of our national history such an argument was never thought of. Then it was said: "We must have protection in spite of our high wages." Only within the last generation was the claim put forth that "We must have protection because of high wages." And not until the infant-industry cry had degenerated into a senile absurdity did misrepresentation take the place of argument, and protectionists begin their present clamor, that "We have high wages because we have protection." The evolution is so remarkable that it is worth while to examine more closely the process.

Before the Declaration of Independence the chief industrial grievance of the colonists was the refusal of Great Britain to grant them free trade. Our young manufactures, except those of iron, were repressed by law in order that we might be the customers of the British factories, and our trade with other nations was hampered and forbidden in order that British merchants might retain a profitable monopoly. The colonists protested against these restrictions because they prevented them from buying goods cheap, and there were at that time no powerful interests which would applaud the absurdity that it is a blessing to have goods dear. When, therefore, independence had been won, and the demand arose for a moderate temporary protection for infant manufactures, nothing would have been more absurd than for protectionists to have claimed that past protection was the cause of the difference between American and European wages. Yet the difference then was even more marked than it is to-day. Adam Smith, the ablest English champion of the Americans in their protest against monopolistic restrictions, writing in 1773, described American wages as follows (Book I., chapter viii.):

"England is certainly in the present time a much richer country than any part of North America. The wages of labor, however, are much higher in North America than in any part of England. In the province of New York, common laborers earn three shillings and sixpence currency, equal to two shillings sterling a day. Ship carpenters ten shillings and sixpence currency, with a pint of rum worth sixpence sterling, equal in all to six shillings and sixpence sterling. . . . The price of provisions is everywhere in North America much lower than in England. . . . If the money price of labor be higher, therefore, than it is anywhere in the mother country, the real command of the necessaries and conveniences of life which it conveys to the laborers must be higher in a still greater proportion."

Those who have doubted the correctness of Adam Smith's conclusions have never doubted the correctness of his observations.

This great contrast in wages being everywhere admitted, it was naturally used by the free-traders as one of the arguments against prematurely forcing American labor into less productive channels. The protectionist reply to this received its best statement in Henry Clay's great tariff speech of 1824. Mr. Clay said (Speeches, vol. i., p. 266):

"The fundamental error of the gentleman from Virginia, and of the school to which he belongs, in deducing from our sparse population our unfitness for the introduction of the arts,

consists in their not sufficiently weighing the importance of the power of machinery.

"*In former times, when but little comparative use was made of machinery, manual labor and the price of wages were circumstances of the greatest consideration. But it is far otherwise in these latter times. Such are the improvements and the perfection of machinery that, in analyzing the compound value of many fabrics, the element of natural labor is so inconsiderable as almost to escape detection.*"

Again (p. 279):

"In considering the fitness of a nation for the establishment of manufactures, we must no longer limit our views to the state of its population and the price of wages. All circumstances must be regarded, of which that is, perhaps, *the least important*. Capital, ingenuity in the construction and adroitness in the use of machinery, and the cheapness of the raw materials are those which deserve the greatest consideration. *All these circumstances* (except that of capital, of which there is no deficiency), *exist in our country in an eminent degree, and more than counterbalance the disadvantage, if it really exists, of the lower wages of labor in Great Britain.*"

At the time Clay said this, "all these circumstances" did not exist anywhere in America to the degree which they exist even in Nebraska and Dakota to-day. The development of labor-saving machinery which the last generation has witnessed was in his day undreamed of. The dearness of capital, owing to its scarcity; the impossibility of manufacturing on a large scale, owing to the sparse population; and the ability of labor to do better by utilizing our bountiful natural resources—all placed the East of that day on a level with the extreme West of our own. But in the Eastern States to-day, when machinery has reached its marvellous development, when capital is so cheap that the State of Ohio borrows on almost precisely the same terms as the Government of Great Britain, when the cheapest transportation in the world makes manufacture on the largest scale possible, America does possess every one of Clay's more than counterbalancing advantages except cheap raw materials, and this advantage is prevented only by the useless, wasteful, and absurd taxes which the Senate bill would retain upon them. Unless Mr. Clay's followers are willing to assert that his great argument of 1824 was free-trade theorizing, they must admit that it is to-day an unanswerable argument, not only for tariff reform, but for tariff abolition.

Mr. Clay did exaggerate,—no man can avoid it who attempts to defend an absurdity; but his exaggeration in asserting that, in analyzing the value of manufactured goods the "element of natural labor is so inconsiderable as almost to escape detection," is gentle and timid compared with the representation of the Senate Committee on Finance that the greater expense of this element in America demands a tariff of 47 per cent. on the total value of factory goods. If American economic history demonstrates anything, it demonstrates that American labor, by its energy and capacity, by its "ingenuity in the construction and adroitness in the use of machinery," in spite of higher wages, can produce the cheapest farm and mine products in the world, can build the cheapest houses in the world, can furnish by far the cheapest railway service in the world, and, wherever 40 per cent. tariffs on raw material and machinery do not bar the way, can also lead the world in the production of cheap manufactures.

But if the argument that the high wages in our factories necessitate the perpetuation of an inordinate tariff be founded on misrepresentation, the other argument, that our high wages have been caused by this inordinate tariff, is based upon falsification—the falsification of the most salient fact in our economic history. The wages in American industries always and necessarily corresponded with the value of the products. The laboring class never asked for the protective tariff, and from the beginning until now their only connection with it has been that they have paid the bulk of the millions every year collected. In latter times it has indeed been urged that the money is eventually spent in the employment of labor; but just as much labor would always have been employed if the laborers had been permitted to spend it themselves.

THE TARIFF ON BOOKS.

THE Mills bill, as it was passed by the House of Representatives, exempts from duty "Bibles, books, and pamphlets *printed in other languages than English*, AND books and pamphlets, and all publications of foreign Governments, and publications of foreign societies, historical or scientific, *printed for gratuitous distribution.*" The Senate Committee on Finance, in their report (No. 2332) submitted October 4, to accompany their substitute for the Mills bill, point to this clause as illustrating one of the numerous inconsistencies which they pretend to have discovered in the latter bill, and claim that according to its provisions "Bibles and other books in foreign languages, printed for gratuitous distribution, are free; while Bibles and other books in foreign languages, if printed for sale, are dutiable at 25 per cent. ad valorem." A reference to the paragraph, as printed above, will show that no such construction of it is tenable, and that the words "printed for gratuitous distribution" do not apply to the first phrase at all, but refer only to the publications of foreign Governments and foreign societies; while the latter publications, on the other hand, are not qualified by the words "printed in other languages than English."

The liberality of the House in proposing to allow citizens of the United States to accept free of tax such publications as were supplied to them without cost by the generosity of foreigners, did not seem excessive. Indeed, to many of our citizens that seems a peculiarly oppressive tax which is levied by their own Government upon the knowledge which is gratuitously furnished to them by foreign institutions. A foreign Government or a foreign society offers the American citizen, without a penny of cost, books which may contain knowledge of the highest value to him; but his own Government refuses to deliver them to him until it has first set an imaginary price upon them for the purpose of taxing him one-quarter of that amount. This does seem a somewhat remarkable way in which to encourage the spread of knowledge among our people. But to the Senate Committee it appears reasonable enough, apparently; at least they have taken pains to strike out that portion of the paragraph in the Mills bill which attempted to abolish this state of things; and the clause has been pared down to simple permission of the free importation of "books and pamphlets printed exclusively in languages other than English." Even an untaxed Bible, when printed in English, is not endurable to the Senate Committee.

During the discussions in the Senate upon the International Copyright Bill, a Republican Senator asserted that it was the "ardent hope and expectation" of his party that the day might never come when the duties should be taken off of books. Nevertheless, we believe that the rapid approach of that day is inevitable, and that it may safely be predicted that even fifty years hence it will be a matter of astonishment and incredulity that a Senator, supposed to represent that portion of our country which boasts the greatest intellectual advancement, should have ventured to announce that the political party which claimed to embrace the best intellect of this country was possessed, in the year 1888, of an "ardent hope and expectation" that the time would never come for the abolition of a most reprehensible fraud, affecting the highest interests of the people. For what can be more blamable upon the part of a Government *with an overflowing treasury* than to check, by the interposition of a heavy tax, the influx of the means of moral and intellectual advancement? During these same discussions upon the Copyright Bill, the following dialogue took place in the Senate Chamber:

"Mr. Beck—The object of this bill, I understand, is to disseminate knowledge among men?

"Mr. Chace—Certainly, to encourage it.

"Mr. Beck—Now, why not allow our own people to obtain, in the cheapest way they can, the product of the brains of foreigners? In other words, if we are to help our own people, and at the same time allow the people of all foreign countries to have the reward of their own genius and their own talents, why not have free trade as regards books among all countries? Then our people would get the cheapest, and everybody would be protected at home and abroad, and the people would get the benefit. That would be fair all around, would it not?

"Mr. Chace—I would say to the Senator that that is a very Utopian idea. If we could get the foreign countries to do it, perhaps we might; but they do not do it, and they will not do it.

"Mr. Beck—Suppose we make the offer to them to bring their books in free for our people if they will do the same thing, and they would jump at it, I think."

Senator Beck's argument is incontrovertible, therefore his proposal is "Utopian." But the Senator from Rhode Island is mistaken in supposing that the other nations of the world are as short-sighted as the United States in this direction. Even the strongest "protective" States of Europe are too intelligent to put a tax upon the instruments by which their people are to grow in intelligence and culture; and for the few civilized countries of the world which do tax foreign books, the excuse can be made that they are struggling

with bankrupt exchequers—an excuse which the United States cannot plead. An examination of the tariff laws of the world (a few for countries of minor importance not being available), shows that the following countries charge no import duty whatever upon books of any kind: Austria-Hungary, Belgium, Denmark, France, Germany, Great Britain, Greece, Netherlands, Norway, Rumania, Turkey, Barbados, Bermuda, Ceylon, Corea, Ecuador, Hawaiian Islands, Honduras, India, Natal, Newfoundland, New South Wales, Nicaragua, Queensland, South Australia, Tasmania, Victoria, and western Australia. To this list there might justly be added some other countries; for example, Sweden, where, according to the new tariff law of July 18, going into effect on January 1, 1889, all books are admitted free of duty except Bibles and hymn-books when bound abroad. Upon the latter a charge of 13½ to 53 cents per kilo is made, according to the kind of binding. In Portugal also all books are free but such as are printed abroad in the Portuguese language (except when by Portuguese authors resident abroad), and these pay a duty of 10¾ cents per kilo. The same rule holds in Russia, all foreign books being admitted free, but unbound Russian books (when printed abroad) paying $1.50 per pood (equal to thirty-six pounds), and when bound $2.25 for the same weight. In Chili all books are freely admitted, except such as contain engravings, upon which the same charge seems to be made as would be made on the engravings, viz., 35 per cent. ad valorem. New Zealand appears to admit books without charge, except in the case of one class called "gift books," which pays 15 per cent. ad valorem. In Italy unbound foreign books are admitted free, but when bound, duty is charged at the rate of $3.86 per 100 kilos, while unbound books in the Italian language only pay the same duty as would be charged upon the paper upon which they are printed, viz., $2.90 per 100 kilos. All unbound books relating to the sciences, arts, and industries are admitted without charge into Venezuela, as well as newspapers and periodicals; but bound books are charged $6.64 and upwards for each 100 pounds weight, according to the quality of the binding.

Twenty-eight States, therefore, including most of the great nations of the world, have absolutely free trade in books, while seven others only charge duties upon exceptional kinds of books. It should be borne in mind that the great bulk of foreign books are sold to the reader unbound, and that the exportation, therefore, of bound editions would be exceptional, and they would consist of special classes of books, such as school-books or holiday volumes. This is a very fair foundation for Senator Beck's Utopian idea. It is, indeed, altogether unlikely that any single nation in the world would reject a proposition coming from the United States for reciprocal free trade in books.

Of the countries which distinctly advocate a duty on books, but two belong to Europe, namely, Spain and Switzerland. The former charges $8.10 per 100 kilos upon works printed in the Spanish language and $1.93 per 100 kilos upon books in foreign languages; while the latter country makes a uniform charge of 19.3 cents for each quintal of weight. The South American and Central American States for the most part charge duties upon books as follows: Argentine Republic, from 45 cents to $1 per kilo; Brazil, 32 to 62 cents per pound, according to binding; Mexico, 3 cents to $1.20 per kilo, depending on the material used in binding, Peru 10 per cent. ad valorem, San Salvador 5 per cent. ad valorem, United States of Colombia 20 cents per kilo, Uruguay about 65 cents per kilo. Hayti makes a specific charge of from 3 to 20 cents per volume on bound books, according to size, reducing the amounts one-half if the works are unbound. Classical books and school-books, however, are admitted free. Porto Rico charges from $5.40 to $6.90 per 100 kilos, depending upon the country from which the importation is made. In Canada the usual duty is 15 per cent. ad valorem, but upon Bibles, prayer and hymn books only 5 per cent. is charged, while the free list includes all books printed more than seven years, all publications of Governments or by scientific societies, and books prepared for the deaf and dumb and the blind. It may be remarked, concerning the various British colonies, that some twenty years ago they passed laws establishing charges upon imported foreign reprints of British copyright books, not as tariff taxes, but as a method for collecting, upon behalf of the British author, the copyright royalty. Such of these laws as had not been repealed by later copyright statutes were abrogated when Great Britain, on behalf of her colonies, joined the International Copyright Union.

THE INFLUENCE OF THE RELIGIOUS NOVEL.

THE reported exclusion from the Ipswich (Eng.) Library of 'Robert Elsmere,' on the ground of its being a "dangerous book," in the eyes of the trustees, suggests many inferences as to the mental condition of those gentlemen. Any that they might consider uncomplimentary we have no purpose to mention, being bent only, for the present, on examining the idea upon which their action must have been largely based—the idea, namely, that the novel is a highly effective instrument of religious propaganda. We can only hazard a guess at the contents of the library over which such faithful guardians are set, but there is little risk in assuming that they have admitted into it the works of Darwin, possibly some specimens of historical criticism as applied to the Biblical documents, very likely some volumes of essays on social reform and allied topics. In fact, the larger part of the raw material worked up in 'Robert Elsmere,' in kind at least, may probably be found—and very little the worse for wear, too—on the shelves of the Ipswich institution. At any rate, it is common for those who stand sentinel over the reading of the youthful mind to let a treatise pass unchallenged, though they give their sharpest *qui vive* to a novel meant to convey the same teaching.

It would be curious if this should turn out to be a survival of the time when the novel, as such, was taboo among the promoters of the cloistered virtues. Certainly it has happened in other departments of religious censorship that what was once a stroke of decapitation, aimed at a whole species, has become a dubious wielding of the shears of discrimination, clipping at one or two ill-favored varieties. However this may be, we may at once admit that there is a certain element of truth in the view that the religious novel may pierce armor from which religious argument falls away blunted. That truth is, that the novel wins a readier and wider hearing than the essay or the monograph can hope for. Many persons are attracted by anything in the shape of a story who would shrink from reading a book demanding close and consecutive thinking. This is the power of logic translated into terms of life and set aglow with passion. If it is only a question of the comparative number of readers, there is nothing to debate about. Where 'Supernatural Religion' has slain its tens, 'Robert Elsmere' will slay its thousands.

But to hear is one thing, to hearken is another. In so far as a novel preaches, it must be content to fare as preaching does. What can only confirm faith should not be expected to create it. Those who already believe the truth which the story-teller strives to set forth in her tale, believe it on other evidence—assent in sympathy; others wonder, or become angry, at any rate dissent. What the professional novel-reader thinks of the didactic twist given to the narrative upon which he has been induced to enter is fairly enough implied in cynical Labouchere's remark, to the effect that he could not see what objection the Ipswich trustees could take to 'Robert Elsmere'; he, for his part, considered it an entirely harmless book, over which he had fallen sweetly asleep more than once. In fact, the greatest direct effect which that novel could produce upon any mind not already in the same drift with it, would be, not a change of belief, but the sending to the real sources of a change of belief—in this case, the methods and results of modern science, and the historical and comparative study of religions. And one would think that the ingenuous young mind of to-day found too many finger-boards, on every road, pointing that way, to make it a matter of surprise or indignation that Mrs. Ward should have erected one more.

This idea, that religious truth dressed out in the attractions of a novel has a seductive power far beyond that of unadorned religious argument and appeal, may be tested by giving it an application the reverse of that thus far noticed. Instead of the heterodox novel laid before the orthodox reader, let it be the orthodox novel laid before the heterodox reader. It is not very probable that the novels of the late E. P. Roe had more effect upon Matthew Arnold than, say, Nelson 'On Infidelity.' One would not mail to Prof. Huxley the most powerful of Mrs. Prentiss's religious stories, and live in hope of hearing that it had turned him from the error of his ways. Or, if this be said to be quite unfair, since the question is of

influence upon immature minds, let the assault be made upon the children of men holding and teaching in their families such opinions as Arnold held and Huxley holds. It is hard to believe that the "Pansy" books would be successful religious emissaries in such a case. Free-thinking parents might shudder, we admit, at finding such works in the hands of their children, but it would be in fear of something else than religious effects.

The stalwart old theologians had an excellent show of reason for their blunt talk about "effectual calling" and "reprobation." So mysterious are those mental processes which result in changed conviction, that we cannot blame the men who took the easy leap from incomprehensibility to divine arbitrariness. So impossible is it for us to understand why the argument which bends one mind is broken on another, entirely like the first, as far as we can see—why the personality that dominates one life beats in vain against its mate—that we cannot wonder at those who said that argument is nothing and personality is nothing, and that new belief and purpose are forced on the soul by the Eternal Power. Yet we have learned something more than they knew of the subtly generative forces that lie back of the birth of mental children strangely unlike their known parentage. One thing we have learned is that insinuated truth is usually more successful in shaping conviction than arguments flung boldly from an unmasked catapult. This is of the highest importance for the novelist to remember. George Eliot wrote all her novels on that principle. Her free-thinking friends often wondered, sometimes asked her, why she did not let her genius give wings to the religious views she was known to hold. She would not do it. She based her refusal partly on the danger of frightening away her readers; but she could have feared this only because she knew that the teaching they were getting from her was destined to work mightier changes than any she could effect by bolder methods. She struck at a deeper and more vital thing than wrong conceptions of religion, namely, wrong conceptions of morality. Those who learned from her to believe in scientific morals would have already destroyed the substance of a religion based upon an unscientific morality, and the form of it would go, all in good time.

Meanwhile, the fact of such a book as 'Robert Elsmere' coming to be written at all, especially to be written by the person who did write it, is really of more weight and suggestion than anything in the novel itself. Mrs. Ward will certainly find an entry in the next edition of Galton's 'Hereditary Genius' under the Arnold family. Few will dispute that Rugby Arnold's granddaughter has drawn much from his loins. The scholarship, the moral earnestness, the philanthropic zeal, the courage—family heirlooms are they all. But the religious view? Is this atavism too? Well, we only know that the children's teeth are not set on edge unless the fathers have eaten sour grapes. Descendants do but lengthen a man's experience, and give his views a chance to mature. It is but an example of the progress from generation to generation, to be observed all about us, that the grandchild yields in showing an ancestral talent increased by the usury of time. This is the great fact, the fact of steady religious change, that makes all arguments for religious change insignificant because it is so much more forcible an argument than any of them. And the great merit of 'Robert Elsmere' is, we believe, the faithful way in which it holds up the mirror to common religious experiences of the age. If astonishingly to reveal the thoughts of many hearts is the proof of a great writing, then such is that book; but that is quite apart from the power of making proselytes, which the Ipswich trustees dreaded.

THE ART AND CRAFTS EXHIBITION.

LONDON, October 6, 1888.

IT requires the courage of enthusiasts to open an exhibition in London during the dullest of all seasons, while most of the frequenters of exhibition rooms are still lingering by the seaside or shooting in Scotland. The moment for a new venture is unpropitious in the extreme, yet there was a goodly gathering at the New Gallery on Saturday, September 30, at the private view of the Exhibition of Arts and Crafts. All who really take genuine interest in art, and who desire beauty of design and ornament in their homes, will wish all success to the Exhibition and its promoters. The aims of the Society are to bring before the public decorative work of all kinds, and to educate their taste as to design, and form and excellence of workmanship, in all the manual arts; also, to give all credit to those who execute the displayed object, and to this end the catalogue gives the name of the designer and also of the executants where any responsibility falls upon them. It seems that this new and quite unprecedented plan of cataloguing met with little encouragement from the principals of the great London firms who contributed objects. They protested against advertising their workmen, and naturally enough, for it was not in their own selfish interest to do so; but Mr. Walter Crane, the President, whose socialistic principles are well known, was imperative on this head, and has in most cases carried his point, so that honor will fall where honor is due—to the worker, and not to the capitalist who employs him. Besides thus bringing into prominence the generally ill-paid work of clever operatives, it is to be hoped that this Exhibition will lead many young enthusiasts, not gifted with any special genius for painting, and longing vainly to follow an artistic career, to turn their capacity into less ambitious channels and to seek to educate themselves for some manual art.

Our exhibitions, crowded as they are with inferior work, refuse thousands of pictures every year, and yet the number of artists and art students is ever increasing. On the other hand, among the cultivated classes there is a great desire to improve the interior of their homes by decorations of all kinds; and one can easily understand that in so dark and dismal a city as London, where the houses are for the most part so dingy and similar as to their exterior, people should seek to make pleasant homes, and love to adorn them according to their means and tastes; and here we have displayed what is needful for that purpose, from wall-papers and chintzes to exquisite tapestries from the looms of Morris & Co. at Merton Abbey, rich *gesso* work by Burne-Jones and Walter Crane, together with every kind of less ambitious and costly forms of decoration. On entering the Gallery the first object which meets the eye is a copper fountain by W. A. S. Benson. The novelty of the material for this purpose is more striking than effective. The design of the fountain is very simple: a copper basin raised on a brass stem, in the midst of which a tiny temple of brass and copper stands, with glass sides, through which one sees a ball rising to the top and tumbling again as if thrown. To watch this ball would pleasantly while away an idle hour of summer, and it is to be hoped that the directors of the New Gallery may retain it to rest the eyes of their visitors in the summer during the picture exhibition. Mr. Henry Holliday's reredos for a church in Philadelphia occupies a prominent position in this hall. It is executed entirely by himself and Mrs. Holliday in Venice and Murano smalti. The system of work is excellent, the coloring is bright and beautiful as regards the draperies, but the heads and hands are not pleasantly designed: they are not conventional and simple enough for mosaic, and not of a type suitable to the subject. When we compare this with the designs for the apse of the American Church of St. Paul's in Rome, by Burne-Jones, in the North Gallery, we become convinced of the all-importance of firm, simple lines, and of the necessity of conventional forms for this art. Notwithstanding the Byzantine character, intentionally adhered to in Burne-Jones's compositions, we find all the originality and immense power of invention of this great master of decorative design, the greatest England has ever produced; and, indeed, with the exception of Raphael, we turn in vain to the past for one who can be said to have produced so much that is lovely and excellent in design.

Two colored designs for further mosaics for the arches of the same church are particularly lovely. In the Annunciation, the scene takes place in a sandy, desert-like country. The Virgin has been seeking for water, her pitcher is beside her; her attitude at the angel's message is full of pious humility. In the Tree of Life, Adam stands on one side, with the implements of field labor; Eve on the other, a tiny baby in her arms, a tattered skin girt round her, a young child, Cain, clinging on to her scanty skirts. The Tree of Life, between the two figures, on which a pitiful Christ hangs, completes the design. But words cannot give the piety of the sentiments expressed in this composition, so simple, so conventional, and so complete. Beside these, by the same hand, are two immense cartoons for the Church of St. Philip's, Birmingham, the birthplace of the artist—the Nativity and the Crucifixion—in which these well-worn themes are treated with great originality. In the Crucifixion, the crowd beneath the cross with the dead Christ is composed of centurions, whose long lances group well with the central figure, supporting the composition so often rather bare and graceless. Near these cartoons, in the same gallery, we admire a gorgeous *cassone*, so magnificent that it would well suit the vast rooms of some Italian palace. This is also a work in *gesso* in high relief, lacquered and painted by Burne-Jones. The design of the front panel is of the Garden of the Hesperides. The tree with the golden apples is in the centre; round its trunk a blue-green, slimy dragon writhes, bending its neck towards a cup of wine which a graceful maiden on her knees is offering; on the other side of the tree, another maiden plays on an ancient instrument to soothe the monster. The tints are all put on over burnished gold, varying its hue; only the faces and hands are painted of a pale, warm, uniform

flesh tint, contrasting well with the brilliancy of the leaves, fruit, and drapery, and the flowers of the field in which the figures kneel. On the side panels verses of William Morris are engraved, explaining the subject, and the back panel is also in simple gold, with a design of deer eating the leaves of a tree branching from the centre of the panel. This is simply engraved in line in the *gesso*.

Walter Crane, whose skill in all the decorative arts is so well recognized, has many examples of *gesso* work. The most beautiful and masterly seems to be the St. George and the Dragon, a prize panel tinted in lacquer. Some of your readers may not know that *gesso* is composed of plaster of Paris, glue, and cotton wool, and that it is very durable and effective for works in relief. It becomes as hard as stone, and is particularly suitable for mantelpieces and panels and ceilings. We have also, by this artist, the six sketches in color for a painted frieze, illustrating the story of "The Skeleton in Armor" of Longfellow. These were executed on a large scale for the house of an American lady at Newport. There are also very effective wall-papers, and a portière in embossed leather, hand-painted on silver lacquer. In the gallery we see the illustrations, so well known, in every stage of color-printing, thus explaining the process they have to go through; also, examples of repoussé work.

Mr. Spencer Stanhope's hanging cupboard is one of the important and elaborate objects of the principal room. The frame is rich Florentine carving, gilt, and partly painted in blue. The central panel represents a band of youths and maidens, all clad in blue, dancing under medlar trees, in which little cupids are perching, preparing to shoot at the revellers. Beautiful glimpses of Italian landscape are to be seen between the tree stems. On either side panel the designs are of figures clad in varied colors; one to the right reminds us of the same artist's "Lethe" picture. The painting is exquisitely finished and very harmonious in color throughout; it seems to be painted in tempera.

Another very finely finished work is a grand piano in green-stained oak, with very elaborate patterns of silver lilies in *gesso* intertwined with gold roses. Round the sides are other patterns of flowers — anemones with leaves, and other more conventional running patterns. The ornamentation of this piano is the work of Miss K. Faulkner.

Mr. W. de Morgan, the potter, has a very remarkable show of tiles and lustre ware. His principal work is a gigantic chimney-piece, in which tiles with painted ships are inserted. The tiles are beautiful in themselves, but they do not seem employed to their best advantage in this mantel-piece, as the principal group is too high up to be sufficiently seen. There are entire cases of plates and bowls of bright copper lustre ware, silver lustre also, and a panel composed of tiles on which are peacocks, with their tales curled alternately towards and against each other; also, a pyramid of tiles, some of which are as bright in color and as beautiful as Persian work.

Mr. Benson has some good copper lamps, and some finger-bowls, likewise in copper, and a sideboard in light wood of simple design.

We note a case of exquisite bindings of Mr. Cobden - Sanderson — the tooling in gold on leather very highly finished, and the designs each especially adapted to the volume it clothes. For example, a small copy of "Romeo and Juliet" has a pattern of intertwined hearts on pale-blue morocco. Each volume shows how far perfection of finish can be carried in the art of bookbinding.

We now come to the exhibits of the firm of W. Morris & Co.—wall-papers, stamped velvets, chintzes, brocades, and brocatels for furniture and house decoration, in rich, flowing patterns and bright, harmonious coloring; a beautiful sideboard in mahogany, and a cabinet in inlaid Spanish mahogany; a hand-made carpet, and very lovely tapestries, which seem quite the richest form of wall decoration. In one here displayed is a St. Cecilia. The larger and more important piece represents lions, foxes, and a hare, with leafage between. In looking around at the numerous designs for wall-papers and textile fabrics by other firms and by artists not yet known to fame, we cannot help noting how they all seem to have followed in the path opened to them by the example of Morris and the artists who, together with him, formed the company that did so much to sweep away the monstrosities of furnishing of the earlier Victorian epoch. These artists were Ford Madox Brown, D. G. Rossetti, and E. Burne-Jones. The last-named alone still furnishes designs for the firm; for beside the tapestries there is a water-color drawing of the Adoration of the Magi, to be executed in the looms of Merton Abbey for Exeter College, Oxford.

A glass case, containing illuminated MSS. from Mr. Morris's own hand, has attracted the greatest attention. The 'Rubáiyát' of Omar Khayyám is especially rich in designs which cover the page, underlying the writing. The patterns are in gold, sometimes with touches of color; the capital letters are marvels of invention. In 'A Book of Songs' the little miniature pictures are very beautifully designed and painted. Some pages also of the Odes of Horace make one wish one could hold in one's hand and turn over the leaves of these splendid manuscripts, which have never been shown before to the public.

The art of needlework is very well represented in all its wide range of capabilities. Some full-length figures by Miss Burden show great skill, but, to our mind, are less adapted to needlework than less ambitious designs. There is a magnificent portière worked in colored silks on white linen by Mrs. and Miss Morris, the pattern of fritillaries, crown imperials, and large roses. A book-cover, which is to be used for binding 'Love is Enough,' designed and worked by Miss May Morris, will no doubt revive the old embroidered book-bindings; for to what better use could one put really delicate work than this? Some very original cabinet panels by Mrs. Walter Crane are remarkable; also a mantel valance worked in colored thread on black merino, the designs being by Walter Crane. Other important panels and screens in floss silk are displayed by Mrs. Holliday, Mrs. Coronio, Miss Una Taylor, and Miss May Morris. Excellent samples of work on linen of the very best kind, and some facsimiles of old Greek lace, are sent by Miss M. A. Smith. The Chiswick Press sends a case of books printed between the years 1831 and 1888.

We must not fail to mention two cartoons for stained glass by Ford Madox Brown, whose work is so rarely to be seen, as for many years he refrains from exhibiting. These drawings are very individual and full of character. There is also a crucifix in tinted sculpture, of very remarkable workmanship and design, by Christopher Whall, an artist as yet not much known. The four ends of the cross contain compositions of children in adoration and sorrow, all treated with the tender feeling Donatello infused into his children, and yet the work bears a distinct English character. We have no space to describe more, although there is much to interest and instruct us. The catalogue contains short essays on each art by the leading men on the Committee for Arts and Crafts, who will later give lectures, each on his own subject, at the New Gallery during this Exhibition.

THE THIRD GERMAN MODERN-LANGUAGE CONVENTION.

DRESDEN, October 3, 1888.

THE success of the Modern-Language Association of America, organized in 1883 through the efforts of Prof. Elliott of the Johns Hopkins University, encouraged certain members of local modern-language associations in Germany to organize there a general association. The first meeting was held in the city of Hanover, the second at Frankfort-on-the-Main, and the third the past few days here in Dresden. The fourth session will be held at Stuttgart, and, instead of in the fall of '89, in the spring of '90.

The meeting at Dresden has been interesting in itself as well as compared with our association at home. Of course, in a city with so many attractions as the Saxon capital, the members could not be held to attendance on many long sessions, and the management wisely took it upon themselves to arrange even the diversions in such a manner that they could, as much as possible, be participated in in common, and thus more cheaply. In this way a *Festkarte*, costing 10 marks, or $2.50, entitled one to take part in the dinner on the Belvedere on Saturday and the banquet and ball in Meissen on Sunday, to view the royal collections and the exhibition prepared by certain members of the Association, and also to one of the best seats in the theatre in Old or New Town ("The Magic Flute" and "King Lear"), a ticket to one of the panoramas in the city, and a guide-book of Dresden. Friday evening there was a social reception at the hotel at the sign of the Three Ravens, Saturday night at the close of the theatre a *Festkommers* in the Kaiserhof, and Monday afternoon an *Abschiedstrunk* at the Bismarck Restaurant. Saturday morning the Association was received in the beautiful Hall of the Polytechnikum with words of greeting from the Saxon Minister of Education and a member of the Common Council of Dresden. When the gentlemen retired from the hall, the members rose to their feet—a ceremony which they were also requested to go through after the reading of the names of members who had died during the year. Saturday morning and afternoon and Monday morning were held the three sessions of the Association; and of the seven papers announced five were read and in part discussed. The fewness of the subjects presented was one of the excellent features of this meeting. There was no sense of a need of hurrying or of cutting short interesting discussions, and the members were able to give each paper due attention and develop a real interest in the subject presented. The discussion became at times animated, especially with reference to methods. There were not wanting, any more than with us, those who take part in debate because they love to hear themselves talk; still, I could not but admire the promptness with which the chief bores of this class were silenced.

The first paper was read by Baron von Locella, an Italian resident in Dresden, on the study of Dante in Germany. It seems that no other foreign poet has been translated and edited in Germany to such an extent as Dante. Prof. Körting of Münster spoke on the aims and tasks of the Romance philology of to-day. He complained that in the study of Romance philology and literature French enjoyed more

than its due share, urged that more attention be given the other Romance languages, and recommended the preparation of a volume of selections from the less familiar of these idioms. Dialect study proper he would, however, leave to natives, because of the great advantage they possess. He referred to the want of grammars at all up to the standard of the philology of to-day, and suggested the desirability of an investigation that would show what classes of Latin words passed into the various Romance languages, and thus throw light upon the history of civilization. Dr. Mahrenholtz of Dresden read an essay on Friedrich Melchior Grimm and the part he played in making the Frenchmen of his day acquainted with German literature and ideas. Prof. Stengel of Marburg presented briefly a plan to gather material for the preparation of a history of French grammar in Germany, and appealed to the members of the Association to help him by collecting the titles, etc., of such grammars as might be in their local libraries.

The only pedagogical paper was presented by Principal Dörr of Solingen; it was on "Reform in Modern Language Instruction," and called forth much earnest discussion. The subject of a reform in the method of teaching modern languages had been brought up at the previous meetings of the Association, and resolutions passed to the effect that the Association was in favor of a change in the method of instruction, subordinating grammar and translation into the foreign language, making reading the basis of instruction, and emphasizing oral reproduction. A number of instructors have undertaken to teach on this plan, but Dörr had begun a similar method several years ago, and the object of his paper was to describe his mode of instruction and state his experiences. Neglecting theoretic phonology, he begins by teaching orally the numerals and the few verbal forms and conjunctions required in the formulas of addition, multiplication, and the like. Then come counting-out rhymes, little poems, short stories, etc. With the second year the first book is employed, and that a reader. Here attention is paid, not only to pronunciation and such difficulties as the language presents, but also to the text itself, which must lie within the intellectual sphere of the pupil and (if possible) have connection with his other studies. Grammar is taught very slowly, one subject only being considered at a time, and that for several consecutive lessons. The use of the foreign language, even in the grammatical explanations, is insisted upon when possible; a translation into the mother tongue is at first required, but later a free reproduction in the foreign language preferred. The pupil's attention is early drawn to the fact that the foreign word does not always correspond to any one word in the mother tongue; later he is taught to distinguish classes of words, and to perceive the force of prefixes and suffixes; still later his attention is directed to figurative and idiomatic expressions, and to the conception underlying them. Translation into the foreign language is entirely discarded. This is, in brief, Dörr's method as he has worked it out in the past nine years, and with the success of which he is well satisfied. As sufficient evidence of its superiority to the usual method, he regards the greater spirit and pleasure with which he, as well as the pupils, come to the recitation and take part in the exercise, as compared with that in classes he conducted at the same time according to the old method. He seems to forget that this very enthusiasm with which he teaches his new method is largely the cause of that of his pupils, and a chief source of his success. He himself does not deny that the method has its less sunny sides, and finds that it makes much greater demands upon the teacher, and is less successful in proportion as the language is inflectional; there being, indeed, a decided difference even between English and French.

In the succeeding discussion, the following points seemed to find nearly general approval, viz., that phonetic transcriptions were the source of more mischief than good; that translation into the foreign language should be kept up by the side of free reproduction; that, while there was much in the old system that was wrong or led to evil results, it was not wise to throw it entirely overboard, nor was full salvation to be found in the new method in its present form; finally, that reform was impossible under any method so long as the training of those aiming to become teachers is restricted to the subjects to be taught, and does not extend to pedagogical principles. This latter point will receive the hearty endorsement of all who have observed, by the side of the unequalled learning of German scholars, their deplorable ignorance of pedagogical principles and incapacity as teachers. Finally, a resolution was offered and passed to the effect that it was the sense of the Third German Modern Language Convention, that it is desirable that as many further experiments as possible be made with the method of instruction which treats the foreign language as a spoken rather than a written one, and has for the basis of instruction a continuous specimen of the language to be learned, instead of disconnected sentences. This resolution cannot be regarded as an unqualified declaration on the part of the Convention in favor of the new method; for, to say nothing of the guarded form in which it is put, it was passed by a majority vote at the close of the day, after a long discussion, and with the understanding that, should it not be passed, the discussion should be continued.

After some deliberation it was decided to withdraw from the *Neuphilologisches Centralblatt* of Hanover the privilege of designating itself the organ of the Association, and not to grant this privilege to any other journal nor establish a special organ, but to publish independent brochures for distribution among the members, as the Modern Language Association of America does.

A report was given as to the efforts made by the Association to induce the various German States to establish travelling scholarships, for the purpose of enabling students desirous of becoming teachers of modern languages to spend some time in the countries where those languages are spoken. Thus far Baden alone has taken steps in this direction, while in Saxony there is good prospect of speedy action. Prof. Stengler proposed that the Association give the other States a year to consider the matter, and then, if unsuccessful, "begin again, and bore and bore till the hard wood is bored through."

The Association now has more than 800 members, with an attendance on this year's convention of 126. Its membership, different from that of our association in America, is made up for the most part of teachers in the high schools and colleges of technology. Of university professors, besides those mentioned above, there were present R. Wülker, the chairman, Zupitza, Voll nüller, Viëtor, Kölbing, etc. There were two from America present.

One novel feature connected with this year's meeting was an exhibition of pictures, books, etc., illustrative of the works and times of Dante, Shakspere, Scott, Burns, Molière, and Sandeau. These collections were made by certain members of the Association from public and private libraries, and were arranged for exhibition in the rooms adjoining the hall where the Association held its sessions. The collections were not all made on the same basis; that pertaining to Dante including illustrated and other editions of his works and translations of them, while the others were restricted mostly to pictures and busts. The Dante exhibition, the most important, was made by Baron von Locella, who was loaned many rare and valuable works by Prince George of Saxony, the Department of Instruction of the Kingdom of Italy, the city of Florence, etc. A list of the subdivisions of the Molière collection will give a good idea of the best of the other exhibitions: Busts and pictures of Molière; pictures of the house where Molière was born, representations of his arms, and facsimiles of his autograph; illustrated editions of his works and other engravings and pictures illustrative of them; musical compositions of his works and representations of the musical instruments of his day; representations pertaining to the history of the theatre of the time and Molière's troupe; pictures of patrons and friends; engravings and other pictures illustrative of the civilization of the seventeenth century.

Sunday morning the members of the Association, accompanied by their wives, daughters, or friends, went by special train to Meissen. At noon there was a banquet in "Die Sonne"; later we made a tour through the beautiful halls and apartments of the Stammschloss of the Saxon kings, and in the evening took part in the ball, or sat near by, drinking coffee and chatting, or watching the comical performances of those who danced the *cotillon*.

GEORGE HEMPL.

Correspondence.

ON PARAPHRASING FROM THE GERMAN.

TO THE EDITOR OF THE NATION:

SIR: In Rosenkranz's 'Pedagogics as a System,' translated by Anna C. Brackett (St. Louis: 1872), we find the following statement:

"Cleanliness will not endure that things shall be deprived of their proper individuality through the elemental chaos" (p. 31).

On page 54 of Part Second we find Miss Brackett's paraphrase of this passage as follows:

"Cleanliness will not have things deprived of their distinctive and individual character, and become again a part of original chaos. It is only a form of order which remands all things, dirt included, to their own places, and will not endure to have things mixed and confused."

Finally, on page 96, we have a paraphrase by Dr. Harris:

"Cleanliness means 'a place for everything, and everything in its place.' To take a thing out of its proper relations is to 'deprive it of its proper individuality,' and in an 'elemental chaos' everything has lost its proper relations to other things, and has no longer any use or fitness in its existence."

These quotations illustrate the thought embodied in my note in the *Academy*, which has served your correspondent "X" as a text for his fine moralizing. All I intended to say was that the speculations of a German educational philosopher frequently need, not only to be turned literally into English, but to be paraphrased, as Miss Brackett and Dr. Harris have done in the

volume cited, in order to come within the ready comprehension of the ordinary reader. Any disparagement of German educational literature, as such, on my part, is a gratuitous assumption by my anonymous critic, for an unworthy purpose. W. H. PAYNE.

PEABODY NORMAL COLLEGE, NASHVILLE.

TO THE EDITOR OF THE NATION:

SIR: I join hands with your correspondent "X" in his condemnation of Prof. Payne. I am myself one of those astonishing prigs who take their Kant in all his original Teutonicity in order to get "the flavor of the German," and I am sure that *I* can see in the German philosophers nothing but luminous simplicity and crystalline lucidity. Conceive, then, with what a shriek of *Zaghaftigkeit* I greeted the suggestion of Dr. Harris, in his introduction to Rosenkranz, that the translation is probably "more comprehensible than the original." What is this but saying that English common sense is superior to German philosophical ponderosity, and what is *that* but accepting the heresy of Prof. Payne? I declare, the discovery gave me such a turn as I have not experienced since I read the utterance of Carlyle (himself something of a German scholar) apropos of 'Wilhelm Meister': "Goethe is the greatest genius that has lived for a century and the greatest ass that has lived for three. I could sometimes fall down and worship him; at other times I could kick him out of the room."

Let us cry aloud to the errant members of the Michigan Schoolmasters' Club to leave the primrose path of Miss Brackett and Dr. Harris, and make their way into the steep and thorny road of Rosenkranz. Y.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me space for the following, to be set over against "Prof. Payne on German Books on Pedagogy"?

"On the whole, philosophical speculation has been a hindrance to the Germans, often bringing into their style an element of the senseless and incomprehensible. The more they have given themselves to certain philosophical schools the worse they write."—*Goethe*, through Eckermann. In another place Goethe, speaking of a German writer of his time who was under Hegel's influence, said: "In his book we come upon places where the mind halts entirely, and we no longer know what we are reading." Hosmer says, "The besetting defect of German writers . . . is an obscurity, proceeding sometimes from a wilful imitation of the conduct of the cuttle-fish, sometimes from want of the sense of proportion." Matthew Arnold has criticised severely the "ponderous, roundabout, inane," in German literature, and so have others: and so, perhaps, would "X" if he should try to explain Rosenkranz's thought in losing his "proper individuality in the elemental chaos." If any profit is to be got from such writers, surely a literal translation is not sufficient for the ordinary reader.

Prof. Payne is Chancellor of the University of Nashville, and in addition President of the Peabody Normal College. This position was taken, not for his own profit or convenience, but from the thought that in this place he could do most to advance the condition of the teachers of the South, and through them their schools. This work I hold to be akin to, but higher than, patriotism, and for this reason I am moved to speak against his would-be defamer. Yours, FRANK M. DREW.

GENOA, ILL., October 16, 1888.

THE UNIVERSITY NEED.

TO THE EDITOR OF THE NATION:

SIR: It is gratifying, indeed, to read such sentiments as were expressed in your editorial on Columbia College in the *Nation* of October 11. Especially is it gratifying to students who have finished their undergraduate work, and are now looking about for still higher courses and broader opportunities for study. The time is now at hand in America when the leading universities must offer to their graduates superior advantages for original work, and more abundant opportunities for independent investigation than those prescribed in the regular college curriculum.

The history of the growth and development of seminary and post-graduate work at the University of Michigan well illustrates the exegencies of the times. In 1883 there were eleven students graduated with higher degrees; only about one-half of them, however, were really post-graduates and were pursuing seminary work in the true sense of that term. In 1887 there were sixteen successful candidates for degrees who were pursuing their work upon the University system. Thirteen of these were working for the higher degrees (M.A. and Ph.D.). According to the University Calendar of 1887–88, there were in all fifty-nine students pursuing courses of study under the direction of the university for the higher degrees. Nine of these received their degrees last June. The total number of students pursuing work on the university system last year was twenty-two, thus showing a marked increase in the popularity of this method of study among the students. (I may say in parenthesis that the university system is one of final examination, and not one of examinations upon each book gone through during the semester. It encourages investigation, and prompts students to original work, and is conducted in a similar manner to post-graduate work.) Already this fall more than fifteen applications are in for higher degrees from students in residence; and about one-half of these applications are for the Ph.D. degree.

Thus we can see the constant increase in the number of students pursuing higher work. The illustration furnished by the University of Michigan can, in a similar manner, be obtained from the other great universities of this country. But this is not all. We cannot suppose that these students, having pursued their special lines of work up to their higher degrees, are then to give up all their expectations of future study at some still higher institution of learning. On the contrary, it is safe to say that one-half of the post-graduates in our colleges now are contemplating extended courses of study abroad. The fact is, that not less than 20 per cent. of these post-graduates do go abroad for study, sooner or later, and many more would if their means would allow.

The question, then, that presents itself, not only to those who are now post-graduates, but also to those who are soon to be such, is, Why cannot America furnish as advanced instruction as Germany or France; and why cannot American college professors establish here in the United States *Seminarien* of as high grade as those of Leipzig, Bonn, or Berlin? It would be a far wiser outlay of money on the part of Mr. Clark in Massachusetts, or Mr. Sanford in California, to found for students, and professors, too, a school where the *depth of things* could be arrived at more nearly, and investigation be carried on for its own sake, than to found two additional universities like those already existing in this country.

The tendency of students at the present day to become specialists brings this demand for higher instruction up to a necessity. That there is such a demand, every one can see; that it should be met speedily and adequately, no one will deny. And it is hoped that the time is near at hand when the idea expressed by President Barnard in his report will take tangible shape, not only at Columbia, but also at other of our great institutions of learning. Our great need, beyond all doubt, in this country is for a few "real universities." Yours truly,

F. C. CLARK.

ANN ARBOR, October 15, 1888.

TO THE EDITOR OF THE NATION:

SIR: Your article on Columbia College, in the *Nation* of October 11, closes thus:

"The country needs all the help it can get from the very highest culture in resisting the torrent of materialism which has, ever since the war, been flowing over the land; and for such culture nothing would do so much good as two or three real universities."

No one will gainsay this. But in all those able and earnest discussions of the subject of a real university which of late years have from time to time appeared in the *Nation* and in some of the best periodicals, one very important thing is always overlooked. As matters now stand, I fear we are far from being ready for such a university; not, indeed, for want of preparatory colleges, nor for want of able professors, nor yet for want of sufficient desire on the part of our students for high attainments. And yet we should lack the students. In order that we might have the students, certain *legislation* would first be necessary, which, however, is not to be looked for in any of our States.

Let me explain. No one who has pursued a course of studies at a German university, and has become acquainted with the life there, imagines that a majority of the students there study because they love studying, or even from a desire for excellence. On the contrary, the real motive power is the fear of the difficult state examination, which must be passed in order to take any position of profit or honor. Take the case of the medical student. In the first place, he is not admitted as a regular student of medicine unless he has passed his examination of "maturity" at the gymnasium (only foreigners being admitted without this); but furthermore he is not allowed to practise, even after graduation, unless he has also passed that state examination. So it is again in the case of the lawyer, and likewise in the case of the divine.

We have on this side of the ocean no such regulations, nor are we likely to have them. Imagine a law to be made that no person should be admitted as a medical student, or as a law student, unless he were able to write, in good Latin and also in correct French, a composition upon a given subject, and unless he should have a pretty thorough knowledge of general history, etc. All this is out of the question. Nor shall we have, for a long time to come, anything like those state examinations. But it must be admitted that for the *average* student everywhere some such strong outer motive is really necessary. The absence of some regulation similar to those mentioned produces with us this lamentable state of affairs, that such numbers of our doctors and lawyers are really uneducated and ignorant.

Let us, then, before we try to have a true university, endeavor to get some effective regulations concerning the licenses of our doctors and our lawyers, and soon our standard of ambition as to general acquirements will rise,

and we shall be on the way to get ready to have a real university. Respectfully yours,

WERNER A. STILLE.

ST. LOUIS, October 15, 1888.

TO THE EDITOR OF THE NATION:

SIR: There is one sentence in your editorial on Columbia College that seems to me to be erroneous, or at least very liable to misinterpretation. It is this:

"The country needs all the help it can get from the very highest culture in resisting the torrent of materialism which has, ever since the war, been flowing over the land; and for such culture nothing would do so much good as two or three real universities."

As the subject is one of some importance, I beg leave to offer a few observations. From your main proposition, I think few intelligent men will dissent; as to the conclusion, the case is much less clear. On reading the article, one is led almost unconsciously to think of Germany, where there are more real universities than in any other country; and the question naturally suggests itself, Is materialism less prevalent there than among us? I have spent some years at different times in Germany, chiefly in the company of university men, and have for nearly a score of years been a diligent reader of German books, but my observations do not warrant the inference which seems to flow from your remark.

I am aware that the spirit of materialism usually manifests itself in one of two ways: the man of thought is often materialistic in his philosophy and spiritualistic in his life; caring little for those things that may be seen and handled, he sets a high value upon intellectual riches. On the other hand, there is the practical materialism which one meets so constantly in this country, no less among church members than among other people, that is greatly concerned about material prosperity, but comparatively indifferent about those things which persons of culture esteem above all else. This class is so numerously represented that we may well use the Horatian dictum "Tanti quantum habeas sis," to characterize the most prominent trait of our contemporary thought. We may give a slightly different turn to an observation of Ampère on the poet Ausonius, by saying that the great majority of our church-members are Christians, and therefore spiritists, when they pray, but materialists during most of their remaining waking hours.

But I am led to think that a kind of materialism which has more or less claim to be called philosophical is very common in Germany. Often it is philosophical only in that it claims to be ratiocinative. "Es glaubt kein Mediciner an einen Gott," "Alle Mediciner sind Atheisten," are expressions that I have heard used more than once to designate the faith, or lack of faith, that is characteristic of a numerously represented and influential profession. This statement is, of course, not literally true, but I have seen no reason to doubt that it contains much of truth. It is well known, too, that the writings of such ultra-materialists as Büchner and Vogt are much read in books and periodicals. The materialism of other popular writers is less openly avowed, though hardly less patent. The signs of the times in France likewise indicate that there, as in Germany, the belief in a personal immortality is a rapidly decreasing quantity. If, then, it be our object to promote idealism in thought and life, without regard to the question of man's personal immortality, we cannot do better than to encourage the founding of real universities, in which instruction shall be absolutely unrestricted; but if it be our concern to encourage Christian orthodoxy, of even the most liberal type, something else is needed. S.

ATHENS, O., October, 1888.

THE POINT OF VIEW.

TO THE EDITOR OF THE NATION:

SIR: In the matter of the religious condition of the back towns there will hardly be any dispute that a grave problem exists. What constitutes the cause of this problem, however, will be a subject of very great difference. To you, the cause of these facts, which, as you say, are "notorious," is the declining force of Christianity. To many of your readers, on the other hand, the cause will be found in the general drying up of country civilization. With scarcely an exception, the depleted church is the inevitable result of a depleted social existence. The back towns, for over a generation past, have yielded up most of their choicest elements. The young, vigorous, and creative life has sought its appropriate sphere in the cities. In most cases the actual numbers are very much less, and in all cases the proportion of actual business and enterprise is smaller than what it once was. Life, society, even humanity, are at a very low ebb in comparison with the state of former times. Now, that the church, which relies for its existence on the leading spirits of any community, should not be deeply, and in some cases hopelessly, affected by the deterioration of life in general, would be simply incredible.

The missionary, then, in the back towns is not trying to do over again a work which once flourished and now has fallen into decay: he is attempting a really new work. The field is the same, but an entirely new set of conditions make it an entirely new work. It is a new generation and a genetically different one. The missionary to the back towns of Vermont and western Massachusetts is really a pioneer, trying to make Christianity intelligible to a mind which, however it may have seen and known the form of godliness, has only in a few devout hearts known the power thereof. But, like a missionary to China or Japan, this Vermont missionary must learn the language of the people, and must know the language in which alone the Christian life is able to make itself understood to the people. The methods proposed in the late numbers of the *Andover Review* have just this end in view. They represent a desire on the part of the minister to be understood. You think these methods are grotesque, and that they are as little likely to promote religious feeling as the study of botany is likely to promote the scientific idea of taxation. But the problem is so difficult a one, and the conditions of success so complicated, that an opinion on the merits of such methods belongs of right only to those who are working in and among the people to whom they are directed. A summer acquaintance with the country will not do. Not the widest acquaintance with large tracts of country, or of innumerable instances of dwindling churches and contentious congregations, will aid much in judging of these proposals. But actual residence fits a man for speaking—actual sharing of what is a very hard and grinding lot; and no one can have the one and do the other without feeling how true and scientific these methods are—the methods you quote.

You will pardon a minister for dissenting from your view that the case is a hopeless one, the force of Christianity having spent itself. Nothing less than the strongest confidence that the force of Christianity has not spent itself, but is equal also to this hardest of problems in the hardest of conditions, could keep a serious man an instant longer at such posts. But, reinforced by the feeling of whose service it is he labors in, and with such an appeal to his humanity and to his spiritual imagination, he can afford his utmost, and expect finally a religious success which shall be complete.

I am yours truly, JOHN TUNIS.

[Even though to the country minister alone an opinion "belongs of right," yet we may be allowed to remark that we did not say "the case is a hopeless one, the force of Christianity having spent itself." We said it is required to find why "there is no more power" in that force—*i. e.*, no more than there is. We know of no one who will say that that force in the "back towns" now is what it was when the disciples "were all with one accord in one place." But if the force of Christianity be not "declining," or declined, how comes it that "Life, society, even humanity, are at a very low ebb in comparison with the state of former times," with the church "deeply, and in some cases hopelessly, affected by the deterioration of life in general"? For what has "the proportion of actual business and enterprise" to do with religion?—ED. NATION.]

HOISTING THE ENGINEER WITH HIS OWN PETARD.

TO THE EDITOR OF THE NATION:

SIR: I do not think attention has been called in your columns to a rather unexpected result of the activity of the American Protective Tariff League. Its system of offering prizes for essays by members of the Senior classes in colleges and universities began last year, the subject announced being "The Advantages of a Protective Tariff to the Labor and Industries of the United States." Among many competitors was Mr. Crawford D. Hening of that renowned stronghold of protection, the University of Pennsylvania. Mr. Hening made a thorough study of the subject—so thorough that he not only won the first prize, $250, but also became sufficiently interested to continue his investigation after his immediate work was accomplished. In time he became convinced that, whatever may have been the advantages of a high tariff in the past, what the country needed now was a thorough revision of the tariff, with a conservative reduction of duties, as proposed by Mr. Cleveland and the Mills Bill. The result was a new essay on "The Tariff and the Surplus," for which he chose as a motto Milton's words, "By this time, like one who had set out on his way by night, and travelled through a region of smooth and idle dreams, our history now arrives on the confines where daylight and truth meet us with a clear dawn, representing to our view, though at far distance, true colors and shapes."

The new essay has been printed by the Pennsylvania Democratic State Committee, in much better type than the Tariff League saw fit to use for the first one, and it deserves at least an equal number of readers. It is to be hoped that some of this year's essayists will be as successful as Mr. Hening in attaining the regions of "daylight and truth." Thus will the American Protective Tariff League become, though unintentionally, a blessing to the country. C. C. B.

PHILADELPHIA, October 22, 1888.

COTTON HOSIERY.

TO THE EDITOR OF THE NATION:

SIR: It has been stated by you that "free

wool" will be a benefit to the manufacturers of this country. If "free wool" would benefit them, why doesn't "free cotton" benefit them? With all the facilities and natural advantages we have in this staple, we cannot to-day compete with the manufacturers of England, France, and Germany in the production of cotton hosiery.

One of our city's greatest industries, up to five years ago, was the manufacture of cotton hosiery for men, women, and children. To-day this industry, in the finer grades of goods, is dead. I can give you the names of half-a-dozen mills in this city that, up to five years ago, turned out 10,000 to 12,000 dozens of cotton hose a day. To-day they do not make a pair. How do you account for this? No other mills have started up to make the same class of goods. The seamless goods have not driven them out of the market, because the gauge is too coarse, making the stocking too heavy and clumsy to take their place.

Look in our retail-store windows, and see the ladies' foreign-made hose selling at 15 cents to 25 cents per pair, men's half-hose 12½ cents to 25 cents per pair, children's hose from 10 cents to 20 cents per pair. These are the goods that have driven our goods out of the market.

What is the reason they have driven us out? Do not say, as Mr. Mills did, that the foreign manufacturer has a secret process by which he makes these goods. We can get the same machines he uses and can get the same skilled labor right here in this city to-day that has made goods like we speak of. Do not say the duty on dyes used in the goods is the cause. If the foreign manufacturer got his dyeing for nothing, it would only make a difference of 20 to 25 cents a dozen in his favor. May be you will say it is the protection that the spinner gets for his yarns that makes the difference. The yarn used in these goods is worth about 22 cents per pound. The duty on this is 10 cents a pound and 20 per cent. ad valorem. The goods weigh about 1⅓ pounds to the dozen. This would make about 25 cents per dozen. Here is a difference of 50 cents per dozen in favor of the foreign manufacturer, and remember this gives him his dyeing for nothing. To offset this the foreign goods have to pay a duty of 35 per cent. ad valorem.

At $1.50 per dozen (which is a very low average), this would be 52½ cents per dozen added to their cost. And still, with all this "robber tax," as you term it, the foreign manufacturer continues to make goods for this market and make money at it, while our mills at home have to close up or get in some other branch. What is the reason of this? We can *surely* get the raw cotton as cheap as they can. But can we get the "labor" as cheap as they can? Would not the same state of affairs occur if we had free wool? Yours very respectfully,

JOHN J. ARMSTRONG.

No. 27 BANK STREET, PHILADELPHIA, Oct. 13.

[There are two possible explanations of the misfortune which befell Mr. Armstrong's friends, the hosiery manufacturers of Philadelphia. One is, that they had too much tariff, for whereas the duty on cotton hosiery prior to 1883 was 35 per cent. ad valorem, it was raised to 40 per cent. by the tariff of that year. As Mr. Armstrong fixes the date "five years ago" when the industry began to decline, the coincidence seems rather remarkable.

The other possible explanation is, that they relied too much on the tariff and gave too little heed to industrial progress in the manufacture of hosiery. This would not be the first case in which failure had resulted from too close attention to business in Washington and too little at home. At all events, the cotton-hosiery manufacture is successfully carried on in Rhode Island, and what is done there ought to be done in Philadelphia with equal business qualifications. The tariff is the same in both places, and there ought not to be much difference in the rate of wages. There is no difference to speak of between the Rhode Island wages and English wages in the hosiery trade. Any industry which cannot get on under such conditions, with a protection of 40 per cent. (which, by the way, is not changed by the Mills bill), ought to be smitten with the great hammer of Thor.

Coming back to Mr. Armstrong's first query, we suppose he would not contend that a tax of 10 cents a pound on raw cotton would revive this ruined industry.—ED. NATION.]

THE PRICE OF STEEL RAILS.

TO THE EDITOR OF THE NATION:

SIR: The protectionists "point with pride" to the tariff on steel rails, and claim it as a triumph of protection that it has reduced the price from over $100 per ton to present price. I, of course, don't believe the protective tariff did it, but am unable to find an explanation of the decline in price. It seems to me the *Nation* would help the cause if it could find space to print a brief history of the steel-rail industry, pointing out the causes that have conspired to bring about the fall in price.

Respectfully yours, F. D. HUTCHINS.

LANCASTER, N. H., October 18, 1888.

[The answer to this question is summed up in the improvements and inventions applicable to the production of steel rails that have come in play during the past fifteen years. The details have often been published and are easily accessible. It is sufficient to say that, since the price of rails has fallen in England even more than in this country, the tariff had nothing to do with it.—ED. NATION.]

THE PRESIDENT'S ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: A writer in the last *North American Review*, under the head of "The President's English," attempts to prove Cleveland's intense egotism by contrasting his marked use of the first personal pronoun with the modesty of our earlier Presidents in referring to themselves as individuals in their public utterances. In proof of such offensive egotism, the writer produces an extract from Cleveland's letter of acceptance containing 712 words, in which he shows the use of the first personal pronoun 45 times, or once in every sixteen and a fraction words.

It is interesting to notice that Washington, the most notably modest of all our Presidents, uses in his Resignation of Commission speech, December 23, 1783, one first personal pronoun in every twelve and a fraction words. In his Inaugural Address, April 30, 1789, he uses, in the first paragraph of 315 words, 21 first personal pronouns, or one in every fifteen, while his Farewell Address, which has become an American classic, presents extracts which show quite as free a use of the objectionable pronoun as the extract cited from Cleveland's letter.

Such an attempt to prove "personal egotism" must necessarily seem puerile in the last degree, even to a GOOD REPUBLICAN.

OCTOBER 12, 1888.

FRENCH CONSTITUTIONAL CHANGES.

TO THE EDITOR OF THE NATION:

SIR: The author of the article on "French Constitutional Amendment," in the last issue of the *Nation*, is slightly at fault in regard to the history of the constitutional changes introduced in France since the adoption of the present Constitution in 1875. Two *revisions* of the Constitution have taken place, but not in 1884 and 1885, as is stated by the author of the article. The dates are 1879 and 1884. The effect of the first revision was merely to decree the return of the Houses and President from Versailles to Paris.

Another mistake of the article consists in presenting the change from the *scrutin d'arrondissement* to the *scrutin de liste* as a constitutional amendment. The law governing the elections to the Chamber of Deputies was never a part of the Constitution. It could be, and was, changed in the same way as any other law, and no meeting of the National Assembly is now needed in order to prescribe a return to the former mode of voting. Students of French political matters may remember that the occasion selected by Gambetta's enemies to bring about his downfall, in January, 1882, was his proposal to establish the *scrutin de liste* and to make it part of the Constitution. As the law governing the elections to the Senate was a part of that instrument, Gambetta thought it only logical that the same character should attach to the law governing the elections to the lower House. The rejection of Gambetta's plan was what induced M. Ferry, two years later, to try a different system, and to take the law relating to the elections to the Senate out of the Constitution. That was the main change introduced in the Constitution in 1884, and the law abolishing life-senatorships and enlarging the constituency of the Senate, which was afterwards passed, was merely a legislative enactment, not a constitutional amendment.

Without entering upon any discussion of the present rather tangled revision question in France, I will say that I agree with the author of the article in thinking that the main change needed in the Constitution is an amendment making it more difficult in the future to amend it further. But, even while wishing for such a change, I might shrink from desiring a meeting of the National Assembly now, in the present unsettled condition of the public mind. An assembly of nearly 900 members is always pretty much of a mob, and no one can predict what would come out of such a meeting.

Yours truly, A. C.

HARVARD UNIVERSITY, October 22, 1888.

[We must adhere to our words. The removal of the seat of government from Versailles to Paris in 1879 is not spoken of by French publicists as "a revision of the Constitution." What are known as "revisions of the Constitution" occurred in the years we gave, 1884 and 1885. The change in 1885 from *scrutin d'arrondissement* to *scrutin de liste* is called in all the books a revision, because it changed an electoral law passed by the National Assembly sitting as a Constitutional Convention, which law was, like a similar "special law" providing for

the election of the Senate, to all intents and purposes a part of the Constitution, and differed from other parts solely in being amendable by the two Chambers acting in their ordinary legislative capacity, instead of by the two Chambers sitting together in National Assembly, or, as we should call it, the joint convention.—Ed. Nation.]

"*TO ELIMINATE*" AND "*ELIMINATION.*"

To the Editor of The Nation:

Sir: Having recently had occasion to look into Mr. E. S. Gould's *Good English*, I there chanced on the following sentence at p. 186:

"Others speak from the throat in a hollow, sepulchral tone, and with an elaboration of syllables and emphasis so mixed together that no ear can *eliminate* the individual words."

This is from the "revised edition" of 1880; but it appears, on turning to the preface of the first edition, that the sentence dates from 1865.

Mr. Gould's claim to a knowledge of the way we are to speak and write our language, if we would do so irreproachably, is most confidently implied throughout his book. Nor does any competent judge of that performance require to be told that his criticisms aim at conformity with all that is exact, not to say fastidious. An idea of his qualifications for handling the subject of which he thought himself a master is, however, furnished by the specimen of his composition given above. During the course of fifteen years he failed to discover that he had there used the verb *to eliminate* in a sense which, probably, no other writer has ever imposed on it, namely, that of 'to distinguish or 'to discriminate.' The error of somehow misusing the term is one that is common, and no less common, I believe, in the United States than in Great Britain. To call attention to it cannot, therefore, be amiss.

It is only as a verb transitive that we find our adaptation of *eliminare*. Almost invariably, above all in the present century, our best authors, in their employment of *to eliminate*, have, further, kept very close to the usual signification of its Latin original. Whether in popular diction, or in scientific, they have generally intended to convey, by it, with reference to what is superfluous, irrelevant, injurious, or unwelcome, the notion of its ejection, extrusion, removal, or riddance, or else, figuratively, that of its deletion or expunction. In passing, *to eliminate* was unknown to Dr. Johnson. As to *elimination*, he had to take it, unexemplified, from his predecessor Bailey; and Dr. Richardson ignores it entirely.

Numerous inaccurate writers that might be specified so use *to eliminate* that, for all the aid of contexts, the meaning which they attach to it is matter of uncertainty. Here and there, however, they clearly understand it to be one with 'to separate'; as though they had previously misapprehended some such phrase as "to *eliminate* impurities," or "to *eliminate* a poisonous element." And even professional guides to English have occasionally contributed to establish this corrupt innovation. One of these is the Rev. James Stormonth; and Dr. Worcester, besides partially misdefining *elimination*, taken as an algebraic technicality, represents Bp. Joseph Hall as identifying the word with 'separation,' though the passage to which he refers, cited in full by Archdeacon Todd, lends no support to such an equation.

I now come to the *Synonyms and Antonyms* of the Ven. C. J. Smith (1867), from which the subjoined congeries of preposterously false philology is transcribed:

"Eliminate, *v. tr. E* and *limen*, a threshold. To bring out from the recesses of private concealment into the public light of day. Hence, 1, to explain; 2, to extract; and 3, to extract what is superfluous or objectionable.

Syn. Elucidate, Explain, Enucleate, Segregate.

Ant. Mystify, Obscure, Involve, Smuggle, Foist, Import, Confound."

It will not surprise any attentive reader of our older literature to be told that Horace's use of *eliminare* has been tentatively Anglicized.

"So settled, that, at no time . . . hee open himselfe, or suffer his tongue to *eliminate* any part of his thoughts." Daniel Tuvil, *Essaies Politicke and Morall* (1608), fol. 114 *v.*

"Whatsoever it is that here we do is, by some that come hither, and write all they hear, presently *eliminated*, and carried to them, which hath caused many hard reports to pass of us, both with them and otherwhere." Rev. John Hales (1618), *Golden Remains* (1673), Part II., p. 64.

Elimination, to import 'unwarrantable disclosure,' 'indiscreet divulgation,' 'blabbing,' has also appeared in print:

"These curious quærees, and fabulous *eliminations* of hels secrets, which S. Iohn properly calleth the deepnes of Sathan," etc. Bp. William Barlow, *A Defence*, etc. (1601), p. 175.

The strictly etymological sense of *to eliminate*, recalled to mind by Dr. Young's affected "*eliminate* my spirit, give it range," and seen in the ensuing extract, may be of infrequent occurrence:

"For God's love, Madam, help you . . . to help to *eliminate* out of his house this offendicle." Abp. Matthew Parker (1567-8), *Correspondence*, etc. (1853), p. 314.

As to relevant quotations in which there is nothing either peculiar or objectionable, three will amply suffice:

"Its balsams, gums, resins, aromata, and all other bases of its sensible qualities, are, as is well known, mere excretions from the vegetable, *eliminated*, as lifeless, from the actual plant." S. T. Coleridge, *Literary Remains*, Vol. II (1836), p. 345.

"M. Comte's subjective synthesis consists only in *eliminating* from the sciences everything that he deems useless, and presenting, as far as possible, every theoretical investigation as the solution of a practical problem." J. S. Mill, *Auguste Comte and Positivism* (1865), p. 185.

"The most rigid Calvinist cannot *eliminate* his instincts." Mr. J. A. Froude, *Short Studies on Great Subjects*, First Series (1867), p. 399.

From among scores of authors who have misconceived the verb and the substantive under notice, it will be enough to cite a few who surely should have known better than to do so:

"The technical affixes employed in *eliminating* derivative from primitive words." Professor H. H. Wilson, *Sanskrit Grammar* (1841), Preface, p. vii.

"The Nature of the Soul is, also, conclusive; it being utterly impossible that such infinite ideas as God, eternity, space, extension, hope, and fear could ever be *eliminated* by either the will, the reason, or the finite evidence of the finite senses." *Foreign and Colonial Quarterly Review*, Vol. II (1843), p. 337.

"In answering these inquiries, we should have to consider separately every collateral influence and circumstance, and, by a most subtle analysis, to *eliminate* the real effect of art from the effects of the abuses with which it was associated." Mr. John Ruskin, *The Seven Lamps of Architecture* (1849), p. 201.

"Classification sets itself to the arrangement of all those bodies which meet its view, and are possessed of common qualities; and thus general ideas are *eliminated*." "It is gratifying to watch the progress of discovery, and to imagine that we are elaborating truths, or *eliminating* principles, from facts that are patent to our own observation." Dr. Samuel Neil, *The Elements of Rhetoric* (1854), pp. 33, 213.

"The various events by which one people [viz., the Jews] was *eliminated* from the varied races of mankind." Sir J. P. Wood (now Lord Hatherley). *The Continuity of Scripture* (1867), p. —.

"Let us construct our hypotheses for an hour, or a day, or for years; they are of the utmost value in the *elimination* of truth." Dr. Michael Faraday, in *Lectures on Education* (1854), p. 68.

A good number of my quotations from which those immediately preceding are selected have, I find, already been produced in Dr. W. B. Hodgson's *Errors in the Use of English*. Dr. Hodgson's researches and my own discover that *to eliminate* has wrongly had attached to it, with more or less distinctness, the various senses of *to bring out*, *develop*, *distinguish*, *educe*, *elaborate*, *elicit*, *elucidate*, *evolve*, *free*, and what not. Such has been the result of a mere weakness for a learned-looking expression, without inquiry touching its meaning; and it certainly behooves any one who would escape the suspicion that, science left out of consideration, he is not even a moderate Latinist, to take heed how he *eliminates* and what he subjects to *elimination*.

The Dictionaries, to which I once more return, are, by reason of their meagreness, and on other grounds, far from being satisfactory in their treatment of *to eliminate*, especially as employed in non-scientific language. Archdeacon Todd and Dr. Richardson have, between them, as authorities for it, only Dr. Young, the poet, as cited above, Bp. Lowth, and Lovelace, of which three the last, in his "thou . . . *eliminat'st* thy door," makes the word denote "to pass beyond"; an interpretation not likely to be questioned by any one who consults Dr. Latham. Where synonymized, as by Dr. O. W. Holmes, with 'to deduce,' 'to infer,' Dr. Webster's editors now correctly characterize it as "recent and improper," after having, in 1864, simply recorded it, without an accompanying note of censure.

Your obedient servant, F. H.

Marlesford, England, September 3, 1888.

—In the second column of your 152d page, l. 4, the printer has put "misusage" for "coinage." Among several other typographical errors in my letter on *Suppositious*, two more may be noticed. John Lawrence has "suppositious *causes*," not "cases." Again, for Vol. "XII." of the *Quarterly Review*, read "XIX."

Turning over a book published in 1854, I lately came across *suppositious* as a substitute for "suppositional," *i. e.*, "hypothetical." *Suppositious* in the same sense, which is equally bad, is not very unusual in my experience of spoken English.

Notes.

A library edition, 12mo, of Walter Besant's novels has been begun by the Messrs. Harper. The same firm have compressed the thirty-six volumes of John Morley's "English Men of Letters" series into twelve, making a "People's Edition."

D. Appleton & Co. will publish on November 1, 'On the Senses, Instincts, and Intelligence of Animals, with Special Reference to Insects,' an illustrated work by Sir John Lubbock.

Chas. Scribner's Sons have nearly ready the first volume of their 'Cyclopædia of Music and Musicians,' a work to be profusely illustrated, and printed only in a limited edition; a 'History of French Painting,' by Mrs. Clara H. Stranahan; and 'Gibraltar,' by the Rev. Henry M. Field.

'Musical Instruments and their Homes' is the title of a work announced by Dodd, Mead

& Co. The illustrations, which number nearly 300, with the accompanying description, form a complete illustrated catalogue of the remarkable collection of musical instruments now in the possession of Mrs. John Crosby Brown of New York. The text has been written by Mrs. Brown and Wm. Adams Brown. The book will be issued in sumptuous style.

'Pen and Ink Papers on Subjects of More or Less Importance,' by Brander Matthews; and 'B. C. 1887,' a volume of travels in British Columbia, by Messrs. Lees and Chutterbuck, authors of 'Three in Norway,' are in the press of Longmans, Green & Co.

'The Private Correspondence of Daniel O'Connell,' which we have already announced as on the eve of publication, in two volumes, by Longmans, Green & Co., consists chiefly of the hitherto unpublished letters of the "Liberator," abundantly annotated, and connected by only sufficient narrative to explain the occasion of them. Although called private, O'Connell's letters, even those to his wife, are chiefly on public topics.

White & Allen announce illustrated editions of 'Favorite Folk Ballads,' *e. g.*, "The Old Folks at Home," "Annie Laurie," etc.; a sumptuous edition of Goldsmith's 'Poetical Works,' edited by Bolton Corney, with forty illustrations on Japan paper; and 'The Hottentot Blue Blook; or, Smith and Schmidt in Africa,' by C. M. von Seyppel, the German antiquarian humorist.

J. B. Lippincott Co. have in press a 'History of the Celebration of the 100th Anniversary of the Promulgation of the U. S. Constitution,' edited by Hampton L. Carson; a 'Life of Henry M. Stanley,' by the Rev. H. W. Little; a 'Memorial of Sarah Pugh,' one of the foremost and most respected anti-slavery women of Philadelphia; 'Paradoxes of a Philistine,' by Wm. S. Walsh; and 'The Writer's Handbook.'

Among the autumn announcements of Estes & Lauriat, Boston, are Keats's 'Endymion,' illustrated by W. St John Harper; Tennyson's 'Fairy Lilian' and 'Bugle Song,' both illustrated by various American designers; 'Song Birds and Seasons,' illustrated; 'The Goupil Gallery of Photogravures'; 'Recent Italian Art,' a portfolio of photo-etchings; and 'European Etchings,' twenty in number, with descriptive text.

Trübner of Strassburg, the publisher of Kluge's 'German Etymological Dictionary,' proposes to get the fourth edition out in time for the holiday trade. Seven of the ten parts have already reached us.

The second volume of Ten Brink's 'History of English Literature,' devoted mostly to Chaucer, is in press.

'The Case of Emperor Frederick III.,' embracing the official reports of the German physicians (translated) and of Sir Morell Mackenzie, and reviewed by Henry Schweig, M.D., of this city, will be published directly by Edgar S. Werner, 48 University Place.

Bismarck *non obstante*, Mr. S. Zickel, 19 Dey Street, New York, has reprinted from the *Deutsche Rundschau* the diary ('Aus Kaiser Friedrich's Tagebuch 1870-'71) which has caused so much pother in Germany, and which, by reviving the memory of the late Emperor and renewing the popular affection for him, has made the present Emperor's absence from the country less felt—and his return, considering the persecutions going on in his name, perhaps less desired.

We praised last year on its appearance the 'Fifty Years of English Song' edited and arranged by Henry F. Randolph (A. D. F. Randolph & Co.). This anthology of the Victorian era we found to be admirably selected and annotated, and most carefully printed, as well as published in excellent taste. It has since been, with good reason, thought worthy of promotion into a large-paper edition in the same number of volumes (four), but with a limitation to 250 marketable copies. The result is an extremely dainty set, bound in boards covered with pale olive-green paper, and white label bearing the title in red and black. It is now both in better shape and in better season for holiday-giving than last year, and cannot fail to be appreciated.

The sixth volume of the 'Poetical Works of Robert Browning' (Macmillan) takes in the Dramatic Lyrics, and the longer "Luria," dedicated in 1846 to Landor. The author says in a note that the majority of the poems, though often lyric in expression, are always dramatic in principle, and might properly enough come under the head of "Dramatic Pieces." The previous volume, it will be remembered, was designated "Dramatic Romances."

Nine pocket volumes, added to "Cassell's National Library" since we last kept the tally of it, embrace Shakspere's "Merry Wives," "King Henry V.", and Part 2 of "King Henry IV.", Scott's 'Marmion,' Steele's 'Essays and Tales,' Defoe's 'Tour through the Eastern Counties of England, 1722,' Roger Ascham's 'Schoolmaster,' Fénelon's 'Existence of God,' and more of Plutarch's 'Lives'—a fair image of the scope of this useful collection.

"Bohn's Select Library" (Scribner & Welford) adds C. R. Kennedy's version of 'Demosthenes on the Crown,' and Pauli's 'Oliver Cromwell.'

With good literary, and we trust with good commercial, judgment, the Messrs. Putnam have added two-thirds of Leigh Hunt's 'Stories from the Italian Poets' to their convenient and (so to say) intimate "Nuggets Series." The Dante biographical sketch and annotated abstract of the 'Divine Comedy' fill one of the little volumes; the Tasso, Ariosto, and Pulci, another. This leaves out Boiardo, and the appendix of metrical examples and versions, which the publishers are ready to make into a third volume if they receive the proper encouragement. Orignally published in 1846, amid the fever of the Tractarian movement, the Dante portion was edited with a motive of helping to stem the Catholic reaction ("in a corner") of Newman and his associates. This furnished the "existing reasons" alluded to by Hunt in his preface, "why it is salutary to show that he [Dante] . . . must not have his barbarism confounded with his strength."

The London *Athenæum* for September 29 announces the speedy publication by the Cambridge University Press of an important work on the 'Divine Comedy' by Dr. Moore, Principal of St. Edmund Hall, Oxford. It will contain (1) a critical account of the text of the 'Divina Commedia'; (2) the collation of seventeen MSS. throughout the whole of the 'Inferno'; (3) the discussion of disputed readings of about 180 passages throughout the poem, which have been collated in about 250 MSS.; (4) appendices on families of MSS. and other subjects bearing on the textual criticism."

In the same number of the *Athenæum* Mr. William Davies suggests a special indebtedness of Milton to one Domenico Mantova, a Brescian *gentiluomo* and poet, whose *Rime* were published at Venice in 1554 as an appendix to the 'Rime di diversi eccellenti Autori Bresciani.' The correspondences cited do not seem to us very convincing, and no single line emerges which, in addition to the general cast of the sonnets, implies adaptation from the Italian original. A marked disagreement must be admitted between

"Now that the fields are dark and ways are mire"

and

"Mentre che chiaro è 'l ciel, puro e sereno."

That Milton got hints for his 'Comus,' and even the scheme of it, from George Peele's "Old Wives' Tale," is maintained by Peele's latest editor, Mr. Bullen, and his reviewer in the *Athenæum* of October 6.

Mr. John Gilmer Speed, of the well-known Kentucky family, and author of a Life of Keats, his great-uncle, has assumed the editorship of the *American Magazine*.

The October proceedings of the Royal Geographical Society opens with an account of a recent survey of Christmas Island, an uninhabited island in the Indian Ocean, remarkable because of its "coral covering." This is followed by a description, by the Shah of Persia, of a new lake, which appeared some six years ago, about thirty-five miles south of Teheran. There is a tradition, to which the Shah refers, that it formerly existed, but disappeared on the birthday of the Prophet. According to the map, which is copied from that published in the Teheran gazette *Irân*, where the article originally appeared, the lake is about twenty-five miles long by five broad, and is estimated to be about thirty-three feet deep. "The water of the lake is brackish and bitter, but it is very clear and sparkling, and its color is blue." This number also contains Sir C. W. Wilson's address before the British Association on trade routes, in the course of which he calls attention to the fact that the steamers constructed for the Suez Canal route to the East "are quite unfitted for the voyage round the Cape," and that consequently the English carrying trade would be liable to paralysis in case the Canal was blocked by war or by accident. He spoke slightingly of the probable effect of the Panama Canal upon commerce, even "when completed as a maritime canal, without locks." Mr. H. H. Johnston contributes a paper, accompanied by an unusually fine ethnographic map, on the "Bantu Borderland of Western Africa," the region extending from Old Calabar to the base of the Cameroons, and interesting from the number and variety of the languages spoken in it. Mr. Johnston has collected vocabularies of twenty-three of the principal ones.

We have received the second *livraison* of Longnon's 'Atlas Historique de la France,' of which we noticed the first part some four years ago. The present instalment, like the last, consists of five plates—No. 6, containing nine small maps of France and its neighbors at various dates from 817 to 950, and Nos. 7 to 10, which together compose a magnificent map of Gaul in the tenth century. The nine small maps, with their succession of petty changes, present vividly to the eye the confusion in political relations which characterized the closing years of the Carolingian epoch. We are accustomed to reckon the division made at Verdun in 843 as practically establishing the boundaries of the kingdom of France, and in the long run it was so; but we learn from these maps that these territories were broken up in less than fifteen years, and it is not until the reign of Eudes, in 890, after several intervening changes, that we again find France with the dimensions of 843. The great map of the tenth century affords a no less interesting observation, as we learn from it (by a comparison with the maps of the earlier *livraison*) that the territorial divisions which Cæsar found in existence, B. C. 58, continued without any essential changes until the full establishment of feudalism—subdivided from time to time, but with very few real changes of boundary. The

tribe of Cæsar became the *civitas* of Augustus, and this in its turn the *gau* (*pagus*) of the Frank Empire. It will be noted that the title of this map is not *France*, but *Gaul*. It is bounded by the Alps and the Rhone; it is divided into the large provinces of Lorraine, France, Burgundy, etc., and does not therefore show upon its face just what was under the rule of Hugh Capet, and what under his contemporaries of Germany and Burgundy. The province of Burgundy, for example, was divided between the kingdoms of France and Burgundy; but to see where the line ran, it is necessary to consult the small map in Plate vi. Plate ix. contains also a small map of the civil provinces, and another of ecclesiastical divisions. We still read the hopeful announcement that the parts will appear on an average one a year.

For the sixteenth time we have the 'Publishers' Trade-List Annual,' with its catalogue of all the book-makers who choose to be represented in it (New York: Office of the *Publishers' Weekly*). In the nature of the case, the volume grows in bulk with the increase of the lists, and this year's seems the bulkiest of all. Its prime use is for the trade, but any book-purchaser can consult it with profit.

—How shall we say anything new of the 'Supplement to Poole's Index to Periodical Literature' (Houghton, Mifflin & Co.)? The same chief editor and assistant, the same unsalaried devotion, the same general scheme, the same indispensableness to the student, the same typographical proportions—what remains to tell of this addition to the 'Poole's Index' of 1882, covering the five years to January 1, 1887? In the first place, the scheme has been greatly enlarged—by taking on forty-six new associates and by indexing thirty-three sets of periodicals not existing before 1882, and twenty-eight older sets now first (at least completely) indexed. Hence the Supplement for five years fills 483 pages, or almost exactly one-third of the edition of 1882, an enormous ratio considering that the first edition of the 'Index' was published in 1848. It must needs be, too, that with the increase in the contributors the range of topics is multiplied, but this we cannot well prove. What is clear is, that the present mode of compilation, which is *current* and not retrospective, tends inevitably to multiply topics of immediate and more or less ephemeral interest, and to give the 'Index' the character of a "Conversation Lexicon," if we may use the expression—a key to "the vital questions of the day, in philosophy, social science, politics, and literature." We will instance two particulars: the chief books of the day are here indicated and embalmed in references to the leading reviews of them; and the death of any great man is signalized by grouping about his name the most striking obituary notices, etc. Spencer's 'Data of Ethics' and Tolstoi's works are examples of the first class; Darwin, Emerson, Longfellow, George Eliot, Grant, Wagner, D. G. Rossetti, of the second. Some of these personages, dead, require as much space in the Supplement as, living, in the previous 'Index'; some even more. Then there are topics which are wholly new, like Knights of Labor, Henry George, Tonquin, Home Rule, Blair Educational Bill; while old topics revive in force and receive greater absolute or relative attention, *e. g.*, Nihilism, Socialism, Civil Service, Tariff, Copyright, Divorce, Electricity, Congo, Henry Irving (who now outstrips Washington Irving). Ireland fills four and a half pages against ten and a half in 1882, and remains one of the chief topics of the English-speaking race. Finally, and still leaving unsaid many things, it should be remarked that this work is a guide to books as well as to magazine articles; to the authors of books, also, and the "men of the day" in all walks of life; and measurably to the writers concerning both. All praise again to Mr. William F. Poole, Mr. William I. Fletcher, and the disinterested men and women who have combined to spin this clue to the wilderness of current thought; who never rest, but are daily toiling over the quarterly 'Co-operative Index' which furnished the substratum of the present Supplement, and which after five years will be gathered up into a volume like that before us.

—Mr. W. Howard White contributes to the *Railroad Gazette* of October 5 some very striking observations upon the ratio of population to railroad mileage in the United States. Beginning with the year 1850, prior to which time Mr. White considers railroad building as somewhat abnormal, there has been a very noticeable regularity in the decrease of this ratio. The number of inhabitants to each mile of railroad in 1850 was 2,571, while in 1887 this number was only 412; and the decrease has been so steady as to admit of representation by a curve which seems to be hyperbolic in charac ter. There was a conspicuous interruption of the curve at the time of the civil war, and another after the panic of 1873, but its nature is not materially affected by these disturbances. Estimating the future increase of population on the basis of the past, the prolongation of the curve would indicate for 1890 a population of 396 to the mile of railroad, and the limit of the curve would be approximately reached in 1898, with a population per mile of 325. It would appear, therefore, that the normal rate of railroad building for the five years from 1885 to 1890 is about 8,000 miles a year, and that 9,000 miles would be in excess of the limit indicated by the curve. As there had been built nearly 21,000 miles at the beginning of the present year, it is clear that a halt must be called soon unless some new factor is to be introduced into the situation.

— To the satisfaction of its numerous well-wishers and the confusion of those who prophesied its early death, the *Journal of Morphology* enters upon the second year of its existence with the promise of two numbers besides the one just issued. This contains five papers, each excellent in its way, and representing as many distinct (and *strictly morphological*) subjects and modes of investigation. The editor follows up the paper in the previous number with a discussion of "the seat of formative and regenerative energy." Prof. Cope considers "the tri-tubercular molar in human dentition" from the standpoint of evolution and racial and comparative anatomy, and concludes that it "constitutes a reversion to the lemurs, and not to the anthropoid apes or to the monkeys proper." The shortest and the longest papers are Dr. Tuckerman's account of the "gustatory organs of a bat," a subject apparently but little investigated, and Dr. Patten's "Studies on the Eyes of Arthropods," which is not only good in itself, but accompanied by a remarkably complete "summary." Prof. Osborn's finely illustrated "Amphibian Brain Studies" is partly a digest of his previous publications, and partly an account of the "nerve-fibre courses," more especially those of the medulla oblongata of the "hell-bender," Cryptobranchus. There are also comparisons with the brains of the lamprey and the lung-fishes, Dipnoans. Notwithstanding some points which might be justly criticised, the paper as a whole is so instructive and suggestive as to occasion deep regret at the intimation on the opening page that the author's labors in encephalic anatomy may not be nearly so continuous as they have been since 1879.

— The September-October number of the *Centralblatt für Bibliothekswesen* contains the conclusion of O. von Gebhardt's article, in which he endeavors to trace the history of the manuscripts discovered at Bobbio in 1494, by Merula. He finds as the result of his investigations that the twenty-five titles given in Merula's list represent fifteen separate manuscripts, of which seven are still preserved in various libraries, four have disappeared, but are represented either by manuscript copies or early printed editions, and four are completely lost. Max Harrwitz gives a list containing the titles and dates of the first works printed at some fifty places, ranging from the sixteenth to the eighteenth century, correcting, with much exultation, the dates given in the 'Dictionnaire de Géographie' of P. Deschamps, whose name, by the way, he misspells. In several instances, too, the corrector is himself in error; thus he commits the egregious blunder of giving 'Klopstock's Messiah, attempted from the German by Jos. Collyer, 1795,' as the title and the date of the first book printed in New York! And a reference to so common a handbook as Cotton's 'Typographical Gazetteer' would have furnished him with still earlier dates for Bergamo, Coburg, Danzig, Novara, etc. There is an interesting account of the sale of the late Karl Goedeke's library. The attendance was small, and as a result the prices, generally speaking, were low, many a literary rarity going for a mere song. Of the collection relating to the Reformation the major part was secured by the Hamburg Library. A. Keysser reports that he has discovered in the Cologne Library a copy of the printed fragment of Cornelius Loos's treatise 'De vera et falsa Magia,' the printing of which was stopped and the manuscript confiscated by the Inquisition. The fragment comprises the first eight sheets of the work, containing the preface and chapters 1–53 of the first book. The importance of this find would be much greater had not the original manuscript of the first two books been discovered in 1886, by Mr. G. L. Burr, in the city library of Treves, as was related in No. 1115 of the *Nation*.

FAY'S CONCORDANCE TO THE DIVINE COMEDY.

Concordance of the Divina Commedia. By Edward Allen Fay, Ph.D., Professor in the National Deaf-Mute College. 8vo, pp. vi, 819. Published for the Dante Society, Cambridge, Massachusetts. Boston: Little, Brown & Co.; London: Trübner & Co. 1888.

A SLIGHT comparison of Dr. Fay's Concordance of the 'Divine Comedy' with any one of the Italian or German compilations which have hitherto had to serve us in its stead, helps one to appreciate the admiration which Mariotti expresses for the English Concordances of Shakspere and the Bible in his 'Dante e la statistica delle lingue.' Englishmen, he says with wonder, as if he were describing the invention of some new engine of war—Englishmen seem to have been induced to contrive concordances by a desire to find references rapidly; and he goes on to recommend that some diligent student of Dante should try to produce a similar marvel. A foreigner, however, has been the first to complete this most practical *Hülfsmittel* for the thousands who read and study Dante as a master, and still more for those whose pleasure it is to dissect

the 'Divine Comedy' in the most approved philological fashion.

It is strange that a concordance of the 'Divine Comedy,' a book of reference natural and necessary, as it seems to us, is really the last point in a long line of indices and vocabularies. To be sure, there has been a printed *rimario* since 1602—that of Carlo Noci, which, revised by Volpi in 1727, and reprinted by Le Monnier in 1853, is sufficiently well known. But, despite the fact that a *rimario* does not often give one a ready clue to the whereabouts of a word or passage, there was for a long time nothing better. From the fifteenth century there had been scattering attempts at compiling lists of proper names, obscure words, and the like; but the first printed matter of any value was Volpi's three clumsy 'Indici richissimi della Divina Commedia . . . che tengono la vece d' un intero Comento' (1727), which consisted of short biographical and critical notes and similar matter, alphabetically arranged under three inconvenient headings. In 1852 Blanc published his 'Vocabolario dantesco,' Carbone's translation of which (1859) is perhaps better known than the original. With this really valuable book, which contains a complete list of the words used in the 'Divine Comedy,' together with much well-arranged and usually accurate information of various kinds, progress ceases for some time. Castrogiovanni's 'Fraseologia poetica e dizionario generale della Divina Commedia' (1854) is a foolish and inaccurate phrase-book and anthology, designed chiefly for the inspiration of Sicilian youth; and Ferrazzi's 'Fraseologia' (1865), though surprisingly complete, is not even an approximation to a concordance. Bocci's 'Dizionario storico, ecc.' (1873), a small and rather rambling book with a very long title; Locock's 'Biographical Guide to the Divine Comedy' (1874), and the fragment of Count Gaddi's 'Vocabolario enciclopedico dantesco' (1876), are mere forerunners of Poletto's valuable 'Dizionario dantesco di quanto si contiene nelle opere di Dante Allighieri con richiami alla Somma teologica di S. Tommaso d' Aquino' (1885). But even this, crowded as it was with references and cross-references, which in part took the place of a concordance, was by no means suited to do the full duties of one.

Meantime there had been attempts at actual concordances. De Battines mentions two that were never published, and a third, also unprinted, 'Indice completissimo di tutte le voci contenute nella Divina Commedia,' which was compiled in 1844 at the expense of Lord Vernon. In 1883 appeared a *saggio* of 'La Concordanza dantesca' of Signor F. Vassallo-Paleologo of Girgenti. According to a recent article in the Neapolitan *Staffetta*, it would seem that the author had originally planned his work after the ordinary fashion of concordances, but that he was dissuaded by certain eminent advisers, who declared that a bare concordance would be uninteresting. What the public wanted was a book that could be read from one end to the other with pleasure—in other words, a concordance of some 2,000 pages, in which all words cited should be accompanied by a context of from five to twenty lines. The two small parts of the new work (1886), which Signor Vassallo-Paleologo has since published, are naturally ill-adapted for use, and they are, furthermore, not particularly accurate. Since 1886 no other parts have been published.

At last, however, thanks to the careful industry of Dr. Fay and to the generous interest and support of the Dante Society, we have a complete concordance to the 'Divine Comedy,' with 819 pages of text and some 44,000 references. The text is Witte's, though such words of the Le Monnier edition as differ from Witte's are inserted in their proper places, and variants of either text in the citations are carefully noted. The method of citation is best shown by an example:

"ETERNA. nel mondo. . M'insegnavate come l'uom s'*eterna*.—*Inf.* xv, 85."

Each word, *e. g.*, *buon*, *buona*, *buone*, *buoni*, is given in its proper place with the citations which go with it, and not under its theme word (*buono*), although, in the case of the "shorter and commoner pronouns, prepositions, adverbs, and conjunctions, and the more frequently recurring forms of the verbs *avere* and *essere*," the citations and references are omitted (unless there is some noteworthy peculiarity in the use of the word in question) and *sovente* is added in their stead, *e. g.*,

"DUE; DUO. *Sovente*."

Whether this method of indexing is better than that of Blanc, who puts inflections and other forms under the theme form (*buon*, *a*, *e*, *i* under *buono*) is still an open question. To the present writer it seems that it is not. One uses a concordance to find a passage from some word which serves as a clue, or else to see the various ways in which the author uses a word. In the first instance, it is just as easy to look for an inflectional form under the theme word; and, in the second instance, it is much more convenient to find all the inflectional forms under a single theme form.

It is curious, too, to note that in Dr. Fay's scheme no phrases are noticed. This is natural in most instances. *Ab antico* can be found from *antico* just as well as if it had been registered under *ab antico;* but to phrases such as *ad ora ad ora*, *a due a due*, one gets no clue whatever, for *ora* and *due* are both without citations (*sovente*). This suggests a question as to the order in which a number of citations should be arranged. Dr. Fay has two rules:

"The first of these is the sense in which the reference word is used; for instance, under the word *cielo* are first grouped together the citations in which the word means sky; secondly, those in which it means heaven; thirdly, etc. . . . The other principle . . . is the alphabetical order of the words of the context most closely connected with the reference word. These are assumed to be, for a substantive, (1) the verbs of which it is the subject, (2) the verbs of which it is the object, and (3) the prepositions by which it is governed; for an adjective, etc."

But there some 170 entries under *cielo*, and there is nothing to show where one meaning of the word ends and another begins, nor does the second principle seem other than unnatural and inconvenient. The reader can test it for himself if he will look for a line under *donna*. Perhaps the wiser plan would have been to take no other rule than that of relative place in the poem. That would have the advantage of complete simplicity at least, and it might prove to be vastly more convenient for both the maker and the user of the concordance.

But these are minor points—points for Dr. Fay to consider, if he be brave enough to undertake another great task, a concordance to the minor works of Dante. Another point of the main scheme remains to be noticed, the attempt to denote by an asterisk "words and word forms, more or less unusual, used by Dante (according to the best texts) only in the rhyme ending of the verse." By "words . . . used by Dante only in the rhyme ending," by the way, Dr. Fay probably means words that Dante uses only in the 'Divine Comedy,' for certain words which he stars are found elsewhere in Dante (*e. g.*, *Plato* is quite the ordinary form in the 'Convito.') This charge against Dante, that he used strange or obscure words or forms *per grazia della rima*, is an old one. The oft-quoted statement of the 'Ottimo' is two-sided, and the somewhat similar remark attributed to Pietro di Dante should not have much authority with us. Nannucci was the first to defend Dante, and he did it fiercely. ('Intorno alle voci usate da Dante secondo i commentatori in grazia della rima,' 1840.) Schneider (1869) tried to confute Nannucci, Zehle (1886) disproved much of Schneider, and Zingarelli (1884) has added new facts to the discussion. As a matter of fact, however, no one seems to know very much about the question. The text to all Dante's works has not yet been definitively settled, and we know as yet too little what his whole vocabulary really was. Nor has more been accomplished for the other documents which show what the written language was in the time of Dante. Until all this is known and much of it tabulated, there is little need of discussing the matter. It may be interesting, however, to notice that Schneider finds Dante guilty of breaking the rules of "good usage"—if so pedantic and academical a phrase can be used for the loose freedom of the thirteenth century—in rhyming words and for the sake of the rhyme in some 580 instances, or in one line in every 24. Dr. Fay finds the same in about 500 instances, or in one line in every 28; or, throwing aside interchanges of *i* and *e* in verb endings, where Dante seems to have had a real choice as to which of two forms he would use, in 402 instances, *i. e.*, one line in every 35. To the writer, it seems that the list is still large. A further sifting, allowing Dante a good deal of freedom in the choice of words which show some slight phonetic or inflectional peculiarity, would seem to reduce it to about 225 words, or one straining for the rhyme in every 63 lines.

Still, it is an undoubted fact that many of the difficulties in the 'Divine Comedy' are due in one way or another to difficulties in the rhyme words; and whoever has the knowledge and the industry to undertake to investigate the matter thoroughly, will be a benefactor to all students of Dante. It is to be regretted that Dr. Fay did not leave the question still open by stating what tests he had applied to words before marking them as rare. Among the words marked with an obelisk as used only by Dante (by which we understand Dr. Fay to mean only in the 'Divine Comedy') there are at least two which are also found in the 'Convito' (*colletta*, in *Conv.* iv. Canzone, and *osannare*, *Ibid.* iv, 28), and there are others which one might expect to find in other writers of the time (Nannucci gives a reference in Fra Guittone for †*Aggrato*). A list of the words marked with an asterisk and of those marked with an obelisk would also be valuable as an appendix.

Of course, the Concordance brings out many facts as to Dante's vocabulary. Mariotti had already given us the number of words which he used in the 'Divine Comedy,' 5,860 to the 5,642 of the Latin Bible, the 8,000 of Milton, and the 15,000 of Shakspere. The proportion of the adjectives to the nouns (1 to 3), the rare use of superlatives (there are only 17 in the whole poem, a mere fraction of the number in the 'Vita Nuova'), and other data which Mariotti gives, are all borne out by the Concordance. The immense importance of the verbs and the emphasis put on simple physical action are seen everywhere. *Dicere* is used about 750 times, and *facere* and *vedere* even oftener. It seems truer than ever that Dante's verse "holds itself erect by the mere force of the substantive and verb, without the help of a single epithet." The use of adjectives is sometimes very curious. *Buono* is used only 110 times, while

alto is found some thirty times more. It is just what one would have wished: *alto* is so much nearer the tone of the whole 'Commedia' than *buono*. And everywhere throughout the book there are half pages of lines which one reads with real pleasure, so significant is each fragment of the whole, so sharp is the light thrown on the recurring word in each set. One thinks involuntarily of a line of sword-points.

Dr. Fay has put on the title-page of his book the motto

"In che i gravi labor gli sono aggrati."

It well denotes the loving and accurate care with which he has performed his heavy task. His book—the first of its kind in centuries—is not for a day: full generations of lovers and students of Dante will place it on their shelves beside the 'Divina Commedia.'

AN INDIAN OFFICER.

Reynell Taylor, C.B.C.S.I. A Biography by E. Gambier Parry, author of 'Suakim, 1885,' etc. London: Kegan Paul & Co. 1888.

WHEN the British in India obtained possession of the Punjab, the duty also devolved upon them of administering a strip of territory which was not properly a part of the Punjab. This strip was known as the Trans-Indus frontier. It extended for a distance of about eight hundred miles, between the Peshawur Valley in the north and the city of Mooltan in the south, and was bounded on the east by the Indus, on the west by the Suleiman Mountains. About midway in this tract of territory lies the district of Bunnoo, a well-watered and beautiful valley, remarkable alike for the fertility of its soil and the profusion of fruits and roses which beautify the landscape. The inhabitants, however, of this lovely region did not exhibit in their lives and character the beauty of the scenery around them. A more ruffianly population than the Pathans of Bunnoo, when the British first occupied the valley, could with difficulty have been found on the surface of the globe. Their character may be inferred from a little anecdote which General Nicholson (the soldier who fell in the assault of Delhi in 1857) has recorded of a certain Bunnoochee child. Nicholson asked this child if he knew that it was wrong to kill people. The child responded that he knew it was wrong to kill with a knife or a sword. Why? "*Because the blood left marks.*" This child had graduated early in the school of murder, considered as one of the fine arts. But though the Bunnoochees admitted in theory the superior excellence of an assassination which left no revealing traces behind it, the knife was the ordinary implement with which a man avenged his wrongs upon his fellowmen. He did not care for a fight in the open field.

"His idea," to quote General Reynell Taylor's own words, "of a successful field was—time, midnight, and a long-sought rival or enemy asleep under his vine in the open air; no witness but the moon, and leisure given for three well-planted blows of a small, broad-backed knife, which makes a deadly three-cornered wound like that of a bayonet, under which a man may live long enough to drink the full bitterness contained in the knowledge of his enemy's triumph."

The free use of this small, broad-backed knife during a long space of time had induced a state of things which made of every village in the valley of Bunnoo a walled and isolated fort, the inhabitants of which did not venture, except by stealth, to enter the streets of another even though it was situated in their immediate vicinity. "When," ran the Bunnoochee proverb, "a man enters a strange village, he takes the strut out of his walk." It was seldom, however, that a man entered upon an enterprise so full of peril. Men passed from infancy to youth, from youth to old age and the grave, without in the whole course of their lives getting a mile or two beyond the walls of their native village. The valley was an incessant scene of bloodshed and murder. Village against village, chief against chief, the never-ending blood feuds were handed on from generation to generation. At the same time, the Bunnoochee was, in his own way, a profoundly religious man. He liked the practice of murder. He would, with absolute equanimity, swear away the life of another, from private spite or merely to oblige a friend; but during the season of Ramadan—the Mohammedan Easter—he was a scrupulous observer of the fast ordained by the Prophet.

"Before I close this letter," writes Nicholson to his friend Herbert Edwardes, "I must tell you of the last Bunnoochee murder, it is so horribly characteristic of the bloodthirstiness and bigotry of their disposition. The murderer killed his brother, and was brought in to me on a frightfully hot evening, looking dreadfully parched and exhausted. 'Why,' said I, 'is it possible you have walked in fasting on a day like this?' 'Thank God,' said he, 'I am a regular faster.' 'Why have you killed your brother?' 'I saw a fowl killed last night, and the sight of blood put the devil into me.' He had chopped up his brother, stood a long chase, and been marched in here; *but he was keeping the fast.*"

The Bunnoochees, however, crouching behind their walled villages, were not the sole occupants of the valley. The mountains overlooking this village were the dwelling places of the Wazeerees—a mountain tribe which presented, in their leading traits of character, a marked contrast to the Bunnoochee proper. They were as manly, brave, and truthful as the Bunnoochees were cowardly and treacherous. The difficulty of finding a subsistence in the hills had forced a considerable part of this tribe to migrate to the plains. The Bunnoochees made desperate efforts to expel the intruders. For this purpose, they even laid aside for a time their internal feuds. But the weak and dissolute denizens of the plain were no match for the hardy mountaineers, and the Bunnoochees, worsted in the field, resolved upon a peace tempered by assassination. This policy did not answer their expectations. The Wazeerees retaliated with an energy and rapidity which speedily convinced the Bunnoochees that it was inexpedient to persist in it. The Wazeerees were in consequence acknowledged as undisputed possessors of the lands which they had seized—about one-third of the valley. They looked upon the Bunnoochees with scorn, and the two races held altogether aloof the one from the other.

Such was the country and such were the people to which Reynell Taylor (the subject of Mr. Gambier Parry's biography) was sent at the age of twenty-five—a solitary Englishman, with instructions to substitute a reign of law for the system of violence, oppression, and murder which had hitherto prevailed. Reynell Taylor was one of a group of young officers whom Sir Henry Lawrence, the new chief administrator of the Punjab, had collected around himself. There was such a remarkable similarity of character in the men composing this group that a description of Reynell Taylor might, with a few trifling alterations, be accepted as a description of any one of them. They one and all possessed in a striking degree those traits of character which, among the wild tribes they were sent to civilize, were regarded as most admirable. Reynell Taylor, for example, was, from the physical point of view, a splendid specimen of humanity, a man perfectly fearless, a finished swordsman, a fine horseman, and a mighty hunter. In the martial exercises in which these Pathans of the frontier delighted, there was not, in all probability, to be found, throughout the district which he ruled, a man so expert as himself. And so it was with Herbert Edwardes, with John Nicholson, with Lumsden, and others of the group we have referred to. They were, one and all, hunters and fighters as well as rulers. They vindicated their right to rule by the splendor of their performances in the chase and the foray.

But they also possessed in common another, and, for the immediate work before them, an even more important characteristic. All Moslems are devout, in that the existence of an invisible world is an ever-present consciousness with them. "If God will" is the exclamation with which a Moslem enters upon all business whatsoever. "God be praised!" is the exclamation with which he invariably brings all business to a close. And Reynell Taylor, Herbert Edwardes, and others, like their master, Sir Henry Lawrence, were men of that evangelical type of Christianity which believes in special providences, which sees "the hand of God" in all things that it undertakes to do, and which stands, therefore, in very close spiritual affinity with the religious convictions of the earnest Moslem. Wherein these men differed from those over whom they were set to rule was all in favor of their right to do so—in the larger outlook born of western culture, in their respect for law, in their consideration for the week and the poor. Reynell Taylor was a conspicuous example of these latter qualities. A man who shrank from no danger on a field of battle, he was gentleness itself in all the relations of peaceful life. The last act of his connection with the district of Bunnoo was to found and endow a Christian mission there; but the Bunnoochees had then learned to regard him as "the good angel," and were wont to say that if all British officials had resembled Taylor, they would have become Christians without the intervention of missionaries at all. In the volume before us, the story of Reynell Taylor's exploits in Bunnoo, and other of the wilder districts of British India, is told by Mr. Parry in a straightforward and readable manner, and a strange, eventful narrative it is. All that Trans-Indus frontier, which he and his companions found so full of violence and murder, can now be traversed by a solitary traveller with as much security as one of the streets of New York.

An Epigraphical Journey in Asia Minor. By J. R. Sitlington Sterrett, Ph.D. [Papers of the American School of Classical Studies at Athens. Volume ii., 1883-1884.] Boston: Damrell & Upham. 1888.

THE delayed second volume of the Papers of the American School at Athens has now appeared, filling the gap in the series of four volumes. Of these volumes the first and fourth are occupied with eleven short papers, two of them on the inscriptions of Assos and Tralleis by Dr. Sterrett, one an important discussion of Greek Versification in Inscriptions by Prof. F. D. Allen, while six of the remaining eight describe theatres, temples, etc., in Athens or Thoricus. The second and third volumes are entirely the work of Dr. Sterrett, now of the University of Texas at Austin, and are wholly devoted to inscriptions. The third volume, which was reviewed in these columns not long ago, gave the inscriptions collected in the Wolfe Expedition to Asia Minor in 1885, while this second volume gives the inscriptions col-

lected in an epigraphical journey the year before.

Dr. Sterrett had already been initiated into epigraphical work in a journey in 1883 with W. M. Ramsay, the indefatigable explorer of Phrygia. As both desired to make further explorations in the fall of 1883, they agreed to go together so far as their plans would allow, starting from Tralles, on the Mæander, not far from Ephesus. The first part of their route through Caria, across the southwestern corner of Phrygia, and as far as Isparta (Baris) in north Pisidia, was investigated both topographically and epigraphically by both Mr. Ramsay and Dr. Sterrett, it being agreed that all copies of inscriptions found should belong to Dr. Sterrett, while all road-notes and rights of map should go to Mr. Ramsay. The maps in this volume, made by Kiepert, cover a large part of Northern Cappadocia, Galatia, and Southern Cappadocia, although the routes are also in part shown on the maps of Cilicia, Lycaonia, Pisidia, and Isauria which accompany Dr. Sterrett's other volume of the Wolfe Expedition. These new maps, quite reconstructing what was before imperfectly known, are of prime importance, and will control the cartography of the region until scientific surveys are made.

Inscriptions are not generally very inspiring reading, even to the specialist. The collecting of them requires great physical endurance, great patience, much experience, and a quick eye. What an epigrapher should not be is indicated, but not stated, in the notes in Nos. 38-87, many of which inscriptions had been previously copied and published in the *Bulletin de Correspondance Hellénique*, by MM. Collignon and Duchesne of the French School at Athens. Their readings are proved by Ramsay and Sterrett to have been hasty and careless, omitting not only letters, the beginning and end of lines, even whole lines (pp. 41, 56), but also entire inscriptions—thus saying of one square cippus (p. 101) that it is "inscribed on two sides," when, in fact, it has long inscriptions, quite legible, on all four sides. This is not the only case of such blunders; an equally bad one is noted on page 93, where, in addition to omitting one of the inscriptions on a stone, they make a blunder of fifty years in the date, by supposing the Cibyratic era to begin 25 B. C., instead of 25 A. D. It is of great importance that such work be thoroughly done, as archæologists are naturally indisposed to go over a territory which it might fairly be supposed had been recently explored by other scholars. The work of French explorers in Asia Minor during the last ten years has shown too much of this hurried and imperfect character. It is much better to take a small district and do it thoroughly. Indeed, the present trip of Dr. Sterrett covers more ground than could be fully explored, and his expedition the next year shows that he had partly learned this lesson.

Among the geographical results obtained we can mention the settling of the location of a dozen ancient towns by epigraphic evidence. Of these the most important is Tavium, fixed at Nefezkieui. The value of this discovery is seen in the fact that seven Roman roads diverged from this Tavium, and the settlement of its locality fixes many other places. The first milestone on one of these roads was found at Nefezkieni. Among other places located by epigraphic proof we notice Heraclea (No. 14), Sebastopolis (No. 25), Antioch in Pisidia (No. 92), Hadrianapolis approximately (No. 160), Pappa (Nos. 175-177), Sarromæna and Sobagena; also Mount Prien and the River Korax (Nos. 352-354). The long series of Roman mile-stones in the Trans-Antitauran region, beginning with No. 269, are of prime importance for the history of the country under the Romans. They locate the Roman roads between Comana Aurea and Melitene, and prove that Melitene was the starting-point of the roads in Eastern Cappadocia, and consequently a provincial capital under the Romans. This is a surprising fact, for, considering the great religious and political importance of Comana, one would naturally have expected to find Comana the starting-point of the Roman roads. These mile-stones give the names of the governors of the provinces, and of the emperors under whom they ruled; and it is not uncommon to find three inscriptions, one over another, on the same surface, made by successive governors who repaired the roads, the whole three being decipherable by a skilled epigrapher.

Among the more curious points brought out, we may mention that No. 21 shows descent reckoned from the mother, and possibly suggests the survival of a primitive family system among the Lycians. But this would require more evidence, as we know of cases among the Armenians of Asia Minor in which little *gentes*, named after an ancestress of mark or wealth, have grown up within a few generations. The "Pisidian gods," whoever they may be, come to light in Nos. 28-30, being invoked to punish any one who shall injure the monuments. These inscriptions also show a peculiar syntax, the dual for the plural; but not so strange as the syntax of another inscription (No. 207) in which the nominative, genitive, and accusative are all used in the same regimen after σύν. But this is no more than might be expected in a region where we find untranslatable Phrygian inscriptions (Nos. 175, 186). Nos. 56-58 give us more of the oracles used in astragalomancy, of which we have a portion in the volume of the Wolfe Expedition. Five dice were thrown. We translate a single oracle:

"An ace, three threes, and a six.
"The time is not yet favorable, but rest and make no vain attempt;
"And be not like the lioness that brings forth blind cubs,
"But plan a season of repose, and God shall give you guidance."

Nos. 243 and 245 are curious riddles; but as Dr. Sterrett gives them on the authority of a Greek physician who professed to have copied them, we shall hold them open to suspicion. Nos. 379 and 380 are interesting, as giving us further knowledge of the Caius Julius Philippus under whom Polycarp suffered martyrdom.

The volume leaves just one thing greatly to be desired. Dr. Sterrett took with him as photographer Mr. J. H. Haynes, who made several hundred pictures of ruins and scenery. There are not a few of these inscriptions that would have been much elucidated by the pictures that belong with them. We presume it is the expense that has prevented giving views of the wonderful volcanic cones, honeycombed with troglodyte dwellings. Some of the most desirable of these pictures, however, like the so-called Hittite sculptures of Eyuk or the splendid Seldjuk remains at Sultan Khan, hardly belong to the zone of antiquity discussed in this volume. If Dr. Sterrett could publish a selection of these pictures in an atlas, they would have a special archæological and artistic value.

Kiepert's labor on the maps, and Hirschfeld's long review of Dr. Sterrett's former volume, which has appeared in the *Göttingische Gelehrte Anzeigen* since our own notice was published, show the value put on our countryman's work by the two best German authorities on Asia Minor. It is greatly to be regretted that he was compelled to leave this congenial work—congenial to so few, and in which he is the sole American representative—to seek remunerative employment. Miss Wolfe, by the gift of a thousand dollars, added the fruits of a year's labor. The explorations in this volume were aided to the extent of a hundred and fifty dollars by a gift from gentlemen in Boston; but the expedition cost Dr. Sterrett personally more than ten times that amount. The men who are willing and competent to make original investigations are so rare that it is a serious loss to the reputation of American scholarship if the lack of some Mæcenas to supply the necessary funds compels them to waste such special talents and training at the teacher's desk.

Euterpe: Being the Second Book of the famous History of Herodotus. Englished by B. R., 1584. Edited by Andrew Lang. London: David Nutt. 1888. 8vo, pp. xlviii., 174.

As early as the time of Aristophanes, Herodotus was parodied and ridiculed as an inveterate story-teller; and Aristotle calls him, with some contempt, a recorder of myths or popular tales. The second book, which sketches the life and manners of the Egyptians, their religious cult and practices, and some portions of their history, is full of legends which floated on the current of the Nile in the fifth century B. C. The blindness of Pheron, and his cure by the magic efficacy of virginity; the golden gift which Rhampsinitus won at dice from Isis in the under-world; the treasury of the same monarch, and the consummate knavery of the thievish master-builder and his sons, which reappear in Greece and Hindostan, as well as in the Arabian story of Ali Baba and the Forty Thieves; the strange legend of Helen in Egypt; the marvel of the Phœnix; the tragic tale of the daughter of Mycerinus, and the device by which, to cheat the oracle, he turned day into night and doubled his allotted span of years—these and many more are excellent examples of folk-lore, whether Egyptian or foreign, whether detected in the making, or arrested on that mysterious pilgrimage from land to land which so puzzles and baffles the antiquarian. For this reason, and for its account of the religion of the earliest civilization in the world, Mr. Lang has chosen the 'Euterpe' to form one of the series which he is editing, and which began with Perrault's 'Popular Tales.'

The introduction discusses the religion of Herodotus and the question of his good faith. The latter, as we have intimated, was impugned early and often, not only in set treatises, but by casual sceptics who were too indolent to verify the facts of the historian or to heed his cautions. The caprice of criticism went so far that, while Juvenal takes the canal of Xerxes for a Grecian lie, Pliny accords to the Phœnix the honor of a grave and scientific description. Mr. Lang's essay deals chiefly with certain charges recently made by Professor Sayce in his edition of the first three books of Herodotus, entitled 'Ancient Empires of the East.' These charges are very serious and, indeed, fundamental. "Plagiarism," "affectation of knowledge," "deliberate deception," "flagrant literary dishonesty and prevarication," are some of the phrases with which the learned professor browbeats the unanswering shade of Herodotus. If they are proved, we ought to say good-bye to the "Father of History."

But, in the first place, Professor Sayce's manner does not beget confidence. He is very positive; there are no shades or degrees in his knowledge; he states matters of pure conjecture for matters of fact. He knows just where

Herodotus falsified, just where his notebook failed him, where his "dragomen" deluded him. If Herodotus withholds the name of Osiris, apparently from motives of reverential awe, it is really because he was hiding his ignorance; if he does not mention Sophocles, it is "because he had not learned him at school." These whimsical speculations, which are worth propounding as after-dinner paradoxes, are answered by Mr. Lang with a patience and urbanity which they hardly deserve. Historians like Grote and Curtius, and editors like Stein, have no such verdict to give of the character of Herodotus; indeed, he carries his own credentials. His careful readers generally become his friends. They are won by his large and humane spirit, his simplicity and good sense, his diligent curiosity, and the love of truth that is transparent through his narrative. Nowhere can they discover the shifty, vainglorious, dishonest personage, half knave and half dupe, whom Professor Sayce detects in the first three books, and who, he strangely enough admits, may be trustworthy in his history of the Persian invasion.

When we come to details, it is to be noted that the Egyptologist criticizes as history what our author expressly gives out as current tradition. "I am telling you here," he says in the 'Euterpe,' "what was told to me. Let every man adopt what seems credible to him. It is my purpose throughout my work to record what I heard from my several informants"; and this warning, given in general, he repeats from time to time, by one sign-post or another, with the most conscientious frankness and assiduity. This means, of course, that he was not professing to give history, in a strict sense: he was observing manners and customs and collecting traditions; he was doing, in fact, all that could be expected of a highly intelligent and painstaking traveller, who visits many countries without a knowledge of their language, and without access to original documents and inscriptions. The tools of later research, of the linguist and the archæologist, were not in his hands. No man was ready at that time to write a scientific history of the East or of Egypt. As Professor Maspero justly remarks of the 'Euterpe':

"He was not writing a history of Egypt. Indeed, with the best of opportunities, he could have given us only a few lists of dynasties, and have taught us nothing more than the original texts teach us to-day. On the other hand, we should have lost those marvellous narratives, with their occasional broad naïveté, which he has so charmingly repeated to us, on the faith of his guides. We should not have known Pheron, nor Proteus, nor Rhampsinitus; and this, I believe, would have been a great loss. The monuments tell us, or will some day tell us, what was done by the Ramses, the Thothmes, and the Cheops of the real world. Herodotus lets us know what was the common talk concerning them in the streets of Memphis."

The curiosity of Herodotus, to whom no trait of human nature was uninteresting, was keener, perhaps, in matters of religion than in any other subject. By training, and probably by inheritance, he was learned in mysteries and oracles and ritual. He easily identifies certain duties and rites of the Egyptians with those of his own country, and naturally concludes that they were borrowed from the oldest civilization known to him. "The hypothesis of borrowing," says Mr. Lang, "has always been a favorite with the learned." It must, of course, still be admitted, in cases where it is supported by sufficient reasons. Unquestionably, Adonis, and Aphrodite as a goddess of the sea, came from the Phœnicians; nor can we refuse the unsophisticated evidence of the Homeric hymns, and of early poetic legend sustained by historic probabilities, that the worship of Dionysus and Demeter and Apollo was imported at some early period. When, however, we widen our circle of facts and resemblances beyond those known to Herodotus, when we find, for instance, the rites of the Aztecs and the Zunis strikingly similar to those of Babylon and Egypt—we are driven to the theory which Mr. Lang has fortified in his 'Myth, Ritual, and Religion,' and which we have already discussed in reviewing that work.

The present edition of the 'Euterpe' is limited to 500 copies. The material and make-up of the volume, like that of the 'Cupid and Psyche' which preceded it, is as harmonious and attractive as a bit of rare old china. The translation chosen by Mr. Lang, with his delicate sense of literary fitness, was first printed in 1584. The translator is unknown, though the initials B. R. may stand for Barnaby Rich. He abounds in racy colloquialisms, such as, "to serve with the same sauce," "in a bad box," "I'll pipe ye such a dance," "as true as the man in the moon." His work entirely absolves itself from all care and burden of exact scholarship. He revels especially in a good story, and tells it with a delicious freedom which sometimes amounts to entire independence of the author. Compared with his slang and exuberant loquacity, the Ionic grace of Herodotus shows severely simple. But his ease and vigor and the antique flavor of his vocabulary smack of Mandeville and Marco Polo, and match to a nicety that enchanted dawn of travel and discovery which will never more return so long as Kiepert and the ordnance-maps endure.

Historical Review of the Legislative Systems Operative in Ireland, from the Invasion of Henry II. to the Union. By the Rt. Hon. J. T. Ball, L.L.D., D.C.L. Longmans, Green & Co.

THIS terse, able, and calmly written book is purely retrospective. The author eschews all reference to present politics. None the less is it a valuable contribution towards the formation of clear views regarding the settlement of the Irish question. We are not aware of any other work in which the history of the legislative systems operative in Ireland is so clearly traced. We see that probably before, and certainly after, the time of King John, legislative assemblies (under the name at first of councils and afterwards of Parliaments) were convened by the Kings of England in Ireland. Originally all who attended them were personally summoned. In the reign of Edward I. counties were empowered to send representatives. A similar privilege was soon after extended to some cities and towns. The number of counties, cities, and towns thus privileged increased along with the extension of English rule. Originally the members of these assemblies met and deliberated together. At a later date they divided into two houses. The development of the representative principle was slow and imperfect. Until the reign of Henry VIII. the natives were practically excluded; until the reign of Elizabeth neither Ulster nor Connaught enjoyed more than occasional representation, and then only to the extent of two members in the case of the former, and four of the latter. The Commons in the Parliament of James I. (called in 1613) were increased by 100 members. No qualifications of race were required from either electors or elected. The inhabitants of the kingdom were, without distinction, nominally at least, "taken into his Majesty's gracious protection." The constitution of the Irish Parliament was then a counterpart of the English. Its capacity of action was very different. It was subject to the restraints of Poynings's law, under which the approval of the Privy Councils of Ireland and England were necessary before it could pass any valid enactment. It was also checked in its action by the assumption of authority on the part of its English rival to legislate for Ireland.

Under the Commonwealth no legislative assembly met in Ireland. We have germs of the idea of union in there being a certain number of members called by Cromwell to his Parliament. Under Charles I. and under William III. and Anne, the English Parliament in express terms legislated for Ireland over the heads of the Irish Parliament. After the union with Scotland, the Parliament of Great Britain distinctly declared that it had full power and authority to bind the kingdom and people of Ireland. From the Restoration, therefore, the legislative system operative in Ireland was basely subservient to the English in all that concerned the welfare of the Irish people. It was, in the words of Grattan, "a squabbling, fretful sectary, perplexing her little wits, and firing her furious statutes with bigotry, sophistry, disabilities, and death."

Mr. Ball traces the growth of the spirit of independence in Ireland through Molyneux and Swift, the life of the Volunteers, and the establishment of Parliamentary independence under Grattan in 1782. He marks the course of events and tendencies which culminated in the union, and impartially gives the arguments for and against that measure. It is difficult to rise from this portion of the work without being impressed with the faults and failings of the Constitution of 1782. It did not stand, because it could not stand; much less could it have stood the increasing complications and closer pressure of later years. Unless Irish statesmen had shown a clearer appreciation of the situation than they did between 1782 and 1800, especially upon such occasions as the discussion of Orde's commercial propositions, a closer and more workable relation between the countries, if not effected by bribery in 1800, would have been effected by force later on. It is impossible to turn over the pages of this book without believing that Pitt and Castlereagh and Cornwallis acted with a sincere belief that their Union would ameliorate and elevate the condition of Ireland. If the experience of eighteen years brought to light the flaws in Grattan's Constitution, so has the experience of eighty eight years (whose history is outside the scope of Mr. Ball's book) proved the weakness of Pitt's Union. Let us hope that whatever rearrangement of the relations between the countries the future has in store will prove of a happier and more permanent character.

Mr. Ball appears to us too hard upon the character and doings of James II.'s Irish Parliament. It appears to us to have been broader and fairer in its spirit towards all classes of the community than those which succeeded it under the houses of Orange and Hanover. To Irishmen there must be touches full of deep pathos in every book relating to the history and constitutions of their country. In happier times to come, they will perhaps be able to read with greater equanimity than can Irishmen of the present day such passages as those which occur in one of Grattan's speeches given at considerable length by Mr. Ball, when he dwells with fervor upon the then position and glories of Ireland: "You [the Irish Parliament] are the greatest political assembly in the world; you are at the head of an immense army; nor do we only possess an unconquerable force, but a certain unquenchable pub-

lic fire, which has touched all ranks of men like a visitation."

No library pretending to any completeness regarding Irish affairs should be without Mr. Ball's book.

Cardinal Wolsey. By Mandell Creighton, M.A. [Twelve English Statesmen.] Macmillan & Co. 1888. 12mo, pp. 226.

Of all English statesmen there is perhaps none of whose character and career it is so difficult to form a just estimate as Cardinal Wolsey; not, as in the case of Cromwell, because of uncertainty as to motives or difference of opinion upon fundamental questions of policy, but because there really seems to be no accepted standard of judgment for him. He belonged in full neither to the old nor the new; or, if he did belong to the old by reason of his training and his official position, he directly and consciously prepared for the new by his prescient statesmanship and conservative spirit of reform. His pitiful subservience in the matter of the divorce has prejudiced our moral judgment against him; and yet, until this fatal temptation came to him, he appears, on the whole, an honorable man, if ambitious and self-indulgent.

Mr. Creighton has succeeded in explaining the inconsistencies and perplexities in Wolsey's career, and helping us to a correct standard of judgment. As a statesman, he rates him very high, reckoning him almost alone among English statesmen as deserving "to be estimated by what he chose to do rather than by what he did. He was greater than his achievements." But his actual achievements were not small; judged by them alone, "he was probably the greatest political genius whom England has ever produced; for at a great crisis of European history he impressed England with a sense of her own importance, and secured for her a leading position in European affairs, which, since his days, has seemed her natural right" (p. 2). This was his work as a national statesman, at that important crisis which marks the commencement of modern history, when international relations began to take a leading place in affairs, and the great international contests of the last four centuries were inaugurated. In this contest of giants, it was Wolsey who first vindicated for England a decisive place and influence. This point Mr. Creighton has worked out with care and elaborateness, and it is the key to the principal part of his work; but we are bound to say that in detail the diplomatic contests in question—perhaps the most difficult thing to narrate—are not always made lucid or even intelligible.

The chapters upon internal affairs are more satisfactory, and the closing chapter, "The Work of Wolsey," is every way excellent. His relation to the divorce is carefully discussed, and receives all the extenuation of which it is capable.

"He could not work under cramped conditions," we are told (p. 213). "When he was restricted to the small matter of the divorce, his hand lost its cunning. He was, though he knew it not, fitted to serve England, but not fitted to serve the English king. He had the aims of a national statesman, not of a royal servant. Wolsey's misfortune was that his lot was cast on days when the career of a statesman was not distinct from that of a royal servant."

"The matter of the divorce was sprung upon him, and it would have been well for Wolsey's fame if he had retired rather than involve himself in the unworthy proceedings to which it led. But the temptation to all men to think themselves necessary in the sphere which they have made their own, is a subtle one; and those who begin by hoping that they may minimize inevitable mischief, end by being dragged into the mire."

Of the divorce:

"It would have been difficult for him to find in the proposal itself a sufficient reason for withdrawing from politics, even if he could have done so with safety. Not even Wolsey could foresee the king's obstinacy and tenacity of purpose, the depth of meanness to which he would sink, and to which he would drag all around him. Wolsey found himself powerless to resist, and the growing consciousness of moral turpitude practised to no purpose degraded him in his own eyes and robbed him of his strength. When once the divorce question was started, Wolsey was pushed on to his ruin by a power of imperious wickedness, which debased others without losing its own self-respect."

"So when we speak of the fall of Wolsey, we mean more than his irrevocable loss of power. He had lost his inner strength, and no longer kept his hold upon affairs. . . . The words of the dying man are often quoted as showing the misery of those who trust in princes' favor. But they are not merely an echo of a far-off state of things which has passed by for ever. 'To serve one's country' may have a loftier and more noble sound than 'to serve one's king,' but the meaning is not necessarily different. The thought in Wolsey's heart was this: 'If I had served the spiritual interests of my country as I have striven to serve its material interests, my conscience would be more at rest.' For Wolsey was a true patriot and had noble aims. Much as he might deaden his conscience, he did not extinguish it; and his last judgment of himself expressed the sad conviction that neither his patriotism nor the nobility of his aims had saved him from actions which he could not justify, and which his conscience loudly condemned."

The book is therefore significant for two things—it shows us clearly what Wolsey did for England, and it gives us reasons for a more lenient judgment than is ordinarily passed upon him.

BOOKS OF THE WEEK.

Abbott, E. A History of Greece. G. P. Putnam's Sons. $2.25.
A Collection of Letters of Thackeray, 1847–1855. Chas. Scribner's Sons. $1.25.
Aus Kaiser Frederich's Tagebuch 1870–1871. New York: S. Zickel, 19 Dey St. 10 cents.

Two Men.

A NOVEL.

By ELIZABETH STODDARD.

12mo, paper, 50 cents. Extra Cloth, $1.00.

Mr. E. C. Stedman writes:

"How vividly, as the story goes on, each figure lives, moves, and has its being; . . . quite above the range of ordinary novels."

George Parsons Lathrop writes:

"Her realism is not petty, trifling, nor discursive. It is intense, concentrated, and deals with the deep and vital elements of human nature. . . . There is nothing imitative in Mrs. Stoddard. . . . She is a woman of genius."

Another's Crime.

HAVE JUST PUBLISHED:

The D'Artagnan Romances,

By Alexandre Dumas.

I. THE THREE MUSKETEERS. With a portrait of the Author. 2 vols. 12mo. Cloth. $3.00.

II. TWENTY YEARS AFTER. 2 vols. 12mo. Cloth. $3.00.

III. THE VICOMTE DE BRAGELONNE; or, Ten Years Later. A Sequel to 'The Three Musketeers' and 'Twenty Years After.' 6 vols. 12mo. Cloth. $9.00.

THE COMPLETE SET, 10 vols., 12mo, Cloth extra, gilt top, $15.00.

These fascinating works, of as great interest as the Waverley Novels, appear for the first time in a style worthy of their merits, translated into English, unabridged, and beautifully printed in handsome, clear type.

"Books which to see is to covet. Surely Porthos, Athos, and Aramis, and their comrade D'Artagnan, here have suitings wholly worthy of them."—*Boston Daily Advertiser.*

Of Dumas's famous creation, D'Artagnan, Robert Louis Stevenson, the popular writer, says: "I do not say there is no character as well drawn in Shakspere; I do say there is none that I love so wholly." His "favorite book" is the 'Vicomte de Bragelonne.'

Victor Hugo's Romances,

Comprising the following works, translated into English, complete and unabridged, with many important passages hitherto omitted. Uniformly and beautifully printed in large, clear type, at the University Press, Cambridge, and illustrated with twenty plates by French artists, including several from 'The Book of Gold.'

I. NOTRE-DAME. With two additional chapters, and the note to the last edition, specially translated. 2 vols. 12mo. Cloth. $3.00.

II. THE MAN WHO LAUGHS. 2 vols. 12mo. Cloth. $3.00.

III. TOILERS OF THE SEA. 2 vols. 12mo. Cloth. $3.00.

IV. NINETY-THREE. Translated by Mrs. Aline Delano. 1 vol. 12mo. Cloth. $1.50.

V. LES MISERABLES. Wraxall's Excellent English translation, the standard, with all omissions supplied, including special translations of several important chapters. 5 vols. 12mo. Cloth. $7.50.

The complete set of Hugo's Romances. 12 vols. 12mo. Cloth, gilt top. $18.00.

Large, handsome type, and clear white paper combine to make these the most beautiful and desirable library editions of these great works.

GROTE'S GREECE. New Edition.

A HISTORY OF GREECE FROM THE Earliest Period to the Close of the Generation Contemporary with Alexander the Great. By George Grote. With portrait and plans. 10 vols. Crown 8vo. Cloth, $17.50; half calf extra, $37.50.

This edition has been printed from new type, and is the best in circulation.

LARGE TYPE EDITIONS OF DARWIN.

THE ORIGIN OF SPECIES. By Charles Darwin. Sixth edition, with additions and corrections. 2 vols. Crown 8vo. Cloth. $4.50.

*THE DESCENT OF MAN, AND SE*LECTION IN RELATION TO SEX. By Charles Darwin. New edition, revised and augmented. With illustrations. 2 vols. Crown 8vo. Cloth. $5.00.

New and beautiful English editions of these most popular works of the great writer, handsomely printed in large, clear type.

LEECH'S PICTURES FROM PUNCH. New edition. Comprising nearly 4,000 sketches. 3 vols., 4to, cloth, extra, gilt edges. Price of the set, $12.00.

WHITE'S SHAKESPEARE. Popular edition. A new and cheap edition, printed from the same plates as the previous edition, with all the Notes of Richard Grant White, the eminent Shakespeare scholar. 6 vols., 12mo, cloth, $7.50.

This edition combines good large type with the advantages of the best text and most valuable notes, at an extremely low price. It includes the Plays and Poems, White's Life of Shakespeare, an Essay on the Rise and Progress of the English Drama, and considerable valuable matter not found in other editions.

CONCORDANCE OF THE DIVINA Commedia. By Edward Allen Fay, Ph.D. 8vo, cloth, $10.00 net.

CENTURY OF TOWN LIFE. A History of Charlestown, Massachusetts, 1775–1787. With Surveys, Records, and twenty-eight pages of Plans and Views. By James F. Hunnewell, author of 'The Historical Monuments of France,' etc. 8vo, cloth, $3.50 net.

LITTLE, BROWN & CO.,

The Nation

VOL. XLVII.—NO. 1218. THURSDAY, NOVEMBER 1, 1888. PRICE 10 CENTS.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

On the Senses, Instincts, and Intelligence of Animals,

WITH SPECIAL REFERENCE TO INSECTS. By Sir JOHN LUBBOCK, Bart., F. R. S., author of 'Ants, Bees, and Wasps,' 'Prehistoric Times,' etc. "International Scientific Series." With over One Hundred Illustrations. 12mo, cloth. Price, $1.75.

In the present volume the author has collected some of his recent observations on the senses and intelligence of animals, and especially of insects, and has attempted to give, very briefly, some idea of the organs of sense, commencing in each case with those of man himself.

II.

How She Did It;

OR, COMFORT ON $150 A YEAR. By MARY CRUGER. With an Illustration. 12mo, paper. Price, 50 cents.

A record of actual experiences in building a small house and in a systematic method of economic living. The narrative in every particular is based on facts, and will be found most suggestive to people with small incomes.

III.

Handbook of Historical and Geographical Phthisiology,

WITH SPECIAL REFERENCE TO THE DISTRIBUTION OF CONSUMPTION IN THE UNITED STATES. By GEORGE A. EVANS, M.D. 12mo, cloth. Price, $2.00.

In this volume the author has attempted to present a sketch of the development of our knowledge of pulmonary consumption from the time of Hippocrates up to the present day, together with the ascertained facts regarding the geographical distribution of that affection.

IV.

Hints about Men's Dress:

RIGHT PRINCIPLES ECONOMICALLY APPLIED. By a NEW YORK CLUBMAN. 18mo, parchment paper. Price, 30 cents.

A useful manual, especially for young men desirous of dressing economically, and yet according to the canons of good taste.

V.

Orthodox.

A TALE. By DOROTHEA GERARD, joint author of 'Reata,' "The Gainsborough Series." 12mo, paper. Price, 25 cents.

A very striking story of modern Jewish life in Austrian-Poland.

For sale by all booksellers; or any volume sent by the publishers by mail, postpaid, on receipt of the price.

1, 3, & 5 Bond Street, New York.

Notre Dame de Paris

By VICTOR HUGO.

Superb Edition de Luxe.

Messrs. ESTES & LAURIAT of Boston and Mr. W. R. JENKINS of New York announce a magnificent illustrated edition of VICTOR HUGO's great historical romance. The Boston house presents the work in English—a new translation by A. L. Alger—while Mr. Jenkins retains the original French, making his the first French *edition de luxe* published in America.

In every other respect the editions are identical, and are superb specimens of bookmaking. The illustrations, nearly 200 in number, are from original paintings by the celebrated artists, *Rossi Bieler* and *de Myrbach*, 16 of them being aquarelles, printed in colors especially for the work in Paris. The work is printed at the celebrated University Press of Cambridge.

Both the French and English editions make two beautiful octavo volumes, and are each limited to 500 numbered copies.

100 copies on Imperial Japan paper, colored plates in proof on Japan paper, in two satin portfolios, French text or English, the set, $20.00.

400 copies on satin finish paper, half morocco, Roxburgh style, French text or English, the set, $12.00.

Illustrated specimens sent free. Application for copies in English should be sent to ESTES & LAURIAT, *Boston; for copies in French to* WILLIAM R. JENKINS, *851 and 853 6th Avenue, New York.*

Animal Memoirs

Parts I. and II. By PROF. SAMUEL LOCKWOOD, Ph.D.

PART I.—MAMMALS. Cloth, 12mo, 317 pages. Price, 60 cents.

PART II.—BIRDS. Just Ready. Cloth, 12mo, 397 pages. Price, 60 cents.

From the New York *Tribune*, September 13, 1888.

Dr. Samuel Lockwood has written, in 'Animal Memoirs, Part I.,' a really fascinating book. His stories of the animals he has known are told with tenderness and humor; his descriptions of the characters, the idiosyncrasies of his friends, are full of sweet, attractive feeling as well as of scientific accuracy. It is a book which will not only delight children, but will teach the most valuable lessons of loving kindness.

From *The Nation*, September 6, 1888.

Dr. Samuel Lockwood is well known as an entertaining writer on natural history, and his 'Animal Memoirs: Part I. Mammals,' sustains his reputation in this particular.

Though primarily intended for supplementary reading in schools, 'Animal Memoirs' will be found admirably adapted for reading circles of young people and for the home.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 1, 1888.

The Week.

EARLY in the month of September, when the quotations from the London *Times* and *Spectator* and *Iron Era* began to look rather brassy, somebody in California conceived the idea of getting a letter out of Lord Sackville, the British Minister at Washington, that might be used for campaign purposes. He wrote professing to be a naturalized British-American, named Murchison, who asked for advice how to cast his vote at the coming election. He received a reply, dated September 13, which he held till the 22d of October, and then, though it was marked "Private," gave to the newspapers. Looked at in its true light, the letter is a well-meant although mistaken endeavor to satisfy an inquiring mind, under the seal of private correspondence. But it turns out that there is no such person as "Murchison," and that the writer was probably the local reporter of a California newspaper, who acted as decoy for the Republican managers. In other words, the letter which is now being used as the principal Republican campaign document, is the product of a petty fraud, of which intelligent and respectable Republicans in the earlier days of the party would no more have thought of availing themselves than of sharing in the profits of a confidence man. To this complexion it has come at last!

Next to the wonder which Lord Sackville's Murchison letter occasioned, must be placed the astonishment that Lord Salisbury should have failed to act upon the hint conveyed to him by Mr. Bayard, that the British Minister was no longer *persona grata* at Washington, and that his presence in a diplomatic capacity was henceforth objectionable. Probably Lord Salisbury had conveyed some kind of hint to Lord Sackville, expecting the latter to relieve him from the embarrassment of a formal recall. If so, we may attribute the tenacity with which Lord Sackville clung to his post to the same mental obtuseness that prompted him to write the Murchison letter. Between the British Minister and his chief, the original scandal has grown to considerably larger proportions, and now becomes a somewhat harrowing incident, akin to that which disturbed the earlier days of President Cleveland's Administration, when two European Governments successively refused to receive a particular person as the American Minister at their respective courts.

The dismissal of Lord Sackville is simply one of the train of consequences of the fisheries dispute—a dispute which would never have given the least trouble or uneasiness if there had been no Irish vote at stake. Both parties have been to blame for the use they have made of it; but the Republican party has been most to blame, because it took the lead in demagogy, and fairly pushed and goaded the Democrats into the same muddy pathway. By rejecting a fair and honorable treaty, by declaring against any treaty or any negotiations for one, by calling aloud for retaliation under an act which avoided all responsibility on the part of Congress for the unhappy consequences that might follow, by deriding the President from day to day, and charging him with want of courage and want of patriotism, they sought to win the votes of a class to whom American citizenship is secondary to their Irish origin, and whose patriotism looks only to means for spiting England. In order to test their sincerity, the President sent in his retaliation message, and then they became straightway dumb until the Sackville letter appeared. What they have done and said since is too fresh in the public mind to need recital.

A new Republican campaign document (not a forgery, but almost as bad) has been brought to our notice. It is dated Philadelphia, October 27, and is signed William W. Justice, Chairman. It is entitled "A Word to Farmers," and it sets forth the advantages to farmers of the tariff on grain, and says that if the Mills bill becomes a law, "grain will undoubtedly be placed on the free list also." Then it states that "with grain on the free list we would find our markets flooded with Russian and Indian wheat whenever the price here was higher than in Europe." The implication of this is that the price of wheat being higher here than in Europe is something of frequent occurrence, and likely to happen at any time. What are the facts? Simply these: that our annual exports of wheat rose steadily from $643,745 plus $7,098,570 of flour in 1850, to $190,546,305 plus $35,333,197 of flour in 1880, and were last year $90,716,481 in addition to $51,950,082 of flour. During this period of thirty-eight years there has been a progressive gain in the exports of wheat and flour, with variations depending upon the state of the harvest in this and other countries. What likelihood is there that the time will ever come when we shall be importing wheat from Russia and India, so that the farmer can have his innings at the game of grab, at which he has been cheated ever since protective tariffs began in this country?

A notable feature of the close of the canvass is the disposition of the Republicans to drop the tariff issue. Invitations from Democrats for joint debates upon this question are declined, as in the case of the Brooklyn Congressional District, where Mr. Coombs, the tariff-reform candidate, is anxious to appear before the people in company with his high-tariff opponent. A member of the New Hampshire Democratic State Central Committee reports that the Republicans in that commonwealth are dropping the tariff issue, and taking to personal abuse of the President and the waving of the bloody shirt. In Indiana the editor of the leading Republican paper, the Indianapolis *Journal*, is on the stump, devoting all his speeches to the bloody shirt. In Illinois, Gov. Oglesby is delivering speeches of precisely the same order. All this means that the "tariff scare" has not worked, and in their rage the Republicans are falling back on the old "rebel scare," which ceased to frighten anybody years ago.

The notion that the high-tariff men have no theory, is one of the strangest which have made their appearance in the canvass. It seems to have especially taken hold of Gen. Harrison, and to have originated in his mind that very absurd alliteration, "maxims and markets." The Protectionists have, like all human beings who are engaged in any policy or course of conduct, a very distinct theory. A theory is simply the belief that if one does certain things, certain other things will result. Every man acts on a theory from the moment he leaves his bed in the morning. He dresses, breakfasts, goes to business, and does his day's work on four distinct theories. What our simple-minded friend Gen. Harrison means when he calls the tariff reformers theorists, or "men of maxims," and the protectionists, practical men, or "men of markets," is simply that the "men of markets" make money out of their theory, while "the men of maxims" make none. He thinks the reformer's theory or maxim ought not to receive attention, because he does not add to his yearly income by it. What makes this notion very funny is, that it has been used in defence of every abuse the world has seen. The barons on the Rhine opposed the freedom of the river on the ground that the advocates of it had no practical knowledge of the pleasures and advantages of trussing travellers, and merely theorized about free rivers in their studies in Cologne and Antwerp. The proposal to put down blackmailing by the Highland clans on the Scottish border was resisted on the same ground—that the payment of blackmail gave security to the farmers who paid it, and an assured income to the Cateran chiefs, who were all practical men, familiar with affairs of this nature, while the enemies of blackmail were Glasgow and Edinburgh professors, who dreamed dreams and spun theories, and compounded maxims in their libraries. Not one of them had ever been out on a foray, or had ever driven a captured herd, or knew a single trail or ford along the border.

John Wanamaker, the great shopkeeper of Philadelphia, is one of the electors-at-large for the State of Pennsylvania on the Harrison ticket, and is one of the most zealous workers for the Republican party in the country. He is especially concerned for the interests of the American workingman, whom he burns to protect from the competi-

tion of the "pauper labor" of Europe. The amusing discovery has just been made that Mr. Wanamaker employs the "pauper labor" of Europe himself, having a factory for the manufacture of ladies' and children's apparel, jersey jackets, etc., at No. 15 Kurstrasse, Berlin. There is nothing strange about this discovery, however. Mr. Wanamaker has repeatedly urged the people of Philadelphia to buy goods made abroad in a free-trade country by "pauper labor," in preference to goods made by protected labor in this country, on the openly avowed ground that the former were the cheaper. The Philadelphia *Press* of June 10, 1886, contained a prominent advertisement by Mr. Wanamaker, of which the following extract is a fair sample:

We are often asked why we go 3,000 miles for things we can make at home.
The shortest answer is, We don't.
There's a heap of meaning in that little word, "thing."
American collars and cuffs, not quite so good as these we tell of now and then as coming from over the sea, we could get for 50 per cent. more money.
American collars and cuffs are made in Troy. . . . The skill of the country is gathered there. That skill controls the country.
There's a keener skill abroad, or better organization, or better facilities. Better collars and cuffs for the money.
We bring these better collars and cuffs and put them right by the side of the best American. Which will you buy?
The question is answered. You are thinking of money. The money is yours. Is it wholesome to bolster Troy at a cost of a third of your money? Is it worth your while? Will you do it? We are not such ninnies as to seriously ask you.
That's the way you reason as buyers. That's the way we reason as merchants.

Mr. Wanamaker now joins Senator Hawley upon the Chinese wall platform. He says that he buys many lines of goods abroad because he can buy them cheaper there; but he would much rather have all foreign goods shut out, so that he could buy everything in this country at higher prices. Undoubtedly, too, his customers would infinitely prefer to have him buy everything at higher prices, because then they could pay higher prices when they went to his shop. The truth is, that what this country really needs to make it prosperous is a general advance of prices. If everybody only had to pay a good deal more every time he bought anything, poverty would be abolished, and economy would no longer need to be practised by anybody. Mr. Wanamaker, as Republican candidate for elector-at-large in Pennsylvania, is ready to do his share towards bringing about the millennium. "The present protection," he says, "is evidently not enough," and for his part he wants to raise duties, "because I want to shut out foreign goods."

The Knights of Labor at Pittsburgh have been investigating the tariff-wages question for themselves, with reference particularly to the wages paid at the Carnegie Steel Rail Works at Braddock, Pa., and at the iron and steel works at Chicago. They find and report that a fair comparison is as follows: At Braddock—blast-furnace department, turn twelve hours, Keeper, $2.23; first helper, $1.70; second helper, $1.60. At Chicago—Keeper, $3.25; first helper, $2.60; second helper, $2.45. This difference is much less than that reported by Mr. John Jarrett in his testimony before the Senate Committee on Labor as existing between the wages of the Bethlehem Iron Works and those of the Chicago Mills. But, since the tariff is the same for Chicago that it is for Braddock and for Bethlehem, the question becomes important, What influence does the tariff exercise on wages, anyway? If a man receives $3.25 for a given amount of work at Chicago, and only $2.23 for the same amount of work of the same kind at Braddock, all under the same blessed tariff, what are we to conclude that the tariff does for the workingman? Do not all the tables of wages paraded by the high-tariff newspapers and orators, whether true or false, become utterly delusive and nonsensical in view of these great differences in our own country?

A correspondent asks us to examine Mr. Blaine's speech at Rochester, and tell our readers whether his quotations from Edward Atkinson, regarding the great advance in the wages of American workingmen "under the protective tariff," are true. We reply that we do not know where Mr. Blaine got his quotations, as he does not refer to any particular work of Mr. Atkinson's; but we do know that Mr. Atkinson utterly repudiates and condemns the idea that the tariff has any effect to increase wages. On the contrary, he holds the very opposite opinion, having been an advocate of tariff reduction for a quarter of a century. According to Mr. Blaine's Rochester speech, the wages of common laborers have increased 66 per cent. "under the protective tariff." Well, if that is true, it does not prove much, for some of the "pay envelopes" that have turned up since that kind of thumb-screw was applied to workingmen by their protected employers, have shown weekly wages as low as three dollars per week, or *fifty cents per day*. One such was recorded by the Plattsburg *Republican* a few days ago. Many have been produced which show a weekly wage of only *five dollars* for skilled workmen. To receive such a wage in a pay envelope is doubly insulting. It is an insult to receive the pay envelope at all, but it is a more bitter insult to receive five dollars for a week's work, and then to be told that this is high wages compared with the pauper labor of Europe. A better authority for Mr. Blaine, and one that can be more easily identified, is his own report on the cotton-goods trade of the world, in which he said:

"Undoubtedly the inequalities in the wages of English and American operatives *are more than equalized by the greater efficiency of the latter and their longer hours of labor.* If this should prove to be a fact in practice, as it seems to be proved from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world."

Mr. Blaine's statements of fact have been so discredited during the present campaign that it seems quite superfluous to say anything more about them. But there is one more item in relation to his Western harangues on Government deposits in national banks that ought to be mentioned. When we pointed out that Secretary Sherman had deposited in national banks much larger sums than Secretary Fairchild had placed there, it was replied that this was done at a time when the refunding of the national debt was going on, and that Secretary Sherman did not put the money in the banks, but merely left it there, and that there was a great difference between the two things. The difference between the two things was merely the difference between drawing a check on the banks and not drawing it. But how was it in 1873, when there was no refunding of the debt in progress? By reference to the report of the Treasurer of the United States for 1887, page 32, a tabulated statement may be found of the balance of Government deposits in national-bank depositories at the close of each fiscal year since the depository law was passed. The balance thus on deposit in 1873 was $62,185,153.64. This is considerably larger than the sum for which Mr. Blaine thinks that Mr. Fairchild is impeachable, and that any Republican Secretary would have been impeached if the Democrats had been in power. The Secretary of the Treasury was then a Republican, as all Secretaries were from 1864 to 1885. During this period there never was a time when the balance of Government deposits in national banks was less than $6,900,000; and for this or any other sum there was not, according to Mr. Blaine, "a shadow of substantial authority in law."

"The hope of the Republican party is in the young men," said Mr. Blaine in his speech at Newark on Saturday night. The declaration is no nearer the truth than Mr. Blaine usually gets, the correct statement of the case being that the hope of the Republican party *used to be* in the young men. The nomination of the party for the Presidency in 1884 changed all that. Many hundreds of young men came of the voting age in Newark between 1880 and 1884, but Newark's Republican vote for President in 1884 was only 526 larger than in 1880, while the Democratic vote was 1,800 larger than four years before. Many thousands of young men were first voters for President in the State of New Jersey in 1884, but the Republican candidate for President had only 2,811 more votes than Garfield in 1880, while Cleveland received 5,213 more than Hancock. The contrast was still more marked in Connecticut. That State had given the Republican candidate for President in 1880 a total of 67,071 votes and a plurality of 2,656, while in 1884, despite the accession to the electorate of thousands of young men, the Republican candidate for President polled only 65,923 votes, and Cleveland had a plurality of 1,276. There were many thousands of new voters in Massachusetts four years ago, but while the total poll was 20,869 greater than in 1880, the Republican candidate for President received only 146,724 votes, against 165,205 for Garfield in the previous election, and a plurality of only 24,372, against 53,245 for Garfield. Mr. Blaine is the last man in the country who

ought to call attention to the influence of the young men voters in view of such a record.

Mr. Andrew Carnegie's naturalization paper has been published at Pittsburgh. It is dated May 28, 1885. So it appears that Mr. Blaine's coaching friend, the author of 'Triumphant Democracy,' was a British subject, by his own choice, until three years ago. The statement is thrown in for what it is worth that Mr. Carnegie's father was a naturalized citizen, although his papers cannot be found, the implication being that Mr. Carnegie may have supposed himself to be an American citizen without naturalization. If this was his supposition, he must have taken steps to have himself naturalized as a British subject when he was a candidate for Parliament a few years ago. We believe that it was "G. W. S." of the *Tribune* who so cruelly derided Mr. Carnegie's aspirations. What Tory Squire could abide the thought of Carnegie making steel rails in Pennsylvania and sitting in the House of Commons for a Scotch borough at the same time? We suspect that the whole truth has not yet been told about the swapping of citizenship by Mr. Blaine's host in the coaching party.

The concern which the woollen manufacturers exhibit for the wool-growers in case raw wool should be admitted free of duty deserves a moment's attention, even in the last week of the campaign. We have given some anxious thought to the matter, and have closely examined the statistics of imports and duties, in order to see what can be done to alleviate the distress of the manufacturers aforesaid. The imports of wool amounted last year to 114,038,030 pounds, of the value of $16,351,369, and the duties collected thereon were $5,899,816. The average rate of duties on all wools, including those used for making carpets, was 36.08 per cent. Now, in case wool is put on the free list, what is to prevent the manufacturers from giving to the wool growers the $5,899,816 which they now pay to the Collectors of Customs? Nothing in the world. Putting wool on the free list does not prevent them from contributing whatever sums they choose to the encouragement of wool-growing in this country. Let them meet the wool-growers in a convention, and agree to pay to the latter ten cents a pound on all the low-grade clothing wool they import, and 12 cents on all the high-grade "in the grease," and double and treble rates for washed and scoured, and the rates for combing and carpet wools as now provided by law. The woollen manufacturers will then be no worse off than they are now, while they can wipe away all tears so far as the wool-growers are concerned.

The Democratic paper in Des Moines reprints from the Republican organ of November 3, 1884, a letter by Samuel Merrill, ex-Governor of Iowa, urging every business man in Iowa to vote for Blaine, on the ground that they could not afford to risk a change in the administration of national affairs, and going on in this style:

"No one can comprehend the disaster that will follow the turning over of this Administration to hands untried and uncertain. Confidence, already shaken by the uncertainty of the present, will be greatly increased, and few men will feel like investing in any enterprise of importance for years to come. No man in Iowa will venture to buy property and build important structures so long as dark uncertainty hangs over us. Real estate will find few sales. Most people will want to sell and few buyers. The result of this 'do-nothing' policy will be disastrous. . . . I confidently believe that, in the event of a change, real estate will depreciate more than 20 per cent within the next year. Most wealthy men will pull for the shore and close up business. They will only do what they feel themselves obliged to do in order to save what they possess. This is the tendency of the human mind, and hundreds of thousands will do it all over the country. None but a lunatic would risk his property in any new enterprise like manufacture so long as the uncertainty incident to a change of Administration should be upon us."

The Administration was turned over to "hands untried and uncertain," but, so far from ex-Gov. Merrill's having "closed up business," his bank is still doing business at the old stand, and lots of it, and its shares are worth $275 per $100 in the open market. In addition to this, it is currently reported that the Governor himself has made a cool million in judicious investments in land outside of his regular business.

Col. Elliott F. Shepard has petitioned the newsdealers to allow him a quarter of a cent more for his newspaper than they have been paying heretofore. In support of the petition he says:

"The *cost* of the paper to us, by weight, with the printers' ink put on it by the press, is more than 1 cent, and you do not believe it is right or necessary that we should *sell the paper at a loss*, for you yourselves would not do business in that way."

The Colonel, when he speaks of weight, must mean intellectual weight, because if he meant weight avoirdupois, it would be an entire mistake to say that it costs one cent—a mistake due, of course, to inexperience in the newspaper business. A newsdealer, who sends us a copy of the petition, wants to know whether the various proprietors of the *Mail and Express*, during the past six or eight years, have been "selling the paper at a loss," as the petition affirms. We think it is very likely, but not because the cost of the white paper and ink amounted to one cent per copy. The outlay for intellect has been too great, and the Colonel ought to state this frankly to the newsdealers. The discriminating talent shown in the selection of a daily text from the Scriptures is alone a heavy burden. To estimate this as low as a quarter of a cent per copy is both shameful and ruinous. If the Colonel would accept our advice, he would boldly put up the price of his paper to three cents. Then he might afford to publish a whole chapter of the Bible every day.

Canon Taylor again takes up the missionary cudgels in the last *Fortnightly*. He must know that he is inviting even more contradiction and remonstrance than his Wolverhampton address of last year met with, yet he squarely flings down the gauntlet in his title, "The Great Missionary Failure." The first part of his article is statistical. He figures out various exhibits, more or less striking, as to the rate of advance of Christian missions, showing that it would take 183 years for all the societies to convert as many as are born in one year among the non-Christian populations of Asia and Africa. But all this is nothing new, and amounts only to saying, what advocates of missions perfectly well know, and in fact base strong appeals upon, namely, that the odds are tremendously against the missionary, humanly speaking. But the champions of missions rather boast than otherwise of their not taking the ordinary human view of the situation, and the most overwhelming figures will be wasted on them. What the Canon has to say about missionary methods, however, is worthy of serious attention from all concerned. For him to appeal, as he does, from the scorn of the "well-paid secretaries at home" to the testimony of missionaries in the field is highly suggestive—for the boldness of it, if nothing else. Briefly, he urges the folly of sending out so much poor material to swell incompetent and rival missionary forces, and objects radically to the whole scheme of going among the heathen as a superior race. In any view of the case, it is significant and gratifying that these objections to missionary methods should be made, if they needs must be made, by a clergyman and a dignitary of the Church—himself, moreover, an avowed friend of missions if only rightly conducted.

The last message sent by the President of Chili to the Congress of that country reveals the continuance of national prosperity in a high degree. The Government's revenues amounted in 1887 to nearly $46,000,000, while the disbursements were but slightly over $37,000,000. For 1889, however, the estimates brought in call for an outlay of $53,000,000, the increase being due to the great number of projected internal improvements. For the extension of the State railroads alone, $7,000,000 are asked. In addition, large sums are to be spent in building prisons and school-houses, buying ships of war, and improving the national harbors. The President had already been authorized to negotiate a loan of $15,000,000 to meet these contemplated expenses; but the large surplus of the past year can now be devoted to that purpose, and no more money is to be borrowed than will be needed to pay for railroad material purchased abroad. The total foreign commerce of Chili, in 1887, amounted to $108,180,820, being an increase over that of 1886 of nearly $13,000,000. The Government is paying great attention to the question of education. In 1886 there were 862 national schools, with an enrolled membership of 78,800 scholars and an average attendance of 47,780; in 1887 the corresponding figures had become 950, 81,362, and 55,831. New school-buildings are being rapidly provided; 42 are now under way, with a capacity for 17,000 scholars, and 60 more are planned to accommodate 23,000.

THE REAL SHAME OF IT.

It is quite true, as the London *Daily News* remarks, that there is not one assertion in Lord Sackville's letter of which "an honest man need feel ashamed." He has said nothing in it which is not true, and which is not creditable to our Government. Thus, it is true that "any political party which openly favored the mother country at the present moment would lose popularity," and it is also true "that the party in power is fully aware of this fact." It is also true that the party in power is "still desirous of maintaining friendly relations with Great Britain, and is still desirous of settling all questions with Canada." If these things were not true, it would show that the party in power was not fit to direct the policy of a great civilized and Christian people; and if Lord Sackville had denied them, he would have slandered both the party in power and the best portion of the American people.

But, as the French say, every truth is not good to tell. There are truths which are unseasonable, which are not fit to be told to any person, by any person, at all times; and the foregoing truths are not fit to be told by a foreign Minister, during a canvass, to a naturalized citizen, with the view of influencing his vote. Consequently, Lord Sackville's letter was a sad blunder, but it is one of those blunders which really affect nobody but the person guilty of them. It is a serious matter for Lord Sackville. It discredits him, in the eyes of his own Government and in the eyes of his professional brethren, on the point of tact and shrewdness, about which diplomats are most sensitive, and it discredits him the more because he is not new to the country. He has been through more than one Presidential canvass, and must be more or less familiar with the tricks resorted to at such times to influence votes. To write such a letter to an unknown person, therefore, argues unfitness for his place. He has, in other words, committed a small but inexcusable and fatal professional blunder—such as all men have committed some time in their lives, and secretly blush over when they recall them—which is likely to ruin his diplomatic career.

What makes us blush just now, however, is not Lord Sackville's downfall, but the fact that his downfall should — judging from the Republican newspapers — seem to be a fact of such tremendous moment for the American people. The childishness of some of our newspapers has long furnished material for the sneers of foreign critics, but journalists are notoriously sensitive and emotional. What is humiliating in the present situation is that a great party, numbering almost half the American voters, considers, or pretends to consider, Lord Sackville's blunder one of the great facts of American history, and is bringing it to the knowledge of the world as such. Large vans are running around, laden with copies of his letter; it is printed in leaded type, and kept standing, in some papers, alongside of drawings of the British crown. It is receiving all the honor which could be given to a despatch announcing a great victory by land or sea, or the outbreak of a great foreign war, or a great scientific discovery, or the farewell address of a great statesman; and yet there is absolutely nothing in it, except that an elderly diplomatist of the second rank, appointed long ago on account of his family connections, and noted in several countries for his dulness, has offended his own Government, and that to which he is accredited, by a piece of small stupidity.

We wish we could stop here with saying that one of our great parties was acting as if it were made up of schoolboys or half-drunken laborers on pay-day. We wish we could take Dr. Storrs, or Dr. Armitage, or any of the other Republican divines or moralists into a private room, and say, "Your party, reverend sirs, is behaving in a very silly, childish way about this Sackville letter. You see, of course, yourselves, that it has no national or international importance whatever, and affects nobody but Lord Sackville himself; and you are doubtless ashamed to see so much fuss made about it, because it gives the rest of the civilized world the impression that our political contests are managed by children and their nurses, and that American adults go into retirement between the nomination and the election day." But we cannot stop here. We should have to go on, and add:

"It is not, however, the childishness of this Sackville fuss, reverend sirs, which troubles us most. It is the shameful fact that the letter was obtained from Lord Sackville by a petty fraud of the bunco kind—that is, by false pretences such as are used by the species of impostor known as begging-letter writers. It is a fraud, which, had it induced Lord Sackville to send the writer money, would have exposed the latter, if caught, to a term in the penitentiary, and which, were our law what it ought to be, and what you would doubtless wish to see it, would also send to the penitentiary a man resorting to it in order to influence a great national election. You preach vigorously against this sort of sin in your pulpits every day. You give the most solemn sanctions of theology to the lawyer's dictum that 'fraud vitiates everything.' You would not knowingly, or at all events willingly, allow a man to remain in your church who, you knew, profitted by cheating, and rejoiced over it openly and unblushingly because it gave him either dignity or emolument. You would scornfully reject the plea that the end justified the means, and would never admit that, although it was wrong for one man to lie and forge, it was not wrong for another man to make money out of the lie or the forgery, or get a wife by it. Why, then, are you silent now, in the presence of this miserable effort to convert the crime of a petty scoundrel into a huge national disgrace, to fill the chair of the American Chief Magistrate by the aid of the kind of trick by which 'bunco steerers' empty the pockets of simple-minded farmers? Do not put the question smiling by, or tell us any stories about 'the magnificent history' of the party. Your concern is, not what the party once was, but the things it is now doing. Moralists have to deal with living men and not with dead ones."

A VERY SERIOUS QUESTION.

We should like to ask intelligent members of the Republican party who are diligent readers of their own party newspapers and campaign documents, a simple question, which we put in good faith and all seriousness. It is this: Supposing that on the first of last July, through an outbreak of war, or some failure in steam or other communication, the reception of books and newspapers from England had ceased, and you were left in ignorance of what Englishmen were saying and thinking, or had been thinking or saying for some time past, about American affairs, how would you decide which way to vote at the coming election?

Again: Supposing you had not made up your mind how you would vote as late as Sunday week, and Lord Sackville's letter, which the *Tribune* is printing in leaded type as a guide to voters, had not seen the light, how would you get along?

As matters now stand, we think it is the duty of every intelligent American to ask himself these questions, and to formulate some sort of answer to them in his own mind. Thus far the canvass on the Republican side has consisted almost wholly of English news—news of what Englishmen are saying or have said about American politics, and news of what wages Englishmen are paying to their workmen. We see very clearly how this operates on the more ignorant Irish. They are expected to express through their vote simply their hatred of everything English, or, in other words, to do everything which they can discover would be disagreeable to Englishmen. Consequently, English news is all they need in the way of political guidance. When they learn what the London *Times* says, and Lord Salisbury says, and the London *Spectator* says, it is all they need to enable them to take action with regard to American affairs in every department. For instance, if the London *Times* said the Government ought to own the telegraph lines, they would know that American telegraph lines ought to remain in private hands; or if the *Spectator* said eggs ought to be taxed, they would know that in America eggs ought to come in duty free. If Lord Sackville said the weather reports in this country were unusually good, they would know that the American Signal Service ought to be abolished.

It must be admitted, therefore, that the Republican managers have, in the present canvass, made what may be considered sufficient provision for the Irish; but what about the Americans, who have no special quarrel with England, and are too busy with their own affairs to occupy themselves with spiting her? The position of this class of Republicans, and in fact of all who confine their reading to Republican newspapers and documents, is to-day most precarious. Our Protectionist friends talk a good deal of the plight we

should be in, "in case of war," if we were dependent on foreign manufacturers for the supply of our leading commodities; but that situation, deplorable as it would be, as they paint it, is nothing to that in which Americans find themselves to-day, in time of profound peace. It would be bad enough, doubtless, to be dependent wholly on England for our cloth, or our salt, or our arms, or our tools during hostilities, but nearly one-half the American people are to-day dependent on Englishmen for their political ideas, and, if communication with England had been cut off four months ago, would be unable to vote intelligently at the principal American election. This sounds incredible, but it is the literal and exact truth, and a most portentous one as regards the future of our institutions. It constitutes a danger which no commentator on our Government has ever foreseen or pointed out. The wildest alarmist of the last fifty years seems not to have dreamed of it, as among the possibilities of the future, that a great American party would openly declare its inability to construct a system of taxation without the guidance of foreign newspapers, or that any considerable body of native voters would be delivered at a great election from doubt and embarrassment by a rather vapid private letter from a foreign Minister. No American who loves his country, or cares for her future, can, in fact, ask himself to-day without a shudder, "Where should we be if the London *Times* had no articles on American affairs, or if Lord Sackville wrote no letters to strangers?"

We pointed out some weeks ago that the Republican canvass was producing little or nothing but these foreign articles, real or forged; but we supposed at that time that the managers probably had some American ideas about taxation and similar topics in reserve, and would begin to spread them abroad as the canvass approached its close. In this we have been utterly disappointed. As the weeks go by, the reliance on English guidance appears to be greater and greater. Should this very alarming dependence on foreigners for political ideas not be checked, there is, of course, no good reason why we should not see English politicians employed openly to stump the country four years from now, and elect an American President by the simple process of telling the voters that they admire his opponent and desire his success, and regulate our taxation by mentioning the imposts which Englishmen especially dislike.

Of course, our Government might continue to exist under such a system, but it would exist as our shame and not as our glory, and would certainly not exist long in its present form. In case of war with England, it might be necessary to omit an election, and make the President hold over until communication was resumed, which in our opinion would give the Constitution a fatal blow. If the practice of holding over until the London *Times* was heard from were once begun, the silence of the *Times* would undoubtedly be often procured, by purchase or otherwise, towards the expiration of the constitutional term, and the Presidential office be gradually converted into the football and laughing-stock of foreign editorial writers.

CAMPAIGN "CULTURE."

The base uses to which party managers are capable of putting "culture," when they get a secure hold of it, is well illustrated by Mr. Cabot Lodge's article in the volume issued for campaign purposes under the title, 'The Republican Party—Its History and Policies.' The article on the Civil Service, which professes to be a history of civil-service reform, is contributed by Mr. Lodge, and he certainly had already displayed the right kind of fitness for the work, by going into Rhode Island to stump the State for a ticket framed by and intended to benefit the defaulting Republican Postmaster Boss Brayton, who stole $30,000 of Government money and was never prosecuted for it. Mr. Lodge displayed very amusing fervor on his behalf, and thus marked himself out clearly for other jobs of the same kind.

This civil-service article is one of them. We cannot go over all its numerous perversions and evasions, nor are we concerned to defend President Cleveland against all its charges; we wish to notice simply its attack on him because of the number of his removals in places not covered by the law. A gentleman and scholar, as distinguished from a party hack, ought, in common fairness, in laying these removals before the public as evidences of the President's depravity, to have said frankly that most of them were made on the expiration of the officers' terms, and that a considerable number, nearly one-quarter, of the Republicans still remained in office, in the fourth year of a Democratic Administration—a thing unknown since Jackson's day. He ought also to have added that arbitrary removals in these places were never more vigorously carried on, or with more shameless indifference to the opinions of civil-service reformers, than during the four short months of President Garfield's Administration, and notably in the Department presided over by Mr. Blaine. Between March 4 and July 2, 1881, Blaine removed 37 Consuls, out of a total of 180, and these adherents of his own party! An honest gentleman could not write a party pamphlet on the history of civil-service reform without mentioning such facts as these, including the disgraceful use made, at the instigation of the same Blaine, of the Collectorship of New York, within this same period. Such things do not excuse President Cleveland's shortcomings, but they place them before the public in their true light; and this is the only light in which an American of fortune and education or a college graduate ought to consent to place them, to oblige any man or any party.

The same thing may be said of Mr. Lodge's concealment of the fact that President Cleveland's removals were not made among officers appointed for fitness, or appointed without reference to their political opinions from among members of both the great parties. He talks throughout as if the President had found, when elected, the Government service filled with highly trained, carefully selected officers, whose removal in every case, without cause assigned, was presumptive evidence of evil intent; the fact being that the unclassified service had for twenty-five years been filled exclusively with Republicans, appointed solely for services rendered to the party, or to Senators of the party, and retained in office, in a vast number of cases, through "influence," and without reference to competency; and that such things as President Arthur's appointing his own impecunious uncle to a paymastership in the army at the age of sixty, so that in two years he might retire with a pension, were by no means uncommon.

It is also highly disingenuous of Mr. Lodge to conceal the fact that, as late as 1882, assessments on office-holders were vigorously, openly, and defiantly collected by the Republican Congressional Committee, through Mr. Jay Hubbell. Mr. Lodge's assertion, therefore, that "under Republican Administrations political assessments on office-holders were given up, and the civil servants were, in conformity with the spirit of the law, withdrawn from the business of political management," is simply untrue. The New York Custom-house was never more active in the work of political management than in the canvass of 1884. Of course, it would have been the height of electioneering foolishness to put these reserves and qualifications into a campaign document; but for this reason honorable men usually refuse to write campaign documents which require evasion, equivocation, and misrepresentation. They leave them to the poor devils who need the money which such compositions usually bring.

Mr. Cleveland has certainly not fulfilled the expectations of his supporters in 1884 in the matter of civil-service reform. This is admitted by them all, so that the labors of the Republican orators and writers in proving it seem to be in a considerable degree wasted. At the same time we have no right to object to their calling attention to it in a canvass in which Mr. Cleveland is a candidate for reëlection. They have a right to point out that his promises have not been kept, and that many of the old abuses continue to flourish under his Administration. This is legitimate campaign work, but the great use of "gentlemen and scholars" in politics ought to be the doing of campaign work in an honest and loyal way. The party hack may be allowed to say, especially if his bread be dependent on it, that President Cleveland has not only failed to keep his promises, but has aggravated the abuses of the civil service—that he has not only failed to establish tenure during good behavior, but has made more arbitrary and unreasonable removals than any of his predecessors; but the Scholar in Politics ought not to say it. To him the delights of campaign lying, forgery, falsification, exaggeration, or perversion are sternly forbidden. He owes the party no service of this kind. Simple truth should, even in the most exciting canvass, be his highest skill; and if the Republican party be the kind of organization Mr. Lodge says it is, simple truth ought to make it a perpetual object of national love and admiration. Quays may come

and Quays may go, but it should stand for ever.

Another melancholy phenomenon of the same sort as Mr. Cabot Lodge in the present canvass is Mr. Theodore Roosevelt. He, too, is a young man of fortune and a Harvard graduate. Mr. Lodge knew Mr. Blaine to be an unfit person for high public office before 1884, but took the stump for him in that year, as he did subsequently for Brayton, the Rhode Island defaulter. Mr. Roosevelt knew also that Mr. Blaine was unfit, and was disgusted by his nomination, but took the stump for him just the same. He was also a tariff-reformer, if not an out-and-out free-trader, before the present canvass, but is now on the stump, talking childish gabble against tariff reform, like his brother phenomenon, Mr. Thorndike Rice, in the *North American Review*, though we believe that Mr. Rice has not had the opportunities in the matter of education of the other two. What food for sneers at colleges and culture there is for Denis Kearney in all this!

THE PIRACY OF ENGRAVINGS.

The latest appeal to the conscience of the people of the United States in behalf of honest dealing in regard to intellectual property is Thomas Humphry Ward's privately printed 'International Copyright in Works of Art: A Letter to the American People.' The author realizes that his topic is by this time a familiar one to American readers, but he asks a reading upon the ground that he does not intend to discuss the well-worn subject of literary copyright, but to consider the question only as it concerns artistic publications. Nevertheless, a considerable number of his thirty-seven pages deal with the question of protection to literary works, the chief argument being the inevitable rapid growth of a native American literature, which will, in the future, be in demand wherever the English language is spoken. "And if," he says, "your literary class becomes rapidly better and larger, it will be little less than insanity if it does not take measures to protect its interests in the other great literary mart for English writing which exists in the British Islands and throughout the British Empire. International literary copyright, in a word, is a necessity to your swiftly growing literary class."

As regards artistic copyright, Prof. Ward's remonstrance is aimed at the unlicensed reproduction of foreign engravings by the various cheap "process" methods—heliotypes, Albertypes, artotypes, etc. This kind of piracy seems to be going on at an astonishing rate. One catalogue is said to advertise as many as 1,378 engravings, another between 400 and 500, and a third about 400; and as the prices of these various reproductions (which closely approach the original engravings in appearance) range from 50 cents to $1—that is, from 1 per cent. to 5 per cent. of the cost of the originals—it is easy to believe that their sale has been widespread. To the moral argument against this state of things there is no answer; but, as Prof. Ward says, "the truth is, that the matter is not one for abstract discussion; if you hear not Moses and the prophets—that is, if you do not admit the universal application of the ordinary laws of right and wrong—then it is useless to discuss the question with you on any ground of principle. It must be argued on grounds of self-interest."

The considerations which he presents, with much force, are: (1) the need to look forward to the time when our own artists shall require protection against similar wrongdoing upon the part of European art publishers; and (2) the fact that, owing to the spread of these cheap, pirated reproductions, European engraving is actually threatened with extinction. Concerning the future of American art, Prof. Ward indicates flattering possibilities, and he speaks in cordial terms of the rising fame of our artists. "It is not only your painters and your sculptors," he tells us, "who are beginning to excel, but your school of etching has now advanced so far that, with a very little more, its leading men will take a position by the side of the most popular etchers of Europe." He mentions by name American etchers who, among others, have already become known to English buyers, and he sounds a note of warning:

> "What are we to foresee from all this? Surely that as time goes on you will develop for yourselves a school of artists, which, though it will borrow without hesitation whatever aids may come to it from European training, will yet be able to stand alone, and will in course of time delight the world. But if this is so, we on our side have a large public that appreciates fine art, that is eager for new emotions, that turns here and there in search of fresh artistic interests. You may be sure that whatever you in the next generation produce on your side of the ocean, and whatever new forms of beauty your artists and engravers combine to bring into existence, will be readily appropriated over here. Our art publishers will act as some of our literary publishers are acting now—they will take advantage of the absence of any protection for your property guaranteed by international law, and they will use the resources of the modern reproductive processes to sell in the markets of Europe, without consulting you, whatever you have made that is worth reproducing. It is painful, it is humiliating, to have to make such a prophecy; but, after all, human nature is human nature, and men are in the main governed by their interests. . . . If in the days when Europe has the monopoly of production you refuse to allow her artists and engravers the protection of your law, Europe in the days to come will certainly retaliate in kind."

Concerning the more serious danger—the threatened extinction of all high-class engraving—Prof. Ward points out that the rapid development of "processes" has, during the last ten or fifteen years, so far destroyed the American demand for the first-hand work of good engravers that their remuneration has fallen to a "heart-breaking" extent. Whereas, fifteen years ago, a publisher who issued 300 proofs of a new plate knew that he might count upon one-half being taken by New York, Boston, and Philadelphia, now these cities supply the demand with cheap reproductions, for "all but fastidious connoisseurship breaks down before the temptation to purchase for three-fourths of a dollar a *contrefaçon* of a plate that would cost twenty or thirty dollars," and the result has been that there is already so great a decline in the demand for the work of the best engravers and etchers that the "older ones are folding their hands in despair, and many of the younger are beginning to turn their talents into other lines." Prof. Ward's forcible summing up, which is at the same time a severe indictment, we will give in his own words:

> "I do not know whether those Americans who interest themselves in the future of art are satisfied with the prospect thus opened out. It seems to me that the illustration most applicable is the old and hackneyed one of the goose with the golden eggs. You are enjoying your ample provision of works of art; the talent of England and of France is working for your enjoyment, and you are profiting by it in the cheapest possible way; you can, by combining the methods of science with the productions of the artist, provide yourselves, at the cost of 80 cents, with an approximation to the work for which we have to pay twenty or thirty times as much; and you flatter yourselves that you are doing a clever thing, are spoiling the Egyptians, are defeating the monopolists, and are in a hundred other ways making the best of both worlds. I venture to submit that you are entirely in the wrong, and that, to take even the lowest ground, you are pursuing a policy that is so short-sighted as to be entirely unworthy of the smartest people in the world. You are putting obstacles in the way of the development of your own artistic class, and, with the words 'protection of native industry' on your lips, you are dealing a deadly blow against an industry which otherwise would be sure to be rapidly developed in your midst, and in the possession of which your sons and your grandsons would feel a pleasure and a pride. Moreover, and chiefly, you are doing your best to extinguish that industry in the regions of the world where it exists already; you are killing the artists in order that you may enjoy their art."

The question naturally arises, upon a reading of Prof. Ward's timely pamphlet, How would this deplorable state of things be affected by the passage of the International Copyright Bill now before Congress? A careful examination of the present copyright laws, as they would be amended by the above bill, leads to the conclusion that the proprietors of foreign engravings could secure themselves against piracy by American publishers by carefully complying with the following stipulations: (1.) Deliver, *before publication*, a printed copy of the title of each engraving at the office of the the Librarian of Congress; or deposit same in the mail *within the United States* addressed to the Librarian of Congress at Washington. (2.) Pay to the same officer a fee of one dollar for recording each title. (If a certificate or copy of the record is desired, fifty cents additional would have to be paid, but the possession of such certificate is not essential to the copyright). (3.) *Deliver, not later than the day of publication*, at the office of the Librarian of Congress, or deposit in the mail within the United States, addressed to the Librarian of Congress, as above, *two* copies of each engraving. (4.) Print upon every copy of each engraving entered for copyright, or upon some visible portion of the substance on which it is mounted, the words "Copyright, 18—(year), by—(name of proprietor)." From the time the title is recorded as above, during the term of the copyright (42 years), every person who has not first obtained the written consent of the proprietor, signed in the presence of two or more witnesses, is forbidden by law to "engrave, etch, work, copy, print, publish, or import, either in whole or in part, or by varying the main design with intent to evade the law, or, knowing the same to be so printed, pub-

lished, or imported, to sell or expose to sale any copy" of such engraving, upon penalty of the forfeiture to the proprietor of the copyright of all the plates on which the same shall have been copied, and every sheet, either copied or printed, and a fine of one dollar for every such copy found in his possession.

A bill is now pending in the House of Representatives (favorably reported) which increases the penalty to $10 for every fraudulent copy of the engraving. These penalties would, no doubt, also afford complete protection against the abominable practice, becoming so prevalent in this country, of using the very finest designs for advertising purposes or for vulgar decoration—a barbarism against which Professor Ward complains bitterly. But while the Chace bill, if enacted, will so amend the present law as to enable the foreign proprietor of engravings to recover damages in case his works are pirated in this country, it is not calculated to encourage him in seeking an American market for his productions, for it practically prohibits his sending them to a dealer in the United States to be sold. Only persons purchasing "for use and not for sale" (according to the text of the bill) are allowed to import copyright engravings, and even then, only two copies at any one time, and after first having obtained, in each case, the written consent of the proprietor, signed in the presence of two witnesses. Furthermore, all such importations are subject to a tariff duty of 25 per cent. ad valorem.

RAILROAD EXTENSION IN THE EAST.

The contrast between Russia and Turkey in their railroad policy is strongly marked. While Turkey controls fertile districts in which there seems to be a fair prospect of profitable traffic, no effort is made to develop them. Russia, on the contrary, is rapidly reaching out into Central Asia, and is coming dangerously near the Indian frontier of England. Both Russia and Turkey are equally bankrupt; but the former appreciates the importance of railroads enough to find some means of building them, while the latter opposes their construction with other obstacles besides financial ones.

The Trans-Caspian Railroad, which we described a few months ago, is now in successful operation. A little further to the south a line is being constructed into the heart of Persia. Starting at Resht, on the Caspian Sea, it runs to Teheran. Although on Persian territory, it is wholly under Russian influence. Many of the workmen are Russians, most of the others have been engaged in one way or another on the construction of the Trans-Caspian Railroad. The material is brought into the country by way of Russia, and the Government of that country seems to be making every effort to render the completion of the road as easy as possible. No definite arrangements have as yet been made for continuing it further than Teheran, but it is generally assumed that little time will elapse before it is pushed on to Meshed and Herat, in the East, as well as southward to the Persian Gulf.

Nothing can contrast more painfully with this rapid development than the supineness of the Turkish Government. It is scarcely two months since Constantinople itself has been in direct rail communication with the west of Europe, and this communication was in a certain sense brought about by the Bulgarian Government in spite of Turkish opposition. As long ago as 1883 an agreement was made by Austria, Servia, Bulgaria, and Turkey for the opening of through communication in the summer of 1886. Austria did her part promptly, opening the section of line from Buda-Pesth to Belgrade in September, 1884. The Servian line from Belgrade to Nish was opened at about the same time. From this point the system, as agreed upon by the four Powers, branched off in two directions—one line, on which the Servian and Turkish frontiers came into direct contact, running towards Salonica; the other and longer line, towards Constantinople, passing through Bulgaria on the way.

The line to Salonica was open for traffic in the early part of the present year; but it was by no means an easy question to decide who should operate it. The Oriental Railroad Company, with Baron Hirsch at its head, seemed to have the best rights in the case. But, as not infrequently happens, the Turkish Government had quarrelled with the company on a question of payment, and was not disposed to accord it the chance to operate a profitable line of this kind. The whole was finally put provisionally into the hands of a company in which Servian influences were apparently predominant. About midsummer, the direct line to Constantinople via Bulgaria was also finally completed. It was not, however, at once put into operation. Baron Hirsch, according to the agreements, seemed to have the right to operate the Turkish section, but he was denied this right on the Constantinople line for the same reason as on the other. The Turkish Government would have been glad to have it operated by the Servian company; but to this the Bulgarians demurred, and in fact refused to transport the Servian rolling-stock necessary for the operation of the company. Had this company had any real rights in the matter, it could have compelled Bulgaria to recognize them; had they had any rolling-stock in that part of Turkey, they could have disregarded Bulgaria's protests; but in the absence of both rights and rolling-stock, there was little to be done.

While every one was wondering what turn affairs would next take, the Bulgarian Government, on the 15th of July, 1888, calmly sent down a train laden with railroad officials and the necessary guards for the stations, to the end of the line thus unused, and, after ascertaining that the coast was clear, on their return dropped at each station the necessary officials and time-tables, after which they sent the Ottoman Government a rather cool note, stating in general terms that a valuable property was in danger, and that they thought it necessary to take possession of it as a means of protecting it. The Porte, as may be imagined, was far from satisfied with the turn which affairs had taken. It is by no means an unheard-of thing, even in America, to have a railroad stolen; but this particular manner of railroad stealing, and the cool way in which it was announced, was something of a surprise. The Porte attempted to persuade Hirsch, who had undoubted rights in the matter, to come and eject the Bulgarian Government; but he did not prove as willing an instrument as was hoped. As between the Governments of Turkey and Bulgaria, he felt quite as friendly to the latter as to the former. He, however, consented to operate the line on condition that he might also have given over into his hands the profitable line to Salonica, which was now run by the Servian company. But here again there was objection on the part of Servia, and it is difficult to see what will be the final outcome. At present a compromise has been reached by which the Constantinople line is provisionally operated by Hirsch; but it is by no means clear that we have as yet reached the end of the difficulty.

If such is the trouble involved in getting to Constantinople, it may be imagined that the difficulties in getting beyond it are even greater. It is some time since the system of railroads through Asia Minor and in the direction of Persia has been authoritatively surveyed; but it is still an open question how soon actual work will begin, or whether, when work is once begun, the Turkish Government may not place such difficulties in the way as to hinder its completion. At present it seems to be playing off one construction company against another in the bids for this enterprise, and shows a disposition not to deal straightforwardly with any of them. Under these circumstances, the policy of Europe in maintaining the Turkish power as a barrier to Russian expansion may react against itself. It prevents Russia, for the time being at any rate, from getting a foothold on the Mediterranean, but it insures her a clear field in railroad expansion towards the Persian Gulf. If half the accounts are true as to the natural resources of Asiatic Turkey, railroad communication with Persia should have developed in that country rather than across the deserts further to the north. But as long as Turkey is left in possession, any such result seems likely to be postponed indefinitely.

TINKERING THE FRENCH CONSTITUTION.

PARIS, October 15, 1888.

Revision of the Constitution has become a universal cry. That this revision should be the cry of the Opposition, of all kinds, is no wonder: it is more difficult to understand why the Government also has formed a scheme of revision. The Constitution is, in a republic, the highest law, the law of laws, and it ought not to be constantly modified. It is not for me to tell with what difficulties and formalities the framers of the American Constitution surrounded the revision of a single article of that instrument: you remember well under what circumstances it became possible to revise the articles relative to slavery. With the exception of those articles, what has been changed

in the American Constitution within a century? It stands now as a firm pillar, round which States and Territories can be organized; it is an object of respect and veneration to all succeeding generations; it gives to your democracy the element of fixity, of duration, which is given to monarchies by a dynasty.

The French Constitution, in its last form, dates from 1875, and it has already been revised. The revision of it is as easy as the change of an ordinary law.

"The Chambers shall have the right, upon separate deliberations, determined in each by an absolute majority of votes, either spontaneously, or at the request of the President of the Republic, to declare that there is need of revising the constitutional laws.

"After each of the two Chambers has taken this resolution, they shall unite as a National Assembly, in order to proceed to the revision.

"The deliberations concerning the revision of the constitutional laws, either total or partial, shall be determined by an absolute majority of the members composing the National Assembly."

Mark in this last article the word *total*. In the intention of the framers of the Constitution, a total revision was a possibility, and it was clearly understood in the deliberations of the Assembly of Versailles that a new National Assembly could substitute, if it chose, a monarchy for the Republic.

Jules Ferry felt that this was a danger for the Republic. He was afraid that a time would come when the representatives of the people might legally and constitutionally put an end to the Republic; and when he was Prime Minister he proposed that the right of revision should be curtailed on this special point; that a special article should be inserted in the Constitution, forbidding any deliberation in the National Assembly on the subject of the form of government. He carried his point, and the Constitution was revised in this sense; an article was inserted which makes it impossible to put to vote the question of the form of government in a National Assembly. The precaution was unnecessary so long as the majority remained Republican in both Chambers, and it would become futile if both Chambers ceased to be Republican. The axe was laid to the tree by the man who wished to protect the tree; for it was seen how easy it was practically to revise the Constitution—that it could be done in a day, with no more difficulty than any small alteration in an ordinary law.

This first revision became a signal; ever since, all the parties in opposition have taken up the cry of revision—the Monarchists in order to abolish the article introduced in the Constitution by the influence of Jules Ferry; the Bonapartists for the same reason; the Radicals because they accuse the Constitution of impotence, and wish to suppress the Senate and even the Presidency. There are obvious reasons why those who desire to substitute a monarchy for the Republic should try to test constantly the fragility of the Republic and to undermine its Constitution; there are reasons also why the Radicals, the Socialists, the Communists, the men whom nothing can satisfy, who are ardent for any change, any commotion, should cry, "Revision, revision!" Still, the cry did not find much echo till it was adopted by General Boulanger and his party.

It is difficult to explain how this party was formed and what are its objects. So far, the programme of General Boulanger is purely negative—"Dissolution, revision!" Once he tried to explain what he meant by revision, and what modifications he would make, if he could, in the Constitution. He was not much listened to, and I suppose that, by this time, nobody remembers the long programme which he read to the Chamber, and I should not be much surprised if he had forgotten it himself. The electors who vote by thousands for Boulanger, without ever having seen him or heard him, do not look upon him as a framer of constitutions, but as a destroyer of constitutions. Who are they, what are they? They are the discontented of all classes, of all ranks, of all opinions (if they have any fixed opinions); the men who follow instincts rather than ideas, who, for one reason or another, are tired of the present, and want something new, something different—they do not know exactly what. Imagination has more to do in the affairs of men than is commonly supposed, and, strangely enough, General Boulanger has caught the imagination of the people. I heard some time ago an old diplomat, a man who has had a great experience of the world and who has travelled in every part of it, say to some people who were criticizing Boulanger, and were trying to prove that some of his actions would ruin him: "You are mistaken. He is an idol. I have travelled in the East and seen many idols: I always found that the uglier they are, the more miracles they perform."

It would be a long and painful task to show how the Republicans have allowed the tide of discontent to rise to its present level; how the "République aimable" of M. Jules Simon, the "République athénienne" of Gambetta, made way by degrees for the present Republic. It would be even more difficult to analyze the process by which all the discontent crystallized, so to speak, round General Boulanger. He appeared first before the eyes of the people as a soldier on horseback, sword in hand. The people see him still as they saw him first, though he no longer wears his uniform, and has been thrust through in a duel by a lawyer. It was thought that after this duel he was a finished man; a short time afterwards three departments returned him by overwhelming votes. Next year there will be general elections, and committees are already formed in every department. I am told that everywhere the Monarchists are obliged to count with General Boulanger and his party: the popular tide is with him, and they dare not oppose it. We must expect to see in the provinces a coalition of Monarchists, Bonapartists, and Boulangists. They will probably vote together on a purely negative platform, without any definite conventions or arrangements, for the sake of victory.

It is needless to show the dangers of such a policy. Lord Palmerston once said that a man on horseback was in coalition with the horse; only, when you form coalitions, you must always be careful to be the horse. Who can tell who will be the horse in this extraordinary coalition of the monarchical forces and of the enigmatical and unnamed forces which go under the name of Boulangism? The real alliance to be feared is the old alliance between Cæsarism and democracy, the alliance which placed Napoleon I. and Napoleon III. on the throne, and which has always ended in a deadly struggle between France and Europe. It seems as if, in the face of such dangers, the Republicans ought to learn some prudence and wisdom; they have still in their hands the keys of the house, but now they themselves propose to rebuild it. M. Floquet, who is our Prime Minister, is the new architect; he also cries, "Revision!" thinking that he can shout it louder than General Boulanger. The plan of the ministerial revision is, it must be confessed, most extraordinary. The rights of the Senate are curtailed with regard to the veto of the budget; yet the Chamber of Deputies has not made such a good use of the finances of the country that a little advice from the Senate should be thought unnecessary. The July number of the *Bulletin de Statistique du Ministère des Finances* gives the amount of the expenses incurred since the war of 1870, outside of the ordinary budget. It is seven milliards, and seven hundred millions of francs. As has lately been said, "The State spends every year five or six hundred millions more than it receives from the regular taxes and sources of revenue."

Still, the prerogative of the Chamber in matters of taxation is a point which can be discussed: but what shall we say of the proposition made by the Government to deprive the President of the right of dissolution—a right which he can use only with the consent of the Senate? This is another diminution of the senatorial power, as well as a diminution of the Presidential power. The most extraordinary part of the scheme of revision, however, seems to me to be the gradual reëlection of the Deputies—one-third going out every two years, so that there would never be a general election. The Ministers appointed by the Chamber would remain in office so long as a partial reëlection of one-third should not have taken place, and could not be upset in the interval of two partial elections by a parliamentary vote. Two years of office would be thus assured to every Cabinet. I leave you to judge if this change can be recommended in a country where the ministerial responsibility is complete, and where the Ministers have to appear every day before Parliament. Everything can be tried in politics; but I can hardly imagine the coexistence of a Chamber and of a hostile Cabinet. This measure is proposed as a remedy for the instability of our cabinets; but the only true remedy is the election by the people of a large and united majority. The present House is cut up into groups and fractions, and cabinets are upset in turn by coalitions of groups. This may be a great evil, but I don't see how it can be remedied except by the electors.

Correspondence.

THE PARTY NOT A PERSON.

To the Editor of The Nation:

Sir: One more word ought to be said to men like Dr. Storrs, who believe that the Republican party is entirely wrong in this campaign, but continue their support because it was right twenty-five and thirty years ago. Their sophistication comes from giving personality to the party. In their conception, the party is a personal existence, that can claim fealty. If this fealty is not given, the person failing to give it is a "traitor to the party." If the party is wrong, its errors are to be condoned, like the errors of an individual, in view of its previous good record, and in the hope that its general spirit of rectitude will speedily bring it back from its lapses from sound political virtue. There is not a greater error enslaving the minds of educated men than this conception of the nature of parties. The correct conception of a party is, not that of a personality which has rights over men, but that of an instrument for achieving political results, to be cast aside whenever it fails to answer one's purpose. It is only an aggregation of men who act together as a party because they have common purposes to achieve. As soon as there are divergent purposes, there should be new combinations of men.

This truth is brought out by a brief history of the Republican party—or rather Republican parties, as there have been a number of them.

Thirty years ago the Republican party was an aggregation of men who stood for the exclusion of slavery from the Territories, for free speech, for a Homestead Law. These purposes have all been achieved, and the men who made that Republican party are mainly dead and buried.

A little later, the men who stood for the Republican party had entirely distinct purposes from the first party. They stood for the carrying on of the war for the preservation of the Union, for the destruction of slavery in the slave States, as a war measure. These purposes have all been achieved, and the men who were that Republican party are largely dead and buried.

A little later, the aggregation of men who, united by common purposes, made up the Republican party, stood for the adoption of certain reconstruction measures and for certain amendments to the Federal Constitution which were to conserve the results of the war. These purposes have also been achieved, and the men who made this Republican party are mainly dead and buried. The issues for which that particular party worked are as extinct as are those of the adoption of the Federal Constitution of 1788.

The next Republican party had for its common purpose the resumption of specie payments. But that issue is as dead as the preceding ones. It is as dead as the adoption of the Copernican astronomy. We all feel that loyalty to the Copernican astronomy should have no controlling power in fixing our present party associations.

During all this history, the aggregation of men who have made up these Republican parties has been a varying one. As men have favored the issues that were called Republican principles, they have united themselves with the like-minded men who constituted the party; as they have disfavored them, they have withdrawn from the party.

Now, in this present year of grace, what does the Republican party stand for? It stands for the perpetuation of tariff abuses. It stands, contingently, for free whiskey. It stands for profuse expenditures of the public money. It stands for the perpetuation of sectional hate. It stands as the firm friend of monopolies, as is conclusively shown by the history of the Republican Senate during the past twelve years. It stands for reckless indifference to cordial relations between the English-speaking peoples. The cause of vital religion and of civil liberty rests largely upon fraternal relations between the English-speaking peoples. The welfare, not of one race like the negroes, but of all races, is involved in their peaceful comity. The men who needlessly put a strain upon the relations of the two foremost English-speaking peoples are traitors to civilization and to the highest interests of mankind.

The party stands for blind, stupid opposition to everything that President Cleveland does. When history comes to be written impartially, one of its most ridiculous recitals will be of the stolid stupidity with which the Republican leaders have arrayed themselves against every step taken by President Cleveland, whether right or wrong. Every Republican President for the twelve years preceding the present quadrennial has pointed out the necessity of tariff revision. Every intelligent man knows that tariff revision has been desirable. At last, when it becomes imperative because of the accumulation of a dangerous surplus in the treasury, merely because the subject is brought forward by President Cleveland, the whole party rushes savagely against it, with all the stupid ferocity of a bull in the arena, inflamed by a red flag.

Those who are in favor of the principles of the present Republican party should vote for its platform and its candidates. Those who are opposed to these principles, and still vote for them, have their minds under a worse than negro bondage; for I can see no way of removing their enslaving chains. It is a libel upon Lincoln and the Republican fathers to say that the present Republican party is their party, *for they had the independence of mind to break away from old parties when their course was antagonistic to the welfare of man.*

I cannot refrain from a somewhat rough *reductio ad absurdum* of the claim that one owes loyalty to a party like loyalty to a woman. Men in the attitude of Dr. Storrs would say, "I know that thirty-four years have impaired Polly's beauty—that she now wears a wig, and that her eyes are dull and lifeless; that her cheeks are sunken and hairy, and that her teeth are gone. But she once had raven tresses; once her eyes were full of liquid fire; once her cheeks were round and rosy like a peach; and once she had teeth of pearly whiteness. She will always be the same beautiful Polly to me that she was at first. I shall always cling to Polly." Now, the real question is not one of good looks, but of character. *What if Polly has lost her virtue? What about clinging to her then?* J.

DEFINE THE ISSUE.

To the Editor of The Nation:

Sir: I observe a growing conservatism, not to say timidity, in the statement by Democratic leaders of the position of their party on the tariff question. I do not believe there is anything in the political situation which makes this apparent weakening of the moral nerve either wise or politic.

There is a large element now supporting the Democratic party because it believes that that party has definitely entered upon a course whose destination is practical free trade—tariff for revenue only. The voters composing this element do not believe in absolute free trade, at any time—that is universally admitted to be impracticable. They do not desire the destruction or unnecessary injury of American manufactures, or the endangering of investments therein. They believe that protection is the proper policy for certain stages in the growth of a country, and that when it is abandoned it should be slowly and experimentally. But they also believe that it should never be the permanent policy of any country. They believe that limitations on trade should be a means, not an end, and that when the end has been accomplished they should be promptly discarded; that such restrictions are not in the line of social progress, are being outgrown as parts of the social machinery—like slavery, spoils-of-office, subsidies, standing armies, conquest and war—and will some day be left behind in the march of modern civilization. And they are confident that any great political party, in a great, free, prosperous, and progressive country like this, which makes the permanent retention of such restrictions the chief plank in its platform, will see the day when it will be ashamed of such a record.

These men whom I am speaking for—and whose opinions in this regard I think I am fairly expressing—believe that some of the infant manufactures of this country, which have been protected thus far, are now grown up and can go alone, and that others are getting so well on to their legs that they can manage to get along quite comfortably with less protection. They therefore believe that the time has come to reduce the contributions which the whole people have been making towards the support of these two classes of manufactures. They are not asking now that the contributions to the first class shall entirely cease (although they cannot quite see why they should not). Out of "abundant caution" they only demand a comparatively slight reduction — a mere loosening of the grasp, confident that it will be promptly tightened if the interests affected shall prove to be injured by the experiment. But what these men insist on, primarily, as the acknowledged end of the course upon which the Democratic party is entering, is this—that, as fast as each protected industry shall reach the point where it can, from its own resources, compete with the world, or where it shall be demonstrated that it cannot be prosecuted in this country without a perpetual bounty, the protection of such industry shall be, gradually and carefully, withdrawn; until, when the last industry shall have passed this point, there shall result what I have called practical free trade.

I believe there is another element now supporting the Democratic party which will not insist upon the definite recognition of this ultimate policy. They are men who are, or were recently, members of the Republican party; and if it should be admitted that the Democratic party hold the same doctrine as to protection that the Republican party now holds, that both parties are for readjustment and reduction of the present tariff along the line of the same general principle, and that the only difference now between them on the tariff question is mere matter of detail as to the specific items upon which the reduction should be made, then I believe that when these men I am speaking of come to understand this as the status of the two parties, they will no longer be for the Democratic party.

The reasons are not far to seek. These men helped to make the history of the Republican party during the war period, and they are proud of the record. It was something of a struggle for them to abandon their share in such portion of the glory of the old party as had been inherited by the new one. The history of the Democratic party during the same period is as obnoxious to them as that of the Republicans is agreeable, and their second sentimental twinge, when they felt themselves compelled to support that party in the present political aspect, grew out of the fear that their individual political careers would sometimes be confounded with the Democratic war record. It is not reasonable to suppose that these men will leave the Republican for the Democratic party if they shall come to believe that there is no difference in principle between the two. Notwithstanding the blunders of the Republican leaders, and the late and probably insincere attempt of some of them to put the party in the line of tariff reduction for the purpose of meeting the exigencies which the campaign has developed, it is probable that these men would prefer in such a case to remain in the Republican party, and strive to reform it from the inside, rather than leave it for a party whose superiority over theirs would consist alone in the fact that this year it is consistent and undoubtedly sincere in its effort to reduce the present tariff.

The men for whom I am assuming to speak are, I think, supporting the Democrats upon the assumption that the following is about the status of the two parties on the tariff question, allowing that the recent action of the Republican Senators is sincere and will be endorsed by their party: The Republicans will not touch the tariff at all unless it shall become necessary to do so in order to reduce the surplus

revenue; and in that case, and for that purpose alone, they will reduce the tariff where the reduction will not affect the protected class—that is, they will make the reduction on such articles as cannot be produced in this country, or, failing enough of these, then on those of which a small proportion (compared with the demand) can be produced in this country. The Democrats say that, while the reduction of the surplus revenue is the first thing to be done, it is merely incidental to the chief thing to be done, which is to commence the readjustment and reduction of the tariff on the line of making the principal reduction in the duties on those articles which can be produced in this country, and the manufacture of which in this country is being protected after the need for protection has ceased, and the largest proportion of which duties is going into the pockets of private parties instead of into the public treasury; and to continue the contest along this line until, through the development of the country's resources, we reach practical free trade. They say, if we are paying more duties than we ought to on articles which cannot be produced in this country, "Very well, that shall be remedied; but all such duties go into the treasury for the benefit of the whole people alike, and so our first duty is to stop those duties which are unjustly received by private parties at the expense of all."

Here seems to be a well-defined issue between the two parties, on principle, and the men I speak of do not as yet see any reason for obscuring it. You will not catch a New England State by telling its voters that your party was the first to advocate the reduction policy, and that the Republican party only adopted it when they were frightened into it by the developments of the campaign; but you will catch and hold voters all over the country by bravely standing by the great principle which underlies the position of your party on the tariff question, and which will mark the difference between the two parties, not only through this campaign, but all through the coming years, during which this is to be the dominant political issue. It is with this principle that you are furnishing a rallying-point for the men from both parties who have been struggling for years to keep our legislative processes out of the grasp of the powerful monopolistic element. JOHN W. ELA.

CHICAGO, October, 1888.

THE PRESIDENT AND THE VETO.

TO THE EDITOR OF THE NATION:

SIR: The frequency with which Mr. Cleveland has used the veto power has been the subject of much severe comment by various Republican speakers for some time past, and particularly by Mr. Blaine in several of his recent addresses. I propose, with your permission, to inquire whether or not the condition of affairs has arisen in which its frequent and vigorous use is necessary, and, further, whether the spirit of the Constitution does not imperatively require it.

The power of the negative was conferred by the Constitution with the double object of checking rash and preventing corrupt legislation. Its framers realized how easily, in the rush of business, corrupt legislation might pass unnoticed, unless the responsibility for its examination was definitely located, and how completely this precaution would discourage it. On the other hand, they also realized how liable are large elective bodies to rash and unwise impulses, and how necessary it was to provide an agency by which, without an absolute veto, sober second thought could be enforced. They did not intend a despotic Executive, nor can any Executive armed with only a qualified veto, with the power of Congress and the Judiciary to contend against, ever hope to become despotic; but it was equally remote from their intention to create a weak one, and the fear of this constituted the objection to an Executive Council. It was not intended to make the President a mere administrative figure-head: the veto power and the privilege, not only of stating to Congress the condition of the country, but of suggesting to it a definite line of policy, would, it was calculated, enable him to affect, not only the administration, but the legislation of the country, and to maintain his weight and dignity in the Federal system.

For some years past, it is now commonly felt, there has been a steady tendency towards that centralization of power which the makers of the Constitution feared; but, instead of concentrating upon the President, it is Congress that has absorbed this additional power, subtracted, on the one hand, from the States, and, on the other, from the President himself. The Supreme Court is gradually winning back for the States the authority of which they have been unknowingly deprived; but the only agency that can reclaim for the President his original prerogative is the President himself. This, I think, has been the effect of Mr. Cleveland's vigorous assertion of his powers; and, so far from being a perversion or abuse of the Constitution, I firmly believe that it was the indifference and weakness of his predecessors which allowed a great abuse to gain firm foothold, the executive power seriously to be impaired, and all the corrupt influences at work in Congress to have unobstructed play.

Alexander Hamilton, in Essay No. LXXIII. of the *Federalist*, in which the veto of the President is considered, has, among other things, this to say in its defence:

"A power of this nature will often have a silent and unperceived, though forcible, operation. When men, engaged in unjustifiable pursuits, are aware that obstructions may come from a quarter which they cannot control, they will often be restrained, by the bare apprehension of opposition, from doing what they would with eagerness rush into if no such external impediments were to be feared."

In a state of affairs, then, in which this hindrance ceases to be dreaded—Congress itself being able but imperfectly to examine the numerous small bills apparently so harmless and plausible that are presented to it—practical immunity is granted to every corrupt influence that is brought to bear upon it. Mr. Blaine, as an old member of Congress—and a member, too, who, if we can judge from extracts published from his private correspondence, must have been quite familiar with this branch of its business—Mr. Blaine must know how many bills are hurried through Congress in the hope and expectation that they will never be exposed to the light of day. Does it not point to a decided impairment of the President's power, to a dangerous departure from the spirit of the Constitution, when Congress has thus learned to count upon the Executive's approval? I lay particular emphasis upon these so-called "private" bills, because the President's vetoes have usually fallen upon measures of this kind; but it is no less necessary that the restraining effect of a possible veto be felt in legislation of a more far-reaching nature. In this, too, Mr. Cleveland has realized for us the kind of President the Constitution designed—a man who should see to the execution of the laws, and the force of whose individuality should be felt in making them. To such a President, Congress must feel a direct responsibility; and whether they work in unison or in discord, the result must be a definite policy, upon which the country is given frequent opportunity to pass.

I have said that the Presidential office has lost prestige within the last twenty years. The power of the veto and the power of recommendation are of less avail to influence Congress than the judicious distribution of the public offices. Whether or not this be the cause, the President has gradually lost influence over the policy of the Government; he has become merely a machine to execute the will of Congress. The effect of this has been to deprive Congress of the head which the Constitution provided; and I believe that much of the aimlessness and incoherence of our legislation for some years past is due to the fact that the President has ceased to be a force in shaping its counsels. The experience of the Congress just adjourned seems to indicate that, with a man of positive force in the Presidential chair, Congress is bound to evolve some systematic policy. It has been repeatedly suggested of late that this end can be best secured by making the President simply an executive, and enforcing some form of responsibility within Congress itself. The present is not the time to discuss this proposal; but this much we may say—that, whenever the President does become such, whether by a formal amendment to the Constitution or by force of precedent, then the necessity for the entire reorganization of Congress becomes absolute.

It is worth while remarking, under these circumstances, that the great statesman of the Republican party has so little perception of the need for a strong and vigorous President to direct and lead the legislature, that he censures an attempt to revive the strength of the Executive by reëstablishing the natural relations between the President and Congress; nay, more, he is not conscious of any imperfections in the perverted system which he seeks to perpetuate. No one who knows Mr. Blaine will be surprised at this; but, for the benefit of those who are still dazzled by his "brilliancy," it may be permitted once more to remark that, to the consideration of a question which demands the talents of a statesman, he has brought only the arts of a politician and a demagogue. F.

LOUISVILLE, KY., October 26, 1888.

MINISTRIES.

TO THE EDITOR OF THE NATION:

SIR: While we are waiting for the result of the great lesson of the election, it is well not to lose sight of the almost equally important lesson, even for us, which is working itself out in France.

No doubt a great many people regard this as showing how bad it is that the Ministry should have seats in the Chambers, and a conclusive proof that no such thing should be tried with us. It may be answered that the evil is not because, but in spite of, this condition. The present state of politics in France is a part of the long illustration, since 1789, of the impossibility of government by legislature, and the necessity of strong executive power. In the panic which is creeping over the country at the anarchy and impotence of the Chamber, men's minds are turning towards revolution and Boulanger or some stronger man. The one single chance that they have of pulling through peacefully (and this chance is unfortunately growing daily less) is in some Minister arising strong enough by constitutional methods to command the support of the country and compel the Chamber to do his bidding. But this chance is only possible through giving to the Ministry a fighting ground in the Chamber. No one thing could be done more certain to

bring on revolution and a military dictator than to withdraw the Ministry from public contact with the Chamber. The factions would fly at each other's throats in a way which would make the country howl aloud for a saviour, even if that saviour were a Louis Napoleon.

The state of things is best illustrated by the finances. The reason why the English national finance is the best in the world is, that it is practically in the hands of one man. Parliament never enforces an amendment to the budget, or, if it does, does so at the risk of causing the Ministry to resign, and is held in check by a wholesome fear of dissolution, while there is no standing committee on the subject, for which the country cannot be too deeply grateful.

In France the Budget Commission bullies the Finance Minister without stint. It will neither accept his plans, nor make any plans of its own. The result is that the accounts of any year cannot be got settled, no definite control can be obtained, either of revenue or expenditure, and chaos is rapidly settling down over the whole system. But, at least, the Finance Minister, by being in the Chamber, lets the country see where the difficulty is, as is made clear by the comments of the press. If he were excluded, the Budget Commission would at once disappear from the public eye, would carry on its squabbles and jobbery and intrigues in the secrecy of the committee room, and the ruin would be none the less certain, and more speedy, because unseen. (Perhaps an analogous case may suggest itself, with the modification that a surplus is much more easily dealt with than a deficit.) Morever, if the Minister's tenure of office were any less uncertain outside of than in the Chamber, it would be because he would become so insignificant as not to be worth the expenditure of force.

Three things the recent experience of France does show to be necessary, viz.: that the Ministers should have fixed terms of office; that the Chambers should be reëlected at fixed and not too long intervals; and that the President, appointing the Finance Minister, should be elected by the whole people.

(1.) If the Finance Minister is to contend successfully with the Budget Committee, he must be independent of it. Of course, the Chamber will go with the Committee against the Minister every time, not because he is of this or that party, but because he is the executive and they the legislature. If he is dependent upon the Chamber for his tenure of office, he is of course defenceless against and the mere tool of the Budget Commission. If, on the other hand, he receives his office through the President from the nation, and cannot be turned out, he can show fight, and make the country understand that the issue is whether he or the Budget Commission is to control the finances—a problem which I imagine would not long remain doubtful.

(2.) In France, dissolution depends upon the President, with the consent of the Senate; and as he is elected by the Chambers, and, like the Senate, is mortally afraid of the other branch, it is a feeble weapon. Moreover, being uncertain as to time, it is, like death, less feared, and the voters are less prepared for it. If elections came at regular and certain intervals, numbers would have their eyes always turned thither, while the people, knowing they would have to exercise a choice at such a time, would watch the conduct of members. If this is not quite true in this country it is because, owing to the exclusion of the Cabinet from Congress, and the secrecy with which business is carried on, the voters do not and cannot know what their members are doing, or whether they are doing anything.

(3.) From the way in which President Carnot is received in his tours through France, it does not appear that he is any less popular than Gen. Boulanger, or that if he chose he could not satisfy the demand for one-man power in a perfectly constitutional way. If he would tell the people that the danger lay in the supremacy of the Chamber and of the Budget Commission, and that it was absolutely necessary that his Ministers should be supported, the Chamber would soon begin to get some strong hints. Even the Boulanger scare has had a wholesome effect upon members. But M. Carnot will not do this. He was elected by the Chambers, and they knew their man. He is not the elect of the people, and he will not, even if he could, talk to them as if they were in direct relations.

How different it is in this country! I suppose it will be admitted that the issue of tariff reform in this campaign was almost wholly owing to Mr. Cleveland's message; without that, it would have dragged on with the old generalities and personalities. It is a wonderful instance of the power of a personal appeal from an elected official to his constituents, while Congress and its party managers are eliminated and thrown aside in an amusing manner, and probably not much to the satisfaction of that august body.

I should like to point out how the same power of the President could be used in the detail of tariff reform; but it is too big a subject for the end of a letter, and will, moreover, have more point after the election. G. B.

Boston, October 27, 1888.

THE GENESIS OF THE LONDON *TIMES* FORGERY.

To the Editor of The Nation:

Sir: In a copy of H. C. Carey's 'Slave Trade, Domestic and Foreign,' printed in 1867, but copyrighted in 1853, appears the following, credited to the London *Times:*

"When the Celt has crossed the Atlantic, he begins for the first time in his life to consume the manufactures of this country, and, indirectly, to contribute to its customs. We may possibly live to see the day when the chief product of Ireland will be cattle, and English and Scotch the majority of her population. The nine or ten millions of Irish who by that time will have settled in the United States, cannot be less friendly to England, and will certainly be much better customers to her, than they now are."

No date is given, and it is therefore impossible to verify the quotation. It is certainly as brutally frank as the famous sentence to the same effect ascribed by Republicans to the same source. This you affirm to be a forgery, and implore gods and men to punish the perpetrator and circulators thereof. H. C. Carey has manufactured the quotation, taken it at second-hand, or it is true. Those who, like the editor of the *Nation*, have watched the drift of English sentiment on Irish affairs, as reflected in the London *Times* and other approved organs of English opinion, will readily admit that, if Mr. Carey's quotation be untrue, it has a remarkable verisimilitude.

Yours, etc., E. M.

Englewood, Ill., October 20, 1888.

[We thank our correspondent for his not too gracious indication of the probable source of the forged quotation from the London *Times*. We will add that it is to be found on page 191 of the edition of 1872. One may well be surprised that a work on the 'Slave Trade,' copyrighted in 1853, when the South was astir to reopen the traffic, owing to the rising prices of slaves, should have been thought worth reprinting in 1867, and even as late as 1872. The fact is, however, that the title conceals a protection diatribe against Great Britain as a manufacturing monopolist, in the course of which Mr. Carey reinforced the old pro-slavery "argument" that the poor of Ireland were as truly slaves as the blacks at the South. It is in this section of his work that an article from the London *Times* is disjointedly cited, without any hint of the date of it except that it was after the British census of March 31, 1851, and presumably as soon as the population statistics were made public.

These statistics showed an extraordinary falling off in the population of Ireland, as the result of the famine and the consequent wholesale emigration to the United States. We infer from the fragments reproduced by Mr Carey that this exodus was made the text of an article in the *Times*, which, observing the rate of a quarter of a million a year, anticipated a thorough evacuation—as did the Connaught *Western Star*, also quoted by Mr. Carey on page 189. The *Times* saw in this a providential remedy for "the inveterate Irish disease" ("surer . . . than any human wit could have imagined"). Convinced that Ireland under the Celts could never be prosperous and happy, the *Times* viewed with satisfaction the prospect of the Irish forsaking their country to mingle with the Anglo-Americans, and giving place at home to the "more mixed, more docile, and more serviceable race" inhabiting Great Britain.

This may be thought an unsympathetic, calculating, and selfish view of the great westward movement, but we do not ourselves find it "brutally frank." The *Times* wished no harm to the emigrants, but, on the contrary, predicted for them across seas a degree of prosperity and happiness such as seemed unattainable in Ireland. If we compare the sentiments of this Tory journal with those held at the very same time by Mr. Carey's great chief, Henry Clay, and by Northern and Southern divines in plenty, with regard to colonizing the free or emancipated blacks of this country under compulsion—and for their commingling, not with a higher race, but with the barbarous natives of Africa—we must admit that the American inhumanity was unspeakably the greater.

Since our correspondent pretends that the extract which he restores in its true language, if not in its connection, and the base counterfeit to which the Republicans have given unblushing circulation, are "to the same effect," it is necessary to print the latter once more, even if *ad nauseam:*

"The only time that England can use an Irishman is when he emigrates to America and votes for free trade."

If "E. M." thinks the true extract as well qualified as the false to serve campaign purposes in winning over the Irish vote, let him use his influence with the Republican managers to substitute it in their lying documentary appeals to race hatred.—Ed. Nation.]

HIGH-PRICED BREAD.

To the Editor of The Nation:

Sir: I notice that some of the labor organizations have adopted resolutions protesting against the recent advance in the price of bread, and denouncing "Old Hutch" as a public enemy. So far as these organizations are supporters of Harrison, is not this action somewhat inconsistent? They object to cheap clothing, because, as Mr. Harrison says, a cheap coat implies a cheap man under the coat. Or, to take the ordinary Protectionist view, if high-priced wool and woollen goods benefit the laboring man by stimulating industry, is not this much more true of high-priced bread? We produce ourselves but a moiety of the wool and woollens we consume; but we produce all, and much more than all, the wheat and flour. If, therefore, it is an advantage to workingmen to make woollen goods artificially dear, it should be a much greater advantage to make bread artificially dear. Assuming that "Old Hutch" is really responsible, instead of denouncing him as a public enemy, they should laud him as a public benefactor. J. M'L. S.

Dayton, Ohio.

THE NORTHERN CONSUMER'S VIEW.

To the Editor of The Nation:

Sir: It is frequently urged by Republicans (I see by your issue of the 25th inst. that the Boston *Commercial Bulletin* has recently taken up the cry again), that the Mills bill sacrifices Northern to Southern interests, the contrast being usually made between wool and sugar. As regards these articles, certainly, there is an answer to be made which must appeal to every man and woman who is not above counting the cost of the necessaries of life.

Sugar is probably used to the same amount per head in all parts of the country (unless, indeed, its presence in mint juleps raises the Southern average), so that, while all who look at the tariff from the consumer's standpoint would have been glad had the Mills bill done more for them in this respect, Northerners cannot complain that they are worse off than Southerners.

With wool the case is different. That part of the country which would be most benefited by any lowering of the present exorbitant price of all kinds of woollen goods is obviously the North, because, being the colder region, it uses far more wool, both for clothes, blankets, and carpets, than does the sunny South.

I believe that, as a matter of fact, the South raises more wool than the North (Mr. Mills's own State, as you point out, raising the most of all), so that the charge of sectionalism is groundless; but, even apart from this, it is clear that, as far as free wool—the most radical and probably the most criticised feature of the Mills bill—affects the interests of the mass of the community, the North is favored by that measure far more than the South. C. C. B.

Philadelphia, October 26, 1888,

A CORRECTION FROM BISHOP BECKWITH.

To the Editor of The Nation:

Sir: In your issue of October 18, page 305, I find what purports to be a quotation from me in these words: "The old-fashioned Gospel of Christ and Him crucified has satisfied the world for centuries, but a new era is upon us." I certainly never intended to make such a statement, nor do I think that I ever did. What I tried to say—and thought I did say—was, that "the *old-fashioned mode of preaching* the Gospel of Christ and Him crucified has satisfied the world for centuries, etc." I think that the sentence with which I am credited in the *Nation* conveys the idea that, in my judgment, the new era which is upon us demands some change in "the old-fashioned Gospel of Christ and Him crucified." Nothing can be farther from my belief. I do not think that those who heard me misunderstood my meaning, which was simply this: The faith of many of our young men in the fundamental truths of the Christian religion is being shaken; therefore, instead of the old-fashioned mode of preaching the Gospel, which took for granted the soundness of this faith, our preaching should be in defence of the faith and in answer to those who deny it.

My faith in the "old-fashioned Gospel of Christ and Him crucified" is the very foundation of all my hopes; and the study of the "new theories" which characterize this age has only strengthened my belief in the statement of the great master of induction—the Apostle Paul—that "the invisible things of Him from the creation of the world are clearly seen, being perceived through the things that are made, even His everlasting power and divinity."

Trusting that you will pardon my troubling you, and that you will do me the favor to make for me the desired correction, believe me

Most respectfully yours, etc.,

John W. Beckwith, Bishop of Georgia.

Atlanta, Ga., October 26, 1888.

PROF. PAYNE ON GERMAN BOOKS ON EDUCATION.

To the Editor of The Nation:

Sir: I leave it for your readers to judge whether the two sentences quoted below in parallel columns are equivalent. The first contains what Prof. Payne *did* say, the second what, according to his letter in your last issue, he *intended* to say:

"To be even approachable, a German work on the philosophy of education needs to be translated twice, first into English and then into English common sense."

"The speculations of a German educational philosopher frequently need, not only to be turned literally into English, but to be paraphrased . . . in order to come within the ready comprehension of the ordinary reader."

The sentence at the right, as I understand it, expresses a commonplace which applies to any book in any language, if "the ordinary reader" means one reading his own language only. I neither took Prof. Payne's original utterance in that sense, nor do I look upon the teachers in whose midst it was made as ordinary readers. Rather than charging one who fails to give to his original statement the sense of his subsequent interpretation with "a gratuitous assumption . . . for an unworthy purpose," it behooved Prof. Payne to say what he intended to say, and to state the *worthy* purpose for which it was said.

Mr. Drew's remarks are for the most part irrelevant; the question is not one of the merit of German literary style, especially not of the style of authors who lived and died before the vast majority of the most valuable works on education were written. I felt justified in bringing this subject to the notice of your readers, considering that it must be of some interest to them to know how far university students of pedagogy are encouraged to pursue that science in a broad and scholarly spirit. On this point Mr. Drew's letter throws no light whatever. Yet he will admit that Matthew Arnold and Mr. Hosmer could not have given us their valuable contributions to the study of German education and literature, had they been frightened in their early manhood by the horrors of the "awful German language." It is also clear that occasional criticisms of the defects of German style from the pens of such writers can neither appear ungracious nor repel any student. Y.

Notes.

A. D. F. Randolph & Co. will publish immediately 'The Historical Memorials of Canterbury,' in a limited large-paper edition uniform with Dean Stanley's 'Memorials of Westminster,' 'The Autobiography and Memorials of Samuel Irenæus Prime,' edited by Wendell Prime; 'The Testimony of Justin Martyr to Early Christianity,' by the Rev. Geo. T. Purves; 'The Only Way Out,' a story of doubt and belief, by Leander S. Keyser; and 'The Peerless Prophet,' a Life of John the Baptist, by the Rev. Archibald McCullagh.

Additional announcements by Houghton, Mifflin & Co. are 'The Witch in the Glass, and Other Poems,' by Mrs. S. M. B. Piatt; 'A Blockaded Family,' a story of the war from the Southern side, by Mrs. Parthenia Hague; and 'People and Countries Visited in a Winding Journey Around the World,' by O. W. Wight.

T. Y. Crowell & Co. have nearly ready an unabridged translation—the first ever made—of Tolstoi's 'What to Do,' in an inexpensive popular form; 'Her Only Brother,' from the German of "Heimburg" (Bertha Behrens); and 'Scotch Caps,' by J A K, a story for young folks.

The Victor Hugo furore still prevails. Estes & Lauriat of Boston and W. R. Jenkins of New York have in hand a magnificent illustrated two-volume edition of 'Notre Dame de Paris'—the former firm in a new translation by A. L. Alger, the latter in the original French, with adornments in common. There will be nearly 200 illustrations, sixteen of them aquarelles. The University Press, Cambridge, will manufacture the work, of which there will be 500 copies in each set.

Encouraged by the great success of their most beautiful edition of 'L'Abbé Constantin,' with photogravure illustrations by Mme. Madeleine Lemaire, MM. Boussod, Valadon & Cie. are going to issue this year a similar edition of M. Guy de Maupassant's 'Pierre et Jean,' with illustrations by M. Duez and M. Lynch. The choice of book is not so happy. M. Halévy's novel was delightfully brisk and perfectly proper, while M. Maupassant's is sombre, analytic, and rather unpleasant in tone.

'The Curse of Marriage,' a novel by Walter Hubbell, is in the press of the American News Co.

Much interest should attach to 'The Life and Letters of Mary Howitt,' edited by her daughter, of which the English publishers will be the Messrs. Isbister; and to 'Dante Gabriel Rossetti as Designer and Writer: Notes by W. M. Rossetti,' which Cassell & Co. will issue.

We learn with great pleasure that Macmillan & Co. are about to issue, for the Society of Dilettanti, a new edition of Penrose's invaluable 'Principles of Athenian Architecture,' the result of the author's recent year in Athens. The greater part of the present book will remain as it is, but there will be much new matter relating to the Erechtheion; the temple adjoining it, of which the remains were brought to light not long since; the Propylaia; the older

Parthenon ; and the Temple of the Olympian Zeus; and a number of plates will be added.

Apropos of the Erechtheion, in the destruction of the so-called "Odysseus bastion," erected by the Greek general of that name at the northwest corner of the Acropolis, an inscription was discovered last spring which appears to be a portion of the famous building account of the Erechtheion. It is of especial importance, because it proves that this temple had a pediment (αἰετός) at both its eastern and its western end, and therefore a pointed roof—a fact that has never been established before. The inscription is published, but not described, by Lolling in the last number of the Athenian *Mittheilungen des Instituts.*

Four holiday gift-books on our table bear the imprint of J. B. Lippincott Co. The best of these is not new, except in size, being Keats's 'Lamia' with the notable illustrations of Will H. Low, which suffer less than might have been expected by the present reduction, and, decoratively viewed, hardly any. The book is now handy for enjoyment of the poem as well as of the designs, is less cumbersome, and still makes a handsome show on the centre-table, the cover being very tasteful and ornamental. Altogether crude and uninspired are the etchings which are supposed to add something to the classical texts of Goldsmith's 'Traveller' and Goethe's 'Hermann and Dorothea.' Only the typography of the former can be praised: that of the latter is much too condensed for beauty. Both these volumes have a smart binding in leatherette, or "new-style leather." The last book of the above group is 'Béranger's Poems,' a collection of upwards of fifty translations gathered together by Mr. William S. Walsh. He has, he says, been careful to omit what was indelicate; but as the collection is truly representative, this point can hardly be insisted on—witness Thackeray's version of "Le Grenier," to mention no others. The most of the translations are by William Young, William Maginn, and Robert Brough; more than a fourth are anonymous. Half a hundred unexceptional renderings of so difficult a poet were not to be counted on. "Les étoiles qui filent" is an example of failure not without excuse. The volume is well printed, has a few explanatory notes, and a number of copies of old-fashioned steel plates that adorned some early French edition. The binding is attractive.

The illustrated edition of Henry C. Work's well-known poem 'Marching through Georgia' (Ticknor & Co.) does not achieve distinction. The best woodcut is a portrait of Gen. Sherman, which serves as a frontispiece.

In Margaret Sidney's 'Old Concord, her Highways and Byways' (D. Lothrop Co.), the purchaser will find both a practicable guide-book to this historical locality and an agreeable fireside itinerary. The pleasant discourse is much aided by very judicious selections of bits of scenery, houses, interiors, etc., copied after nature by "process" engraving. These are charming enough. Among them occurs the Public Library, and one can but feel that this institution is a better guarantee of the permanence of what was good and great in the past of the quiet town than the richest of historical associations and traditions, and the various memorial monuments and tablets exhibited in this handsome volume.

We may fitly join with the foregoing a brief mention of Mrs. Ednah D. Cheney's 'Louisa May Alcott, the Children's Friend' (Boston: L. Prang & Co.). This is an unaffected account, for children, of the life of Miss Alcott, especially as reflected in her juvenile stories, and has been written with the utmost good taste and sobriety. A few pen-drawings of homes and residences are scattered through the text. An appendix preserves a few family poems by Miss Alcott and her father.

Likewise for children is the 'Longfellow Remembrance Book' (D. Lothrop Co.), the work of several hands, but the poet's brother and biographer has the largest and the best share in it. He has the knack of addressing the young, and tells them here nothing that will fail to interest them. There are numerous helpful illustrations.

Geo. Routledge & Sons send us two fancy almanacs for 1889. That designated "The Kirmess Almanac" we can only say is appropriately illustrated — not very well — with dancing groups of various nationalities. Kate Greenaway's smaller Almanac is in her usual vein of pastoral daintiness, with no change in the dramatis personæ or in her color scheme, and with little art in drawing where the puppet model does not serve. Herrick, Milton, and Shakspere furnish the sole text.

'A Winter Picnic,' by J. and E. Dickinson and S. C. Dowd (Henry Holt & Co.) gives a chatty description of the pleasant spending of several months in Nassau by a party of ladies, and of their modest housekeeping there. The most interesting portions relate the peculiarities of the colored population. The length of the book is out of proportion to its attractiveness, and the too frequent careless familiarity of the style borders on rudeness to the reading public. However, it may be useful as a guide-book.

An amusing illustration of the public demand for sugar-coated instruction is 'Molly Bishop's Family,' by Catherine Owen (Houghton, Mifflin & Co.). Under the guise of a story, we find a sort of compound treatise on domestic matters: for instance, on the training of babies, the choice of furniture, the financial and culinary management of a small boarding-house, etc., not to speak of recipes for meat-pies and other things. Fortunately, good sense pervades it, and no doubt it will prove useful to many.

It is with great pleasure that we record the publication of 'The Dramatic Year, 1887–1888, Brief Criticisms of Important Theatrical Events in the United States,' edited by Edward Fuller (Boston: Ticknor & Co.), because it shows that a literary interest in the acted drama is increasing ; and as this interest is brought to bear, it will in time have its effect on the contemporary stage—an effect which cannot but be wholesome. Mr. Fuller's preface intimates that this is probably the first of an annual series, and we trust that its success will encourage him. The volume contains twenty-seven papers on important plays, performances, and productions, seen in New York and Boston during the past theatrical season. These papers were written by the editor, in part, and in part by Messrs. H. M. Ticknor, L. H. Weeks, G. E. Montgomery, J. R. Towse, C. T. Copeland, and B. E. Woolf (who supplies an analysis of "Ambitious Amateurs," *i. e.*, Mrs. Langtry, Mrs. Potter, Miss Banks, Miss Mather, *et al.*). Mr. William Archer contributes an incisive review of the London theatrical season of 1887–1888, which he says will be marked in his memory "by two delightful pictures, indelibly printed—the pictures of two American actresses in two Shaksperian characters: Miss Anderson as *Perdita*, and Miss Rehan as *Katharine.*" In the succeeding annual issues it would be well to append a double index of plays and of players.

Shakespeariana for October (Philadelphia: Leonard Scott Publication Co.) is an exceptionally valuable number. The symposium, "How did you become a Shakspere student?" is rather disappointing, though it is something to learn that Miss Helen Faucit gave the needful impulse to Mr. Halliwell-Phillipps to begin that pursuit of Shaksperiana which has attained such prodigious dimensions. Mr. Talcott Williams furnishes a bibliography of the "Taming of the Shrew," and Helen A. Clarke a list of Shakspere "operas, operatized dramas, and overtures," with dates of first representations.

The November number of the Photo-Gravure Company's *Sun and Shade* is much the best of the three thus far issued. The two classes of plates are kept by themselves, instead of being mingled as heretofore, and violent contrasts have thus been avoided. Moreover, a decided "actuality" is given to this portfolio by two capital photogravure portraits of Messrs. Morton and Thurman, and by one of Mme. Jane Hading, whose histrionic art is now claiming our admiration. In landscape we have a rough yet tender woodland scene from the brush of William Hamilton Gibson, and a prospect of the battlefield of Gettysburg, from nature, the point of view being Little Round Top. The excuse for this latter plate is the bronze statue to Gen. G. K. Warren erected on the summit. This gallant soldier looks in the print like a Quaker pedestrian surveying the scene, field-glass in hand; or, if we make out that his sword is not a staff, then he seems but the hero of Quaker guns. Architecture is pleasingly represented by an engraving of the Tower of Catherine de Médicis at Blois.

The first paper in the *Scottish Geographical Magazine* for October is Mr. H. H. Johnston's entertaining account of his explorations in the Cameroons, originally read before the British Association. In view of the German phonetic spelling, Kamerun, he gives as a reason for retaining the common form the fact that it is not, as they appear to think, a native word, but is simply a corruption of the Portuguese "camarões" (shrimps), betokening the abundance of these animals in the adjacent waters. Among other excursions, he ascended to the highest peak of the Cameroon Mountains, which he found to be 13,508 feet above the sea. He dwells upon the great value to the white residents of the coast of the mountain slopes as a sanatarium. That a European climate was within two days' journey from the pestilent swamps of the Delta seems to have been a fact up to this time very strangely ignored. It is encouraging to learn that sweet wines "are rapidly usurping the place of rum and gin in native estimation." An interesting account of a recent journey in Little Russia, by Mr. E. Delmar Morgan, and Mr. H. R. Mills's "Sea Temperature on the Continental Shelf," both of which were read at Bath, complete the number, with the exception, of course, of the usual geographical notes, which are compiled with great care and completeness.

Excavations are being conducted at Mykenæ with great results. It now appears that there are pre-Homeric tombs on all sides of the city, cut or dug into the hills like the "Treasury of Atreus," with passages leading to them, though, if we may judge from brief descriptions received, much less pretentious in size and style. Remains of bodies found show that they were not burned, but laid at full length in the burial chamber, and large numbers of prehistoric ornaments, of an Oriental character, have been found.

—General Sheridan's reminiscences of the march of the German army from Gravelotte to Sedan, which *Scribner's* offers its readers this month, make a paper of very great interest as an expression of the man himself, as

well as for the sake of the personages whom he so closely observed, and of the critical events which he witnessed. The principal figure is Bismarck, and it must be acknowledged that no pen has drawn the Chancellor with so life-like strokes. It is not that Bismarck said or did anything remarkable; but Sheridan saw the man, and he has related small details in such a way as to give that elusive personality which biographers seek often in vain. It is not too much to say, without intending any derogation by the reference, that Boswell himself did not render the old doctor with greater directness. It is a paper which must be read entire, however, in its own words. The military criticism is slight. The force of the whole lies in the clear ocular sight, if one may use a seeming tautology, both of the eminent men and of the field of operation; and Sheridan had the gift of telling what he saw. The second paper of leading interest is the survey of the working life of railroad employees. The whole corps is covered, from the hero of the locomotive to the station agent. The variety of work needed to sustain the system is set forth fully, and the responsibilities and hardships of the hands strongly brought out. The peculiarity of the employment is that a single error has such fatal consequences, and hence there must be a continual strain, which few men can support without sometimes relaxing the tension. It is observed that, notwithstanding the many improvements which have diminished the chances of injury to the employees, it is necessary still to hold the corporations to their duty in this respect by law. This is a disagreeable truth. The writer gives to the employees generally an excellent character, and what he says goes to show that strikes are not fair exponents of what the men really are. Mr. Stevenson's opening chapters of "The Master of Ballantrae" promise exciting adventure, and contrast with the quiet and somewhat despairing ending of "First Harvests." Mr. Stimson exercises a doubtful power in an author in wreaking vengeance on the characters he hates and detests with so thorough a good-will. Mr. Birrell's article upon Arnold, Mr. Brownell's on "French Manners," and General Greely's upon our "Winter Climate" also deserve mention in this sterling number.

—*Harper's* is full of beautiful illustrations of the engraver's art in landscape, and of striking or curious cuts of ancient and foreign objects. The paper upon the Lower St. Lawrence, while it is excellent in its choice of subjects and in its literary touch, fades out beside the series of illustrations, which give the characteristics of the landscape and the people with a freshness and vigor and picturesqueness that bring them home to the eye at once. The writer upon the Boats of the Tagus, too, is indebted to the sharply-lined cuts of the strangely-rigged craft which live in its waters, for the precision with which his words are realized. In the article upon Elk-hunting, likewise, though the tale of adventure and slaughter is well told, with a sportsman's relish, and something of the true sportsman's regret that any other than himself should do the exterminating, many readers will find the pictures of the splendid, great-antlered animals the more enjoyable. Theodore Child employs the combined arts of photography and engraving in a more utilitarian fashion, to set before the reader the image of the interesting curiosities which are housed in the Museum of the Hôtel Carnavalet at Paris, and which illustrate the history of the city from the earliest times. He selects the objects of the Revolutionary period to form the bulk of the article; and between the cuts and the gossip of the text, the paper is one of the most successful from his very prolific pen. The most entertaining contribution, however, is by Charles Gayarré upon the New Orleans Bench and Bar in 1823. It is novel in its method, and reproduces the figures of Mazureau and Hennen, Grymes, Edward Livingston, and Moreau Lislet, taken as typical lawyers of the French-English régime, in a series of scenes from the court-room, conducted in dialogue between judge, jury, and the opposing counsel. The vivacity and strength of these reminiscences are remarkable; and as a contribution to a most perishable and a most attractive part of our provincial history, the article has real interest beyond its powers of entertainment. We should mention, too, Mr. Richard Wheatley's account of the New York Real Estate Exchange, with several excellent portraits, and much encyclopædic information in respect to the methods and the operations of the Exchange and the history of real-estate values in this city. The number is the best which this magazine has issued for some time.

—Mr. Bradford Torrey opens the November *Atlantic* with a chronicle of the month, a floral and ornithological chronicle, in which he does not so much say a good word for "the melancholy days" as prove a good case for them. Indeed, without relying too much on the ever-hoped-for Indian summer, the long-accustomed observer finds the autumn as tardy in departing as the spring is in coming to our northern hillsides, and the snow is as likely to flurry down upon our asters as upon our young hyacinths. Mr. Torrey found seventy-three species of plants in blossom, among them the Deptford pink, and he counted twenty-five species of birds still lingering in the wood and meadow. Of his search for one of these, the Ipswich sparrow, which was unknown until 1868, he gives a pleasant account, making it the best episode of his little paper, delightful for the unconscious feeling with which he renders the scenery of the beach—not the sky and sea, but the mere sand-hills, the bare grass, and the tracks of the birds through it. It is noticeable that these observations are taken near the sea-coast, which is favorable to a variety of species and to the late blooming of the plants. Mrs. Lillie B. Chace Wyman takes us back to factory life, and to one of its most disagreeable and unjust phases, that of black-listing. She describes her visit to the houses of the hands, and particularly two or three of these black-listed men whom she found there, and who are various enough to serve as types. It would be impossible to practise black-listing without leaving the door wide open for injustice, arbitrariness, and caprice; and in these cases the writer finds nothing to support the decision of the overseers that these men should not receive work from anybody in the business to which they were trained. The paper, like all from her pen, has the value belonging to the work of an intelligent, interested, and trustworthy observer. Prof. Trowbridge presents, in another short paper, the latest educational idea, and it is one which, if accepted, would truly be revolutionary. It is in fact a sporadic development of the elective system. He would have, as we understand it, only one study, or closely allied group of two or three, pursued at once, for a period of perhaps three months, and then another study or group should be taken up for the same time, and so on, to the end of the curriculum. This scheme is not likely to receive much attention, the length of time during which one is conversant with a subject being quite as important an element in education as the intensity of the interest in it for a short time.

—The layman who labors under a feeling of essential inferiority to scientific men because their work is beyond his comprehension, may take comfort on seeing how little the work of scientists differs from that of ordinary men when they address themselves to general questions. The latest illustration of this is furnished by Prof. Cope's article on "The Relation of the Sexes to Government" in the *Popular Science Monthly* for October. The article opens with some observations on the antiquity of the difference between the sexes, and on the great advance which was made in the possibilities of progress when sexual reproduction first made its appearance among living things; but the unwary reader who is led to expect that this exceedingly ancient history is going to throw any light on the question, will find himself completely disappointed. In point of fact, the author himself soon leaves this "scientific" point of view, and rambles in a very inconsecutive manner over the familiar ground of woman's disabilities, as disclosed by what he calls "ordinary observation." The arguments of the article depend essentially on the unquestioning acceptance of the results of such observation, which are embodied, in the main, in the following passage:

> "We find in men a greater capacity for rational processes, a capacity which is not always exercised to its full. We find in men a greater capacity for endurance of the activity of the rational faculty. We find in men a greater capacity for work in the higher departments of intelligence which require mechanical skill of a high order."

—Prof. Cope not only accepts, without so much as the insinuation of a doubt, these results of a kind of observation which if a scientific man were to accept in his specialty, he would be supposed to have lost his senses; he does not for a moment consider how great may be the degree of this incapacity, but takes it for granted that it must be sufficient to be fatal to the claims of women. He says elsewhere that most men have had to steel their minds against the aimlessness and pettiness of women, and have observed in them "a pronounced frailty of the rational faculty in thought or action." It is to be hoped that a very respectable minority among men have been more fortunate; but in any case, does Prof. Cope think it scientific to assume, as he does throughout his article, that if women should take part in government, all the beautiful qualities for which he gives them credit will take flight, while the aimlessness and pettiness and irrationality will remain unaffected? Whichever side one may take on the question of women's political aspirations, one may regret that scientists should not set an example of clear and consecutive thinking when discussing a subject upon which plenty of loose writing has been done. And the sooner scientific writers learn that the catchwords of evolution and of physical science are not sufficient to give authority to their utterances on subjects which require chiefly sound judgment and knowledge of human affairs, the better it will be for their influence in the world.

—Our note on the proposed coöperative portrait catalogue, discussed at the Catskill meeting of the American Library Association (*Nation*, Oct. 4), has brought us a number of letters of inquiry from collectors. But we find that there is a general misunderstanding of the matter. The Association did not propose undertaking a general catalogue of portraits: that is a very desirable thing, but is far beyond its powers either of preparation or of printing. What it has in mind is to make coöperatively, and print by subscription, a list of the portraits in such

collections as Lodge's, Kay's, the Clouets at Castle Howard, 'Men of Mark,' the half-dozen national portrait galleries, Petitot's 'Émaux,' the 'Allgemeines historisches Porträtwerk,' the 'Galerie Théâtrale,' Crombie's 'Modern Athenians,' etc.; and the old magazines that used to give a portrait a month, and books like the fine new edition of Grammont's Memoirs. If anyone wants the portrait of any person in whom he has become interested in his reading, he may, of course, find it in the first book he consults; but the chances are that he will have to finger the indexes of half the portrait collections in his library (when they have indexes, which is not always) before he finds what he is in search of. What a help if he could turn to an alphabetically arranged general index, and be referred to the very work, volume, and page where his man was portrayed! Portraits published singly are easily found in a library, for they are of course catalogued under the name of the person. A general catalogue of portraits, therefore, though it has other uses, does not uncover any buried treasures in a library, and would not deserve library coöperation.

—A correspondent writes us:

"Your editorial on the Whitechapel murders calls to mind one of De Quincey's fragments, a sequel to the 'Essay upon Murder as a Fine Art,' wherein he describes with frightful vividness a series of murders in this same East London in the year 1812. De Quincey, of course, treated the subject from an æsthetic standpoint, as befitted his theme; but the series of household murders, committed (as it afterwards proved) by one man, as cunning as he was ferocious, bears a remarkable resemblance to the crimes over which London is agitated this very month. East London and human nature in it, as your editorial suggests, remain quite constant, it would seem."

—Some idea of the importance attached to the study of Greek archæology in Germany, and of the extraordinary activity of the Imperial Archæological Institute in this field of research, may be formed from the report of Herr Conze, Secretary of the Institute, presented at a recent meeting of the Berlin Academy of Arts and Sciences. The headquarters of the Institute are in Berlin, where the executive officer is a *Generalsekretär*, Herr Conze, director of the classical department of the Berlin Museum. In Rome and Athens the Institute has branch establishments, that in Rome occupying an estate which belongs to it, while that in Athens is about to hire of Dr. Schliemann a house built expressly for the Institute this year, the former quarters having been in an ordinary dwelling-house. Each of these branches is under the charge of two secretaries, in Rome Herren Petersen and Hülsen, in Athens Herren Dörpfeld and Wolters. Members of the Institute who are pursuing investigations in Italy or Greece are provided with quarters in either of these buildings. The periodical publications of the Institute are its *Jahrbuch*, published quarterly in Berlin, the *Mittheilungen* of the Athenian and Roman branches respectively, the *Ephemeris Epigraphica*, a supplement to the Corpus of Latin inscriptions, and the *Antike Denkmäler*, a folio of twelve plates annually, in which all the resources of modern reproductive art are called upon to illustrate newly discovered or important works.

—Valuable as these periodicals are, they appear almost insignificant beside the great publications which the Institute has under way, some of which have already occupied more than a generation of workers. Those of which Herr Conze made mention in his report are the Corpus, if we may so call it, of Roman Sarcophagi, by Prof. Carl Robert, of which one volume is now in press, Kekulé's work on Greek Terra-cottas, of which a volume on the reliefs of the Campana style is now in preparation, a collection of Etruscan cinerary urns, by Herr Körte, who is also continuing Gerhard's great work on the Etruscan mirrors, having already issued seven parts of his supplement. In addition to his labors in the Museum, and in the preparation of the great work on Pergamon, Herr Conze has charge of the Corpus of Greek grave-reliefs, also under the auspices of the Institute. In topography the most important work of the Institute is the *Karten von Attika*, by Curtius and Kaupert, of which five parts have appeared. All these publications are conducted under the immediate direction of the Institute, to which reports of progress are made by the several editors at stated intervals. The expense of these superbly illustrated volumes is naturally very great, the amount of travel necessitated being no inconsiderable item, and is, we believe, met entirely by the imperial Ministry of Public Instruction, by whom appropriations are made annually for the Institute.

ELY'S AMERICAN MUNICIPAL TAXATION.

Taxation in American States and Cities. By Richard T. Ely, Ph.D., assisted by John H. Finley, A.B. Thomas Y. Crowell & Co.

In spite of much hasty investigation and more hasty deduction, this volume is almost invaluable to students of American politics. It is the first attempt that has been made at a systematic presentation of the history and present status of the American experiments in local taxation. Of the qualities necessary for the work, Prof. Ely possessed three of prime importance—industry, a gift for popularizing economic subjects, and a zeal for reform. Unfortunately, it is the last of these qualities that is disproportionately prominent. As a scientific work, this volume on 'Taxation' cannot be ranked with the author's 'French and German Socialism.' It is the work of an agitator, not that of a critic. In season and out of season, Prof. Ely pleads for state and municipal socialism. The fact that the American system of levying local taxes amounts to the exercise by the public of a part ownership in the property taxed, does not in any wise satisfy him. He follows blindly his German masters. The socialism which he advocates is not the increased recognition of the duties of property, wherein America leads the world while Germany has yet the first lessons to learn, but the German ideal of state management of business enterprises. He advocates, for instance, the abandonment of the American plan of assessing abutting land for street improvements and taxing it for general public expenses, and would instead provide for "the finest educational facilities the world has ever seen" by a law or constitutional provision,

"that no new street shall be laid out by any municipality through land which it does not own; this land to be acquired as agricultural land, and to be leased as demand might arise at auction, in periods of twenty-five years, to be released at the expiration of that period; the lessee, if a new person, to acquire improvements at an appraised valuation."

There is, it will be seen, no confiscation in this plan. It is the socialism of the chair, not that of the streets. The city merely assumes the position of a private investor who goes in debt for his capital. Whether there would be profits or losses would depend upon (1) whether, in the first instance, the city councilmen showed the economy of a private investor in planning and contracting for street improvements; (2) whether they drove as good bargains in leasing the land; (3) whether as landlords they were as severe in refusing subsequent improvements; and (4) whether the citizens would be anxious to build upon land which was merely leased. In case the councilmen made extravagant contracts in laying out the streets, submitted to hard bargains in leasing the land, yielded to pressure for subsequent improvements, and found citizens averse to building upon lots which they only leased, the plan would involve a succession of losses from beginning to end.

This faith, however, in the plenary inspiration of aldermen in no way mars the historical portion of Prof. Ely's volume. Regarding details, the author shows excellent judgment as to what is interesting and significant. The volume opens with a short sketch of the universal history of taxation, from the time when the Romans waged foreign wars in order to be relieved from taxation, down to the time when Americans—an influential minority, at least—are willing to wage them in order not to be relieved. The recognition that taxation is a blessing instead of a curse did not begin to manifest itself until direct taxation was replaced by indirect. In England this occurred in the reign of Charles II., when Parliament "divested the landed gentry of all feudal obligations to the Crown, without touching their privileges, and replaced these obligations by taxes on beer, wine, tobacco, and spirits." This effectually shifted the burden of taxation upon the propertyless masses, and taxes ceased to annoy the influential classes. But they did not come to be regarded with affectionate devotion until, with the development of commerce, those who controlled legislation learned to incorporate in the tax laws protective features, by which their wealth, instead of being diminished by the nation's burdens, was increased.

Even in our own country, taxation was not always so popular as at present. In colonial times it was with the greatest difficulty that citizens could be persuaded to submit to it. In 1649 the General Treasurer of Rhode Island reported that he had received nothing and had nothing in his hands. Public expenses were frequently defrayed by quit-rents, fines, fees, and lotteries, which last were often employed to secure funds for the erection of schools, and even churches. Very early, however, the colonies had recourse to the property tax. At first the assessments were inconsiderable. In Virginia, in 1796, we find it fixed at one-fourth of one per cent. upon the assessed value of the land. Gradually, as the local governments became more thoroughly democratic, other taxes were repealed, and many of the State constitutions provided that no other should be levied. The name "American system" has been applied by the followers of Henry Clay to the protective tariff, though it was framed entirely upon European models. Prof. Ely, with much greater justice, applies the term to the system of State and local taxation which, by the middle of the century, was completely established in all our commonwealths. He describes it in a single sentence: "It is the taxation of all property, movable and immovable, . . . at one uniform rate."

Prof. Ely, as has been indicated, is not a partisan of the system. He quotes Baron von Reitzenstein's condemnation of it as primitive and crude, and himself goes so far as to declare it to be "so radically bad that the more you improve it the worse it becomes." He recognizes the intensity of the sentiment in its favor among the masses, yet characterizes the efforts to enforce it, which are increasing both in frequency and in strenuousness, as the pur-

suit of a will-o'-the-wisp. This indictment he supports with a history of the failures which have been made in various States.

This portion of the work has strength. The view taken is already accepted by many of the most intelligent students of taxation, especially in our large cities, and the scholarly way in which Prof. Ely enforces it will doubtless contribute much towards its wider acceptance. Nevertheless, he has failed to demonstrate his point. His investigation is apparently thorough, yet it is not critical. The American theory, as Prof. Ely correctly states it, is the taxation of all property, real and personal, at one uniform rate. A logical consequence of this is, that the property shall be taxed once and not twice. Another logical consequence is, that (since the tax is upon property and not upon incomes) the property shall be taxed in the State where it is, and not in a State where it is not. Where this programme has been carried out, as it has been in Connecticut respecting the stocks and bonds of railroads, and in California respecting all forms of private credits, the system has been a success. The failures which have been made, of which Prof. Ely presents such a formidable array, have been where legislation, in its attempts to reach personal property, has aimed, not at justice, but at retaliation—not at single taxation, but at double taxation.

Prof. Ely bases his declarations as to the universal and increasing failure of the attempts to reach personal property upon the assertion that, while a century ago there was comparatively little personalty in existence, it has during the past few decades rapidly assumed enormous proportions, with no corresponding increase upon the tax duplicate. This is true enough, perhaps, when the term "personalty" is used to include the various certificates of ownership in realty; but if by it is meant movable property, the existence of which adds to the national wealth, the statement is unfounded. Even railroad securities do not represent such property. If railroads were taxed as mortgaged farms are taxed, there would be no danger of driving them out of any of the States. It is thus that Connecticut is now taxing them, and Pennsylvania is preparing to follow her example. If, then, we turn our attention to personalty which exists independent of realty, and which must be taxed as personalty if taxed at all, it becomes exceedingly doubtful whether it has increased in amount or value faster than real estate. In our older and richer States it is certainly not greater comparatively than in the Territories. Regarding the farms, we have authoritative statistics. In Dakota the value of the lands and buildings is $22,400,000; the value of the live-stock, farming implements, etc., is $8,860,000, or 40 per cent. as much. In Connecticut the value of land and buildings is $121,000,000; that of the stock, implements, etc., $14,100,000, or but 11½ per cent. If, instead of farmers, we compare merchants, we know that it is in the agricultural community that the value of the stock of goods they carry is usually most out of proportion to their rents. In short, it seems highly probable that, as time advances and wealth increases, the value of movable property becomes gradually less in proportion to the value of lands and buildings.

California is the State which has attempted most logically to carry out the theory of the property tax. In California, personal property is taxed in the county where it is situated and protected, and whose inhabitants pay for its use. The fact that the owner chooses to spend his income in another community is not thought to give that community a right to levy a second tax. The Constitution provides that "a mortgage, deed of trust, contract, or other obligation by which a debt is secured, shall, for the purposes of assessment and taxation, be deemed and treated as an interest in the property affected thereby." By means of this provision the creditor is made to bear nominally as well as really the tax levied upon the property which he has loaned. This clause in the Constitution was framed for the relief of the debtors. It does relieve them, yet it relieves equally the creditors. These are permitted to contract for any rate of interest, and they are secured against double taxation. Of the success of this plan it need only be said that in 1886, while the assessed value of the realty of the State was but $600,000,000, $98,000,000 of mortgages were returned for taxation, showing practically the same percentage of mortgaged property as was found last year in the investigations of the Michigan Labor Commissioners. A plan similar to that in California is now being followed in Massachusetts.

In California the railroads are exempted from the provisions of the clause in the Constitution, and they escape their share of the taxation. But in Connecticut, as has been said, they do not escape. Here the roads are assessed that proportion of the total value of their stocks and bonds which their Connecticut mileage bears to their total mileage. In the year 1886 they paid in taxation $626,000, though the entire cost of roads and equipment, according to the estimate in Poor's 'Railroad Manual,' was but $48,391,000. Certainly these roads paid their fair share of the State's taxes. If any one will examine critically the Connecticut statistics which are given in Prof. Ely's book, he will be forced to conclude that this commonwealth taxes fully as much property, movable and immovable, as has its actual situs within its borders. The State tax on various corporations other than railroad amounts to $500,000, which is equivalent to the average tax on individual property assessed at $35,000,000. Besides this, $98,000,000 of personalty was returned to the local assessors. As the total amount of realty returned was but $250,000,000, there can be little doubt but that personal property bore its full share of the public burdens. The Connecticut system failed only where it ought to fail—where it attempted to tax intangible securities representing property outside of the State. Such an attempt, if successful, would involve double taxation, quite as much as if citizens of Connecticut were taxed on their foreign real estate. Being, therefore, unjust as well as impracticable, the Tax Commission, in its report of 1887, was wise in recommending its abandonment.

If we except the railroads, which in most States escape taxation, what is true of Connecticut is true throughout the Union. If the owners of all tangible property were taxed where the property is situated, and thus all property were taxed once, the relief to owners of real estate, and the relief to the debtors and honest creditors who now suffer from double taxation, would be of far less importance than the bringing to an end of the enormous amount of perjury now provoked, and the consequent corruption of the national sense of honor. As David A. Wells stated, a good many years ago, the chief trouble now is that the State tries to play the part of an Italian brigand. It seizes the property when the owner is elsewhere, and it seizes the owner when the property is elsewhere. In the latter event, however, it does not carry out effectively the brigand's programme, since it releases its victim if he will but perjure himself. Prof. Ely is justified in what he says of the moral effect of many of the crude attempts at vengeance upon the owners of personalty; but when he makes the chief teaching of his volume to be the ridiculous and increasing inadequacy of the property-tax to reach practically all the wealth of the nation, it is because he has accepted loose estimates regarding the extent of movable property instead of making a searching investigation, and in his zeal for revolution has ignored the successful reforms of the last decade.

Of the substitutes which Prof. Ely offers for the existing system, nothing more need be said than that he recommends that railroads be everywhere taxed upon their gross earnings, as now in Wisconsin. To this it might be objected that many political economists believe that taxes upon gross earnings, like internal-revenue taxes, are, in the main, shifted upon the consumers. It might also be objected that the Wisconsin system in 1886 yielded only 60 per cent. as much revenue as the Connecticut system, though its mileage was seven times as great. But these two objections are of little import compared with the fact that the United States Supreme Court, in May of last year (Philadelphia and Southern Mail Steamship Company v. Commonwealth of Pennsylvania) decided that all State taxes on gross receipts from inter-State or foreign commerce are unconstitutional. This far-reaching decision appears to have been wholly overlooked by Prof. Ely.

Prof. Ely has given us, in a popular form, the results of a valuable investigation; but his suggestions as to how to revolutionize the present system are, to speak temperately, worthless.

THE PART OF FRANCE IN AMERICAN INDEPENDENCE.

Histoire de la participation de la France à l'établissement des États-Unis d'Amérique : Correspondance diplomatique et documents. Par Henri Doniol. Vols. i. and ii. Paris: Imprimerie Nationale; Alphonse Picard, éditeur.

It is not inappropriate that the hundredth anniversary of the founding of the first French republic should be celebrated by the publication, by order of the French Government, of a work on the participation of France in the establishment of American independence; for the reciprocal influence of France and America in the last quarter of the eighteenth century was very great indeed. Of late years, a school of historians has undertaken to teach us that at the time of the Revolutionary war our country became much indebted to Germany and very little indebted to France. This theory excites a natural indignation in the breast of M. Henri Doniol. He will certainly find no difficulty in disposing of the shadowy claims of the friends of Germany, for there was no German government which did anything whatsoever to help the struggling colonies. On the other hand, six German States let out troops, to the number of thirty thousand in all, to put down rebellion in America. Moreover, no German officer of any distinction volunteered to come to this country to help the colonists, with the sole exception of Baron von Steuben, who was induced to do so by the French ministers; for Kalb, although of German birth, was a French officer, who had never held a German commission.

The claim of France is twofold—that of the French Government for help which materially influenced the result; and that of the French people for sympathy which often took shape in outward acts. With the latter, M. Donoil has little to do, except in the case of Lafayette, yet it is perhaps the stronger claim

of the two. The reforming party in France in 1775 contained all the most generous and thoughtful men of the nation, for the need of reform was evident and the danger not yet apparent. That party was full of enthusiasm for the "insurgents." It was not merely that England was regarded as the natural enemy, but that America itself was believed to be the home of all the virtues. The elaborate simplicity of Franklin was supposed to be typical, and to it was accorded a genuine admiration.

The Government of Louis XVI. looked at politics less sentimentally. That weak and unfortunate monarch acquired by some happy chance, and kept by what must have been an accident, one reasonably competent minister. Charles Gravier, Comte de Vergennes, was not a man of the first rank intellectually. M. Doniol tells us that he had twice, as minister plenipotentiary, checked the plans of Maria Theresa; but that monarch, in her private correspondence, expresses her entire satisfaction with the appointment of Vergennes, whom she characterizes as "not enterprising." The Count had, however, from the beginning of his ministry, one definite policy, namely, to raise the position of France in Europe by means of the Family Compact. That alliance, formed with Spain in 1761 to oppose the encroachments of England, was to be made the pivot of French policy. The close alliance with Austria which had been inaugurated by the Comte de Choiseul in the previous reign, was if necessary to be sacrificed to it. Prussia, and not Austria, Vergennes believed to be the natural ally of France in Germany. But England was the great, the necessary enemy: he considered her so depraved, both in politics and morals, that peaceful considerations would have no weight with her. Accession to power has a tendency to calm the minds of statesmen and to moderate their extreme views, but the irritation of Vergennes was kept up. Lord Stormont, the English ambassador at Versailles, was haughty; St. Paul, the chargé d'affaires, was discourteous; the British Ministers were negligent in answering the complaints made to them concerning violations of rights under the treaty in matters of fishery and commerce. It is easy to believe now that English roughness was responsible for a good deal of the trouble, but the French were uneasy and captious. Their national pride had been deeply wounded by the defeats and losses of the Seven Years' War; and the first partition of Poland, accomplished without their concurrence, seemed to mark more clearly their fall from that first place in Europe to which they considered themselves entitled.

While Vergennes looked forward, not without apprehension, to a war with England at no distant date, he had no desire to hasten it unduly. Above all, he wished Spain to be fully engaged to help France in the struggle, and at this point he was met by delay and difficulty. The views of the two courts were not identical. His Catholic Majesty, Charles III., had complicated interests, and cared less to humble England than to protect himself. If the Court of St. James could only have been brought to give him a free hand with Portugal and the Portuguese possessions in America; if it would have let him bully Morocco and restrain the Algerine pirates; if the thorn of Gibraltar could have been extracted from his side—he might have been glad to let King George set the good example of bringing American insurgents to reason. In vain did Vergennes explain that Algiers and Morocco were but flies, more discomforting than dangerous to Spain, while England was a monster, against which she should always be prepared. The Spanish King might assent to the general proposition; but he was still worried by the flies, and was not without hopes of pacifying the monster. Meanwhile, he urged his nephew, Louis XVI., to improve his fleet. Such advice was by no means uncalled for. Vergennes himself recognized the fact that France was too weak to go to war, and that reforms were needed; for the treasury was disorganized, the expenditures exceeding the receipts every year, and the navy had to be made over from the beginning. So Vergennes talked fair to the English Ministers, while he carefully watched events in America. In the summer of 1775 an agent was sent to Philadelphia. This man, Bonvouloir, was given no real powers, and could be disavowed. In accordance with a system which was extensively followed in later years, he was furnished with a commission in the French army, for the sake of impressing the Americans, and the commission was antedated. Tricks of this sort were a part of the day's work with diplomatists of the last century. M. Doniol gives the fullest account that will probably ever be obtained of the proceedings of Bonvouloir, who, before the publication of this book, had been known only as a shadowy and nameless person, who appeared for a short time at Philadelphia in the autumn of 1775. Bonvouloir sent to France in December of that year an elaborate report, representing himself as entirely in the confidence of the Committee of Secret Correspondence which Congress had appointed to manage the foreign relations of the United States. He probably lied; and, indeed, the whole conduct of the personage is not such as to inspire confidence. Yet a closer examination of his letter than is possible in the printed copy might prove interesting. We know that he was instructed to use sympathetic ink. He calls attention in his report to the words in that document that are underlined, but these, when examined, have no evident significance. Some communication in cipher is not impossible.

A far more interesting and important agent than Bonvouloir appears on the scene at about the same time with him. This is no other than Pierre Augustin Caron, known to the world as Beaumarchais, watchmaker and courtier, author and financier, swindler and man of genius Was Beaumarchais really attached in his heart to the independence of America and the glory of France? We are inclined to believe it; for the greatest scamp may have feelings, and the affections of this one were warm. But why did the French Government show him such marked favor? He was not yet one of the literary glories of France, and if his name were conspicuously before the public, it was hardly so in a way to conciliate the feelings of administrators. He had defied a court of justice and brought it into not unmerited contempt. He had been employed in some of the more crooked and hidden paths of diplomacy, and had managed to get himself arrested at Vienna on very reasonable suspicion of swindling the French court by pretending to effect the destruction of a libel on Marie Antoinette, which libel was believed either to be non-existent or to have been written by Beaumarchais himself. Why did ministers of state read and lay before the King reports in which the self-importance of the writer often sinks into impudence? Why did they entrust millions of livres to a speculator whose financial reputation was shady at best? Perhaps it was because he was such an amusing scamp, and Ministers who are courtiers like to be amused. In any case, the United States had in Beaumarchais an invaluable friend—indiscreet, but most energetic—who probably expected to make his fortune out of them, and whom they treated very shabbily in the end.

About the middle of 1776 Silas Deane, the first American envoy, arrived in Paris, to be followed at the end of the year by Dr. Franklin and by the Virginian, Arthur Lee. Throughout 1777 the diplomatic game went on. Franklin and his colleagues asked for a treaty of commerce, for arms, and for permission to sell prizes in French ports; and proposed a defensive and even an offensive alliance. Vergennes encouraged them, but granted little open help, and tried meanwhile to bring the Spanish court into a hearty acquiescence in his views. He urged that a reconciliation between the colonies and the mother country was what the Bourbon courts had most to fear. "For would not the English," said he, "powerfully armed as they are, wish to take an indemnity for the cessions which they would make to their colonies, at the expense of the two crowns? . . . We may equal them in numbers, but we cannot hide from ourselves the fact that the English surpass us as eminently in experience at sea and in skill in manœuvres, as we surpass them in the nobility and disinterestedness of our views." Lord Stormont on his side encouraged the idea of a reconciliation, with the purpose of keeping Vergennes uneasy. It was, apparently, as a part of this last plan that a secret interview was arranged between a young American named Carmichael, who acted as an unofficial secretary to the commissioners, and a person unknown. The interview took place at night in the Place Vendôme, at the foot of the statue of Louis XIV., which then stood where the column now is. The conditions proposed were just those so dreaded by Vergennes, viz., the recognition by England of American independence, and an expedition against the French and Spanish possessions in America. It was said that at a later interview Lord Stormont's secretary had confirmed these proposals. If this be true, there is little doubt that his master was quite ready to disavow him.

Another curious affair is considered at length in these pages. This is the scheme of the Comte Charles François de Broglie, who hoped to supersede Washington and become the generalissimo of the Americans. This strange plot was discovered by Friedrich Kapp in the papers of General de Kalb, who was to have been the principal agent in its execution. It would be interesting to learn what steps were taken by the latter in America towards its fulfilment, and how he became convinced that it could not succeed.

The first two volumes of M. Doniol's book end with the account of the treaties of commerce and of alliance between France and the United States, which were concluded hurriedly, without the adhesion of Spain, on the receipt of the news of Burgoyne's surrender. We look forward with expectation to the two volumes that are yet to come, which will deal with the part taken by France in the war, and with the negotiations for peace.

M. Doniol's own narrative is clear and well written. His extensive quotations from papers in the French archives form a large part of the book, and are both interesting and well edited. The work will take a place beside the monumental collections of President Sparks and the careful history of Mr. Bancroft, amplifying and elucidating them. It will throw fresh light on the history of the United States and on that of France. It contains no startling historical revelations, but it is henceforth indispensable to all thorough students of the period to which it relates.

BOOKS ABOUT THE STAGE.

History of the American Theatre before the Revolution. By George O. Seilhamer. Philadelphia: Globe Printing House.

The Annals of the Edinburgh Stage, with an Account of the Rise and Progress of Dramatic Writing in Scotland. By James C. Dibdin. Edinburgh: Richard Cameron.

The Life of Mrs. Catherine Clive, with an Account of Her Adventures on and off the Stage, a Round of Her Characters, together with Her Correspondence. By Percy Fitzgerald. London: A. Reader.

Une Première par Jour: Causeries sur le Théâtre. Par Albert Soubies. Paris: Dupret; New York: F. W. Christern.

Encyclopédie de l'Art Dramatique. Par Edmond Béquet. Paris: Dalou; New York: F. W. Christern.

Les Mémoires d'un Dompteur. Par Bidel. Paris: Librairie de l'Art; New York: F. W. Christern.

PERHAPS the best book about the stage in our language is Colley Cibber's 'Apology,' and perhaps the second best is the late G. H. Lewes's 'Actors and Acting,' both being written from abundant knowledge, sound in theory, and having a literary flavor. Such books come to the student of the stage but seldom, and, in default of such, the next best books are careful local histories, of which the first two volumes on our list are fair specimens. Mr. Seilhamer has set himself the task of telling anew, after Dunlap and Ireland, the story of the vicissitudes and the growth of the theatre in America, chiefly in New York and Philadelphia, before the Revolution. Mr. Dibdin, a member of a family honorably connected with the stage through several generations, attempts to set forth for the first time the full story of the theatre in the capital of Scotland. These books are welcome and well made, and reveal honest labor and abundant love for the subject, without which the accomplishment of the task would have been impossible.

Mr. Seilhamer's chief defect as an historian of the stage—and it is a most annoying defect—is a desire to disprove every assertion made by every preceding writer on his subject. That he does disprove some of them is no excuse whatever for his attitude of constant antagonism to all his predecessors. Toward Dunlap he is especially violent. Now, no doubt, Dunlap blundered occasionally; but he has deserved well of all lovers of the drama in America, and it would become Mr. Seilhamer to note his shortcomings with lenity. No comparison of skill as a writer is possible between Dunlap and Mr. Seilhamer, for Dunlap had a style and had studied our language; and a comparison of temper is also altogether in Dunlap's favor. Mr. Seilhamer even carries over to the recently organized Dunlap Society his hatred of Dunlap, and (p. 72) declares that the Society in one of its publications included a certain epilogue as by a certain Singleton, "thus perpetuating the mistaken assumption of the historian after whom the Society was named." We incline to the belief that Mr. Seilhamer is not a member of the Dunlap Society, or, if he is, that he has not taken the trouble to examine Mr. Hutton's excellent collection of poetical addresses, from which the epilogue to which he refers is absolutely absent. Despite this defect, and although it is not always easy to follow the thread of his story, in the main Mr. Seilhamer's work is praiseworthy He has seemingly spared no pains in the collection of material and in the preparation of lists of parts played by the different actors of the earlier companies. The comparisons of casts of the same play in succeeding years are also useful. The typography of the history is excellent. We may note that the author nowhere alludes to Dr. Edward Eggleston's researches into pre-Revolutionary theatrical history, published two or three years ago in the *Century;* apparently he is ignorant of them.

To go from Dunlap's 'History of the American Theatre' to Mr. Dibdin's 'Annals of the Edinburgh Stage' is to get a curious contrast; and yet it is easy to find not a few points of similarity. It is well known that plays were acted in New England (when the Puritan feeling was yet too strong to permit the opening of a regular theatre) as the gratuitous accompaniment of a concert for which the tickets were sold. Now in Mr. Dibdin's book (p. 54) we see that precisely the same device was adopted in 1743 in Edinburgh by Mr. Este. When we come down to the period which Dunlap knew, we find that the playgoers of Edinburgh and the playgoers of New York were going to see almost exactly the same plays. In America, it may be that there was a little more of the Teutonic sentimentality of the Kotzebue kind than there was in Scotland; and this was due, no doubt, in great measure to Dunlap's own labors as an adapting dramatist. In Scotland, on the other hand, there was a far greater proportion of dramatizations of the Waverley novels, which were more in number and which had a far greater success than in America, as might readily be expected. Mr. Dibdin's account of Scott's relation to the stage and to stage folk is pleasantly interesting. He tells at length also the story of the tragedy of "Douglas," by the production of which a Scotch clergyman was supposed to have snuffed out Shakspere; indeed, the heartfelt outcry of a Scotchman is recorded by Mr. Dibdin (p. 87): "Whaur's yer Wully Shakspere noo?"—which is oddly like the "Enfoncé, Racine!" of the Romanticists after the success of the "Henri III." of Dumas at the Théâtre-Français. In the days when "Douglas" was produced, and well into the present century, we see that a condition obtained in Edinburgh now to be seen nowhere except possibly in a few provincial towns of France and Germany. The regular playgoers were a small, compact body, loving the theatre, learned in its arts, knowing each other, and wanting their own way. The O. P. riots would not only be impossible now—they are almost inconceivable. From among the mass of interesting details in Mr. Dibdin's carefully compounded volume, we select only one, of a certain timeliness just now that Mr. Lester Wallack has so recently passed away. There was a circus in Edinburgh in 1791, and a Mr. and Mrs. Wallack were in the company; and it was in Edinburgh in 1792 that they first ventured on the dramatic boards.

Neither Mr. Seilhamer nor Mr. Dibdin is to be congratulated on his literary style, but either is a paragon in comparison with Mr. Percy Fitzgerald, who wrote badly when he began, and who writes worse year by year. His biographical sketch of Kitty Clive is just what might be expected. It contains most of the available material, pitchforked together. The facts are before the reader, for Mr. Fitzgerald has made himself acquainted with the history, memoirs, and ana of the eighteenth century; and the picture of Clive which the reader forms after perusing Mr. Fitzgerald's pages is probably accurate enough. But it is a torture to read anything so painfully ill-written, in which bad English strives with bad French. On p. 32, for example, we are told that Macklin was "more or less *lièd* (*sic*) with the manager." But Mr. Fitzgerald does not ordinarily need two languages to write badly in: he stumbles over every "and which" and "and who"; and in this turn of phrase he abounds. To make the matter worse, the book bristles with misprints, Congreve's *Miss Prue* appearing as Miss "Price," for instance. There is a frontispiece reproduction of Faber's portrait. The book has a neat vellum binding, with a decent leather label.

M. Albert Soubies, to whom we owe the always beautiful and useful annual volumes of the *Almanach des Spectacles*, has succeeded in making a sort of theatrical calendar. The date of the production of a new play in Paris is called a *première*, and M. Soubies, searching through the long history of the French drama, has found one *première* for every day in the year, from January 1 to December 31. About each *première* he gossips a little, more or less as its importance demands, and so he has furnished forth a book of four hundred pages, carefully indexed, and containing not a few notes of value. Thus, in recording the performance in 1883 of the garden scene of Boïto's "Mefistofele," M. Soubies draws attention to the sluggishness of the French opera-houses, in that Parisian lovers of music have not yet heard Wagner's operas, or Ponchielli's "La Gioconda," or Goldmark's "Queen of Sheba," or Nessler's "Rat-Catcher," or the whole of Boïto's opera, or any of the great Russian operas. "We are not curious in France," is the French critic's comment on the fact he records. M. Soubies's book is full of anecdotes; it is, in the language of the literary advertisements, just the Book for a Leisure Half-Hour.

The last two titles on the list may be dismissed briefly. An Encyclopædia of Dramatic Art is a book greatly to be desired—but M. Béquet has not met the want. His is a dull and dry compilation, of little or no utility. In the 'Grande Duchesse de Gérolstein' *Fritz*, at the end of the play, requests an appointment as schoolmaster. "Can you read?" he is asked. "No; it is to learn," is his frank answer. A perusal of M. Béquet's book suggests a doubt whether it did not proceed from his ignorance. But he has not always taught himself to advantage: it would be easy to instance many articles in his cyclopædia which are misleading and some which are absolutely wrong. The preface is a masterpiece of self-satisfied and pretentious ignorance.

For years "Bidel et ses fauves" have been favorites of the Parisian public, appearing, now in some melodrama in which a victim is thrown to the lions, and now exhibiting themselves in one or another of the suburban fairs which succeed each other in the environs of Paris throughout the summer. M. Bidel's autobiography is not without interest, although it is not quite as exciting as the illuminated cover and the flamboyant illustrations by M. Paul Cousturier might lead the intending purchaser to believe. At the end we have an account of the useful Mutual Benefit Organization which M. Bidel formed among his fellow-showmen, and of which he seems justly proud. He prints its statutes in full in a final chapter. There is a touch of natural bravado here and there throughout the book; but in the main M. Bidel is modest enough. Therefore we incline to the belief—and we express the hope—that the artist is solely responsible for the portrait, supported by two lions rampant, and bearing the motto, "Leo inter Leones."

Birds in Nature. By R. Bowdler Sharpe, F.L.S., F.Z.S., etc. With thirty-nine colored plates and other illustrations by P. Robert

Boston: Estes & Lauriat, 1888. Large 4to, pp. vi, 78.

Song Birds and Seasons. By André Theuriet. Illustrated by Hector Giacomelli. Boston: Estes & Lauriat. Imp. 8vo, pp. xvi, 200, profusely illustrated.

THESE two luxurious volumes, sumptuous in every detail, fit to adorn any centre-table, and alike of the gift-book class, are yet quite unlike each other, appealing to different tastes. Their titles exchanged would suit just as well, and either might be called "Birds in a Book," or "Birds in Season"—for the holidays.

Robert's remarkable colored plates have been out for some time. We think we first saw them about ten years ago, in a "portfolio" edition; but whether then accompanied with French text or not, our memory does not serve us to say. Whether one likes them depends upon what kind of pictures one likes. They are the work of an artist who has seen birds through hot and highly-colored glasses, and are chromo-lithographed with a wealth of tint we have never seen equalled in this kind of work. They are gorgeous and bizarre; perhaps not more strained in color-effect than in drawing, too, for the postures of some of the birds come dangerously near those conventionalized figures we see on dados and other wall decorations, while in the plain head- and tail-pieces in the text this formalism of the artist is indulged without restraint. Perhaps "Frenchy" is the most comprehensive adjective we could apply. But the pictures are far above the ordinary style of colored illustrations; they hold us with a singular fascination, and, after challenging, they defy our adverse criticism. The pansied bower in which the redstart is quivering with passion, overcomes us as easily as it does the bird's coy mate.

The text of this edition is new, and a stranger collusion of the ink-horn and the palette would be far to seek. We are minded of a couple of well-known phrases. One of these is "John Bull"; the other is "china-shop." The English author goes gunning for the French artist in the most orthodox ornithological fashion, and bags his bird at every one of the thirty-nine articles of his creed. (We beg pardon for mixing metaphors: we meant to say, of the thirty-nine shots he fires at the pictures.) Whether he has aimed high or low, written up or down, depends upon the relative standing we assign to science and art. Mr. Sharpe is the keeper of the Ornithological Department of the British Museum; the author, to a greater extent than any one else, of the fourteen volumes of the British Museum Catalogue of Birds, which are, nevertheless, not among the foremost of the many great works which have flowed from his indefatigable pen since his famous 'Monograph of the Kingfishers' appeared in 1871. Probably no man now living surpasses Sharpe in extent and accuracy of technical knowledge of birds, and certainly not half-a-dozen in the world are his peers. What, then, is he doing to Robert's designs? He is furnishing, from the depths of his consciousness and other available sources of information, public and private, thirty-nine sheets of reading matter to be interleaved with the plates; and he does it faithfully.

The other one of the two volumes in hand is not less complete in the furnishings requisite to the make-up of a book *de luxe*. Giacomelli supplied the exquisite illustrations for Michelet's 'L'Oiseau,' and how many other æsthetic and imaginative works are indebted to his dainty pencil we do not know. In this one we have a hundred or more engravings from his designs—four or five to each of the subjects of M. Theuriet's text—in the form of full-page prints, borders prettily enclosing poetry of invincible appropriateness, initials, head-pieces and tail-pieces, all in perfect taste and keeping with the purpose of the manufacturer of the volume.

We sometimes wonder whether a regular scientist is ever competent to pass judgment upon the illustrations of his craft, when these exceed the fixed limits of "diagrams" by the boundlessness of art. He is mostly a simple-minded creature, with a wonderful quality of directness and literalness, capable of being unpleasantly affected by the sight of a painting of a historical battle-scene if he cannot count the nails in the shoes of the horses, or of a fish leaping to the fly without exposing all its hypopharyngeal and branchiostegal appurtenances. If he be an ornithologist, he wants his birds—not exactly wooden, for that would be too light and airy—but of Bessemer steel, in silhouette, broadside on, with the microscopic texture, if not the molecular structure, in bold relief. So he reserves a private opinion when he sees Giacomelli's aërial prettinesses, being satisfied that no bird ever looks like that. The scientist is quite right: birds never "look like that" after passing through his hands as specimens; but they do ruffle up their feathers and take a thousand instantaneous poses that few of us know, and fewer still can catch and fix on paper. Giacomelli's pencil has always seemed to us peculiarly happy in expressing the thoughts and feelings of birds by their attitudes, and he is never better than when he puts a tender touch upon the helpless little fledglings in their nest. The whole series of designs is tasteful and pleasing; for such small pieces in plain black and white, they are wonderfully effective.

This volume is liberally supplied with text, several pages to each subject, both in prose and verse, sufficiently various to suit any reasonable range of taste. Whether the translation has lost a charm which the original possessed, or has gained a new grace of its own, we are unable to say. There are, doubtless, those who read the text of elegantly illustrated gift-books, else enterprising publishers would cease to furnish these volumes with such materials. In this case the text is printed at the University Press—which warrants us in supposing it contains scarcely a typographical error—and it flows smoothly from beginning to end of the book.

Heinrich Heine's Autobiographie. Nach seinen Werken, Briefen und Gesprächen. Herausgegeben von Gustav Karpeles. Berlin: Robert Oppenheim; New York: B. Westermann & Co. 1888. 8vo, pp. 586.

THIS volume is a compilation of the autobiographic passages so abundantly scattered throughout the published writings of Heine; but, although nothing but a compilation, it is not without value, and all classes of readers will find in it something to make it welcome. It cannot help doing a useful work in making the peculiar gifts of the poet known to many who lack the time or the inclination to read his whole works, and who here can get a very good taste of his quality.

Some controversy concerning Heine's position in German literature has recently sprung up in his native land, and the most absurd attempts have been made to deny him the fame to which he is so richly entitled. One anonymous scribbler has gone so far as to assert that this great master of style could not write his own language correctly; and, in support of his assertion, cites instances of elisions of a final vowel, made for the sake of the metre. The controversy derives its only interest from the circumstance that it is involved in the anti-Semitic agitation, and shows once more the folly of mixing literature with politics. Literature is perennial, politics are shifting and temporary. We have a mild illustration among ourselves, in the wild assaults made on one of our greatest living writers by newspaper editors to whom his political views are uncongenial. Heine attached great importance to his political writings, and looked on himself as a soldier of liberty. The political causes for which he fought are, for the most part, as dead as Julius Cæsar; but what he wrote about them will never die, and will be read for its style by generations to whom its subject-matter is indifferent. In this respect he is far beyond men like Swift and Defoe, to whom he has otherwise some resemblance, but whose political pamphlets are almost unreadable to any one who has not an intimate acquaintance with the period which produced them.

Many students of Heine to whom his works are as familiar as household words, have given less attention to his letters, and for such the copious extracts from his correspondence will form the chief attraction of the present volume. Naturally, Heine's letters are even fuller than his other writings of references to himself, and afford much material for an autobiography. He was as fond of talking about himself as Montaigne; and although he did not live in as naïve a time as the French essayist, his egotism is not a whit more offensive. When he speaks of the excellence of his books—when, at the age of twenty-seven, he writes to Varnhagen, "You may expect many more right good books from me"; when, alluding to Goethe's word, "Nur die Lumpe sind bescheiden," he says that he will not deny his poetic fame with the false modesty invented by men of no account; when he justly boasts that none of his countrymen won the laurel at as early an age as he did; when he relates that the first European book published in the Japanese language was a translation of his poems; when, in many other passages, he openly proclaims his full consciousness of his rank as a poet—he never strikes the reader as being arrogant, any more than does Milton when he declares that he will write something that the world will not willingly let die.

It need hardly be said that the book is full of specimens of Heine's wit. It would be impossible to dip anywhere into his pages without bringing up abundance of it. This applies to his private correspondence as well as to his works generally. In a letter to August Lewald in November, 1836, he relates that he was in danger of drowning in the Seine. A river steamer tipped to one side, the ladies on deck screamed like mad, but he pacified them by saying: "Fear nothing, ladies, we are all under the protection of the law." He adds that mere politeness would have required him not to get drowned before receiving an answer from the German Diet to a petition which he had addressed to that body. Writing at about the same date to another friend for a loan of 400 thalers, he says: "As regards my solvency, I must tell you at the same time that at this moment my affairs stand so badly that only a fool or a friend would lend me money." The gout he describes as a *juste-milieu* sickness, seemingly invented by Louis Philippe, of which one can neither live nor die—a cholera without danger or romance. His wife he calls his *atra cura*. When he is suffering from toothache, he says that if he had the choice between a bad conscience and a bad tooth, he would choose the former. In describing one who impressed him unpleasantly, he said that he could tell by

the tone of his voice that he was one of those people who are painted gray inside and have wooden bowels. In a letter to Alexander Dumas, he mentions that a servant whom he once had, and who had seen him dictate for days at a time, when asked about his profession, said: "My master is a Dictator."

Heine's attachment to his family is made more conspicuous in this book by the collocation of detached passages scattered through his writings. He always writes with great affection of his parents, and describes even their foibles with a loving hand. He details with much humor the various ambitious plans which his mother cherished for his future greatness, now in one walk of life, now in another. He relates that she was economical for herself, but could be lavish for the pleasure of others; and as she did not love money, but only esteemed it, she gave it away with a light hand. She sold all her jewels to enable him to attend the university for four years. His father, a very handsome man, had at one time been a commissary in the army of Prince Ernest of Cumberland, afterwards King of Hanover, and had, in that service, contracted expensive tastes, for the gaming table, for actresses, for horses and dogs, and the like. Out of love for his wife he established himself as a merchant in Düsseldorf, but his temperament and inclinations did not qualify him for success in business. Heine says that one day, when some of his irreverent remarks were reported to his father, accompanied with an accusation of atheism, the latter gave him the longest lecture he had ever had, as follows:

"My dear son, your mother allows you to study philosophy under Rector Schallmeyer. That is her affair. For my part, I do not like philosophy, for it is pure superstition, and I am a merchant and need my wits for my business. You may be as much of a philosopher as you wish, but I beg you not to say openly what you think, for it would hurt my business if my customers learned that I had a son who does not believe in God; the Jews, particularly, would buy no more velveteens of me, and they are honest men, pay promptly, and are quite right to stick to their religion. I am your father, and consequently older than you and more experienced; therefore you may take my word for it, if I permit myself to tell you that atheism is a great sin."

How much of this speech is Heine's own, the reader must guess for himself.

Heine's money troubles, his bad health, his persecution by the German governments, his quarrels with his friends and relatives, his many disappointments, his controversies with his publisher, well known as they all have been for years, are here brought together in such a way as to vindicate him from some of the harsh accusations made against him in the past, and now revived in Germany. Severe judges will regard some of his traits with disapproval; but the more charitably inclined, mindful of the proverbial infirmities of genius, will acquit him of all meanness or lack of principle, and will consider that, on the whole, he is deserving of sympathy rather than of condemnation.

The Sunday-School: Its Origin, Mission, Methods, and Auxiliaries. (The Lyman Beecher Lectures before Yale Divinity School, for 1888.) By H. Clay Trumbull. Philadelphia: John D. Wattles. 1888.

THE spell of the Theological Seminary must have been upon Mr. Trumbull to make him open his course of lectures with this definition: "A Sunday-school is an agency of the Church by which the Word of God is taught interlocutorily, or catechetically, to children and other learners clustered in groups or classes under separate teachers; all these groups and classes being associated under a common head." But his little fishes soon stop talking like whales, and the author's acknowledged learning, industry, and literary skill are well displayed in the 400 pages that follow. Identifying the modern Sunday-school with the synagogue instruction in the Torah and with the catechetical schools of the early Church, he treats of its Jewish origin and Christian adoption, gives an outline of its history for seventeen centuries, details its modern revival and expansion, and discusses the many questions pertaining to its administration and its relation to the family and the Church. All this is done with characteristic thoroughness and ability. One might protest against some of his rather extravagant claims for the Sunday-school, as, for example, that the want of it was the principal cause of the "dark ages," and that "America has been practically saved to Christianity and the religion of the Bible by the Sunday-school;" but this is at once recognized and pardoned as the enthusiasm of a specialist. We note, too, that the grave distrust of the whole Sunday-school movement felt and expressed by eminent leaders of the Church, the late Dr. R. D. Hitchcock for instance, is rather put aside than squarely met. A capital index rounds out the book.

The Life and Life-work of Behramji M. Malabari. By Dayaram Gidumal, LL.B., C.S. Bombay: Education Society's Press. 1888.

THIS book offers more samples of that curious, almost hybrid, culture and civilization which English occupation of India has produced. The subject of this biographical sketch—for it is but a sketch—is still living, not having yet reached the age of forty. He early won fame as a poet, first in Gujarati and later in English. Of the quality of his verse in the former language we cannot judge, but of his "Indian Muse in English Garb" it appears to be safe to say that the cleverness shown in the use of an alien tongue is greater than the excellence of the poetry. As a journalist, Malabari's work has been associated with the *Indian Spectator*, which he has made, perhaps, the leading periodical edited by natives and printed in English. The last few years he has given to a tireless agitation for social reform, his efforts being mainly directed to the abolition of the system of infant marriages and enforced widowhood. It is undoubtedly as a contribution to this programme of reform that the biography has been prepared by the hand of a friend. The copious selections from Malabari's writings and speeches, which are appended, yield a good idea of his ability and activity, and, it would seem, self-sacrifice. The religious note of the book may be gathered from its dedication to Ram Mohan Roy and Keshub Chunder Sen. Brought into close contact with Christian missionaries, and acknowledging great indebtedness to them, particularly to the famous Dr. Wilson, Malabari adheres to the religion of his fathers, finding, apparently, that it is as easy to spiritualize Zoroastrianism as Christianity.

838 Broadway, New York.

BABYHOOD.—Devoted to the care of Infants. **$1.50 a year. 5 Beekman St., New York.**

THE CENTURY MAGAZINE FOR 1889.

The growth of THE CENTURY MAGAZINE, although in one sense phenomenal, is but the natural result of a quick appreciation of what the reading public demands, and of a studied effort to gather together the very best that writers, artists, and engravers can supply. It has always been the desire of the conductors of THE CENTURY that it should be the one indispensable periodical of its class; that whatever other publication might be desirable in the family circle, THE CENTURY could not be neglected by those who wish to keep abreast of the times in all matters pertaining to culture. Its unprecedented circulation would seem to be the response of the public to this desire and intention of the conductors of the magazine; and this popularity again lays upon the magazine the burden of ever-increasing excellence. The 37th volume, 19th year, begins with November, 1888; and, while it is impossible here to give anything more than a partial idea of the wealth of literary and artistic material to be drawn upon during the next twelve months, the following are among the most important serial features:

THE CENTURY GALLERY OF ITALIAN MASTERS,

Engraved by TIMOTHY COLE, who is recognized as the leading magazine engraver of the world, and who has already spent four years in the European galleries reproducing upon wood for THE CENTURY this series of the most valuable pictures in the Old World. This is the most important artistic work upon which the magazine has ever entered, and in order that the fullest educational results may be derived from the pictures, they will be published in historical order, with brief critical papers by W. J. STILLMAN and MR. COLE.

THE SIBERIAN EXILE SYSTEM.

The remarkable series of papers which Mr. GEORGE KENNAN is now furnishing to THE CENTURY upon this important subject is attracting the attention of the civilized world, and the papers are being reprinted in hundreds of foreign journals in Europe and Asia. The San Francisco *Chronicle* says that, in these papers, "Mr. KENNAN has lifted the veil and revealed a condition of affairs of which the outside world had no conception or realization."

STRANGE, TRUE STORIES OF LOUISIANA,

Collected by GEORGE W. CABLE, author of 'Old Creole Days,' 'The Grandissimes,' etc. Mr. Cable has been many years in gathering together these remarkable stories, of which some are merely transcribed or translated by Mr. Cable from the original manuscripts; others are accurate narratives by him of actual occurrences. 'How I Got Them,' itself a strange, true story, is in the November CENTURY.

THE ROMANCE OF DOLLARD.

A serial novelette by a writer new to readers of THE CENTURY, Mrs. MARY HARTWELL CATHERWOOD, with a preface by FRANCIS PARKMAN, the historian. It is a story of devotion and heroism, based upon events in the early history of Canada, and on its historical side is the result of a careful study of the records of an interesting and unhackneyed period. The author, as Mr. PARKMAN says, "is a pioneer in what may be called a new departure in American fiction." With illustrations by HENRY SANDHAM, formerly of Montreal.

LINCOLN IN THE WAR.

The authorized 'Life of Lincoln,' by his private secretaries, Messrs. NICOLAY and HAY, now appearing in THE CENTURY, is holding the attention of thousands of readers. In the forthcoming chapters the authors will develop more fully the relations of the President with McClellan, Grant, and other leading generals of the war, with the members of the Cabinet, and other prominent men. Lincoln's plan for the gradual abolishment of slavery will be fully explained.

JOHN LA FARGE'S NOTES AND STUDIES IN JAPAN,

A series of articles of peculiar interest, will consist of notes and "letters home" from Japan by the distinguished artist, JOHN LA FARGE, illustrated with engravings from original studies.

PICTURES OF THE FAR WEST.

A series of full-page engravings from original drawings by MARY HALLOCK FOOTE, including such subjects as "Looking for Camp," "The Coming of Winter," "The Sheriff's Posse," etc., the artistic result of a long residence in the far West.

OTHER SERIAL FEATURES

Include a continuation of the papers on English Cathedrals, with Mr. PENNELL'S illustrations (with a chapter on Westminster Abbey); illustrated papers on Ireland by CHAS. DEKAY, and a series of Irish-American stories, humorous and pathetic, by GEORGE H. JESSOP; supplemental War Papers, untechnical and of general interest, among them, "The West Point of the Confederacy," "Recollections of Stonewall Jackson," "Lyrics of the War," "Beecher at Liverpool," and "The Western Soldier"; Mr. EDWARD L. WILSON'S abundantly illustrated papers on Bible subjects treated in the International Sunday-school Lessons, with articles on existing monuments connected with the Old and New Testament narrative—by the Rev. Dr. CHARLES S. ROBINSON, Prof. MORRIS JASTROW, Jr., and others; more of Dr. BUCKLEY'S papers on Spiritualism and Clairvoyancy; short stories by leading writers, novelettes (to be announced later), etc., etc.

TERMS. A SPECIAL OFFER.

The Regular price of THE CENTURY is $4.00 a year. In order that new readers who begin with November, 1888, may get all of Mr. Kennan's Siberian papers, we make a special offer of *a year's subscription from November, 1888, and the twelve back numbers from November, 1887 (in which the Siberian papers were begun), for $6.00; or a year's subscription from November, 1888, with these twelve back numbers bound in two handsome volumes, for $7.50.* Dealers everywhere take subscriptions and supply numbers, or they will be sent, prepaid, from the office of the publishers, THE CENTURY CO., 33 East 17th St., New York.

"THE CENTURY *is indeed a great living picture of the world's interests and movements, and is a library in itself and a liberal education to every reader.*"—Boston Traveller.

"*He who subscribes for* THE CENTURY *does himself, his friend, or his family an inestimable service.*"—The Methodist, Baltimore.

Longmans, Green & Co.

The Nation

VOL. XLVII.—NO. 1219. THURSDAY, NOVEMBER 8, 1888. PRICE 10 CENTS.

"The book is a model of the printer's art, and is eminently fitted for the writings of an author of Daudet's delicate and beautiful style."—*The Critic.*

ROBERT HELMONT: The Diary of a Recluse, 1870-1871.

By Alphonse Daudet. Translated by Laura Ensor. With 123 illustrations from designs by Picard and Montégut. 8vo, paper, $5.00; half leather, $6.00. *Limited (numbered) edition.*

"The sureness, lightness, and deftness of Daudet's art, his constant and exquisite sympathy with nature, the sure evidence in every phrase, in every little picture or episode, of the artistic delight of the artist in his work, make his writings the source of a pleasure that must express itself, if at all, in enthusiastic hyperbole. In reviewing 'Robert Helmont' we find it hard to keep ourselves within bounds, and we sympathize with Mr. James in his desire to say that Daudet is adorable, and thus to have done with it."—*Boston Advertiser.*

Uniform with 'Robert Helmont.'

MADAME CHRYSANTHÈME.

By Pierre Loti. Translated by Laura Ensor. With 199 illustrations from designs by Rossi and Myrbach. 8vo, paper, $5.00; half leather, $6.00. *Limited (numbered) edition.*

"Kindly welcome my book with the same indulgent smile, without seeking therein a meaning either good or bad; in the same spirit that you would receive some quaint bit of pottery, some grotesquely carved ivory idol, or some preposterous trifle brought back for you from this singular Fatherland of all preposterousness."—*From Loti's Dedication in Madame Chrysanthème.*

Uniform with 'Robert Helmont' and 'Madame Chrysanthème.'

FRANCIS, THE WAIF.

By George Sand. Translated by Gustave Masson. With 100 illustrations from designs by Eugene Burnand. 8vo, paper, $5.00; half leather, $6.00. *Limited (numbered) edition.*

"The domestic morality, the quiet nature, the home feeling of 'Francis, the Waif' may be described as something wonderful for George Sand. . . . And then follows, close upon the blazing track of revolution, a picture of household virtue so sweet and tranquil, so full of tenderness and love, that it is difficult to believe it to be the production of the same hand."—*Bentley's Miscellany.*

GEORGE ROUTLEDGE & SONS, 9 Lafayette Place, New York.

SIR JOHN LUBBOCK'S NEW BOOK.

FRANKLIN IN FRANCE.

From Original Documents, most of which are now published for the first time. By EDWARD E. HALE and EDWARD E. HALE, JR.

PART I. THE ALLIANCE.

PART II. THE TREATY OF PEACE AND FRANKLIN'S LIFE TILL HIS RETURN.

With four newly engraved portraits of Franklin from copies which are now rare, and numerous portrait illustrations throughout the text. Complete in two handsome octavo volumes. Cloth.

Public Library

"In February of last year Roberts Brothers published the first volume of 'Franklin in France,' by Edward E. Hale and Edward E. Hale, Jr. (see the *Beacon* of February 19, 1887), who were the first to show on the basis of authentic documents why Franklin is one of the greatest diplomats in history, and easily the greatest name in the diplomatic history of our country. The *Christian Union* said of that volume: 'It gives in detail, and with shrewd and sensible comment, the history of the diplomatic relations between France and America in our War of Independence; it presents, incidentally, an interesting picture of French social and political life, and finally it throws new light on the sturdy individuality of Franklin himself.' We have now the second and concluding volume (Boston: Roberts Brothers, 8vo, pp. xiii and 470, $3.00), and it is difficult to exaggerate the importance of this contribution to American history. The bulk of the work is new and proves what it has cost to establish American independence and the recognition of this country by the powers that recognize international law as binding. The present volume covers the period of the peace treaty and of Franklin's return to America in 1785. . . . The work is, indeed, as interesting as it is important. At the same time it is readable, fresh, and entertaining. The title-page contains a good portrait of Franklin, after a miniature of Duplessis, engraved in mezzotint by J. A. J. Wilcox. There are also fifteen portraits in vignette, and a good index for the two volumes. The work tells better than any other how stood the affairs of our country in regard to France and Great Britain from the unheralded, unexpected and unwelcome birth of the nation to the adoption of our national Constitution, and what part Franklin took in keeping the infant alive and respected. The editors have taken the Franklin papers for a basis and allow them to tell a story of the highest interest."—*The Boston Beacon.*

"It has always been recognized that the work of Franklin in France during the nine years of his mission there was of supreme importance to the cause of the American Revolution. It has not been so generally recognized, perhaps, to how great an extent his success in his mission was due to his own personal qualities—to his wisdom, discretion, patience, forbearance, equanimity, and such like qualities, which made this simple Quaker from America the peer of the diplomats from all nations of Europe who met him in the French capital. One can realize this better after a careful perusal of the volumes under consideration, and appreciate better the debt we owe to Franklin. . . . The book is, indeed, a most valuable addition to an historical library, containing a great amount of material which cannot be found elsewhere, admirably arranged and published in most attractive form."—*The Churchman.*

FINE SET, MAGAZINE OF AMERICAN history, richly bound, for sale by A. S. CLARK, Bookseller, 34 Park Row, New York city.

OXFORD CLARENDON PRESS

NEW PUBLICATIONS.

LOGIC: or, The Morphology of Knowledge. By Bernard Bosanquet, M.A., formerly Fellow and Tutor of University College, Oxford. 2 vols., 8vo, $5.25.

"The conception of logical science by which the author has been guided is that of an unprejudiced study of the forms of knowledge in their development, their interconnection, and their comparative value as embodiments of truth.

"This book is very much the most important philosophical work that has been published in the English language since Lewis's 'Problems of Life and Mind'; and I do not, in saying this, overlook either Jevons's 'Principles of Science,' or Green's 'Prolegomena to Ethics.' It has a wider scope than Prof. Green's works ever had, and it differs from Jevons's work by being both metaphysics and literature, as well as a treatise on the logic of science. . . . As things are, the recent advances in logical doctrine are mostly contained in this book."—*James Saumarez Mann in Academy.*

LOTZE'S LOGIC. In Three Books: of Thought, of Investigation, and of Knowledge. English translation. Edited by B. Bosanquet, M.A. Second Edition. 2 vols., 12mo, $3.00.

A CLASS-BOOK OF ELEMENTARY CHEMISTRY. By W. W. Fisher, M.A., Aldrichian Demonstrator of Chemistry in the University of Oxford. 12mo, $1.10.

FOSSILS OF THE BRITISH ISLANDS Stratigraphically arranged. Part I. Palæozoic, Cambrian, and Silurian Species. By Robert Etheridge, F.R.S. 4to, $7.50.

A TREATISE OF HUMAN NATURE. By David Hume. Reprinted from the Original edition in three volumes, and edited, with an Analytical Index, by L. A. Selby-Bigge, M.A., Fellow and Lecturer of University College. 12mo, $2.25.

EUCLID REVISED, with Additional Propositions and Exercises. Edited by R. C. J. Nixon, M.A., Mathematical Master in the Royal Academical Institution, Belfast; formerly Scholar of St. Peter's College, Cambridge. 12mo, $1.90. Sold in Parts as follows: Book I., 25c.; Books I. and II., 40c.; Books I.–IV., 75c.; Books V.–VI., 75c.

"An endeavor to meet our great educational want—a reformed Euclid as distinguished from a new Geometry."—*From the Preface.*

"We heartily recommend the book."—*Journal of Education.*

"It is certainly in every way better fitted for use than the text-books now in vogue, and should add to the ease and efficiency of teaching."—*J. S. Yeo, M.A., Mathematical Master, Fettes College, Edinburgh.*

"Makes the whole subject much more easy and complete."—*E. J. Routh, M.A. Sc.D., F.R.S.*

"The best edition of Euclid for schools that I know. . . . The notes are excellent and the examples well chosen."—*H. P. Gurney, M.A., Principal Mathematical Lecturer of Messrs. Wren & Gurney.*

CLARENDON'S HISTORY OF THE REBELLION AND CIVIL WARS IN ENGLAND. Reëdited from a fresh collation of the original MS. in the Bodleian Library, with marginal dates and occasional notes by W. Dunn Macray, M.A., F.S.A. Six volumes, 12mo, $11.

ANNALS OF BOTANY. Edited by Isaac Bayley Balfour, M.A., M.D., Sydney Howard Vines, D.Sc., F.R.S., and William Gilson Farlow, M.D., assisted by other botanists. Volume I. (Nos. 1–4), containing 18 plates, in part colored, and 6 woodcuts. Royal 8vo, half morocco, $9.00.

"It gives good promise of a useful future. The original papers are good solid pieces of work. The notes are an attractive feature. It is to be sincerely hoped that a long and vigorous career is before the Annals, and that it will have the effect desired by its founders of stimulating elementary research in this country and in America."—*Academy.*

Volume II. No. 5, June, $2.60. Volume II., No. 6, August, $1.90.
Subscription to each volume, in numbers, payable in advance, $5.75.

A HANDBOOK TO THE LAND CHARTERS AND OTHER SAXONIC DOCUMENTS. By John Earle, M.A., author of 'The Philology of the English Tongue.' 12mo, $4.00.

It is the aim of this handbook to facilitate the critical study of the Saxon legal documents which were collected by Kemble in his "Codex Diplomaticus," and which are now being republished by Mr. De Gray Birch in his 'Cartularium Saxonicum.'

Clarendon Press Series. New Volumes.

MODERN GERMAN READER. A Graduated Collection of Extracts in Prose from Modern German Writers. Part I. With English Notes, a Grammatical Appendix, complete Vocabulary, and an Index. Edited by C. A. Buchheim, Phil. Doc., Professsor of German in King's College, London. Fifth Edition, revised. 16mo, 60 cents.

"Of the Notes it is scarcely possible to speak too highly."—*Athenæum.*

"Dr. Buchheim understands the art of educational selection."—*Saturday Review.*

RELIGION AND POLITICS IN EGYPT.

Leaves from an Egyptian Note-Book.

By Isaac Taylor, LL.D., Canon of York. Crown 8vo, cloth, $1.25.

"There is much new in this account of Modern Theology, the Harem, etc. In style and temper the book is simple and candid, and reads itself."

Lyrics from the Song-Books of the Elizabethan Age.

Edited by A. H. Bullen. New and revised edition in one volume. 16mo, gilt top, uncut edges, cloth, $1.50.

Mark Rutherford.

THE AUTOBIOGRAPHY OF MARK RUTHERFORD; and Mark Rutherford's Deliverance. With a New Preface, and the Addition of another paper. Second and Cheaper Edition, in One Volume. Crown 8vo, Cloth, $2.25.

Irish Pictures.

DRAWN WITH PEN AND PENCIL.

With numerous illustrations. Imperial 8vo, cloth, $3.50.

The volume of the Pen and Pencil Series for 1888. In the engravings, which will be more numerous than in most volumes of the series, all the characteristic features of Irish architecture, art, scenery, and life will be depicted. In the letter-press special attention will be paid to the natural features, social customs, etc., exhibited in this remarkable country.

*** All previous volumes of the Pen and Pencil Series on hand.

John Standish.

OR, THE HARROWING OF LONDON. By the Rev. E. Gilliat. With numerous colored Illustrations. Crown 8vo, cloth, $2.00.

A remarkably interesting story of the time of the rebellion of Wat Tyler, reproducing, accurately and vividly, the manners and life of the English people of that day. The heroine of the story is Calote, the daughter of the poet Langland, and among the other characters are Chaucer, Gower, Langland, King Richard II., and the Fair Maid of Kent.

The Life and Adventures of Edmund Kean.

2 vols., crown 8vo, cloth, $5.00.

"Literally packed with information and anecdotes."—*St. James's Gazette.*

"A really good biography of the gifted actor, whose life was so full of dramatic contrasts."—*World.*

Lives of Twelve Good Men.

By John W. Burgon, B.D., Dean of Chichester. 2 vols., 8vo, cloth, $6.00.

CONTENTS: Martin Joseph Routh — Hugh James Rose—Charles Marriott—Edward Hawkins—Samuel Wilberforce—Richard Lynch Cotton—Richard Greswell—Henry Octavius Coxe—Henry Longueville Mansel—William Jacobson—Charles Page Eden—Charles Longuet Higgins.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

AN EGYPTIAN PRINCESS. An Historical Novel. By Georg Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but Academic English."—*St. James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M.A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M.A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS, THE THOUGHTS OF M. AURELIUS. $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon). 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** *The above sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested. New catalogue of choice and rare books ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Men and Measures of Half a Century.

SKETCHES AND COMMENTS.

By Hon. Hugh McCulloch. 8vo, $4.00.

"Mr. McCulloch modestly entitles his work 'Sketches and Comments.' But the sketches are so sharp in outline, so positive in feature—the comments are so explicit and delivered with so *ex cathedra* an air of personal observation and infallible accuracy, that the volume must become one of the standard works in the history of our time."—*Chicago Tribune.*

"Hardly any other volume of contemporary memoirs is entitled to greater consideration than this. It comes from one whose judgment was keen, clear, and accurate, and whose opinions are entitled to great weight."—*Boston Herald.*

"We find what we want on every page—the author's keen recollections of distinguished men and important affairs."—*Philadelphia Press.*

RECENT NEW BOOKS:

Letters of Thackeray.

A new edition, with Portrait of Thackeray, and reproduction in *facsimile* of a characteristic letter. 1 vol., 12mo, gilt top, $1.25.

In this dainty edition these famous letters will again be sought for by thousands to whom the other editions were inaccessible.

The Reveries of a Bachelor.

With all the illustrations, printed in tint, made by F. O. C. Darley for the original illustrated edition. Square 8vo, $3.00.

"One of the most tender and touching works in our literature. It would be hard to name its equal."—*N. Y. Tribune.*

Stuff and Nonsense.

By A. B. Frost. New edition, with new cover and additional drawings and sketches. 8vo, $1.25.

The drawings and sketches added by Mr. Frost have made almost a new work of this revised edition.

"A most amusing literary and artistic salad."—*N. Y. Telegram.*

The Five Talents of Woman.

By the author of 'How to be Happy, though Married.' 12mo, $1.25.

"The book is witty, sensible, and bright. It is crowded with racy insights relating to character, temperament, acquirements, costumes, and fascination."—*Boston Traveller.*

A SUPERB PORTRAIT OF

Mrs. Humphrey Ward,

Author of 'Robert Elsmere,' with an authorized sketch of her life and literary career, appears in the November BOOK BUYER, just out. Also, portrait and sketch of MARGARET DELAND, author of 'John Ward, Preacher,' and 30 pages of bright literary news, with 15 beautiful illustrations. Price, 10 cents. The BOOK BUYER will be sent for 10 cents to any address by

CHARLES SCRIBNER'S SONS,

NEW YORK.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 8, 1888.

The Week.

WHEN President Cleveland sent his message to Congress last December, his supporters throughout the Northern States, while applauding his courage and feeling that he had rendered the country a great service by presenting a new and living issue for parties to divide upon, felt also that he had sacrificed himself to a principle, and that the first battle in the issue he presented would inevitably be lost. Well, the first battle has been lost, by a narrow vote. What follows? The world moves, either forward or backward; it does not stand still. The victors in Tuesday's contest can no more stand still than the vanquished. The responsibility for the national finances will, after the 4th of March next, rest with the Republican party. The surplus will stare Mr. Harrison in the face, just as it now stares Mr. Cleveland. It must be got rid of, either by reduced taxation or by extravagant appropriations. The smallness of the Republican majority forbids that the latter policy should be adopted. It will not be safe to inaugurate a system of national profligacy in order to empty the Treasury. As little will it be safe to repeal the whiskey tax in order to maintain imposts on the necessaries of life. The masses have got an inkling for the first time that the tariff is a tax on consumption, and therefore an undue and unjust burden upon labor. They are not likely to forget anything that they have learned in this campaign of education. The Republican leaders, those who in former years have denounced the present exorbitant tariff and tried to bring it within the measure of decency, will now be put to it to stem the rising tide which calls for reform in our system of national taxation—a tide whose impulses are not unfelt in their own ranks. We will not anticipate the outbreak of tariff reform in Republican councils, but we do not see how it can be avoided. But whether it comes in that quarter sooner or later, this great battle, on an entirely new issue, which so narrowly escaped being a victory, will go on. An audience has been secured at last for the principle that every man has the right to the fruits of his own labor, without deduction for the recompense of the labor or capital of others. Nobody who took part in this first skirmish will lay down his arms till victory is won.

New Jersey shows an increased plurality for Cleveland over 1884. Connecticut has again been carried for Cleveland, as in 1884, though by a reduced plurality. The result in these two States shows that the "tariff scare" did not work in the great manufacturing strongholds. The local election in Newark a few weeks ago indicated that the laboring men had studied this question, and could not be fooled by the advocates of the high tariff; the result of the election in New Jersey and Connecticut demonstrates the correctness of this inference. For many years New York has gone Democratic in every Presidential election when New Jersey and Connecticut were carried by that party. Upon an issue affecting all three States so evenly as that of tariff reform, one would have expected a similar concurrence this year. The returns from those election districts which include the great manufacturing industries in this State show that the tariff scare did not work any better in those districts than in Newark, or Paterson, or New Haven, or Hartford. It is impossible to resist the conviction that, if the sole issue presented in this State on Tuesday had been the tariff, Mr. Cleveland would have carried New York, as he did New Jersey and Connecticut. It is unnecessary to go beyond the city of Brooklyn to find the proof that Mr. Cleveland was beaten in the State of New York, not because a majority of the voters condemn his policy on tariff reform, but because a majority of the voters would not sustain for the Presidency a party which nominated a man like David B. Hill for Governor.

Now that the political campaign is ended, we can take an unbiased look at the Treasury surplus. On October 30 it amounted to $74,491,969, having been reduced by bond purchases during the month about $22,000,000, of which a large sum went for premiums. The problem which confronted the nation fourteen months ago, when the last 3 per cents were called in, is still before us, pressing for solution. Whether the one party or the other controls the next Congress, or whether the two Houses remain as now under the control of different parties, the surplus is there, growing and menacing the country in various ways. It menaces all business interests unless it is shovelled out in some way. It menaces all social interests however it may be poured out. If spent for extravagance, it demoralizes. If spent for premiums on bonds, it puts in the hands of the Secretary of the Treasury a power which no human being ought ever to exercise—the power to make money scarce or plenty over the whole country and even in foreign countries. Up to this time nothing has been done to put away this evil, to relieve this strain, to banish this temptation. Let us hope that now, the political strife being over, steps may be forthwith taken to reduce the surplus in an honest way, and to remove the blackest cloud on the horizon of our daily life.

There is every reason for believing that the alleged use of large sums of money in deciding Tuesday's election will lend a powerful aid to the agitation in favor of ballot reform. If we had a perfectly secret ballot, as we ought to have, all attempts at bribery would cease as quickly and completely in this country as they did in England when the English Ballot Act went into effect there. Great as are the offences against an honest ballot committed here, they have never reached the openness, variety, and extent in which they existed in England before the enactment of the new law. While the provisions of that law requiring the publication after election of sworn statements of all expenditures by candidates or their agents, and requiring also the keeping of such expenditures within fixed limits, had much to do with restricting the use of money in elections, still it is the unanimous opinion of all authorities that the mere requirement of secrecy in the ballot has done more than all else to stop bribing, since no man is willing to risk his money in bribing a voter whom he cannot follow to the polls to see if he votes in accordance with the bribe.

At the National Republican Convention there was a distinct pledge made by the Indiana men that, if Harrison were nominated, they would not ask for a cent of money from other States. Give us the candidate, they said, and we will take care of Indiana ourselves. They were taken at their word. They got the candidate, and what has happened since? In a pecuniary sense, it is a question for Republicans only. But in a larger sense it possesses a more widespread interest, for it is now plain that the Republicans of Indiana have "gone back on" their promise to ask no money from the National Committee. This is shown by the tenor of the letter addressed by William W. Dudley to the chairmen of the Republican County Committees in Indiana, which, with amazing effrontery, outlined a scheme for buying the State of Indiana for the Republican ticket. To comprehend the significance of the letter it is necessary to know something of its writer. Col. Dudley has for many years been one of the most prominent Republicans in Indiana, and has been, by the appointment of Republican Presidents, Marshal of the United States District Court in that State and Commissioner of Pensions at Washington. He has been Treasurer of the Republican National Committee during the late canvass, and the special friend and personal representative upon that Committee of Gen. Harrison, who desired his election as Chairman of it.

But this is not all. Col. Dudley was one of the men who managed the Republican campaign for the Indiana election of October, 1880, when the State was bought outright for the Republican party. This was the campaign of which Mr. W. P. Fishback, a leading lawyer of Indianapolis, a former partner of Gen. Harrison, and a lifelong Republican, said, in an open letter to Mr. Peelle, a Republican Congressman, published five years ago and never questioned: "Men like Dorsey will come to Indiana again, as they came in 1880, and disburse $400,000 in the Dennison House parlors, to be used in buying votes, hiring repeaters, bribing election officers to stuff ballot-boxes and falsify election returns. You know that there are men high in office because they connive at such crimes, and it is no secret that men honored by the

party are so honored mainly because they aided the escape of arrested felons, who were hired to come from other States to violate the election laws of Indiana." This, too, was the campaign the result of which was celebrated by that famous banquet given at Delmonico's by most reputable citizens of the metropolis in honor of that notorious rascal, Stephen W. Dorsey, Secretary of the Republican National Committee, who had superintended the work of buying the State—a banquet at which the man who had been elected Vice-President by virtue of the Indiana corruption, and who afterwards became President, cynically confessed that "Indiana was really a Democratic State," and had been made Republican by the use of "a great deal of" what he euphemistically called "soap." This, too, was the campaign Col. Dudley's own share in which was rewarded by Garfield with the appointment of Commissioner of Pensions, the thoroughly efficient incumbent being dismissed in the middle of his term to make place for him. Indeed, it was Col. Dudley among others whom Mr. Fishback had in mind when he said that "there are men [in 1883] high in office because they connive at such crimes."

Among the dregs and offscourings of the campaign there remains a Republican document entitled "An Open Letter to Workingmen," by Nathaniel McKay, illustrated by a series of cuts that were used by the protectionists in England in 1846 or thereabouts, before that country was emancipated from such folly. "The majority of the illustrations used in this pamphlet can be seen at Mr. McKay's office, 15 Whitehall Street, New York," is the legend at the top of the title-page. For our part, we should consider the man who would take the trouble to reproduce the pictures, with a view to influencing votes for protection here, a greater curiosity than any illustration in the pamphlet. By what mental process Mr. McKay was led to suppose that the condition of a chain-maker in England forty or fifty years ago, when he was taxed on his bread for the benefit of the landowners, could be made useful to those who are taxing the laboring man here on his clothing for the benefit of wool-growers and others, is a mystery that puzzles us not a little. The picture represents a man and his wife both working at the forge, both barefooted, ragged, and unkempt, with two ragged and emaciated children in the same room. What in the world has this to do with the manufacture of chains in the United States in the year 1888? How could these poor creatures, even if they were now alive, compete with the workmen in Cooper, Hewitt & Co.'s mills at Trenton, for instance, where chains are turned out by machinery by the yard, the rod, and the mile? How can anybody who makes chains by hand, fashioning each link out of a bar of iron by hammering, just as horse-nails were made by blacksmiths forty years ago—how can any such workman, if there be any such still living in England or anywhere, reduce the wages of chain-makers here who can turn out forty links while the hand-worker is turning out one? The idea is grotesque, but not so grotesque as Mr. McKay's invitation to the public to come and see the original picture at his office.

"An English Invasion" is the title of a Republican campaign document issued at the office of the Chicago *Inter-Ocean* a few days ago. This is not an invasion with ironclads, as the startled reader might imagine from a hasty glance, but with iron castings. It is affirmed in the document that the Denver City Cable Railroad Company invited bids for 5,000 tons of iron castings for their plant, and that proposals were received from four Chicago firms and from St. Louis, Cincinnati, Kansas City, Belleville, Ill., Birmingham, Ala., and Omaha, and also from one English firm; and that the English bid was the lowest, notwithstanding the fact that they have to deliver the castings in Denver and pay a duty of 1¼ cents per pound ($28 per ton), which the *Inter-Ocean* says is equivalent, on this class of goods, to 40 per cent. ad valorem. Of course the English concern got the contract, and of course, when the contract is fulfilled, there will be added to Uncle Sam's menacing surplus the sum of $140,000 in the way of duties on 5,000 tons of castings. The *Inter-Ocean* does not allude to this feature of the affair, but sends up a great wail about the loss suffered by this country because of English cheap iron. "It means," says the document, "the loss of over 10,000 tons of ore to American consumption, and of over 10,000 tons of fuel." Other losses are mentioned, but no gains are acknowledged, although it is manifest that we shall gain 5,000 tons of castings which will necessarily be paid for by the proceeds of American labor of some kind.

Now glance for one moment at the false statement that this Denver transaction causes *a loss* of 10,000 tons of American ore and 10,000 tons of American fuel. The truth is, that all the ore and all the fuel are *saved* and not a ton lost. We have the castings, and the ore and the fuel besides, and of course the ore and the fuel will come in play in good time. When the writer of this document said that we had lost ore and fuel by buying castings in England, he meant that we had postponed for a time the using of certain natural resources which, although extensive, are of limited quantity, and when once used can never be replaced. This is the exact truth, but if he had put it in this way, instead of asserting that we had *lost* 10,000 tons of each of those valuable materials, his document would have been useless for catching the votes of the unwary. Then he goes on to ask, "What would be the result to American foundrymen if the duty was still further reduced?" This question might better be put to the Republicans of the Senate than to the supporters of the Mills bill, for the latter makes no change in the duty on iron castings, while the Senate bill reduces it from 1¼ cent to 1 2-10 cent per pound. This is not a large reduction, but is $1.12 per ton, and, on the Denver contract would amount to $5,600. For our own part, we discredit the whole story from beginning to end, for the reason that our entire importations of iron castings in 1887 under the 1¼ cent duty were only $28,154, and this included andirons, sadirons, tailors' irons, and hatters' irons. If the foundrymen of Chicago cannot compete with English foundrymen at Denver, when the latter are handicapped with a duty of $28 per ton and five or six thousand miles of transportation besides, they are greater slovens than we have taken them for.

Several Republican newspapers have been keeping the following apothegm from the mouth of Gen. Harrison standing in their columns, viz.:

"No man's wages should be so low that he cannot make provision in his days of vigor for the incapacity of accident or the feebleness of old age."

Our first objection to this is, that the sentiment is stolen from Gov. David B. Hill of New York without credit. Gov. Hill first promulgated it to an astonished public at a county fair in western New York (Dunkirk, we believe). He began by saying that the great cause of discontent was poverty. From this bold preamble he reasoned that every man ought to have wages sufficient to provide a comfortable support for his family, and to afford him reasonable time for recreation and religious worship, and to make provision for old age. We have admired this sentiment for about three years—we believe it was three years ago that Gov. Hill first propounded it. We have suggested sundry amendments and improvements from time to time, which, it seems, have not attracted Gen. Harrison's attention. We have thought that every man's wages should be high enough to enable him to dress respectably, and go to the theatre occasionally, and visit the seashore or the mountains now and then, and to have a glass of light, wholesome wine on his table after his day's work. Everybody must admit that these things would do away with discontent, promote social order, and make America the happiest land that the sun shines upon. Why did Gen. Harrison restrict the wage-worker to the meagre bill of fare prescribed in the foregoing quotation?

Mr. William W. Justice of Philadelphia objects to our remarks upon his campaign document entitled "A Word to Farmers," in which he reminded them of the benefits that the tariff on wheat and flour confers upon them, by preventing the importation of grain from Russia and India "whenever the price here is higher than in Europe." We remarked upon this singular document that during a period of thirty-eight years our *exports* of wheat and flour had been growing continually, with some variations depending upon the state of the harvests, and that they had risen from a total value of $7,742,315 in the year 1850 to $142,666,563 in 1887. And then we asked what likelihood there was that we should ever be importing wheat from Russia and India, so that the farmer could have his innings at the game of grab at which he has been cheated ever since protective tariffs began in this country. Mr. Justice replies that "at this present moment, were it not for the United States customs tariff of 20

cents per bushel on wheat and 20 per cent. ad valorem on flour, millions of bushels of foreign wheat would unquestionably now be under contract for shipment from European ports to the United States, and large quantities of American flour, which have been exported from America to foreign countries for a market, could be brought back to America, after paying a reasonable ocean freight, and sold at a large profit in America."

Mr. Justice is altogether wrong in his calculations. In the first place, American flour reimported in the original packages is not subject to duty. Consequently there is no obstacle to the reimportation of "large quantities of American flour." But it does not come. On the contrary, there was exported from our Atlantic ports in the week ending October 27 (the last week for which we have official returns) 197,714 barrels of flour (of which 114,449 went to Great Britain) and 53,144 bushels of wheat, all of which, except 2,000 bushels, went to the United Kingdom. Now, how does this come about? By referring to the quotations in Liverpool and New York respectively, we find that the best American wheat is quoted in the former market at 43s. 9d. per quarter, which is equivalent to about $1.30 per bushel, while the same article is quoted in the latter at $1.09½ per bushel. Mr. Justice tells us that it does not cost over 6 cents a bushel for freight between Liverpool and New York. Add 6 cents to the New York price and we have $1.15½, which leaves an abundant margin for all other expenses and risk. This would seem to account for the fact, otherwise unintelligible, that we are still exporting some wheat and flour, although prices at Chicago are actually higher than at New York, and much too high to warrant shipments from that market to this. The Chicago prices are purely speculative, and they have no more relation to the permanent export trade than "Old Hutch's" September wheat corner had to the permanent domestic trade.

Mr. Theo. Mayor, a well-known citizen of Berkshire, Tioga County, New York, and an old and earnest Republican, has published in the Owego *Gazette* a letter to his brother farmers, containing transcripts of accounts of the farm which he has worked for thirty-four years. We have not room for Mr. Mayor's detailed figures, but we give a summary of his conclusions, drawn from comparison of the prices of produce in those years which, he says, "according to our high 'protection' friends, were years of starvation prices," with the pampered "home market" years of 1879-87. Premising that, "of the dairy produce, I wish to say in those times, as a general rule, summer butter was not the article manufactured now, as we did not use ice or the present improved dairy methods, and you found very few fine summer firkins: at present, such butter would sell for grease," Mr. Mayor says:

"Now, brother farmers, I ask you, Are these starvation prices, or much lower than those you receive at the present time? But you will perceive at once that corn, wheat, wool, cattle, and pork brought then a better price than we receive now; butter, oats, and beef very much the same. Ten cents per pound of tariff protection on wool ought to have raised it in latter years to 43, 45, or 46 cents, according to the prices I received under no protection; but you have only received 25, 28, and 30 cents, or on the average from 3 to 8 cents less than I did from 1855 to 1858. Wheat has been quoted within two years at 70 cents per bushel, shelled corn at 50 cents, pork 5 cents per pound, to say nothing about our taxes, which have quadrupled since 1860."

This address, made to farmers in the county paper of an agricultural community, appeals for verification to their own experience as students of "markets" and not of "maxims."

We had no idea that Friends Joseph Wharton and Isaac H. Clothier of Philadelphia could be so wily and worldly-wise as they have shown themselves in "A Few Earnest Words to Friends" (Quakers), put out in a fly-leaf just before the election. They were troubled, first of all, by the conduct of the Administration towards the Indians. They were troubled, secondly, by the growing "fixed and systematic oppression" of the colored people at the South. They were troubled, thirdly, by the way "the Administration party works most harmoniously with the whiskey Trusts and drinking saloons." But we knew well that their greatest trouble was the fourth, namely, Cleveland's "policy of tariff destruction," which, however, we were shocked to learn, is merely a dodge to divert attention from the "ultimate purpose" of the Democrats "of placing the South, with all its barbarisms, once more in full control of the national Government." Sly fellows, the Democrats, but not sly enough to hide their real designs from Friends Wharton and Clothier. What pained us most in the document, however, was the remedy for these terrible evils and dangers. It is neither more nor less than that the Friends should "hold for a time their prohibition views in abeyance," as, "by voting for the Republican candidates, [they] simply relegate to the future a question which is not now before us, while assisting by their votes in the advancement of several concerns which are held dear by Friends, and in preventing the overthrow of that beneficent system of protection to home industry," etc., etc. O Joseph, Joseph, O Isaac, Isaac, if the liquor question was not before you, where was it? What had become of the drunkards? And what about the free-whiskey plank in the platform?

"It is the last straw that breaks the camel's back." Such must have been the exclamation of Mr. John D. Long when he received the letter of Prof. Bowen of Harvard in reply to his (Long's) request that Prof. Bowen would write a letter to be read at the Republican meeting in Cambridge on Friday. Prof. Bowen is the sole representative, among *American* college professors and ex-professors of political economy, of the doctrine of protection—one of the very few who have any toleration for it. His work entitled 'American Political Economy' does favor protection of the kind advocated by Henry Clay half-a-century ago, this being, as has been repeatedly shown in this campaign, a very different thing from that advocated by the Republican party to-day. Consequently, Prof. Bowen has been looked up to as a sort of monument, almost a solitary one, for everything labelled "protection." Mr. Long must have been nearly stunned when he received Prof. Bowen's letter, telling him that the present tariff is tyranny and not protection, that it is crushing our native industries, and taxing the necessaries of life to such a degree that it drives our native workmen into riotous attempts to raise the rate of wages upon which they can no longer subsist. Mr. Long's cup must have been full when he received this letter, and so, we judge, was the *Tribune's;* but although this veracious paper had a telegram nearly a column long concerning the Cambridge meeting at which Prof. Bowen's letter was to have been read, it made no mention of it.

The Republican party, which a few years ago was denouncing Gen. Butler as a disreputable politician, whose support was a thing to be dreaded by any party, has sunk so low that it implored his aid, and sent him to Michigan to preach the high-tariff doctrine in the hope of preventing that State from going for tariff reform. The Democratic papers simply reprinted passages from his own speeches of a few years ago, as, for instance, this from a speech in 1882:

"I am one of the largest woollen-manufacturers in the United States. I do not say this boastingly, but to show that I am not selfish in the views I hold. The cloth I wear [placing his hand on his coat-sleeve] is of my own manufacture, and I notice several gentlemen around me who wear the same. On these goods there is a tariff of 60 per cent. Republican orators and newspapers tell you this tariff is to protect the mill-laborers. Twenty per cent. will pay our entire labor expenses. What do you suppose becomes of the other 40 per cent.? These same Republican orators and newspapers tell you it goes into the United States Treasury. Not a dollar reaches there. Every cent goes into my pocket. [Slapping his hand on his pocket vigorously to give emphasis to his words.] And every one of you is paying this bounty to the woollen-manufacturers. *The whole tariff scheme is an imposition and a fraud on the American people.*"

It is a noteworthy fact, to which we have not seen attention called, that the two great Northern gifts for the education of Southern negroes—that of the late John F. Slater of Norwich six years ago, and that of Mr. Daniel Hand of Guilford a few weeks ago—have come from the State which, in the old days, was among the slowest of the New England States in supporting the anti-slavery agitation, and stoutest in opposing the education of colored youth within her own borders. It was within the shadow of Yale College that a town-meeting in New Haven decreed what would now be called a shot-gun quarantine against an institution for the manual education of negro youth proposed to be established there; and it was in the old-fashioned New England village of Canterbury that Miss Prudence Crandall's incendiary plot for teaching colored girls was suppressed by the joint efforts of the mob and of the officers of the law. There is a poetic justice in the fact that Connecticut, which stoned the prophets of negro education half-a-century ago, is now foremost in benefactions for the promotion of that object throughout the country.

RETROSPECT AND PROSPECT.

It is now eleven months since President Cleveland gave the country a live political issue to take the place of the dead and decaying controversies of the past. The issue he presented would have forced its way to the front ere long, even if Blaine had been elected instead of Cleveland four years ago. It was Mr. Cleveland's merit that he had a clear view of the future. It is statesmanship in the highest sense to plant one's party on the right side of an issue which is destined to dominate the future political life of the nation. It is Mr. Cleveland's crown of merit, more enduring and ennobling than any temporary victory, that he awakened his own party from slumber, and put before it the splendid task of emancipating American industry from its present thraldom.

The Mills bill, or any bill drawn upon similar lines, is merely a repeal of a war measure. Time and again has it been admitted by the leaders of the Republican party that the present tariff was passed to provide means for a desperate struggle now happily passed away. Time and again did they promise to repeal this war tariff and to reduce the public burdens to the measure of a peace establishment and a lightened national debt. Time and again have their more enlightened Senators demanded that those promises be fulfilled; but as years rolled on, the grip of the protected classes grew tighter and tighter. The Republican party insensibly fell under the domination of men who had become rich by an iniquitous system of taxation, like the Whig party of old. Feeble attempts were made in 1872 and in 1883 to shake off this yoke of vulgar and ill-gotten wealth, to abolish the tolls on industry, and to restore to the common people the natural right to the fruits of their own labor. For particulars, read the speeches of Senators Sherman and Allison, not to mention the names of Garfield, Grant, Arthur, Folger, McCulloch, Hale, Ingalls, Logan, and other living and dead statesmen who have held the highest positions in the councils of the party and the nation. Time would fail us to recount them all.

There came a change in the ideas controlling the Republican party. We were told that a tariff is not a tax, or at all events that it is not a tax if it is levied on things that are produced in this country or can be produced here. It is a tax if levied on tea or coffee, because these articles are not produced here, but it is not a tax if levied on wool or tin plate, because these are or may be produced here. This idea found expression in the Chicago platform. If the tariff is a tax, the conclusion follows that the tax is paid by somebody and received by somebody else. Then by logical steps it becomes necessary to show that the tax so paid and received gets back to the payer in exact proportion to his payment, in which case nobody is better off than if the tax had not been levied at all. On the contrary, since it costs something to collect taxes, everybody in the supposed case is worse off. Nobody can be bettered unless he gets something that he has not earned, something that belongs to somebody else.

The idea that a tariff is not a tax, embodied in the Chicago platform and getting its highest expression in the free-whiskey plank, did not wear well. It was abandoned on the 4th of October, when the Senate Committee reported its substitute for the Mills bill. The Republican party "changed front in face of the enemy." It reported a schedule of changes in the tariff, some up and some down. This was President Cleveland's second victory. His first had been the awakening of his own party. His next was the right-about-face of the Republican party. When the Senate bill was reported, it made the issue of the campaign a difference concerning schedules as to things that are or may be produced in this country. The Republicans reduced the tax on sugar more than the Democrats did, but they reduced the taxes on other things less; on others, neither party made any reduction; and on still others, notably on wool, the Republicans increased the tax. In short, the acknowledgment was publicly made that a tariff is a tax, although levied upon things that are or may be produced in this country.

Now that the public have been brought to think and reason, and to divide upon this great question, which is no other than the right of each man to the fruits of his own toil, and now that the admission has been extorted from the Republicans that the tariff is a tax, we look with entire tranquillity upon the result of the election, in progress as we write. As surely as the fight against slavery was unextinguishable while slavery remained, so surely will the fight against tariff spoliation be continued and renewed as long as that wicked system lasts. If Mr. Harrison is elected, the fight will break out in his own party. The intestine strife that led to the smashing of the Chicago platform will grow and increase. The varied interests that are now combined to tax the many for the benefit of the few cannot be held together. The spoliation tariff is doomed to fall, and the crash will be all the greater if the Republicans continue to defend and uphold it. A new force has appeared in the field of politics. It has the inspiration of truth, the vigor of youth, the courage of a great conviction, the stimulus of patriotism, and an assured faith in the triumph of the right. It has all the growing elements and the moral impetus that gave the anti-slavery party its final triumph; and triumph it will, whatever may be the result of its first battle.

PAUPER CAPITAL.

Perhaps the absurdest thing about the Republican position in this campaign has been that their great cry of pauper-labor competition was a conclusive argument against the Senate bill, whose distinguishing feature is its sweeping reduction in the tariff on sugar, while it has not the remotest application to the Mills bill, whose distinguishing feature is its removal of the tariff on the raw materials—wool, lumber, and copper. The Senate bill's reduction of more than 40 per cent. in the tariff on sugar exposes our sugar producers to the competition, not so much of the pauper labor of Europe, as of the slave labor of the West Indies. In case, as the new school of Protectionists pretend, people who get high wages ought never to employ those who get low, but ought rather to perform the ill-paid work themselves, then the Senate bill is merciless to our laborers in permitting them to exchange the product of one day's labor in America for the product of four or five in the West Indies. Yet the Republican leaders, with the exception of Mr. Kelley, have swallowed this cardinal principle without a grimace, and applauded the action of the Senate. Nevertheless, in the same breath they have kept up the pauper-labor cry against the Mills bill, because it removed the taxes from three important raw materials, not one of which but is most cheaply produced either in our own country or else in Ontario or Australia, the only other countries in the world where wages are as high as our own. In the case of each of these industries, the costly protection now granted is not against the competition of cheap foreign labor, but against the competition of cheap foreign capital.

That this is true of the wool industry was practically confessed in the tariff debate of 1884, by the chief representative of the Ohio wool interests, Hon. George L. Converse. The wool-growers of Ohio, said Mr. Converse, must be "protected against the *cheap lands* of Australia." This argument was used because not even misrepresentation could supply another. Australasia produces annually 455,000,000 pounds of wool, half again as much as any country in the world. Yet Australasia is notoriously the trades-unionists' paradise. In the free-trade province of New South Wales the working day is but eight hours, while the wages, according to the official statistics cited by F. P. Powers in the *Quarterly Journal of Economics* for October, are as follows:

Bricklayers	11	shillings.
Plasterers	11	do
Carpenters	9	do
Painters	9	do
Laborers	8	do
Slaters	10 to 12	do
Etc., etc.		

When speaking of Australian competition, to talk of pauper labor would have been too ridiculous for even Mr. Converse to hazard; therefore he fell back upon the argument of European landlords, and demanded protection against the cheap lands of Australia in almost the same language as that used by the barons in the German Reichstag when they demand higher taxes on wheat and corn in order to be protected against the cheap lands of America. This taxing of the masses in order to raise the rents of the land-owners, though a less monopolistic measure in America than in Germany, is at the same time less intelligent. In Germany, the taxing of American grain really does raise the rents of landlords; but in Ohio its chief effect has been to induce farmers to turn land worth $70 an acre for corn-raising into sheep-pastures, for which purpose $3-an-acre land in Texas would serve as well. The wool tariff is thus the taxing of the masses for the

protection of capital, but not for its enrichment; for the capital is pensioned as a pauper only to compensate it for becoming worthless.

In the case of lumber, the irrelevancy of any cry against the competition of cheap labor is equally obvious. Along the Canadian border, whether in Michigan or in Washington Territory, the difference in wages between America and Canada is imperceptible. The labor of the two countries is interchangeable. When Congress added $2 a thousand feet to the price of lumber, the lumber kings needed no more laborers than before, and, had they needed them, would have imported more Canadians rather than add a dime to the weekly wages of their men. The farmer in New Jersey pays no higher wages than the farmer in Nebraska, though his land is worth four times as much; and the lumber kings of the Northwest would pay no higher wages if the selling prices of their forests should be quadrupled by act of Congress. The tariff on lumber means monopoly pure and simple.

But the most flagrant case of all is the copper industry. The disgraceful history of the tariff on copper is well known; yet the demand for the imposition of the protective tax in 1869, in behalf of the richest mines in the world, was hardly so preposterous as is the demand for the retention of the tariff to-day. It is true that high wages are paid in these mines, and that the chief foreign competitors employ pauper labor; nevertheless, during the last decade, American labor has shown its ability to compete in the markets of the world by selling in Europe in 1885 more copper than it produced in 1875. During the decade between 1870 and 1880, the efficiency of the labor in the mines constantly increased, and the labor bill of the mine-owners proportionately diminished. According to the last census (Compendium, p. 1239) the per cent. of the value of the product paid for labor in 1870 was fifty-two; *in 1880 it had sunk to thirty-six.* With the exception of an expenditure for materials, which amounted to but 15.7 per cent. of the value of the product, the entire balance has been profit to the rich monopolists who owned the mines. The only effect of the tariff on copper has been to enable the rarely broken copper combination to charge a higher price to Americans than foreigners. The only competition feared is domestic competition. The protection now granted is the protection of extortion.

What Mr. Carnegie has said of the protection of raw materials in England is equally true in America. It is merely the taxation of the masses in order to increase the rents of the land-owning classes. If, then, it is robbery for legislation to reduce natural rents in order to benefit the laboring classes, it is equal robbery for it to increase natural rents in order to benefit the capitalist classes. The tariffs on raw materials, which the Mills bill repeals, are in every instance tariffs to increase natural rents. As was said by John H. Kasson, M. C., of Iowa, July 10, 1866, when as a Republican leader he discussed a measure to tax raw materials, the title of the Senate Bill "should be changed so as to read: '*A bill to prevent the diffused blessings of divine Providence from being enjoyed by the people of the United States.*'"

THE ENGLISH VIEW.

It is clear that England is surprised at the dismissal of Lord Sackville, and that the surprise is genuine. She can see reasons why Lord Sackville should have retired, or been recalled, after a sufficient lapse of time to save dignities all around, but no reason why there should have been any haste about it—least of all why he should have been dismissed within a week after the offence had become known which admittedly called for his retirement. Since nearly all organs of English opinion take this view, we are required to believe that the soreness which exists is real and not feigned.

There are two facts in the case which have not been considered on the other side of the water, both of which ought to have been present to the mind of Lord Salisbury at the outset. One is, that the political effects of the Murchison letter, let the same be more or less, were to be wrought out within two weeks of the time that letter was published. We freely concede that, at another time, and under other circumstances, Lord Salisbury would have been allowed to take his time, and that Lord Sackville, if he delayed his departure, would have been frozen out, just as Minister Sargent was at Berlin, instead of being dismissed. Englishmen understand this as well as we do, and so they say that a great, civilized, friendly nation ought not to mind the fury of the Irish, who are not more than one-fifth, perhaps not more than one-tenth, of the voting population. At all events, they say, the American people ought not to put this capricious and objectionable class of voters in the balance against the canons of diplomatic courtesy and the good-will of a kindred people.

The situation was a difficult one, but it had two sides, and all we ask is that our side shall be considered and allowed to have its proper weight. It was quite within the range of possibilities that the Murchison letter should have been the deciding factor in the election. It was on the cards that Lord Sackville's blunder should elect Harrison and carry the next national House of Representatives. This was the intention of the scoundrels who entrapped him. The Republican party press and speakers were making use of the letter to the exclusion of everything else. They had even dropped their forged quotations from English newspapers in their glee over this find. It is impossible, and will for ever be impossible, to say what the net political effect of the letter would have been if matters had been allowed to run their course, but it is certain that if the result had been the election of Harrison and a Republican House of Representatives, our relations with England would have become more strained than they are now. It is an article of faith of the Republican party that the fisheries dispute should not be settled by negotiation. This means that it should not be settled at all, but should be allowed to drift at the mercy of wind and waves. It means that there should be a running sore on both sides of the line, a constant cause of irritation, with all that that implies. Would it be desirable to have the policy of the nation settled in this sense for four years by a lurch of the Irish vote in the last two weeks of the campaign? Is it in human nature to contemplate that chance, and not take steps to prevent it? Lord Salisbury ought to have seen the thing in this light. He ought to have been wiser than the English newspapers in general have shown themselves to be.

The second fact that has escaped attention on the other side is, that this capricious and menacing Irish vote is England's contribution to our political life. It is no child of ours. We did not bring it into the world. We did not seek such a gadfly to drive us hither and thither. We have institutions which depend upon universal suffrage, and we have to make the best of them. Of all who come from the Old World to help us make or mar our destiny, this British contribution alone sets the interests of its native land above those of its adopted country. Germans, Scandinavians, Bohemians, and Poles vote according to their conception of American interests; some few conceive that Socialism, or even Anarchism, would be beneficial to America, but none approach the polls with the smallest thought of Germany, Scandinavia, Bohemia, or Poland in their minds. The Irish alone vote for Ireland, and contribute their money for Ireland from year to year. Patriotism, as they understand it, is love for Ireland, and this is as a coal of fire in their hearts.

It is a piece of cheap advice to England to say that she can stop all this by satisfying the Irish in Ireland; that she can transform the Irish voter in America into a stanch and stable American citizen by giving the Irish in Ireland home rule. But bickering about home rule is not our present purpose. What we wish England to consider is, that if we have an excitable and irascible element in our politics, which has to be reckoned with in every important crisis of our national affairs, which busies itself three hundred and sixty-five days in the year with plans for vexing our relations with the mother country, and which has now grown to the dimensions of perhaps two million voters, that element is England's contribution. Therefore she must bear with us as best she can this disturbing element, which can no more be controlled under our form of government than can the disturbing influence of one planet on the orbits of the others.

AN EXPERIMENT IN RAILROAD CONTROL.

In the current number of the *Jahrbuch für Gesetzgebung*, Dr. von der Leyen describes the development of a system of railroad control in Prussia no less interesting than that of the advisory commissions in America. The Prussian system presents some features that might be profitably studied and perhaps imitated in this country.

When Alsace and Lorraine were annexed after the war of 1870, the Imperial Govern-

ment naturally took possession of the railroads. The old French tariff system could not be maintained to advantage under the new management, nor was it possible, under the traffic conditions of the country, to adopt any of the existing German schedules. The matter was compromised by the adoption of an extremely simple system of rates, which on the whole gave satisfaction. In order still further to conciliate the merchants of the country, the Government asked their advice on many subjects, and it was suggested by the Chamber of Commerce of Mülhausen that such consultations should be regularly organized. The Government was glad to meet this suggestion; it was at once put into execution in Alsace, and efforts were made to extend it to other parts of the German Empire. In most cases, however, the first results were disappointing. Merchants and manufacturers did not believe in the new arrangement, and they took little interest in naming their representatives at the conferences. But in the autumn of 1879, in connection with extensive purchases of private railroads by the Prussian Government, legal recognition was given to the whole system. A law was passed providing for the election, largely by local representative bodies, of members of a local advisory board, some representing commerce, some manufactures, and some agriculture. From the members of these local boards, with the addition of a few others, a general advisory board was chosen. All important changes in railroad policy were henceforth to be submitted either to the local or general board, accordingly as they affected local or general business interests. This system was rapidly extended. As the Prussian Government obtained more and more complete monopoly of the railroad management, public interest in this means of representation increased. The principle of election by local governments seems to have been discarded. The members of local boards are now chosen by chambers of commerce and other industrial organizations. In the General Board, however, one-quarter of the members are named directly by the Government, only three-quarters being directly representative of trade and agricultural interests.

These bodies are like commissions of the Massachusetts type in the fact that their functions are purely advisory. They afford a means of securing publicity of management. In some respects they do this better than a commission, in other respects not so well. The advantage is, that they represent directly almost all trades, so that, in any important change of policy, there is a fuller opportunity for different sides to be heard than is ordinarily the case in connection with the reports of a commission. The disadvantage is, that such a body is necessarily somewhat unwieldy. It is weeks before it can come to a decision, and months before the grounds for such a decision can be fully presented or its influence felt in matters of practical railroad management.

There is also this difference between the German and American systems: the German roads are owned by the Government, American roads by private corporations. The American Commission, therefore, represents Government and business against the immediate management of the roads, while the German Advisory Board represents business interests against the management and the Government. But the means of control is the same in the two cases. Publicity exercises a controlling force on an irresponsible government in Germany in the same way that it exercises its power upon an irresponsible corporation in America.

The Railroad Commission has to-day passed out of the stage of development represented by the Massachusetts type. The Inter-State Commerce Commission has become a court, and there is a tendency on the part of State commissions to assume the same functions. This leaves a gap, which might well be filled by a local advisory board. There are almost always strained relations between traffic managers and shippers, due to the absence of free communication between one party and another. The Inter-State Commerce Commission has tried to prevent such misunderstandings, and its efforts in that direction during the first year of its work were often crowned with gratifying success. It was found that many supposed causes of dispute disappeared when there was a fair and free opportunity to talk matters over. But the Commission has so much to do in getting opinions on actually disputed cases that it cannot do full justice to this part of the work. An organized body by which the various classes of shippers should give expression to their demands, is in the highest degree desirable. In one respect it is more needed now than it was two years ago. The system of special rates, however great its abuses, nevertheless gave opportunity for shippers to influence the policy of a railroad. A single shipper could secure a reduction; and often a reduction which was made in one instance soon became general. There is danger to-day that the prohibition of special rates will prove the means of preventing the first step in reduction, which opens the way for so many more. If we can take no steps except under a general demand for change, it is more than ever desirable that bodies should be organized by which this general demand can make itself felt. It would be hard to get such a system into good working order. No one could tell who represented fairly the different industries. Many merchants and manufacturers in America would look upon the new system with even more distrust than was felt at first in Germany. But with the increasing organization of industry, the demand for something like representative government of the industrial affairs of a nation becomes stronger every day; and experiments on this line would seem to have the best chance of success.

THE AMERICAN ORIENTAL SOCIETY.

PHILADELPHIA, November 3.

THE fall meeting of the American Oriental Society took place in this city on October 31 and November 1. It was one of the most successful the Society has ever held, more than forty papers and communications being presented. The first session was held on Wednesday afternoon in the chapel of the University of Pennsylvania, and that of Thursday in the rooms of the Historical Society, Dr. William Hayes Ward in the chair. Dr. Cyrus Adler of Johns Hopkins read reports on the exhibition of oriental antiquities made by the National Museum at the late Cincinnati Exposition, and on a collection of oriental antiquities recently deposited at Washington. Dr. Ward presented a paper on a very interesting Babylonian cylindrical object recently found at Oroomiah, Persia. The walls, of transparent alabaster, are six millimetres thick, the designs in relief being archaic Babylonian. Two doors are being opened by two porters who stand at their side. Between the doors stands Shamash, the sun-god, with his left leg exposed, the foot resting on a hill. Behind him comes Hiabani, with three other persons, one of whom is the goddess Aā. The cylinder was not turned on a wheel, as tool-marks are plainly visible on the inside. It resembles many of the cylindrical seals, and is very valuable for Babylonian mythology. Dr. Ward also read a paper on the Babylonian caduceus, which he is inclined to see in an emblem often found in the hands of the deity as represented in the seals. This emblem is very similar to a sceptre or trident, for which it has often been mistaken. Dr. Ward prefers to see in it a double serpent arising from one stem. The clue to this identification is given by the single serpent which occurs so frequently.

Prof. Toy of Harvard described the modern Arabic dialect of Cairo, which he has had occasion to study personally during the past year. Prof. Moore of Andover gave an account of a Samaritan MS. now in the library of the Andover Theological Seminary, containing portions of the Book of Exodus, and assigned its composition to the thirteenth or fourteenth century. A very interesting paper was presented by Prof. John A. Payne on the seventh year of Cambyses. Mr. Pinches of the British Museum published a few months ago (*Babylonian and Oriental Record*, vol. ii, p. 202) a Babylonian astronomical tablet containing references to an eclipse which occurred in the seventh year of Cambyses. This eclipse not only fixes the date of the accession of Cambyses at 528 B.C., but is identical with the one mentioned by Ptolemy in his 'Almagest' (Book V., chapter 14, §5). Prof. Payne suggested that this might be the original tablet upon which Hipparchus and Ptolemy had based their information.

On Wednesday evening the society met at the house of Dr. Pepper, Provost of the University, to listen to a discussion on the method and use of Semitic studies in the University and Theological Seminary. The first speaker, Dr. W. H. Ward, emphasized the importance of the study of oriental civilization in the departments of art, history, and theology. He reviewed the past history of these studies in this country and the advances which have been made during the past ten years. He hoped that the material now deposited at the Metropolitan Museum and at the University of Pennsylvania would not have to wait long for competent scholars. Prof. Harper of Yale also took a hopeful view, saying that Semitic study, in the University, had been born again to a life far more vigorous than the old life, because more widely extended and deeply rooted. He showed briefly what could be accomplished in the different Oriental languages, not only in the department of philology, but also in that of history and literature. Future success, he felt, was assured, because of the importance of the study itself—an importance now appreciated

by those who make this study their profession, as well as by intelligent, broad-minded, and broad-hearted men in every line of labor. Prof. Francis Brown, of Union Theological Seminary, followed with an account of the position Semitic studies must occupy in a theological seminary. He dwelt upon the great assistance the colleges might render if they sent their students to the seminaries well versed in the rudiments of the chief Semitic languages. Remarks were also made by Profs. Toy, Gottheil of Columbia, Green of Princeton, Haupt of Johns Hopkins, and Lyon of Harvard. The hope was expressed that every college and university would in a short time have its Chair for Oriental languages and literatures. During the evening Prof. Jastrow, of the University of Pennsylvania, exhibited specimens of a collection of Assyrian antiquities recently acquired by that institution.

The second day's sessions were opened by the reading of a paper sent by Dr. W. A. P. Martin of Pekin, entitled "Plato and Confucius: a Curious Coincidence." Dr. Martin pointed out that the ethical question which forms the basis of Plato's 'Euthyphron' is also found, and decided in a similar manner, in the writings of Confucius and his apostle Mencius. Prof. Hopkins of Bryn Mawr, in a paper on the qualitative variations in the Calcutta and Bombay texts of the 'Mahābhārata,' showed that the text of the former, though the shorter of the two, deserves precedence. The Bombay text, generally considered the better, contains many additions made to glorify Vishnu and to amplify the poem *in majorem gloriam* of the Pandus. An interesting paper on the development and character of Mohammedan education was read by Prof. Frothingham of Princeton. It was shown that the Arabs, in the golden age of their history, had a complete system of pedagogics. Among the distinguishing features of their system were the democratic principles of equality which opened the instruction, not only to Arabs, but to Christians and Jews alike. Freedom was also allowed the individual teacher to use what method he might think best. The Arab ideal of culture—and this is to be insisted upon—was distinctly moral. To a certain degree the entire population was educated, attendance at school being obligatory up to the ninth year. For the purposes of higher instruction, colleges flourished in all parts of the caliphate, where the intellectual, experimental, and linguistic sciences were cultivated. Spain even had its college for women.

Mr. Talcott Williams of Philadelphia read a note on the Arch of Chosroes, which was minutely described, and in which he proposed to see a gigantic divan. Prof. Haupt sought to determine the exact measurements of the Assyrian "Noah's Ark." In the well-known Deluge Tablet, lines 25 and 26 giving these measurements are mutilated. By comparison with another text and with the Babylonian Deluge Tablet, Dr. Haupt arrives at the conclusion that the ark measured 600 by 120 cubits, about 500 by 110 feet.

In a paper on "Symbols of the Sun-God and the Word *Kuduru*," Prof. Jastrow sought an explanation of the disc which, in company with the staff, is seen in the hand of the god on the Abu Habba Stone. He believes that this is the *Kuduru*, which he identifies with a Biblical and Talmudic word meaning "globe" or "sphere." In the sense of "circle," it would stand for that country over which the god presided. In this way Prof. Jastrow would explain the name Nebuchadnezzar (*Nebo-kudurusur*) to mean "Nebo protect my country." Prof. Lyon spoke on some Assyrian and Babylonian royal prayers, and on the Pantheon of Assurbanipal, which contained twelve gods, while, at other times, there were not more than seven. Prof. Isaac H. Hall of New York, described and exhibited a New-Testament MS., Peshito version, date A. D. 1206, with a text of the Traditions of the Apostles. This Syriac text of the Traditions differs materially from the Greek text.

Prof. Gottheil read a paper entitled "A Proposal to Catalogue all the Oriental MSS. in America." These MSS. are scattered in different public and private libraries throughout the country; they are not accessible to students, and are even, in a large measure, quite unknown to them. It would be the work of the Oriental Society to obtain a complete list of all existing MSS., and then to publish a detailed and systematic catalogue of them. The proposition was very favorably received, and a committee, consisting of Profs. Hall, Gottheil, Moore, and Hopkins, and Dr. Adler, was appointed to take the matter in hand, subject to the advice and approval of the Council.

Among the papers read in full or by title were also the following: "On the Origin of Certain Rajput Forms of the Substantive Verb in Hindi," by Prof. S. H. Kellogg; "Notes on a Trip through the Chinese Provinces, Chihli and Shansi, and through Southern Mongolia," "The Lamaist Ceremony called 'Making of Mani Pills,'" and "On the Use of Skulls in Lamaist Ceremonies," by Mr. W. W. Rockhill, of Pekin; "The Indo-European Hypothesis," by Mr. M. W. Easton of Philadelphia; "Notes on the Proposed Edition of the Works of Edward Hincks;" "Verbs tertiæ infirmæ in Assyrian," by Dr. Cyrus Adler; "Paphlagonian Tombs" (illustrated by stereopticon views), by Prof. Marquand, of Princeton; "Targum MSS. in the British Museum," "Origin of the Superlinear Vowel-System," by Prof. Moore; "A MS. of the Thirteenth Century, containing Portions of the Targum," by Prof. Gottheil; "The Asuri-Kalpa, a Witchcraft Practice of the Atharva-Veda," by Mr. W. H. Magoun of Baltimore; "A New Vedic Text on Omens and Portents," by Mr. J. T. Hatfield; "On Transposed Stems in the Babylonian Talmud," by Dr. Marcus Jastrow; "The Names of the Hebrew Tenses," by Prof. W. H. Green.

In the evening a reception was tendered the society by Dr. H. Clay Trumbull, editor of the *Sunday-School Times*. Two beautiful American MSS. were shown the Society by Prof. I. H. Hall; Arabic, Hebrew, and Syriac ones by Prof. R. Gottheil; and Hebrew rolls by Dr. Trumbull and Mr. Mayer Sulzberger. Dr. W. H. Ward exhibited a beautiful collection of Babylonian seals.

The Society adjourned to meet in May, 1889, in Boston. R. J. H. G.

THE MARQUIS OF LONDONDERRY IN BELFAST.

DUBLIN, October 20, 1888.

AT a banquet in Belfast a few days ago, the Lord Lieutenant announced that "her Majesty has been graciously pleased to confer on this town the dignity and the honor of the title of a city; the honor is greatly enhanced by the fact that on no other occasion has this title been conferred on any town that was not the seat of a bishopric." No Irishman should grudge Belfast this honor or any other that can be conferred on her. One of the good effects of home rule will be that, the pretensions of that city and a corner of the north to dictate regarding the government of the rest of the country being removed, all Irishmen may be proud of Belfast and the north, as Englishmen are of Manchester and their north, or as Scotchmen are of Glasgow. The cities and towns of Ireland are, according to modern ideas, for the most part insignificant in size. The population of none of them, except Dublin and Belfast, rises above 100,000, all others having, in common with the rest of Ireland, rather diminished in population since 1841. Cork has fallen from 81,000 to 80,000; Limerick from 48,000 to 38,000; Waterford, from 23,000 to 22,000. Dublin, including its suburbs, has increased from 240,000 to about 300,000; Belfast, from 75,000 to about 225,000. No wonder, then, that Belfast feels elated, and that, as with most of those who have advanced themselves in life, there is a self-consciousness about her not always agreeable to others. The rest of Ireland, Dublin especially, does not concern itself much about Belfast; but Belfast (or "B'lfast" as the inhabitants say) is much occupied with herself and her own importance. Educated persons in Dublin would be laughed at who boasted that anything was especially good because of belonging to this city: Belfast people incline to think that, in Ireland at least, there is little admirable outside Belfast and its neighborhood, and are apt as far as possible to ignore the rest of their country.

The difference between the two cities is marked. Dublin is the governing and professional centre of Ireland; here are "the Castle," the law courts, the universities, and chief offices, while we have few manufactories, and it is a problem how the masses of our poor live. Belfast is the industrial centre of Ireland; there are the magnificent ship-building yards at which the White Star and some of the other finest vessels in the world are constructed. Belfast is also the well-defined centre of Presbyterian thought, having within its district 450,000 of the 470,000 Irish Presbyterians. There are in Ireland 640,000 Episcopalians, of whom only 380,000 are in Belfast and the corner counties. The Church Synod, therefore, meets in Dublin. In so far as Ireland is Catholic, Dublin is incontestably its religious capital; in so far as it is Protestant, it has two capitals. Dublin Protestants feel very much at one with their co-religionists over Ireland; Belfast Protestants confine their sympathies more to their own district. If an Irish association quasi-Protestant be established for any purpose, what is called Ulster is pretty sure to assert its independence. We have Ulster temperance leagues, Ulster women's suffrage associations, Ulster schoolmistresses' associations, and the like. The Ulster people prefer to manage their own affairs, and generally do so vigorously and well. The same characteristics of grit, sturdiness and hardheadedness that we associate with the Scotch immigration in the north of Ireland, existed to a certain extent before the Anglo-Norman invasion, and the same rivalry between north and south—only it was then as much the south against the north as the north against the south.

Belfast has none of that air of stately, faded metropolitan grandeur that there is about Dublin; she has no buildings like our old Parliament House and Trinity College, the Custom House and the Law Courts; but on the whole her inhabitants are much better housed than ours. The mass of the Dublin people occupy wretched tenements—single rooms of large old houses once the dwellings of the well-to-do. Whole districts of old Dublin are absolutely rotten. When buildings fall, it hardly pays to rebuild them. When past a certain limit of danger and unfitness for human habitation, they are closed: you may pass through lanes of these closed houses in what was once a busy part of Dublin. Portions, happily, have been demolished, and rebuilt by the Artisans' Dwell-

ing Company; one small demolished quarter is now being converted into a public garden by the Guinness family. But these are only oases in the filth and decay and degradation in the old parts of Dublin. There is, besides, a savagery in living such as I have never seen elsewhere, not alone due to defects in our present system, but also to a direct inheritance of times when the Irish generally were especially low in the scale of civilization. The mass of the Belfast workers inhabit separate, neat houses of modern construction. Dublin is one of the unhealthfulest, Belfast one of the healthfulest cities in the United Kingdom. There are dirt and misery in Belfast, but far less than in Dublin. The working-people there look as if they had bought their own clothes: here they have more the appearance of wearing second-hand garments. The great mills, the roar of the spindles, the lurries piled with bales, a general go and brightness and hope in the air, the shriek of the steam-whistles at meal-hours, the streets crowded with hurrying working-people —these in Ireland belong only to Belfast. There you do not seem to be in Ireland: it is more as if you were in the States or the north of England, and Belfast is less gloomy than English manufacturing towns of similar size; yet there is through all a certain provincialism of life and thought and feeling, and the city is, as we all know, disgraced by occasional rioting and brutality peculiar to it. Catholic majorities over the rest of Ireland show a liberality respecting honors and spoils which is not shown by Protestant majorities in Ulster; and such disabilities as Protestants do labor under are due almost entirely to political causes, while in Ulster the opposition to Cathol cs is mainly on religious grounds.

It is strange, this claim of Ulster to a life in the Empire distinct from the rest of Ireland. The Protestants and Catholics in Ulster are nearly equal. Of nine counties, four are represented entirely by home rule. There is not one county without a home-rule representative. Its home-rule representatives are a majority of one. In three-quarters of its area, the Catholics are nearly two to one. In the remaining quarter, containing two-fifths of the population, and comprising the extreme northeast corner of Ireland, and mainly three counties only, the Protestants are about three to one. At the last census, the income-tax assessment of Ulster was less by nearly £1,000,000 than that of Munster and Connaught combined, and less by £3,000,000 than that of Leinster. This may not be altogether a fair criterion of general wealth, since such a large proportion of the inhabitants of Ulster earn high wages and occupy a comparatively comfortable position without coming under the operation of the tax. Leinster, for taxation purposes, is rated at £4,761,000; Ulster at £4,346,000; Munster at £3,424,000; Connaught at £1,366,000. In education Leinster is ahead of, and Munster nearly on a level with Ulster.

It is difficult to understand how Belfast and the small portion of Ulster decidedly Protestant and anti-Irish could be staked off from the rest of Ireland. "I wish to goodness it could have been," said a Nationalist M. P. to me the other day. "How would its farmers now feel if they had no Land Acts, or its Presbyterians if they still had to support the Episcopalian Church?" The Belfast corporation is just about to consolidate and lower the interest on its debt by availing itself of an act passed almost entirely through the exertions of Mr. Sexton and other home-rule members. The opposition of Belfast and the north to home rule arises from local jealousy. 900,000 Ulster Protestants would have much more influence in an Irish Parliament representing a population of 5,000,000 than in a London Parliament representing 30,000,000. Ireland could not harm Ulster without harming herself. With the guarantees upon which home rule would be conceded, how could she single out the Ulster Protestants for attack? How could she injure them without injuring the mass of Catholic employees dependent on them for livelihood? And if Ireland had the opportunity, she would not have the strength to injure a race like the northern Protestants, even if they were not backed by the Protestant opinion of England and the United States, where Catholic minorities desire to make their way. When it comes to the point, I do not believe Belfast and Ulster will fear to throw in their lot with the rest of Ireland. They would hardly consent to leave the small minority of Protestants scattered over the rest of the country to be hopelessly swamped by a Catholic majority; and all Catholics are not considered even by Ulster-men as Catholics in the dangerous sense. A recent writer has pointed out that if ever there are 500,000 or so of the better class of Catholics in Ireland reasonable and reliable, they and the Protestants will hold the balance of power in the country. Much of what is said regarding the inherent incompatibility of the north and the south of Ireland reminds me of the views current thirty years ago regarding the inherent incompatibility of the Italian peoples.

The Marquis of Londonderry announced her Majesty's desire regarding Belfast at a public banquet upon the opening of a free library, the foundation stone of which had been laid some years ago by Earl Spencer, then Lord Lieutenant, in the odor of sanctity as an opponent of home rule. The Marquis's speech was in the main a glorification of the Balfour government of Ireland. The most casual reader will see in it evidence of those proclivities in the governing class here which render it impossible for the Queen to be popular in Ireland. In Great Britain, royalty is a neutral representative centre, round which politicians of all shades can meet, as round a common love of country. However bitter politics may be, however the Queen or royal family may be supposed to incline one way or the other, neither she nor any member of her family ever thinks of openly taking sides, much less of publicly indulging in strong language regarding any political party. The Lord Lieutenant is the Queen's representative; he is about all of her Majesty or her family we ever see. And it was at this banquet in Belfast where, "as representative of our beloved Queen in Ireland," he felt "quite at a loss to find words with which to thank you for the kind manner in which you have proposed my health," he then went on to abuse the Opposition, and to speak of the Irish members and their doings respecting the Plan of Campaign in a way which would hardly be justifiable even if they were convicted felons. He asserted that his policy and that of his party had been a complete success; yet, strange to say, "we know well that if we were to relax the firm hand that holds the reins of government in Ireland, that fire which is at present smouldering would inevitably spring into a blaze"—not very reassuring as to the permanent effects of the policy.

Statistics of crime and outrage in Ireland, collected as they are by instruments entirely under the influence and control of the central authority, and always inclining to favor the current views of the Government, are not very reliable. I have in previous communications traced the reasons for crime and outrage having diminished, and for the agitation having somewhat subsided. The Coercion Act has had perhaps a little to do with this, but not much; ameliorative and hope-inspiring causes have been more potent. I doubt the correctness of his Excellency's contention that farms from which tenants have been unjustly (or, for that matter, justly) evicted are being taken up with any more readiness than they have been since the commencement of the agitation. If this were the case, to the extent he claims, the agrarian difficulty would for the present be at an end. So far as I can ascertain, "evicted farms" are as closely boycotted as ever. Only the other day a relative holding property and residing in one of the most settled districts in Ireland, complained to me that there would be no use in his evicting a notoriously troublesome tenant of a laborer's cottage, because no one else would take it. (The present temper of the country relative to such holdings will eventually press heavily on the poor, the application of capital to the construction and maintenance of residences for them being entirely checked by the difficulties in collecting rents and in resuming possession in cases of unsatisfactory occupiers.)

The Government are trying to show that the law is being "firmly, fairly, and fearlessly" administered all round, by not administering it at all in certain classes of cases. Men are arrested and punished here and there, now and then, to keep up an appearance. But if the law were fully carried out, the jails in Ireland would not hold one-tenth of those who would be committed for breach of proclamations against the League and the Plan, and the Press clauses. The law could not be carried out, and is not carried out further than is necessary to save appearances. The rise in the value of live-stock since last March from 36s. to 42s. per head for sheep and from 50s. to 60s. per cwt. for beef may have a much more quieting effect upon the agitation than the power now exercised by Government. After all, the ballot-box, and not rhetoric, supposition, or statistics, proves the real feeling of the country; and there is nothing in late elections, and in the municipal elections now proceeding, to indicate any change here in the relations of parties. The advance of opinion in some directions is certain. A few years ago those who now most violently oppose political change, upheld the land system of the country as the best that could be desired, maintaining that a system under which the landlord held the capital and the occupier had its use, was better for the state than the systems of peasant proprietorship, with their attendant clog of mortgages. On this subject there is an entire change of opinion. The *Daily Express*, the organ of Irish landlordism and ascendancy, said a few days ago, relative to the sale of a large portion of the Abercorn estates to the occupiers:

"It may be conceived that, in the case of a thrifty and industrious tenantry, the change from tenancy to ownership will have a magical effect. . . . Although the bonds of attachment which have been transmitted from feudal times are now loosened, we are sure that it will only be a legal severance, and that feelings of sympathy and friendship will still be cherished on both sides."

These considerations as to Ulster and the present state of feeling in Ireland have been prompted by a perusal of the Lord Lieutenant's speech at Belfast. But every other interest pales before the proceedings of the Commission which in a few hours is to open at Westminster.

D. B.

GEORGE SAND IN ITALY.

VENICE, September 12, 1888.

IT was towards two o'clock one morning after the great *galleggiante* down the Grand Canal, that we stopped at Florian's for a cooling

drink, and thoughtlessly asked the waiter at what hour the café closed. "Closed, sirs?" he said with astonishment. "The doors of Florian's have not been shut for three hundred years." And truly, as the streets and canals of Venice are never deserted by day or night, it is possible to sit in any part of St. Mark's Square, and imagine that life has never ceased there since those buildings were first erected. The "Cappello Nero" over there has been an eating-house for more than five hundred years. You glance at the windows of the Procurazie, and seem to see the same figures looking down on the Doge's procession which you saw that day at the Academy in the pictures of Gentile Bellini, or in the reproductions of the old woodcuts hanging in the show-cases of Ongania's book-shop at the corner; or, on turning your head, you see the masks and jests of the last century as you saw them in the pictures of Longhi in the Civic Museum. You see those very scarlet gowns which hang there, over the shoulders of real people; for they cannot be creatures of the imagination. There is no place so easy to repeople as Venice, and none where the ways of revivifying are so many and so various.

But one element of the population of old times is wanting. The gondoliers ply their oars from father to son; the shopkeepers and petty tradesmen still practise the virtues inculcated in their minds by the old conservative Republic; there are perhaps not so many priests and abbés visible in the cafés, and their worldliness has given place to the outward decorum demanded by the age; foreigners of all nations are here in as great numbers as at any time during the last two centuries; Venice is still hospitable to dethroned royalty: but the old nobility are no longer here. They spent their fortunes in riotous living during the last century, especially in their mania for *villeggiatura*, satirized by Goldoni, and borrowed money from convents and monasteries to keep up their state, until there came the French occupation, and the mortgages on their estates were foreclosed to fill the coffers of Napoleon. With their fortunes the families also disappeared, and few of them can now boast of a male representative. It is true that many of the old names still exist, but those who bear them are, for the most part, not even connected by birth with the nobles whose names they have taken. It was at times customary for a servant, client, or dependent to give his child as a baptismal name that of the family which he served. In many cases the name of the reigning Doge was thus introduced. With time the plebeian name has been dropped, while that of the noble family alone remains. For example, Daniel Manin, the illustrious patriot of 1849, was no relation to Lodovico Manin, the last Doge, but a Jew to whom his name had been given. When it became necessary for the Austrians to give up Venetia, the Emperor Francis Joseph would have been glad to have restored the old Venetian republic, but, on asking the advice of his best qualified counsellors, was unable to find a sufficient number of descendants of noble families to fill the official posts.

Good old Jules Lecomte, in his excellent guide-book to Venice—in which, by the way, he gives a very interesting account of the higher Venetian society of the early part of this century—recommends as a way of learning and appreciating Venice the perusal of George Sand's Venetian tales. He wrote at a time when these had been recently published; but his advice is still worth taking, for these stories, even after fifty years, have lost none of their freshness. The impression made by Venice on George Sand was so strong that, long after her visit, the recollection of it would inspire charming bits of writing. She almost foretold this in a passage in 'Lettres d'un voyageur,' written while still at Venice.

"On putting my hands to my face I inhaled the odor of a sage-bush, whose leaves I had touched some hours before. This little plant was now flourishing on its mountain several leagues away from me. I had respected it: I had carried away from it only its exquisite scent. What a precious thing is perfume! Without causing any loss to the plant from which it emanates, it attaches itself to the hand of a friend, and follows him on his way, to charm him, and to recall to him for a long time the beauty of the flower that he loves.——Remembrance is the perfume of the soul."

It was the remembrance rather than the reality of Venice which inspired George Sand, except in the first part of the book just cited, where she wrote under the impression of a recent passion.

"The hazy nights," she says, "of our own mild regions have charms that no one has felt more than myself, and no one has less wish to deny. Here Nature, more vigorous in her influence, perhaps a little too much imposes silence on the mind. She lulls thought to sleep, agitates the heart, and dominates the senses. Only a man of genius could think of writing poems during these voluptuous nights: one should sleep or love."

She had loved, and the first part of her stay in Venice had included her idyl with Alfred de Musset. It is useless recapitulating now a story about which so much has been written. The 'Histoire d'un merle blanc,' 'Elle et Lui,' and 'Lui et Elle' give us no detailed facts to enable us to understand from three points of view the divergences of character that brought to a speedy end a passionate love, which strongly influenced them both for the rest of their lives. In none of these, of course, are there real facts and real names, but the allusions were only too evident to the curious public at the time. George Sand's story of the two painters is clever and pleasing as a story, and, while it represents the hero as very weak, makes him sympathetic. Paul de Musset's tale of two musicians is brutal, both in its statements and its insinuations, but is yet well enough done to leave you with a feeling of detestation for the heroine. Arsène Houssaye has recently made a revelation of this affair which he professes to have taken down from Musset's lips. Musset first met George Sand at a dinner given by Buloz of the *Revue des Deux Mondes*, and sat between them. He says: "Between Buloz and George Sand there could be no hesitation," but he added that her great eyes did not fascinate him long. He had really loved her only at Venice,

"because Venice always inspires love in poets and artists. You may imagine that on first meeting her I found neither beauty nor charm in her; although she might play with a switch in remembrance of Maurice de Saxe, one of her thirty-six fathers, she was still a countrified *bourgeoise*. I admired her in her genius, not in her face. I don't love women who dress like men, any more than real women love men who disguise themselves as women. Nevertheless, travelling with her in Italy intoxicated me a little, and, besides that, I was not sorry to carry her off from some other men who were sighing for her. The journey was charming. She, who had learned nothing, talked of everything as it were by magic. I believed myself her master, but yet I bowed down before her."

During the earlier part of her stay at Venice George Sand lived at the Hôtel Danieli, and it was there, on the last night of the Carnival, when the extreme cold added to her moral sufferings, and she had the feeling of being all alone among a population of strangers all bent on amusing themselves, that, in order to distract herself, she began to write 'Léone Léoni,' the idea of which was in part a reminiscence of 'Manon Lescaut.' She finished it in a week; for when she sat down to the writing-table her inspiration never failed her, and interruptions did not hinder her power of self-concentration. She took no credit to herself for her power of work, which one of her friends described by saying: "She sits down to the table and turns the tap; somebody comes in—she shuts it off. When the interruption is over, she turns it on again." And so she wrote for nearly all her life, from midnight till morning, and often for a couple of hours besides during the day. She was then writing to gain her bread; for the separation from her husband had not yet been arranged, and the money for her journey had been advanced by Buloz as payment for unwritten articles in the *Revue des Deux Mondes*. But Danieli's was then, as now, the most expensive abode in Venice; and after Musset's departure she found a lodging in the Campo S. Luca with an apothecary named Ancillo, who had been known, from Byron's time on, as the greatest scandal-monger and *mauvaise langue* in Venice. Mengaldo says of him in his diary: "A perfect good-for-nothing; but it is sometimes a good thing to make friends with the devil." Here, when for a while she was left without money, she dined with the strictest economy, and slept on a mattress on the floor, as she had no bedstead; but she was able to work for eighteen hours at a time without getting ill, and generally for seven or eight hours a day, after which she had only enough strength to go and drink her coffee, smoke her cigarettes, and talk bad Italian with her friends on the Square of St. Mark. But here, apart from bread-winning, she wrote th charming 'Lettres d'un voyageur,' which it is difficult to praise too highly, and introduced us to the society of Beppa, the Doctor, the Abbé, the Gondolier Catullo, and the Turk Zuzuf, who all reappear from time to time in the stories written in later years.

All these tales due to Italian reminiscences have one thing in common with the novels of George Sand's first period, that they have really but one theme in all its changing forms—the passion of love. And they are not disfigured by the political, socialistic, and humanitarian thories and discussions which mark so disagreeably the other work of her second period. Indeed, one of the greatest of these latter, 'Consuelo,' would scarcely be readable now, were it not that the early part of it gives such an enchanting picture of the easy, careless Venetian life of the old days, and that the heroine is surrounded with a sort of mystic Italian glory which does not desert her even in the worst circumstances. I should have excepted one little story, 'Les Maîtres Mosaïstes,' because in this there is scarcely a word of love from first to last. It is simply a *conte* told to amuse a boy, and is an example of clever workmanship, being, in fact, a paraphrase of a dozen pages of dull prose at the end of Zanetti's book on Venetian pictures. But George Sand was conscientious in all that she did. She says somewhere: "I like to have seen everything that I describe. If I have only three words to say about a place, I love to see it in my remembrance, and make as few mistakes about it as possible." So, when writing this little story at her solitude in Nohant, she asked a friend in Paris for details about Venetian costumes, and, with a sort of realism, drew the characters of the two heroes from two of her friends. This little masterpiece should be the first book read by the visitor at Venice, and he can then never pass through the Church of St. Mark without a sentimental interest in the mosaics, which will add greatly to his pleasure.

Her love of reality in the *mise-en-scène* never

hampered George Sand's imagination, and no improbabilties were allowed to stand in the way of the development of a plot or the painting of a character. Her intercourse with the shepherd children of Berry had early given her a love of the marvellous, and the mysterious corridors and winding passages in 'Consuelo' and 'La Daniella' (which might be used as a guide-book to the country about Frascati) seem reminiscences of her wanderings about the garrets and cellars of her convent with the other girls, "in search for secrets that never existed, and to rescue from a romantic captivity imaginary victims whose names even were unknown." She says herself:

"I am very fond of romantic events—the unforeseen, intrigue, action in a novel. . . . I have used all my efforts to keep the literature of my times in a practical path between the peaceful lake and the rushing torrent: my instinct would have pushed me towards the precipice."

'La Daniella' was chiefly the product of a subsequent visit to Italy, and contains some singular criticisms on Genoa, Pisa, and Rome, none of which towns inspired the authoress with the sympathy which she had for Venice. She was disgusted with much that she saw at Rome, did not like the monuments, felt oppressed by the ruins, and especially by the dirt, saw nothing picturesque or harmonious in priests and beggars, and hated the Papal Government. All this is seen in the early part of the book, as well as in some of the later chapters; and in a letter to a friend, she says:

"No, I don't wish to admire anything, to love anything, to tolerate anything in the kingdom of Satan, in that old cave of brigands. I wish to spit on the people who kneel to the Cardinals. . . . If, thanks to me, any one takes a horror and disgust of Rome as it is to-day, I shall have done something. I could say as much about ourselves, if I were allowed."

The letter goes on hoping that the French are slightly better than the Romans, and will not sink quite so low under the Empire. The publication of 'La Daniella' brought two warnings to the newspaper in which it was published, *La Presse*; and another article by a different person soon after caused its suspension. As this fell in the middle of another story which George Sand was publishing, she wrote to the Empress, begging that the newspaper might be pardoned.

In 'L'Uscoque' she rewrote the history of Byron's 'Corsair,' and gave it a Venetian setting. "It was very cold in my room," she says in the preface, 'and on going to sleep I used to see fantastic landscapes, rough seas, and storm-beaten rocks. The wind blowing outside, and the fire crackling on the hearth, used to produce strange cries and mysterious rustlings, and I believe that I was more possessed than charmed by my subject." The Corsair or Uscoque is a Venetian nobleman of high rank, who used his position of Admiral and Governor to join with the pirates one day in plundering his countrymen, while pretending to fight the pirates the day after.

In 'Le Piccinino' the fancy took her to tell the story of a brigand chief.

"Whether the type be frightful like those of Byron or worthy of the Monthyon prize like those of Cooper, it suffices for these heroes of despair to merit legally the rope or the galleys for every good and honest reader to love them from the first pages and hope for the success of their enterprise. Why, then, under the pretext of being a reasonable person, should I be deprived of creating one to my liking?"

She did not aim in this book either at painting a precise historical epoch or faithfully describing a country. It was a color-study, dreamed rather than felt, where some traits are accidentally true. The scene was laid in Sicily, rather than anywhere else, because she had just received some good engravings of that country.

All these tales are delightful, both to those who love a mere story for the story's sake, and to those who wish a relief from ordinary occupations; and they seem to suffer not at all from the lack of the realistic touches which are considered necessary by a Stevenson and a Haggard. In 'Teverino' and 'Le Secrétaire intime' you are removed far from any probabilities and possibilities of earth into the realms of poetry and fancy; and yet, while enjoying this, you feel all the time that you are in Italy. In one you get a glimpse of Bassano, in the other of Monaco; but the landscape is so dim and hazy that the pictures would be recognized only by those who know the country. Both of these stories are ended with the same inspiration with which they were begun. It had no time to cool. In many of the longer novels you feel the want of a settled plan: the opening is the finest part; then come the wearisome pseudo-philosophical discussions and reflections, which take the place of inspiration; and the dénouement arrives apparently as a mere matter of duty towards the publisher. George Sand was always fond of natural history: it was part of her love for nature. She gave herself up sometimes for weeks and months, together with her son Maurice, to researches in botany, mineralogy, and zoölogy, when she dreamt of nothing else, and her brains seemed to be filled exclusively with scientific terms; nothing else existed for her. "After one of these scientific orgies," says Caro, "she had all the difficulty in the world to return to ordinary life and her habitual tasks." The 'Secrétaire intime' was suggested to her by a tale of Hoffmann, but it is easy to see from one chapter that it was written just after an entomological orgy.

One of her novels shows remarkably the author's love of nature, and her power of depicting passion, although it is chiefly, as she herself says, "a work of analysis and meditation." It is the strongest of all the tales due to the influence of Italy and one of the strongest of all her books. This is 'Lucrezia Floriani,' a picture of love and jealousy. The scene is laid in the soft landscape of Lake Iseo, such as she saw it in going from Milan to Venice. She has feebly denied that Prince Karoll, the jealous lover, is a portrait of Chopin; but there can be no question that Lucrezia is a portrait of herself—greatly idealized, it is true, but as characteristic as Thérèse in 'Elle et Lui.' Every page, as Caro says, "is written from an observation or a remembrance." In any case it would be difficult to find in literature a more faithful representation of the passion of jealousy—in this case, jealousy of an unconcealed and well-known past, which destroyed all pleasure of the present, and left no hope of happiness in the future.

In 'La Dernière Aldini' we return to Venice and the Venetian nobility, then in process of extinction. The story is told by Lelio, the tenor, one of her friends in the Campo S. Luca whose acquaintance we have already made in 'Lettres d'un Voyageur'; and most improbable it is. We demur to the love-making between Mme. Aldini and her gondolier, even when we find that she had been married only for her money, and was despised by her husband for being in reality one of the common people; but the similar scene between the daughter and the gondolier, who had now bloomed into a great singer, is somewhat more natural. We remember, however, that it is a cardinal point of George Sand's faith that love is a leveller, and makes all men as all women equal; and when we yield to the magic of her style, we almost believe it. This little story shows one trait which is rare in George Sand's works—a sense of humor; in real life she was utterly destitute of it, and her conversation, when more than one person was present, is said to have been very dull and heavy. It was only in the night watches, when her pen seemed to dictate to her brain, that she escaped from the grossness and commonplace of ordinary life into an imaginary world, full of light and airy creatures, whither she will lead, and where she will keep, all who begin to read her stories.

Renan, at one of the dinners at Magny's so celebrated in their time, said that George Sand was truer than Balzac; and added that she would be read three hundred years from now. The late M. Caro, in his charming sketch (which alone is sufficient to justify his election to the Academy), and other recent critics, think that the world is getting tired of realism and naturalism, at least as preached in contemporary France, and predict the return to passion and sentiment as shown in the works of George Sand. Her romantic nonsense and her tedious political philosophy may be eliminated, but very much will still remain.

Correspondence.

ELY'S AMERICAN TAXATION.

To the Editor of The Nation:

Sir: Your reviewer of my work on 'Taxation in American States' accuses me of ignorance of the decisions of the Supreme Court bearing on the constitutionality of a tax on gross revenues of railroads, which may be held to interfere with inter-State commerce. As your review will be read by many who will never see the book, may I in justice to myself quote a single sentence from page 227, in which I had in mind the very decision referred to?

"Prudence must be exercised in taxation of railroads, or it will be found that laws taxing them will be nullified by a Federal court, on the ground that it involves interference with inter-State commerce."

I believe the Wisconsin system still stands, and when I was in Wisconsin making a special study of taxation, one of the justices of the Supreme Court told me that he did not believe it could be successfully attacked. A few weeks ago a gentleman who has prepared a digest of all the decisions of the Wisconsin Supreme Court on the subject of taxation, wrote me that he regarded their system of taxing railroads as invulnerable. At the same time, I fully recognized the weighty character of the principle involved, and was careful to call attention to it. So far from never having considered the subject, it may not be improper to say that it was carefully considered by our Maryland Tax Commission, of which I had the honor to be a member, and that among its members were lawyers of standing in the community.

Whatever may be the tendency of the book, my intention was to recommend changes which should be an effectual barrier against socialism. It is easy to "call names," but it is generally regarded as evidence of malignity or of a weak cause. Yours truly,

Richard T. Ely.

Johns Hopkins University, Baltimore, Md., November 3, 1888.

GERMAN RAILWAY SERVICE.

To the Editor of The Nation:

Sir: As an offset to the unfavorable opinion concerning the railway service of Germany

expressed in the article "Competition in Fast Train Service," printed in the *Nation* for October 11, will you allow me to state briefly my experience of German railroad travel? Without possessing the special knowledge relating to this subject evinced by the writer of the article referred to, I have had no inconsiderable experience of our own railroads east of the Missouri River; and I had more than the tourist's usual interest in making whatever observations were possible in regard to railroad trains while making rapid journeys through Europe. Besides carrying a copy of Bradshaw's 'Continental Railway Guide' in a handsatchel, I made it a point to secure, wherever possible, the local guides or railroad time-tables, and also made a practice of timing the arrival and departure of the various trains.

The following routes, wholly or partly within the German Empire, were travelled over during 1887: Lindau-Munich-Vienna; Vienna-Prague-Dresden-Leipzig; Leipzig to Weimar, to Jena, to Halle, and return; Leipzig-Berlin-Rostock (Warnemünde); Kiel-Hamburg-Bremen-Hanover-Frankfort; Cologne-Frankfort-Heidelberg-Strassburg. With but a single exception, no trains on any of these routes were late, either in departing or arriving. They sometimes reached stations a few minutes earlier than was indicated upon the time-tables, but in such cases delayed their departure until the time set down in the table. The single exception was in the case of a fast train from Hanover to Cassell and Frankfort, which was about fifteen minutes late in reaching Göttingen. This was much complained of at the university town as a thing of too frequent occurrence as regards that special train, and the explanation given was that the schedule time did not make sufficient allowance for the transfer of passengers and baggage from the Berlin-Hanover train, with which it was necessary to make connection. *My* impressions of the railway service of Germany, as regards reasonable speed, punctuality, choice of trains (both as to swiftness and cost of tickets), comfort, and a prevalent, and to an American most delightful, sense of safety, were entirely favorable.

S

PURITY IN POLITICS.

To the Editor of The Nation:

Sir: Every lover of higher morals in politics must admire the course of the *Nation* in its endeavors to bring about reform in the civil service and a wise readjustment of the tariff. The inexorable law which politicians seem so unable to grasp is, that the purest party, with the highest aims, must in the long run be the victorious party. This is illustrated in this country and in England by the fact of the frequent change of administration; by the fact that, if the party in power ceases to represent the highest aims in politics, the party out of power, declaring its attachment to such aims, very soon succeeds in wresting the power from the more corrupt one. This law it was that brought victory to Lincoln and the Republican party in 1860, and that turned the party of that name out of power in 1884, and gave victory to Cleveland and the Democrats.

However the coming election issues, whether in keeping in Cleveland or putting in Harrison, let the successful party remember in its flush of triumph that, if old and rejected party corruptions are taken up and questionable political methods countenanced, defeat is sure to come, and quickly. I would transcribe here for the consideration of thoughtful men the following words of a wise living historian, Bishop Stubbs ('Lectures on Mediæval and Modern History'):

"What we want to see is men applying to history and politics the same spirit in which wise men act in their discipline of themselves—not to cease to be partisans, not to cease to hold and utter strong opinions, but to be as careful in their party behavior and in their support of their opinions as they are in their behavior in social circles, their conversation in social life. The first object of the true politician, as of the true patriot, is to keep himself and his party pure, and then to secure victory; to abolish meanness and corruption where he has influence, rather than to make capital by denouncing it where his denunciation can only provoke a retort. The sound politician, on whichever side he may be, believes that his scheme of politics is the one in which the benefit of his country is most entirely involved, and he wishes the position of his country to be impregnable. To be impregnable it must be sound: if his party represents to him his country, his party must be sound, and it concerns him much more closely to purify his own ranks than those of the enemy. Success is certain to the pure and true: success to falsehood and corruption, tyranny and aggression, is only the prelude to a greater and an irremediable fall."

Percy Gordon.

FOREIGN ALLEGIANCE OF FOREIGN GOODS.

To the Editor of The Nation:

Sir: I wish to contribute the following to that history of the "Influence of Protection Doctrines upon the Operation of the Intelligence" which some one will surely write, after the present hysteria passes away and sanity returns. It is from a communication in the Minneapolis *Tribune* of October 29, and is an attempt to answer the argument that protection does not help the American laborer as long as the foreign laborer immigrates freely to compete with him:

"The labor that comes to American soil in the shape of human beings is, as a rule, animated by mind, and in consequence thereof thinks and soon becomes Americanized; while goods, wares, and merchandise never forswears (*sic*) allegiance to foreign powers; but always remains foreign, and therefore loyal in results to the land that manufactured it (*sic*)."

The writer would seem to make allowance, by his phrase, "as a rule," for some human beings coming to American soil who are not "animated by mind." He thus secures for himself in advance an asylum from all criticism. D.

CONFIRMATION.

To the Editor of The Nation:

Sir: May I add, as a commentary on my last week's letter, some sentences from the *chronique* of M. Charles de Mazade in the *Revue des Deux Mondes* of October 15:

"The recent journey of the President of the Republic, to Lyons, in Savoy, in Burgundy, may throw some useful light upon the real and inward feelings of the country. The President, held back by a certain constitutional preciseness, by an excess of reserve perhaps beyond what public opinion demands, committed himself but little; but he was able to hear what was said to him, and there was almost everywhere the same feeling which finds its most happy expression in the discourse, as temperate as judicious, of the President of the Chamber of Commerce at Lyons, asking for the country only that protection which results from constitutional stability, from public order firmly maintained, from a good condition of the finances, from social peace propagated by that true liberty which is the guarantee of all rights and extends to all faiths."

And a few lines farther on:

"For ten years the evident palpable cause of all the parliamentary incoherences, of all the financial disorders, of the legislative anarchy, is the progressive usurpation of a Chamber as presumptuous as ignorant, which has not ceased to place itself above the Constitution, which has wished to manage everything, without knowing how to do anything."

Is there not instruction and reproof for us in the affairs of France? Is it not true that, with all the abundance of our financial resources, with our large surplus in the Treasury, with all our immense material prosperity, there is through the country a feeling of uneasiness and distrust, owing to want of confidence in the ability of Congress—without leaders or any definite plan of action—to accomplish anything to good purpose? G. B.

Boston, November 3, 1888.

TEACHER AND COMMUNITY.

To the Editor of The Nation:

Sir: Your correspondent "C," whose letter in relation to "The Teacher and the Community" you published on October 18, speaks of the lack of individuality in teaching as caused largely by the custom of giving preference to teachers resident in the community. That this is true, no careful observer can doubt, and it is refreshing to know that there is at least one community in which there exists so nearly an ideal state as your correspondent depicts.

But the evil mentioned as derived from this sort of "protection to home industries" is but a small part of the damage done. The truth is, the methods of employing teachers in our public schools are but little better than those of filling Government offices. The school system needs "civil-service reform" as much as the United States Government. It is bad enough to have political parties running rival candidates for members of the School Board, and to have these nominations worked for from precisely the same motives as Mike or Barney works for an alderman's seat, *i. e.*, that he may use his position to make money. It is, for example, no uncommon thing to find men working for place on school boards because they are coal-dealers and want the contract to supply the schools with coal, or plumbers, or building contractors, or real-estate agents from motives equally obvious; but when we have in addition the custom of employing local talent for teachers, and thus bring into play the whole set of political, social, church, and family interests, then we have a truly deplorable result.

The evil makes itself manifest along two lines. (1.) In the selection of teachers. Good teachers fail to obtain positions for lack of the requisite "influence," while poor ones succeed because of a father or uncle on the School Board, or because pushed by a certain church, or because of the backing of some social clique. Moreover, it is almost impossible to get rid of an inefficient teacher under such a system. I have in mind now a school in which are two grossly incapable teachers. The principal is well aware of their inefficiency, and finds his own efforts largely nullified by their presence; and yet, were he to endeavor to have them removed, he would stir up a perfect hornets' nest of church and social antipathies, which would probably damage the school more, at least for some time, than does the present poor teaching. Very likely, should he attempt to oust them, not having himself the same sort of "anchors to windward," *he* would be the one to go. Capable and conscientious superintendents are hampered almost beyond endurance by this custom. It would be difficult to exaggerate this aspect of the evil.

(2.) Good teachers cannot do so good work in their own communities as elsewhere. It is well known that both ministers and teachers succeed best away from their "native seats." It is almost impossible to attain to that absolute impartiality necessary in a public servant, when among one's old friends and associates.

It is a great misfortune to a teacher "always to have known" certain families. In a word, the whole set of local interests and jealousies familiar to us all, but too many to enumerate and describe here, hamper the activity of the teacher, and form an incubus that is non-existent in a strange town. TEACHER.

October 28, 1888.

THE PRATT FREE LIBRARY.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* for October 25, in speaking of the library to be given to this city under the provisions of Mr. Tilden's will, states that the only things approaching it in character are the Newberry Library at Chicago and the Boston Public Library. May I ask if the Pratt Library at Baltimore should not receive honorable mention with these? Its money value is less than either of the libraries referred to, though it is not inconsiderable, Mr. Pratt's gift being in all one million dollars, of which two-thirds will draw 7 per cent. interest perpetually. But in respect of its freedom to all classes it certainly has no superior. There are practically no restrictions whatever for actual citizens, while temporary residents in the city can obtain books on the same terms with citizens with much less formality than is necessary at the Boston Public Library.

It certainly could not be, in any fuller sense, "a library of the people." J. S. R.

NEW YORK, October 25, 1888.

TRANSLATION AT SIGHT.

TO THE EDITOR OF THE NATION:

SIR: The fact that several little text-books have been prepared of late, with annotated extracts for sight-translation, would seem to indicate "a felt want" on the part of teachers. The need of these books, however, is not very apparent, because a teacher can easily find short extracts in the books used by the classes. There is another form of sight-reading which I have employed with my classes, and which it may be worth while to suggest to other teachers. It consists of extracts from some modern Greek newspaper, written upon the board for the students to read. It is a very easy matter to make selections in which the deviation from the classic standard is exceedingly small. This plan has several important advantages over the reading of short extracts from the ancient authors. The students find it a pleasing change to see that their Greek can actually deal with the affairs of to-day, as well as with those of more than two millenniums ago. The freshness of modern life and modern interests is very helpful in giving a touch of zest and enthusiasm to what so many find a very dry study. To read, in very fair Greek, telegrams about the great events happening over the world, and comments on them, taken, it may be, from the London *Times* or the New York *Herald*, opens the eyes of many a student to the possibilities of his Greek.

A few of the various extracts our Freshmen and Sophomores had last session were, for example, statistics from the New York *Herald* about the number of cows in the United States, and the annual yield of milk, butter, and cheese; articles about the *Great Eastern*; about Volapük; about John Wanamaker's picture-gallery; about Adelina Patti's celebrated fan, with the sentences written on it by the Emperors of Russia and Germany, by Queen Victoria, M. Thiers, as President of the French Republic, and others; about Dickens, George Eliot, Abraham Lincoln. In short, almost anything which at the present day is noteworthy among current events can be presented to students, in Greek which they would frequently scarcely recognize as not being good enough for Xenophon. At times I have seen students almost double themselves up laughing at jokes in Greek, an experience rather rare in the reading of any of the classic authors they study.

It is quite easy and very appropriate for the teacher to give his scholars in connection with these readings some idea of the structure of modern Greek and its chief departures from the classic norm. To all of which is to be added the important fact that students who have read even this little of modern Greek will be likely to have a keen appreciation of the fact that Greek is *a living language*. For, strange as it seems, it is not difficult to find intelligent people to whom the declaration that Greek is *not* a "dead" language comes as a sort of revelation. When you tell them that Greek is as truly a living language as English or French or German, they find it hard to take you seriously.

Respectfully, A. H.

UNIVERSITY OF MISSISSIPPI.

JOHN WISE OF IPSWICH.

TO THE EDITOR OF THE NATION:

SIR: The note concerning this unappreciated worthy, printed in a recent number of the *Nation*, led me to consult the edition of his works published in 1860 by the Congregational Board of Publication. The introductory chapter, by Rev. J. S. Clarke, D.D., asserts that "some of the most glittering sentences in the immortal Declaration of Independence are almost literal quotations from this essay" ('A Vindication of the Government of New England Churches'). If this is true, it is time that Wise took his proper place in our political, as well as our religious annals.

The list of subscribers to the edition of 1772 contains the names of Mr. William Dawes of Boston, Mr. Ephraim Fairbank of Bolton, and Mr. Peter Jayne of Marblehead, each of whom took one hundred copies. But a more important name is that of Rev. Manasseh Cutler of Ipswich, properly of Ipswich Hamlet, now Hamilton. Did any of the wisdom of Wise pass through Cutler into the Ordinance of 1787?

Why, by the way, does Cutler not appear in the Stedman-Hutchinson 'Library of American Literature'? In the volume where he would naturally figure, nearly seven pages are devoted to Eliza Southgate Bowne, who was merely a writer of entertaining letters. Cutler left behind descriptions of social life equally sprightly, besides records of scientific observation, weighty political papers, and written opinions on various religious topics. Surely, he was "an author," if quantity, quality, influence, and versatility are to be considered.

HENRY BALDWIN.

755 BROADWAY, October 26, 1888.

CONCERNING CERTAIN EPIGRAMS.

TO THE EDITOR OF THE NATION:

SIR: In the interesting notice in your last number of the recently published volume of Dr. Sterrett, 'An Epigraphical Journey in Asia Minor,' occurs this sentence: "Nos. 243 and 245 are curious riddles; but as Dr. Sterrett gives them on the authority of a Greek physician, we shall hold them open to suspicion."

This was Dr. Sterrett's opinion about No. 243, and it certainly is justified, for it is made up of mutilated portions of two epigrams that are to be found in the 'Anthologia Græca Palatina.' First come the last three verses of Lib. xiv., Epig. 58, which are followed by the whole of Lib. xiv., Epig. 35, except part of its first word [Ἀνθρώπ]ου κ. τ. λ.

No. 245 does not seem to be recognized by Dr. Sterrett. This also is to be found in Lib. xiv., Epig. 5, lacking the last line.

Very truly yours, HENRY W. HAYNES.

BOSTON, October 27, 1888.

Notes.

A CHOICE collection of books and papers relating to Lichens, left by the late Prof. Edward Tuckerman to the library of Amherst College, is to be kept apart as a memorial of the donor. Mr. Wm. I. Fletcher, the librarian, desires supplementary contributions of works, and a fund (say of $1,000) sufficient to maintain the collection by additions and repairs.

Longmans, Green & Co. have nearly ready Walter Besant's 'Eulogy of Richard Jefferies,' author of 'The Gamekeeper at Home' and other remarkable works.

Ticknor & Co. issue this month 'The Other Side of War: With the Army of the Potomac. Letters from Headquarters of the Sanitary Commission during the Virginia Campaign of 1862,' by Katharine Prescott Wormeley; 'Pen and Powder,' by Franc B. Wilkie, a war correspondent; 'Vagrom Verse,' by Charles Henry Webb ("John Paul"); 'The Philistines,' by Arlo Bates; and 'Better Times,' by the author of 'The Story of Margaret Kent.'

John B. Alden publishes directly Gogol's 'Taras Bulba,' translated by Jeremiah Curtin; and Daudet's 'The Immortals.'

Mr. F. J. Stimson's 'First Harvests' will be issued in book form by Charles Scribner's Sons, who also announce Mommsen's 'History of the Roman Republic,' abridged by C. Bryans and F. R. Hendy. Their *Book-Buyer* for November has a frontispiece portrait of Mrs. Mary A. Ward, author of 'Robert Elsmere.'

Thomas Whittaker announces as the next volumes in the "Camelot Series" 'The Teaching of Epictetus'; in the "Canterbury Poets," 'Poems of Wild Life,' edited by Charles G. D. Roberts; in the "Great Writers," a 'Life of Heine,' by William Sharp.

The publication of Mr. Lang's 'Letters on Literature' has been postponed until the new year; but his volume of poems, 'Grass of Parnassus,' will be issued immediately.

In 1875 Mr. Grant Allen printed privately at Oxford a little pamphlet discussing certain difficulties in the current conception of energy: and he afterwards sketched out a more elaborate work, which was shown in 1885 to Mr. Edward Clodd, who embodied certain of its conclusions in 'The Story of Creation.' As these conclusions have been attacked, Mr. Grant Allen has determined to join in the controversy, and his 'Force and Energy: a Theory of Dynamics,' will be published here shortly by Longmans, Green & Co., preceded by an "Apology," in which the author modestly sets forth the circumstances of the book's preparation and publication.

Two of the seven volumes of the definitive edition of the Writings of John G. Whittier come to us from Houghton, Mifflin & Co. Externally, the series is uniform with the Browning published by the same firm, but the letter-press is much more open and inviting. The most venerable and endeared of our poets makes for the last time a classification of his verse, with such information concerning the basis and nature of it and the date at which it was written as is desirable. The prefatory

discourse is of markedly frequent occurrence in the first volume, "Narrative and Legendary Poems," less so in the second, "Poems of Nature; Subjective and Reminiscent; Religious." "Mogg Megone," and other youthful and discarded poems, are relegated to an appendix in a subsequent volume. Whittier's prose writings will be included in the present series. A new and very interesting early likeness, of 1836, accompanies the first volume; one ten years younger the second. While we have in this instalment the poems which embalm so much of New England and Quaker history and tradition, the landmarks of the great abolition struggle and an exquisite American portrait-gallery find their place in a succeeding volume or volumes. Whittier's admirers could hardly wish for a more beautiful monument than this Riverside Edition.

Five editions and two reprints of the same edition in twelve years bear witness to the standard quality of Prof. M. Foster's 'Text-book of Physiology,' of which we had occasion to notice the second edition just ten years ago. Macmillan & Co. have now issued Part I. of the fifth edition, relating to the blood, the tissues of movement, the vascular mechanism. The second and third parts will follow as soon as may be. Considerable revision has taken place, chiefly in the way of fuller elucidation of fundamental topics.

Mr. Charles Morris once more appears as a purveyor of literary readings in "Half-Hours with the Best Foreign Authors" (J. B. Lippincott Co.). In four volumes he collects specimen translations from the Greek and Roman, the German (and Scandinavian, though the Introduction makes no allusion to the latter), the French, the Italian, Spanish, etc. Each volume has a frontispiece portrait. The author's scheme is to begin with some brief general remarks on the literature under survey; the extracts then follow, without chronological or any other order, each generally preceded by a summary account of the author, the translator being sometimes indicated in the editorial note, sometimes appended. When an extract is too long, Mr. Morris cuts it down, with an abstract of the omitted part or parts. An index enables one to discover all the pieces taken from a given author. The editor has brought to his task industry enough, but neither remarkable learning, taste, nor critical ability. We shall not insist on omissions, though Ibsen cannot be found in Volume II., nor Fritz Reuter in Volume III. Both the older and the later Russian writers of distinction, however, are at least honored by remembrance in Volume IV. Taking the repast as offered, many will find it palatable; and all may remember that selection from accessible translations is a far different thing from selection from the whole range of the originals.

In a style uniform with their five-volume editions, royal quarto, of 'Les Misérables' and 'The Count of Monte Cristo,' Geo. Routledge & Sons have just issued Sue's 'Wandering Jew, in three volumes. The translator's name is not given. The nearly two hundred illustrations are by A. Ferdinandus, and clearly belong to another epoch than the present. But if special designs were out of the question, then we should have wished to see more discriminating borrowing. We have in mind a French edition far better furnished than this, whether as regards imagination, consistency of character-types, or draughtsmanship. In short, we have here neither true illustrations nor embellishments. The typography, on the other hand, for which the De Vinne Press is responsible, can be unqualifiedly praised. The binding is simple, in dark-green cloth.

Several reissues of well-known books are before us. The Library Edition of Besant and Rice's novels, which is being brought out by Dodd, Mead & Co., is continued with ''Twas in Trafalgar's Bay, and Other Stories.' Scribner & Welford put their imprint on an English-made volume combining 'The Autobiography of Mark Rutherford' and 'Mark Rutherford's Deliverance.' Macmillan & Co. send us a new edition of 'Edinburgh: Picturesque Notes,' by Robert Louis Stevenson. Its chapters are a series of papers that first saw the light in a magazine, with illustrations. The title well describes the book, which is not an ordinary guide-book. If it were, the text would be less interesting and less literary, and the illustrations would (or might easily be) better; and there would probably be a map for the reader's orientation. Mr. Stevenson makes no concessions to Edinburgh's climate or the new villa architecture; but in other respects he is a good citizen of the gray metropolis of the North. He will not listen to overpraise of Burns at the expense of Fergusson, "our Edinburgh poet."

'Jottings of Travel in China and Japan' (Philadelphia: Porter & Coates), by Simon Adler Stern, contains twenty short chapters, giving the impressions of the author, who recently made the trip. They touch lightly the surface of things, and convey the idea of a bundle of letters privately printed for the eyes of personal friends, rather than a book of information for the public. Mr. Stern's experiences seem to have been only those of the average passenger across the Pacific; and three brief appendices on Chinese pirates, the Queen's jubilee, and Japanese dress have been published in the newspapers. The chapters on treaty revision in Japan and the railway problem in China are the most timely and important in this dainty souvenir of travel.

It is worthy of remark that the Tractarian movement in Oxford is followed in the same university by an interest in the philosophy of Hume. Two editions of this philosopher's works in comparatively recent years indicate the tendencies of thought in that presumably conservative centre. That of Thomas Hill Green, with its able introduction, was the most important. Although the idol of conservative minds, Green was a liberal in religion and politics. He was the original of "Grey" in 'Robert Elsmere,' and the influence of Hume upon him is remarked in the fact that he had surrendered miracles, and that he is represented as speaking of "the fairy tale of Christianity," when alluding to certain historical conceptions of it. Green's volumes, however, are scarcely accessible to the ordinary student, because of cost and size. Hence, a new edition in one volume, 'Hume's Treatise of Human Nature, reprinted from the Original Edition in three volumes, and edited, with an Analytical Index, by L. A. Selby-Brigge, M.A., Fellow and Lecturer of University College' (Oxford: The Clarendon Press; New York: Macmillan). It is very convenient in form, with good binding, good paper, clear and excellent type. The analytical index is very complete, occupying some sixty pages, and though the editor apologizes for its length, the student will find it very valuable, if not indispensable. There are no notes or comments, only the text of Hume. The book will make an admirable work for the philosophical class-room, although it would have been greatly improved in this respect if a thorough system of notes had been added. Even as it is, however, the study of Hume is very greatly facilitated.

Cataloguers must count among their perplexities the proper entry of the novel attributed to George Sand, 'Princess Nourmahal,' which Mr. Lew Vanderpoole is said to have translated "from the original French manuscript" (G. W. Dillingham). It is highly improbable that an inedited work by this writer should first see the light in an English dress; and the internal evidence is wholly against the imputed authorship. Until proofs of genuineness are forthcoming, duty to a writer unable to defend her own literary reputation would seem to require that her name should not be attached in catalogues to 'Princess Nourmahal.'

The latest American additions to the Tauchnitz series are Mr. Bret Harte's 'Millionaire of Rough and Ready,' Mr. Gunter's 'Mr. Barnes of New York,' Mrs. Burnett's 'Sara Crewe,' Mr. Marion Crawford's 'With the Immortals,' and Mark Twain's 'Selections from American Humor'—a very motley choice, it would seem to an American.

Not to be partisan in our politics, *Paris Illustré* for October 27 supplies a large colored portrait of Gen. Harrison, as lately of President Cleveland (International News Co.).

A French account of the late festivities at Bologna will be found in the October number of the *Revue Internationale de l'Enseignement*, from the pen of M. Georges Lafaye.

A striking portrait of the dramatist, Henrik Ibsen, is given with the tenth number of *Die Gesellschaft* (Leipzig: Wilhelm Friedrich).

Many of our readers will be glad to learn of the promotion of Mr. F. W. Maitland, lately Reader of English Law at Cambridge in England, to the place of Downing Professor of Law. This is the oldest chair of law at Cambridge; it was established in 1800, and first occupied by Christian, the learned commentator upon Blackstone. Our readers have already been advised of the admirable work upon Bracton's Note Book and other records of our early law which Mr. Maitland has done. Much is expected of him.

The Slater Memorial Museum of Fine Art at Norwich, Conn., of which our readers have already had some account from us, is to be formally opened on November 22, with an address by Prof. Chas. Eliot Norton.

—The most notable feature of the November *Century* is the beginning, with this first number of a new volume, of Mr. Cole's series of engravings from the Italian masters. As the plan is to follow the historical order, this first instalment naturally brings before us specimens of Byzantine art, with samples of the transitional style of Cimabue. With Mr. W. J. Stillman to furnish the historical and critical comments, and Mr. Cole's unsurpassed technical and artistic skill employed in the reproduction, the series promises to provide material and stimulus for popular art education of the greatest value. Mr. Cole's notes, based on loving and protracted study of his canvases, are landmarks of description and critical discrimination. The opening chapters of the "Romance of Dollard" are of a high order. A prefatory note by Mr. Parkman certifies to the historical accuracy of Mrs. Catherwood's story, and the sure style and skilfully handled material of the new writer speak for themselves. Mr. Kennan's Russian paper appeals to the reader's pity and indignation as strongly as any that have preceded it. It is not alone the physical sufferings of the convicts and political exiles, on their marches to Eastern Siberia, that make the system seem appalling, but the blind, suicidal way in which Russia is robbing herself of her best life. She buries alive the men who were born to be her leaders in science and literature, and condemns the gifted women who might become the mothers of the eminent men of the next generation, to such privations that

suicide often comes as the only escape. Nature does not thus ruthlessly destroy her most promising variations. Dr. Lyman Abbott writes a characteristic article on the "New Reformation," which will probably meet the fate of most mediating efforts in theology and get the buffets of both extremes. It must do good, however, for the *Century's* audience to hear so frank a theologian as Dr. Abbott; only, we share his shrewd suspicion that few of those who most need to hear him will read his article through. Mr. Halstead's "Gravelotte Witnessed and Revisited" will necessarily be compared with Gen. Sheridan's contemporaneous paper, and will suffer from the comparison. The editor has some lively passages, and, in some respects, outstrips the soldier; but the latter's clear straightforwardness and simplicity put him decidedly at the front, on the whole. After the fine writing in which Mr. Halstead pretty freely indulges in his descriptions of the battle, it is somewhat amusing, though perfectly natural, to find him asking Sheridan the next morning, "Please tell me what happened yesterday." Lord Nelson's portrait, with genius stamped on every line of it, ought not to go unmentioned, nor should his hitherto unpublished letters written on the Copenhagen expedition; they are in perfect keeping with all that we know of his eager and impetuous spirit.

—Three more issues by the English Dialect Society make the present year still further remarkable for its publications. One of them is a catalogue of the accessions to the Society's library (in the custody of the Manchester Free Reference Library) since 1880. These have increased the collection nearly one-half, so that the total number of works is 820. No fewer than 139 were added to the 352 already possessed relating to English counties. Besides this catalogue, we have received from Trübner & Co. a 'Glossary of Berkshire Words and Phrases,' by Maj. B. Lowsley, and a much larger 'Glossary of Words Used in the Neighborhood of Sheffield,' by Sidney Oldall Addy. The pronunciation and grammar of Berkshire are sufficiently peculiar to warrant the special attention which Maj. Lowsley gives them. Something of both is discernible in the example cited under the word *zaa* (saw): "'Ooll the Meuster be zo good, an' zo kind, an' zo obligin', an zo condescendin' as to len' we the mate-*zaa* vor to *zaa* our me-at?" Initial *f* is always pronounced *v*, and initial *s* preceding a vowel (including *w* and *y*) has the sound of *z*. *Meat* and similar words may, as above, be made either monosyllables or dissyllables. Maj. Lowsley goes extensively also into manners and customs, superstitions, and folk-lore generally. One of the "sayings" is (of the superfluous or unsuitable), "as much as a two-ad (toad) wants a zide-pocket." It would, if we had room, be easy to quote a large number of amusing expressions. "A had *just about* a tumble" is Berkshire for "He had a very severe tumble"—our colloquial "quite," but stronger. "Cupboard love" denotes the affection which children have for those who give them sweetmeats, etc. Here is a good definition in dialect:

> "A chap be called a '*hobble de hoye*'
> As be shart of a man but moor'n a bwoy."

—Mr. Addy, too, has much to tell in his introduction about Sheffield customs, and he is an innovator (so far as we remember) in respect of inserting local place-names among the common parts of speech in his Glossary. This he does very extensively, and, we should suppose, most usefully, since he quotes when possible from old deeds and other instruments in which a name occurs. Sheffield he interprets to mean "the field of division." "America," the name of two fields, is accounted for in one case by reference to its remoteness from the village. It is of interest to notice that "the Derwent is still called the *Darwin* and also the *Darrand*." Mr. Addy argues plausibly in favor of the view that the author of the 'Catholicon Anglicum,' perhaps the oldest English dictionary, was a Yorkshireman; and he fain would make him also a native of Rotherham, and give a name to him. Mr. Addy's equipment for the glossary proper seems inferior to that of some of his predecessors, and his remarks occasionally have a touch of naïveté. Reference to earlier volumes in this series would have explained to him the term *whigged* (of milk) as meaning "wheyed." The Sheffield dialect contains numerous quaint concepts, as *manners-bit*, the 'portion of a dish left by the guests that the host may not feel himself reproached for insufficient preparation'; *thrift-pot*, a savings bank; *waistcoat-piece*, a breast of mutton; *dateless*, with memory gone; *be-twittered*, 'excited, frightened, overcome with pleasing excitement,' etc. *Clever* denotes 'physically strong'; *buxom*, 'a good-tempered, well-fed rural beauty, not unconscious of her power of attraction, nor unwilling to receive a chaste expression of admiration,' etc. *Christian* is used of a man in contradistinction to a beast of the field. Both poetically and truthfully, "one is said to be his *own man* when he is in his usual health." It is odd to find *nous* in vogue with the meaning 'sense, ability,' and to be told that it may not be the university slang. We refrain from further quotation with this locution for 'how much soever': "*Choose how much* I did for him, I never could please him."

— A quarto pamphlet of twenty-eight pages, entitled 'Objects and Work of the Selden Society, with an Account of the Principal Classes of Manuscripts with which the Society Proposes to Deal,' may be obtained by any one interested (price one shilling) from the publisher, Bernard Quaritch, No. 15 Piccadilly, London. It sets out at length the objects of the Society, one of which is the collection of material for dictionaries of "Anglo-French" and law terms; and Prof. W. W. Skeat furnishes a "scheme" for the proper collection of such materials, with practical directions for the transcription of words and quotations. This scheme, together with the Prospectus of the Society, was published in the London *Law Times* for April 23, 1887 (pp. 449-451). Prof. Skeat uses the term "Anglo-French," he explains, as the best one, "from a philological point of view," to distinguish the language of the French manuscripts written in England from the Norman-French, from which Anglo-French gradually diverged. Prof. Skeat's directions for the preparation of word-slips furnishes another illustration of the slowness with which English scholars realize the full benefits of that beneficent invention, the card system. The best size of card to use is given as seven by four and one-half inches, but these dimensions are apparently accidental, being those of the commonest size of English note-paper, which it is recommended should be used—even the utilization of unused halves of old letters being suggested. After the sheets have been written upon, they are to be alphabetized, and then tied up in bundles. Here we have three distinct sources of waste. The sheets of note-paper, to be kept of the proper size, must be cut into halves by hand with a paper-knife—a useless labor in this age of machine-work; besides, by this method one edge is left rough, which interferes with the proper manipulation of the finished sheets. The preparation of scholarly work upon second-hand paper is poor economy. Such labor is wearing at best, and it is not wise to tax the tired brain with the added strain caused by the vexation of trying to write on paper which has been folded and crumpled—a strain which is by no means insignificant, as most writers will have learned. Furthermore, the handwriting will, of necessity, be poorer, resulting in increased chances of error; and this last is a consideration of great importance in work of the kind contemplated. Finally, the method used in arranging and preserving the completed cards is of the very first importance, and tying them up in bundles is about the worst possible way, especially where the nature of the work in preparation demands constant reference to them.

— It is astonishing how slowly the European mind seizes upon the fact that these cards will stand upon their lower edges in drawers or trays, without other support than that which each card affords to its neighbor. In one of the large libraries of Great Britain, for example, a catalogue of books had been prepared on cards which were kept (considerably more than one hundred thousand of them) in beautiful cases of drawers, each drawer being about one inch in depth, and nicely divided into compartments of a size corresponding to the cards, except that sufficient space was left at one end to allow the insertion of the fingers when the contents were to be removed. Here the cards reposed, in suitable bunches, flat on the sides, it being necessary to remove a whole parcel every time a single card was to be referred to. If these cards had been placed upright in drawers of a suitable depth, not only would there have been a great saving of space, but each card would have been entirely accessible, and could have been referred to without a moment's loss of time, and without the least disturbance of the cards coming before or after it. It could have been removed and replaced in a few seconds, or changed to another position, with no disarrangement of the remaining cards, while new ones could have been added *ad libitum* without any difficulty; whereas, in the case of the catalogue mentioned above, the addition of more cards to any one parcel than the depth of the drawer would allow, necessitated the shifting of the cards in every compartment beyond the one where the additional cards were placed—a vexatious labor, involving great loss of time. Another frequent mistake in the use of cards for catalogue, dictionary, or index work is that of having them made of too thick paper. In no case, even though a large size is desirable, or clippings are to be pasted on them, is it necessary to have the cards thicker than the one-hundredth part of an inch. If they are cut by machine, as they ought to be, and consequently of a uniform size, with smooth edges, they can readily be used no thicker than two hundred or three hundred to the inch.

—Booksellers and librarians will rejoice to receive the eleventh volume of Lorenz's "Catalogue Général de la Librairie Française," forming the subject-index to the two previous volumes. It is made in what is called the "dictionary" style, another testimony (of the more importance because appearing in the land of Brunet, whose systematic arrangement has been so widely copied) to the superior serviceableness of an alphabetic arrangement of subjects. There is, however, one not objection-

able departure from strict dictionary rules. Under "Poésies," "Romans," "Théâtre (Pièces de)" are alphabetically arranged lists of titles of poems, novels, and plays. In a pure dictionary catalogue these would be dispersed throughout the alphabet. The pleasure of getting this index will be somewhat dimmed by the announcement that the author now gives up the work, after twenty-seven years of labor. He expresses the hope that he shall find a successor. It will be very unfortunate for all who have to do with French literature if he does not. For the issues of nearly half a century (1840–1885) his work is a sure and easy guide; what should one do without it? The utility of continuing it ought to tempt some bibliographical enthusiast and martyr—for the pecuniary reward must certainly be slight. That the labor is not, may appear from Lorenz's assertion that he sent proofs to all the authors whose works were contained in his last two volumes (IX and X), some 6,000 circulars in all, and received replies from between 4,500 and 5,000.

—The October number of *Les Lettres et les Arts* (Paris: Boussod, Valadon et Cie.; New York: Chas. Scribner's Sons) opens with another long passage from the "Notes et Souvenirs" of M. Ludovic Halévy, extending this time from August 11, 1871, to January 19, 1872. It would perhaps be ungrateful to question whether these delightful notes were ever taken, even in the most rudimentary form, either at the dates affixed to them or at any other period; but the reader cannot help feeling that many of the events and personages of the brilliant collection here offered to his attention have nothing to distinguish them from the purely literary creations of the author. The comedy is as brilliant in one case as in the other, and no one will be likely to find any fault with M. Halévy that his "Souvenirs" are presented in so attractive a form. There are two very readable stories in the present number. In "Le Lotus rouge" a young captain of Zouaves and his orderly, and a young Chinese girl and her attendant, play their parts in one of M. Gaston Bergeret's light and amusing little comedies, in which the only thing real is the undercurrent of scarcely indicated sentiment characteristic of his writing. "La Déjanira" is by a less known writer, M. Alain de Mérionec. It is a story of Padua in the middle of the last century, in which music and jealousy are the principal motive powers. There is a charm in the telling of the tale and in the presentation of the scenes in which it passes that makes it pleasant reading. The most valuable as well as the most interesting article in the number is the second part of "Les Canons anciens et modernes," by General Thoumas. The startling progress made since the Franco-Prussian war in everything relating to artillery is told with a rapidity and precision that suggest well-executed military manœuvres, and add to one's interest in the statements made the pleasure caused by the complete harmony between the subject and the manner in which it is treated. The author in the end only states, without resolving, the well-known paradox, that the perfection of all the engines of destruction of which he has been writing is a step towards the realization of universal peace; but the facts he sets forth seem to indicate that the nations of Europe are now engaged in a new kind of war, in which physically destructive battles are superseded by struggles, of which the effects are both moral and financial, in the invention of more and more terrible and costly engines of destruction. It remains a question as yet whether this new warfare is any less destructive of human happiness and progress than the old.

THE COMTE DE PARIS'S HISTORY OF THE CIVIL WAR.

History of the Civil War in America. By the Comte de Paris. Vol. iv. 8vo, pp. 681. Philadelphia: Porter & Coates.

THE translation of the continuation of the Comte de Paris's 'History of the Civil War' appears in advance of the regular French edition. A note by Col. Nicholson, the American editor, tells us that this volume "contains, without abridgment, the seventh volume of the French edition, and so much of the eighth volume as was contained in the manuscript which the distinguished author carried with him when he was banished from France." It is also intimated that the preparation of the work is indefinitely suspended.

Irrespective of political questions between the Orleans princes and the French Republic, American readers will sincerely regret the suspension of historical work by the Comte de Paris. The fairness of his spirit has been manifest in every chapter, his military criticism is rarely at fault, his powers of description give his pages great vividness and stirring life, and his sympathy with the national cause for which he fought is sincere and outspoken, while he is by no means a blind partisan. No other historian of the Civil War can compare with him in grasp of the subject as a whole, and in judicious proportioning of the parts. We have numerous good histories of campaigns, and are accumulating much valuable material for a complete history; but, for some years to come, we shall be likely to look to the Comte de Paris for the formal history of the great struggle. This would make it the more unfortunate if his work is destined to remain a fragment.

There is this comfort, however, in the matter—that the point to which he had brought his narrative when he left France was a natural period in the history. The present volume brings it down to the appointment of Gen. Grant to the command, under the President, of all the armies of the nation. It tells of the campaigns of Chickamauga and of East Tennessee, of Missionary Ridge and of Knoxville, of Gillmore's operations before Charleston, and of Banks's Red River expedition. It closes the period of multifarious scattered efforts, and prepares the way for the last act in the drama, when our Eastern army and our Western—Grant before Richmond, and Sherman from Chattanooga to Raleigh by way of Atlanta—concentrated the attention of the civilized world. It would be impossible to find a point at which a writer could more easily stop (if he must stop short of the end) than that which the historian has now reached. The volumes already published make a work in themselves, covering the period when the direction of our armies was in the hands of McClellan and Halleck, the assumed theoretic experts in the art of war, before they passed to the control of Grant, the hardy, inexorable, and indomitable soldier who had no academic standing worth speaking of.

Looking at these four volumes together, it is not difficult to see that the Comte de Paris has predilections which modify his views, notwithstanding the manifest fairness of his purpose. He has what it is not unjust to call prejudices, both political and military; and his military prejudices may be subdivided as personal and as between the regular and volunteer officers. It would have been very strange if his mind had not been more or less warped, considering the circumstances of his connection with our army. He was an aide-de-camp of McClellan during the Peninsular campaign, and then returned to France. He was a very young man, susceptible to the personal charm of his chief and to the influences which prevailed at headquarters. He was there accustomed to hear Mr. Lincoln spoken of in habitual terms of gross contempt, and Mr. Stanton as an unprincipled political adventurer who had been made Secretary of War through McClellan's friendship, only that he might seek to ruin the man by whose aid he had mounted to power. At the same headquarters it was a fixed opinion that McClellan had no second as a general, being the only man in the country competent to conduct a great army. Another article of faith was that only the officers of the regular army had any claim to be considered soldiers, and that, even of these, a comparatively small inner circle included all that should have aspirations beyond the command of a brigade. When the air was saturated with such notions, maintained with passionate earnestness by the younger men, and more or less openly avowed by all, the wonder is, not that the young French prince should have been influenced in his view of American affairs by this medium through which he necessarily saw them, but that, in his later studies, he should have risen so far above them as to leave comparatively little trace of their effect.

Yet there are traces. He blames Mr. Lincoln's retention of McDowell's corps near Washington in the spring of 1862, while he does not blame McClellan's disobedience of the condition on which the Government assented to the Peninsular campaign, viz., that a fixed number of troops should be left for the protection of the capital. The general tone adopted towards the Administration is, in all military matters, at least depreciating. In the volume before us, the tardiness of Rosecrans's movements towards Chattanooga in 1863 is debited to the account of the Government, because Grant and Burnside had not been put in motion to support his flanks in July. "One month," it is said, "would have sufficed, if the direction of these manœuvres had been intrusted to one head only, and not to three generals under the pedantic and annoying control of the small Aulic Council at Washington." The intimation here is that, although Halleck was the responsible general-in-chief, there was also a habitual consultation by the President and Secretary of War with other military men at the capital, and that this was mischievous in its effects. This was one of the common matters of complaint at McClellan's headquarters in 1862, and originated with the consultation by Mr. Lincoln with McDowell, Franklin, and Meigs, when McClellan was ill in the December previous. Gen. Hitchcock was substituted for Franklin in the gossip of subsequent years. There was nothing resembling that bugbear of European soldiers, the Austrian Aulic Council. It was both the right and the duty of the President, as commander-in-chief, to enlighten himself by consultation with the members of his official staff or other military officers on duty at Washington. After a general was assigned to a command in the field, he was allowed as large latitude as is ever given to such commanders. In the Austro-Prussian war, Manteuffel commanded a separate army in the Rhine valley, whilst Moltke was with King William in Bohemia, and the orders to the former were not less definite than those sent by Halleck to Rosecrans. We should not quarrel with the author if he argued that Halleck was not Moltke's equal, but we cannot admit that the case was one of an Aulic Council.

Again, in the criticism of Burnside's campaign, the "Washington Government" is charged with sacrificing the true military end of the movement to politics. In a sense, this is true. It was a question of high politics as well as of Mr. Lincoln's sympathy with the noble loyalists of East Tennessee. It would be easy to state this so that no blame would be attached to the President's action under such motives, even if a military man disagreed with him; but we cannot approve of attributing it to the low side of political conduct, as the author does when he says, "True military interest was sacrificed to the desire of securing a politic result which might be praised in the newspapers and applauded by the multitude." The truth is, that the military view was sacrificed to the political in ordering the movement at all, and not so much in the orders given to Burnside after he had reached Knoxville. Buell had pointed out, in the fall of 1861, that the only way to liberate East Tennessee was by an army moving from Nashville upon Chattanooga, and nothing could be better evidence of his sound military judgment. He analyzed the problem, showing the impossibility of sustaining an army there by a line of wagon communication over the mountains two hundred miles long. Burnside's soldiers learned the truth of this to their cost when they were starving and naked in the winter of 1863-64, before railroad communication could be extended to them. But the loyal mountaineers had burned their ships as soon as the war began, and had been hunted and harried and hanged from that time till the national forces occupied the valley. It was not low politics to be willing to do even unmilitary things for their rescue.

The personal predilections of the author appear gracefully in losing no opportunity to praise those whom he had known in the Potomac army, and not unpardonably when he condones or apologizes for the faults they may have committed in later campaigns. He is, however, true to history in matters of fact whenever they are known to him, and even his friendship for McClellan does not make him conceal the fatal defect of constantly and grossly overrating the opposing army. As a good "McClellan man," he has no mercy for Halleck, and can see no good in him. We could more easily agree with him in this were not the two men so alike in mental constitution that a list of the faults and weaknesses of the one would pretty well answer for the other. There was no comparison in their personal attractiveness, but this counts for little in a critical estimate of their performance of public duty. The sharp contrast in the tone used towards them by the author must therefore be set down in good part to the personal predilection already mentioned.

The Comte de Paris can hardly be said to have known much of the volunteer officers of our army. His service with them in a single campaign, and that the first one made by the Army of the Potomac, could hardly enable him to form any accurate judgment of their quality. It was the well understood policy of McClellan to concentrate in that army the largest possible number of regular officers, and they were proportionately much more numerous than in the Western armies. Gen. Scott had begun the organization of forces for the war, with the settled opinion that it was to be, like the brief conflict with Mexico in 1848, a war in which volunteers would not have time to learn the soldier's trade, and must be regarded as undisciplined auxiliaries to be used in a subordinate way to assist the smaller body of regular troops. McClellan modified this so far as to aim at forming a large army of volunteers, officered, as far as possible in places above regimental commands, by regular officers. One who accepted the views current at headquarters of the Potomac army in its first campaign, could scarcely credit the change which a year or two of constant field-work would make. There remains, throughout all the volumes of the history before us, a perceptible difference of manner in speaking of officers of the two kinds; it is probably unintentional, but it is noticeable. An illustration will best make it evident.

The author details with fulness and unquestionable good faith two unfortunate expeditions—that of the cavalry under Gen. Sooy Smith, intended to coöperate with Gen. Sherman in the Meridian expedition, and the Red River expedition under Gen. Banks. In both he takes the unfavorable view of the performance of duty by the responsible commander. In the first he limits himself to such criticism as is strictly necessary to reach his judicial conclusion, and makes no general comment whatever upon the character of the officer as a soldier or a man. In the second, however, one cannot avoid the impression that volunteer officers as a class are criticised over Gen. Banks's shoulders. The relation of the expedition to the purpose of bringing out cotton from the Red-River country, leads to mention of cotton speculators, who are said to have been the "scourge" of the Western army, "wherever the honest and energetic chiefs, imbued by their education with true military spirit, such as Grant and Sherman, could not nip the evil at its root. These speculators," it is added, "were too often spared by generals who had the fault of mingling political matters with the duties of their command." The contrast instituted between generals of military education and political generals is obvious. If, however, we inquire who had been the objects of severest criticism (justly or unjustly), we must answer Frémont, Ormsby Mitchell, and Butler, of whom two had been regulars. A subsequent chapter narrates the Florida expedition under Gillmore and Seymour for a similar political purpose, equally unfortunate, and condemned also by the author as unmilitary; but no intimation is made that the regular officers who conducted it were therefore political generals.

In strictly military comparisons, there is the same disparaging contrast. We are told that the Confederate Gen. Richard Taylor was eager to take the "first opportunity to measure his strength with his adversary, of whose military inexperience he was but too well aware." So, when Banks was superseded by Canby, the author remarks that "the authority with which he (Canby) was invested, and that which his vast experience conferred upon him, were guarantees that henceforth the Federal Armies of the Far West were going to be handled with a thoroughness which up to that time had been lacking." The contrast is in both cases based on the "inexperience" of Banks; yet it is a simple historical fact that Banks had had more experience in handling large bodies of troops in actual war than either Taylor or Canby. In the expedition to the Texas coast preceding this to the Red River, the author has very frankly given the evidence, and stated the conclusion that, both in sound military conception and in practical execution, Banks's ideas were superior to Halleck's, and were well carried out.

On the Red River expedition, Gen. Franklin was second in rank to Banks, and Gen. Stone was his chief-of-staff. Unless it were shown that these officers were excluded from his consultations, it would be presumed that the organization and movement of the army were not wholly Banks's work. But in this, as well as in the tactical handling of the troops at the battle of Mansfield, the prominent subordinates are exonerated from responsibility and blame, and the "ignorance of the true principles of warfare" on the part of the General is made to account for all that was untoward. The same sweeping condemnation follows each step, till the last one is characterized as "the finishing stroke of disgrace for the general-in-chief." It would be too long a task to analyze the campaign and point out the debatable points in the criticism. We think it enough to say that the tone of the whole, when compared with that used in regard to the other commanders of expeditions mentioned, seems to show that the same standard of judgment of principals and subordinates is not used; and the assumption of Banks's inexperience and ignorance is made a reason (unconsciously, no doubt) for saddling upon him many more sins than his own.

It is time that it should be distinctly recognized that three years of actual experience in a great war and in responsible commands was, for a man of intelligence and of courage, a school in military art in comparison with which any academic preparation is insignificant. Grant explicitly and most broadly recognizes this in his 'Personal Memoirs,' and declares that at the close of the Vicksburg campaign such men as Logan and Blair were every way fit to command armies. European wars attest the same principle. Moreau and Hoche and Ney are too brilliant examples of men passing from civil employment to successful military careers to be overlooked by a French writer, if Americans should not think of them. It is the first step which costs, and the advantage of what in this country has been rather rashly called military education is found in the beginning of an unprecedented struggle, and not after it has continued through several campaigns; after that time, men may safely be left to stand on the merits of their conduct, considered by itself, without reference to their antecedents in time of peace. Our civil war showed the wreck of many reputations among those assumed by a false standard to be preeminently fit to lead armies, and gave solid ground for the conclusion that no man can be called a general till he has stood the test of responsible command when the lives of men and the fortunes of his country depended on his action.

We do not now discuss the question how far the judgment of incompetency against Gen. Banks would be modified by applying to him the same canons of criticism, with the same presumptions in his favor, which are applied to Halleck, Gillmore, Seymour, Sooy Smith, Franklin, or Stone. We only say that this does not seem to have been quite completely done in the volume before us. With the limitations thus indicated, the high praise to be given the author for clearness of vision, for industry of investigation, and for an earnest purpose to judge fairly, cannot easily be overstated. There are some apparent slips in translation, but the delay of the original edition would make any statement of them merely conjectural. The general current of the narrative is lively and attractive, and the vivid picturing of the several campaigns makes fascinating reading of the whole work.

SOME HOLIDAY BOOKS.

Warwick Brookes's Pencil Pictures of Child Life. Boston: D. Lothrop Co.

Fairy Lilian, and Other Poems. By Alfred Tennyson. Illustrated. Boston: Estes & Lauriat.

The Bugle Song, and Other Poems. Illustrated. Boston: Estes & Lauriat.

Ranch Life and the Hunting-Trail. By Theodore Roosevelt. Illustrated by Frederic Remington. The Century Co.

Sundry Rhymes from the Days of our Grandmothers. Collected and illustrated by George Wharton Edwards. A. D. F. Randolph & Co.

The Diverting History of John Gilpin. By William Cowper. Illustrated by H. Rosa. George Routledge & Sons.

THUS far the holiday books of the year seem to be of a lighter mould than those to which we have become accustomed of late years. Perhaps the publishers feel that the putting out of elaborate and expensive books for this season has been overdone, and have called a halt for the present; perhaps we have only the skirmish line to deal with as yet, and the heavy battalions are to come. At any rate, we do not see any of those volumes of serious artistic importance which this time of year has been wont to bring forth.

The slightest of all in mere physical bulk, yet the weightiest in artistic metal, is the dainty little volume containing some twenty-eight photographic reproductions of pencil-sketches —most of them of children—by the late Warwick Brookes. The text, by T. Letherbrow, a personal friend of the artist, gives us a glimpse of a singularly sweet and winning character, and some account of a sturdy and laborious life. Mr. Brookes seems to have been almost entirely self-taught. Born in 1808, the son of a poor calico printer, he was taken from school at nine years old to aid his father in his work as what is known as a "tear-boy," whose duty is "to dip a brush in color and to keep supplied the color-cloth on which the printer daubed his block before he applied it to the fabric." While still at this work, some of his drawings fell into the hands of his employer, who placed him as an apprentice in the designing-room. By the time he had become a journeyman his father seems to have died, and the support of his mother fell upon him. To support her first, and his wife and children later, he worked steadily at his trade until his long last illness began in 1865, and it was in the leisure left by this employment that his artistic work was done. In 1838 a night-school for drawing was established in Manchester by the efforts of that singular being, B. R. Haydon, and this school Brookes attended for five years. Then he and others founded a school of their own which was carried on for more than twenty years. He never seems to have had a studio or even an easel, but worked standing, holding his paper in his hand. His models were his own children. When his long illness began, some of his drawings were, for the first time, published by his friends, and attracted the attention of artists and laymen. He made many warm friendships with the most eminent men in England, and received a pension from the Government. He died in 1882.

His art is certainly very interesting. It is not marked, as it was not to be expected it should be, by great force or by academic correctness; sometimes it is curiously feeble. His crowded compositions are weak, as is his landscape; and occasionally there is a visible preoccupation with the style of the classic or post-classic period of Italian art, while again a modern German influence will seem to have commanded him. He is at his best in drawings of one or two childish figures without background or accessories. Some of these are exceptionally delicate and refined in execution, and full of subtle and natural expression. His children are perhaps a trifle too angelic—they are certainly not "of the earth earthy"—but the gentle and sweet side of child nature could hardly be better given. In some of the drawings, the vague stare of very small babies is capitally rendered. Mr. Brookes is not a commanding personality in art, but he is a personality well worth making acquaintance with, and this little book deserves the popularity it is likely to attain, at least with all mothers of children. The reproductions by Mr. Kurtz are capital, and of an accuracy and fine fidelity beyond the reach of wood-engraving.

Whatever Mr. Brookes's drawings may lack, they at least make up a book possessing the quality of unity of purpose and of style; but the very genius of higgeldy-piggeldy seems to have presided at the construction of the two publications that come to us from Estes & Lauriat. Fourteen artists of various talent and degrees of talent are represented by the illustrations of 'Fairy Lilian, and Other Poems'; and their drawings not only bear no relation to each other, but seem to bear very little to the text. There is plenty of cleverness and of ability, but it is cleverness and ability wasted for want of intelligent direction. Illustration of well-known poetical compositions is always dangerous; but when the whole series of designs is unified by one mind and one purpose, it may impress one with its own right to existance independently of the text upon which it is grafted. Here the drawings are like the pictures in an exhibition, each (to use a Gallicism) swearing at its neighbors, and each losing, rather than all gaining, in effectiveness by their proximity; they must be taken separately, and, so taken, their inefficiency as interpretations of the poetry is the more marked. This piecemeal character of the work is distracting enough, but the confusion is worse confounded by the details of book-making. There is not a picture in the book that is printed in the middle of the page. An illaudable ingenuity has been shown in spotting the illustrations irregularly upon the leaves, and surrounding each with an annoying decoration in pale gray, or in designing them of odd and unsymmetrical shapes.

The second book from the same publishers is worse, for it has not even any discoverable unity in the text itself. It contains short poems by Tennyson, Goethe, Moore, Longfellow, and Scott; and the selection cannot even be accounted for by the exigencies of illustration, for one of the poems appears without any illustration at all. The drawings range from mediocrity downwards.

The other books on our table may be more rapidly dismissed. Both Mr. Roosevelt's sketches of Western life and Mr. Remington's illustrations are too well known through the pages of the *Century Magazine*, in which they first appeared, to need much notice here. It is enough to say of the latter that, while not in any serious sense works of art, they are capable and spirited illustrations. The book is handsomely printed on heavy paper, with wide margins, and somewhat fantastically bound. Mr. George Wharton Edwards's illustrations of the wofully moral ballads he has gathered together from the Taylor family, are superficially clever and evidently imitative of Abbey, while Mr. H. Rosa's illustrations of 'John Gilpin' are not even superficially clever, and are equally evidently imitated from Caldecott.

CHILDREN'S BOOKS.

GOOD lessons of family affection and of self-denial, of courage and of enterprise, are taught in 'Raymond Kershaw,' by Maria McIntosh Cox (Roberts Bros.). This is the narrative of a struggle with limited means by a family suddenly bereft of their supporter. It is very well told and in a sweet spirit, the charm of which will perhaps be as much heightened to some readers as marred to others by the Episcopalian coloring.

An entirely charming story, entitled 'The Captain's Dog,' has been, not literally translated, but "done into English" by Huntington Smith from the French of Louis Énault. (T. Y. Crowell & Co.) The dog's character and intelligence are drawn by a loving hand, his human companions pleasantly sketched, and the incidents of the story told with grace, humor, and *esprit*. One or two of the illustrations, representing the hero, really add to the value of the book, but as a general thing they have little merit.

Young girls will thank Mrs. J. W. Davis for her excellent translation from the German of Eva Hartner's story called 'Pythia's Pupils' (Routledge). It is most refreshingly different from the ordinary type of stories for girls. The scene is a small German city, and the heroines are members of a cooking-class. Their culinary experiences, their friendship for each other, their domestic life, are all related with engaging simplicity and vivacity, and they themselves are delightful specimens of cheery and kind-hearted girlhood minus the intense self-consciousness of the American maiden. Dora's fear of her father will seem singular to our cis-Atlantic daughters, but it only adds to the quaintness of the book. It is a pity that we have not more such stories, so firm morally, so quiet and healthy in tone. The translator's style is very clear and pleasant.

Mrs. Champney has interwoven with some personal impressions of the West others gained from reading, and embodied them in a story called 'Howling Wolf and his Trick Pony' (D. Lothrop Co.). Indian scenes, legends, and superstitions appear plentifully. We find also some illustrations of the white man's cruelty to the Indian. The story opens well, but drags later on. At times it taxes severely the reader's notions of probability, and once or twice degenerates into positive silliness. On the whole, it is moderately interesting.

An absurd story, written by Selden R. Hopkins, and called 'The Young Prince of Commerce' (D. Lothrop Co.) has for its object to teach matters of business and explain financial terms and operations. No doubt, a person ignorant of such things may learn considerable from its pages; but the instruction would have been given far better without a silly setting of fiction, and, moreover, should have been clearer and fuller.

Fairyland lacks its due enchantment when its charms are catalogued. 'Brownies and Bogles,' by Louise Imogen Guiney (D. Lothrop Co.) is not, as one might fancy from glancing at its pretty pictures of elves, a collection of stories, but seems an attempt to give children a smattering of folk-lore by classifying the "little people" who at different times and places have been supposed to exist. The authoress has done her best to enliven her book by sprightly comment and description, intermingled with accounts of fairy doings and occasionally the outline of a special story. Nevertheless, those for whom it is written will hardly have the patience to read it; and why should they? The virtue which would carry them through its tediousness would do them better service in some other field.

'Jack in the Bush, or, A Summer on a Salmon River,' by Robert Grant (Boston: Jor-

dan, Marsh & Co.), recounts the exploits, on the York and St. John Rivers in Lower Canada, of a party of six boys, taken for the occasion by a self-sacrificing gentleman, who was a sound sportsman and a master of the art of properly governing the youth in his charge. The author knows about salmon fishing, and is perfectly familiar with the phenomena of Canadian woods-life. His book is instructive, interesting, healthy reading from beginning to end.

The same cannot be said of 'The Search for the Star,' another boys' book, by Edward Willett (T. Y. Crowell & Co.). The story is of the journey of a party of boys to the headwaters of the Penobscot in search of an improbable man who has stolen an apochryphal ornament from their parents. They kill moose, deer, bears, wild-cats (as the author calls panthers), "Indian devils," which are animals of great size and ferocity, till now unknown, and have various other adventures, nearly all so palpably invented and so badly described as to awaken no feeling save one of indignation in the reader that such trash can be printed on any except political topics and just before an election.

One book, which seems to have been originally intended for two, is 'Wrecked in Labrador' (T. Y. Crowell & Co.). The wreck appears only in the second part, but in both we have an account of visits made to the coast of Labrador by people who are represented as enjoying greatly the opportunities for fishing, etc., offered by that region. The author, Winfrid A. Stearns, states that much of the story is a transcript from his own diary. He would have made a briefer and better book if he had not forgotten that many things interesting to one's self appear very trivial and tedious to the general reader; moreover, the style is poor, and the language often ungrammatical.

G. P. Putnam's Sons give us a handsome volume, well and appropriately illustrated, in Margaret Vere Farrington's 'Tales of King Arthur and His Knights of the Round Table.' This is pleasantly written, though not always with sufficient care; and if our young people will put up with some inevitable monotony, it will give them a good idea of various of the Arthurian legends. It is, of course, impossible, in treating material of this kind, to avoid some presentation of ideas which we dislike to put before boys and girls, but these our author has touched very lightly. Indeed, a believer in literary candor would be tempted to desire the postponement until adult age of a kind of reading which necessitates such caution. The preface to the book, which aims to give an idea of the rise of this legendary matter, is less clear than it should be.

Denkmäler des klassischen Altertums. Von A. Baumeister. Munich: R. Oldenbourg. 1885–1888.

AMERICAN scholars are often heard, after their return from a few years of study at one or other of the great European universities, to lament the absence at home of the unlimited facilities for investigation to which they have become accustomed abroad. Few, perhaps, reflect that nineteen-twentieths of their German fellow-students, after an equally brief or even briefer sojourn among the museums and libraries of Berlin, Munich, or Vienna, find their professional engagements at small country colleges often in no wise better equipped than our own, making fully equal exactions on the time of their instructors, and practically quite as remote from the coveted facilities of the metropolitan university. The plan of the 'Monuments of Classical Antiquity' was drawn up with special reference to the needs of these teachers. This does not exclude an appeal to cultivated lovers of antiquity of all classes, notably among artists, collectors, and literary amateurs. No one, in these days, can be expected to take all the publications devoted to the elucidation of the concrete side of antiquity and the reporting of the almost daily discoveries made in this field. Still less can any individual dream of owning all the sumptuous folios that illustrate the topography of ancient cities and the varied marvels of ancient art. Most of these works are out of print, and can therefore be obtained, if at all, only at fancy prices. To comprise in one publication either the whole field, or the most captivating aspects of what the French so aptly designate under the term *l'antiquité figurée*—this has been one of the great practical problems in the advancement of learning. Each generation of scholars, almost ever since the revival of learning, has felt the want, and has offered a solution of its own.

The name of "Monuments" is itself a traditional title. The first comprehensive work of the sort was the learned Bernard de Montfaucon's 'L'antiquité expliquée et représentée en figures,' which came out at Paris, from 1719 to 1724, in fifteen folio volumes. Its modern parallel, Daremberg and Saglio's great 'Dictionnaire,' gives little promise of advancing far beyond the first three letters of the alphabet. The idea of a selection was uppermost in Winckelmann's 'Monumenti antichi inediti' (Rome 1767–68), and also in the grand old 'Monumenti dell' Instituto,' the serial issue of which was but recently suppressed through an acute access of *furor Teutonicus* that suddenly made itself felt in Berlin. The superb volumes of heliotype plates from choice antique statuary, engraved in the very finest style of mechanical reproduction by the firm of Dujardin, and edited by Rayet under the title, 'Monuments de l'art antique,' are well known to book-lovers. Yet Rayet is in his turn to be eclipsed by Brunn's new undertaking, 'Monuments of Greek and Roman Sculpture.'

Perhaps it was the deterrent price of this last work, which is now in progress of issue (at $5.00 a number, or $400 complete, in case the price is not raised), that suggested what a field there might be for a rival on a more modest scale, if Baumeister's 'Monuments' can fitly be called so. Both collections are, in fact, the outcome of an intelligently culled opportunity, being based on the recent advances made in the science and art of photographic reproduction. In the 'Monuments of Ancient Sculpture,' as for Rayet's nearly synonymous work, the heliotype process is employed throughout. The twenty-four hundred plates and inset figures that furnish forth the copious illustration of the present work, are mainly distributed (according to whether a photograph from the original *monument* or a standard line engraving is taken for archetype) between the recently invented wire-net and the long-familiar etched-zinc processes. Both methods of reproduction seem almost providentially designed for the purposes of an archæological reference-book like the present dictionary. By the aid of them, the publishers have harvested in, for the benefit of even the least affluent of classical scholars and teachers, a wealth of material heretofore accessible only to the wealthiest of well-circumstanced amateurs, if, indeed, to these; for how many dispose of such a treasury of archæological publications as the Bavarian State Library, or have at hand so rich or so carefully accumulated a cabinet of photographs from the antique as that attached to the Chair of Classical Archæology in the University of Munich, and slowly collected by Professor Brunn? These two sources have been lavishly drawn upon in the formation of the magnificent store of capital cuts, equally remarkable for the elegance of their execution and for the absolute faithfulness with which they render their originals, that distinguishes the 'Denkmäler.'

Not a small proportion of the works of ancient sculpture made accessible in these trustworthy engravings are published for the first time altogether, or for the first time with any approach to veracity. Some have been so distorted in the ordinary trade-cuts one groans to meet again and again, in manual after manual, that it is like breathing the freshness of the marble itself to let the eye repose on the nicely graded shading of an unfalsified presentment. Here, to open at random near the beginning of Volume I of the 'Denkmäler,' is the sepulchral stele of our old friend Aristion, "the soldier of Marathon," as the Greek photograph dealers persist in calling him, although he more probably served in the body-guard of the Peisistratidæ. Much cited as this relief has been, both on account of its vestiges of a festive coloring and because it is the earliest signed work by an Athenian master that we possess, it has remained badly known. In Figure 358 we can at last see it as it is without having to go to Athens; even the painted portion of Aristokles' design is clearly visible. How interesting to compare with this partly colored low-relief the entirely painted specimen portrayed in Figure 935. Here there is no relief at all, nothing but a flat marble slab, on which Lyseas, the dead man, appears delineated in graven outlines, which were filled out, as may be tolerably discerned even in the engraving, with red, white, green, black, etc. Perhaps the process is a little better suited to the rendering of the sharply contrasted lights and shades of sculptured drapery than for the subtler surface modelling of the nude. It is sufficient to compare two fair types of the best that can be achieved in this style of illustrations. Figure 1,549 gives us the Louvre torso of Praxiteles' "Resting Satyr" (the "Marble Faun" of Hawthorne's story) in a form on which the most extreme nicety of execution has been aimed at, owing to Brunn's recent identification of this piece as the master's original work; Figure 130 is a full-page plate, after a fine photograph from the original, of the famous "Sleeping Ariadne" of the Vatican. The pictorial effectiveness of the latter cut, of which the netted shading is relatively coarse, far exceeds that of the one representing the Satyr.

When the process is pressed into service for polychrome work, it proves an artistic failure. Plate xlvii, in illustration of that much-debated subject, the polychromy of ancient statuary, shows us a Pompeian statue of Venus in the exact coloring of the original. The goddess has yellow hair, blue eyes, and a body the tint of which a herald would blazon as *proper*, whereas the prudish might see more propriety in the white, yellow, and blue coloring of the gown that chastely enwraps her nether limbs. The genuine chromo-lithograph, as employed elsewhere in the 'Denkmäler,' is far more pleasing to the unsophisticated eye. Plate xlvi puts before us an architectural piece, a corner of a Doric temple, restored in its pristine glory of terra-cotta incrustations and gay coloring, and detached in bold perspective against the cheering blue of a Grecian summer sky. A three o'clock sun throws a sharply defined shadow of the cornice across the whole breadth of the blue triglyphs and white metopes of the entablature; the eye, dazzled by

the sunlight reflected from the great blocks of the architrave, reverts to the pleasant polychrome adornment above and below with a sense of relief and rest. One has, as it were, spent a minute in the sixth century B. C., thanks to an eight-color chromo measuring thirteen inches by nine. It is a pity no better specimen of colored sculpture could have been given than the above-mentioned Venus, which, whether in the original or in the reproduction, is certainly not very remarkable on the score of art.

The general scheme of collaboration embraces coutributions from some two dozen approved connoisseurs. Their names alone are a sufficient guaranty of the high level maintained. Arnold treats of Scenic Antiquities, Assmann of Nautical Antiquities, Blümner of Private Antiquities, including Agriculture and the Arts, Deecke of the Alphabet and Etruscan matters, Von Jan of Music and Musical Instruments, etc., etc. Perhaps as noteworthy a one as any among the single articles is that on Olympia, by Professor Flasch of Erlangen. In ninety-two pages of close print he recounts the history of the site, of the games, and of the German excavation of the Altis, and discusses the results of the latter as they appear embodied in the buildings and statuary brought to light. Flasch assigns the sculptures from the pediments of the temple of Zeus to the Attic school, without pretending to fortify his position by argument. This is a curious return to the theory originated in the old pre-Olympian days by Brunn, who has since discarded it as untenable, and now connects the artists Paionios and Alkamenes, whose actual works were unearthed at Olympia, rather with the artistic tendencies prevalent in Northern Greece, the home, as it happens, of both men. In view of the altogether antipodal character subsisting between the Olympian sculptures in question and the style of the early Attic school, as exemplified in the recent discoveries on the Acropolis, we need not wonder much to see Flasch soon after advocating the *Secento* nonsense of ascribing the whole plastic decoration of the Olympian temple to the invention, if not the material execution, of Pheidias himself. It is difficult to understand this mania for systematically degrading artists whom their contemporaries at least assigned to the very first rank, to the position of mere journeymen. Flasch himself ranks Paionios exceedingly high. Some sentences in his appreciation of the famous Winged Victory have the ring of Winckelmann's own.

The contributions of Flasch on Olympia, Milchhöfer on Mykenai, and Trendelenburg on Pergamon, taken together with the numerous articles by the editor on the Mythology of Art, by Julius on Ancient Architecture, by Julius and Waldstein on Sculpture, and by Von Rohden on Painting, if published separately, would constitute one of the most satisfactory manuals of the history of ancient art yet published. The alphabetic arrangement presupposes some acquaintance with the names of ancient artists as associated with their works; but the cuts themselves serve as a convenient key in turning the leaves, as one involuntarily does a great deal, and that with much gain of information as well as pleasure. Sometimes the juxtapositions are a little curious. A lady pupil of the writer was a whit abashed, on opening Volume I., some days ago, at the heading "Costume (Greek)," to be confronted by a full-length cut of the Venus de Médicis, this statue having been inserted under the name of its reputed author, Cleomenes.

One of the last issues to hand, No. 58, brings an exhaustive treatise and a superb series of illustrations relating to the topic of "Triumphal Arches." The last of the great articles is that on "Vasenkunde," by Von Rohden. Painted vases by Attic masters of the sixth, fifth, and fourth centuries B. C. already enjoy an esteem in archæological circles greater than is accorded to marbles of the period of feebleness, dependence, and debasement. Such a vase as that of Erginos (the potter) and Aristophanes (the painter), depicted in Figure 637, offers an example of draughtsmanship and figure composition Pheidias himself could not outdo. Examples of this art are frequent in the *Monuments*, and will do much to bring the general public round to the point of view occupied by the trained expert. It is a pleasant duty, now that the completion of the serial issue is in sight, to congratulate both publishers and editors in behalf of the numerous American scholars whose situation is so nearly akin to that of the average *Gymnasialassistent* that the 'Monuments of Classical Antiquity' will be welcomed by them as a real boon. As a Government, we shall of course continue to fight the importation of educational works like this by a blackmail tax ot twenty-five per cent.

The Complete Angler; or, the Contemplative Man's Recreation of Izaak Walton and Charles Cotton. Edited by John Major. London: J. C. Nimmo; New York: G. P. Putnam's Sons. 1889.

THE first of Major's editions of Walton was published in 1823, and marked the period in which this classic began a greatly increased popularity and circulation. A second was published in 1824, and a third in 1835, followed by others up to 1882, two or three of which were American editions. Of these, the one of 1844, which we believe was the last of those issued under Major's superintendence, was a great improvement on its predecessors in print and illustration, the work of Mr. Creswick and the woodcuts of fish being especially good, as are also the designs of Absolon. The etchings by Tourrier in the volume under notice, which replace the earlier Absolons, are far inferior in design and treatment.

As an appendix to the edition of "1889," and bound with it, is 'The Practical Fly Fisher, more particularly for Grayling or Umber,' by John Jackson of Tanfield Mill. This contains 10 plates of natural and artificial flies, comprising 120 examples, colored by hand, and exceedingly interesting to the angler.

The difference to the reader, as compared with the collector, between the various Waltonian editions is in the "introductory essay" or preface which different editors have fallen into the fashion of publishing. Dr. Bethune has distinguished himself by having written the best of all these—a thoroughly just, appreciative, and brilliant setting for his editions—and Mr. Major has done the very worst. Of it Mr. Westwood, in his 'Chronicle of the Compleat Angler,' says: "The writer, though worthy and inoffensive, was vain, vulgar, and silly, and his essay is precisely what we should expect from a shopkeeper turned man of letters for the nonce. It is, in fact, a farrago of twaddle from end to end," etc., etc. In attempting to gloss over Walton's humble origin, Mr. Major has also aroused the indignation of Dr. Bethune, who, in his 'Bibliography of the Complete Angler,' devotes a page of severe rebuke to the unfortunate publisher. The ideal edition of Walton will be one with the illustrations of the Pickering of 1836, and the imprint (let us, as Americans, say) of De Vinne, and the preface of Dr. Bethune.

Leibnitz's New Essays concerning the Human Understanding. By John Dewey, Ph.D. 12mo, pp. 272. Chicago: S. C. Griggs & Co. 1888.

PROF. DEWEY has written one of the clearest and most comprehensible of the books in the philosophic series in which it appears, and of which it is the seventh. In this respect he has the advantage of those who have preceded him. But it is due rather to the system with which he is dealing than to any proclivities on the part of the writer to keep shy of Kantian and post-Kantian philosophy; for he evidently judges of his subject from the position of transcendentalism. Leibnitz wrote before German philosophy had become oracular in its deliverances, and hence was less afflicted with the curse of obscurity than Kant and Hegel. It is fortunate, therefore, for Prof. Dewey that his exposition offers fewer obstacles to the general reader than would have been the case had he been obliged to make concessions to the phraseology of his author; for both his reputation and his usefulness will be helped by the intelligible character of his work, and the growing philosophical community in America may congratulate itself upon this additional contribution to its libraries.

There is one important difference between this and the other volumes in the same series. They are purely expository, with as little of the historical method as it is possible to get along with. Prof. Dewey, on the other hand, has done as much historico-critical as expository work in this volume, and we suspect that in so doing he has deviated in some degree from the original purpose of the series. This departure, if it be such, has certainly abridged his treatment of special topics in Leibnitz's philosophy, notably the crucial metaphysical conception upon which it turns, namely, the doctrine of monads. Besides, it has made him read Locke with the eyes of Hume, and Leibnitz with the eyes of Kant. Seldom have we observed such a Kantian color given to the interpretation of Leibnitz, and we think more than it will bear, although it is not to be denied that the distance between them is very slight, or that the revolt of Kant against "dogmatism" did not prevent him from being largely influenced by Leibnitzian conceptions. But it is possible to make Leibnitz more of a Kantian than he really is, and some of Prof. Dewey's exposition is open to the objection that it seems to do this very thing.

There is a more important criticism to be made. The writer is a strong advocate of idealism and as strong an opponent of materialism. He assumes a complete antithesis between these two theories, and expects the defence or proof of the one to be the necessary refutation of the other. This is legitimate enough from the position of Cartesian dualism, to which, in a modified form, Liebnitz still adhered. For idealism in such a philosophy was intended to combat the materialism which resulted from Locke's views of sensation, and hence it came to coincide with the spiritual as opposed to the mechanical side of Cartesianism. But now that monism, as opposed to dualism, has become the accepted creed, owing to the influence of Kant and modern science, can the antithesis to which we have referred be maintained any longer? Can idealism and materialism be opposed to each other except upon the assumption of dualism? Monism, in most cases at least, seems to be identical with either materialism or pantheism, and in both is fatal to the very belief which Cartesian dualism, with its idealistic position, was designed to establish. Hence we really gain nothing when

we employ language which will not bear examination from the new standpoint, and which has nothing but historical associations to commend it. There is a serious problem here, and we express the hope that Prof. Dewey may take it up some time, and, if possible, solve it.

BOOKS OF THE WEEK.

Alden, Mrs. G. R. The Pansy: Stories of Child Life at Home and Abroad and of Modern and Ancient History. Illustrated. Boston: D. Lothrop Co. $1.25.
Ballantine, R. M. Blue Lights; or, Hot Work in the Soudan. T. Nelson & Sons. $1.50.
Barrett, F. The Admirable Lady Biddy Fane. Cassell & Co.
Besant, W. The Inner House: A Novel. Harper & Bros.
Bingham, G. C. Snow-Baby: Merry Rhymes for Pleasant Times. E. P. Dutton & Co. 50 cents.
Bradlee, C. D. Sermons for All Sects. Boston: W. B. Clarke & Co.
Champney, Elizabeth W. Three Vassar Girls in France: A Story of the Siege of Paris. Boston: Estes & Lauriat. $1.50.
Chester, J. Ruth, the Christian Scientist; or, The New Hygeia. Boston: H. H. Carter & Karrick.
Christie, R. Maxims and Phrases of All Ages. 2 vols. G. P. Putnam's Sons. $5.
Collier's Great Events of History. New ed. T. Nelson & Sons. $1.25.
Colson, F. H. Stories and Legends: A First Greek Reader. Macmillan & Co. 75 cents.
Comstock, Prof. J. H. An Introduction to Entomology. Part I. Ithaca: The Author. $2.
Croly, D. G. Glimpses of the Future: Suggestions as to the Drift of Things. G. P. Putnam's Sons. $1.
David Livingstone. The Story of His Life and Travels. T. Nelson & Sons.
Donahoe, D. J. Idyls of Israel, and Other Poems. John B. Alden.
Driven into Exile: A Story of the Huguenots. By A. L. O. E. T. Nelson & Sons. $1.
Favorite Tales for the Nursery. T. Nelson & Sons. 50 cents.
Fisher, W. W. A Class Book of Elementary Chemistry. Macmillan & Co. $1.10.
Foster, Prof. M. A Text-Book of Physiology. Fifth ed. Part I., comprising Book I. Macmillan & Co. $2.60.
Fowler, J. A. History of Insurance in Philadelphia for Two Centuries. 1683-1882. Philadelphia: Review Publishing Co.
Freeman, A. C. The American State Reports, Decided in the Courts of Last Resorts of the Several States. Vols. I. and II. San Francisco: Bancroft-Whitney Co. $4 per volume.
Gibson, W. S. An Introduction to Latin Syntax. Macmillan & Co. 50 cents.
Gill, G. Charming Songs for Little Warblers. Boston: School Supply Co.
Gladstone, W. E. "Robert Elsmere" and the Battle of Belief. A. D. F. Randolph & Co. 15 cents.
Hall—Stevens. A Text-Book of Euclid's Elements, for the Use of Schools. Parts I. and II., containing Books I.—VI. Macmillan & Co. $1.10.
Hardy, H. J. A Latin Reader for the Lower Forms in Schools. Macmillan & Co. 60 cents.
Hoare, Rev. E. N. Notable Workers in Humble Life. T. Nelson & Sons. 80 cents.
India, Pictorial and Descriptive. T. Nelson & Sons. $4.
James, H. The Aspern Papers. Louisa Pallant. The Modern Warning. Macmillan & Co. $1.50.
Jones, D. E. Examples in Physics. Macmillan & Co. 90 cents.
Kane, Rev. J. Ilian; or, the Curse of the Old South Church in Boston. Philadelphia: J. B. Lippincott Co.
Liautard, A. Lameness of Horses and Diseases of the Locomotory Apparatus. W. R. Jenkins.
Lieber, B. F. Universal Telegraphic Cipher. B. F. Lieber, 4 Stone St., New York. $10.
Lindsay, Prof., etc. Religious Life in Scotland, from the Reformation to the Present Day. T. Nelson & Sons. $1.25.
Little Ones' Animal Stories and Poems. Boston: Estes & Lauriat. $1.75.
Lockwood, S. Animal Memoirs. Part II. Birds. Ivison, Blakeman & Co.
Lovett, R. Irish Pictures, Drawn with Pen and Pencil. T. Nelson & Sons. $3.50.
Mackenzie, R. The 19th Century: A History. The Times of Queen Victoria. T. Nelson & Sons. $1.
Mackenzie, Rev. J. The History of Scotland. T. Nelson & Sons. $1.50.
Mann, H. English Free Trade: Its Foundation, Growth, and Decline. Providence: The Press Co.
Masson, G. The Story of Mediæval France, from the Reign of Hugh Capet to the Beginning of the 18th Century. G. P. Putnam's Sons. $1.50.
Miller, C. R. A Treatise on the Law of Conditional Sales of Personal Property. Cincinnati: Robert Clarke & Co. $3.50.
Old English Ballads. Illustrated. T. Nelson & Sons. $1.75.
Onward: A Scripture Text-Book for Each Day in the Month. E. P. Dutton & Co. 50 cents.
Planetary Evolution; or, a New Cosmogony. Kansas City, Mo.: M. H. Dickinson & Co. $1.
Poe, E. A. The Bells. Illustrated. E. P. Dutton & Co. 75 cents.
Quincy, J. P. The Peckster Professorship: An Episode in the History of Psychical Research. Boston: Houghton, Mifflin & Co. $1.25.
Rayet, Prof. O. Études d'Archéologie et d'Art. Paris: Firmin-Didot & Cie.
Rouse, W. W. A Short Account of the History of Mathematics. Macmillan & Co. $2.60.
Rutherford, W. G. First Greek Grammar. Macmillan & Co. 50 cents.
Ryan, D. J. A History of Ohio. With Biographical Sketch of her Governors and the Ordinance of 1787. Columbus: A. H. Smythe. $1.
Sargent, J. Y. A Latin Prose Primer. Macmillan & Co. 60 cents.
Stearns, Prof. O. S. Introduction to the Books of the Old Testament. Boston: Silver, Burdett & Co. $1.
Stokes, W. The Anglo-Indian Codes. Vol. II. Adjective Codes. Oxford: Clarendon Press: New York: Macmillan.

PROTECTIONISM.

The ism which teaches that waste makes wealth. By Prof. Wm. G. Sumner. 16mo, cloth, $1. Postpaid.

HENRY HOLT & Co., 29 W. 23d St., N. Y.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK:

PROVERBS AND PHRASES OF ALL AGES. By Robert Christy. Classified by subjects and arranged alphabetically. Believed to be the most comprehensive and most conveniently arranged compilation in its department. Two volumes, large 12mo, half leather, $5.00.

THE STORY OF MEDIÆVAL FRANCE. From the Reign of Hugh Capet to the Beginning of the Sixteenth Century. By Gustave Masson, B.A., of Harrow School, England. 12mo, cloth, illustrated. (Vol. xxi. in the Story of the Nations.) $1.50.

TRUE AND FALSE FINANCE. By a Taxpayer. (Questions of the Day, No. 55.) Paper, 25 cents.

THE POCKET GAZETTEER OF THE WORLD. A Dictionary of General Geography. By J. C. Bartholomew, F.R.G.S., etc. Uniform with the 'Pocket Atlas of the World.' 32°, cloth, $1.00; full leather, $1.50.

ALSO READY:

The Twentieth Thousand of

BEHIND CLOSED DOORS. By Anna Katharine Green, author of 'The Leavenworth Case,' 'A Strange Disappearance,' etc. 16mo, paper, 50 cents; cloth, $1.00.

*** *New Lists of the Publications for the present season.*

STATIONERY AND CIRCULATING Library for sale.—Reason, death of owner. Address Mrs. M. A. McLEAN, 1749 Penna. Ave., Washington, D. C.

New Books for the Young.

THE SAILOR BOYS OF '61.

By Prof. J. Russell Soley, author of 'The Boys of 1812,' etc. This volume contains an accurate and vivid account of the naval engagements of the great Civil War and the deeds of its heroes. Elaborately and beautifully illustrated from original drawings. 1 vol., quarto, cloth, $2.50.

GREAT GRANDMOTHER'S GIRLS IN NEW MEXICO.

By Elizabeth W. Champney, author of 'Three Vassar Girls' series. This is the second volume of this delightful series, describing incidents in the life of a quaint little maiden who lived in the time of the Spanish adventures. Illustrated by "Champ." 1 vol., 8vo, cloth, gilt, $2.50.

HUNTING IN THE JUNGLE.

With Gun and Guide. From 'Les Animaux Sauvages,' by Warren F. Kellogg. An exciting and amusing series of adventures in search of large game—gorillas, elephants, tigers, and lions—fully illustrated with over a hundred original drawings by the celebrated Lançon. Engraved on wood by the best modern book illustrators. 1 vol., 8vo, cloth, $2.50.

THE BOYS OF 1812.

By Prof. J. Russell Soley, author of 'Blockaders and Cruisers,' 'The Sailor Boys of '61,' etc., etc. This "most successful war book for the young, issued last year," is now made in boards with an illustrated cover designed by Barnes. 1 vol., 8vo, chromo-lithographed board cover, $1.75.

NEW EDITIONS OF IMPORTANT WORKS.

English Men of Letters.

PEOPLE'S EDITION.

English Men of Letters. Edited by John Morley. 16mo, cloth, $1.00 each. Twelve Volumes now ready, each containing three biographies, as follows:

Vol. I. Milton, Gibbon, Shelley.—Vol. II. Southey, Byron, Defoe.—Vol. III. Dryden, Pope, Sidney.—Vol. IV. Bentley, Cowper, Landor.—Vol. V. Burke, Macaulay, Fielding.—Vol. VI. Bunyan, Johnson, Bacon.—Vol. VII. Scott, Dickens, Spenser.—Vol. VIII. Sterne, Swift, Hume.—Vol. IX. Chaucer, Lamb, De Quincey.—Vol. X. Coleridge, Burns, Wordsworth.—Vol. XI. Locke, Goldsmith, Gray.—Vol. XII. Thackeray, Addison, Sheridan.

This popular edition of Mr. Morley's famous series contains in twelve volumes the biographies formerly published in thirty-six. The books are of a most convenient size for the hand, and attractively bound. For the library the edition cannot fail to supersede all others.

Inquisition of the Middle Ages.

[illegible] of the Inquisition of the Middle Ages. By Henry Charles Lea. Complete in Three Volumes. Pp. xxxiv., 1908. 8vo, cloth, uncut edges and gilt top, $3.00 per volume. (*New edition.*)

"A landmark in the domain of American scholarship. . . . This particular field of study has never before found a proper and adequate historian. . . . Among the best achievements of scholarship in America, of which it must long remain as a choice and conspicuous ornament."—*N. Y. Times.*

"It will doubtless become the standard authority upon the history of the Inquisition."—*Philadelphia Ledger.*

"The first critical and dispassionate history of the Inquisition that has been written. . . . A great literary achievement, an invaluable gift to letters, and a noble monument to scholarship."—*N. Y. Tribune.*

"Mr. Lea has selected those facts which constitute the real history of the Inquisition, and has set them forth with singular clearness and impartiality."—*Boston Transcript.*

"A book that will rank with the most valuable work done by American students."—*N. Y. Sun.*

Stormonth's Dictionary.

A Dictionary of the English Language, Pronouncing, Etymological, and Explanatory, embracing Scientific and other Terms, Numerous Familiar Terms, and a Copious Selection of Old English Words. By the Rev. James Stormonth. The pronunciation carefully revised by the Rev. P. H. Phelp, M.A. Pp. xiv, 1,234. Imperial 8vo, cloth, $6.00; half roan, $7.00; full sheep, $7.50. (*New edition.*)

"A model performance, in which the scholar will take as much delight as will the school-children, the family circle, and the busy man of affairs or letters who has occasion to look up a word. . . . If an office, schoolroom, or family can have but one dictionary, Stormonth's is the best."—*Boston Advertiser.*

Send for Circular and Price-List.

WYCKOFF, SEAMANS & BENEDICT, 327 Broadway, N.Y.

Our Debenture Bonds
are a favorite security with many of our most conservative Eastern investors.

A series of $100,000 in 6 per cent. bonds is issued in sums of $200.00, $500, and $1,000, payable in five and ten years after date. Each series is secured by $105,000 of first mortgages on property valued at NOT LESS than THREE TIMES the amount of the mortgage. These mortgages are assigned to the Boston Safe Deposit and Trust Company of Boston, as trustee to hold in trust. These bonds are certified by the Boston Safe Deposit and Trust Co., who hold the securities. Every bond has coupons annexed, each coupon representing six months interest payable at the Ninth National Bank of New York.

By the terms of the trust, no bonds can be issued by THE KANSAS INVESTMENT CO., until the mortgages are assigned to and in the possession of the trustee.

These bonds are popular,

First: Because they are negotiable by delivery and can be sold without assignments or transfers in writing.

Second: For purposes of collateral, and they can be held without publicity.

Third: The security for each $100,000 is $5,000 more than the par value of the bonds. In addition to this they are the direct liability of The Kansas Investment Co., and its entire assets may be exhausted to meet these bonds should there be any default. They are sold at par, with accrued interest.

We invite correspondence and solicit your fullest investigation of our finances, method of doing business, and integrity and reliability of our officers, believing that the closest scrutiny will result in making you our clients. Write us either at our home office in Topeka, Kansas, or at 101 Devonshire St., Boston, Mass., for our pamphlet descriptive of these bonds.

WILLIAM R. JENKINS,
PUBLISHER AND IMPORTER OF FRENCH BOOKS,
851 and 853 6th Ave., New York.

Memoirs of Count Grammont.

By Anthony Hamilton, Edited, with Notes, by Sir Walter Scott. With Portrait of author and Thirty-three Etchings by L. Boisson, on India Paper, from Original Compositions by C. Delort. Imperial 8vo, uncut edges, bound in cloth, $18.00; full morocco, $30.00. Edition limited to 750 copies for England and America.

"As no other book furnishes an equally vivid picture of life at the Court of Charles the Second, the 'Memoirs' of Grammont continue to hold their own in the favor of reading men. . . . The illustrative work demanded peculiarly refined execution to be in keeping with a literary style which has had Gibbon, Voltaire, and Sir Walter Scott among its eulogists. A book which has been said by a French critic to afford "the truest specimen of perfect French gayety," required of the artist a peculiar lightness of touch and a lively sense of humor. Delort's illustrations are refined in execution, polished, expressive, and full of human interest. . . . The publishers deserve credit for doing their work so well."—*N. Y. Tribune.*

Specimen pages of this valuable book will be sent on application.

*** For sale by all booksellers, or will be sent by mail, postage prepaid, on receipt of the price by*

NEW BOOKS.

RELIGION AND POLITICS IN EGYPT.

Leaves from an Egyptian Note-Book.

By Isaac Taylor, LL.D., Canon of York. Crown 8vo, cloth, $1.25.

"There is much new in this account of Modern Theology, the Harem, etc. In style and temper the book is simple and candid, and reads itself."

The Works of George Borrow.

Post 8vo, 5 vols., cloth, $5.00.

"The career and works of George Borrow are well worthy of study. He may have been 'a vagabond' by taste and habit, but he was eminently a Christian and a gentleman, and many men have earned greater name and fame without half his claims to the gratitude of society."—*Saturday Review.*

I. THE BIBLE IN SPAIN; or, the Journeys and Imprisonments of an Englishman in an attempt to circulate the Scripture in the Peninsula. With portrait.

II. THE ZINCALI: an Account of the Gypsies of Spain; their Manners, Customs, Religion, and Language.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Hugh McCulloch's Reminiscences.

Men and Measures of Half a Century.

SKETCHES AND COMMENTS.

By Hon. Hugh McCulloch. 8vo, $4.00.

"Mr. McCulloch modestly entitles his work 'Sketches and Comments.' But the sketches are so sharp in outline, so positive in feature—the comments are so explicit and delivered with so *ex cathedra* an air of personal observation and infallible accuracy, that the volume must become one of the standard works in the history of our time."—*Chicago Tribune.*

"Hardly any other volume of contemporary memoirs is entitled to greater consideration than this. It comes from one whose judgment was keen, clear, and accurate, and whose opinions are entitled to great weight."—*Boston Herald.*

"We find what we want on every page—the author's keen recollections of distinguished men and important affairs."—*Philadelphia Press.*

RECENT NEW BOOKS:

Stuff and Nonsense.

By A. B. Frost. New edition, with new cover and additional drawings and sketches. 8vo, $1.25.

The drawings and sketches added by Mr. Frost have made almost a new work of this revised edition.

"A most amusing literary and artistic salad."—*N. Y. Telegram.*

The Five Talents of Woman.

By the author of 'How to be Happy, though Married.' 12mo, $1.25.

"The book is witty, sensible, and bright. It is crowded with racy insights relating to character, temperament, acquirements, costumes, and fascination."—*Boston Traveller.*

Letters of Thackeray.

A new edition, with Portrait of Thackeray, and reproduction in *facsimile* of a characteristic letter. 1 vol., 12mo, gilt top, $1.25.

In this dainty edition these famous letters will again be sought for by thousands to whom the other editions were inaccessible.

The Reveries of a Bachelor.

With all the illustrations, printed in tint, made by F. O. C. Darley for the original illustrated edition. Square 8vo, $3.00.

"One of the most tender and touching works in our literature. It would be hard to name its equal."—*N. Y. Tribune.*

A SUPERB PORTRAIT OF

Mrs. Humphrey Ward,

Author of 'Robert Elsmere,' with an authorized sketch of her life and literary career, appears in the November BOOK BUYER, just out. Also, portrait and sketch of MARGARET DELAND, author of 'John Ward, Preacher,' and 30 pages of bright literary news, with 15 beautiful illustrations. Price, 10 cents. The BOOK BUYER will be sent for 10 cents to any address by

CHARLES SCRIBNER'S SONS,

NEW YORK.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 15, 1888.

The Week.

THE agencies which create a majority at a Presidential election are so numerous, and often so obscure, that everybody is more or less tempted to speculate about them—all the more because an opinion about them which nobody can refute is within every man's reach. The humblest or most ignorant man in New York to-day may have a theory of the cause of Cleveland's defeat which it would be impossible for the most sagacious or best informed to overthrow. If any man chooses to say that it was the tariff did it, or Hill did it, or civil-service abuses did it, who can demonstrate that he was wrong? There could not, in fact, be a better illustration of what logicians call "a composition of causes" than a Presidential election affords. Many things contribute to the result; but nobody can say, with overwhelming authority, unless he has actually bought and paid for the majority—which Matt Quay may have done—which thing was mainly instrumental in bringing it about, or, in other words, which thing was the "causing cause." All this naturally makes many people, after all is over, when they sit down to think about it, take a savage satisfaction in selecting some of their enemies to bear the blame. Nobody who has voted can feel perfectly secure against the charge that it was he who caused the calamity, no matter on which side he has voted. Even if he has voted for Cleveland, the disgust he has excited in other people at seeing him vote for anybody may have driven thousands over to Harrison. The *Tribune*, in fact, accounts for the defeat of Warner Miller in this very way. Thousands, on hearing that the Mugwumps were going to vote for him, determined to vote for his opponent, their feelings about corruption and liquor to the contrary notwithstanding. In fact, the doctrine that votes, under a popular government, have to come from the right people in order to do a candidate any good, has, ever since 1884, played a considerable part in our politics, and will doubtless continue to play a considerable part hereafter.

The Brooklyn *Eagle* thinks that "the figures disprove the statement that Gov. Hill's Democratic supporters went back on Cleveland." Admitting this, the same figures seem to us to prove that Gov. Hill's candidacy caused thousands of independent voters to withhold their votes from Cleveland. It is plain that the Governor's candidacy lost the Democratic State ticket many votes in those quarters of Brooklyn where independent voters are most numerous. Take, for instance, certain election districts of the First Ward, which includes the Heights, and compare their votes for the Presidential and Gubernatorial tickets:

	Cleveland.	Hill.	Harrison.	Miller.
4th	212	103	254	350
5th	163	110	276	313
8th	237	140	278	363
9th	177	124	196	239

Here, it will be seen, are election districts where one-fifth, one-fourth, one-third, and even, in the Fourth District, more than one-half of the men who voted for Cleveland voted against Hill, nearly all of them casting their ballots for Miller. This element consisted of lifelong Democrats, who could not endure the saloon candidate nominated for Governor by their party, and of independent voters, chiefly of Republican antecedents, who abominate the Hill type of politician. There were enough independent voters who thus discriminated between the two tickets, and supported the Presidential candidate of a party whose Gubernatorial candidate they could not abide, to save Cleveland the First Ward, although his plurality in it was but 207, against 498 four years ago. But there were other voters who had all along been favorably disposed towards Cleveland, and would have supported him if nothing had happened to disgust them with his party, who simply would not have anything to do with a party which nominated such a man as Hill for Governor. They did not consider that the country would be endangered or disgraced by Cleveland's defeat this year, as they did consider it would have been four years ago by Blaine's election; they did not think that the cause of tariff reform would be lost if Cleveland should not be reëlected; but they did feel that a party which would honor a man whose only claim above other men was that he was the devoted friend of the liquor interest was a party which they could not help to keep in power, at Washington or anywhere else.

The Republicans are sobering down sufficently now to contemplate what has happened in this city and State as well as in the nation, and we trust that they will give the situation here their most prayerful attention. It is probably great fun to laugh at the Mugwumps because Miller was not elected Governor and Hewitt was not elected Mayor; but are the facts of Hill's return to the Executive chair at Albany, and that Tammany Hall has full control of this city, causes for uproarious merriment? What is going to be done to guard us against similar successes in future elections? Does anybody believe that if Hill had been running against Miller on the issue of rum against temperance, in an election in which no other candidacy was involved, the State of New York would have given a majority for Hill and rum? Does anybody believe that if Hewitt had been running against Grant, in an election which was on city issues alone, the Republicans would have been so partisanly blind to the interests of the city as to make Grant's election sure by running a candidate of their own? Why should the welfare of the city and State be thus tied up with national politics, and sacrificed whenever the elections occur on the same day? We put these questions to intelligent and patriotic men of all parties, and ask them to consider seriously whether they can devote their energies to a more worthy object than the securing of separate municipal, State, and national elections.

The Harlem Democratic Club has already taken steps to advocate legislation which will give us separate municipal elections. They have appointed a committee to draft a bill to be submitted to the Legislature providing for spring elections for municipal and county officers, and another bill to secure electoral reform within the lines of Gov. Hill's veto of the Electoral-Reform Bill of the last session. As to the desirability of holding municipal elections at such times as no other elections are held, there can be no doubt. As it is now, the interests of the city are almost invariably sacrificed for State or national party interests, and a great flood of unworthy candidates for the Legislature, Board of Aldermen, and minor local candidates is swept into office under cover of the political excitement of the time. Gov. Hill, in his first message to the Legislature, took strong ground in favor of spring elections, and afterwards vetoed a bill providing for them, because it had some other measure conjoined with it. He might be tried now with a simple measure for the same purpose, and see what he would do with it.

As for the imperative necessity of a ballot-reform law, we have already expressed ourselves in favor of that, and are glad to see that a Democratic organization is the first to take the field for it now. Certainly the Democrats of this State, and of the whole country, ought to be impressed with the importance of such a reform to them. It is small use for them to make any attempts to carry the country and elect a President so long as a handful of political gamblers of both parties in this city and State can arrange a "deal," and decide the contest to suit themselves. Other States are already in the field with measures looking to the same end. A ballot-reform bill has been prepared by a club formed for the purpose in Providence, and is now before the Rhode Island Legislature. Michigan, which made an effort to secure such a law two years ago, and passed a bill through one house of the Legislature, will undoubtedly return to the subject this winter, when the Legislature comes together in biennial session.

There is even a prospect that Indiana too may be rescued from the disgrace of being put up at auction every four years. The State has long been in urgent need of a new

election law, but the Democrats have stood in the way of the reform. This year they have lost the State on the Presidential vote, for lack of such a law, as they claim, and the leaders of the party in the press and the organization are demanding that the Democratic Legislature chosen last week shall do something about it. "The supreme duty of the next Legislature," says the *Sentinel*, the most prominent Democratic newspaper in the State, "is to pass an election law which will forever free Indiana from the scandal and disgrace to which it is now exposed every four years." The *Sentinel* points out that the Legislature is Democratic in both branches, and declares that "if a proper election law is not passed, it will be an everlasting reproach to the party." Chairman Jewett of the Democratic State Central Committee takes the same view of the matter as the *Sentinel*. "There is an urgent necessity," he says, "for the passage of a better election law than the one we now have," and he holds that "all men ought to unite in this effort." He thinks that the reform should include provisions limiting the size of voting precincts so that not more than 250 votes should be polled at one precinct; forbidding any one except the voter to approach nearer than 100 feet to the polling place; and the furnishing by the State of an envelope in which each ticket shall be enclosed, with opportunity for the voter to select and seal up his ballot unobserved. He thinks it would also be a great gain if the terms of State and county officers could be so arranged that elections for such offices could be separated from Federal elections. Out of the discussion thus started some improvement ought to come.

It is hardly necessary for us to say to the tariff-reform clubs throughout the country that they ought to continue the work for which they were organized without intermission, that they ought to hold regular meetings, issue such documents as they can find means to publish and circulate, and go on in all respects as living organisms. It is hardly necessary for us to give this advice, because these clubs, unlike mere party clubs, were formed for a continuing purpose. They are like the anti-slavery clubs of old, that worked and fought, not against a party, but against an evil, and allowed themselves no rest so long as the evil existed. The tariff-reform clubs have no party end to gain: it is their object to educate, and it is perfectly immaterial to them whether the reform they work for is carried out by one party, or by the other, or by both together. They are volunteer organizations, moved by a conviction that the tariff is an obstacle and a hindrance to the prosperity of the nation, and an injustice to the great mass of the people. The activity of the past few months, when a national election was pending, cannot be kept up; but the organizations can be continued and improved, and the work carried forward quite as effectively as before.

The year 1892 is a more distant goal than the tariff-reform clubs have in mind at present. There will be an election for Congressmen in all parts of the United States two years hence. This is the true objective point for tariff-reformers. The recent election has shown where the tariff-reform clubs can put in their most effective work, namely, among the workingmen of the large cities—the very ones who were so pelted during the recent campaign with wage statistics and quotations from English papers, forgeries and other. The returns show that this rubbish was wasted on the workingmen. They didn't believe a word of it. The Republicans, on the whole, lost votes in the manufacturing centres, where people meet and talk, and hear debates and take part in them. They gained in the rural districts, where the poor, tax-ridden farmer is still gulled, and gulled more than ever, with the idea that, by paying taxes for somebody else's benefit, a mysterious subterranean stream of wealth will gush out at his doorway by and by. He has been waiting for it all his lifetime, and it has not come; but apparently his faith in it has grown in proportion to the mystery of the oracles which have promised it to him. The tariff-reform clubs can easily reach the workingmen, and bring more and more of them into a knowledge of the truth; and to this work, in season and out of season, they will continue faithful to the end.

The three largest wool-growing States in the Union are Texas, Ohio, and California. These are the States in which, if anywhere, we ought to look for Republican gains by reason of the Democratic demand for free wool. But what is the complexion of the returns from these States? The returns from Texas are unimportant in any case, the Democratic majority being so large, and are at present insufficient to base a comparison upon; but in Ohio and California, strange as it must appear to the high-tariff mind, the Democrats have actually gained votes. In Ohio, Mr. Blaine's plurality four years ago was 31,802. This year Mr. Harrison's plurality is less than 21,000. In California, Blaine had 13,128 plurality, but Harrison's plurality is several thousand less. So much for the wool-growing States. Let us now glance at the cities and States where wool manufacturing is an important branch of industry. Probably Rhode Island is the most important centre of this industry. What do we find here? In the city of Providence Blaine had 1,864 plurality; Harrison has now only 488. In Pawtucket Blaine had 451; Harrison has 266. In the whole State, Blaine had 6,639; Harrison has 4,427. New Hampshire is also extensively engaged in wool manufacturing. In Manchester, the largest manufacturing town, Blaine had 587 plurality; Harrison now has 391. In the whole State Blaine had 4,066; Harrison has 2,748. The city of Philadelphia is probably the largest wool-manufacturing centre in the whole country. Here Mr. Blaine had 30,000 plurality four years ago; now Mr. Harrison has 18,065. Norwich, Connecticut, is another important wool manufacturing point. In that city Blaine had 431 plurality, Harrison has 99. In Waterbury Cleveland had 491 in 1884; his plurality is now increased to 749. In Bridgeport this plurality of 576 is increased to 678. In Meriden his plurality of 54 rises now to 341. Throughout Connecticut, as a general rule, the Democrats have gained in the manufacturing towns and lost in the rural districts. They have gained where there was opportunity for discussion and the mingling together of people and comparison of views.

The Indianapolis *Journal* has reached the conclusion that "this is a Republican country, and there is no middle-aged voter now alive who will ever see the Democracy again in control of the national Government." Something may be pardoned to the natural exuberance of the home organ of a successful Presidential candidate, but it is well enough to remind the *Journal* that the Republicans swept the country much more thoroughly in 1872 than in 1888, and that only two years later there was a "tidal wave" which gave the Democrats an overwhelming majority of the House in 1874, and large pluralities on the Presidential ticket in New York, Connecticut, New Jersey, and Indiana in 1876. Also, that Garfield carried New York by 21,000 plurality and received 214 out of 369 electoral votes in 1880, while in 1882 the Democrats carried New York by nearly 200,000, and in 1884 Cleveland received 219 out of 401 electoral votes.

One break has certainly been made in the "Solid South" in the assured election of a Republican Legislature in Delaware, which, although the geographies used always to class it as one of the "Middle States," has of late years in political divisions been ranked with the other late slave States. The result is due primarily to a quarrel between the factions in the Democratic party. This became so bitter that the Saulsbury wing finally helped the Republicans to carry his home county, which holds the balance of power in the Legislature. The political revolution in the little State, thus brought about, will very likely end in giving the Republicans control of the commonwealth. It seems also probable that another break has been made in the Solid South by the election in West Virginia of a Legislature which will send a Republican to the Senate. The Democrats have been losing ground in the State steadily since 1876, and if the Republicans have carried the Legislature this year, they may reasonably hope to secure a majority of the popular vote in the next election, if they have not done so now. The Republicans were sure of controlling the Senate by the casting vote of the Vice President, even if they had not gained a seat in either Delaware or West Virginia. Delaware will make the parties stand 39 Republicans to 37 Democrats, and a change in West Virginia, 40 to 36.

We commend the existing situation to the attention of people who recommend a change in our method of electing a President, so as to have the choice made by popular vote. Under the existing system, it was clear to every experienced student of election-returns before midnight on Tuesday that Harrison had a

majority of the electoral votes, and consequently was elected. But nobody has the slightest idea to-day, or can have for days to come, whether he has also a majority of the popular vote. A long time must elapse before all the voting districts can possibly be heard from in such great and for the most part thinly settled States as Minnesota, California, and Texas. It may easily happen that a candidate may have a large majority of the electoral votes, but a very narrow preponderance of the popular votes, as Garfield in 1880, who had 214 electoral votes to only 155 for Hancock, but led Hancock by only 9,464 votes out of more than 9,000,000. The idea of subjecting the nation to the strain of waiting days and probably weeks to find out who is to be President, while all the back districts are being heard from, is simply preposterous.

Wall Street has not taken a favorable view of the election of Mr. Harrison. There is a tinge of disappointment very clearly discernible in financial circles that Mr. Cleveland is not to be intrusted with the reins of government during the next four years. This arises partly from the fact that the administration of the finances, both under Mr. Manning and Mr. Fairchild, has been prudent and conservative, and always in the direction of economy, and opposed to profligacy of all kinds. It is a great thing to know beforehand what you can rely upon in the Department of the Treasury. It is an unsettling circumstance to have a new man come in, however good his general character may be; it is especially so to have a new man come in backed by a party whose platform calls for large appropriations in order to get rid of the surplus. But we think that the platform will not be much regarded by the politicians, now that the election is past, and that Mr. Harrison will seek, in his Secretary of the Treasury, some man of experience and stability, in whom the best elements of the country may have full confidence; for it is only on these conditions that the Republicans can retain the power they have so narrowly secured in the recent election. It would be a most fatal contrast if it could be shown at the end of two years that in the management of the national finances the Republicans were less trustworthy than the Democrats.

The present Legislature of Georgia is remarkable because of the youthfulness of its presiding officers. The President of the Senate and the Speaker of the House were both born in the year 1853. They were still mere boys while the war was raging, and entered upon their political career after the bitterness of the reconstruction era had passed away. The bringing to the front of the young men in the South is becoming very noticeable. Gov. Seay of Alabama is only forty-five years old. Representatives Phelan of Tennessee and Simmons of North Carolina are two of the youngest men in Congress. The delegates to the St. Louis Convention from Georgia were almost without exception of the new generation, and two of the Presidential electors just chosen in that State have barely attained their majority. West Virginia has been for years noted for the youthfulness of its Governors, Senators, and Representatives, but the more southern States are now conferring political honors upon even those who are too young to have had any war record. There is little or no concerted effort to set aside the "old colonels"; on the contrary, they are honored, because, in the first place, they were prominent and worthy citizens before they were colonels; and secondly, because of their gallantry and self-sacrifice. But it is obvious that they are being supplanted by men of fewer prejudices, of fresher ideas, and of greater vigor.

The infringers of the Bell patents can take little, if any, comfort from the decision of the Supreme Court just rendered, upholding the right of the Government to maintain suits to annul patents on inventions which have been granted illegally by means of fraud upon the Government officials. The principal suits for infringement of these important patents have been decided already in favor of the Bell Telephone Company by the Supreme Court, and the points set up in the Government suit to annul the patent virtually cover the same ground. The points determined in the decision just made relate solely to the question whether or not the Government, under the Constitution and laws, could maintain a suit under any circumstances to annul a patent once granted. This decision settles a long-contested point, and probably will meet with general approval so far as the main question is concerned—that is, that the Government has the right to maintain such suits. The decision, however, would have been received with much greater approval if it had been secured under different auspices, and the suit had been instituted or instigated otherwise than by infringers seeking to gain for themselves benefits which should belong only to a meritorious inventor.

England continues to manifest the most provoking indifference to the result of our Presidential election. One would have thought, in view of the tons of campaign literature carried by our post-offices, circulated in our streets and horse-cars, posted on our dead walls, and borne aloft on our banners, that the whole island would now be in agonies over the loss of Cleveland. But so far is this from the present complexion that Lord Salisbury, in a speech at the Guildhall, rather chuckles over the defeat of Mr. Cleveland as a joke in his own favor, while the English press, even the *Times* and *Spectator*, take rather less interest in it than they would in a tribal conflict in Afghanistan. This may be all artfulness, from which the *Tribune's* Tory Squire will tear off the mask in due time, but at present we can only feel a strong sense of humiliation that the English manufacturers and the Cobden Club are not putting on sackcloth and ashes.

What is exactly the present position of the leading Republican organ, the *Tribune*, and its London correspondent about the Sackville incident, it is a little difficult to make out. Just before the election the *Tribune* described the incident, on the strength of the Squire's despatches, as a conspiracy in the following terms:

> "Mr. Cleveland's Bargain with the British Premier—Trading his Country's Honor for Electioneering Purposes—The Whole Shameful Trick Disclosed — A Secret Understanding with Lord Salisbury—The President Did Not Dismiss Lord Sackville until he had been Assured that England would not be Angry—Lord Salisbury Agreed to his Envoy's Dismissal for the Sake of Having Cleveland Reëlected—If Cleveland is Reëlected he will not Forget his Obligations to the British Government."

This makes Mr. Phelps a participant in a "shameful trick," an accomplice with a foreigner in perpetrating a gross fraud on his own countrymen. Had the affair occurred earlier, and in a more barbarous age, Mr. Phelps would probably have felt justified in inflicting corporal chastisement on the Squire for circulating such a story about him, and nearly all contemporary writers would have said that he richly deserved it. But on Sunday the culprit told a different tale. Says he, with extraordinary impudence:

> "The facts, however, are still very imperfectly known to the British public. The diplomatic correspondence laid before Parliament and published in the papers gives but a fragmentary account of what really happened. The chief novelty in it is the difference between Lord Salisbury and Mr. Phelps respecting what occurred at Hatfield. Lord Salisbury seems to have understood that no decisive action would be taken by the American Government until a fuller statement of their grounds of complaint had been made. It is certain Mr. Phelps neither gave, nor could give, any such assurance."

But how does this hang together with the story that the dismissal of Sackville was arranged beforehand with Salisbury both as to time and manner, and that Salisbury absolutely consented to the dismissal in order to help Cleveland in the election?

The *Nineteenth Century* prints a protest signed by 417 of the foremost men and women in England, so far as intellectual standing is concerned, against the part played by competitive examinations in English schools and colleges. It is probably, in its way, the most remarkable document in educational history. The protest is followed up by short explanatory and confirmatory articles from Max Müller, Edward A. Freeman, and Frederic Harrison. The contention of the signers is that the persistent use of examinations, as the sole or at least main test of the pupil's progress and the teacher's efficiency, has destroyed or is fast destroying in both teacher and pupil the proper sense of the true object of mental training. They have come to regard success in passing examinations as a sufficient proof of education, whereas it may be achieved in a large number of cases without leaving behind a trace of anything which can fairly be called intellectual culture. Unfortunately, the protestants are very weak in the matter of suggesting a remedy. The less we rely on examinations, the higher the order of men and women must be whom we get for teachers; and no community seems as yet willing to take the necessary pains to find the teachers who are competent to keep examinations in their proper place, or to honor and reward them sufficiently for the work done.

REDISTRIBUTION OF POWER.

WHETHER or not the Republicans prove to have carried their ticket for Presidential electors in West Virginia, the apparent choice of a Legislature which will elect a Republican to the United States Senate practically breaks the "solid South" in a national contest for the first time since its solidity was established a dozen years ago. Virginia in the interval has had non-Democratic legislatures and State officers, but it continued Democratic in Presidential years, and the rise of the Readjuster party was a local phenomenon, rather than a sign of revival of the Republican party as such in the State. The result in West Virginia this year is of an altogether different sort. It has followed a fair fight on the national issue between the two parties, uncomplicated by any exceptional local consideration like the debt question in the Old Dominion. The result surprises no close student of the State's political history. Republicanism was discredited in West Virginia for some years after the war by the virulence at first shown towards the "rebel" element, but it has been steadily gaining ground ever since 1876, when Tilden had 11,148 over Hayes, until Cleveland had only 4,221 over Blaine in 1884, so that the only question before this campaign opened was whether the inevitable Republican victory would come this year or be postponed until 1892.

The solidity of the South, once thus broken, never will be restored. All that held other Southern States in the Democratic column this year was the Bourbonism of Republican Senators in giving support to "Bill" Chandler's policy of threatening to restore the force régime, which enabled the Democratic leaders in that region to arouse the fears of their followers lest the evils of the reconstruction era might return if any of them voted the Republican ticket. The fears were as unreasonable as the threats were ill-advised. Neither will be justified by the event. The irresistible logic of events will prevent anything like a reactionary policy towards the South by the Harrison Administration. Nothing effective could be done under the construction put upon the constitutional amendments by the Supreme Court; nothing in the way of political advantage can be gained by any further agitation of the matter. Chandler is likely to drop out of the Senate next March; but whether he remains or not, his policy will be quietly dropped. Even the Cincinnati *Commercial Gazette* realizes and confesses that the day of the bloody shirt is over. "Shall we then rush to force the States of the solid South into the rude settlement of the most difficult of all questions, that of races commingled on the same soil?" it asks, and thus answers its own question: "No. Let the Southern States gradually follow the example of old Virginia, where manhood suffrage is almost, and soon will be altogether, established beyond question."

But it is not merely true that the solidity of the South has been broken, never to be restored. The relative importance of the South as a factor in Presidential elections has passed its highest point, and must show a marked falling off after the next Federal census, and before the Presidential election of 1892. In 1860 the slave States contained 12,240,293 out of a total population in the United States of 31,443,321, or almost 40 per cent.; and in the Electoral College which chose Lincoln, those States cast 120 out of 303 votes, or almost exactly 40 per cent. As New York then had 35 electoral votes, the union of this State alone with the slave States would have made a majority of the Electoral College.

The census of 1880 showed a slight falling off in the relative importance of the South, the population of the old slave States being then 18,507,324 out of 50,155,783 in all, or 37 per cent.; and the electoral votes of those States upon the basis of that census numbering 153 out of 401, or 38 per cent. New York, which has 36 electoral votes, no longer sufficed to turn the scales if cast with the "solid South"; a dozen other votes must be sought elsewhere in the North. In 1884 New Jersey and Connecticut contributed three more than the necessary number, Indiana keeping them company; and this year, if West Virginia has not changed, New York, joined with New Jersey and Connecticut, would have reëlected Cleveland, even allowing Indiana to Harrison.

But it is already clear that a solid South, even if it could be kept solid, combined with New York, New Jersey, and Connecticut, will not furnish enough electoral votes to choose a President after the next apportionment. Since 1880 the region west of the Alleghenies and north of the Ohio River line has been growing far more rapidly than any other part of the country. It has received the greater part of the immense immigration from foreign countries during that period, and it is still largely recruited, as of old, from the New England and Middle States. On the other hand, the South has received but an infinitesimal percentage of the foreign immigration, and, outside of Texas, Arkansas, Florida, and isolated districts in other States, has gained but slightly from the Northern States.

In 1860 the region beyond the Alleghenies contained only 8,608,760 people, or not much more than a quarter of the whole population. In 1880 it had 17,141,052, or more than a third. Its growth in political power was still more striking. In the Electoral College of 1860 the West cast but 73 out of 303 votes—a trifle less than one-quarter; Kansas, Nevada, Nebraska, and Colorado not then being States. Under the apportionment following the census of 1880, that region has 135 out of 401 votes, or a trifle more than one-third. The proportion is certain to be still higher under the census of 1890, upon the basis of population alone.

But another element enters into the account, which must operate decidedly to the advantage of the West in the matter of political power. It is certain that new Territories will speedily be admitted to the Union from the Northwest. North and South Dakota and Washington will undoubtedly be made States during the Fifty-first Congress; probably Montana also; possibly Wyoming with them. The greater the number of States in any part of the country, the greater its relative power, since the smallest State must have three electoral votes, corresponding to its two Senators and one Representative. On the basis of the existing States, the South must inevitably lose proportionally to the rest of the country after the next apportionment. The admission of three, four, or five new Western States will materially increase this relative loss. The gain of the North will be the gain of the West. New England, which in 1800 constituted more than one-fourth of the Electoral College, had sunk by 1860 to but a trifle over one-eighth, and was reduced by the last census to less than one-tenth. New York, New Jersey, and Pennsylvania, which had one-fourth the electoral votes in 1800, had fallen below one-fourth in 1860, and have less than one-fifth now. The solid South, if it could endure, would fall far short of 38 per cent. of the Electoral College after 1890, while the West is certain to raise its proportion far above 34 per cent.

The change will tend still further to eliminate the sectional controversies which grew out of the divisions of the slavery era, and is therefore to that extent cause for congratulation.

THE ENGLISH MISSION.

ONE of the difficulties with which General Harrison will have to contend is the difficulty of finding a suitable person for the English mission in place of Mr. Phelps. For some years back the Republican party has made a show of hostility to England a prominent portion of its outfit, partly to please the Irish, and partly to reassure the manufacturers who are afraid of "British free trade." But it is no easy matter to find any one who will represent this feeling diplomatically in London without disgracing the country. The most prominent candidates for the London mission are generally wealthy men who desire—or whose wives and daughters desire—to cut a figure in London society. The men whom every Administration since the war has tried to send have been men of some intellectual or professional distinction. Reverdy Johnson, Motley, Edwards Pierrepont, John Welsh, and James Russell Lowell have all been men with other claims to social favor than their money. The same thing may be said, but with less emphasis, of Gen. Schenck. President Cleveland maintained this good tradition by sending Mr. Phelps.

But every one of these has given offence to the Irish by maintaining good relations with English society, and to Americans by not pushing Americans who wished to get into English society with sufficient vigor, and has in this way indirectly brought odium on the Administration at home. Presidents Hayes and Arthur suffered much from Mr. Lowell's popularity in London, and President Cleveland has suffered from Mr. Phelps's. Indeed, we believe it is hardly a secret that Mr. Phelps's nomination for the Chief-Justiceship was fully determined on,

but abandoned in deference to the wishes, or rather threats, of an Irish delegation.

This is undoubtedly a humiliating position for a great Government with regard to any high office, but it is one which shows no sign of mending. The American passion for shining in English society, which hardly existed as long as there was such easy access to the Court of the Tuileries and Compiègne, has grown with wonderful rapidity within the last twenty years, partly owing to the fostering influence of the Prince of Wales, and partly to the multiplication in this country of incomes so large that American manners and customs furnish no proper or suitable occasion for spending them. English social traditions impose on a very rich man an obligation to live up to his income, and furnish him, in the state of the great nobles, with a model for the organization of his household which saves the newly enriched a world of trouble and perplexity. When a man finds himself in possession of a very large revenue in England, and does not know what to do with it, he has only to see how the Duke of Westminster or the Duke of Buccleuch lives, to get an idea of the sort of thing, at all events, for which he ought to strive with his own money.

In this country he has no such helps or reliefs. Until very recently our rich men made a point of living plainly and affecting frugality. Men desirous of political distinction have to do so still, but only a small proportion of our very rich men now care for political distinction. What they seek is social distinction —that is, association with people whose company is, for one reason or other, a little exciting, and whose surroundings and tastes are luxurious, and who make amusement a serious business. They cannot find this at home, so they seek it in England ; and, of course, if they can seek it with ambassadorial rank and privileges, all the better. Hence a world of trouble for every new Administration. Almost every man in America with over $30,000 a year thinks he would make a beautiful Minister to England, and his wife knows he would. Distance gives splendor to all foreign missions, but the London mission it positively glorifies. There is hardly a politician in the West, from the humble ward-worker up to the Congressman of the "deestrict," who does not in the inner recesses of his heart believe he would be the idol of the imperial circle at Vienna, or a favorite evening companion of the Czar or King Humbert, if clothed with American diplomatic robes. But for the "better element," what Gen. Butler used to call the "white-cravat and daily-bath men," there is no place like London, as Gen. Harrison will soon find out. There are plenty of American citizens to-day to whom an assurance of this mission would be worth a $50,000 contribution to "Matt" Quay's campaign fund; and the more unfitted a man is for it, either socially or intellectually, the more, of course, he is willing to pay.

But no matter which kind of man he sends—the vulgar rich man, who would like to show Londoners that he too has liveried lackeys and smart turnouts and heavy silver plate and is sure to furnish them with private club jokes at his own expense and that of his wife; or the cultivated American, who can command the respect of the best English company by his mental equipment, his manners, his self-respect, and his long familiarity with the way people of refinement live—the President will find himself in trouble. Either variety will enjoy English society, and let it be seen plainly that he does so; and the result will be that he will offend both "the plain American," who thinks a real American ought to call on the Queen in his shirt-sleeves and walk London streets with his boots outside his trousers, and the patriotic Irishman, who thinks the American Minister ought to leave a threat of war at the British Foreign Office every morning, to procure the release of some ill-used member of the National League, or the pardon of a meritorious murderer. No Administration can escape responsibility in the eyes of these two classes for the demeanor of its London representative; and the more efficient he is from the purely diplomatic point of view—that is, the more agreeable and welcome he is to the society to which he is accredited—the more political injury he is likely to do to the Government at home.

The "presentation" trouble alone is increasing at a rate which threatens before long serious international complications. There is a growing feeling that every American, with the means of purchasing a return ticket to Great Britain, and reasonably well dressed, has a right to be presented by his Minister, in company with his wife and one daughter, to the Queen, or the Prince and Princess of Wales representing the Queen. All recent Ministers have resisted this claim successfully, but they have resisted it at the cost of great rancor and heart-burning. They have thereby sent home hundreds of "enemies of the Administration" who had gone out feeling kindly enough towards it. If the Queen had not to be consulted in the matter, the pressure would long ago have been irresistible. But can the Queen hold out indefinitely? Will the state of the British navy and of her poorer classes warrant her in holding out? Will the Cobden Club let her hold out? These are questions Gen. Harrison will have to answer for himself, and we do not envy him his task.

THE FUTURE OF THE COPPER SYNDICATE.

MANY writers are predicting the speedy downfall of the syndicate which now controls the world's supply of copper. At present prices, consumption by no means equals production. The unsold stock is constantly increasing. Most observers rush to the natural conclusion that this increase must ultimately ruin M. Secretan and his associates.

Of the facts with regard to production and consumption, there can be no doubt; nor is there any doubt that the unsold stocks are also increasing. Yet the conclusions drawn from these facts may be wrong. There are certain contingencies, as pointed out by M. Georges de Laveleye in the *Moniteur des Intérêts Matériels*, under which this unsold stock may be a source of strength, instead of weakness, to the syndicate. The matter can best be understood by some reference to the recent history of copper production and prices. Owing to new processes and to the discovery of new mines, the copper product has grown rapidly, having doubled within about fifteen years. The consumption has also increased, but not so rapidly as the production. Even at the extremely low prices which prevailed two years ago, the excess of production over consumption was something like 50,000 tons annually. The London price was driven down to about £40 per ton, or about 9 cents a pound, for Chili bars. For a large number of the mines this figure was not remunerative. Some of them closed their business, and a great many more strove to contract operations as much as possible.

It was at this juncture that the syndicate began its operations. It quietly purchased the floating stock of 50,000 tons at very low rates, and at the same time it made contracts with the leading producers of the world, agreeing to take their product for the next three years at a decidedly higher figure. Most of these contracts were made at about £65 per ton, which then seemed to the producers a highly profitable operation. In this way the syndicate obtained control of something like three-fifths of the world's annual product. The monopoly was even more complete than it seemed, because the other two-fifths of the product came from the smaller and weaker mines, whose chance of independent action was less than that of the mines controlled by the syndicate. Under the influence of this monopoly the price was rapidly raised to £80 per ton, where it has since been maintained. In individual cases, the syndicate forced speculators who had "sold short" to settle at even higher figures; but the price just named is that which seems to have been fixed for Europe.

If consumption did not equal production at the low prices ruling a year or two since, it is obvious that the difference must be even greater under present circumstances. The syndicate stand face to face with an annual product of 250,000 tons (of which they control about 150,000) and an annual consumption of not much over 200,000. In order to maintain prices, they must be prepared to absorb the excess of each year, and carry it as long as may be necessary. If they start with 50,000 tons at the outset, at the expiration of their three years' contract they will find themselves loaded with 200,000 tons. The first question is, whether they have the capital to do it. This can probably be answered in the affirmative. Their present system of contracts enables them to sell 100,000 tons annually at a profit of £15 per ton. This will not, of course, enable them to purchase 50,000 tons outright at £65 a ton, but it will readily enable them to put up whatever margins may be necessary for this operation, and to pay the interest on the capital involved, with much additional profit to spare.

But what will be their situation at the expiration of the three years? Will they be able to continue their operations when their contracts expire and when prices are once

more ruled by free competition? Will not their present temporary profit be more than swallowed up by a subsequent fall in price? Most observers believe that the outcome cannot fail to be disastrous to the syndicate. Yet this result is by no means sure. It may be that the stock thus accumulated will prevent a return to the system of free competition, and will force the mine-owners to renew their contracts at the expiration of their present term in a manner more favorable to the syndicate and less so to the producers and consumers.

If we take the result of three years' operations under present prices, we shall find that the syndicate has made a profit of £15 on each ton actually sold, or say £4,500,000 in the aggregate. They will further have a stock of 200,000 tons on hand, for 50,000 tons of which they have paid £40, and £65 for the rest. Interest charges are slight in any event, because of the initial profit on the first operations; and, such as they are, they are probably much more than covered by the gains on subsidiary transactions in which the syndicate has engaged. If the syndicate should at the end of three years have to dispose of its product at £40 a ton, there would still remain a profit on the whole transaction, as will be seen by the following figures:

Expenditures.		
50,000 tons @ £40..	£2,000,000	
450,000 tons @ £65..	29,250,000	
		£31,250,000
Receipts.		
300,000 tons @ £80..	£24,000,000	
200,000 tons @ £40..	8,000,000	
		£32,000,000

With the capital which they undoubtedly control they could even go further, and dispose of their product at £30 per ton or seven cents per pound, without anything like financial ruin as a result of their operations.

But what will be the condition of the copper producers under these circumstances? Our past experience shows that there are comparatively few mines for which a European price of £40 per ton is really remunerative. They will have to face the alternative either of a conflict with a syndicate already possessed of 200,000 tons of copper, which it is prepared to sell at £40 or even £30 a ton, or of making a new contract with that syndicate on such terms as it may be willing to offer. Looked at in this light, the accumulated stock will form a powerful means in the hands of the syndicate of forcing the copper-producers to make a new agreement on such terms as it may choose. The first results of this kind are beginning to show themselves in some remodelled contracts which are now being made with European mines. It is, of course, impossible to tell just what those terms will be. The syndicate may attempt to limit the annual product in such fashion as to prevent accumulations in the future; or it may strive to fix the price so low that it can sell to consumers at a lower price and thus increase the demands of the market, while at the same time making it unprofitable for outside producers, not under contract with the syndicate, to extend their operations in the way which they are now tempted to undertake. In either case, the final position of the syndicate would be much stronger than it is to-day, while the copper producers would have less advantage than at present.

This result, it will be observed, is subject to three contingencies. It may, of course, happen that the syndicate has not sufficient capital to carry through its operations, in which case the result would inevitably be disastrous; but there is no evidence that such is the case. Or it may be that certain mine-owners will think it worth while to fight the syndicate for a time, in the belief that their resources will be sufficient to give them a controlling position in the long run. But the large stocks of copper in the hands of the syndicate do not increase the probability of such a result. While they may, in a certain sense, weaken its powers of financial endurance, they also tell severely against the chances of any competitor who may strive to enter the field. In other words, they make the struggle more disastrous for both parties, and not for the syndicate alone. There is still a third contingency, that new discoveries of copper may increase the independent product not now controlled by the syndicate; but there seems to be no immediate prospect of any such result with the stronger companies. From the weaker mines M. Secretan has little or nothing to fear. It is far more advantageous to them to sell their copper at the present high rates than to try to obtain any controlling position in the industry. They neither have any inducement to enter upon a destructive competition, nor the power to sustain it if it were once begun. Looked at in the light of all these facts, the position of the syndicate is stronger than most people think.

THE LONDON MURDERS.

The resignation of Sir Charles Warren, the head of the London police force, is a very good sample of expiatory sacrifice. There has not been a thing said against him in relation to the Whitechapel murders which really touches his efficiency. He is accused of making the police too much of a military body, and thus separating it too much from the population to which it ministers; but that this has in any degree increased the difficulty of catching this particular criminal has not been shown. The first of these murders was committed over six months ago. Since then the most expert detectives, both regulars and volunteers, have been on the track of the murderer without result. Much fame and a large reward has for some time awaited the person who should catch him, but no such person has appeared. Sir Charles Warren says the police have acted on the suggestions furnished by 1,400 letters, without any result. Of course this is very wonderful, but it proves nothing against the efficiency of the police in this particular case, and he has to resign in obedience to the demand for an expiatory offering, which the public in times of trouble calls for almost as eagerly in the modern as in the ancient world. It is true he goes out ostensibly for writing an article in one of the magazines about his own force, which is against the rules, and it is also true that he has been very unpopular with the London Radicals ever since he broke up the meetings in Trafalgar Square; but neither of these things would have hurt him if he had found "Jack the Ripper."

Among the few explanations of the difficulty of discovering the murderer which have had any value, is a suggestion of our Pinkerton, that the crookedness of the London streets, and the multitude of courts and nooks in certain quarters, facilitate the commission of crimes of this sort, and the escape of the perpetrators. It is quite true that London in this respect offers a marked contrast to New York, where all, or nearly all, the streets are straight, and cross each other at right angles, and where the houses have no back alleys. But Boston is in all these things nearly as badly off as London, and does not seem to suffer in consequence. In fact, as nearly as we can see, the secret of the murderer's success lies in the class in which he finds all his victims. Both their habit of nocturnal roving in secluded places, and the facility with which they can be approached, make them an easy prey. The really unaccountable thing is that nobody has been found in any lodging-house, or tavern, or human habitation of any kind, after these butcheries, with blood on his clothes, and that no cast-off, blood-stained clothes have been found anywhere. That anybody can cut up a living body as this murderer does, without staining his clothes, seems impossible. Where, then, does he go after he has done the deed? There is undoubtedly a sharp look-out for him in every haunt of vice and crime in London. The class of women whom he slaughters is now full of suspicious horror about every man they see. Any thief or vagrant can get a good reward by putting the police on his track. To hide or change his clothes, or burn them, without attracting anybody's attention, when everybody is on the watch, would seem a task of extraordinary difficulty, and yet it has been achieved.

The mystery is not lessened by setting him down as a lunatic with homicidal tendencies. Lunatics are often very clever or cunning in concealing their intention to commit a crime, but they rarely show any special skill in concealing a crime after it has been committed. They do not hide either themselves or the evidences of their guilt with any adroitness; in fact, their usual resort, if stricken with remorse, or afraid of being caught after committing a murder, is to kill themselves. But this man appears to be just as skilful in covering up his tracks as he is in the work of slaughter. It is said he must be a doctor or a medical student, he cuts so skilfully; but the best dissector cannot keep the blood off his clothes when he kills a person with a knife in the open street, or keep people from asking what he is about if he tries to hide them, or wash them, or burn them. Taken altogether, the affair must be set down as the most puzzling in the history of crime.

IRRIGATION IN THE UNITED STATES.

In the United States, irrigation is employed extensively in Colorado, Utah, and California. Colorado has by far the greatest irrigable area,

and there the laws respecting the use of water for agriculture are the most perfect. Nature seems to have ordained that this State shall lead in irrigation. Within its borders are congregated the highest ranges and peaks of the Rocky Mountains; it is the veritable Dome of the Continent. On the countless square miles of its lofty summits fall the heaviest mantles of snow, the sources of an unfailing water supply. All the great rivers west of the Missouri, except the Columbia, commence their courses in this State. The Platte, the Arkansas, the Rio Grande, and the Colorado rise nearly together in central Colorado, and in summer are large, swollen rivers before they leave its confines. No Western State or Territory, therefore, is nearly so abundantly supplied with water and streams as Colorado. This advantage, together with its favorableness of location with respect to immigration, and its vast extent of most fertile farming land, assures to it the foremost rank in agriculture among the mountain States.

The canal system of Colorado at this time embraces 5,000 linear miles of large and small ditches. It represents investments of private capital amounting to $12,000,000, and furnishes water for two and a half millions of acres. So attractive are canal enterprises to those familiar with them that many miles of canals are now being constructed, notwithstanding the fact that there are at this time fully one million of acres of fine, unoccupied, and unimproved land situate in the irrigated territory. The young State needs people rather than reservoirs and more canals.

The water of every natural stream is declared by the Constitution of Colorado the property of the public, and is dedicated to the people's use. There are no riparian rights. The canals are taken out of the rivers and creeks, and at present furnish water only for valley lands. The fertile plain-ranges and smooth *mesa*- or table-lands lie above the level of the streams, and must eventually be supplied with water by great and costly systems of reservoirs. When all the water of a stream is claimed and appropriated by ditches, it becomes a source of contention among its users, and the law is active in determining and enforcing the rights of the respective canal companies. The law is based on the principle that the right to water is acquired by priority of utilization; that is to say, the courts hold that water should not be taken away from those who first have utilized it in good faith. If, for instance, a canal has used the full capacity of a stream, it is for ever entitled to all the waters of that stream. The volume of a river from which several canals are conducted having been estimated in cubic feet per second * of time by the State Engineer, each ditch company appears before the district court, which has jurisdiction subject to appeal to the Supreme Court, and shows when it was constructed, what its capacity is, and how much water it has used, or can use, for actual tillage. The court thereupon decrees to each company the number of cubic feet of water per second it is entitled to draw each season from the stream, and its rank of priority, *i. e.*, its order of precedence with respect to other canals supplied from the same stream.

These decrees are, of course, enforced. The State Engineer has general supervision of all matters pertaining to irrigation, and he is required by law to see that water is distributed in accordance with the court's injunctions. The State is divided into water districts, and for each district the Governor appoints a water commissioner, whose term of office is two years. It is his duty to divide the water in the streams of his district among the several canals, according to their rights as determined by the court; and, if need be, he may summon the sheriff to assist him in the discharge of his duties. The water commissioners are under the direction of the superintendents of irrigation, who have charge of the water divisions, each division embracing several water districts. The especial duty of the superintendents is to see that the laws are properly executed, and that the judicial decrees are enforced by the commissioners. The superintendents are under the general supervision of the State Engineer, and anybody has a right of appeal to him from a superintendent. The commissioners must report fully to the superintendents as often as the latter desire, respecting the supply of and demand for water in their respective districts, and all other matters deemed worthy of attention.

So much for the relation of the State to the canals. What are the farmers' relations to them? Water is disposed of to consumers in two ways—by rental and by absolute sale of the right to it. A company rarely attempts to dispose of water under both plans, for that has not been found practicable. A corporation seeking a permanent investment may construct a canal for the purpose of renting water to farmers at an annual rental "per inch."* Water rents, in Colorado, are from $1.50 to $2.50 an acre (or an "inch") per annum. If a farmer regards the rental exorbitant, he may have the matter brought up before the county commissioners, who, after hearing evidence on the part of the consumer and the company, can fix the sum. Their decision is final, so that practically the people control the rate. The principle which inspires the law to adopt this procedure is that the canal companies do not *own* the water, but are public carriers. If a farmer has once used water on his land, he can always compel the company to furnish it to him upon tendering each year the rental price established by the commissioners, the theory being that water, once applied to a tract of land, is a fixed appurtenance as long as the rental is paid. It cannot be transferred by the company or the farmer to other land without the consent of both parties.

But the usual and most popular plan of disposing of water is to *sell* a "perpetual right" to its use. When the constructing company on this plan has sold all of its water, the canal is owned and operated by the farmers as a stock company, shares of stock representing "inches" of water. The corporation is then a mutual company, escaping the hindrances of the law; and the consumer owns the right to his water, and pays only the annual charge for "maintenance and operation"—generally ten cents per acre. "Perpetual rights" on this plan are worth from five to twenty-five dollars per acre. While the parent corporation exists, the purchaser obtains a deed or contract for his "perpetual water-right"—a temporary evidence of the right to use water. A "perpetual water-right," or simply a "water-right," is a right, good for all time, to sufficient water to irrigate eighty acres. When the farmers reorganize the company on a final basis, "water-right" contracts or deeds are superseded by shares of stock.

How the consumer farms under the irrigation system, and what are some of his advantages, next deserve notice. The farmer must conduct the water to his land from the head-gate, or opening, through which he takes his supply. The head-gate is always under the control of the superintendent of the canal, who divides the volume among the users. Each man's water flows over a weir—a device for measuring exactly how much the consumer receives. A lateral, or small ditch, is built from the main canal by the farmers of a neighborhood, and from it each one takes his share of the supply. The user contrives to conduct his water along the highest side of his farm in a smaller lateral, whence the stream is distributed over his fields by flooding, or conveyed in small channels between the rows of crops. Crops are usually supplied with water three times from the middle of May until about the first of August. A skilful man can irrigate from eighty to one hundred and twenty acres of grain during a season, and can "go over" eighty acres in eight or ten days. In the fall, another irrigation usually takes place, so that the ground may be in condition the following spring to germinate the seed. Very rarely is fall grain sown in Colorado.

Frustrated by neither drought nor flood, the husbandman is able to mature his crops to perfection, to accelerate or retard their ripening, and to bring harvest to suit his convenience. By applying water, he can keep half of his field green while he harvests the other half. The growth of grain is almost marvellous. In parts of the State, solid fields of oats and wheat five feet tall, with heads in proportion, are common. The grain itself is perfect in quality and usually over-weighs. But alfalfa (or lucerne) and leguminous plants yield the most astonishing results. Alfalfa is the most beautiful, wonderful, and profitable crop raised in the Rocky Mountain region. A field of it, with its sweet-scented, purple blossoms, is a perfect garden of beauty and perfume. It is a kind of clover and highly nutritious; it grows about two feet high, and, being perennial, its roots reach down usually five feet deep. Alfalfa is first harvested in June; then water is applied, and in four weeks it is cut again; the water is reapplied, and it is ready for another harvest a month later. Each cutting of a good crop will yield two tons. It is worth in Colorado from $7 to $10 per ton. It will been seen that irrigation is simply an *insurance*—it assures a certainty of return for the year's work.

In passing from the subject of irrigation in Colorado, attention should be called to the surprising effect of the canals on the volume of a stream. It would seem natural that, if the full capacity of a river were directed into a channel, there would be no supply for ditches lower down the stream. With this in mind, the people of western Kansas and Nebraska, realizing the necessity of irrigation, are inclined to complain because all of the water in the eastern-flowing streams of Colorado is appropriated before reaching their borders. However, both experiment and theory show that their fears are groundless. The State Engineer of Colorado gives the result of his investigation of this subject in his report for 1885–86, before there was any expectation of inter-State contention, and when the people of those parts of the plains more remote from the mountains had no thought of the necessity of irrigation for their region. He made the experiment in the Cache-la-Poudre, a stream of northern Colorado, and says: "Starting with a flow of 127,609 cubic feet per second in the cañon, before any water is drawn into canals, the volume at the lower point, after supplying fifteen canals, had in-

* A cubic foot per second is becoming the module in Colorado, and is that volume of water which will flow, during the irrigating season, through an orifice one foot square. It is sufficient to irrigate about fifty-four acres.

* An "inch" of water means the "statutory inch," *i. e.*, that volume of water which will flow in a second of time through an inch-square orifice, under a five-inch pressure. An "inch" of water is generally considered, in Colorado, sufficient to irrigate one acre; but it is an inaccurate term, and is fast falling into disuse.

creased to 214,508 feet per second, showing an addition of more than two-thirds of the original amount, to supply canals farther down the valley." The reason for this is, that all the water withdrawn from the river for irrigation gradually seeps back into it, making a steady and reliable current. But for this fact, the water would rush down the sandy beds of the rivers in torrential streams, disappear quickly, and be of slight avail for the irrigator's purposes.

That irrigation is destined to be practised widely in the United States admits of no doubt. Without it, the western half of our country would not be susceptible of cultivation. All the valleys and great parks and *mesas* of the West—whether at an elevation of 500 or 5,000 feet, whether in the Rocky Mountains, the Sierra Nevadas or the Coast Range—demand irrigation. The same may be said of the vast arid plains—the "bad lands" of America—which lie between the twenty-second and twenty-seventh meridians. Although their soil is almost as rich as that of the valley of the Ganges, they are, without water, a desert, and with water, marvellously productive. They will some time be covered with extensive and costly systems of reservoirs stretching eastward from the mountain lakes. Nor is it venturesome to predict that irrigation will some time be quite extensively employed in considerable portions at least of the Eastern, Middle, and Southern States. There are two grounds for this prediction. The sure and sufficient supply of water for his crops is the greatest desideratum for the farmer. Irrigation not only provides this supply, but it fertilizes the land. The silt-bearing, mountain water spreads rich soil-food over the fields, and renews and reinvigorates them each season. Although the expense of constructing irrigating canals in the States east of the Mississippi would be great, the enormous sums now expended in fertilizing stuffs, which would not then be needed, might perhaps pay the whole cost. If, for instance, the farmers of the Genesee Valley in New York State should distribute over their farms the never-failing waters of their neighboring lakes with the vast amount they pay annually for guanos, their outlay per annum might be no greater than at present, and their income would be greatly increased. Guanos add nothing to the permanent melioration of their farms; but the irrigating canals would be a fixed improvement, and, making possible the increased revenues arising from the additional quantity and the improved quality of the grain produced, and produced without failure, would add to the value of their farms many fold.

LUCIEN BONAPARTE.

PARIS, November 1, 1888.

AN anonymous work has just appeared on Prince Lucien Bonaparte. "We publish this notice," says the unknown writer, "in the hope of proving to all who, from interest or through passion, have pretended to separate Lucien Bonaparte from the Imperial family, and who look upon him as a mere private individual, without any connection with the throne, that if, from the most honorable motives of personal pride and of fidelity to beloved beings, he thought it a necessity to escape for many years from the domination of his all-powerful brother, he returned to him when he saw the storm gathering about his head. The reconciliation was sincere on both sides, and he reëntered, therefore, the family circle, and resumed the titles and honors to which his birth gave him a right."

Lucien was the third son of Charles Bonaparte and of Letizia Ramolino. Charles, the father, died at Montpellier in 1785, leaving eight children, five sons and three daughters. Here is the list of them: Joseph, born in 1768, died in Florence in 1844 (King of Naples and of Spain). Napoleon, born in 1769 (there has been much discussion about the exact date of his birth), Emperor of the French, died at St. Helena in 1821. Lucien, born in 1775, died at Viterbo in 1840. Eliza, born in 1777, died at Trieste in 1820 (Grand Duchess of Tuscany). Louis, born in 1770, died in 1846 (King of Holland). Pauline, born in 1780, died in 1825 (Princess Borghese). Caroline, born in 1782, died in 1839 (Queen of Naples, the wife of Murat). Jerome, born in 1784, died in 1860 (King of Westphalia). All these names have become historical. We see in this list that Lucien came immediately after Napoleon, who came himself after Joseph. Lucien began his education at Autun and continued it at the Seminary of Aix, after a short stay at the school of Brienne. He was preparing himself for ecclesiastical life when the Revolution broke out. He adopted its principles, and entered into the struggle of the Corsicans, who remained faithful to France, against Paoli. The whole Bonaparte family being proscribed from the island, Lucien fled to Toulon, and the Government gave him a small office worth 1,200 francs a year, at Saint Maximin, in the Department of the Var. He was twenty years old; and, little suspecting his future destinies, he married the sister of the keeper of a small inn in which he lived, Catherine Boyer. The author of the memoir before me is obliged to confess that the education of this Catherine, whom her husband often called Christine, was neglected; that, not knowing how to write, she was unable to sign her marriage papers.

In 1795 Lucien was appointed inspector in the military administration. He had some difficulties with the revolutionists of the province, and was for a moment put in prison at Aix. By the influence of his brother Napoleon, he was released, and appointed *commissaire des guerres* in the armies of Germany and of the North. He afterwards returned to Corsica, with instructions from Bonaparte, and was appointed a member of the Council of the Five Hundred. Though he was not yet eligible, on account of his youth, his election was validated. After a while, he took his place in the ranks of the Opposition. "Ah!" said one day Sieyès to Lucien, "why do we not have a sword on our side? Why is your brother not here?" His brother was in Egypt; when he landed at Fréjus, there was a great feeling of joy in France and in Paris. Joseph and Lucien met him on his way; public opinion was prepared for a change, and everybody longed for it. Lucien had been elected president of the Five Hundred. He put his brother Napoleon in relations with Sieyès. The first interview took place on the 10th Brumaire, in Lucien's house. Sieyès and Napoleon came immediately to an agreement. "Occupy yourself," said Bonaparte, "with the transfer of the two councils to Saint-Cloud and with the establishment of a provisional government. I approve of the reduction of this government to three persons, and, since it is judged necessary, I am willing to be one of the three consuls, with you and with your colleague Roger-Ducos."

The 18th Brumaire was chosen for the day of the execution of this plan. I will not relate the history of this famous day, but will only say that Lucien was one of the principal actors in the drama. He left the presidential chair, he spoke to the troops: "I confide to the soldiers the care of liberating the majority of the representatives of the people; once liberated from poniards by bayonets, we shall be able to deliberate in peace on the destinies of the Republic." The poniards were a fable, the bayonets a reality. The Directory was suppressed, the executive power given to a commission of three consuls, and the Chamber was adjourned. The author of the 'Secret Memoirs of Lucien' says: "The true author of the 18th Brumaire, Lucien hindered the demagogues of the Five Hundred from profiting by Napoleon's discomfiture in order to outlaw him. Lucien, surrounded with threats and with clamorous voices, refused, as President, to put to vote the decree which outlawed his brother, and which might have altered the dispositions of the troops which had been brought for the dissolution of the Council. Five grenadiers, into whose arms Bonaparte had fallen, would have been a feeble barrier against furious men; and if Lucien had not struggled as he did against those who tried to tear him from his chair, the plot would have failed and turned against its author."

Lucien was appointed Minister of the Interior at twenty-four years of age. The Home Office at that time comprised also Public Instruction, Letters and Arts. His sister Eliza, married to M. Baciocchi, kept his salon, where he received the writers of the time—Fontanes, La Harpe, Chateaubriand, just come back from the emigration, Roederer, Boufflers, who seemed a remnant of the eighteenth century. The wife of Lucien, whom he kept in the background, the illiterate Christine Boyer, died at that time, leaving him two young daughters (one became a Princess Gabrielli, and died in 1865, the other was married in 1818 to a M. Arved, a Swede, and in 1824 to Lord Dudley Stuart, and died in Rome in 1847).

When Bonaparte returned from the campaign of Marengo, he quarrelled with his brother Lucien. They were both hot-tempered, and Lucien, in a fit of anger, threw his portfolio on the table of the First Consul. He was sent as Ambassador to Spain, and obtained at Madrid the retrocession of Louisiana to France. He offered Tuscany, which had been erected into a kingdom under the name of Etruria, to the Infant Duke of Parma, who was married to the Infanta Maria-Louisa. The King and Queen of Spain loaded him with presents. He wrote to his brother: "For the treaty of Tuscany, I have received twenty-five pictures from the gallery of the Retiro, for my gallery, and 100,000 écus in diamonds. I shall receive as much for the peace of Portugal. If money were my passion, I should already be a millionaire. . . . I dare not look attentively at anything, for fear it will be offered to me. . . . The King and Queen have offered me all the orders of Spain, the Golden Fleece, and a pension of 100,000 francs. I answered as you imagine; then their Majesties told me they gave me all that *in pectore*." When Lucien was recalled, he made his parting visit, and we read in the 'Souvenirs' of Prince Pierre Bonaparte, the son of Lucien: "Sapey, the first secretary, received a magnificent diamond snuff-box. Lucien wondered if he had been forgotten, when there arrived, for the Ambassador, the full-length portrait of the King." The frame was wrapped up in paper. "Sapey opened the paper cover, and what did he find? Uncut diamonds innumerable, to the amount of five millions of francs! Such was the origin of Lucien's fortune." Lucien returned to France, with his diamonds carefully packed in little bags, under a strong escort of cavalry. On his arrival, he entered the Tribunate, and in 1803 he was appointed Senator and Grand Officer of the Legion of Honor.

At the death of the young Infant of Parma, whom Lucien had helped to make King of

Etruria, the First Consul asked Lucien to marry Maria Louisa, his widow. She was the third daughter of Charles IV. of Spain. Lucien refused; he had secretly married a French woman, Alexandrine de Bleschamp, who was the widow of a M. Jouberthon of Nantes. Mme. Jouberthon was very handsome. She had some difficulties in producing the legal documents necessary for a civil marriage, for M. Jouberthon had died in Saint Domingo. Lucien had at first only a religious marriage, and had kept it secret from his brother. When the papers arrived, the civil marriage was celebrated and announced to Napoleon. Napoleon became so infuriated with his brother that Lucien thought it necessary to leave France. He went to Rome, and when the senatus-consultum of May 18 established the Empire, Lucien and Jerome were formally excluded from the line of succession (Jerome only reconquered his place in 1806, when he divorced Eliza Paterson). Various attempts were made towards a reconciliation of the two brothers. Lucien went to see Napoleon at Mantua, in 1807, after the Emperor had signed the Peace of Tilsit. Napoleon was anxious that his brother should be divorced, and, showing him a map of Europe, told him to choose for himself: "All this is mine, or will soon be mine. I can dispose of it all. Will you have Naples? I will take it from Joseph, who does not care for it. . . . What will you have? Speak. Whatever you like is yours, if your divorce precedes mine." Lucien answered that even the Kingdom of France could not tempt him. The last word of Napoleon was: "Everything for Lucien divorced, nothing for Lucien without a divorce."

In 1810 Lucien's name was struck from the list of Senators. In the letter addressed by Napoleon to Laplace, the Chancellor of the Senate, we read:

"Lucien has abandoned himself to a shameful passion for a woman who by her conduct had placed an insurmountable barrier between herself and whatever is honest. We judged that he could not be comprised in the line of heredity. While we raised our brothers to the rank which suited their birth and the interests of our crown, he remained in the state of a private individual. Since we have been struggling against great dangers and have had to fight a European coalition, his duty ought to have brought him back to our side, and we had a right to count upon the talents which he received from Heaven. He has always been deaf to our voice; he has finally looked for a refuge out of the Empire, and has placed himself under the protection of the Powers which he knew to be ill disposed to our throne, and has rendered more irrevocable his renunciation of all his duties towards us, towards the Senate, towards the country."

What had Lucien done? He was on the most excellent terms with the Pope, who had shown him great kindness; he had remained on his estate at Canino, which the Pope had sold to him. He was desirous to remain neutral between the Pope and the Emperor, but the Emperor did not permit any such neutrality. Lucien resolved to go to America, and asked for English passports, in order to go to the United States.

A GERMAN HOME FOR AGED WOMEN.

DRESDEN, October, 1888.

IN spite of Julian Hawthorne's bitter vilification of the Saxon capital and its people, "all the world" continues to come year after year to the beautiful city on the Elbe; and small indeed must be the town, even in Western America or Eastern Russia, where there is not at least one heart that cherishes pleasant memories of Dresden. Yet I venture to assert that few remember Dresden as a city of benevolent institutions, though it possesses several that would enjoy considerable notoriety in a town having fewer attractions of a more brilliant character. It has been my good fortune to become intimately acquainted with one of these, the Consolidated Hospital for Women, or Materni Hospital, as it is usually called, after the chief of the united foundations. "Hospital" is now a misnomer, for the institution has become simply a home for aged women; and in case of prolonged serious sickness, an inmate is removed to a hospital proper.

The beginnings of the institution go back to very early days. The first we know of the Materni Hospital is that in the year 1280 Henry the Illustrious, Margrave of Meissen, presented it to his daughter-in-law, Helena, the wife of Margrave Dietrich of Landsberg, who, in turn, 1291, transferred it to St. Clara's Convent at Seusslitz, from which it passed over, in 1329, to the Town Council of Dresden, and became an asylum for respectable burgher women without means. The Bartholomæi Hospital seems also to date from the thirteenth century. It was founded by citizens of Dresden as a hospital for persons afflicted with leprosy and other contagious diseases, but, on the establishment of other hospitals, assumed a character similar to that of the Materni Hospital. "There were eight inmates besides the hospital master (who had charge of the fields belonging to the home, and whose duty it was in early days to go about the town once a week and take up a collection) and his wife, who had charge of the cows." Little is known of the origin and history of the Brücken Hospital. It seems to have been at first an ordinary hospital at the old bridge over the Elbe, and was maintained by the bridge funds; in time it too became a home for old women, and was removed to another location.

The plan of a consolidation of these three institutions was one of the beneficial results of the reform movement which set in after 1830, at which time the direct representatives of the people began to have a share in the city government. A large piece of land on Freiberger Street belonging to the Bartholomæi Hospital was purchased by the Materni Hospital, and here a building was erected according to the modified plans of the celebrated architect Gottfried Semper, who built the old theatre and planned the present one. The building was opened in 1838, and cost $63,549,* besides $2,431 for furnishing. It contains eighty-two rooms for the inmates proper, and apartments for the superintendent and his family, his assistants, and the servants. In time more room was required, and the necessary funds ($55,231) being furnished by the city from the surplus of the City Savings Bank, a new building was erected in 1883 on the same piece of land and in the same style. It is connected with the Old House by a covered passage, and has accommodations for sixty-seven inmates, beside bath-rooms, kitchen, etc., and servants' quarters. The buildings have the form of an Π, are three stories high, including the ground floor, and have broad and well-lighted staircases and corridors. The stairs are of stone and the floors of wood. The walls in the hallways are painted light brown to a height of four feet from the floor, and above have a faint blue tint like the walls of the rooms, while the ceilings are white—altogether a combination very cheerful and agreeable to the eye. Each room is heated separately by the stove in it, and in the New House the corridors are also heated by a furnace, so that even in the winter time the old ladies can walk about, or sit on the fine heavy oaken benches and chat while their rooms are airing. The water-closets have recently been arranged on the modern plan, and in the New House an excellent system of ventilation has been provided. Here, too, are the bath-rooms with hot and cold water and all appliances, where each inmate is required to bathe at least once a fortnight. Here, as well as over each bed, is the button of the electric signal calling the attendant.

The whole institution is managed by the Materni Hospital proper, which receives as compensation from the other foundations a yearly allowance of $60 for each individual it cares for on their behalf; and the money given weekly to each inmate also comes from the treasury of the foundation to which she belongs. From time to time there are made by benevolent persons other foundations, sometimes only supporting one person at a time, and these are attached to the Materni Hospital in the same way. All inmates are on the same footing and have the same advantages, but the conditions of entrance differ slightly in the various foundations. Since the consolidation, the fiftieth anniversary of which has just been celebrated, the number of places has risen, not counting the 29 provided for by new foundations, from 28 to 120. This remarkable increase has been made possible by the rise in the value of the property of the institution, the accumulation of unused interest, and the gifts and bequests of inmates and others. The capital of the Materni Hospital is at present $205,956, that of the Bartholomæi Hospital $106,331, that of the Brücken Hospital $9,856, and that of the new foundations about $113,000. Besides this the Materni Hospital owns real estate to the value of $352,722, and the Bartholomæi Hospital to that of $44,299. The institution and its property are controlled by the City Council, and more immediately by one of its members, who is called the Administrator of the Hospital. In the institution itself there is a superintendent, a matron, seven attendants, a chief cook with three assistants, a janitor, and three general servants.

An applicant for admission must bring proof of an unblemished character, and of freedom from any disease that would make her obnoxious to others or require special treatment; be sixty years of age (now practically seventy, as there are always enough of that age waiting for a vacancy); have been ten years a resident of Dresden, and, in the case of the Materni Hospital proper, be the widow, divorced wife, or unmarried daughter of a citizen of Dresden, or have herself acquired citizenship; bring with her the furniture necessary for her room, and pay an admission fee of $75.

Each inmate receives a room 12x21 feet for her exclusive use, fuel and light, $1.40 a week with which to buy food, and 40 cents extra for a Christmas dinner, medicine and treatment when sick (in case of prolonged serious sickness she is removed to the City Hospital, the cost of her treatment there being carried by the foundation to which she belongs), and burial at the expense of the Home. No provision is made for clothing, and here each one must have resort to what little resources she may have, or to relatives and friends. The institution is also the legal heir of each inmate, and inherits whatever is in her room at the time of her death (except letters, family pictures, and the like), and a certain proportion of what she may possess elsewhere. There have been in all but three cases of withdrawal from the Home; of these the cause was in one case the winning of one fourth of the highest prize in the State

* I have given throughout the American equivalents of German money, counting a mark as practically 25c.; of course the same amount of money will buy more in Germany than at home, which must be borne in mind farther on in considering the amount allowed for food each week.

Lottery, in another the inheritance of a large fortune, and in the third the desire of relatives to have the old lady with them. An inmate may be removed in case of serious misdemeanor, but no such case is recorded.

Now let us examine one of the many little homes of which the great Home is composed. They have much in common, but as each old lady brings her furniture with her and arranges it according to her taste, each room has an individuality of its own. The room I shall describe is that of my grandmother, in which I have spent not a few happy hours, and of late some very sad ones, for she has been for a number of days confined to her bed. When, one pleasant September evening, I came up the stairs and into the hall that leads to her room, her door was distinguished from the others by an evergreen garland and a great 90 above it, for it was her ninetieth birthday. I did not come unexpected, and she was busy making tea for her "American grandson," as she is fond of introducing me. Opposite the door is a large double window, with neat white curtains and dark shades, and a number of flower-pots with her favorite flowers. She called my attention to one and said, "See how nice your geranium blossoms." I had taken it from the garden in Göttingen some years ago and potted it, but had forgotten all about it. Before the window, on a little elevation or "throne," is a stand with a chair on either side, one of these the large easy chair in which she sits when she wishes to read, and at the same time be able, if she chooses, to look down into the fine large garden belonging to the Home, or upon the street and watch the people passing by. In the middle of the wall on the right is her bed, and on the opposite side a large sofa with a table before it, in the German fashion. A high porcelain stove stands in the corner by the door. She has also a wardrobe, a bureau, a cupboard for her dishes, and a washstand. On the walls hang pictures of children, grandchildren, and great-grandchildren in both hemispheres, and views of the places where they live. Here she is absolutely her own mistress, receiving company, and coming and going as she pleases, being held only by the following rules, which aim to secure the convenience, health, and safety of all. It is forbidden to stay away over night or go upon a journey without first informing the superintendent. The door and gate are locked at nine in winter and ten in summer, and any one coming later has to pay the janitor a fee. A high standard of cleanliness must be maintained, and it is not allowed to wash clothes in the rooms, or engage in any other work or industry that might be objectionable to others. Birds are allowed, but dogs are banished, as also the cat, which was even allowed the nuns by the 'Ancren Riwle.' One old body who, when she entered the Home, had a dog she was very fond of, put him out to board, and has him brought to her twice a week to pet and fondle.

In the morning each old lady does her little housework (till age or sickness prevents), and makes her coffee by the aid of an alcohol-lamp or in the kitchen; if she prefers, she can have it prepared for her for a trifle. Dinner is cooked in the large kitchen in the New House and brought to each room by an attendant. The amount charged is for the raw material only, all expense for preparation being carried by the institution. The following is one of the weekly bills of fare that the superintendent took from the frame in the kitchen and handed me. The messes given are bountiful, and potatoes are always furnished though not mentioned.

July 1–7, '88. *Sunday:* Soup 1c., Roast 6c. or Pork-chops 7c., Dessert 1c. *Monday:* Boiled beef and barley 4. *Tuesday:* Fried sausage and Lentils or Meat balls and Groats 4c. *Wednesday:* Beef with Cauliflower and Carrots 5c. or with Farina 4c. *Thursday:* Rice cooked in milk 3c., Veal-fricassee 4c. *Friday:* Boiled Beef and Noodles 4c. *Saturday:* Soup with Greens 2c., Macaroni 2c.

As dinner may be ordered for visitors, I have often eaten with my grandmother, and I am sure could not desire food better or better prepared. Still, the greatest freedom is allowed in this matter, and no one is required to have dinner from the kitchen, but simply to state, when the girl comes around the evening before, whether she will or not. She may go to a restaurant or wherever she pleases, and have as expensive a dinner as her means permit, or she may buy what she wants and prepare her dinner herself. Ordinary peddling is not allowed in the building, but a baker and certain peasant women have been authorized to make regular visits and bring bread, produce, and fruit to sell to the inmates. Those in the New House who wish to prepare their own dinner must provide themselves with oil-stoves or get along with the one hole of the stove in their rooms. In the Old House, the two small kitchens in the first and second stories, which were used before the New House was built, are put at the disposal of the old ladies, and fire provided for them at certain hours. In this way they are able to secure a variety that could not be provided for them, and each is able to indulge her taste, and keep up on a small scale the busy home-life she once led. Some carry this too far, occasionally objecting to what is offered for the next day, and then, when the time comes, cooking the same; some even affect to be above eating what is prepared in the kitchen. Supper, too, may be ordered, but most prefer to prepare it themselves, the girl being required to buy and bring them what they wish.

There is a chapel in the third story of the Old House, and evangelical service is held every other Thursday by one of the clergymen of St. Anne's Church; but attendance either here or in a church is according to the desire of each individual. Communion is held quarterly, and not only in the Chapel, but also, for those who find it difficult to go down the stairs, in one of the rooms in another story. This was once done in my grandmother's room during my stay in Dresden. A white spread was laid upon the table, on which were arranged a crucifix, the goblet of wine, a little silver box with wafers, and two candlesticks. Here the kindly *Diakonus* in his vestments administered the Lord's supper and the consolations of the faith to four old ladies in or approaching the nineties —but I, of course, was excluded. There is also a drawing-room, in which the inmates may come together for social intercourse; but they very seldom avail themselves of the opportunity. Still, there is plenty of visiting, and one cannot be surprised that, where 149 old women are gathered under one roof, there is a deal of gossip, fault-finding, and even scheming to displace attendants and others. Nevertheless, these things are not prominent, and pains are taken to keep up a high standard of demeanor. Each year the class of persons admitted is better. The entrance fee, together with the other conditions of admission, tends to the same end, and also relieves the inmates of the humiliation of being considered objects of charity. There are not a few here who could well be supported by their relatives or friends, but who prefer to live out their days in this simple but secure and, above all, independent way in their native city. I have several times passed through the quiet halls at night after the closing hour. At each door hung, like children's stockings on Christmas eve, a little basket or bag for the baker to put the coffee-rolls in early in the morning; and somehow I thought how soon, at each one of these doors, Some One would come and knock, and there be an end of daily cares and of the need of daily bread. G. H.

Correspondence.

WHAT WE OUGHT TO EXPECT.

To the Editor of The Nation.

Sir: In your issue of Nov. 8 you say:

"The surplus will stare Mr. Harrison in the face, just as it now stares Mr. Cleveland. It must be got rid of either by reduced taxation or by extravagant appropriations. The smallness of the Republican majority forbids that the latter policy should be adopted. It will not be safe to inaugurate a system of national profligacy in order to empty the Treasury. As little will it be safe to repeal the whiskey tax in order to maintain imposts on the necessaries of life. The masses . . . are not likely to forget anything that they have learned in this campaign of education."

I do not say that this is as unreasonable as if a Frémonter had said, after the election of 1856, that, in view of the rising tide of opinion opposed to slavery, measures for its abolition were likely to be adopted by Congress; but I fail to see any adequate reason for sharing your hope, while I cannot shut my eyes to the likelihood of a very different policy being carried out.

In the first place, the surplus problem could be solved by expenditure with far greater safety than the *Nation* seems to think. Economy is not an American characteristic. Private extravagance rarely excites comment, and we have grown so used to the waste of public funds that, far from being regarded as the robbery that it really is, more often than not it is approved as a means of distributing the public wealth among the people. Besides, our system is such as to make practical party responsibility for any measure involving expenditure a thing of rare occurrence. River and harbor bills and pension bills are never, strictly speaking, party measures, nor was the Bland Silver Law such, nor the Blair Educational Bill. The very prominence given to the Mills Bill shows that it was an exception to the general rule, and it was only indirectly a measure involving expenditure. In the usual absence of Administration measures or organized opposition, each member votes so as to strengthen his position with his own constituents.

Secondly, as to the disposition of the surplus. Extravagant river and harbor bills are too well-known a feature of our financial policy to call for special notice. The glaring unconstitutionality, as well as impolicy, of the Blair Education Bill did not deprive it of a very considerable support in both Houses of Congress. What is most important of all is, that Mr. Cleveland's pension vetoes (both of private bills and of the Dependent Pension Bill) played a part in the recent campaign only less important than those of the Mills Bill and the more or less genuine utterances of the English press. Mr. Harrison boasted himself the "friend of the soldier," and an originator of the dependent-pension scheme, and talked of the "great national ambulance." The "soldier vote" was appealed to most successfully in his behalf, and it will claim recognition. The attitude of the Grand Army prevents all uncertainty as to what sort of recognition will be asked, and it is too much to suppose the leaders of the Republican party are going to disappoint

what must be, from their point of view, such reasonable expectations.

Thirdly, the surplus is there, and all that is necessary to meet the demands of pension and other bills is to let the sources of the surplus stay about as they are. Granted that the tobacco taxes will probably be removed, is there any likelihood that the tariff will be touched, except possibly in the way of raising some of the duties? The repeal of the sugar duties, though proposed in the Senate bill, has too long been regarded as the entering wedge of "British free trade" to warrant much expectation of its being seriously considered. The Republican party is now absolutely controlled by men who believe, rightly or not, that any tariff reduction would deprive them and their immediate supporters of millions of dollars of profits, and they may naturally be expected to fight tariff reform to the bitter end. Even if an attempt in that direction were made, the party whose first and last article of belief is the necessity of fostering special interests would probably find it impossible to adjust any measure of reform to the satisfaction of those whose profits would be affected by a change. Certainly the difficulties in the way of such a solution of the surplus problem would be enormous as compared with the simple plan of spending the money.

It is certainly well to look on the bright side under all circumstances, and all tariff-reformers would like to take the *Nation's* view; but, as a long and bitter fight seems to confront them, it may be just as well for them to prepare for it with a never-slackening zeal, and to look for no concession from their opponents until it is actually made. C. C. B.

PHILADELPHIA, November 12, 1888.

WHAT SHALL WE DO?

TO THE EDITOR OF THE NATION:

SIR: The outcome of the election proves clearly that the country is not yet ready to decide with the President on the issue which he made; and to say that Mr. Harrison's election is due to ignorance, self-interest, and misrepresentation is simply to state this fact in other terms. Unfortunate as the result is, it becomes doubly so from the fact that other circumstances accompanying it greatly endanger Mr. Cleveland's position as the leader of his party. His entire public life has, consciously or unconsciously, been an effort to raise the plane of his party's life; and the course of events, by drawing to his support the independent and disinterested sentiment of the country, has aided him in his efforts to identify it with high principles and sound ideas. In a people composed of as many dissimilar elements as is the American people, and a people whose unity is so constantly disturbed by the influx of a large and raw foreign population, it is not strange that four years have been inadequate for this great work. Its influence has as yet hardly touched the official machinery of the party, or its recognized leaders in the Senate and the House. How insufficient a single Presidential term has been thoroughly to regenerate the party, the renomination of Gov. Hill showed; but it was my earnest hope that four more years of President Cleveland would so completely transform his party as to leave Gov. Hill, his friends and his methods, high and dry behind it. But at the very moment when the process was proceeding most favorably, when the people were gradually comprehending his sound ideas of public policy, when the ancient leaders of the party had, however reluctantly, signed their own death-warrants by accepting his leadership, a severe defeat brings to the front a man who represents the very elements of party life which Mr. Cleveland has uniformly opposed.

This, then, is the critical question which the election presents to the Democratic party: Will it continue Mr. Cleveland as its leader, and cling to its declaration of its purposes, without regard to the next election; or will it abandon its leader and its principles, for the chances of success with Gov. Hill in 1892? Will it dare to repudiate its partial success, and to rejoice more in its defeat with the President than in its victory with the Governor? The time has come to choose between two irreconcilable tendencies; and the choice of Mr. Hill will inevitably mean the surrender of every inch of ground that the President has so painfully won, and the exchange of the absolute certainty of ultimate and enduring success for the nearer prospect of office without anything that could make it worth the having.

I confess, however, with great reluctance, that the outlook for the prevalence of wise and patriotic counsels is not reassuring. Success is a sweet thing to most men, and the probability of repeated defeat, even in a great cause and with ultimate triumph, is not pleasant. The history of the Democratic party in recent years contains a somewhat similar case, that of Mr. Tilden in 1880, in which, with practical unanimity, the party deserted its leader and its principles, only to meet, however, a most crushing defeat. How far the Democratic press is disposed to try this course again, I have no means of knowing; but I see with profound regret that the course of the *Courier-Journal* points unmistakably to the substitution of some one else—most likely Gov. Hill or Gov. Gray—for Mr. Cleveland, on the alleged ground that he is responsible for his own defeat. Why? Not, indeed, because he pressed the tariff question, but because he lacked the small abilities that make successful candidates. Has it, then, come to this, that a great principle of government is to be established through bargaining in public offices? Are we to acknowledge manhood suffrage so disastrous a failure that a great truth must be obscured, compromised, and disgraced before it can hope for success? The party of the future will not have it so. The party towards which the President was leading the Democratic party, and with which more than all else the continued endorsement of Mr. Cleveland and the equally vigorous repudiation of Gov. Hill would identify it, will succeed on its merits or not at all.

But if the Democratic party lacks the courage to uphold the President, if it surrenders to Gov. Hill and becomes the counterpart of the Republican party, then let us have a new party, which will grow up with a distinct purpose, appropriating to itself the real strength and intelligence of the nation—a party prepared to bide its time, ready for and indifferent to defeat, but strong in the assurance of its final triumph. For as sure as there is something higher in our life than either the Republican party of Gen. Harrison or the Democracy of Gov. Hill, so surely will the lofty and unselfish conception of public duty in the end prevail; it cannot be that our political life will permanently be disconnected from the true intellectual life of the nation.

In that party of the future, let us give a high and honorable place to the brave man who has just experienced his first defeat. In a brief Presidency of four years he is the only Executive since Abraham Lincoln who has left an enduring and worthy imprint on our national history. I am not now disposed, nor have I ever been, to extenuate his faults. His almost forgotten message on the labor troubles was a stupendous, an unexplicable blunder; his retaliation message, though a consummate political move, may well be criticised on higher grounds; his treatment of Lord Sackville, though the provocation was great, was hardly in keeping with the national dignity; and his course in regard to the civil service, though in this he contended against obstacles which no man can realize, was still inconsistent and unfortunate. But, despite all these shortcomings, he is still the first President in a quarter of a century who has contested the domination of selfish interests, who has encountered and combatted the great forces of demoralization which have threatened and have impaired the purity of our Government. Monopolies, railroads, "pension sharks," "land-grabbers," have all recognized that they had nothing to expect from him; and these have been our great public questions since the accession of Gen. Grant! It is not strange that Mr. Cleveland was not victorious in his last struggle against the organized forces of corruption and ignorance, fighting for very life: it is enough for him that he will be so in the end. He has directed and developed forces which will continue to grow in activity long after he has retired from his high office. To his lasting honor be it said, he is the only man in public life today who could seriously aspire to be their leader. F.

LOUISVILLE, November 10, 1888.

THE ELECTION IN MARYLAND.

TO THE EDITOR OF THE NATION:

SIR: It looks as though Gormanism had received a mortal blow in this State. The defeat of Indian Inspector Morris A. Thomas for clerk of the new equity court, the election of two and perhaps three Republican Representatives in Congress, and the reduction of Cleveland's plurality in the State to 5,500, have rudely awakened the masses of the Democratic party to the conviction that the great boss in whose invincibility they had been taught to trust is, in fact, destroying the party. In 1876, in a total vote of 163,761, Tilden had a plurality of 19,799. In 1880 the total vote rose to 172,221, but the Democratic plurality was only 15,191. In 1884 the total vote was 186,019, and Cleveland's plurality was 11,118; and now, with a total vote in the State of 212,000, the plurality is but 5,500. In twelve years the Democratic vote has increased less than 15,000, while the Republican is now nearly 29,000 greater than it was in 1876. This reduction in the Democratic majority has been brought about in the face of the naturalization of many thousand foreigners, four-fifths of whom vote the Democratic ticket. In 1876, only four of the twenty-three counties of the State gave Republican pluralities. In 1888, twelve went Republican. For the first time since the war, Baltimore city will have a Republican member in the House of Representatives.

National issues have probably had very little to do with this growth of Republican strength. It has been almost entirely the result of the frauds, corruption, and political tyranny of the Gorman machine. Every independent movement that we have had in the last thirteen years has permanently detached some voters from the Democratic party. The men most prominent in these revolts are still, with very few exceptions, Democrats, but after every campaign some of the rank and file unite with the Republican party. Unless this drain can be arrested in the meanwhile, Maryland in the next Presidential election will be a doubtful State. Some of the Gorman people are saying that the small Democratic majority is due to

the tariff policy of the national Administration. This is not so. It is unquestionably true that in some of the workingmen's wards the Republicans made large gains on the tariff issue; but on the other hand, it was that issue, and that alone, which held the great body of independent Democrats loyal to the Democratic national ticket. Had not the Republican party represented (in their view) a dangerous economic policy, there is little doubt that many of the most prominent Independents in the State would have either voted for Gen. Harrison or not voted at all. As it was, one or two of them who have been lifelong Democrats, and who are anything rather than Protectionists, cast their votes for the Republican ticket, as did many of the Republican Mugwumps of 1884. But the great mass of independent Democrats gave their earnest support to Cleveland and Thurman. They organized a campaign society which they called the Jeffersonian Association, and under its auspices was held the meeting at which Secretary Bayard made his speech.

On the whole, therefore, the fact that the economic question was an issue in the canvass helped rather than hurt the Democratic party. The nomination of Morris A. Thomas was, it is generally understood, due to the personal influence of Senator Gorman. Naval Officer Rasin, and the city leaders who take their orders from him, were, it is believed, reluctant to put Thomas in any position in which the people could get a chance at him; but Gorman insisted, and Thomas got the nomination. Thomas doubtless counted on its being a Presidential year, and on the fact that the Republican candidate, Capt. John H. Suter, who had been nominated when it was understood that the Democrats intended to nominate Mr. William Brewer, (who had been for twenty years deputy clerk of the existing equity court, and would have been the best possible candidate for the place), was far from a strong nominee. He had been put up to round out the ticket and without any thought that he would be elected. His integrity and clerical efficiency were not assailable; but he had been well known as a Republican politician, and had held a place in the custom-house for some eighteen years, having resigned on request about a year ago. It was alleged that his habits were not good. Under these circumstances, the Reform League decided that it would not be wise policy for them to endorse Capt. Suter. They accordingly confined themselves to the publication in the papers of a formal protest against Thomas's candidature, laying especial stress on the details of his fraudulent bankruptcy, as showing in a striking manner his unfitness for a place in which thousands of dollars of trust moneys would necessarily pass through his hands.

The members of the League, in their individual capacity, almost without exception did all they could to beat Thomas, in the only way that it could be done—that is, by electing Suter. Several gentlemen had prepared and distributed 50,000 circulars containing the principal objections to Thomas. With each circular Suter pasters were sent. No public meetings were held, no further newspaper publications were made. Disgraceful as it is to say, not a single newspaper editorially made mention of Thomas. He had expected a scratching campaign, and, in order to defeat it, he had prevented the circulation of the Democratic ticket throughout the city. For the first time in many years the Democratic voters of the city received no Democratic tickets at their residences. He evidently believed that few people would scratch him if they had to go to the polls and there get their tickets and then scratch him openly. Doubtless this scheme did save him a good many votes, but the result proved that there was a more general and robust independent feeling in the city than anybody had supposed; for although Cleveland had 5,000 plurality, Suter had some 3,400 more votes than Thomas.

The result, in its entirety and in its details, is a tremendous blow at Gorman, and is so everywhere accepted. Politicians who have been his subservient tools are now openly saying that his mismanagement has brought the party to the very verge of defeat. The various factional leaders who have been beaten by Rasin and Gorman in past contests for the control of the party organization, are everywhere preparing for a new struggle. Meanwhile, the Independents are quietly watching the signs of the opening battle, and are busying themselves in preparing drafts of new election and civil-service laws, in order that they may be ready to seize any opportunity which the fortunes of the strife may offer for the advancement of these great reforms. O. S.

Baltimore, November 9, 1888.

THE SAME ISSUE UNDER CHANGED CIRCUMSTANCES.

To the Editor of The Nation:

Sir: Suffering under disappointment, as I suppose is the case with most of your readers, I seek for consolation in eternal principles.

The London *Spectator* discusses M. Floquet's proposals for the revision of the French Constitution, and especially that which it regards as most important, viz., that the Ministers shall have a fixed term of two years, and not resign upon defeat of a bill, but only upon a special vote of a want of confidence. The critic thinks the Chamber would vote want of confidence just as readily as it would defeat a bill. Very likely; but why need the Ministers resign in either case? "Moreover, in the case of many bills which involve policy, defeat must be followed by resignation, or affairs would come to a deadlock." Why any more than they do now in this country? Would the fact that Ministers had a voice in the discussion of legislation involve such a consequence any more than the fact of its being thrust upon them without their having anything to say? "Could a Ministry remain after such a defeat? It does in Prussia, because Prussia is not a democracy, and Ministers do not mind a vote of want of confidence." That is to say, Ministers in Prussia are not appointed by the Chamber and are not dependent upon it, but derive their authority from the sovereign. Why might not the same thing be true in this country of Ministers appointed by a President elected by the people and independent of Congress? "Government must obey the law of its being, and it seems to us that in a Democratic country an effort to make Ministers secure against the representatives of the people, yet absolutely subject to their authority, is foredoomed from the very first to failure." The gap in this reasoning lies in the words "yet absolutely subject to their authority." It may be true of England and France, where Ministers are made and unmade by the Legislature; but it need not be true of this country, where Ministers are made and unmade by the people through the President."

"If it succeeds, it will be at this strange price, that the Ministry which cannot be turned out will be reduced to impotence. The momentum which carries great bills, and especially great but not popular bills, is the fear that, if they are rejected, the Ministry will resign; and if that fear is removed, they will be rejected by wholesale." This leaves out of sight another fear which is not less powerful, that of members who see danger of losing their seats. What is it which makes the Prussian Chambers submit so tamely to the bullying of Prince Bismarck? I suppose it is hardly the fear of fine, imprisonment, and torture for words spoken in debate. The German people are hardly sunk so low as to be cowed by that. It is because members feel that the present popularity of the throne and Government is so great that attacks upon them would recoil upon the aggressors. May we not suppose that a President elected by eleven millions of voters could lend force enough to his Ministers to enable them to withstand factious opposition, or that skilful holders of such offices could wield a lash long enough to make the dogs of opposition cautious of barking too closely at their heels? G. B.

Boston, November 10, 1888.

'PRINCESS NOURMAHAL.'

To the Editor of The Nation:

Sir: In your column of literary notes published on November 8, I find a paragraph devoted to a recently published novel entitled 'Princess Nourmahal,' said to have been translated by Lew Vanderpoole from the French of George Sand. Of it you say, "It is highly improbable that an inedited work by this writer should first see the light in an English dress; and the internal evidence is wholly against the imputed authorship." Will you be kind enough to allow me to present the external evidence in my possession confirming your opinion?

While I was editor of the *Cosmopolitan*, Vanderpoole came to me and made such representations in regard to the 'Princess Nourmahal' that I was induced to accept it. But happily, before a line of it appeared in the magazine, I became convinced that his statements were not to be believed. He had asserted, among other things, that he was a nephew of George Sand; that he had visited her at her home in France; that he had been intrusted by Victor Lamoureaux, his cousin and a co-executor of Mme. Sand, with the manuscript of 'Princess Nourmahal,' and that he had been authorized to translate and publish it in the United States. At my request, Mme. Adèle Roch of New York wrote to Baron Dudevant, Mme. Sand's son, in regard to the truth of these claims. What he wrote in reply I will let him say in his own words and in his own language. His letter is dated Nohant-Vic, October 23, 1887, and the parts referring to the matter in controversy are as follows:

"(1°.) Ma mère, Madame George Sand, n'a jamais laissé de manuscrit intitulé 'La Princesse Nourmahal.'

"(2°.) Elle n'a pas institué pour son exécuteur littéraire M. Victor Lamoureaux. Je suis son seul exécuteur testamentaire, et je suis seul héritier de tous les manuscrits et autres travaux littéraires qu' elle a laissés, et seul chargé d' en user à ma seule convenance.

"(3°.) Elle n'a aucun lien de parenté avec Mr. Lew Vanderpoole.

"(4°.) Le monsieur susdit n'a jamais fait aucune visite à Mme. George Sand, et elle ne l'a jamais ni vu ni connu.

"(5°.) Ce Mr. Vanderpoole n'a jamais été chargé, que je sache, par qui que ce soit, de traiter avec qui que ce soit pour la publication de manuscrits émanants de George Sand, et ces manuscrits n'ont pu lui être confiés, puisque j'en suis seul possesseur comme héritier légitime et direct avec plein pouvoir d'en user comme il me plaira sans que cela regarde personne autre."

Whatever doubts I may have had in regard to the character of Vanderpoole and the genuineness of the 'Princess Nourmahal' were, of course, removed by this letter. I think that it will also solve any perplexities that librarians may experience when they come to catalogue

the story. They need not hesitate to refuse to credit George Sand with the authorship of the story. F. P. Smith.

Rochester, November 6.

THE BATTLE OF CHATTANOOGA.

To the Editor of The Nation:

Sir: In the edition of the *Nation* of October 4, ult., under the head of "Notes," the writer, referring to a paper by me proving that the "Chattanooga engagement was fought exactly as it was *not* planned," makes mention of "Tolstoi's thesis that such deviations are the rule in war." That idea was not Tolstoi's, is as old as the art of war, and is familiar to all those who have the merest smattering of the rudiments of that art. The reputations of generals have appreciated as they have shown ability in taking advantage of events to change their plans on the field of battle. The remark quoted is, however, not applicable to the paper in question, which was only a reply to a labored argument by the principal personage in the battle to prove that it *was fought as planned*. Had the "thesis" of Tolstoi been accepted by him, the answer to his arguments would never have been necessary.

The conclusion would seem to be irresistible that I was the one who accepted Tolstoi's idea and not the writer to whom I replied.

Wm. Farrar Smith.

November 8, 1888.

[Precisely; and this was what we meant to intimate. That General Smith has misunderstood us, shows that we wrote obscurely. —Ed. Nation.]

THE PRATT LIBRARY.

To the Editor of The Nation:

Sir: It is not surprising that a writer in the *Nation* had not heard of the Pratt Library of Baltimore. It has not yet joined the ranks of libraries, in the modern sense of the word. Mr. Pratt's gift was a very handsome one, but the management of the library is at present in very unintelligent hands. No better way of giving out books has been devised than to make tired women and laborers stand in a long row until their turn is reached. My dressmaker has told me that she is going to join the Mercantile Library (the fee for which is five dollars a year), because she cannot afford the time required for waiting at the Pratt. Far from instituting courses of lectures, or any other means to show unbookish people what they want to read, it refused last year to allow its rooms to be used for such a course when other benevolent people were anxious to get one up.

These are two instances out of many which might be given of how much it needs instruction in the ways which have lately been devised for making a library a centre of literary influence—such ways, for example, as Mr. Bemis has found to be so admirably successful in Buffalo. M.

Baltimore, November 11, 1888.

Notes.

Mr. S. S. Rider, Providence, announces as in preparation a general index to the first series of Rhode Island Historical Tracts, "with a correction of all known errors." Moreover, he will shortly begin a second series with 'An Inquiry concerning the Origin of the Clause in the Laws of Rhode Island (1719-1783) Disfranchising Roman Catholics, and Prescribing a Religious Test for the Admission of Freemen.' This tract will be from Mr. Rider's own pen, and will differ in its conclusions from those arrived at by the late Chief-Justice Eddy. The new series, we should mention, will be limited to 250 copies at the utmost. The first series has nearly doubled in marketable value.

"The Gift-Book of the Year," according to the publishers, Estes & Lauriat, Boston, will be their Keats's 'Endymion,' illustrated by W. St. John Harper. They will issue for the gift season also an illustrated edition of George Eliot's Poems, together with a "George Eliot Portfolio" of photogravures and etchings illustrating the works of the novelist; 'Fair Women of All Countries and Times,' text and a great variety of illustrations; 'Voices of the Summer,' sixteen etchings after Millais, Birket Foster, etc.; 'American Painter Etchings,' ten remarque signed proofs, by F. S. Church, Thomas Moran, F. Dielman, and others; and Victor Duruy's 'History of Greece and the Greek People,' elaborately adorned with more than two thousand engravings and color prints.

Charles W. Sever, of the University Book store, Cambridge, Mass., will shortly issue 'Hesper: an American Drama,' by William R. Thayer, author of 'The Confessions of Hermes.'

Ticknor & Co. will publish on November 17 'Wanderers,' being a collection of the poems of William Winter, author of 'Shakespeare's England,' etc., and dramatic critic of the *Tribune*.

Ginn & Co. have in preparation an 'Analytic Geometry,' by Prof. A. S. Hardy of Dartmouth; and 'A Reader in Botany,' by Jane H. Newell.

The Seeger & Guernsey Co., 7 Bowling Green, are compiling a 'New Business Cyclopædia of the Manufactures and Products of the United States, for Domestic and Foreign Trade.'

The second volume of the new 'Chambers's Encyclopædia' (Philadelphia: J. B. Lippincott Co.) extends from Beaugency to Cataract. Some of the longer articles are Bible, Bird, Book (Bookbinding and Booktrade), Brain, Bridge, and Carlyle. Noteworthy also are those on Bibliography and Biography. Marks of freshness abound—in the lists of authorities, in mention of the fact of Belfast's becoming a city, of Brazilian emancipation, of Mrs. Green's Henry II., etc. Andrew Lang writes on Robert Burns; A. H. Bullen on Samuel Butler; George Saintsbury on Byron; Sir George Grove on Beethoven (making free use of his article in the 'Dictionary of Music,' and giving a convenient chronological presentation of Beethoven's compositions and troubled existence); Stanley Lane-Poole on Cairo; H. B. Wheatley on Caricature, etc., etc. The illustrations continue numerous, and there are several maps.

A very notable undertaking has just been completed by the Clarendon Press, Oxford (New York: Macmillan). We refer to the new edition, in six volumes, of Clarendon's 'History of the Rebellion,' to which Mr. W. Dunn Macray has brought a refinement of accuracy unknown to his less painstaking predecessors. He has collated every word of the text with the original MS., and that there may be no doubt as to the value and extent of his corrected readings, he has grouped these at the close of Vol. VI, where they fill more than fifty pages, in single column, set over against the corresponding readings in the edition of 1849. A certain number of significant passages struck out from the first four books of the MS. are also preserved together in the appendix; divisions, both of sentences and of sections, have been rectified, often to great advantage; and the over-punctuation has been much simplified. Another important service has been to indicate by footnotes the transitions from the MS. of the 'History' to that of the interwoven 'Life.' "Hitherto," says Mr. Macray, "it has been impossible, without great expense of labor and time, to verify any passage whatever, from there not having been a single clue given whereby to find it." Not satisfied with all these improvements, the editor has assigned dates to the events narrated so far as this was practicable; and these, standing in the margin, often demonstrate a lapse of memory on the part of the historian. Finally, the index has been made worthy of the name, the references, however, being, instead of to volume and page, to book and section—on the whole, the right course to pursue. Mr. Macray's own notes are sparse, brief, and either for correction or elucidation. A facsimile of the first sheet of the 'History' shows the well-known rhetorical alteration in the very first line. Too much praise can hardly be bestowed on this edition, to which it would appear that little can be added except, as Mr. Macray points out, in the way of fixing dates.

In 'After Noontide' (Houghton, Mifflin & Co.), Margaret E. White has made a collection of extracts designed to emphasize the cheerful aspects of old age. Her range of selection is pretty extensive, running all the way from the Bible to Tupper, and yields something, we should think, for all tastes. The book is indexed by authors, and is tastefully printed.

Arthur Helps's 'Casimir Maremma' has been unpretentiously reissued by Roberts Bros.

'The Universal Telegraphic Cipher,' compiled by B. Franklin Lieber, and published by him at 4 Stone Street, New York, appears to be specially designed for the use of bankers and stockbrokers, who would doubtless find it very serviceable, and could easily adapt it to their private business. It is also a very fair and well-arranged general code, but it could never replace the private code of a merchant.

Under the title 'Pompeii' (Naples: Luigi Pierro), L. Conforti, apparently a disciple of Carducci, has collected some fifty poems full of erudition and bristling with Latinisms. A slender vein of narrative, reappearing here and there, serves to give an appearance of unity to the whole; but in the main the pieces are descriptive, the poet's aim being to give us a series of pictures of life in ancient Pompeii at the various hours of day and night. Judged from a Latin standpoint, the verses are graceful and harmonious.

The proprietors of the *Writer*—a now well-established monthly published in Boston, in which the veteran quill-driver and the novice are alike apt to find something helpful, at least on the mechanical side of their calling—are to launch on January 1 a companion periodical, the *Author*. Its aim is to admit selected as well as original matter, of special importance to writers, but its exact physiognomy is not indicated in the prospectus.

The Gesellschaft Urania of Berlin has begun a new popular illustrated monthly, entitled *Himmel und Erde*, the prospectus and first number of which have reached us. As its name would imply, the scope of the magazine is broad enough to include astronomy, physics of the earth and celestial bodies, optics, physics proper, geography, and meteorology. The entire prospectus, a brief one, would be worth producing here, had we space; but if the name of the editor, Dr. M. Wilhelm Meyer, of Berlin, were not sufficient guarantee for the character of this new venture, the long list of contributors would be. Gould of Cambridge and Peters of Clinton are the only representatives

of America in the list. *Heft* 1 makes an excellent beginning with an important paper by Schiaparelli on the planet Mars, the study of whose surface he has made particularly his own. Following are papers by Foerster, the editor, and others, and a collection of interesting notes, and reviews of the scientific works of the day. Each number of this monthly will contain 50–60 pages royal octavo, and the price for the year is $3.50. No. 1 bears the date October, 1888. The illustrations are of a high order, and the new magazine may well displace much of the cheap stuff, French and English, heretofore current.

The November *Academy* (Syracuse, N. Y.) is an exceptionally valuable number, being composed of papers read last month before the New England Association of Colleges and Preparatory Schools, and of the debates thereon. Mr. John Tetlow's paper, on the desirability of modifying the present modern-language requisitions for admission to college, stands first, and is, to our minds, the most useful; indeed, it led directly to the charging of a committee with the subject. Much discussed also was Prof. Truman H. Safford's paper on the falling-off in the ratio of attendance at college; as he estimates, but five-eighths of the yearly ratio of increase in population represents the increased attendance. President C. K. Adams's paper on the teaching of pedagogy in colleges and universities completes this excellent bill of fare.

The *Studio* for September gives an interesting specimen of Alfred Stevens's portraiture, "The Lady with a Fan," owned in this country. Mr. Kurtz's method of reproduction, the editor assures us, has gone far in translating the color scheme into black and white.

Paris Illustré for November 3 (International News Co.) is much concerned, pictorially, with the Comédie-Française. Admirably grouped is the scene in which Director Claretie and numerous actors and connoisseurs listen to the younger Dumas's reading of a new play. Fine in another way is the view of the Crush Room of the theatre, garnished with portrait statuary.

The Appalachian Mountain Club professes its readiness to receive donations in money or in real estate, whole mountains (*pro bono publico*) not excepted. We believe that nothing so bestowed will go amiss. The Recording Secretary is Mr. Rosewell B. Lawrence, 23 Court St., Boston.

Following in the path of the Associations for the Advancement of Science in England, France, and the United States, the scientific workers of Australia and thereabouts have banded themselves into a like Association of their own, which had its first general session at Sydney late in August last. A marked degree of success is reported. Lord Carrington made the initial speech, and the President, Mr. H. C. Russell, H.M. astronomer at Sydney, followed with an address. The Association starts in with nearly one thousand members, who contributed more than one hundred papers, which will be largely printed in the Transactions of the Association. The meeting of 1889 will take place at Melbourne, with the eminent botanist, Baron Sir Ferdinand von Müller as president, and a meeting in New Zealand is arranged for 1890.

The Observatory at Dun Echt, near Aberdeen, Scotland, is perhaps the most perfectly equipped private establishment in existence. Its owner, the Earl of Crawford and Balcarres, has offered the fine instruments to his Government, on condition that the administration of the Royal Observatory of Scotland continues in its hands. Prof. C. Piazzi Smyth has lately sent in his resignation as Astronomer-Royal of Scotland, because, he says, the Government would do nothing towards the betterment of the ancient establishment on Calton Hill, Edinburgh, of which he has been so long in charge. This may now be dismantled, or reserved for instruction uses, while a new Royal Observatory appears likely to be built elsewhere. A committee have in hand the matter of selecting a suitable site.

From Dietrich Reimer, Berlin, we receive the two concluding sheets of Richard Kiepert's "Wall-Atlas," or series of wall maps, of Europe, the labor of many years. These figure Russia and Scandinavia physically without lettering, but with a conventional coloring to represent elevations, water-courses, etc. A political series parallels the physical. The authenticity and the satisfactory execution of these maps entitle them to the attention of teachers here as well as abroad.

—In the last number of the *Forum*, Mr. Lester F. Ward, whom Europeans know as the principal American authority on sociological questions, turns the tables on the evolutionists, in regard to the status of women, in the very neatest and cleverest of fashions. He points out to them that they are forgetting their Darwinism in not remembering that the greater size and strength of man, and his corresponding greater weight of brain, far from being an unalterable law of organized life, are the merely accidental result of his immediate ancestors having spent their lives in battles with their rivals, and of the great liking which the females among the higher animals had for the conquerors in war. Far from drawing the conclusion that man is the necessary defender and master of women, if we are under a sacred obligation to preserve the "natural" state of things which prevailed among our progenitors, we ought "to insist that woman should defend both herself and her offspring from hostile influences of all kinds, and also assume the whole duty of supplying her children with food, while the sole function of man should be, as it is in most mammals and birds, to take care of himself and fight off rivals"—a state of society which is distantly approached in a few of the very lowest tribes of savages.

—But even this state of things is not "indicated," as the physicians say, if we take account of the whole of the animal creation. It has been frequently remarked that the laws governing the higher forms of life can be rightly comprehended only by an acquaintance with the lower and more formative types of being. It is only among birds and mammals that this physical superiority of the male prevails: throughout the rest of the animal scale, there is a very different state of things, and among the invertebrates female superiority is well-nigh universal. Among the lowest animals the male, if there is a male, usually leads a brief and precarious existence. He is sometimes devoured by the female when his function has been performed. What is worse, there is a barnacle, described by Darwin, which has, in two valves of her shell, two little pockets in each of which she keeps a little husband. These are the deep and ingrained principles of Nature to which we should return if we wished honestly to take her for our guide. But there is one thing more. If it be true, as Prof. Brooks thinks he has made out, that the female sex represents the principle of heredity, or permanence of type, and the male that of variability, then it is of the utmost importance that whatever high qualities of mind and body and heart modern civilization is capable of producing, those it should, in the first instance, produce in its women. It must be from the steady advance of woman rather than from the uncertain fluctuations of man that progress is to come. "There is no fixed rule by which Nature has intended that one sex should excel the other, any more than there is any fixed point beyond which either cannot further develop. Nature has no intentions, and evolution has no limits." The lesson of science, rightly read, is that the elevation of woman is the indispensable condition to the elevation of the race.

—The ninth volume of Mr. John Bigelow's edition of Franklin's Works (G. P. Putnam's Sons) is one of the most interesting of the series. It opens in 1784, while the ambassador was still at Passy, but with a prospect of being allowed to return, as actually took place in the summer of the following year. The thought of a rest from political labors seems to have tinged his familiar correspondence with even more than his wonted geniality, and any selection of his letters, which we may some time hope to see, would draw largely upon the present volume. There is a noticeable amount of personal and especially boyish reminiscence, which ought to be printed in connection with his autobiography proper. Not a few of the letters to him are also to be remarked, as that from Gov. Benjamin Harrison of Virginia, the ancestor of two Presidents, and one from John Sevier, the head of the new State of Franklin. One from Mme. Helvetius, printed verbatim, is amusingly illiterate. The editing might have been a little more laborious to advantage. Thus, a defective proper name, "Cab nis," on page 311, is conjectured to be "(? Cabenis)," though on page 346 it recurs plainly as Cabanis. Franklin spent the long voyage homeward in recording his observations on the Gulf Stream and on various practical matters relating to the methods and perils of navigation, and discussing smoky chimneys. He returned home only to be plunged deep into public business, to be thrice made President of Pennsylvania, and to participate in the Convention that framed the Federal Constitution. He also served as President of the Pennsylvania Society for Promoting the Abolition of Slavery—a partial atonement for his assent to the pro-slavery compromises of the Constitution.

—We are tempted to quote freely from these pages, still fresh for instruction, but must forbear. Franklin remembered the first ship that brought Irish emigrants to Pennsylvania, yet he could say in 1784 that they and their children now ruled the State. In a letter to B. Vaughan, April 21, 1785, he writes:

"We see much in parliamentary proceedings, and in papers and pamphlets, of the injury the concessions to Ireland will do to the *manufacturers* of England, while the *people* of England seem to be forgotten, as if quite out of the question. If the Irish can manufacture cottons, and stuffs, and silks, and linens, and cutlery, and toys, and books, etc., etc., etc., so as to sell them cheaper in England than the *manufacturers* of England sell them, is not this good for the *people* of England who are not manufacturers? And will not even the manufacturers themselves share the benefit?—since if cottons are cheaper, all the other manufacturers who wear cottons will save in that article; and so of the rest. If books can be had much cheaper from Ireland, . . . is not this an advantage, not to English booksellers, indeed, but to English readers and to learning?"

To the Abbé Morellet, April 22, 1787, excusing the war tariff of that date:

"I am of the same opinion with you respecting the freedom of commerce, especially in countries where direct taxes are practicable. This will be our case in time, when our wide-extended country fills up with inhabitants. . . . Nothing can be better expressed than your sentiments are on this point, where you

prefer liberty of trading, cultivating, manufacturing, etc., even to civil liberty, this being affected but rarely, the other every hour. Our debt occasioned by the war being very heavy," etc.

On this the Abbé comments:

"You impose duties that you may raise money; this is plain. But the author of your pamphlet levies imposts to secure to America her navigation and a balance of trade in her favor. He already follows in the steps of European Governments, who have disguised all the tyranny they have exercised over commerce under these false pretences; and I confess I should be very sorry to see you pursuing the same crooked channels."

—Volume xlii of the second section of Ersch and Gruber's 'Encyklopaedie' extends from "Landstände" to "Lehrte." The opening article, covering nine and a half pages of the size of the *Nation*, treats of the Teutonic estates of the realm which flourished from the fourteenth to the eighteenth century, and which are not to be confounded with the popular assemblies that preceded with them, or with the Diets that followed them. They are distinguished from the former in that they did not stand for the rights of the nation or state as a whole, but contended for the privileges of the classes of which they were composed, and, in most cases, developed into three estates, viz.: first, prelates and nobles; secondly, the knighthood; and, thirdly, the cities. From the later Diets or Parliaments they differed in that their members were not representatives, but each one sat by virtue of being a member of one of the estates. The volume is rich in interesting biographical notices. Perhaps the longest article is one of ten pages on John Law of Lauriston. Among titles that possess the attraction of "actuality" may be mentioned Ferdinand Lassalle (not found in Appletons' 'American Cyclopædia') and Eduard Lasker, each of whom gets four and a half pages. Hubert Languet, also missing in the 'American Cyclopædia,' gets six and a half pages. French biography is particularly well represented. Eleven members of the Larochefoucauld family are treated in as many pages, and six members of the Larochejacquelein family in seven pages. Lanfrey, the historian of Napoleon I., has four pages, and Jean Denis Lanjuinais, who is not even mentioned in the 'Britannica,' has five. Other French names are Lannes (Duke of Montebello), La Place, Latude, Lavoisier, Latour d'Auvergne, etc. The battle of Langensalza, June 27, 1866, is described in three pages. The Duchy of Lauenburg requires six.

—A valuable feature of this work is the fulness of the bibliographical references and the copious citation of authorities. Mr. Leslie Stephen pursues a similar course in his 'Dictionary of National Biography'; indeed, no work of reference can make any pretensions to rank as a literary production if it habitually conceals the sources of its information. With all its wealth of learning, however, the present work is not free from errors and omissions, most noticeable in regard to English and American topics. There is no mention of Langland, the supposed author of the 'Vision of Piers Plowman,' or of François de La Noue, or of La Pérouse, the navigator, or of La Salle, the explorer, or of Nathaniel Lee, the dramatist, or of John Ledyard, the American traveller, or of the city of Leavenworth, although Leadville is given, with the statement (important, if true) that in 1880 that enterprising town had 240 miles of telephone connection. In an article on Mme. de Laroche, the grandmother of Bettina Brentano, one of the works referred to is "Crabb: 'Robinson's Diary.'"

—Krummacher, whose researches into Carlyle's language and style we have already noted more than once, brings them to a (provisional?) conclusion in a recent issue of the *Englische Studien*, xii, 38-59. Provisional, we venture to insinuate, because we hope that Krummacher will reprint his results in book form, and, in so doing, revise and extend them. The present instalment deals with syntactic peculiarities and figurative expressions. The curious use of tense in the conditioning clause, mentioned page 40, *e. g.*, "of which, *were* the crisis come, we will give some account," needs fuller illustration and analysis than it here gets. "Historical shot-rubbish," cited page 44, is not fairly rendered by *schlecht verarbeitetes Material*. The allusion sought for on page 53 in "flattering unction to his soul" is readily found in "Hamlet"; that in "not witty, but the cause of wit," in "King Henry IV.," Part II. Carlyle's Trismegistus, page 54, may be directly classical (if Lactantius can pass in that category), but we suspect that he is borrowed at second-hand from Milton's "Penseroso," 88. Krummacher's remarks upon Carlyle's style in general, and its non-German character, are admirable. We shall never understand the genesis of it until some patient scholar (Krummacher himself, or one like him) shall study exhaustively the writings of the Edinburgh period, and compare them step by step with those composed at Craigenputtock. The latter are Carlylese, the former are not. The thing is to show exactly when and how the former gave way to the latter.

THE COMTE DE FALLOUX.

Memoirs of the Comte de Falloux. From the French. Edited by C. B. Pitman. London: Chapman & Hall. 1888. 2 vols., 8vo, pp. xii, 484, 497.

THESE memoirs were published in French in the beginning of this year under the title 'Memoirs of a Royalist,' which the English editor discards from his title-page, but retains as an alternating head-line. The English edition is a handsome, sightly book, and the translation is well done, although there is some inconsistency in the treatment of French titles: Count alternates with Comte, but every Duke is called a Duc. In what the "editing" consists is not readily apparent, except that a copious index is furnished.

Count Alfred de Falloux was born at Angers May 7, 1811, of a family notable for its devotion to the royal family of France and for its zeal for the Catholic religion. His father emigrated at the age of fourteen and entered the Talleyrand-Périgord regiment. His mother was the daughter of the Marquise de Soucy, and grand-daughter of the Baronne de Mackau, both of whom had been governesses to the royal children. His childhood was passed among persons accustomed to make sacrifices to their loyalty and in a province which was the peculiar home of the monarchical creed. He received his schooling first in his native town and later at the Collège Bourbon in Paris. His father's fortune had been reduced to modest proportions by the vicissitudes of the Revolution, but the death of a rich cousin in 1822 placed the family in an independent position. Young Falloux was thus enabled to follow his literary inclinations and to indulge a taste for travelling. One of his earliest journeys was in company with Lamartine, and in the course of it he paid his respects to the King and Queen of Sardinia, who were making a temporary stay at Chambéry, and living in patriarchal simplicity. The Revolution of 1830 caused him to return to Paris, animated by resentment against the House of Orleans and all its adherents. He says that at this time nothing would have induced him to enter an Orleanist drawing-room, although he met the Duc d'Orléans and the Duc de Nemours on the neutral ground of the Austrian embassy. The drawing-room war in which he took part reached an acuter stage after the miscarriage of the expedition undertaken by the Duchesse de Berry in 1832, and during her captivity at Blaye the Royalist society resolved to wear mourning and to give no balls, but only *routs*, at which fashionable authors like Eugène Sue, Balzac, and Sainte-Beuve were the lions.

Finding no opportunity to serve his country, M. de Falloux again started out on his travels, passing through Belgium and Holland and up the Rhine as far as Mayence, reaching Prague by way of Frankfort, and visiting the family of King Charles X., who were then receiving hospitality at the Hradschin Palace. The King played whist every evening; he was a bad player and frequently lost his temper, but his partners were used to him and did not mind. It was at this time that Falloux first made the acquaintance of the Comte de Chambord, then in his fourteenth year and known as the Duc de Bordeaux. In London he met Persigny, who already at that time (1835) was devoted to the interests of Prince Louis Bonaparte, and endeavored to enlist Falloux in the same cause. Finding his efforts useless, he said, "Your eyes will be opened. Prince Napoleon will reign, and you will form part of his first ministry." Thirteen years later this prophecy was fulfilled. A second meeting between the two young men took place in Strasbourg in 1836, a few days before Bonaparte's attempt, when Persigny again made an ineffectual effort to bring Falloux over to his side.

On his return to France, Falloux gave himself up to works of charity and literature; he took part in the missionary work of Saint Francis Xavier among the working population of Paris, being told off to expound the Bible to audiences of workingmen, and he wrote Lives of Louis XVI. and Pius V. Under the inspiration of Montalembert and Lacordaire, the energy of the young men of the Legitimist party, finding no vent in politics from 1830 to 1848, was turned into religious channels. At about the same time a similar proselytism was fermenting in Germany under the leadership of Doellinger and Goerres. In 1842 Falloux offered himself as a candidate for deputy and was defeated; but four years later, when for the second time a candidate, he was successful. The party of the Comte de Chambord was then, as always, divided into two sections, at the head of one of which was the Duc des Cars, while the other acknowledged the leadership of M. Berryer, the distinguished barrister. On entering Parliament, Falloux cast in his lot with the latter, and adhered to it for the rest of his life. He gave evidence of aptitude for practical statesmanship by studying and advocating the question of postal reform, which was opposed by M. Guizot. How necessary this reform was, appears from the circumstance that "the delivery of letters was divided into numerous zones. Each zone had a special tariff, which varied from six to thirty-two sous, and involved a complicated reckoning with the postman for each letter. Moreover, a prejudice existed against pre-payment; no one resorted to it except with their tradespeople, and it was extremely impolite to prepay a letter to any one who was unprepared to accept an imputation of poverty." This was in 1848. The question of educational liberty, with which M. de Falloux was a little later so thoroughly identified, also came to the front at

this time; but all such questions were, for the moment, thrust into the background by the startling Revolution of February, 1848.

The Constituent Assembly, elected by universal suffrage, contained many representatives of the most conservative classes of the country, and among them an unexpectedly large number of priests, of whom Père Lacordaire was perhaps the most conspicuous. Men like M. Molé and Montalembert acquired considerable ascendancy in it. M. de Falloux was, at his own request, put upon the Committee of Labor, desiring, as he says, "to place real solicitude for the working classes in opposition to a quackery which is much more anxious to work upon the wounds of society than to relieve or cure them." A sub-committee, composed of Falloux, Victor Considérant, and Beslay, of whom the last-named took part in the Commune of 1871, reported in favor of closing the national workshops. At the same time M. de Falloux presented a draft of measures for ameliorating the condition of the working classes, embracing "an endowment for the societies for mutual help, the improvement of savings banks, the protection of children in factories, draining and sanitary arrangements for populous districts, the demolition of unhealthy dwellings, etc." These measures were in advance of the times; in England Lord Ashley had begun his efforts in behalf of factory operatives in 1833, but it was not till 1878 that he saw the full fruition of his labors. It may be remarked, in passing, that there are points of resemblance in the characters of M. de Falloux and of the seventh Earl of Shaftesbury, as well as in their sympathy with the laboring poor.

The report on the national workshops was the signal for the outbreak in June, which was suppressed by General Cavaignac, who was invested with full executive power, and who dictatorially executed the decree which the Assembly would have voted if the insurrection had not intervened; but the philanthropic proposals which were intended to accompany this measure were indefinitely postponed. The election of Louis Bonaparte to the Presidency in December, 1848, was brought about by the conservative majority in the Assembly, under definite pledges that a parliamentary Ministry should be formed, in which every faction of that majority should be represented. M. de Falloux was selected from among the Legitimist party on account of his liberal sentiments. He at first declined, although urged to accept by M. de Montalembert, M. Molé, and the Duc des Cars, and at last only yielded to the eloquent appeal of the Abbé Dupanloup, afterwards so well known as the Bishop of Orleans. He entered the Cabinet as Minister of Public Instruction and Worship, being the first Catholic Minister France had had in sixty years; and he gives the following account of the beginnings of the new Government:

"The relations between Prince Louis Bonaparte and his Ministry were at first very embarrassed and sometimes rather ludicrous. With the exception of M. Odilon Barrot, the Prince had little previous acquaintance with any of us. One might even add that, outside the small Napoleonic group in the midst of which he habitually lived, he had never been familiar with any one. He had now to become acquainted with the whole of France. Under these circumstances he felt himself exposed to every kind of slight, and his foreign accent, which the *Charivari* was always taking off, added to his embarrassment. It was easy to detect his ignorance of men and things, an ignorance one would never have expected to find in a pretender who had always aspired to govern them. He was well versed in the exact sciences, and knew much that many others did not know; but, on the other hand, he had but very little of that general knowledge which most people have at their fingers' ends. He had scarcely any correct notion of literature or art."

Within a week after taking office, the entire Cabinet tendered their resignations to the President in consequence of an extremely offensive letter he had addressed to one of their number, M. Léon de Malleville, Secretary of the Interior. The trouble was smoothed over by a formal apology written by the President, who was more cautious after this incident, and backed down promptly whenever one of his constitutional advisers seriously opposed any of his pet projects. M. de Falloux at once devoted himself to elaborating the Education Law which is associated with his name, although it was not enacted until after he had left the Ministry, and he succeeded in enlisting in its behalf men of the most opposite views. He was also the most energetic promoter of the Roman expedition. A little later, when there were difficulties in the Cabinet, he was requested by the President to form a new Ministry, but declined the task. He remarks that the President never alluded before him to a Napoleonic ambition or hope, but even one day said to him, "Show me the House of Bourbon reunited, and you will then find me quite ready to take up my hat and stick." In September, 1849, M. de Falloux, by threatening to resign because the President had published a letter to Colonel Ney which he had promised not to publish, compelled the President to eat humble pie by a public retraction. In October, M. de Falloux finally left the Ministry.

The death of Louis Philippe in August, 1850, encouraged the Royalists to hope for a fusion of the two branches of the royal family, but these were dashed by the circular issued from Wiesbaden in the name of the Comte de Chambord, which had the effect of chilling the ardor of most of his adherents. In this circular a committee of five was appointed to take charge of the Pretender's interests, but additions were shortly made to this number, and, among others, M. de Falloux was requested to join. In the meantime the Bonapartist movement assumed more audacity. The Ministry of October, 1849, containing Rouher and Achille Fould, was the first step in the new departure, and was logically followed by the removal of General Changarnier in January, 1851. A new Cabinet, formed in October, 1851, was not only chosen outside of Parliament, but was composed of obscure men without ability. The most important person in it was Saint-Arnaud, who was brought from Algiers and made Minister of War. The 2d of December, being the anniversary of the battle of Austerlitz, was chosen for the execution of the Coup d'État. Among other deeds was the imprisonment of over three hundred deputies at Mont Valérien. M. de Falloux was among the number, and relates several incidents of the occasion. The confinement lasted only three days, after which most of the deputies were liberated, but, as some exceptions were made, the others refused to accept their liberty as a privilege. As they declined to enter the omnibuses that were waiting for them in the yard, the police collared them and made them get in. The omnibuses were driven to the Place Louis XV., and the passengers were told to alight, but refused to do so, unless by force and under restraint as they had entered. The horses were thereupon taken out, and the omnibuses left standing in the street, so that their occupants had to get out and go home.

Although the Coup d'État was sanctioned by six million votes, the Royalist party consoled themselves with the reflection that the Man of December, intoxicated by success, would embark on some mad enterprise that would lead him to destruction, but they did not expect to wait twenty years for their prophecies to come true. The President, however, was more cautious than his opponents gave him credit for. Still, according to M. de Falloux, "he wrote on his desk a decree annexing Belgium after the Napoleonic manner; but the patriotic despair of M. Sauvo, editor of the *Moniteur*, sufficed to soften him and stop it."

The Royalist party continued, as before, to be split into two factions, the impracticables and the moderates. The former, with the approval of the Comte de Chambord, prescribed total abstention from politics, while the latter considered that they had duties to the country as well as to their exiled monarch. This was the view taken by Falloux; but, for personal reasons, partly connected with his health, he took no active part in politics, and withdrew to his estate, where he indulged his taste for rural life and for literature. His cattle took prizes at agricultural shows, although these things were regulated by politics under the Empire, and no one was expected to carry off a prize who was not an adherent of the Emperor. M. Rouher, Minister of Agriculture, in congratulating Falloux on gaining his first *prix d'honneur*, informed him that when the judges learned that the winning ox belonged to him, they thought they had better give the prize to another breeder; so they looked again at another ox which they had liked, and discovered that this was better than the first one, but as it turned out that the second ox also belonged to Falloux they had to award him the prize after all.

In April, 1856, Falloux was elected to the French Academy in the place of Count Molé. One of his supporters was M. Guizot, who, when some one said to him, "Read the 'History of Saint Pius V.,' and see if a Protestant can vote for M. de Falloux," replied, "As I have made up my mind to vote for him, I am not going to read his books," and, adds M. Falloux, he kept his double pledge. He also says that the declared support of Guizot was enough to alienate Thiers, who did not attend the meeting, but did not make an adverse use of his influence. On the day of his reception, the wife and daughter of M. Falloux went to the Palais Mazarin before him, and, in the excitement of the moment, forgot to send the carriage back for him.

"Time running short, I had to take a hackney carriage, and I arrived at the Institute very nervous as to the possible consequence of a delay very unlike the excessive punctuality for which I am habitually reproached. I hurried up the stairs, but on reaching the top step I perceived that I had left my speech in the carriage. I ran down the stairs quicker than I had mounted them, looking for the vehicle. It was gone, and there I was, on the pavement of the quay, in the academician's costume—a coat embroidered with green palm-leaves, a cocked-hat, and a sword—racing through the crowd in pursuit of my cab, which I finally overtook with great difficulty. My speech was lying quietly on the seat, little dreaming of the anguish it had caused me. I snatched it up, and hurried back breathlessly to join my colleagues just as the sitting was being formally opened. I knew what sorrow my wife and daughter would feel at their forgetfulness, and I kept the secret."

In 1863 and 1869 M. de Falloux was persuaded to be a candidate for the Assembly, but was defeated on both occasions. After the fall of the Empire, the Royalists again had high hopes of a restoration through the instrumentality of M. Thiers, but were disappointed, partly through the personal ambition of Thiers to remain President, and partly though the blindness and obstinacy of the Pretender, who stunned his best friends by his "white flag" manifesto of July 5, 1871. He dealt them a

similar and final blow by his Salzburg manifesto of October 27, 1873, when the Government of Marshal McMahon seemed really to promise a return of the monarchy, and a reconciliation had at last been effected with the House of Orleans. The Comte de Chambord discovered too late how great a mistake he had made, and, in order to undo the mischief, came to France incognito, went secretly to Versailles, and asked for a personal interview with Marshal McMahon. "The Marshal replied that if any danger threatened M. le Comte de Chambord he was ready to defend him at the peril of his life, but that his duty towards the Assembly and his Ministry forbade his loyalty to accept the secret interview which was demanded; and it did not take place."

We have left ourselves no room to quote any of the striking passages in which M. de Falloux describes the characteristics of the many prominent statesmen with whom he was brought into frequent and intimate contact. He is evidently animated by a sincere desire to be strictly impartial, even in speaking of his opnents. Perhaps the only person whom he mentions with any bitterness is M. Louis Veuillot, the truculent editor of *L'Univers* and *Le Monde*. Of Napoleon III. he gives a more favorable account than would have been expected. Of the genius of M. Thiers he was a warm admirer, even while at odds with his politics; of his oratory he says that "no one, perhaps, since Voltaire, has spoken the French language with as much finesse and clearness as he did." Others whom he sketches are Guizot, Berryer, Montalembert, Lacordaire, Lamartine, Cavaignac, Persigny, Odilon Barrot, Dupanloup, Lamoricière, etc., etc. Moreover, although a serious-minded man, his book does not lack the epigrammatic flavor that one naturally looks for in French memoirs.

The Book of Noodles. By W. A. Clouston. A. C. Armstrong & Son. 1888.

Wit and Humor: Their Use and Abuse. By William Mathews, LL.D. Chicago: S. C. Griggs & Co. 1888.

No one who confines his studies of humor to the jests of our forefathers will feel disposed to question Hobbe's dictum, that the cause of laughter is a "sudden glory" in ourselves at discovering some inferiority in others. The point of these jests is always the witlessness of their subjects, and it must be said that such point as they had has become somewhat blunted by the advance of civilization. We are disposed to laugh rather at the simplicity of those who could be amused at such imbecilities than at the jests themselves, and we are perhaps more likely to be overcome with pity or contempt than with laughter. There was evidently a childish period in the development of the sense of humor, and the mirth of our ancestors is often as mysterious to us as is the mirth of our children.

On this account we do not find Mr. Clouston's dainty little book very exhilarating; but it is a scholarly production. He does not attempt to trace the stories of simpletons to their original sources, but he points out the resemblances between their forms as they are found in different countries. The noodle-stories of Europe have substantially the same incidents as those found in the Buddhist and Indian books, and the tales of Iceland and Norway are repeated in Southern Italy and in the western Highlands. The 'Tales of the Men of Gotham,' an ancient chap-book, forms a convenient basis of operations for Mr. Clouston, and the noodles and boobies of numberless other lands, from Ireland to Japan, are called in to testify to the uniformity of human folly and to the meagre imagination of early humorists.

Simpletons everywhere have taken the moon reflected in water for a green cheese, and have vainly tried to rake it out—when some blundering beast has not drunk it up, with disastrous results to himself. They have everywhere tried to bottle sunshine, to raise crops of cooked food, to see how they look when they are asleep, to drown eels, and to fence in birds. The story of the Irishman who let go his hold upon the bridge in order to spit on his hands, is told even yet; but the same thing was written in Sanskrit, ages ago, and simpletons then as now sat upon branches and cut them off between themselves and the tree. A very common basis of these tales is the literalness with which stupid people follow directions, as in the case of the fool who is told to cast sheeps'-eyes at the maidens. Many of them turn upon confusions of personal identity, there having been many predecessors of the Irishman who accounted for his stupidity by his having been changed at birth. The Irish humor, indeed, is generally of a higher order than that of other peoples, and there is nothing to prevent men of all times from laughing at the story of the Irishman who was riding an ass, when the beast, in kicking at flies, got one of its hind feet into the stirrup, and the rider dismounted, exclaiming, "Faith, if you're going to get up, it's time I was getting down."

Mr. Mathews's book is of a very different character from Mr. Clouston's. The specimens of wit and humor with which it is filled are of modern origin and of modern style, while the object of the author seems to be didactic. We will not turn his quotations against him, and cite Jean Paul on the Germans—"They rig out an epigram with a preface, and a madrigal with a table of contents"—but he has really made so good a collection of *jeux d'esprit* that we fear that most readers will pay little attention to his comments. He discusses the theories of wit and humor, epigrams, puns, parody, and repartee, with many apt illustrations and with appropriate cheerfulness. His observations are generally judicious, and he introduces his stories with a good deal of cleverness. It can hardly be said that he contributes much of his own to our inheritance of witticisms, but lovers of good things will be grateful to him for the result of his pleasant labors; they will, perhaps, find his book less cloying than it would have been had he made it a mere compilation. The wit is more digestible for an admixture of grave matter.

The Law of Equivalents in its Relation to Political and Social Ethics. By Edward Payson. Boston: Houghton, Mifflin & Co. 1888. 8vo, pp. 306.

THE Law of Equivalents is a new and fanciful name for the principle of the uniformity of nature, or for the statement that every event must have a cause. It is a curiosity of literature to come upon a book which does not belong to the domain of abstract logic, and which is yet devoted, with a great deal of energy and fire, to proving that events are preceded by their causes. No serious-minded critic could take exception to the soundness of this doctrine; and if there are people who have not yet been convinced of its truth, they will doubtless find a great deal to interest and instruct them in Mr. Payson's pages. It is plain that there is no subject under heaven which might not be used to enforce and illustrate this general thesis, and we are therefore prepared to find that there are few subjects under heaven which our author has not touched upon. All his own views in regard to society and politics are easily defended by saying that the means which he recommends for attaining to virtue and happiness are equivalents, and by denying that sacred name to the means recommended by his opponents. When hard pushed, he even goes so far as to say that those who oppose him reject the Law of Equivalents itself. Of Carlyle he says: "The Scotchman evidently does not believe in the Law of Equivalents." And again: "I suspect Mr. Macaulay did believe in the law." The value of his own views in regard to questions of any intricacy may be gathered from this specimen of his political economy:

"Society depends upon and flourishes by the luxurious and extravagant, and even vicious, habits and indulgences of its members. . . . By far the greater part of the revenues of the three most civilized nations now living are drawn from tobacco and spirituous liquors. . . . So, too, the more innocent luxuries of life for the gratification of appetite and costly apparel . . . furnish employment for myriads of idle hands, and assist in the distribution of that wealth which ever tends to great centres."

This, our author says, is trite enough, but he neglects to say that it is untrue.

After noting (p. 241) the regard in which the author holds superstition even, in preference to a cheerless no-faith, one is not surprised to find that he has a great distaste for woman suffrage, and that he considers all its advocates to be very poor creatures. A large part of the book is taken up with proving that women are so pure and good that it is not fitting for them to take a part in the government of their country. He believes that woman is an interpreter to man of vast stores of wisdom which, but for her, would forever remain undisclosed; that there is no substitute for woman's instinct; that instinct is better than the highest reason in that it never misleads its followers. What, then, will he say to the fact that the Woman's Christian Temperance Union of Maryland, a very saintly and a very feminine body of women, has lately declared itself to be in favor of woman suffrage? There seems to be nothing for him to do but to yield to the clear instincts of these admirable women.

Orient and Occident: A Journey East from Lahore to Liverpool. By Maj.-Gen. R. C. W. R. Mitford. With illustrations. London: W. H. Allen & Co. 1888. Map. Pp. iv, 359. 8vo.

GEN. MITFORD chose to return to England from India by the way of Japan and the United States, instead of the Suez Canal, and accordingly feels qualified to write a book. He saw nothing which had not been described equally well hundreds of times before, and the only value his book has is that it gives, in a readable way, the impressions which certain parts of two rapidly changing countries made on a traveller in the year 1886. The reader will be disappointed if he expects to find in it the intelligent and profitable criticism of a keen and well-informed observer, especially where our own country is concerned. The author's irrepressible insular prejudices give a spice, not of novelty, but of personality to his account. In Japan he is struck with the preponderance of German influence. Many of the Yokohama shops "had their Japanese signs translated into German only, while in all notices which appeared in foreign languages, German held the first place. Next in frequency, and not far behind, came Russian. English and French followed after a long interval," and Portuguese brought up the rear. He also notes that which distinguishes this part of Japan from every

other country, the absence of pastures, and consequently of cattle and flocks. "Milk, butter, cheese, and mutton are unknown, except as importations—the first three in a condensed and tinned shape from Europe, the last from the Korea." An attempt was being made to start a dairy and a "mutton-club," which it was feared would fail from want of pasture. "Not only is every available scrap of land near the town under cultivation, but the indigenous grasses are quite unfit for sheep pasture." This is not true, however (as the author seems to think), of other districts, where cattle and goats are raised in considerable numbers. Gen. Mitford's experiences in the United States were of the ordinary character, and do not call for especial notice, unless we except this remark, that in his opinion the best shops in New York are "about on a par with those of Brighton or Scarborough." A delicious illustration of the manner in which the average Englishman manages to take from an American story all its characteristic humor, is given in the author's attempt to tell what the New York Alderman said on the proposition to put a gondola in Central Park. The worthy city father's terse "Why not put in two and let 'em breed?" becomes, in Gen. Mitford's version, "A pair of gondōlas should be got till we see how the climate of our great country suits them." Of the illustrations, which are "from sketches by the author," we can only say that his style and skill are much better suited to portray Bunker Hill Monument than the Yosemite or Niagara.

Power and Liberty. By Count Leo Tolstoi. Translated from the French by Huntington Smith. Thomas Y. Crowell & Co., 13 Astor Place.

THIS work of Count Tolstoi's, we are informed by the translator, has never appeared in Russia. It is difficult to imagine why it should not. A more harmless book it would be difficult to conceive of, or one more remote from any popular interest or revolutionary tendency. It is only a more abstract and impersonal rendering of the same ideas that appeared in the author's 'Napoleon and the Russian Campaign,' in which the pendulum of speculation swung to the furthest possible point opposed to Carlyle's great-man theory of history. Our criticisms upon that book will make any criticism upon this superfluous for readers who have the first in mind. As the contention there was that Napoleon had nothing to do with the Russian campaign, so it is here that the great man in general is a figment of historical imagination. So radical is the Count that, between Buckle, who has been considered heretofore as the grand opponent of the great-man theory, and Gibbon, he has nothing to choose. Buckle turns out to be another "great man" theorist, only his great men are orators, men of science, philosophers, and poets, where Gibbon's are monarchs, generals, and statesmen. Equally objectionable to Count Tolstoi is the theory that the real power in history is the popular will, and that this expresses itself in great men. He cannot make out the connection between the popular will and its supposed exponents. Some of his pages on the contradictions of historians are bright enough, but they are for the most part based on travesties of actual histories.

In the discussion of free will and necessity, it is not unlikely that the reader is embarrassed by the transmission of the author's thought through a foreign language. There is much that is obscure, and some things that are plainly contradictory. The subjective aspect of all actions is liberty, the objective aspect is necessity. The idea that actions are subject exclusively to the law of necessity is, we are assured, as untenable as the idea that man's acts are absolutely free. But liberty is for the metaphysician, necessity for the historian. "In history, what we know we call necessity; what we do not know, we conceal under the name of liberty. In history, liberty is what we do not know about the life of humanity." History, following the example of the other sciences, must give up the search for causes, and seek only for laws. Just as astronomy found it difficult to give up its belief in the immobility of the earth, so history finds it difficult to give up the idea of personal independence, and to acknowledge that man is subject to the laws of time, space, causality. But as the astronomer was landed in an absurdity by the earth's immobility, so is the historian by his idea of independence; each must give up an apparent reality for something imperceptible which enables them to establish laws. This is the conclusion of the whole matter.

The book is written in a series of disjointed propositions, whose perpetual *staccato* is extremely disagreeable and almost paralyzing to the mind. As a plea for a broader treatment of history than we have generally had of late, the book may have some value; it would have much more if it were not so negative. It finds fault with all other methods: it gives us no example of its own. When Count Tolstoi has written a history according to the canons here laid down, it will be interesting to compare it with Gibbon and Freeman and Buckle, and some others, and see which we prefer. Our impression is that Count Tolstoi's will seem very thin and cold and bloodless in the comparison.

The translator of 'Power and Liberty' finds in it, as in 'Napoleon and the Russian Campaign,' the "ground-swell of humanity and the aspiration for freedom." There is more charity than truth in this. The majority will find in it little more than cold and windy speculation, and a new reason for wishing that Count Tolstoi would return to novel-writing at no distant day, not merely that he may give us greater pleasure, but also that he may do us greater good.

Incidents in the History of the Honourable Artillery Company. Being an Abridged Version of Major Raike's History of the Company from its Incorporation in 1537 to the Present Time (1887), and including also a Brief History of the American Branch of the Regiment, Founded in 1638, and known as the Ancient and Honourable Company of Boston, Mass., U. S. A. By Captain Woolmer-Williams. London: Richard Bentley & Son. 1888. Pp. 203.

CONSIDERING that the Artillery Company of London and its Boston offshoot have never been in action officially, and that the history by Major Raikes had covered all the interesting matters of this civic body occurring prior to 1878, it will be sufficient to say that the interest in the above-cited pretty volume is confined to its American portion. Various civilities have passed between the London and Boston bodies. In 1887 the commander of the Boston company, Colonel Henry Walker, with several other members, attended by invitation the 350th anniversary at London of the formation of the corps. In return, in May, 1888, Captain Woolmer-Williams and some associates formed a prominent feature in the interesting ceremonies at Boston, attending the 250th anniversary of the establishment of the American branch.

Although, as we have said, neither body as such has any military record, they have not been composed of "carpet-knights." In Boston the Artillery Company was founded as a school for officers, and, for most of its term of existence, membership was confined to them. Of course, also, the members for the first two hundred years consisted of men who had taken part in the unceasing frontier wars. Since the great Rebellion, many veterans have figured on its rolls; and, in fact, the roll of services of its various members throughout would compare favorably with that of many regiments of regular troops in England. The present book is a very satisfactory testimony to the cordial relations existing between the two bodies. Its illustrations are interesting and appropriate, and the historical sketch contains enough to satisfy the ordinary reader.

HENRY HOLT & CO., Publishers, New York.

Notre Dame de Paris

By VICTOR HUGO.

Superb Edition de Luxe.

Messrs. ESTES & LAURIAT of Boston and Mr. W. R. JENKINS of New York announce a magnificent illustrated edition of VICTOR HUGO'S great historical romance. The Boston house presents the work in English—a new translation by A. L. Alger—while Mr. Jenkins retains the original French, making his the first French *edition de luxe* published in America.

In every other respect the editions are identical, and are superb specimens of bookmaking. The illustrations, nearly 200 in number, are from original paintings by the celebrated artists, *Rossi Bieler* and *de Myrbach*, 16 of them being aquarelles, printed in colors especially for the work in Paris. The work is printed at the celebrated University Press of Cambridge.

Both the French and English editions make two beautiful octavo volumes, and are each limited to 500 numbered copies.

100 copies on Imperial Japan paper, colored plates in proof on Japan paper, in two satin portfolios, French text or English, the set, $20.00.

400 copies on satin finish paper, half morocco, Roxburgh style, French text or English, the set, $12.00.

Illustrated specimens sent free. Application for copies in English should be sent to ESTES & LAURIAT, *Boston; for copies in French to* WILLIAM R. JENKINS, *851 and 853 6th Avenue, New York.*

"*The large type, the broad page, the substantial and tasteful binding of these volumes give them an appearance of finality. No one certainly could desire to possess the works which have appeared in this edition in any more elegant or substantial form.*"—Christian Union.

GEORGE ROUTLEDGE & SONS,

9 LAFAYETTE PLACE, NEW YORK.

ANGLO-SAXON DICTIONARY.

Based on GROSCHOPP'S GREIN, edited, revised, and corrected, with Grammatical List of Irregular Verbs, and brief Etymological features. By James A. Harrison, Professor of English and Modern Languages in Washington and Lee University, Virginia, and W. M. Baskerville, Ph.D., Lips., Professor of English Language and Literature in Vanderbilt University, Nashville, Tenn.

In the course of the work, the authors have found it necessary to introduce several new and important features, which, it is hoped, will increase the value of the book as a practical Lexicon, and commend themselves to the students of Anglo-Saxon. These are:

1. A Grammatical Appendix intended to convey in brief but explicit form a working *Outline of Anglo-Saxon Grammar*, such as students often find it convenient to consult in the process of their language studies.

2. Cognate words from the Icelandic, Gothic, Old High German, and Modern German, intended to show some of the etymological connections of the Anglo-Saxon vocabulary.

3. A list of Irregular Verbs occurring in Anglo-Saxon poetry.

4. The use of *Antique Type* in the definitions of words, by which the modern English derivative may be directly traced to the Anglo-Saxon original.

Sent postpaid on receipt of $3.00 by the publishers.

A. S. BARNES & CO.,

PUBLISHERS,

Signed proofs of these plates cost respectively from $8 *to* $80. *Frederick Keppel & Co.'s descriptive catalogue for* 1888, *containing* 24 *illustrations of the etchings, will be mailed on receipt of* 10 *cents in postage stamps.*

HOUGHTON, MIFFLIN & CO.'S
SATURDAY BOOKS.

Ancient Rome in the Light of Recent Discoveries.

By Rodolfo Lanciani, Professor of Topography in the University of Rome, and Director of the Roman Museum. With about 100 Illustrations. 8vo, tastefully bound, $6.00.

The excavations which the Italian Government has made since 1871, under Professor Lanciani's observation and direction, are here described. They have brought to light the Forum, the House of the Vestal Virgins, the Palace of the Cæsars, the walls of the Senate House, and multitudes of statues, inscriptions, and other objects of great historic interest.

The Critical Period of American History, 1783-1789.

By John Fiske, author of 'Myths and Mythmakers,' 'Outlines of Cosmic Philosophy,' etc. With a colored Map. Crown 8vo, gilt top, $2.00.

Mr. Fiske here treats the obscure period between the close of the Revolution and the adoption of the Constitution. It is based on profound research, and written with so much force and clearness as to be exceedingly interesting.

Young Sir Henry Vane.

By James K. Hosmer, author of 'Samuel Adams,' in the series of American Statesmen. With a portrait of Vane, plans of the Battles of Marston Moor and Naseby, a facsimile of a letter by Vane, and a copy of the Great Seal of the Commonwealth under Cromwell. 8vo, gilt top, $4.00.

A book of great historic and biographical interest, based on careful and extended research, and written in an engaging style.

Ireland Under Coercion.

The Diary of an American. By William Henry Hurlbert. Crown 8vo, $1.75.

Mr. Hurlbert's conclusions and criticisms are worthy of all attention; but we attach still greater value to the book as a collection of evidence on the present phase of the Irish difficulty, the genuineness of which it would be idle to impeach.—*London Times.*

On Horseback.

A Tour in Virginia, North Carolina, and Tennessee, with Notes of Travel in Mexico and California. By Charles Dudley Warner, author of 'In the Levant,' 'My Summer in a Garden,' etc. 16mo, $1.25.

Like Mr. Warner's other volumes of travel, this book is full of information, fine observation, and delicious humor.

Flowers and Fruit.

From the Writings of Harriet Beecher Stowe. 16mo, $1.00.

A Blockaded Family;

Or Life in Southern Alabama during the Civil War. By Parthenia Antoinette Hague. 16mo, $1.00.

A book of great interest, describing the expedients resorted to by the people of blockaded districts to procure the necessaries of life.

Our Phil and Other Stories.

By Katharine Floyd Dana. With illustrations by E. W. Kemble. 16mo, $1.25.

An available holiday book containing three stories so good and so well told that they are altogether worthy of being brought out in this permanent and attractive form.

*** *For sale by all Booksellers. Sent by mail, post-paid, on receipt of price by the publishers.*

By James Bryce, M.P., D.C.L.

THE AMERICAN COMMONWEALTH. By James Bryce, D.C.L, M.P., Regius Professor of Civil Law in the University of Oxford, and author of 'The Holy Roman Empire.' 2 vols., large crown 8vo.

PRINCIPAL CONTENTS.—National Government—State Government—Party System—Public Opinion—Illustrations—Social Institutions. *Shortly.*

By the Author of 'John Halifax, Gentleman.'

CONCERNING MEN; and Other Essays. By the Author of 'John Halifax, Gentleman.' 12mo, $1.25. *Ready November 17.*

By Richard Holt Hutton.

THEOLOGICAL ESSAYS. By Richard Holt Hutton, M.A., Author of 'Essays on Some of the Modern Guides of English Thought in Matters of Faith.' Third Edition, revised. Globe 8vo, $1.50,

LITERARY ESSAYS. By the same Author. Third Edition, Revised and Enlarged. Globe 8vo, $1.50.

By Henry James.

THE ASPERN PAPERS; and Other Stories. By Henry James, Author of 'The Americans,' 'Daisy Miller,' 'The Princess Casamassima, etc., etc. 12mo. $1.50.

"In the "Aspern Papers' Mr. James exhibits an unequalled skill in evolving interest out of the minimum of material. . . . Mr. James has contrived to weave a story which is full of a light and delicate interest, which gives pleasure by the refined and subtle dissection of almost infinitely little things, which is marked by quiet humor, and which contains a great deal of admirable psychical analysis."—*New York Tribune.*

"It is as a short story writer that we think Mr. James appears at his best, and in this volume he may be read in his most attractive and most artistic vein. . . . When he wri es on the limited scale to which he has proportioned these three clever stories, his wit, his sarcasm, his fine touches of humor, and the sharp outlines of his character ske ching gain by the comparison."—*Boston Saturday Evening Gazette.*

EDINBURGH: Picturesque Notes. By Robert Louis Stevenson, author of 'An Inland Voyage,' etc. With illustrations. New edition. 12mo, $1.25.

"Well deserving of a new issue, for it is instinct with the characteristics which are most attractive in Mr. Stevenson's writings. The 'Notes' are really picturesque. They are written in the easiest possible style, are pleasantly discursive, enlivened by local legend and anecdote, full of quaint conceits and bright bits of scenic description, and breathe throughout a love of Caledonia."—*New York Tribune.*

PLATO. Phœdrus, Lysis, and Protagoras. Translated by the Rev. Josiah Wright, M.A. (Golden Treasury Series.) 16mo, $1.25.

A TREATISE OF HUMAN NATURE. By David Hume. Reprinted from the Original edition in three volumes, and edited, with an Analytical Index, by L. A. Selby-Bigge, M.A. Oxford, Clarendon Press. 12mo, $2.25.

THE THEORY AND PRACTICE OF ABSOLUTE MEASUREMENTS IN ELECtricity and Magnetism. By Andrew Gray, M.A., F.R.S.C., Professor of Physics in the University College of North Wales (in two volumes). Vol. I, 12mo, $3.25.

EXAMPLES IN PHYSICS. By D. E. Jones, B.Sc., Lecturer in Physics in University College, Aberystwyth. 16mo, 90 cents.

PRACTICAL LOGARITHMS AND TRIGONOMETRY. By J. H. Palmer, Master of the Royal Naval School of Gunnery. 16mo, $1.10.

ELEMENTARY STATICS. By the Rev. J. B. Lock, M.A., Teacher of Physics in the University of Cambridge. 16mo, $1.10.

THE HISTORY OF MATHEMATICS. By W. W. Rouse Ball, Fellow and Assistant Tutor of Trinity College, Cambridge. 12mo, $2.60.

EXPERIMENTAL MECHANICS. A Course of Lectures delivered at the Royal College of Science for Ireland. By Sir R. S. Ball, M.A., Astronomer Royal for Ireland. New edition. With illustrations. 12mo, $1.50.

EXAMPLES FOR PRACTICE IN THE USE OF SEVEN FIGURE LOGARITHMS. By Joseph Wolstenholme, D.Sc., Professor of Mathematics in the Royal Indian Engineering College. 8vo, $1.25.

Price, 15 Cents; Annual Subscription, $1.75.

UNIFORM EDITIONS.

THE MAN WHO LAUGHS. By Victor Hugo. With 140 illustrations from designs by D. Vierge and G. Rochegrosse. 2 vols., royal 8vo, cloth, $6.00.

NINETY-THREE. By Victor Hugo. With numerous illustrations from designs by Victor Hugo, Bayard, Brion, Vierge and other eminent French artists. 2 vols., royal 8vo, cloth, $6.00.

NOTRE-DAME. By Victor Hugo. With numerous illustrations from designs by Victor Hugo, Bayard, Brion, Johannot and other eminent French artists. 2 vols., royal 8vo, cloth, $6.00.

THE TOILERS OF THE SEA. By Victor Hugo. With 150 illustrations from designs by Chifflart, D. Vierge and Victor Hugo. 2 vols., royal 8vo, cloth, $6.00.

With 'The Man Who Laughs' and 'Ninety-Three' is completed the publication of this edition of Hugo's great romances, begun two years ago with 'Les Miserables' (now sold only through McDonnell Bros. of Chicago). In all that goes to the making of really fine editions—heavy and rich paper, profuseness and splendor of illustration, the highest skill in engraving, the utmost care in presswork, and appropriate and tasteful binding—the publishers are confident that no existing edition can in any respect be compared with this.

"Hugo, with his erudition and his passion, his knowledge of all the chords of the human heart, a knowledge which depends as much upon sympathy as upon intellect, is one of the great masters whose places along the centuries will always be few and far between."—*New York Journal of Commerce.*

UNIFORM WITH THE HUGO EDITION.

THE WANDERING JEW. By Eugene Sue. With 182 illustrations from designs by A. Ferdinandus. 3 vols., royal 8vo, cloth, $10.00.

"It is printed in the same sumptuous style as the works of Hugo and Dumas, which this house has published, and is in every way a fitting complement to these masterpieces of French literature which have been issued by this house in the present and previous years. The illustrations are all by the same artist, Ferdinandus, and therefore preserve throughout a unity of conception and design which cannot be achieved when various hands have been engaged on one and the same work."—The Publishing World.

UNIFORM WITH THE HUGO EDITION AND WITH 'THE WANDERING JEW.'

THE COUNT OF MONTE-CRISTO. By Alexandre Dumas. With nearly 500 illustrations from designs by G. Staal, J. A. Beuce and other eminent French artists. 5 vols., royal 8vo, cloth, $15.00.

"One of the most perfect and beautiful publications of the season is the superb new edition of the standard English version of 'The Count of Monte-Cristo' published by the Routledges of this city and London—a worthy member of that list of standard foreign fiction, especially of a classical rank, which this house is augmenting each month."—The Independent.

THE ROMANCE OF A POOR YOUNG MAN. By Octave Feuillet. With 100 illustrations and portrait of the author. From designs by Mouchot, engraved by Méaulle. 4to, tapestry covers, in a box, $7.50.

The tapestry binding with stamped colored designs, the heavy richness of the paper, the beauty of the open typography, Mouchot's carefully studied and well drawn illustrations and their skilful and artistic engraving by Méaulle combine to make this edition everything that a fine edition of such a work should be.

NEW PUBLICATIONS.

HER ONLY BROTHER.

Translated from the German of Heimburg (Bertha Behrens). One vol., 12mo, $1.25.

An interesting story of German country life. Those who like the pure, healthy fiction of the German school, where dramatic effect is attained by working on simple lines, will be enthusiastic over this book, which has attained immense popularity in Germany.

WHAT TO DO.

An Unabridged Translation from the Russian of Count Lyof N. Tolstoï. In paper covers, 50 cents.

A friend and disciple of Count Tolstoï, having had access to the original MS. of this extraordinary work, made a new and complete translation of it. In its present inexpensive form, the American people have an opportunity to learn the views of the great Russian humanitarian in regard to abolishing beggary, class distinctions, and the abuses of society, and ameliorating the condition of his fellow-men. The views are presented with thrilling eloquence and honesty, and will interest all who think.

SCOTCH CAPS.

By J A K, author of The Riverside Museum, Birchwood, Fitch Club, Giant Dwarf, etc. 12mo, $1.25.

The increasing popularity of this author, whose books for young people have been warmly recognized for their freshness, originality, and good sense, and have met with unqualified success with the young, insures a good demand for this, her latest story, which will be found of the same standard quality and merit as the six already published.

LIMITED LARGE-PAPER EDITIONS.

I. FIFTY YEARS OF ENGLISH SONG. Selections from the Poets of the Reign of Victoria, with biographical and historical notes. Edited and arranged by Henry F. Randolph. Large-paper edition, small 8vo, limited to *two hundred and fifty copies.*

We praised last year on its appearance the 'Fifty Years of English Song.' This anthology of the Victorian era we found to be admirably selected and annotated, and most carefully printed. . . . It has since been, with good reason, thought worthy of promotion into a large-paper edition in the same number of volumes, but with a limitation to two hundred and fifty copies. The result is an extremely dainty set.—*Evening Post.*

4 vols. Small 8vo. Boards. $10.00.

II. HISTORICAL MEMORIALS OF CANTERBURY. By Arthur Penrhyn Stanley. Uniform with the large-paper edition of the 'Memorials of Westminster Abbey.' This book, like the one of last year, has been printed in the best style of the University Press, and contains, in addition to the illustrations of the English edition, a fine etched portrait of Dean Stanley. The edition will be strictly limited to six hundred numbered and registered copies, and considering the elegance of manufacture, is sold at a reasonable price.

Small 8vo. Half cloth. $3.00.

Specimen pages sent on application.

Anson D. F. Randolph & Co.,

38 West 23d St., New York.

Stability, Experience, Protection, and Provision for the Future,

all combined in the new policy of the

MANHATTAN

LIFE INSURANCE COMPANY

OF NEW YORK.

ORGANIZED - - 1850.

This old Company now offers to the public its new

SURVIVORSHIP DIVIDEND PLAN,

Which affords all the advantages of Life Insurance during the earlier years of life, and at the same time makes a provision for old age, as the Policy-holder can surrender his Policy at the end of the Survivorship Dividend Period, and receive its full value in cash—thus combining INVESTMENT and PROTECTION.

Any information cheerfully furnished.

Covers for the Nation,

in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to XLVI., *i.e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering, state the volume-number wanted.

Address Publisher of the *Nation*, Box 794, New York.

Superb Art Books

ENDYMION.

By John Keats. Illustrated by W. St. John Harper. The Gift-Book of the Year. This beautiful poem is now presented in the superb setting it deserves, being illustrated by numerous photogravures from drawings made for this art edition, by W. St. John Harper, and printed in delicate tints in connection with the text. It has an appropriate cover, in novel style, and is the most artistic triumph in book-making ever achieved. 1 vol., royal quarto; cloth, $15.00.

FAIRY LILIAN.

By Alfred (Lord) Tennyson, together with twelve of his most popular short poems, illustrated under the supervision of George T. Andrew, by the most distinguished artists of the day. The volume is a marvel of the printer's art, showing on each page a delicate border in tint surrounding the illustration border printed in black. 1 vol., quarto, cloth, gilt, $6.00; full seal, $8.00; calf, $13.00.

EUROPEAN ETCHINGS.

A collection of 20 etchings by the most noted artists of Europe, such as Volkhart, Grotiohann, and others, with descriptive and biographical text. Royal quarto, beautifully bound; edition limited to 355 copies, of which there are 250 copies proofs on Holland paper, in half blue morocco, $15.00.

GEO. ELIOT'S POEMS.

Limited Edition. A superb and complete edition, printed from new, large type, on hand-made linen paper, at the University Press, illustrated with 13 artist proofs on Japan paper, of photo-etchings and etchings by the best known American artists. The edition is strictly limited to 200 numbered copies. 1 vol., 8vo. genuine parchment, $7.50; cloth, $6.00.

*** For sale by all booksellers, or sent, prepaid, on receipt of price by*

Estes & Lauriat, Publishers,

BOSTON.

Holiday and Wedding Presents that are Sure to Please.

High class Etchings, tastefully framed, are veritable works of art, and are of permanent value. Frederick Keppel & Co., 20 East 16th St., Union Square, New York, are glad to announce that among their newly published Etchings are FIVE which have won prizes at the Paris Salon of this year. Signed proofs of these plates cost respectively from $8 to $80. Frederick Keppel & Co.'s descriptive catalogue for 1888, containing 24 illustrations of the etchings, will be mailed on receipt of 10 cents in postage stamps.

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

FOREIGN BOOKS.—Russian, Polish, Hungarian, Swedish, Danish, Hebrew, French, German, etc. H. ROSENTHAL & CO., 14 Cooper Union, N.Y.

Scribner & Welford's NEW BOOKS.

Correspondence Between Wagner and Liszt (1841-1861).

Translated from the German by Dr. Francis Hueffer. Two vols., large crown 8vo, cloth, $5.00.

This Correspondence gives us a deeper insight into the character and aspirations of Wagner than any other existing biography of the master. These letters take the same rank of importance in Music as those of Goethe and Schiller in Literature, and will be of permanent value.

The Works of George Borrow.

Post 8vo, 5 vols., cloth, $5.00.

"The career and works of George Borrow are well worthy of study. He may have been 'a vagabond' by taste and habit, but he was eminently a Christian and a gentleman, and many men have earned greater name and fame without half his claims to the gratitude of society."—*Saturday Review.*

I. THE BIBLE IN SPAIN; or, the Journeys and Imprisonments of an Englishman in an attempt to circulate the Scripture in the Peninsula. With portrait.

BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon). 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

**** *The above sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested. New catalogue of choice and rare books ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

PUBLISHED TO-DAY:

A History of French Painting.

From its Earliest to its Latest Practice. Including an Account of the French Academy of Painting, its Salons, Schools of Instruction, and Regulations. By C. H. Stranahan. With full page reproductions of sixteen representative paintings. One vol., 8vo, $5.00.

The comprehensiveness of Mrs. Stranahan's book makes it a noteworthy addition to the literature of art, every phase of the subject being treated with detailed fulness, and the work thus filling a place hitherto vacant. In character it is biographical, historical, critical, and descriptive, the origin and growth of the different schools and their relation to each other being clearly explained. Not only the masterpieces of French painting, but almost all works of either individual interest or historical importance are critically described, and their location in public and private galleries is pointed out. Its usefulness as a book of reference or for general reading is combined with an attractiveness, through its illustrations and artistic cover, that makes its publication at this season peculiarly fitting.

Dogmatic Theology.

By William G. T. Shedd, D.D., Roosevelt Professor of Systematic Theology in Union Theological Seminary, New York. Two vols., 8vo, $7.00.

Dr. Shedd stands at the head of the defenders of the older Calvinistic theology, and also in the very front rank of modern writers upon the more scientific and speculative side of theology. His latest work is the culmination of his life-long investigations in this field, and is closely connected with his previous works. Profound in thought and vigorous in style, it is worthy of the most careful attention by every student of modern theology.

First Harvests.

An Episode in the Life of Mrs. Levison Gower. A Satire without a Moral. By F. J. Stimson. 12mo, $1.25.

'First Harvests' is a panorama of New York life; its characters are drawn from both top and bottom of the social scale. Those who remember 'Baby' Thomas in 'The Crime of Henry Vane,' will take an interest in seeing her way of life in 'First Harvests'; while in Flossie Gower and Arthur, the protagonists, in Gracie, Jenny Starbuck, and Durwent, true aims and false, low lives and high, are intermingled.

A SUPERB PORTRAIT OF

Mrs. Humphrey Ward,

Author of 'Robert Elsmere,' with an authorized sketch of her life and literary career, appears in the November BOOK BUYER, just out. Also, portrait and sketch of MARGARET DELAND, author of 'John Ward, Preacher,' and 30 pages of bright literary news, with 15 beautiful illustrations. Price, 10 cents. The BOOK BUYER will be sent for 10 cents to any address by

CHARLES SCRIBNER'S SONS.

NEW YORK.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 22, 1888.

The Week.

THE talk of some of the Democratic organs, when their tongues were loosened after the election, shows how much President Cleveland, with all his faults, as long as he was supposed to be a power, did to keep down the baser element in his party and raise the party aims. One of the most ruffianly of them, which pretended to support him during the canvass, no sooner was assured of his defeat than it poured on him a flood of blackguard personalities which would have disgraced a Sixth Ward pothouse. Others began to ridicule his attempts to reform the civil service or the tariff, and to abuse the Mugwumps for supporting him in his attempts to give the party a creed, or indeed furnish it with a reason for existing — something which before Cleveland's day it was a little difficult to discover. Hill they admire as an ideal politician, and towards him they have the kind of tenderness which mothers have for cripples and idiots. They love him for his defects and his vices.

There are two little amusements in which the more childish orators and editors of the victorious party are now apt to indulge in after a Presidential election. One is abuse of the Mugwumps, and announcements that they will be heard of no more ; the other is the "presentation of names" for "Cabinet positions." The first is simply silly, but the last has a touch of pathos about it which makes one unwilling to laugh at it. Nearly every country town has a man of some local note—a lawyer, or judge, or business man who dabbles in politics, or an editor or professor with some reputation for scholarship or for habits of reading or reflection—who has for some reason failed, to the great surprise of his fellow-townsmen, to make his name known outside the district, and to whom political managers pay little or no deference. He is nearly always, too, a modest man, who does not blow his own trumpet, so that the guardianship of his fame is left wholly to his immediate neighbors. Occasions for paying tributes to his worth are, of course, rare ; and when his party wins the Presidency, the presentation of his name to the President-elect and to the public for a "Cabinet position" becomes a sort of sacred duty. It is discharged sometimes simply by an article or letter in the local paper, showing what a master stroke of policy it would be to put our distinguished fellow-townsman at the head of the State Department or the Treasury; more rarely by the despatch of a delegation to see the new President in person, and "urge his claims." Probably nobody who takes part in this touching ceremony has the smallest expectation of seeing the enterprise succeed. Everybody knows that the President is, and ought to be, absolute master of the situation, and makes his own selections for the Cabinet. But for two or three months there is, for this particular purpose, a sort of poetic suspension of the Constitution, and the business of making up a Cabinet is transferred to the region of romance ; the horns of Elfland blow, and there is a grand parade of modest merit, and we all see for once what Cabinets would be in an ideal State, where talent and virtue alone obtained "recognition."

That the cause of civil-service reform in the Federal service has little to fear and much to hope from General Harrison, might fairly be inferred from the news from Indianapolis touching the pressure of the office - seekers, already begun, even if his character and promises gave no guarantee on the subject. He will be compelled, for self - protection, if for no other reason, to enforce the letter of the law with regard to the classified service, and apply it, in spirit at least, to the unclassified. The eagerness for places displayed by the victors is already so great that the Republican organs are calling on them for the exercise of patience and self - restraint. When their appetite is so sharp after four years' exclusion, we may guess what it would be after twenty - five years' exclusion, such as the poor Democrats had suffered in 1884. We suspect that, by the 1st of April next, both President Cleveland and his party will stand higher in Gen. Harrison's estimation then they do now. Good Republicans who found fault with them for not living up to their professions about patronage, did not know what it was to deal with 200,000 or 300,000 ravenous office-seekers, and no Republican President since Lincoln has had any experience of it. As the country grows in wealth and population, these predatory hordes increase in number and violence, and any President who means to retain a shred of conscience or self-respect must bar the doors against them.

Wherever a test is made for traces of the "cyclone of fear" among wage-workers, they are not to be found. No matter whether the area of whole States be chosen, like New Jersey and Connecticut, or separate portions of large or small towns, the result is the same: the workingmen were not frightened and the employers were. A private letter from Piqua, Ohio, says: "The free-trade scare did not lose us votes in the 'laborers' wards,' but did somewhat in the business and residence portions. At least 1,000 of our population, which is 10,000, are employed in shops, and their employers did work hard—especially the owners of the linseed-oil mills, of which there are four in the city—to influence them." When the farmers shall get as wide awake as the operatives are, the shares in the Trust will lose more than the considerable advance which they have made since the result of the election was known. On the other hand, equally persistent are the evidences of unusual corruption of voters, especially in the rural districts. We have note of one little New York town where $350 was spent, and forty votes were bought, the greater number of which belonged naturally to the Democratic party. It was all very open: one of the buyers showed a list of twenty-one votes which he purchased on election day. The same thing was done in the two neighboring towns; in one of them—a farming town—sixty votes were known to be bought, and the town, which is generally "doubtful," gave Gen. Harrison 130 majority. Our advices show that this state of facts existed generally throughout the central portion of this State.

It is useless to deny or evade the fact that the vote has shown that the farmers, on whom the tariff-reformers relied with some confidence, and from whom the Republicans expected but little, are at present either opposed to or indifferent to changes in the tariff, and that no serious change can be made until they are won over. Winning them over is a much more difficult matter than the winning over of the "wage-workers." Of all classes of civilized men, the farmer has from the earliest ages been hardest to persuade. His mind, like the mind of every man who lives in the country, is apt to get stiffened by want of contact with his fellows, by hard work, often solitary work, in the open air, by inability to find much time or wakefulness for reading, and by the monotony of his calling, all the phenomena of which recur with almost unbroken regularity. There is no class on which habit lies more heavily, to which the old ways seem safer, to which novelties, including new ideas, seem so suspicious, and which is so loath to hear more than one side of a debatable question. These difficulties might be overcome, however, by tact and persistence. The farmer is hard to persuade, but he is not unpersuadable. All farmers are not like the English farmer who, during the Anti-Corn Law agitation, "thanked God he was not open to conviction."

But there is, in addition to these difficulties, the very great one that the American farmers cannot be reached easily with speeches or documents. To get up a meeting of operatives or mechanics in a manufacturing centre is an easy matter ; they are all on the spot, and eager to gather and listen in the evening to any one who has anything to say to them. Farmers live far apart, and have to travel miles over bad roads to attend meetings. The evening, when they are tired and reluctant to leave home or use their horses, is their only leisure time. Moreover, they are not eager readers of more than one newspaper, which, in this State, among Republican farmers, is apt to be the *Tribune*, which most of them suppose to be the same kind of paper as when Horace Greeley edited it. They take its humbug and its cant with the same guileless

simplicity with which they took Greeley's fervor and enthusiasm, and swallow without suspicion a thousand bits of imposture which a dweller in cities detects at a glance. To describe the situation fully, we must add that it is among the farmers mainly that the passions of the war and suspicions of the South still linger, and that the cause of reform was therefore weighted among them by the fact that the Mills bill was framed by and found its ablest defenders among Southerners. It had, therefore, in the rural districts to contend, not only with the farmer's ordinary fear of change, but his fear of change proffered by hands which he cannot help still considering hostile. These are assuredly not insuperable difficulties, but they cannot be attacked too soon. The task of reformers during the coming winter should be to win over the rural districts by appropriate missionary work. If the farmer will not come to the missionary, the missionary must seek him out during his least busy season, and if he will not buy tariff literature, see that he finds plenty of it to his hand for nothing.

The Young Men's Democratic Club of Massachusetts has published the report of its treasurer of the receipts and expenditures of the club during the recent campaign. The receipts consisted of three items: $1,820 from entrance fees and assessments of 364 members, $8,501 from contributions of 131 persons, and $181.38 from sale of documents outside the State and to the Tariff Reform League, and from other sources. The expenditures are given under thirty different heads, the largest single item being $2,173.12 for printing 1,403,500 documents, and specifications are given as to the cost of distributing those documents; while other items cover the expenses of headquarters, the cost of printing Russell and Corcoran "stickers" for distribution by the State Committee, etc.; only $49.76 being left for the final entry of "other miscellaneous expenses."

Such a report as this is now an anomaly, but we live in hope of seeing the day when it will be, not only common, but also inevitable; when the law will require an itemized statement under oath by the treasurer of every campaign committee of its receipts and expenditures. Contrast the record of the Young Men's Democratic Club of Massachusetts with the record, or rather the lack of record, of the National Committees of the two great parties. The campaign was no sooner ended than it was announced that the Republican managers had made a bonfire of all the written matter which had accumulated in their headquarters, care being taken to see that no scrap of paper escaped the flames. Nobody wonders at this, considering that the Chairman of the Committee was a man whom the leading organ of his own party only a few years ago charged with being guilty of the most insolent defiance of public sentiment seen since Tweed's day, and the Treasurer a man who wrote a letter giving instructions, which were followed, how to carry Indiana for his party by buying "floaters."

Quay and Dudley are apparently going to set up a permanent bureau of corruption in Washington. This, at least, is the inference we draw from the announcement, which we find copied into the *Tribune*, that they are to keep the National Committee in constant session, and that Quay is going to "hold what he has won with a mailed hand." It is further announced that he is already beginning to distribute the spoils, and that he has an agreement with Gen. Harrison that he (Quay) is to be allowed to treat the election as an old-fashioned spoils victory, and that he and his camp-fellows are to be allowed to "loot" the public service at their pleasure. We have no doubt that this is an old-fashioned lie, and that Quay has no understanding with Gen. Harrison (or with anybody but Satan) that he is to be allowed to continue with impunity to practise any species of rascality. As to that precious scamp, Dudley the Treasurer, his letter about "the floaters in blocks of five" is, we believe, at this moment in the hands of the Grand Jury at Indianapolis, with a fair chance of getting him indicted in December; though, of course, "politics" is very powerful even with grand juries in that State. If he can be caught and convicted, a term in the State Prison would do him a world of good, some of which might even reach Quay vicariously.

Although Mr. Miller's canvass for the Governorship on a high-license platform did not result in his own success, it seems clear that it was a chief element in carrying the State of New York for Harrison. The Prohibitionists steadily increased their vote in New York from 1884 until it reached nearly 42,000 last November, and a few months ago they counted upon 50,000 this year at the very least, while the more sanguine predicted a total of 60,000, and some even put their estimates as high as 75,000. Apparently they did not poll 30,000, and it is obvious that the main reason was Mr. Miller's fight against the saloons. The difference between the actual Prohibition vote and the Third-Party vote which was reasonably to have been expected if the Republican candidate for Governor had not made a straightforward fight on the temperance issue, is more than the amount of Harrison's plurality over Cleveland; so that Mr. Miller may fairly claim to have carried New York for Harrison, if not for himself. That this is the correct view, appears the more clearly by comparing the result in New York with that in Connecticut. In the latter State the Republicans nominated a saloon candidate for Governor, and the result was a decided increase in the Prohibition vote. Despite Cleveland's gains over 1884 among the workingmen in the manufacturing cities and towns, he would have lost the State by reason of Harrison's gains among the farmers, except for the fact that the nomination of Bulkeley for Governor by the Republicans drove Republicans into the Prohibition party, as in this State the nomination of Miller for Governor won Prohibitionists back into the Republican party.

Pretty much everything else about the recent election in West Virginia is involved in doubt, but one question which came up was decisively settled. A prohibition amendment to the Constitution was submitted to popular vote, and it was buried under an adverse majority estimated as high as 40,000. The movement to incorporate prohibition in the fundamental law has met one unbroken series of defeats ever since such an amendment was defeated by a narrow margin in Michigan a year ago last spring; Oregon, Texas, Tennessee, and now West Virginia, having decided against it.

The woman-suffrage question has just come before the Legislature of another State, a vote having been taken in the Vermont House on Thursday. The matter was presented in the shape of a bill giving women the right to vote in municipal elections, and the measure was strongly supported before the Committee. The analogy of Kansas was invoked—a State which, like Vermont, is overwhelmingly Republican, and which introduced municipal suffrage for women two years ago. Altogether the advocates of the change were exceedingly hopeful of victory, and apprehended defeat, if at all, only by a narrow majority. The result, however, showed that they had entirely misjudged the temper of the law-makers, the bill being defeated by a vote of 192 to 37, or more than five to one.

The Knights of Labor have been holding what may be their last National General Assembly. Their annual report shows that they have lost in membership during the past year no less than 300,000, and that their expenditures have so far exceeded receipts that the order is bankrupt. Their receipts for the year were $265,500, and their expenditures exceeded this amount by nearly $4,000. Of the expenditure $50,000 was for salaries, and $32,000 for hotel, mileage, and travelling expenses of the officials. Printing, paper, and postage amounted to $41,000 more, and $75,000 were "donated" to various district assemblies. The "Strike Defence Fund" is all gone, and the "Educational Fund" also; there is a heavy mortgage upon the palatial headquarters of the order in Philadelphia; there is a large collection of doubtful investments in a coal mine, a wagon factory, and a lithograph company; and the air is filled with charges of fraud against the officials of the order.

The great Powderly is still talking as glibly as ever, if we may judge from the annual address which he printed in the official organ of the order before starting for the Convention. He says in it:

"I do not blame men for striking: I blame them for making fools of themselves in not knowing how to strike. They always strike at the top leaf on the tree, because it appears plainest to the vision; but they always leave the root undisturbed to grow other and more powerful shoots. On many an occasion I have almost lost patience with prominent men in the labor movement—men who have lived in the past so long that they cannot see that the agencies of this generation are entirely different from those of any other, and from their point of view the strike has the same power as of old. We must teach men what it is that creates a

necessity for a strike. They must be taught how to strike effectively against the system which permits gambling in money, in land, in railways, and in the very food which is withheld from the mouths of millions at the sound of the stockbroker's ticker. Our Lecturers and Educators should be kept in the field, and instructed to keep these questions always before the people."

The meaning of this is somewhat obscure, but, as we make it out, it seems to claim that the true solution of the Labor Problem can only be reached by continuing Powderly's $5,000 salary and sending him abroad as a Lecturer and an Educator.

One of the drollest books of the season, and one which deals liberally with the affairs of the United States, is a London publication entitled 'The Economic Crisis,' by Sir Moreton Frewen. We know what a commercial crisis is and what a financial crisis is, but having never heard of an economic crisis which was neither commercial nor financial, we looked with curiosity into Sir Moreton's pages to find out what it might be. It appears to be, in this case, a shortage of money in Europe, consequent upon the demonetization of silver. The flattering situation of America, where silver has been remonetized, and where "Gresham's law"—which requires that inferior money should, in all cases, drive out the superior—has been proved to be a humbug, is admirably contrasted with the harrowing condition of things in Europe. We must remind Sir Moreton that there is not as yet any inferior money in the United States, and consequently no superior money to be driven out, our law being such that nobody except the Government can get a silver dollar without paying 100 cents in gold value for it. This is only one of a multitude of grotesque errors into which the author of 'The Economic Crisis' has fallen in dealing with the fiscal affairs of this country. He revives, for example, the oft-exploded falsehood that our act of 1873, in which the silver dollar was dropped from the coinage, was passed by stealth and for a secret and dishonest purpose. "The bondholders and other gold owners," he tells us, "meant that specie payments should be resumed through the intermediary of *gold alone*, and, keeping this in view, the full significance of the act of 1873 was once apparent." What "parlous stuff" this is will be understood by all who remember that in 1873, when the act was passed, the silver dollar was worth three cents more than the gold dollar—a fact that was cited in public debate in Congress. From this it follows that if the bondholders had desired to improve their position, they would have done exactly the opposite of what is here charged against them.

By way of offset to the alleged contract for 5,000 tons of iron castings awarded to an English firm by the Denver Cable Railway Company, which so powerfully affected the imaginations of some people in the recent campaign, we read in the *Railroad Gazette* that "the Westinghouse Electric Company of Pittsburgh, Pa., has been awarded the contract for a central station plant in London, England, for 25,000 incandescent lamps." Yet John Bull appears to be no way seriously alarmed by this "invasion." The proper thing for him to do at the next general election would be to display the Union Jack surmounted by the Stars and Stripes, and to ask all sturdy Britons whether they want the Yankees to light the houses of London and take the bread out of the mouths of British workmen. But John has passed the infantile stage of existence, and is satisfied to get the best thing that is to be had for his money.

Mr. Joseph Chamberlain and his bride must be glad that it is over. Getting married in this country, if you are a person of distinction, is much like taking a bath in ice-water. You see the newspapers getting ready for you, and as the happy day approaches the more miserable you become. A shuddering sensation passes up and down your spinal column, and you wonder whether it is true, as your encouraging friends tell you, that after the first plunge you will not feel the chill at all, and that the reaction will be wholesome and exhilarating. Mr. and Mrs. Chamberlain have borne themselves with fortitude in these trying moments, and it must be said that they have suffered much less at the hands of the editors than Mr. and Mrs. Cleveland had to endure on a like occasion.

The London *Spectator's* explanation of Mr. Cleveland's defeat is, that he had disappointed the Mugwumps on account of his "vacillating and injudicious foreign policy," which is an entirely new view. It also flatters itself "that the Irish vote is now powerless for three years," and within that period "reasonable negotiations will be possible." It admits that Irish influence in the Union is an "ugly fact for Americans to consider," but consoles itself with the thought "that it is not nearly so bad as it would be were home rule conceded." There is hardly any unpleasant thing an English Liberal-Unionist now thinks of which would not be aggravated by home rule. He reminds one of the Southern negro who said to a traveller enjoying the moonlight: "You should a' seen dat moon befo' de wah."

Lord Ashbourne's Act, on the extension of which Mr. Gladstone has locked horns with the Ministry, authorizes the Government to lend money at 4½ per cent. to the tenant to enable him to buy his farm when the landlord is willing to sell, at a fair price based on the rental. The Government pays 3 per cent. on this sum, and the difference of one and a-half per cent. is credited to the tenant, and goes towards the reduction of the principal, which it is to extinguish in about forty-nine years. The act has been in operation three years, and according to the Ministry has been a great success. As the first instalment of money voted to carry it out has been exhausted, or nearly so, another £5,000,000 is accordingly asked for. The main objection of the Gladstonians to it is that it pledges the credit of the Government for the benefit of the Irish landlords, who are very eager to sell but could not find purchasers if the Government did not help them; and that it would really make the State the landlord of the whole country, and expose the Government to all the odium attaching to that character if bad times came and the tenants were unwilling to pay, and perhaps make the repudiation of the debt due by the tenants a political issue. Another and a minor one is that the proposal to extend the Act is an attempt to divert attention from the question of arrears, which is depriving a large proportion of the tenants of the benefit of the Land Act of 1881. The Land Commissioners cut down their rents, but have no power to touch the arrears of rents which they have pronounced excessive, and for which tenants are being evicted by the thousand. Like most other things done or attempted for Ireland, however, there is an immense amount of English "politics" in it. The present proposal is more or less due to the Cabinet's fear of going on for another session with nothing in the Irish programme but coercion, and it is more or less discredited by the way in which Mr. Balfour frequently, and Lord Salisbury now and then, describes the bulk of the Irish people, to whom it is proposed to lend the money, as persons bent on robbery. In fact, if one judged from their descriptions, it would be the height of folly to lend money to such a community. Therefore the Liberals say, with some plausibility, "You do not really expect ever to get this money back, but the loan will answer your purpose, as it will deliver your friends, the landlords, from their present plight."

What progress the Government is making in the pacification of Ireland is hard to make out. Mr. Balfour keeps up a very active warfare on the stump with the Gladstonians, and maintains that he is doing splendidly with his Coercion Act, and has all but put an end to boycotting and outrages. To this the Gladstonians reply that outrages have indeed diminished, but the reason is that the Irish people now hope something from the constitutional agitation carried on in their behalf in England, and therefore rely less on outrages; hence, there is no sign of real reconciliation or submission. The discussion between him and them, however, mainly consists of recrimination. When they reproach him with his imprisonments and arrests, and so forth, he says they did the same thing when they were in power; and when they reply that they now see the error of their ways, and are sorry for it, he rejoins that they are liars and hypocrites. He is the liveliest man with his tongue who has ever held the office of Irish Secretary, and accordingly gives great satisfaction to the old Tories, who like to see Gladstone handled without gloves. He has got much satisfaction lately from an address against home rule signed by nearly all the Irish Nonconformist Ministers, which furnishes some set-off to the home-rule tendencies of the English Nonconformists; but the Irish Nonconformists, if Presbyterians are taken out, are hardly worth consideration from the political standpoint.

THE REALLY SERIOUS MATTER.

THE fortnight which has elapsed since the election has been devoted very largely, by those who care anything about politics, to speculation as to the cause of the Democratic defeat. Of course, the conclusions reached on this subject are numerous and varied, and not one of them would probably meet with anything like general acceptance. But with regard to two important phenomena of the contest, there is, we think, an almost general agreement. One is, that the Republican victory did not come from the quarter from which it was generally expected—the operatives and mechanics of the great manufacturing centres: their alarm over the effect of a reduction of the tariff on wages did not influence the result. The other is, that money was used in this election with a profusion never before known on American soil. Some of the estimates place the Republican outlay at $3,000,000, none put it lower than $1,000,000. The former estimate derives much support from the fact that the Committee demanded $400,000 in the last week of the campaign. When this sum was needed to finish up the work, we are warranted in inferring that $2,500,000, at least, was needed to carry it on during the preceding three months.

How much the Democrats used we cannot say. We are not raising this discussion in their interest or for their vindication. But they undoubtedly were able to get very much less than the Republicans, because they had no wealthy class to call on which had, or thought it had, an immense pecuniary interest in the result. The Democrats, perhaps, did as well as they could in the same line, but their best was comparatively feeble; for it must be said, to the credit of the Administration, that assessments were not extorted from the Government officers, and although the President set a very bad example by a large contribution, voluntary offerings were, as usual, small and rare. We are not, therefore, attempting to compare the morality of the two parties. We are simply calling the attention of patriotic Americans to the fact that enormous sums of money, greater than ever before, were at this last election put into the hands of men noted for their unscrupulousness about means, and were used for the purpose, in some way or other, of deciding who should be the next President of the United States. It is no exaggeration to say that the election came nearer than any which has preceded it to being the sale of the Government at public auction to the party able to "put up" most money. Nor is it an exaggeration to say that all the tendencies of the day are in this direction—that in politics, as in morals, the first foe in the field is the belief or disposition to believe that a rich man ought to have his way. It was thought a "big thing" when Jay Gould gave $50,000 to "Johnny" O'Brien in aid of Blaine in 1884. We believe a gift of a similar amount in the late canvass would have been considered a comparative trifle. The world marches on every side towards heavier expenditure. In a village near New York there are seventy-five colored voters who have always hitherto disposed of their votes for two dollars apiece: this year they insisted on five dollars apiece, and, we believe, got it. They felt the buoyancy in the market almost as soon as the canvass opened.

There is nothing particularly new about all this. In the politics of all countries, under a popular government, rich men buy votes and poor men sell them, if the law permits it to be done secretly and with impunity. There is not a single modern State the government of which would not be periodically sold to the highest bidder, as the Roman Empire was occasionally, if there were no legal difficulties in the way of such transactions. In England the traffic in votes, and even in seats in Parliament, was, before the Reform Bill was passed, almost as open as the traffic in cattle; and the practice of purchasing closely divided constituencies, or "doubtful States," as we call them, continued with more or less activity down to the passage of the Parliamentary Elections Act in 1883. It was checked somewhat by the transfer of the trial of contested seats from the Committee of the House of Commons to the judges of the law courts, but it was not finally stopped until all candidates, and all committees or agents acting in their behalf, were compelled to publish a full and sworn account, with vouchers, of their receipts and expenditures. The law prescribes exactly what the legitimate expenses of a canvass are, and provides the voter, not only with the ballot, but with absolute secrecy in casting it.

These precautions are called for, not by anything peculiar in the condition either of England or America: they are called for by human nature itself, as it is known to us in every country, and will continue to be called for in every country which has not deliberately decided to be governed by a plutocracy. Whenever that determination is reached, however, the machinery of elections will be unnecessary. When the legal term of the party in power has expired, all that will be necessary will be to call for sealed proposals for the possession of the Government during the next term, to be opened on a prescribed day, and the Administration to be handed over to the candidate offering most money. This would be moral and decent compared to our present system of hole-and-corner bribery and corruption.

In the meantime, we would warn those who believe in the old-fashioned American plain of carrying elections by persuasion, by lectures, by speeches, by articles, by appeals to the reason, or even to the passions and prejudices of men, through voice and pen; who look back with tenderness to the days when the only great men in politics were orators and statesmen, and find it hard to accept the dispensers of funds as the real heroes of a Presidential canvass, that an evil of this sort is one which grows with wonderful rapidity, and that as it grows it weakens the public sentiment on which, in the last resort, we must rely for its cure. As long as no active measures are taken to check it, the distributers of "soap" will smile more and more at the activity of the distributers of documents.

THE REMEDY FOR VOTE-BUYING.

THE theory that a secret ballot is the surest as well as the simplest remedy for bribery at the polls, is strongly sustained by all the many accounts which have been published concerning the methods by which both political parties bought votes in the recent national election. In every instance, the chief concern of the briber was to keep a close watch upon the man whom he had bribed until his ballot was deposited. Colonel Dudley was most emphatic upon this point in his famous letter: "Divide the floaters into blocks of five, and put a trusted man with necessary funds in charge of these five, and make him responsible that none get away and that all vote our ticket." The limit of five was put because that was the largest number one man could hold under such constant surveillance that no change of ballots could be made without detection. Another Indiana plan which has been described by a county committeeman was even more careful than this: "When we had secured a voter, we took him to the polls and sent him to our worker, who stood at the window. The worker handed the voter a ticket, and *saw him* give it to the judge of election." It was only after this that the money was paid over.

In New York city it has for many years been the custom of the bribers to require the man whose vote has been bought, to walk to the polls with the folded ballots which have been given to him held erect in the air, with the hand about shoulder-high, where they can be seen every moment by the watcher until they are deposited in the boxes. It is not an unusual thing in many of the worst districts of the city to see squads of men, ranging from five to ten in number, marching to the polls with their ballots thus held in view. In all the accounts of bribery which come from the New England States and from the interior and other portions of New York State, there is the same testimony on this point—the briber never allows the bribed voter to be a moment out of his sight after he has received his ballot and has started for the polls. The "bull-fence" device in some parts of Indiana is evidence on the same point. As described by one of its inventors, in the account published in the *Evening Post* of Monday, it "is a curved chute made of a high fence that leads up to the polls on one side and away from them on the other," and its object is to "give our men a chance to change their ballots on the way to the polls and not get caught at it"—that is, one party buys a number of the other party's voters, furnishes them with ballots, takes them to the polls, and starts them into the chute towards the ballot-boxes. "But," says the narrator, "at the moment when they are out of sight in the chute they slip that ballot into their pockets, slip out the ballot of their own party, and hand it to the election officers without any one having seen the change made."

All this furnishes conclusive evidence that if the act of voting were performed in secret no bribed voter could or would be trusted to

carry out his bargain when left to himself, without possibility of detection at the polls. This has been found to be the case in Australia and England, and, in fact, wherever the secret ballot has been put into practice. It is the unanimous testimony of all English authorities that it is the secrecy provision, rather than the rigorous provisions of the law against bribery of all kinds, which has abolished bribery at the polls in Great Britain. Speaking on this point when he was in this country last year, Mr. Joseph Chamberlain said:

"In my opinion there is at the present moment exceedingly little electoral bribery and corruption in the United Kingdom. The elections are singularly pure, and are daily, if it were possible, improving in that respect. Corruption, indeed, is almost an impossibility, owing to the fact that the briber is absolutely dependent upon the bribe-taker's observance of the motto, 'Honor among thieves,' for the briber has no means of ascertaining how the latter votes. This is due to the secrecy in which the ballots are cast, so very different from here, where the voter practically casts his vote in public."

Yet before the English law requiring a secret ballot went into effect, bribery had reached proportions there far in excess of what we have ever witnessed here, even in the late election. The secrecy requirement abolished it completely; for while, under the former system, there had been enormous expenditures of money, and charges of bribery sometimes affecting nearly one hundred seats, in every Parliamentary election, at the first election under the new law the expenditures dropped from $15,000,000 to less than $4,000,000, and there were only two charges of bribery made, and at the second election under it the expenditures fell off still more, and there was not a single charge of corrupt or illegal practice.

Sooner or later we must have in every State a reform in our election laws based upon secrecy in voting as the fundamental principle. It exists now in the Wisconsin law which went into operation in the city of Milwaukee last spring, and has worked with great success there; but it applies nowhere else in the State. It exists also in the new Massachusetts law which will go into effect next January, and will apply to the whole State. Experience has shown that secrecy is as imperative in the rural districts as in the cities, for the growth of bribery at the polls has been quite as alarming in the former as in the latter. There are signs of a greatly increased public sentiment in favor of the reform; and whether it is strong enough to compel the politicians to grant it this year or next, it is certain to become so before many years have passed.

THE SALOON IN POLITICS.

The candidacy of David B. Hill for Governor of New York as the champion of the saloons was so open and flagrant an exhibition of subservience to the liquor interest, and its effect upon the national election was so obvious, that the public is in danger of overlooking some other manifestations of the same influence in politics which are hardly less important. This tendency is strengthened by the fact that Republicans find party advantage in fixing attention upon the discredit which the Democrats of this State brought upon their organization throughout the country by yielding to the demand of the saloons for Gov. Hill's renomination, and thus claiming that the Democratic party is always and everywhere the liquor party.

But the idea that the saloons are Democratic any more than Republican in politics, or that the liquor interest cares anything for politics at all, except as it can make either party serve its ends, is altogether wrong, as has been proved by elections held in other States. We have more than once referred to the fact that, while the Republicans of New York were inveighing against the Democrat, David B. Hill, as the friend of the saloons, the Republicans of Connecticut were trying to elect to the Governorship of that State Morgan G. Bulkeley, who has long been equally notorious among his neighbors as the friend of the saloons. The saloons of Connecticut, without regard to party, were as stoutly opposed to the Democratic candidate for Governor of that State as the saloons of New York were to the Republican candidate for Governor of this State.

Still more striking was the influence of the saloon in the politics of Missouri. This is a State long controlled by the Democrats, and where, according to the theory of New York Republicans, one would expect to find the liquor interest controlling the Government through the Democratic party. On the contrary, Missouri was one of the first States to accept the doctrine of high license, a law of that sort having passed the Legislature several years ago and been maintained against all attempts to weaken it. In the chief city of the State a Democratic Mayor, David R. Francis, has enforced the Sunday Closing Law, and secured St. Louis the quietest Sundays it has ever known. In short, Democracy has given Missouri, and particularly its metropolis, a severer restriction of the liquor evil than Republicanism has brought about in Ohio, and especially in Cincinnati, where a Republican Mayor obstinately refused to enforce the Sunday Law passed by the last Legislature.

With the same impartiality in the matter of parties as was exhibited in New York and Connecticut, the saloons in Missouri waged war upon their enemy. Mr. Francis having been nominated for Governor by the Democrats, the saloons of St. Louis, which are chiefly beer-saloons, threw their whole influence against him, and carried the city for the Republicans by a large majority. The *Republic*, the chief Democratic newspaper, says that "they polled at least 8,000 votes, and polled them as a unit, demonstrating the power of the beer saloon in politics as it has never been demonstrated before until this election, when we have similar evidence of it in the vote for Hill in New York."

The saloon showed equal impartiality in national politics. Mr. Gallus Thomann, the head of the Literary Bureau of the United States Brewers' Association, tells a reporter that "the Republicans were beaten in 1884 because they nominated a man for President from the great prohibition State of Maine, whose record on the prohibition question did not suit the Germans. I know what I am talking about," he added, "for I myself made the investigation of his record. I found that Mr. Blaine, while a drinker himself, had been hypocritical enough to be an ardent advocate of the Maine law in his own State. That lost him the German vote, and cost the Republican party the election." But the Republican managers changed front this year, and so won back the German vote and carried the election. "They found out their mistake," Mr. Thomann went on, "and in 1888 they nominated a man who had no objectionable prohibition record, gave the Prohibitionists the cold shoulder, and adopted a resolution copied after the utterance of the National Liquor-Dealers' Association. The consequence was that the Germans came back to the party and Harrison is elected."

The moral of all this is plain. The saloon is in politics only for the saloon. If in one State it throws its weight for the Democrats, it is not because it loves the Democratic party, but because that party in that State is on its side; and it is equally ready at the same time in another State to cast its vote for the Republican party if the latter party in that State makes the higher bid. In like manner it will oppose the Republican candidate for President in one election if it suspects him of affiliation with prohibition, and support the Republican candidate four years later if convinced that the saloon has nothing to fear from him.

The great advantage which the saloon has in all these controversies is the fact that its favorite, when once nominated by one of the great parties, is sure to be supported by a large percentage of the opponents of the saloon, simply because he is the regular candidate. Most of the Democrats in this State who deplore the power of the drink evil voted for Hill as the Democratic nominee, just as most Republicans of the like mind in Connecticut voted for Bulkeley as the Republican nominee. In other words, so long as the saloon can nominate its man in a close State, it can rely upon a large share of the churches to help elect him.

THE SUPINENESS OF RAILROAD STOCKHOLDERS.

The present state of some of our great railroads in the West is certainly amazing. We hear much said of the timidity of capital, and many bugbears in the shape of organized labor, State interference, and even anarchy, have in recent years been paraded before frightened property-holders; but it appears after all that their foes are of their own household. A really "smart" president or general manager, such as stockholders apparently delight to select, can do more harm to his own railroad, as well as others, than State Legislatures or Knights of Labor are likely to effect, and the success of these men of late has been phenomenal. The stockholders submit to the loss of their property with the apathy of the subjects of an

Asiatic despotism, while their servants exult in irresponsibility, and fight the most desperate financial contests with the pleasant consciousness that, whoever may wince, their withers are unwrung. They are deaf to the startling admonitions of Judge Cooley, to the benevolent suggestions of the Commerce Commission, and to the warnings of experts upon the railroad question, and they are blind to the threatening attitude of the State Legislatures. They are willing to be as lavish with their stockholders' money as Artemus Ward was with the blood of his wife's relatives, and plunge them into a railroad war with as light a heart as M. Ollivier's over the declaration of war in 1870.

We are accustomed to smile at the folly of the Hindus, who, when unable to obtain justice, starve themselves to death upon the doorsteps of their oppressors; but our railroad directors seem to think that this policy is dictated by the profoundest sagacity. Whenever a railroad attempts to do business at a loss, its rivals are excited to the most frantic emulation. They proceed to punish the offender by showing it how much more severely they can injure themselves than any one else can injure them, and they have kept this up until several fine properties have been brought to the brink of ruin. During the intervals when they are not employed in cutting rates, they devote themselves to building parallel roads as a preparation for renewed rate-wars on their completion. Their methods have a curious resemblance to those of the territorial magnates of Europe during the Middle Ages, when the chief business of rulers was to enlarge their possessions regardless of the sufferings of their subjects. To do them justice, it must be said that they have the same excuse, the temptation to seize on a rich province being as great to a railroad man as to a prince; but some regard ought to be paid to the lessons of history.

Speaking broadly, the lesson of European history is that wars of conquest have seldom been very successful. Territory acquired in this way is generally held by an uncertain tenure. It may be held for a long time, as Alsace and Lorraine were held by France; but so long as there are other Powers which feel that it is wrongfully held, there is always danger of retaliation. No considerable Power can placidly behold the advance of another into provinces that are naturally connected with the former—provinces which, if not actually tributary, are at least in the possession of friendly Powers of moderate strength and circumscribed ambition. It was a great mistake for France to extend her control to Tunis. She gained little or nothing, but she incurred the lasting enmity of Italy, and converted a friendly and grateful nation into a dangerous foe. It is by no means impossible that she may eventually lose Nice and Savoy as a punishment for her disregard of those feelings of *quasi*-proprietorship which Italy naturally has in African territory so closely approaching her own. Geographical and racial distinctions cannot be arrogantly overridden. In the acquisition of territory, compromise is almost invariably more profitable to all parties than competition.

Our railroads, it is true, need pay no attention to distinctions of race, but they cannot ignore geography. Every great road regards certain territory as naturally belonging or tributary to it: it is territory which already it fully supplies with transportation, or which it can reach, by extending its branches, with greater facility than other roads. If a rival road undertakes to build in this territory, it is sure to excite retaliation, and it will probably lose more by arousing this competition than it can gain by attempting to annex territory to which there are existing claims. The consequences are frequently disadvantageous to the communities that suppose themselves to be benefited by the competition. Unless the amount of transportation is very large, it can be done at less expense by one road than by two, and in the long run increased expense must fall upon those who use the road. Railroads may be built by foreign capital, but they must always be operated with their own earnings, and the greater the expense of transportation, the higher the charges.

To determine what territory naturally belongs to a certain road is often, of course, a matter of difficulty; but to fight over the question is not the only way of determining it. Men in charge of great trusts ought to be able in most cases to come to some agreement or compromise, and when they cannot, they ought to seek the help of arbitration. What stockholders need is some advisory board to which they can apply when they become convinced that their property is mismanaged. As it is, they are the victims of their tyrannical rulers. They elect them, it is true, but they are incompetent to displace them, or even to criticise them; they have not the necessary knowledge, and they are disunited. They know that their property suffers, but they seldom know just why, and they cannot tell what to do about it. It should be the duty of such a board to inform itself as to the merits of railroad disputes, and, if its advice was not followed, to point out to stockholders the errors of their rulers, thus enabling them, if they chose, to insist upon their correction. It would not be necessary to confer upon this body power to dictate policies or to compel action, and it would be undesirable, even if it were practicable, to have it established by Government. The railroad president who persisted in fighting after a properly constituted board had proposed reasonable terms of peace, would probably soon find that his resignation would be acceptable.

The prohibition of pooling by the Commerce Act is probably unwise, but no one believes that it would really prevent the railroads from maintaining fair rates if they were all managed by honest and reasonable men. The trouble is, that some managers have a very low conception of their powers and responsibilities. Their views as to obtaining business seem to be those of the ordinary commercial traveller, and they have not sufficient breadth of mind to appreciate the advantages of honorable management. They make rates for the public and grant rebates in private; they connive at the cutting of rates by their agents when they have entered into agreements to maintain them; and they have created a dangerous public prejudice against railroads by their duplicity and arrogance. Most men do not demand special privileges and rebates on their own account, but because they are afraid that other people are getting them. Most railroads grant them, not because they prefer to, but because they are afraid that other roads will grant them. The prohibition of pooling makes it harder to remove these suspicions, but it does not necessitate the present reckless competition. The example of the coal companies shows that fairly satisfactory results can be obtained by a tacit understanding that is apparently not obnoxious to the statute.

The settlement of our Eastern railroad wars by the agency of a leading firm of bankers shows that the plan which has been suggested is not an impracticable one. If men of this standing could be induced, by the action of railroad stockholders as a class, to serve as disinterested advisers and peacemakers, doubtless railroad directors as a class would be glad in most cases to appeal to them. Certainly the stockholders in the Western roads have suffered enough, owing to the causes which we have indicated, to lead them to take measures for self-preservation. When a road has been ruined, the bondholders generally unite and appoint a committee to protect their interests. There is no conclusive reason why stockholders should not unite for a like purpose before their roads have been ruined. Unless they can bring themselves to adopt some such means of checking the follies of their trustees, they are likely to suffer quite as severely in the future as in the past.

COMPETITIVE EXAMINATIONS.

THE protest against the abuse of examinations in England, to which we referred last week, touches indirectly on the effect of competitive examinations for admission to the public service; and Prof. Max Müller doubts whether they have not been injurious to the Government service in India, where he was one of the most strenuous advocates of their introduction, and Mr. Frederic Harrison makes the somewhat foolish remark that, under them, "Arthur Wellesley would not have got into the army and Burke would have received low marks." The protestants suggest no substitute for the competitive system, but mention, in a faint-hearted way, that somebody else has suggested a pass examination, to be followed by a term of probation, which, as the *Economist* points out, would result in practice in the restoration of the old system of favoritism under a very thin disguise.

The fact is, that the competitive system in England is what its enemies in this country used to say ours was—an examination in a variety of subjects, with no direct bearing on the work the successful candidates were to do, and which only college graduates could pass. In England these examinations are so severe, and cover so much ground, literary, historical, and scientific, that not only are college graduates as such unable to pass

them, but every college graduate who wants to get into the army or the civil service, in all but the lowest grades, has to be prepared by an elaborate system of cramming, which takes from six months to a year of time, and costs a good deal of money. The "coaches" or crammers who prepare men for the examinations are now a large and influential body, some members of which, who make a reputation by the success of their pupils, earn as large incomes as all but the leading lawyers.

Of course, the influence of this is greatly felt in all the schools and colleges, and under it, naturally enough, the state of things has arisen of which the protestants complain, and in which both teachers and pupils, professors and students, all over the country, have come to look on education as simply preparation for some examination through which they will get a salary and entrance on a career. The more vigorously the candidates get themselves up on subjects, of course the higher the tests have to be; so that for some years back a sort of competition has been going on between the examiners and the crammers very like that which has been going on between the makers of guns and of armor plating. Every time the gun-makers increase the power of the projectile, the shipbuilders have to thicken or harden the plating. So, also, the more thoroughly prepared the crammers make the candidates, the more rigorous the requirements of the examiners become. The remedy would seem to be to cut down greatly the literary and scientific exactions, and give a good deal more weight to character, physical condition, and knowledge bearing directly on the duties to be performed; or, in other words, to assimilate the examinations more nearly to those in use in this country. The notion that there is any choice between competitive examinations and the old system of patronage finds no acceptance anywhere. It may be true that Wellington could not have got into the army under the present system; but who can tell how many Wellingtons were kept out of the army by want of influence or aristocratic connections? Wellingtons did not abound in the British service in Wellington's day. His immediate predecessor in the Peninsula, whom he had great difficulty in superseding, was a wretched dolt.

The weakness of the protestants' position, in so far as their animadversions are directed against the use of examinations as tests of proficiency on the part of teachers and pupils in schools, is that their remedy —in so far as they suggest a remedy—calls for a very large body of teachers of a kind which does not exist, or exists only in very small numbers. In this they remind us a little of the Socialists, all whose plans for reorganizing society always assume the existence of an immense and now unemployed stock of administrative talent, which can be readily called into play. Where this talent is, nobody knows. All employers, all corporations, all governments are hunting for it night and day, and tempting it by high pay and great honor; but they do not get it. So also the enemies of examinations as tests of the teacher's capacity and the pupil's progress seem to assume the existence of an immense body of teaching talent, which will develop the minds and morals of children by mere force of character and example, so that there will be no need to test their work by mechanical processes like inspectorial questioning. We hope there is such a body of teaching talent somewhere, but there are as yet very few signs of its existence. As far as one can see at present, the number of born teachers—that is, of men or women who possess in a marked degree the teaching talent, and are capable of becoming a dominating influence to a roomful of children or youths, and of carrying on their work for years without loss of vigor, freshness, or interest—is exceedingly small. In fact, we should say that such teachers were almost as scarce as great generals or great statesmen. The great bulk of teachers, as the world is now constituted, will and must be people who teach from necessity and not from choice, who find the occupation monotonous and wearing to the nerves, and whose work would infallibly fall off if it were not constantly tested by the simple and, we admit, commonplace process of question and answer.

THE COLONIAL POLICY OF FRANCE.

When the philosophical historian comes to write the definitive account of the passion for colonization which possesses all the leading countries of Europe, he will undoubtedly rank it as one of the incidents of the modern industrial development and competition. Colonies are planted and civilization is engrafted on barbarism in order that the home market may be eased of its glut. That is the main motive, and the subsidiary ones are but grouped about it. In the case of France, the traditional thirst of Frenchmen for *gloire* probably enters into her schemes for extending her colonial possessions next in importance after the commercial reason. Certain it is that since 1870, as formerly after 1815, France has sought in Algeria and China that military glory which was denied her on European battlefields.

The modern colonial policy of France has been subjected to thorough criticism by M. de Lanessan, in a series of articles in the *Revue Scientifique*. He maintains that the experience of a hundred years has established three main rules for the planting of colonies among barbarous peoples. The first rule is to respect native religious practices; the second, to regard native social institutions; the third, to make use of the existing system of local administration as far as possible. All these rules, says M. de Lanessan, are steadily violated by France.

Taking up the last specification first, the French administration of the affairs of Cochin China appears to have been badly directed for the past seven years. For nearly a score of years before 1881, Cochin China escaped a rigorous application of the French administrative system. It was a period of general prosperity. Natural resources were steadily developed, the revenues increased easily even with light taxes, and great public works were entered upon. But in 1881 the country was put under the "régime civil." Essentially the same prefectoral machinery as that of France was introduced; the number of French officials was quadrupled; naturally enough, taxes were doubled. Costly buildings for the public service now absorb the funds before devoted to improving the means of communication and transport. A pronounced dissatisfaction with French rule has sprung up where before there was, at the worst, indifference to it.

"I cannot insist too much," says M. de Lanessan, "upon the mistake we have made in forcing our civil code upon the natives of Cochin China." As it is easy to see, this flies in the face of all native ideas of the family, of inheritance, rights of husband and wife, parents and child, etc. To endeavor to set aside completely and at a stroke conceptions passed on by tradition for thousands of years, seems indeed the height of folly. How the natives regard the French code may be inferred from a recent occurrence in Algeria. It was proposed to the Mussulmans of a certain district that they should become "naturalized." Their leaders deliberated over the question, perceiving the political advantages which would come to them by acquiescing, but finally returned answer that the thing was impossible, that it would involve a complete social revolution, the consequences of which they could not pretend to foresee.

The articles to which we refer lay much stress upon the way in which the French colonial authorities ride rough-shod over the religious prejudices of the natives under their rule. "Everywhere in Anam and Tonkin," says the writer, "I have seen pagodas occupied, often needlessly, by our troops, to the great scandal of the inhabitants; our soldiers looting the most sacred and venerated objects, and, too often, the civil authorities shutting their ears to the just complaints made on this account by the natives. . . . To a considerable degree, the characteristic of our present colonial policy is the offensive tendency of our colonial officials to favor openly and officially the propaganda, often more zealous than prudent, of the missionaries."

In the last sentence a matter is touched upon which is deserving of special notice. It is highly curious and instructive to see how France, while becoming more intensely anticlerical in her domestic policy, poses as the great champion and protector of Catholic missions abroad. In fact, the Association for the Propagation of the Faith is largely a French society; its two councils sit, the one at Lyons, the other at Paris. The diplomatic, often the military, activity of France in China has taken directions which can never be understood until its Catholic coloring, and the reason for it, have been observed. As long ago as 1862 the French Minister of State, M. Billault, declared in the Senate, in regard to the then recent expedition to China: "We went into the far East, and shed the blood of France there, to represent the spirit of re-

ligion, and plant that cross which is the symbol of the Empire and civilization."

The explanation of the matter is this. The Jesuits, at the time of their expulsion from China in 1722, were in possession of considerable lands and houses. These have been eyed longingly ever since, and the power of France has been used to get them back, in part at least. By the Treaty of Nankin, in 1846, it was provided that "all the ancient houses through the provinces which were built in the reign of Kanghi, and have been preserved to the present time, and which, on examination by the proper authorities, are clearly found to have been the bona-fide possessions of the professors of the Roman religion, are to be restored to them, except only those which have been converted into temples or dwelling-houses for the people." Under the terms of this concession, the efforts of the French ambassadors have been vigorously and persistently made in aid of the Catholic missionaries. Indeed, little by little, France took the position of protector, not only of French missionaries, but of the Catholic missionaries in China of all nationalities. In one case, not long after the Franco-German war, a German missionary in China was found appealing to France for protection. Not only so, but finally France put forth the pretence of being the protector of all native Catholics.

But Chinese diplomacy, if slow, can see through a ladder. By a well-considered counter-move it set up the Pope as the head of Roman missions in China, and proposed to leave the religious aspects of the matter entirely with him; meanwhile it required all missionaries needing diplomatic support and protection to use the consuls and ambassadors of their own nation. The result was, according to a recent letter in the *Times*, to make the "French protectorate over the Catholic faith in China a thing of the past. In the strongest possible manner, the Viceroy of Canton has repudiated the right of the French consuls to make representations to him on behalf of native Christians in his province, and his policy has now been adopted and extended by the central Government." France has not yet accepted the situation, and the Pope, owing, it is believed, to French representations, has not yet sent an envoy to China nor received the Chinese ambassador at Rome; but those steps must soon be taken, apparently. In any case, the influence of France in China has been greatly impaired. It would certainly be a good thing, both for her and for China, if all this missionary matter could be taken out of the negotiations between them; it has been a constant source of friction, if not of actual war. It seems certain that Rome will have to try conclusions with China at first hand, the support of France now proving a broken reed, as did that of Portugal before.

SWISS AFFAIRS.

GENEVA, November 2.

THE laurels culled by Germany in instituting a system of obligatory insurance do not seem to allow the Swiss governments to sleep. Few questions attract attention to the same degree, and we are only at the commencement. The *Nation's* readers have from time to time been informed of the progress of this great enterprise, in letters which have been read with interest even here. They know that the old Emperor and Prince Bismarck, in consequence of attempts on the life of the former, and of other threatening symptoms, felt the need of acting against the Socialists; at the same time, however, as an offset to measures of exceptional severity, they resolved to introduce a vast system of insurance which should show their interest in the amelioration of the lot of the working classes. On the 15th of June, 1883, the Reichstag passed the law of insurance against sickness. On the 6th of July, 1884, the law of insurance against accidents was enacted in its turn. The edifice is not yet finished, but it is to be completed by a third branch of insurance—against infirmity and old age—which is at present under consideration and will be presented in due time. At the risk of repeating what is well known, let me say that the expenses connected with the first two branches of insurance are borne entirely by the workmen and their employers, and that the State is to give financial support only in the third branch. According to the last project prepared for presentation to the Reichstag, the imperial treasury is to hand over about twelve million dollars a year for this service.

In our country the Socialists enjoy perfect liberty, within the limits of general laws. So the governments have nothing to ask pardon for; and if the question of obligatory insurance has been brought forward, it is solely from a sentiment of philanthropy, and to do justice to a desire expressed at different periods by the political groups of workingmen. Switzerland consists of twenty-two cantons, of which three are subdivided into two demi-cantons, making in all twenty-five little republics—twenty-five "sovereign States," as the Federal Constitution calls them. What conditions could be more favorable for making political experiments than this multiplicity of little organisms? It was the demi-canton of Bâle-Ville that was the first to enter on the path of compulsory insurance. Last year the local legislature voted a law of insurance against sickness, the principal points of which I have elsewhere outlined as follows:

"Each workman or apprentice, irrespective of sex, is obliged to insure against sickness in an authorized relief bank, offering, for a period of ninety days, either medicines and medical treatment free, or a subsidy of at least 24 cents a day. The employer, subject to severe penalties, is to see that his workmen are insured. He is to pay the third of their assessment out of his own pocket, or a maximum of 80 cents for each per annum. A maximum sum of $6,000 is added annually to the budget to subsidize the savings banks of the first category giving medicines and medical attendance gratis, and to enable them to lower their premiums. If the need of it is felt, a general relief savings-banks (*caisse de secours générale*) is to be organized by the State."*

This bill, however, had to be ratified by the people before it could become law, and so was lost at the polls. It was opposed chiefly by the extreme groups, Conservatives and Radicals, as well as by members of private mutual-insurance companies. But this first check did not lead to the abandonment of the idea: it has been taken up once more, and a new bill will soon be presented.

After Bâle-Ville, it was Geneva's turn. The Grand Conseil has been discussing a motion made by one of the leaders of the Radical party now in power, which, as will be noticed, not merely includes the working classes, but is much bolder and more ambitious. It may be outlined as follows: Insurance against sickness is rendered compulsory for all natives of both sexes, whether workmen or not, from the age of eighteen. As there is a certain public that can never be made to pay their regular assessments, the State makes itself responsible and pays for them, provided that their poverty is not the result of "laziness" or "misconduct." Besides, it is understood (although this point was not formally stipulated and could not be made the object of an obligation) that the insured who are in easy circumstances—estimated at about one-half of the whole—should of their own accord give up the advantages of the undertaking and, with patriotic devotion, be satisfied with bearing their share of the expenses. The State subsidy is fixed at a maximum of $30,000, or about thirty cents per head of the population; an insurance service is also instituted for persons not belonging to any mutual insurance company. By this combination all persons falling sick have a right to assistance. They are guaranteed the expenses of treatment during illness, and a "temporary" indemnity, the duration and amount of which are not indicated, when out of employment.

The opponents of this measure reproach it with instituting, not insurance but compulsory assistance, thus aggravating the plague of legal charity against which the "progressists" of all countries war incessantly. Again, they fear the distribution of citizens, through this insurance, into different categories—some doing nothing but give, the others doing nothing but receive; and between these two the real insurers, paying their premiums and enjoying their privileges. They also ask whether the law would not lead to arbitrary interpretations, and how poor but deserving citizens are to be distinguished from the others. In short, it is impossible from the text of the law to determine the financial bearing of the project.

So much for criticism. When it was asked what could be substituted for a measure so much found fault with, its adversaries rallied in general round the idea of a great cantonal insurance company, subsidized by the State. The delicate point was to know whether compulsion would be admitted for a certain class of citizens for whom insurance is most needed, and who are the most difficult to get into it under a régime of liberty. On this head opinions were divided. Finally, on the third of October, the question was sent back to the Conseil d'État for reconsideration, which was without doubt the wisest plan. At this point matters stand; and it will give a more complete idea of the situation if I add that in the canton of Aargau they are also busy organizing a system of compulsory insurance against sickness, while in the canton of Neuchâtel they are thinking of a system of life insurance. Finally, the Federal Government is occupied with the means of establishing a workmen's insurance against accident, which is to apply to the whole of the Swiss Confederation.

Last Friday I was present at a very touching fête held in the parlors of the Hôtel des Bergues, opposite the little island where the statue of Jean Jacques Rousseau rises, and where the Rhone escapes from the Lake of Geneva. The International Committee of the Red Cross had invited its friends, the authorities, and the consular representatives to celebrate by a banquet and appropriate manifestations the twenty-fifth anniversary of the foundation of this great philanthropic institution. It was, in fact, on this day, a quarter of a century ago, that Geneva united within its walls delegates from the principal Powers, convoked in order

* 'L'Assurance obligatoire en Allemagne,' p. 63.

to organize in time of peace a free society, having its ramifications everywhere, and which in time of war might relieve the wounded on the field of battle. This project had been conceived by a local society little known abroad, the Genevan Society of Public Utility, which gave it its first practical form. When the conference opened, grave doubts were entertained of the possibility of coming to an understanding, which was, nevertheless, reached. An international society was formed having as its emblem a red cross on a white ground—the Swiss colors being a white cross on a red ground—which was to have a character of neutrality recognized by all the Powers who undertook to protect it in its humanitarian work.

The fête of Friday last was presided over by Mr. Gustave Moynier, who had presided over the meeting for organization twenty-five years ago, and who has been without interruption the central president and the soul of the association. He had at his side Dr. Appia, the second and last of the members who had founded the Red Cross. A perfect avalanche of telegrams of sympathy from all quarters of the horizon gave to this fête a most delightful cosmopolitan character. In particular, a cablegram from Washington was read, and a message from Miss Clara Barton, who is well known here, and who had sent one of the bouquets adorning the table around which we were assembled. There are few works in which we are happier than this of the Red Cross, which has helped to make Switzerland loved, and has consecrated a great victory of the Christian spirit over the barbarity of times of war.

Next year the Parisians are going to have their exposition, and we in Switzerland shall have a festival that attracts a great number of amateurs every time it takes place. Vevey, a little town of the canton of Vaud, on the shores of the Lake of Geneva, has preserved a brotherhood that dates from the Middle Ages—a brotherhood of vine-dressers. This corporation has inherited from its predecessors the custom of celebrating, at certain dates quite distant from one another, a kind of open-air theatrical performance, for which they prepare months ahead, and in which ancient mythology—Pales, Ceres, Bacchus—is joined to modern art. Admirable music is given in a grand representation, which is a sort of Oberammergau Passion-Play, but in a full pagan setting. The latest fêtes of the vine-dressers date from 1797, 1819, 1833, 1851, and finally the 26th and 27th of July, 1865. Vevey is reached in a few hours from Geneva by a splendid fleet of steamers constantly plowing the blue waters of the lake. The date of the celebration has yet to be fixed. Mr. Paul Ceresole of Vevey, President of the Swiss Confederation, will preside on this occasion.

Louis Wuarin.

IMPERIAL FEDERATION.

Edinburgh, October 26, 1888.

I spoke in my last letter of the rapidity with which the Imperial Federation idea had gained ground, both in Britain itself and in the outlying parts of the Empire, within the last few years. During the few weeks since I last wrote, the subject has received an unusual proportion of notice on the platform and in the press, and the places in which it has come up for discussion are significant of the new phase through which the idea is passing.

Yesterday I attended, in the Merchants' Hall at Glasgow, a crowded meeting of business men who had come together to hear an address upon the subject from Lord Brassey. The meeting seemed to me thoroughly representative of the clear-headed Scotchmen who have made the business enterprise and success of Glasgow felt throughout the world. The chairman's introduction of Lord Brassey is worth quoting as illustrating the spirit in which the subject was considered.

"We are perpetually told," he said, "that Imperial Federation is a noble dream, but nothing more, and that it must be put in some concrete form before it can recommend itself to men of business. Now Lord Brassey is no dreamer of dreams; he is not a visionary philosopher; he is not a random rhetorician: he is a man of business, and what is more than that is this—he is probably the greatest amateur traveller in the world at this moment. Lord Brassey has travelled through the British Empire, . . . he has, so to speak, looked into every chink and crevice of the British Empire; and this man of business comes back to you and will tell you that he is convinced that Imperial Federation is a necessity for this Empire and a necessity of the near future."

Addressing itself to the consideration of the speeches made by Lord Brassey and others upon this occasion, the *Scotsman*, which is distinctly representative of the best thought of Scotland, says:

"Imperial Federation is not to be thrust aside in the future as it has been in the past. . . . The speakers said many things which deserve to be carefully considered by all who have at heart the future greatness of the Empire. The spirit in which they advocate Imperial Federation is not one of shallow and boastful imperialism. There is nothing of what the French call Chauvinism in the proposals they make. They have regard to plain and obvious facts. Our Empire is not confined within the narrow limits of the British islands. It is found in all parts of the world. British enterprise and courage have built up great communities across the Atlantic, in Africa, in the Indian Ocean, and in the far-away Pacific. These communities have grown, and are growing. Are they to remain part of our Empire, or are they to split away from us, and become, if not our enemies, our touchy and jealous friends? These questions are forced upon us by the logic of facts. . . . Shall we wrap ourselves in a mantle of selfishness, declare that our interests are only at home, and that our colonies may do as they please? Nothing could be more suicidal. Such a policy would mean certain, and probably not slow, destruction. . . . It is not a party question, and it ought never to become one in the sense in which other and less vital matters are made party questions. But Imperial Federation will become the rallying cry of a party comprising all who wish to see the greatness of our Empire maintained, and the prosperity and happiness of the people guaranteed by the best of all possible securities."

About a fortnight ago, Lord Rosebery addressed the Leeds Chamber of Commerce, on the invitation of that body. He pointed out with great force to the merchants of Leeds that the commercial interests of Britain were most intimately connected with her colonial empire; that this would be still more so in the future as the colonies grew in wealth and power; and that in no way could the Chambers of Commerce throughout the country, representing, as they did, the practical side of the national life, employ their great influence more effectively than in studying the problems of national consolidation, and educating the public mind on the bearings of the question. He closed his address with words of great significance, as coming from one of the foremost statesmen of this country.

"The cause which we call Imperial Federation, for want of a better name, is worthy not merely the attention of Chambers of Commerce, but is worthy of the individual devotion of the people of this country. . . . I can say from the bottom of my heart that it is the dominant passion of my public life. Ever since I traversed those great regions which own the sway of the British crown outside these islands, I have felt that this was a cause which merited all the enthusiasm and energy that man could give to it. It is a cause for which any one might be content to live; it is a cause for which, if needs be, any one might be content to die."

It is evident that the question has entered upon a new phase, when the attention and criticism of the business mind of the country are thus challenged by leading public men.

I have lately had the advantage of much frank conversation with Lord Rosebery upon this and kindred subjects, and it has occurred to me that some statement of his views in this connection would, in the light of recent events and public utterances, have special interest for readers of the *Nation*. It will be remembered that, when serving as Foreign Minister in Mr. Gladstone's last government, Lord Rosebery had the singular satisfaction of finding that his management of national relations met with as hearty endorsement from Lord Salisbury and the Conservative party as from his Liberal friends themselves, and probably no Minister of late years has done more to maintain the high traditions of the British Foreign Office. Himself an ardent Liberal, eager for the reform of the House of Lords, in which he sits, keeping himself in touch with advanced Liberal thought, having the political strength of Scotland almost entirely at his back, and specially indicated by Mr. Gladstone as his probable successor in the leadership of the Liberal party, there is probably no man in England to day whose views about Britain's national position have more significance. The absolute frankness and sincerity which he brings to the discussion of public questions make me confident that he would have no objection to having his views known as widely as possible.

Starting from the idea that the consolidation of an oceanic empire, which is the Federationist ideal, would be favorable to the world's peace, Lord Rosebery believes that a closer and permanent union of the various British possessions throughout the world is not only desirable but practicable, and that the tendency of things at the present time is to necessitate such a union. The democratic movement in England is bringing Britain more into harmony with colonial life, and one of the best results of federation would be to draw Britain out of the circle of merely European politics, and therefore into the broadening stream of Anglo-Saxon life throughout the world, with its enormous democratic interests.

He thinks that such a movement ought to strengthen and deepen sympathy between Britain and America. He sees no reason for constant jealousies and misunderstandings between these two great branches of our race. The great interests of each lie in peace, and it ought to be possible for each to pursue its great national aims, not only without dangerous friction, but with sincere sympathy. Americans, he thinks, ought to understand better than they do the essentially democratic character of the British system of government. He has met Americans who believed that our system is a despotism because the country is governed by a queen, while, as a matter of fact, the appeal to the will of the people on great public questions is more speedy and direct than in the United States; and so completely popular is the form of government that a distinguished English writer, Sir Henry Maine, has pointed out how conservative, in comparison, are the safeguards provided by the American Constitution against sudden popular changes. Distinct advantages in some directions in the interests of popular government may even be claimed for a system which avoids the tremendous political struggle involved in electing a head for the state every four years. Federation would, by drawing in the influence

of colonial life, emphasize the democratic side of the British Government, and so can fairly claim the sympathy of the American people, so far as this is concerned.

It is clear, again, that America has as great a political interest in a contented Irish people as Britain herself. Lord Rosebery believes that Imperial Federation would do much to solve the great Irish difficulty, by satisfying the Irish mind in Ireland; and then, from the great mass of Irish sentiment in America, we might hope for a flow of kindly Irish feeling between our two great Anglo-Saxon countries.

For good understanding between Britain and the United States, Lord Rosebery thinks that each should follow lines of natural development. If Canada, after a hundred years of loyalty to Britain and British institutions, were absorbed into the United States, it would stimulate national rancor and hostility for many years. Friendly feeling depends on equality of position. England, being gradually stripped of her colonies, would be towards the United States somewhat in the position of a toothless parent, neglected and despised in the corner of the household. Neither for Britain, America, nor the world is such a relation desirable. Much better would it be for both to be working out on grand lines and with generous rivalry what, after all, are very similar aims. The American continent would probably be all the better for having two nations thus engaged in its development, each learning from the experience of the other. Canadian character is too strong, Canadian sentiment too deeply fixed by a century's history, to be uprooted and diverted from their course in a generation. The English people believe that Canadian attachment to Britain is growing stronger rather than weakening, and therefore there has been a remarkable change within the last ten years in the position which Canada and Canadians hold in England. Their influence is now freely admitted in Imperial Councils, and the energy shown in developing the country since Confederation has immensely lifted Canadian credit and prestige in the mother land. Finally, Lord Rosebery believes that Canadian honor is too deeply pledged to British connection to make it at all likely that modifications of commercial relations between the United States and the Dominion would be allowed to affect the political situation.

I have referred before to the extreme caution which has marked Lord Rosebery's leadership of the Federation movement. A some what similar caution is perhaps necessary in trying to indicate what appears to me to be the views held by leaders of the movement in England, in respect of the practical agencies by which it is possible to accomplish a closer federal union. While they recognize the possibility that British statesmen at home and in the colonies may be within measurable distance of a decisive effort of constructive statesmanship, I think that at present they look rather to a very gradual development of centralized government on imperial lines. They understand that, while so deeply engaged as the colonies are in the difficulties of organizing new territories, they could only be expected to bear a relatively small proportion of imperial burdens. As their own interests grow wider they will be willing, as all Anglo-Saxon people are, to assume their fair share. An imperial revenue, managed by an imperial council of state, containing colonial delegations, increasing in size and influence with the increase of their contributions, would form a sufficient nucleus of organization. Such a council, consulting together for common interests, would gradually gather power and intensify the feeling of national unity. I have heard the opinion strongly expressed that, as the tendency of Parliament now is to employ itself more and more in local affairs, and as each lowering of the suffrage increases this tendency, there would be no regret felt at seeing foreign affairs gradually taken out of the hands of Parliament and intrusted to a great national council which would attract to itself the best representative ability of the Empire, and, wielding some such powers as those now possessed by the Senate of the United States, would rise to a dignity commensurate with the vastness of the questions with which it had to deal. But whatever the form in which it may be thought best to embody ultimately the unity of the British people, Lord Rosebery and others acting with him do not believe that it presents any problem superior to our statesmanship. G. R. Parkin.

Correspondence.

INDIANA "FLOATERS."

To the Editor of The Nation:

Sir: As it is doubtful whether one in fifty of your readers has the faintest conception of the open and wholesale bribery carried on by both parties in Indiana, I would call their attention to a few facts which I have collected in the interest of political science and of good government.

The number of "floaters," *i. e.*, of marketable voters, in the entire State is said to be 30,000. However that may be, I learn from what seems reliable authority that in this (Monroe) county alone there are 600, 200 of which—I will not say of *whom*, for such *Stimmvieh* are hardly to be regarded as persons—live in this town; and as the town has only 3,500 inhabitants, and therefore a voting population of about 700, the magnitude of the evil is apparent. Let us see how this "floating" vote was manipulated.

It will probably amaze the readers of this communication no less than it did the writer to learn that Dudley's injunction to let none of the floaters "get away" was almost literally an order to the Republican "workers" to seize each floater, carry him to the polls, and prevent the Democratic enemy from capturing him by force and placing their ballots in his hands. Yet such is but a slight exaggeration.

In order to get a view of practical politics with his own eyes (no matter how disgusting the sight), and to see how far, if at all, our actual political system agrees with the fine phrases of the orators who tell us that in this glorious land every citizen is a sovereign and every chair a throne, the writer spent the greater part of election day at the polls, and there witnessed a most instructive, if not edifying, spectacle. But it must not be supposed that the wily workers deferred till election day their struggle for possession of the floaters. All day Monday, on the contrary, the battle raged; and when the shades of night settled down over Bloomington, probably more than a hundred of the voting cattle had been corralled in various buildings, with sentries to guard them against surprise by the foe. Among the places that served as pens for these drunken floaters may be mentioned the office of the leading Republican paper of the county and the hall of the local G. A. R. Post. The use of this hall for such a purpose drove one of the veterans to hand in his resignation, and to declare that he would no longer be a member of such a body. Thus far, however, I have heard of *only* one who took this stand. Wagon-loads of floaters had also been transported into the surrounding country, ready to be brought back with a rush to the polls at sunrise. As Harrison carried Indiana, and Monroe County showed heavy Republican gains, it is hardly necessary to state that the majority of these wretched creatures were captured by that Grand Old Party of Great Moral Ideas which possesses a monopoly, not only of wool, wheat, pig-iron, etc., but also of virtue.

If it were not so serious a matter, it would be amusing to learn that a lady of this place, who went to purchase butter on election day, was told that there was none for sale in town, as all had been bought the day before to butter sandwiches for floaters—for it would seem that even the Hoosier floater cannot live by free whiskey alone. Yet the latter was liberally supplied, as Bloomingtonians know to their cost, since drunken floaters, penned up in a wood-shed, caused a fire in the night which destroyed half a block of buildings and threatened with destruction a large part of the town.

I was not fortunate (or unfortunate) enough to be present when the polls were opened and the first batches of floaters (in "blocks of five," more or less) were voted, but will mention a few incidents that came under my own observation during the day. Going to the polls immediately after breakfast, I saw a dense mob of men surging around the window through which the ballots were handed. A fight had just taken place for possession of a negro floater. During the campaign he had sung (perhaps for pay) in the Democratic glee club, but had been captured the night before by the Republicans. The wicked Democrats now attempted a rescue, but in vain. The Grand Old Party of Great Moral Ideas held him firmly in their clutches, and the vote of this sovereign went to swell the plurality for Gen. Harrison. Later in the day I heard a negro loudly jeering a Democratic worker: "Oh, we sing with you, but we don't vote with you!" which merry jest was greeted with vociferous and triumphant laughter by the Republican bystanders. At another precinct I saw a Republican worker drive up in a buggy, squeezed in between two filthy negroes, and deliberately place Republican ballots in their hands in full view of the assembled crowd, the negroes handing in the ballots through the window without even alighting from the buggy.

In 1880 one "crisp two dollar bill" was said to be the price of a Hoosier vote; but in 1888 the average was probably three glittering five-dollar gold-pieces. The Bloomington butchers report that, since the election, negroes have offered many of these yellow coins in payment for meat. It must not be supposed, however, that negroes are the only purchasable voters in these parts. The Hoosier floater is but too frequently neither negro nor foreigner, but your genuine free-born American sovereign.

I have related the above concrete facts in some detail because I believe that the thinking men of the country should know them, and should ponder earnestly upon a remedy, if there be one. The incubus of universal suffrage could hardly be shaken off without a bloody revolution, but undoubtedly legislation might palliate the evil. There are some objections to the abolition of the electoral system and the substitution for it of direct popular vote for President; but it would at least render useless the concentration of enormous sums of money upon doubtful States. Even Matt. Quay would find it difficult to purchase the entire country. But much could be done by the passage of such election laws as would prohibit more than one voter from approaching the polls at a time, and would thus render the ballot really secret.

R. H. Dabney.

Indiana University, Bloomington, Ind.,
November 17, 1888.

THE COLORED VOTE IN THE NORTHERN STATES.

To the Editor of The Nation:

Sir: The statistics of the immense colored vote in the old slave States are common knowledge everywhere, but few persons probably have investigated the numbers and influence of the colored vote in the North, or are prepared to estimate its significance in the election just held.

The census of 1880 shows the number of white and colored males over twenty-one years of age in the States named below to have been as follows:

States.	White.	Colored
Connecticut	163,739	3,532
Rhode Island	75,012	1,886
New York	1,388,692	20,059
New Jersey	280,965	10,670
Ohio	804,871	21,706
Indiana	487,718	10,739
Illinois	733,161	13,686
Michigan	461,557	6,130
Nevada	25,633	5,622
California	262,583	66,809

It is a fair presumption that the number of colored males over twenty-one years in these States is at least as great now as in 1880, since, in addition to natural increase, there has been a considerable emigration from the Southern States; and as there are few, if any, foreign-born negroes, it is also fair to presume that they are all voters, and that nine-tenths of them vote with the Republican party, having none of the associations and traditions which in the South still connect many of them with their former masters and have led to business relations and political alliances.

Of the States named above, only Connecticut and New Jersey gave their electoral vote to Cleveland, all the others voting for Harrison, and their respective majorities being unofficially given by the Republican press as follows:

Rhode Island	4,427
New York	10,000 to 11,000
Ohio	20,000 to 25,000
Indiana	2,438
Illinois	15,000 to 18,000
Michigan	15,000 to 20,000
Nevada	1,500 to 2,000
California	5,000 to 8,000

It will be seen that Harrison's majorities, as estimated above, are, in the States of New York, Indiana, Nevada, and California, less than their respective colored votes; and if these estimates should be sustained by the official figures, it will be apparent that Harrison's success in those States is due to the colored vote, and that if it were eliminated Cleveland would have received their 62 electoral votes, which, added to the 168 votes he did receive, would give a total of 230 out of 401.

Or, confining the analysis to the State of New York alone, in which there can be no possible question of the correctness of the argument, her 36 votes would have given Cleveland 204, thus insuring his election.

Here is presented the singular spectacle of 20,000 colored voters in the Empire State of the North determining the result of a Presidential election for eight millions of white voters in 38 States; and not only so, but also determining, certainly *for four years*, and possibly for an indefinite period, the course of the Government upon the gravest question of public policy ever presented to the intelligence of the American people.

This letter has no purpose to present an argument against negro suffrage, which is one of the inevitable evils of our system of government to-day; but its purpose is, if possible, to aid the white voters of the country to realize the vital importance of the intelligent and conscientious exercise of their own right of suffrage. Yours respectfully,

James A. Pearce.

Chestertown, Md., November 12, 1888.

THE SECTIONAL BREAK-UP.

To the Editor of The Nation:

Sir: To a thinking man of either party, one of the most important and most welcome incidents of the late election is the fact that the Republicans carried West Virginia. Still more pleased would all patriots have been had the great northwestern States of Illinois and Minnesota given Democratic majorities, and old Virginia and Tennessee, on the other hand, come into the Republican ranks, which positions these last four States would apparently occupy did their citizens actually vote on the "tariff" as the paramount question. So long as the idea of a "solid South" lingers as a possibility, even, in the minds of our people, it appears impossible to obtain their votes on an economic question. In Kentucky, for example, notwithstanding the *Courier-Journal*, the protection idea has unfortunately obtained a strong foothold; yet, in the result at the polls, this fact is barely visible: men talk protection, but vote the straight Democratic ticket. The natural consequence of this is, that in Minnesota men talk free trade and vote the Republican ticket.

The Democratic party has not gone far enough. Their platform calls for tariff reform, but they still shelter under their banner Randall and his following. The Mills Bill and the President's letter both presented the question strongly to the people; but the party organs, in great part, emphasized most strongly—in one the phrase, "We are entering on no crusade of free trade"; in the other, the fact that the average reduction of duties was *only* five per cent. While Democratic leaders continue to apologize for raising the only issue which is before the country, that issue cannot constitute the dividing line; the party still remains an association of men who cling together because they have voted on the same side since the times of Buchanan, and their fathers, perhaps, before them voted for Jackson and Van Buren. In this company Republican reformers do not feel at home, and can very rarely be persuaded to remain. The best chance for the party is to make a bold stand for free trade without disguise, and trust to the sense of the people, irrespective of the latitude of their homes.

Lincoln D.

Louisville, November 12, 1888.

UNITY IN TARIFF REFORM.

To the Editor of The Nation:

Sir: In your issue of November 15 you say: "The recent election has shown *where* the tariff-reform clubs can put in their most effective work, namely, among the workingmen of the large cities."

If I may be allowed to add a few suggestions, based upon an experience gained in both public and private discussion of the subject, as to *how* the work of tariff-reform clubs and tariff reformers can be put in most effectively, I would say, to begin with, that I think they should first agree *to work together for a specific purpose*. As it now is, some of the friends of "tariff reform" advocate "free trade," and others "tariff reduction" simply, a "tariff for revenue only," or a "tariff for revenue with incidental protection," etc., etc.; and thus the advantage of concert of action, so well appreciated and so much relied on by the opponents of any tariff reform, is entirely lost to them.

If, on the other hand, our tariff reformers should all agree that, whatever their ultimate action might be, they would combine *now* for the single purpose of advocating the immediate reduction of our tariff laws to a *strictly protective* basis, they would thereby secure the hearty coöperation of many an honest believer in "protection" who would not agree to a reduction on any other basis. The average candidate for a seat in Congress two years hence, if not the members recently elected, would, with the aid of these honest allies, be readily made to understand the difference between *tariffs for protection* and *tariffs for bounties with incidental protection*, and the bounties would soon "go." Such a reduction would prove a great boon to the unprotected consumers, while a present attempt at anything beyond would afford sufficient pretext to the "friends of protection" to contine their open opposition to any reduction whatever. The "free trade" red rag should, therefore, no longer be flaunted in the face of the "protectionist" bull.

Starting, then, with such a specific purpose, the tariff reformers should bend their energies to convince the unenlightened voters:

(1.) That "*the* tariff" is not a unit, but an aggregation of particulars, each of which must be scrutinized separately.

(2.) That the "principle of protection" requires only the imposition of such a tariff or tax upon a competing foreign production as will raise its cost to that of the like domestic production.

(3.) That when any tariff goes beyond the limit of that principle, the excess, in so far as it enhances the price of the domestic article, operates solely as an unalloyed tax upon the consumer and a pure benefaction to the domestic producer.

(4.) That many of our tariffs are now open to such an objection—some because they were made so originally, and others because they have become so through a change of circumstances—and that the effect in the aggregate is to lay a heavy burden of taxation upon the people.

(5.) That "tariff reform" means the reduction of these excessive tariffs to the limit of the principle of protection, and a consequent reduction in the price of the articles named in such tariffs, whether of foreign or domestic production.

(6.) That neither a reduction of the national revenues nor the abolition of "the surplus" is necessarily synonymous with or productive of "tariff reform."

(7.) That "those who think alike should act together," at least in voting for members of Congress.

I am not unmindful of the fact that the foregoing suggestions omit any reference to the subject of adding "raw materials" to the "free list"; but since many of the "friends of protection," actuated by an enlightened self-interest, are calling for "free raw materials," I think we may, for the present, leave the advocacy of that branch of "tariff reform" to them.

Stephen H. Tyng.

Boston, November 19, 1888.

A FREE-TRADE PARTY.

To the Editor of The Nation:

Sir: Many Democrats are blaming President Cleveland for precipitating the party into opposition to protection, and thus leading them to defeat. I think it is easy to see that Democratic defeat is due, not to the act of this brave, honest, and patriotic leader, but to the failure of the party to give him adequate support.

Neither in the Mills Bill nor in campaign documents and speeches, excepting by Mr. Thurman and a few others, was the true note sounded. It should have been an aggressive war-cry against the whole "protective system." It degenerated into a defensive appeal against the charge of being "free traders." On the other side, protection fought with the desperation born of danger, and with all the weapons which monopoly can command.

After a brief interregnum, the Republicans once more come back to power, a wiser party than when they left it. What remains to the Democracy? Nothing but to fall again into the accustomed rut of opposition. It has no aims, no issues, no aspirations which can lift it again to power. Only some egregious blunder on the part of the victorious party can avail; and this, if it have anything left of the wisdom of the serpent, it will take good care to avoid.

But there are within both parties, and outside of either, a large and increasing number who are ill-satisfied with the Republican "system," on the one hand, and with Democratic pusillanimity on the other. These would gladly serve under the standard of free trade, if borne by a competent leader. This body includes the philosophical and scientific minds of the country, as well as a noble band of young men, educated in just principles of political economy. They see in the old Saracen device, adopted from the feudal age, an incubus upon our constitutional liberties, and a source of oppression, corruption, and disorders throughout the body politic. They see in free trade, pure and absolute, the remedy for these evils, and the highway to the restoration of our foreign commerce and our languishing agriculture, and of the greatest good to the greatest number. That the good work has begun is evident from the alarm of the enemy. Under vigorous instruction it will go on, until an educated people are as eager to be emancipated from the new slavery as they were from the old.

Will not you, Mr. *Nation*, sound this key-note, and give your powerful aid towards the desired consummation? The conflict may be arduous and long, but "Truth crushed to earth will rise again." Error is already wounded, and will die amid her worshippers. Is it too soon to organize a new party, bearing on its banner "Free Thought, Free Speech, Free Trade"? B. H.

DETROIT, November 15, 1888.

[As was said long ago of another and kindred reform, free trade is not a movement, but an attitude of mind. It will have been achieved in this country whenever Congress adopts the principle never to vote another tax with a "protective" intent—*i. e.*, for the benefit of a class. The reduction of the existing tariff then becomes merely a question of time and details, following well-defined lines. Time may show that neither of our two great parties can be forced into this attitude; but we do not yet despair of them. —ED. NATION.]

"NOT THAT KIND OF MAN."

TO THE EDITOR OF THE NATION:

SIR: A well-informed Indianapolis correspondent of the Chicago *Herald* says that "President Cleveland does not escape criticism entirely," for the late defeat, namely, though his motives are respected. Hundreds of Democrats have not recovered from the disappointment immediately following his election, when they saw Republicans retaining positions which they "believed they themselves had earned by years of fealty to the party's principles. Harrison's friends," continues this correspondent, "declare that he will make no mistake of this kind; that he will place Republicans in all positions of honor and trust in the Government, and will thus strengthen the party and himself by rewarding none but those who can be depended upon to do their duty as partisans."

I have many friends in Indiana, and the universal feeling is that Mr. Harrison intends to strengthen (?) himself and his party by rewarding his partisans with the offices of the country—put none but Republicans on guard. In the case of the post-office in this city, Mr. Cleveland allowed the incumbent to serve out his term, which had a year to run, although the postmaster was editor of the Republican paper, which was constantly abusing the President and his policy. Even now, one-half the post-office employees and letter-carriers are Republicans, as are also the postal clerks in this vicinity.

The suggestion that *any* Democrat, however worthy and useful, will be allowed to retain his position after about next April, is received in this part of the country with derision. They say, "Harrison is not that kind of a man."

Yours truly, B. W. W.

BURLINGTON, IOWA, November 13, 1888.

HEREDITARY FEAR OF ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: Will you not say something with regard to heredity in politics? Observation here leads me to believe there exists among a certain class of native Americans an unreasoning fear of England, similar to that a quiet horse shows when he smells the odor of the wild beasts in a menagerie, though they are invisible to him. I have been taught that a horse inherits the fear from his wild ancestors, and I am disposed to think that a New Englander's comes down to him from the early days of the Republic.

One of my neighbors lays it down as "a lor," that "whatever England wants is bad for the United States"; and, although he is a graduate of the Harvard Scientific School, one might judge from his ordinary political outgivings that he, in his heart, believes Queen Victoria never goes out for a drive without a bandanna in her reticule, and that the whole of England is to-day excited over the possible changes in our tariff. Very truly yours, P. L.

CUMBERLAND, MD., November 12, 1888.

THAT DENVER CITY CONTRACT.

TO THE EDITOR OF THE NATION:

SIR: A few days prior to election you quoted from a Western paper an article referring to the fact that an English concern had entered into competition with a large number of American foundries for 5,000 tons of castings for a cable railroad in Denver, Col., and that this English concern had underbid its American rivals and had received the contract. You finally dismissed it with the remark that you belie ed the story was a campaign falsehood. I admit I was of that opinion myself, but the *Iron Age* (November 1) gives a full statement of this affair, and I think it is probably correct in its statement; at least, as the *Iron Age* puts it, the story seems to bear the evidence of truth. While its version differs considerably from that given by the Western paper, the substance of both is that an English foundry has underbid the lowest American bidder for this work, and is to ship to this country 5,000 tons of castings (on which there is a duty of 45 per cent. ad valorem) and deliver them in Denver for less money than our Chicago foundries were able (or willing) to do.

I must admit that this is a remarkable instance of what our high-tariff friends call foreign competition.

I wish you would tell your readers, of whom I am one, how this competition is possible, with our 45 per cent. tariff, and what we might expect under a lower tariff. The Mills bill makes 5 per cent. reduction on this class of goods. Yours respectfully,

JOHN H. PIPER.

NOVEMBER 12.

[It is not the Mills bill, but the Senate substitute, that makes a reduction of the duty on iron castings, and herein we think that the Senate bill is preferable to the Mills bill.

We said that if the Chicago foundrymen could not compete at Denver with English foundrymen, who are handicapped with a duty of 45 per cent. ad valorem, or of $28 per ton, as the case may be, they were greater slovens than we had taken them for. The basis of the cost of castings is the cost of pig-iron, which the *Iron Age* puts at $16 per ton in Chicago. The cost in Glasgow, Scotland, is 41s. 6d. per ton, equal to $10. Therefore, the disadvantage of the Chicago foundryman at the outset is $6 per ton, against which he has the advantage of $28 per ton duty, a net protection of $22 per ton. Now where does all this bonus go to? Not to labor. We have not the figures of comparative wages in English and American foundry work before us, but we have those of blast-furnace work, in a recent consular report (No. 49, Department of State), from which it appears that the labor cost of pig-iron in Middlesbrough, England, is 79 cents per ton, and in eastern Pennsylvania $1.25 per ton; difference, 48 cents per ton. The difference between the two countries in the labor cost of castings cannot be very much greater, but we will suppose that it is $1 per ton. Then we have $6 difference in pig-iron and $1 difference in labor, total $7, against a duty of $28. What becomes of the other $21 of net protection? The *Iron Age* says that the English foundrymen got a freight rate of $7 a ton from Liverpool to Denver via Galveston, while the railroad charge from Chicago to Denver was $9 per ton. That is a question which evidently has no relation to the tariff, but if we count it in, it subtracts $2 more from the net protection, leaving $19 per ton bonus, or considerably more than the total cost of the raw material, pig-iron.

There is some mystery about this affair which we do not attempt to penetrate, and the mystery deepens when we read in the trade journals almost every day that American firms have been awarded contracts for iron bridges and for locomotives in Australia, Chili, and other foreign countries where they are obliged to compete with English contractors on equal terms. We should say that if our foundrymen could not compete with English firms in the interior of the United States under the present duty, in the second century of the republic, it was the best possible evidence that protection was a failure as to that particular branch of industry, and that it was high time

to try some other system; for is not the buyer of castings also an American citizen and entitled to some consideration? Even the Denver Cable Railway Company has some rights which white men are bound to respect.—Ed. Nation.]

"FORESIGHT AND HINDSIGHT."

To the Editor of The Nation:

Sir: In the *Nation* of May 24 a correspondent gave a striking illustration of the fact that "even the greatest of historians may not write history in advance without incurring some danger to his fame for philosophical acumen." The illustration was in the form of a quotation from a speech made by Lord Macaulay in 1845, when he declared that the chances of the African race were better in Brazil than in the United States, and prophesied that the black population of Brazil would be freed before that of the United States.

During a second perusal recently of 'The Last Days of Pompeii,' I noted a similar "nod" on the part of the first Lord Lytton. In Chapter 4 of Book II he expresses his opinion upon the unification of Italy as follows:

"Italy, Italy (while I write your skies are over me, your seas flow beneath my feet), listen not to the blind policy which would unite all your crested cities, mourning for their republics, into one empire. False, pernicious delusion! Your only hope of regeneration is in division. Florence, Milan, Venice, Genoa may be free once more, if each is free. But dream not of freedom for the whole while you enslave the parts; the heart must be the centre of the system, the blood must circulate freely everywhere, and in vast communities you behold but a bloated and feeble giant, whose brain is imbecile, whose limbs are dead, and who pays in disease and weakness the penalty of transcending the natural proportions of health and vigor."

It may possibly be too early yet to decide whether or not the unification of Italy was a "pernicious delusion"; but the "blind policy" of Victor Emanuel and Cavour seems thus far to have brought happiness and prosperity, and "regeneration" appears to have been accomplished, not "in division," but in a united Italy. Thus novelists as well as historians, being mortal, sometimes make mistakes.

Cleon.

Mito, Japan, October 1, 1888.

MODERN GREEK IN THE TEACHING OF ANCIENT.

To the Editor of The Nation:

Sir: I was much interested in the communication from "A. H." in the last number of the *Nation*, respecting his reading of the modern Greek in his classes. I quite agree with him that we have in the living language of to-day a resource for giving a new and fresh interest to the ancient tongue, and I can parallel the satisfactory results of which he speaks with those which I have obtained in some of my own advanced classes. It seems to me that the ideal course in Greek should take notice of the language in every phase of its history, and certainly in any such survey the modern Greek must come in with its claims. Claims it certainly has upon us, in view of the remarkable resurrection of Greece in the present century, since the recovery of her independence after four centuries of slavery to the Turks. The fact, too, that we have now an American School of Classical Studies at Athens must give to all American students of Greek a special interest in all that pertains to the Greece of to-day, and hence to the present form of her language.

W. H. Appleton.

Swarthmore College, Pa.

THE FEMALE INTELLECT.

To the Editor of The Nation:

Sir: If Prof. Cope would like to supplement his "general observation" with a few facts, he may be interested in knowing that of the last graduating class at Cornell University, ten per cent. were women, but that those women won sixty per cent. (three out of five) of the fellowships. The subjects in which they were so successful were botany, architecture, and mathematics. President Adams, in addressing the Association of Collegiate Alumnæ which met at Cornell last month, said that the women regularly stand a little higher than the men in the university classes. Does it not show a "pronounced frailty of the reasoning faculty" on the part of Prof. Cope, that he does not perceive the bearing of the many facts of this nature which, nowadays, are to be had for the seeking?

M.

TEACHER AND COMMUNITY.

To the Editor of The Nation:

Sir: I have been struck by the little influence exerted by our teachers in this city, and have wondered if it is due to our method of employing them. We carry out the plan of "protection to home industries" till it amounts to practical prohibition. Out of eighty teachers employed in our public schools, all except sixteen have been educated here in our High School. Of the sixteen educated elsewhere, five are said to be graduates of colleges bestowing degrees.

Our method of appointment to fill vacancies is as follows: Graduates of the High School wishing to teach in the city schools must attend the Training School one year. The Training School is a central primary school of about sixty children, on whom the teachers practise. After the school is dismissed, the teachers recite to the principal one hour each day. A record of each teacher is kept, and appointments are made in the order of standing. So far as is practicable, each teacher is sent to the district nearest her home, and, hence, where she attended school a few years before.

A Citizen.

Burlington, Iowa, November 12, 1888.

THE MYSTERY OF THE CALCULUS.

To the Editor of The Nation:

Sir: The review of Newcomb's 'Calculus' in your last number treats of the old question, Why do so few of our college boys study the Calculus? and the other question, Why do so few men from college, even if they studied it there, remember anything of it in after life? One cause, which I discussed in a letter published by you some years ago, is found in the absurd way in which mathematics is taught in all or nearly all our schools and colleges—the interminable mental gymnastics that have to be gone through before the really useful, and at the same time the truly sublime, parts of the science are reached. Some of the latest text-books have rather multiplied than diminished the old mass of rubbish, under the head of "modern" and of "descriptive" geometry, and by the exuberantly full treatment of the higher algebraic equations, which can hardly ever be put to any use. These are put on top of the wretched puzzles that are to be solved by plain and quadratic equations, and they tire most boys and young men with the study of the noblest of sciences, long before they come to the portals of the much-dreaded Calculus. It is like the case of the proverbial Dutchman, who took a mile's start for jumping a ditch, and was exhausted and out of breath when he reached it.

I recollect that I began to learn the Calculus, without a teacher, before I was ten years old, from an old book—I believe it was Abel Birja's Algebra—by a method which perhaps was not strictly scientific, but very simple and easily understood. The "differential" was defined as the increment of a quantity, which is so small that its higher powers may be disregarded when compared with the first. If anybody objects to the supposed inaccuracy, he is told that if he stickles for any particular degree of exactness, he can always assume his differential small enough to satisfy his own standard. This notion of an increment "so small that, etc.," is called for short "infinitely small," and may be of the first, second, or any higher degree, according as products or powers occur, and you get along with it splendidly in solving all problems. When I got older I came across an ex-Professor of Mathematics, who told me that these notions were all wrong, and that, according to Lagrange, the differential quotient is nothing but the coëfficient of the second term in the development of a function, and that I must have nothing to do with infinitely small or infinitely great. I took "infinite" pains to recast all my ideas on the subject, and had great trouble to get rid of "those infinitely small arcs which may be treated as straight lines." I found afterwards that Lagrange himself, in his series for periodic functions, makes very free use of the infinitely great and small.

But to your reviewer, who says that these first conceptions are the main difficulties and the only difficulties in the Differential and Integral Calculus, I cannot give my assent. In the first place, old geometry, before the days of Newton and Leibnitz, presented the same difficulties of the infinitely small and great as the modern Calculus when applied to figures in space. The circle was always a polygon of an infinite number of sides; the sphere, an aggregate of a doubly infinite number of pyramids, each standing on a doubly infinitesimal basis. The difference between the old treatment and the new is this only: that before the days of the Calculus each curved line, or curved surface, or round body had to be treated separately, and the harsh reasoning about infinitesimals had to be applied to it in its own way, the solution being always clumsy and often impossible; whereas we now have a method which goes right through all obstacles, and, the meaning of the symbols d and f being once understood, the student can generally do without any mention of the infinitely great or small.

In the second place, I do not admit that, after the learner has grasped the method and the meaning of the symbols, his path is all smooth and strewn with roses. It is, indeed, all plain sailing for a while, say, as far as most of the college courses go—the quadrature and rectification of plane curves, and the measurement of the surfaces and volumes of bodies of revolution. But a little further on lie definite integrals, elliptic functions, the solution of differential equations, variations, calculus of finite differences, series for periodic functions, etc.; and all these branches are necessary for the student who wishes to apply his mathematics to the study of physics and mechanics, or to the theory of probabilities. Even the differential equations from which the planetary orbit is derived, though they can be solved by a sort of sleight-of-hand, without need of the general method for solving such equations,

are pretty tough. In fact, Calculus means "stone," and the student's path becomes here right stony.

And this brings me to one of the objections made by the unmathematical mind to the well-known proposition, that the planetary curve is formed by two forces, and by these alone; the force of inertia driving along a straight line with the acquired velocity and the incessant or accelerative force of attraction. A highly educated man, who has even a smattering of Calculus, asked me this morning: "In a circular or nearly circular orbit, where the attractive force is always at, or nearly at, right angles to the inertia, is not the diagonal formed by the parallelogram of forces always greater than the one side of the parallelogram due to the inertia alone? Why, then, does not the velocity of the planet increase all the time?"

Who can answer this without mixing in his explanation infinitely small quantities of the second order? I await a reply. L. N. D.

Louisville, Ky., October 21, 1888.

Notes.

Ginn & Co., Boston, have in press a 'Vocabulary to the First Six Books of Homer's Iliad,' by Prof. Thomas D. Seymour of Yale. It has been made at first hand. The antiquities will be illustrated by woodcuts.

White & Allen announce an edition of Anster's translation of 'Faust' (the first in English verse), with colored illustrations after aquarelles by Frank M. Gregory, along with many black-and-white designs; also, 'P. T. Barnum's Circus, Museum, and Menagerie,' compiled by Mr. Barnum himself and Sarah J. Burke, with colored prints.

'The Walks Abroad of Two Young Naturalists,' from the French of Charles Beaugrand, with numerous plates and vignettes, will be published directly by T. Y. Crowell & Co.

Thomas Whittaker has nearly ready 'Stray Leaves of Literature,' by Frederick Saunders of the Astor Library.

Brentano will publish 'The Song of the Palm, and Other Poems,' by Tracy Robinson.

Robert Clarke & Co.'s list of new books includes a 'Narrative of a Journey Down the Ohio and Mississippi in 1789-90,' by Maj. Samuel S. Forman of New Jersey, edited, with a memoir, by Lyman C. Draper; 'Adventures of Pioneer Children; or, Life in the Wilderness,' by E. Fenwick Colerick; a 'Manual for Building and Loan Associations,' by Henry S. Rosenthal; and 'Historic Families of Kentucky,' First Series, by Thomas Marshall Green.

Harper & Bros. publish directly a new novel, 'A Christmas Rose: a Blossom in Seven Petals,' by Robert Edward Francillon; and 'Colonel Quaritch, V.C.,' by Rider Haggard.

'New Amsterdam—New Orange—New York' is the title of a brochure now in the hands of the printer, and compiled by Gen. Charles W. Darling, corresponding secretary of the Oneida Historical Society, at Utica, N. Y. The material has been gathered from a large number of unpublished folio manuscript volumes of public records.

B. Westermann & Co. will shortly receive 'Die Gred,' a new historical romance by Georg Ebers, of which Nuremberg is the scene.

The Routledge edition of Victor Hugo has received a fresh enlargement by the publication of 'The Man Who Laughs,' in two volumes. We can add nothing to what we have said of the other works in this handsomely printed series, except that the illustrations deserve more praise than those in the 'Wandering Jew.' Their defects are such as they share with the monstrous creation whose scene is in England, but whose characters and incidents form anything but an "historical novel." Doré would have been a proper designer in this instance; and one artist of genius would have been worth the two who have actually divided the task.

The newly completed volume of the *Magazine of Art* comes to us bound from Cassell & Co. Its contents have the usual variety: scenes from nature in New Zealand, Exmoor, Fontainebleau; specimens of local art galleries and current exhibitions; modern artists and their works; costumes, beautifully illustrated; Irish types and traits; art on the stage, with a timely portrait of Miss Anderson as *Hermione*, etc., etc. There is a not remarkable series of Napoleon portraits; another, somewhat more *recherché*, of Dickens portraits. Best of all the pictorial examples is the engraving after Paul Dubois's masterly bust of Pasteur; Auguste Rodin is also forcibly represented. A chalk drawing by Watts of his "Love and Death," and a woodcut after his "Orpheus and Eurydice," further lend distinction to this volume, which has its monthly photogravure of some painting.

The *Bookworm* (London: Elliott Stock; New York; A. C. Armstrong & Son) makes so pretty a bound volume that it is a pity not to be able to speak very highly of the contents of this magazine. We have found it in this, its first year, scrappy and inorganic, with only by accident a special article possessing some degree of interest. This would be more apparent in a classified table of contents, which is lacking, than it is in the index.

Our monthly notice of the *Century* for the past six months precludes the necessity of any extended remarks on the fourteenth volume (May-October) which lies before us. One observation, however, will be pertinent: the multifarious contents need a better key than the table supplied at the beginning. Take Mr. Kennan's six related articles on Siberia and its exiles: not more than three are grouped together. The papers on the civil war are likewise mingled indiscriminately with other articles in the alphabet lottery. We could further wish to see an index to the more important engravings, and think the portraits, as a class, worth a complete list to themselves.

Two volumes, or parts, contain the twelvemonth (1887-88) of *St. Nicholas*, in whose familiar physiognomy, if there is anything new to be noted, it may be the number of process engravings from living models—an endless resource for a magazine of this character. We fulfil a promise in calling the editor's attention to the perilously small type in which the letters of correspondents are printed. There is nothing imaginative in supposing them to be often read by young incautious eyes in the fading twilight, or by dim or glaring lamplight.

Mr. Henry T. Coates's 'Fireside Encyclopædia of Poetry' (Philadelphia: Porter & Coates) comes to us in its twenty-seventh edition. It has been very extensively overhauled and considerably enlarged. Hardly any of the authors and pieces omitted to gain room would be missed, even if it cannot be said that they are always replaced by their betters. Bernard Barton, William Beattie, William Congreve, Erasmus Darwin, Austin Dobson, Ebenezer Elliott, and Andrew Lang are some of the British new-comers; Alice Cary, C. P. Cranch, Julia Dorr, Edward Everett, J. T. Fields, Paul H. Hayne, J. G. Holland, R. T. S. Lowell, J. J. Piatt, Henry Timrod, and William Winter some of the American. One misses here R. W. Gilder and Sidney Lanier, to mention no others. The collection remains about what it was before, albeit somewhat fresher—not among the best in a critical sense, but from its comprehensiveness a useful supplement to similar collections. The index has been rather neglected. "Gilfillin," "Cenneck," and "Wm. *Joseph* Irons" stand for Gilfillan, Cennick, and Josiah. The year of Mary Howitt's death might have been inserted. The steel engravings of the first edition have given way, to advantage, to excellent portraits of the poets on wood, with facsimiles of their manuscripts.

It can only be necessary to mention the appearance of the third volume of Poor's annual 'Directory of Railway Officials,' a supplement to the Manual. The thoroughness and authority of this list of the personnel of our railway service are indisputable.

'Notable Workers in Humble Life' (T. Nelson & Sons), by the Rev. E. N. Hoare, consists of sketches of eight in many respects very remarkable men. The stories of four, at least, are familiar to most, viz., those of the weaver, John Duncan, who became a well-known botanist; of the baker of Thurso, Robert Dick, whose knowledge of geology astonished Sir Roderick Murchison; of Thomas Edward, the shoemaker-naturalist; and of the Portsmouth cobbler, John Pounds, whose work in teaching poor children led to the formation of Ragged Schools. The lives of the itinerant lecturers and exhorters, John Ashworth, Thomas Cooper, author of the 'Purgatory of Suicides,' and Robert Flockhart, soldier and street-preacher in Edinburgh, will probably be new to the majority of readers. The closing chapter is devoted to an account of the self-sacrificing labors of George Smith of Coalville, in securing legislation for the protection of children employed in brick-yards and on canal-boats, as well as of his as yet ineffectual efforts to obtain similar protection for thirty thousand gipsy children who roam through Great Britain. The author is in almost every case able to let the subjects of his sketches tell the principal parts of their story in their own language, which they often do in a style remarkable for its simplicity as well as its power of expression.

We can recommend to teachers of advanced classes a work recently issued from the press of Waterman & Amee, Cambridge, prepared by Dr. Benjamin Rand, of Harvard University. It is entitled 'Selections Illustrating Economic History Since the seven Years' War'; and is intended to furnish a course of reading upon the economic life of the principal industrial nations for the last century or more. Its first topic is "Leading Sections from the English Navigation Acts"; the second, "The Colonial Policy of Europe" (taken from the fourth book of Adam Smith's 'Wealth of Nations'); then follow the "Great Inventions," from Walpole's 'History of England'; "The Economic Causes of the French Revolution," from Von Sybel's 'French Revolution'; "The Emancipating Edict of Stein," from Seeley's 'Life and Times of Stein,' and "The Orders in Council," from Levi's 'History of British Commerce.' There are other extracts, designed to give an idea of English finance from 1793 to 1815, of the English Corn Laws, of the new gold supply after 1848, of the German Zollverein, of the French economic affairs under the Second Empire; of the French indemnity paid to Germany after the Franco-Prussian War, and the application of it by Germany; of industrial progress in Italy, of European public debts, and of our own industrial growth. All the extracts are from the most approved authorities, such as Cairnes, Levasseur, Neymarck, Kolb, and the Tenth Census of the United States. Dr. Rand's

work has been done in the most critical and painstaking manner. He has displayed excellent judgment, not only in his selection of sources, but also in the length and the appropriate character of the extracts which he has made from them. Though its chief worth will be appreciated more by students of economics, the volume will be of great value to general readers of history.

A valuable contribution to the study of mediæval institutions is the 'Étude sur l'histoire des alleux en France,' by Émile Chénon of Rennes (Paris: Larose. 1888). The facts here developed as to allodial property in France are somewhat of a surprise to those of us who have been accustomed to consider the maxim, *Nulle terre sans seigneur*, as the governing principle of landed property in France. M. Chénon shows that it was only in a small part of the country that this rule prevailed. A map *des pays allodiaux en France* gives only Brittany and the countries of Blois, Beauvais, and Boulogne as *pays anti-allodiaux*, in which this maxim is a governing one. A belt of country embracing the entire east and south is given as *pays allodiaux*, in which the contrary rule prevails — *Nul seigneur sans titre;* while most of the western provinces are called *pays censuels*, in which the rule is, *Nul alleu sans titre*, feudal tenure being simply a matter of presumption, *juris tantum*. The allodial lands themselves are classified (p. 38) as *alleux souverains, justiciers*, and *simples*. The first class are true sovereignties, in which the proprietor exercises all regalian rights, as Boisbelle in Berry, the princes of which declared that they held only *de Dieu, de leur épée, et du lignage*. Of this class is the famous kingdom of Yvetot, celebrated by Béranger, which did not lose its sovereignty until 1553. The proprietors of the *alleux justiciers* exercised a similar authority, but only, as the great feudatories did, by special grant, being still subject to the royal authority—the rights of justice being held as a fief. The *alleux simples* were allodial merely as property, being subject, in point of the administration of justice, to the seigneuries within which they were situated.

The four articles of the *English Historical Review* for October are shorter than the average, and perhaps of less general interest. The first article, "The Settlement of Australia," by E. C. K. Gower, fills only ten pages, with an appendix. Then follows "The Tomb of Dante," by E. Moore, Principal of St. Edmund Hall, Oxford. This interesting paper describes the discovery of the bones of Dante in 1865, and discusses the problem of his tomb. "Elizabethan Presbyterianism," by William A. Shaw, considers that phrase of Presbyterianism, especially associated with the name of Cartwright, which belonged to the sixteenth century. The movement, we are told, "stands out from the history of Elizabethan dissent as an abrupt expansion with a distinctly separate genesis, and effective of no results except in so far as it influenced the beginnings of independent separation." Lieut. Col. W. G. Ross, in "The Battle of Naseby," examines the various accounts of the numbers engaged on both sides, and concludes that the army of the Parliament numbered some 13,500 men, that of the King not above 8,000. Of the lesser papers, reviews, etc., which follow, perhaps the most interesting, at least to American readers, is an elaborate review by Lord Acton of Lea's 'History of the Inquisition.' "As a philosophy of religious persecution," he says, "the book is inadequate. The derivation of sects, though resting always upon good supports, stands out from an indistinct background of dogmatic history. The intruding maxims, darkened by shadows of earth, fail to insure at all times the objective and delicate handling of mediæval theory. But the vital parts are protected by a panoply of mail. From the Albigensian crusade to the fall of the Templars, and to that Franciscan movement in which the key to Dante lies, the design and organization, the activity and decline of the Inquisition constitute a sound and solid structure that will survive the censure of all critics." This judgment from a scholar of high rank, himself a Catholic, seems worthy to cite.

Mr. H. H. Johnston discusses, in his characteristic and entertaining way, in the November *Fortnightly*, the question of the probable position of the Emin Pasha relief expedition. He agrees with almost all African authorities that Stanley has joined the German governor, and suggests three alternative courses which he may be pursuing. In conjunction with Emin, he may be operating to the northward of the province of the latter against the Mahdi's forces, thus giving rise to the rumors of the "White Pasha"; he may be simply waiting in the Nile valley for the expected reinforcements under Major Barttelot, meantime helping Emin in the reorganization of his dominions; or he may be marching to the westward, through the provinces of Darfur and Wadai, to the basin of the Niger. Mr. Johnston might have added the fourth conjecture, which is perhaps more probable than this last, that he is proceeding by the west of Lake Victoria Nyanza to Msalala, near its southern extremity, where a depot of supplies for him has been established. Mr. Johnston gives an interesting account of Mr. Stanley's kindly methods of dealing with savages, and incidentally remarks that, from his personal observations on the Congo, he knows that the loss of life during that first famous passage of the river was far less than Stanley himself represents it in his 'Dark Continent.'

The second number of the *Journal of the Gypsy Lore Society*, for October, has come to hand. The popular portion of its contents is relatively small this month. The publishers are T. & A. Constable, Edinburgh.

Babyhood rounds out its fourth volume with a New York and London imprint—an American notion in journalism transported across seas in return for the many the mother country has given us. The leading title is explained in a sub-title: "A Monthly Magazine for Mothers, devoted to the care of infants and young children, and the general interests of the nursery." It has been admirably conducted from the start, and its bound volumes form a domestic library of quite uncommon value. It is a publication of which physicians should be the best friends and advertisers.

English medical skill was in request at the Prussian court eighty-five years ago, when Louise, the mother of the late Emperor William, was still alive. This gracious and heroic lady had great confidence in a Dr. Brown, whom she employed in her own case, and in 1803 desired to attend the Russian Princess Helen, sister of the Emperor Alexander I., during what proved to be her fatal illness. In the current *Vom Fels zum Meer* (F. W. Christern), Dr. G. Egelhaaf communicates letters from the Queen to Brown, Brown's replies, and other correspondence relating to the case in question, together with translations of a part of the physician's diary. Louise's letters are also translated; for she wrote in French, as one may see from the half-dozen examples given in curious facsimile, even to the fancy borders and colored edges of the Queen's note-paper. They are naturally full of tender sympathy for a bosom friend, and are a pleasant confirmation of the Queen's traditional character. Their publication will not shock the Chancellor.

The Bufford Sons Lithographic Co., 335 Broadway, send us a well-executed life-size portrait of Mrs. Benjamin Harrison.

The Woman's College of Baltimore was opened on November 13, with interesting ceremonies. President Gilman of the Johns Hopkins University made an admirable address, touching upon the various ways in which the higher education can make life richer and fuller—a theme which cannot be too frequently preached upon, provided it be done with the simplicity and convincingness which characterized this occasion.

Close upon the above event comes the cheering announcement that the Trustees of Columbia College have consented to the establishment of an affiliated college for women—an "annex," to use the cant expression. It will make no draft on the resources of the college, depending entirely on endowments and tuition fees. The instruction will be given by the Columbia professorial body, and as the organization will be subject to the approval of the Columbia Trustees, the connection is closer than that of the Harvard Annex with that University. Our readers will recall the letter written to us by Mrs. Annie Nathan Meyer, which may be considered as the public opening of the agitation which has attained this happy result.

The ninth annual report of the Society for the Collegiate Instruction of Women, or, in other words, of the Harvard Annex, represents a steady growth in all departments, with a crying need of enlarged quarters. The attendance for the coming year is certain to be larger than last year, and from a very wide range—Hawaii, San Francisco, St. Louis, Kentucky, Virginia, etc. After June of next year, the Society's "Harvard Examinations for Women" will be abandoned, as having served their end.

The New England Meteorological Society proposes to have a Loan Exhibition of Meteorological Apparatus, Photographs, etc., at the Institute of Technology, Boston, in connection with its fourteenth regular meeting in January, 1889. For this purpose the Society invites contributions to any of the following groups of articles: Meteorological apparatus; photographs (of lightning, of clouds, of meteorological apparatus and observatories, of buildings demolished by wind, tornado tracks, overturned trees, etc.); charts and specimens (as, of objects damaged by wind, lightning, hail, frost, and heat). Articles should be sent to A. Lawrence Rotch, Physical Department, Mass. Institute of Technology, Boston, by prepaid mail or express, not later than January 12, 1889, and preferably immediately—marked, also, with the name and description of the article and the name and address of the contributor.

—A very curious document has just been issued by the Commissioner of Patents, entitled 'Women to whom Patents have been granted by the United States Government, 1790 to July 1, 1888.' It is a quarto of 44 pages, and records in round numbers about 2,500 patents, besides 57 reissues. The very first on the list was taken out by Mary Kies in 1809 for "straw-weaving with silk or thread." Mary Brush followed in 1815 with a "corset"; Sophia Usher in 1819 with "cream of tartar, carbonated liquid"; Julia Planton in 1822 with a "foot-stove." From that date the entries are annual, with exception of the years 1827, 1829, 1830, 1832, 1835–39, 1844, 1846, 1852, and 1854–55. The first (short) page of the pamphlet embraces the whole of the half century 1809–58, in which there were precisely fifty patents granted. By

1869 a year's entries require a full page; by 1881, two pages; by 1886, three pages. The first native patentee whose address is recorded is Agdalena S. Goodman, Duval Co., Fla., for "improvement in broom-brushes," 1849, and she was the only Southerner save one up to the outbreak of the civil war. During the same period, New York had furnished 14, Massachusetts 4, Ohio 2, and Maine, Connecticut, New Jersey, and Indiana 1 each. Some one possessing more patience and leisure than ourselves may perhaps satisfy curiosity by summing up for each State to the present date, as well as by classifying the subjects of the patents. These are by no means confined to the domestic arts and conveniences, or to the hygiene or adornment of the female sex. In 1864 Mary Jane Montgomery of this city brought forward her "improved war-vessel," side by side with the "improved lantern dinner-pail" of a Michigan sister; and the same Miss Montgomery in the same year devised an "improvement in locomotive-wheels," having, by the way, many associates in railroad invention, even to "an apparatus for destroying vegetation on railroads." One lady in Iowa, with a male partner, makes an "improvement in cigars"; another, of Philadelphia, offers a considerate "moustache-spoon"; a third, of Boston, contributes a "pantaloon-tree." A gentle competition is observable in "improvements in corpse-coolers"; but we notice only one "apparatus for killing mosquitoes." Some of the more bizarre "devices" are "for inducing sleep"—a companion to the foregoing; "for restoring facial symmetry"; and "for exposing hair to the action of heated vapors." Perhaps in all the 2,500 we may look in vain for a new *principle*.

—It is a long time since we have seen so attractive an edition of a Greek classic as 'The Timæus of Plato,' edited by R. D. Archer-Hind, M.A., Fellow of Trinity College, Cambridge (Macmillan). It is a large octavo of 360 pages, and the publishers have dressed it in a garb which makes it a delight to the reader and an ornament to the library. Of all the works of Plato the 'Timæus' is, in modern times, probably the least read. It is Plato's cosmogony, the work in which he gives us his theory of the ultimate constitution of matter, and what he conceives the history of the universe to have been from its origin down to and including the creation of man. The old scholiasts, with more than their usual accuracy, gave it the sub-title, "Concerning Nature; Physical." But everything in connection with physical science has undergone such a complete transformation in modern times that, to the natural philosopher of the present day, the speculations of Plato seem mere poetical fancies. The work is never read in our colleges, and by few out of college, except those who make a special study of the Platonic philosophy. Hence, separate editions of the dialogue are rare. The present is the first English edition, but we most unhesitatingly pronounce it the most learned and the most useful of all that have appeared in any country. A complete English translation, facing the Greek text, offers an assistance which, considering the difficulty and frequent obscurity of the original, will not be disdained by the most accomplished Greek scholar. It is written in excellent English, clear and flowing, and though with a freedom often bordering on paraphrase, yet, in all cases where we have carefully compared it with the Greek, it appears to us a correct and faithful exposition of Plato's meaning. Mr. Archer-Hind's elaborate introduction is a work of far higher importance than the great majority of such preliminary dissertations. It is not merely an introduction to the 'Timæus,' but to the whole Platonic philosophy; even more than this, it gives a broad and comprehensive view of Greek speculative philosophy from its origin to Plato's time. The commentary is very full and almost invariably upon passages whose explanation is desired by the reader; it has few of the characteristics of the notes usually appended to text-books prepared for those learning Greek. Such knowledge as can be readily obtained from the grammar and dictionary is assumed. Mr. Archer-Hind writes for men, not boys. Especially worthy of notice are the comments on the mathematical passages in the 'Timæus.' The numerous diagrams, with the explanations given, set the meaning of these passages in so clear a light that one who has puzzled over them before often wonders why he was perplexed. It is not probable that we shall have another edition of the 'Timæus' for some time to come, and therefore it is agreeable to think that the want of another will not for a long time be felt. Two indexes, one Greek, the other English, are welcome additions to the many excellences of this handsome and scholarly work.

—Those of our readers who are interested in the earlier growth of the French monarchy will find a thorough and exact discussion of the contribution of Philip Augustus to this development in a doctor's dissertation by Mr. Williston Walker, who has just been called to the Chair of History at Bryn Mawr. Under the title, "On the Increase of Royal Power in France under Philip Augustus," Mr. Walker examines, "(1) the theory of the royal power and position of the royal family; (2) the central administration; (3) the local administration and the relation of the King to the feudal and corporate elements of the kingdom." One has but to compare the pages of this essay with the chapters on Philip Augustus in the larger histories of France, to see immediately that Mr. Walker has made a valuable addition to existing accounts of that long and active reign. Where the ordinary narratives are general, he is specific; and, with constant reference to the sources, he passes under review the whole system of the royal government. Warnkönig, in his 'Französische Staatsgeschichte,' gives many details about the subordinate parts of the administration, but this particular question which Mr. Walker discusses is not nearly so fully examined, nor are his chronological bounds so definitely fixed. Besides, much progress has been made in historical criticism since Warnkönig wrote. Philip received his second name, not, as Michelet states, because he was born in August, but from the contemporary historian Rigord, who says he bestowed it upon him because writers usually give that title to rulers who increase (*augeo*) their realms. If Rigord had been familiar with the governmental methods of the first Augustus, he would no doubt have seen additional propriety in giving Philip that title, for Philip built up his own power on similar lines. The important feudal office of seneschal and chancellor, previously held by leading nobles, and frequently the strongholds of dangerous opposition to the King's power, he practically suppressed. The seneschalship was discontinued, and the duties of the chancellor he intrusted to various members of his council. This policy immeasurably strengthened the monarchy by placing under the immediate control of the King the power which had been exercised by the great officers in a semi-independent fashion. In regard to the other high officers he was more conservative; yet the tendency was the same. The butlership declined in importance, the chamberlainship became largely honorary, the constableship was not changed much, but the active duties were passed into the hands of officers of lower rank. In this policy Philip was not an innovator, but rather the successful executor of the designs of his father and grandfather.

—In discussing the origin of the peers, Mr. Walker examines the first recorded instance of their participation in the judicial proceedings of the court, the trial of King John. Following Bémont (*Revue Historique*, September and November, 1886), Mr. Walker is inclined to discard the view held by the majority of writers (*e. g.*, Stubbs and Pearson) that John was twice tried, and condemned by default in 1202 on complaint of his vassals in Poitou, and again in 1203 for the murder of Arthur. It is affirmed that none of the contemporary historians of France record the second condemnation, while for the first there is considerable evidence. It hardly seems to us that the case is made out. Other features of Mr. Walker's essay we cannot take up here, but will refer those interested to the work itself, which will amply repay reading. We are informed in the biographical note that Mr. Walker was graduated from Amherst in 1883, from the Hartford Theological Seminary in 1886, and that he took his doctor's degree at Leipzig this last summer.

THE QUARREL OF THE DOCTORS.

The Fatal Illness of Frederick the Noble. By Sir Morell Mackenzie. London: Sampson Low & Co.; New York: Brentano. 1888.

THE sad story of the fatal illness of the late Emperor of Germany, with its doubtful diagnosis and its alternations of hope and fear, and of the patient, heroic struggle of the noble sufferer against the inroads of malignant disease, is still fresh in the memory of every one; and now, to complete the painful picture, the details of a disreputable controversy between the physicians in charge of the case have been spread before the public.

Early last summer the German physicians published their official report, in which they angrily denounced Dr. Mackenzie as a bungling manipulator, and threw upon him the whole blame for the failure to operate at a time when an operation might have cured the disease. With regard to these accusations it may be said that, in charging Mackenzie with lack of skill, the Germans were probably guided by their feelings rather than by their judgment; for, whatever faults Mackenzie may have, his bitterest professional enemies (and they are numerous enough in England) have always admitted his wonderful manual dexterity. Moreover, the German accounts of Mackenzie's operations are given in such an evidently hostile spirit, and contain such obvious inaccuracies, that no great confidence can be felt in the ability of the writers to make and report their observations honestly.

As for the responsibility for the failure to operate in the early stages of the disease, it seems to be perfectly well established that the German physicians were, on May 18, 1887, unanimously of the opinion that their patient was suffering from laryngeal cancer. It was further decided that on May 21 the larynx should be opened from the front and the morbid growth removed. On the evening of the 20th, Mackenzie first appeared upon the scene, listened to the reports of his German colleagues on the history of the case and the grounds for their diagnosis, examined the patient, declared himself by no means convinced

of the malignant nature of the disease, and objected most emphatically to the proposed operation until the microscopic examination of a portion of the growth removed through the mouth should have confirmed the diagnosis of cancer. To this delay the German physicians assented; and from this time till the close of the Emperor's life, though German physicians were constantly in attendance, the influence of Mackenzie seems to have been predominant.

One cannot fail to be struck by the readiness with which the six German physicians yielded to Mackenzie's guidance in this important matter, and it is difficult to avoid the suspicion that they were perhaps after all not quite so sure of their diagnosis in May, 1887, as when they wrote their report. Had they been so, the course most consistent with professional dignity would have been to state their inability to concur in Mackenzie's proposed course of treatment, and to withdraw from the case if the patient desired to follow the English physician's advice. Having retained their connection with the case, they certainly cannot avoid sharing with Mackenzie the responsibility for the delay. On the whole, therefore, the tone and spirit of the German report creates an impression not altogether unfavorable to Mackenzie; but unfortunately this impression is not confirmed by reading Mackenzie's own book, for we find him dealing in angry vituperation, reckless misstatements, bitter personal invectives, and downright charges of malpractice, in a way which clearly demonstrates that in this kind of controversy he has nothing to learn from the example set him by his colleagues.

It is alike painful and unprofitable to follow the details of this thoroughly disgraceful quarrel. The only question which interests the general reader is, whether the treatment of the case was in all respects the best adapted to save a life so important to the nations of Europe. As to this point it must be borne in mind that six eminent German physicians (though they subsequently allowed themselves to be overruled by Mackenzie) were in May, 1887, ready to stake their professional reputations on the diagnosis of cancer and to proceed at once to an operation. In the light of subsequent events, and allowing full weight to the statistics of similar operations, and bearing in mind the specially favorable conditions under which the operation would have been performed, there seems to be little doubt that the course thus recommended was in accordance with the most advanced medical science, and offered a reasonable chance of saving a life otherwise doomed to a speedy extinction. Upon the physician who urged delay must, therefore, rest the chief responsibility for depriving the illustrious patient of whatever chance of life an operation would have afforded.

It still remains to be explained how it could happen that a physician of Dr. Mackenzie's skill and experience could fail to concur in a diagnosis reached with such unanimity by his colleagues, and so fully confirmed by subsequent events. In this connection a phrase in Mackenzie's preface is significant. He writes: "I have been unable, for obvious reasons, to allude to several points which, though not bearing on the purely medical aspect of the case, were yet most important factors in determining the course which was pursued." The considerations not "purely medical" can hardly have been other than political in their character, and, among political considerations, that arising from the feeble state of the Emperor William's health in the spring of 1887 was obviously the most important. Does Dr. Mackenzie mean to imply that it was considered more desirable that the Crown Prince should become Emperor than that he should be cured of his disease? On this hypothesis Mackenzie's course is comprehensible, for by refusing to operate he doubtless gave his patient a better chance of living six months, though a poorer chance of living six years. How far a physician may honorably allow his treatment to be influenced by considerations of this sort is a question which each practitioner must settle for himself; and it is easy to see how, in a case where such motives enter in, differences of opinion are certain to arise.

There is nothing, however, to excuse the tone in which the controversy has been carried on. It is a quarrel in which there are no laurels for either party, and of which the effect will be to produce in impartial readers a feeling that the heir to the imperial throne of Germany would have fared better had he been the humblest hospital patient in his father's dominions.

THE AFGHAN FRONTIER OF BRITISH INDIA.

Lettres sur l'Inde. À la Frontière afghane. Par James Darmesteter. Paris: Alphonse Lemerre. 1888.

In the year 1886, Professor Darmesteter was commissioned by the French Minister of Public Instruction to undertake certain philological inquiries on the northwest frontier of British India. In pursuance of this mission he spent seven months in the two frontier districts of Peshawur and Hazara. The better part of his time, he tells us, was taken up in technical researches altogether devoid of the element of the picturesque. These inquiries, at the same time, brought him into somewhat intimate relations with a strange and picturesque people; he saw much that was new and interesting to him, and in these letters he has endeavored to reproduce, for the benefit of French readers, some portion of what he saw and heard. The result is a book as entertaining as it is instructive. The reader who has never been in India will find here nothing hard, technical, or obscure to diminish the piquancy of Professor Darmesteter's vivacious delineations of men and things; and those who know India best, if they find nothing positively new in these pages, will benefit by observing how familiar facts impressed the mind of a keen and intelligent inquirer. Especially in reference to the people of the country are the remarks of a competent observer, like the Professor, of value to their alien rulers. An Englishman, whether he be an official or not, who permanently resides in India, occupies a position the most disadvantageous for understanding or appreciating the character of the people. On landing in India he lacks the linguistic ability to communicate with them, and is, in consequence, thrown wholly upon the society of his countrymen, where what may be described as a traditional view of the Indian character reigns supreme. There being absolutely no social intercourse between the British community and the people of India, this traditional view is a thing made up of the strangest shreds and tatters—mere odds and ends of knowledge, pieced together in a wholly haphazard manner. It has, as its foundation, a sense of unquestionable superiority, originating in the fact of conquest, and maintained by all the political and social relations of the two races. It is built up by sweeping generalizations, deduced from the peccadillos of domestic servants, the deviations from truth of terrified witnesses in a court of law, and the devices of those few natives who seek to compass their own advantage by pandering to the vanity of their white superiors.

When once this traditional view of the native character has taken possession of the mind, it is all but impossible for an Englishman to divest himself of it. For instance, not one Englishman in a hundred ever acquires such a command over any of the languages spoken in India as to be able to converse freely upon general topics with those who employ it as their native tongue. He knows enough to stumble through his official duties, his business, or whatever else it is that has taken him to that country; and that over, his intercourse with the people ceases, quite as much from inability to carry it further as from want of inclination. In former years, when Englishmen were accustomed to form connections with native women, and did not return to their own country once in twenty years, no such gulf as that which now exists divided them from the people of India. This growing difficulty of "keeping touch" with the subject races is, indeed, the greatest of the many dangers which threaten the stability of the Empire. Now, an accomplished oriental scholar, like Professor Darmesteter, landing in India for the purpose of philological research, is exposed to none of those influences which warp and pervert the judgment of the ordinary Englishman. He has been drawn thither, not in order to make a livelihood, but by the intellectual fascination which the East has already exercised upon him; the very purpose for which he comes inclines him towards the people rather than their rulers; he has no official or traditional prepossessions to overcome—and all these circumstances combine to endow his picture of the country with a freshness and impartiality which cannot be expected in an Anglo-Indian official.

Although the greater part of these letters is taken up with the two districts of Peshawur and Hazara, the Professor makes many suggestive reflections upon the condition of India generally. For example, he notes how superficial so far has been the influence of the West upon the people of India, in that the movement in the direction of political change is entirely disjoined from any desire for social or religious reform. There is absolutely no awakening of intellectual life (properly so called) in India. A certain proportion of the population has acquired more or less knowledge of English, but the deeper springs of thought and conviction have not been touched. This, of course, is due to the arrogant and unsympathetic form in which western civilization, as incarnated in the British community, is presented to the people. Could that civilization come among them as a friend and equal, and not as a kind of omnipotent ploughshare relentlessly rooting up whatever checks its course, the results would, in all probability, be very different. On this and other kindred topics, Professor Darmesteter has much to say that is worth reading, but it is chiefly as a picture of native and Anglo-Indian life on the far-away military frontier of the Empire that the book is of value.

The natural boundary of Hindostan is the river Indus. As soon as the traveller crosses that river, he enters into the country of the Afghans. Anterior, however, to the British conquest of the Punjab, the ruling power in that province was a religious sect known as the Sikhs. Originally the religious tenets of this sect consisted in the profession of a mild and gentle theism and the practice of passive submission to the powers that be. The ruthless persecution of the Delhi emperors had the effect of changing this community of Oriental Quakers into the Ironsides of India. The Afghans being as fanatical in their faith as the Sikhs were in theirs, the religious wars between the two peoples were incessant; and un-

der the conduct of their great leader, Runjeet Singh, the Sikhs established their power along the whole Afghan frontier, which extends along the banks of the Indus for eight hundred miles from Hazara to Moultan. When the British took possession of the Punjab, the question was discussed by the Government of India whether or not this strip of territory should be restored to Afghanistan. In an evil hour for the British Empire, it was decided in the negative. In the strip of open country which divides the Indus from the mountains of Afghanistan, the British had little difficulty in establishing a reign of law, but their authority ceases where the plains come to an end. The bleak and difficult hills which surround the cantonment of Hazara, which encircle the Peshawur Valley on the north, and which, under the name of the Suleiman Mountains, stretch southward in the direction of Moultan, are known collectively as Yaghistan. The word *Yaghee* signifies a man who can in no way be brought into an orderly condition, a thoroughly worthless, turbulent fellow; and such preëminently is the condition of Yaghistan. It acknowledges allegiance neither to the Ameer nor to the Viceroy. When the tribes are not engaged in fighting with each other, they vary the monotony of existence by raiding upon the Afghans—British subjects—who dwell in the plain country. Since the annexation of the Punjab, the Indian Government has sent about twenty-six military expeditions into the hills to inflict retribution for unprovoked raids upon its subjects. The mountaineers, however, remain incorrigible, and only a few weeks ago an army of ten thousand men had to be set in motion from Hazara to punish the tribesmen of the Black Mountain for the murder of two British officers.

Now, among the objects to which Professor Darmesteter devoted himself while on the northwest frontier, was the study of Pushtoo, the language of the Afghans. This naturally led him to take a lively interest in these people, and more especially in their songs and ballads; for, wild and rude as the Afghan is, there is a real vein of poetry running through the harsher elements of his character. Just as the history of the Arabs prior to the advent of Mohammed has been reconstructed from their poetry, so might a competent scholar do with the Afghans. Professor Darmesteter has made admirable use of these abundant materials. It is his frequent quotations from this ballad poetry which gives to his portraiture of the Afghans so much of freshness and reality, combined, as it is, with a keen eye for the distinctive characteristics of men. With a like happy and successful touch he has delineated the fearful monotony of Anglo-Indian life in a military cantonment, the qualities of the fighting races—Sikh, Ghoorkha, and Pathan—which constitute the effective portion of the native army; and while he sees clearly the limitations and defects of the British character as affected by its Eastern surroundings, he renders ample justice to the courage and honesty of purpose which won and keep this position.

History of Tennessee: The Making of a State. By James Phelan, [M.C.]. Boston: Houghton, Mifflin & Co. 1888. Pp. 476. 12mo.

THIS is a somewhat pretentious book, taking up the lines of Green, Freeman, and Froude. The author is fond of the continuity of English life, beginning at the mouths of the Elbe and Weser, stopping for a while in Britain, and crossing the Atlantic to America. The theories about the continuity of Anglo-Saxon laws and habits of thought are obtruded again and again, almost *ad nauseam*.

The merit of the book lies in the interesting facts which it tells, though these are often obscured by their arrangement. When Mr. Phelan comes across a new actor on the political stage, he does not merely go back to his birth or first public appearance, which cannot well be avoided, but he also tells us all of his later doings and adventures, breaking the thread of the story so that it is often hard to make out whom he is writing about. The narrative begins with the year 1769. The discoveries of De Soto, the travels of La Salle and Marquette, the temporary French outposts on the Chickasaw Bluffs, left no mark on the features of the State. In 1769 a few settlers from Virginia met at Bean's cabin in the Watauga valley, near the State line; they formed the first germ of the body politic, the Watauga Association. The history starts here, and ends virtually with the outbreak of the civil war in 1861. What little is said of later events is mainly in justification of the repudiation (the writer calls it the "compromise") of the State debt in 1882.

The first settlers in East Tennessee came from Virginia, and took up their lands in supposed obedience to its laws. When they found themselves upon the territory of North Carolina, they asked its Legislature to extend the laws and protection of that State over them, which was done in 1776, but in name only; they were left to fight their own battles with the Cherokees. In 1784 the Western country was offered, rather than ceded, to the United States; its neglect became absolute. Then the revolutionary State of "Franklin" was formed, which, after a two years' flickering existence, collapsed, the settlers returning to their allegiance to the Old North State. In 1790 the territorial government of the Territory south of the Ohio River was set up with a Governor and Council; in 1794 a Legislative Assembly was vouchsafed to the settlers; in 1796 the State of Tennessee was admitted to the Union. Thus, in the course of twenty-seven years, the country saw six different Governments; but amidst all of them the constant petty wars with the Indians went on, with all their horrors and brutalities. The best fighters became the natural leaders of the people.

In these early days, little more than the extreme east of Tennessee was trodden by the f ot of the white man. Knoxville became the capital in 1791, instead of still more eastern locations; Nashville (the successor of Nashborough) though founded about 1779, grew into importance at a later day, Memphis and West Tennessee much later. But the best part of the book is given to the few years in which the few pioneers among the rugged hills and dales round the upper Tennessee and the Holston rivers underwent their trials and hardships. The author believes in the maxim, "Happy is the people that has no history," and thinks that the best material for the historian is gone when the State is admitted into the Union, no longer quarrelling with the mother State or with Congress, well protected against Indian inroads, and steadily progressing towards wealth and the power of numbers.

The great figures in the history of Tennessee are John Sevier, Andrew Jackson, and Andrew Johnson. Comparatively little is said about the two latter, who are supposed to be known from their career upon the broader national stage. John Sevier belongs to Tennessee alone. With pardonable State pride, our author calls the battle of King's Mountain, in which Sevier, with two hundred sturdy pioneers from the Holston valley took a conspicuous part, the turning-point of the Revolutionary war, and thus derives America's free existence from the brave deeds of those who built the State of Tennessee. As a soldier against "Britishers" and Tories, as Indian fighter, as leader and Governor of the rebel State of Franklin, and lastly as the acknowledged chief of the full-grown State of Tennessee, John Sevier is as striking a figure in the Southwest of his time as Samuel Houston, fifty years after him, starting from Tennessee, became in a new Southwest. The marriage of Houston, his election as Governor of Tennessee, his sudden resignation and departure because of his wife's departed love, are well but briefly told. David Crockett, the most picturesque figure of the Western backwoods, comes in only for mere mention: has not everybody read Crockett's life and sayings? Hugh Lawson White, about whom Jackson's enemies in the South rallied as a Presidential candidate in 1836, is highly praised for his purity and virtue, but we do not learn what, if anything, he really did. John Bell is, to our historian, the ablest politician of the State, and is set far above the more brilliant Francis Grundy.

But Mr. Phelan's warmest praise is reserved for a wholly non-political character, Samuel Tate, whose well-directed energy raised the money for completing the Charleston and Memphis Railroad. "He promised at the time (August, 1854) to have the road completed by the 1st of April, 1857. It is worthy of remark that the last spike was driven on the 27th of March, 1857." To this railroad Memphis, the commercial capital of the State, owes much of its wealth and preëminence, and a great part of western and southern Tennessee an outlet for its products and access to the luxuries and amenities of the country at large. The advance made by the advent of the steamboat, as compared with the former days of canoe and pirogue, keelboat and "broadhorn," was much more marked; but steamboats were built by "capital" for profit, while the motive power of the early railroad was, in the words of our author, a compound of agriculture and sentiment.

The change from the habits of the frontiersman to those of civilized life is well put:

"When first we meet with him he wears moccasins, leggings, hunting-shirt, and coonskin cap. His rifle rests in the hollow of his arm. Around his waist is a leathern belt, while shot, powder, and powder horn are strung over opposite shoulders. A dog is apt to be at his heels. As the settlement advances, however, his character is modified in a great degree with his appearance. The cap goes first, then the moccasins and leggings, and finally the hunting-shirt. He hunts less and works more. Perhaps he now has a negro slave or two, a couple of horses, and a few 'herd of stock.' His family increases, also his slaves and his cattle. He loses some of his prejudice against the refinements of life. He even brooks a ruffled shirt. . . . His wealth continues to increase. He builds a frame house in which there are various rooms. . . . His son is with Doak in the East, or at Davidson College; his daughters are possibly in South Carolina, etc." (pp. 184, 185.)

Slaves, by the way, are mentioned very sparingly in the early days which precede the formation of the State. The "institution" was guaranteed in the acts of cession and acceptance, but it found little foothold till peace against the Indian enemy was secured by compact numbers, and till those well-to-do citizens of the Eastern States who owned human merchandise were no longer repelled by the fear of intolerable hardships from crossing the Appalachian Mountains.

The book contains a chapter on "Tennessee Institutes," and one on "Local Self-Government," tracing from England through North Carolina the leading features of civil political

law that prevail in Tennessee. Mr. Phelan shows why the Southwest must differ from New England in the matter of the township, and all that pertains to it, though the institutions of both come from the same English source, each branch of the American offshoot retaining what is most in accord with its needs. A chapter on "Religion in Tennessee" follows, which is interesting, as giving the rise of the "Cumberland Presbyterian Church" out of the Cumberland Presbytery. The very hardness and narrowness of the Presbyterian ministers who then ruled in the Transylvania Synod over Kentucky and Tennessee, as manifested in continual accusations of and trials for heresy, drove out those members of the Cumberland Presbytery (so named from the river flowing through Northern Tennessee) who favored the calling of unlearned laymen to the ministry, in order to supply the great demand for spiritual leaders which was nourished by the camp-meetings. These were first held on the border-line of Kentucky and Tennessee in the opening years of the present century. The Cumberland Church was, in fact, a compromise between the Presbyterian and Methodist models. It was owing to the dissensions in the former that the latter church soon gained its great predominance in Tennessee. The "jerkings," a nervous epidemic, which grew out of the camp-meeting excitement, and raged for three or more years through the two sister States of the Southwest, is touched upon very curtly.

There is a chapter on "Schools." The "first literary institution established in the great Mississippi Valley," says our author, on the authority of "Monette," was Martin Academy, chartered in 1788, under the presidency of Samuel Doak, a Presbyterian minister of Scotch-Irish descent, great-grandfather of H. M. Doak of Nashville, to whom the book is dedicated. We fear that some citizen of Lexington, Kentucky, the "Western Athens," will dispute this claim of priority. The chapter on "Banks" recounts the blunders and disasters which Tennessee shared with all the Western and many Eastern States. From the chapter on "Internal Improvements" we have already quoted the glories of Sam Tate. Another chapter treats of "Murrell and the Reign of Disorder." John A. Murrell was simply the head of the "Mystic Clan" of murderers, robbers, horse-thieves, and counterfeiters, who infested the Southwest for years, and, by terrorizing the better elements of society, long defied justice. He was in 1834 convicted of one of his many crimes, and sent to the penitentiary for a long enough term to render him harmless. The expulsion of the gamblers from Vicksburg in the following year (1835) is mentioned as breaking the hold of the vicious classes on the Mississippi-River country; but enough lawlessness was left.

Dissection of the Dog as a Basis for the Study of Physiology. By W. H. Howell, A.B., Ph.D., Associate in Biology, Johns Hopkins University. New York: Henry Holt & Co. 1888. Pp. 107, 7 figures.

THE author rightly holds that "even an elementary study of human physiology ought to be preceded by a more or less thorough dissection of some mammal." Of the reasons given for preferring the dog to the rabbit or cat, the last alone has any force, and this only where the dog is the usual subject of physiological experimentation; no ground is assigned for publishing a new dissection of this quadruped after the favorable reception of several editions of Foster & Langley's 'Practical Physiology,' which, by the way, like the account of canine anatomy in Huxley's 'Vertebrates,' and indeed all literature, is unmentioned. The moderate size of the book is due partly to the judicious omission of parts having comparatively little physiological importance, and partly to the brevity of the directions for dissection. This feature the author undertakes to justify in the preface:

"To a person altogether ignorant of the methods of dissecting, a written description cannot fully supply the place of an instructor; . . . to students with some little experience, or working under the guidance of an instructor, it is a hindrance rather than advantage to attempt to describe just the direction and extent of each cut," etc.

It will be noted that here is a grave question in educational methods which might well occupy the attention of a body like the American Society of Naturalists. On this occasion the reviewer contents himself with dissenting from both the above propositions; with claiming that the time of an instructor should never be taken for anything that a printed book can supply; and with pointing out that (1) the present work is professedly designed for absolutely untrained beginners; (2) the author's claim that "it is better to leave something to the intelligence and discretion of the teacher or the pupil" might, it would seem, have warranted the omission of the initial paragraph of "dissection of the eye": "With a moistened sponge clean the exposed portion of the eyeball and the eyelids from dirt;" (3) in one respect, namely, as to cutting the muscles at their attachments, the directions are not only superfluous, from the author's own standpoint, but at variance with the practice and precept of all expert anatomists.

It would be hardly fair to estimate the author's experience, judgment, and acquaintance with the views of other anatomists from the following extraordinary sentence upon that liquid which the "Autocrat" characterized as "destroying the organs of the living, but conferring a kind of immortality upon those of the dead," and which the late Louis Agassiz and Spencer F. Baird gave weeks of their precious lives in persuading Congress to remit the tax upon for natural-history purposes: "Immersing the dog in alcohol will keep it from decomposing, but leaves it in such a bad condition for dissecting that it is not to be recommended." This is as wise and just as it would be for a professed cook to declare that "exposing the lamb to heat will cook it, but leaves it in such a bad condition for eating that it is not to be recommended." In reviewing another laboratory manual, in which several pages are devoted to explicit directions for the use of various grades of alcohol for various purposes, a leading anatomist remarked (*American Journal of the Medical Sciences*, January, 1883): "Judging from the condition in which specimens are often presented for inspection at our medical societies, it is evident that not one physician in a hundred knows the use of alcohol as a preservative." Is the Biological Department of Johns Hopkins University prepared to reject this agent upon grounds fairly comparable with those upon which certain well-disposed but ill-informed persons denounce alcohol as a beverage as "always and for all people a poison"? Plaster of Paris is recommended for injection of the blood-vessels rather than the starch-mixtures introduced by Pansch and improved by Gage, which are preferable on nearly all accounts.

As usual in such works, the directions for obtaining the brain are anthropotomical in source, vague, and unsufficient. Notwithstanding the assurance that "with a little care the cap of the skull may be isolated without tearing the brain at all," the present writer ventures to doubt whether this ever has been or ever will be accomplished: the bony tentorium is not even mentioned, yet it forms a serious and commonly unexpected impediment.

Little fault is to be found with the seven diagrams, mostly of vessels and nerves; but one would naturally expect in addition an outline of the base of the brain. There are errors respecting the similarity of the roofs of the two parts of the fourth ventricle, and the representation of the "vago-sympathetic" nerve as if not easily separable into its two constituents. In view of the famous controversy between two English anatomists, twenty-five years ago, as to the presence of the "posterior horn of the lateral ventricle" in apes, the statement on page 82 that the dog always has even a "very inconspicuous" representative of it should, perhaps, be more extended. Although functionless, the rudimentary clavicle which exists in some dogs might well have been mentioned in connection with the tendinous intersection of the *levator humeri*.

The preface professes to enumerate "the terms of direction made use of, as *anterior*, meaning towards the head; *posterior*, towards the tail; *dorsal* and *ventral*, with the usual significance; *right* and *left*, *inner* and *outer*, with reference to the midline of the body." *Midline* is an improvement upon *middle line* or *median line*, and the use of *dorsal* and *ventral* is to be commended; the text, however, exhibits frequent lapses into the customary ambiguities, *above*, *below*, *over*, *under*, *forward*, *downward*, *backward*, *outer*, *outside*, and *internal*, any of which might have two or more meanings, excepting for one already familiar with the facts. The following unusual names and interpretations should have been justified in the book itself, or references should have been given to publications in which they have been submitted to competent tribunals: "*infra-cardiac*" for azygous lobe of the lung; "*great tubercle*" for greater tuberosity of the humerus; "*latissimus extensor*" for the dorso-epitrochlearis; and the inclusion of all the muscular masses, from the ribs and sternum to the humerus, under the one name, *pectoralis major*. The best bit of description is that of the heart (p. 42). English weights and measures are commonly employed, yet on page 12 the same paragraph contains *feet* and *grammes*.

The page is large and the type clear. Typographical errors (*e. g.*, *calices*) are few, but there is great irregularity in the hyphenation of names; in fact, the needless hyphens are so numerous as to give some pages the look of a child's reader. The index is far from complete.

Goethe und Karl August. Studien zu Goethe's Leben von Heinrich Düntzer. Zweite neubearbeitete und vollendete Auflage. Leipzig: Dyk'sche Buchhandlung; New York: Westermann.

THIS huge book, made of three volumes in one, and containing nearly a thousand closely printed pages, is the latest achievement of the indefatigable Heinrich Düntzer, who, however it may stand with his other claims to a monument, will certainly deserve one for his industry. As far back as 1859 he published a volume entitled 'Goethe und Karl August während der ersten fünfzehn Jahre ihrer Verbindung.' In 1864, a second volume appeared, which continued the history down to 1805. Then the work stagnated until 1886, when the original publisher's

successor proposed a new edition of the first two volumes and the completion of the work in a third. To this the author assented, but found it necessary to rewrite entirely what had already appeared. As the preface is dated May, 1887, we infer that this enormous task was performed by Düntzer, who is now seventy-five years old, in about a year. Such a feat means, of course, little more than that the inveterate book-maker, who has written a fair-sized library upon subjects connected with the great days of Weimar, has rehashed the familiar materials, and so—made another book.

The work of Düntzer, his merits and his limitations, are so well known that extended criticism of the volume before us is unnecessary. Suffice it to say that this is a work like his other works: it exhibits the same evidence of prodigious industry in reading and excerpting, the same pathetic fidelity in chronicling small beer, and the same lack of critical capacity, of literary skill, and of the other higher qualities of style that go to make biography delightful. The lives of Goethe and Karl August are described circumstantially from the beginning of their connection to the death of the Grand Duke in 1828. The tireless chronicler follows them from month to month, and even from day to day, telling us where they went, whom they saw, what the weather was, with whom they dined, and how they felt. The book will undoubtedly find readers among the growing legion of those who read about Goethe for the purpose of writing about Goethe; but it will hardly make numerous friends among those who do not belong to this class, especially among those with whom a sense of the shortness of life is a real present fact of consciousness.

To some people in this country, as well as to many in Germany, the fact of chief interest in connection with this work of Düntzer's is that, in spite of its pretensions to thoroughness, it was written without access to the Goethe archives at Weimar, and that, too, though the archives are known to contain not a little of unpublished correspondence between Goethe and Karl August, as well as other documents likely to throw light upon the relations of the pair to each other. This is doubtless an incident of Düntzer's quarrel with what he calls the "Berlin-Weimar ring"; at least, we infer as much from a sentence of his preface, in which, speaking of the documents just referred to, he observes that he has "spared himself the hopeless attempt to obtain access to them." In view of the fact that comprehensive biographies of Goethe and Karl August are among the plans of the Grand-Duchess Sophie and her advisers, it would seem to require some assurance to enter the field just now with a publication of this nature got up without the help of the Weimar collections. But of assurance Düntzer has no lack, as is sufficiently shown, for instance, by his recent exploit of reëditing Goethe's letters to Frau von Stein after Wilhelm Fielitz had just given them to the world in two volumes as admirably edited as they are handsomely printed. Fielitz had, however, reproduced Goethe's orthography, and this was displeasing to Düntzer, who has always had a fancy for correcting and normalizing Goethe's text. Furthermore, Fielitz had assigned conjectural dates to a number of dateless letters, and printed them in the body of the volumes in chronological order. Düntzer thought they should have been either omitted entirely or printed by themselves in an appendix. So he went to work and put out an edition of his own, which has, as the *Goethe-Jahrbuch* very justly remarks, "not the slightest independent value."

Henry the Second. By Mrs. J. R. Green. [Twelve English Statesmen.] Macmillan & Co. 1888. 12mo, pp. 224.

No greater service can be rendered to the student of constitutional history than to lay before him, in concrete form, a truthful picture of the practical working of institutions at some critical epoch. The most accurate analysis of the forms and forces of government is but the exhibition of a piece of dead machinery, which needs to be seen in operation in order to be really understood; and, what is of still more importance, such an analysis can take no account of the human passions and interests which enter into all systems of government as a disturbing element. We may speak of the machinery of government, but it is machinery which never works mechanically or with perfect smoothness. There is no more fertile source of misunderstanding in historical study than the assumption that statutes and organic forms actually govern the life of the community: if this is not true at the present day, much less can it be true in ruder and less orderly times. The too formal and systematic notions derived from the study of the machinery of government are best corrected by such a concrete presentation as that suggested.

Many historians have undertaken, with more or less success, to provide such a sketch of government in its actual workings, either as an independent writing or as a part of larger works; but we are not acquainted with any attempt so successful as that of Mrs. Green, in her account of Henry II. The importance of this epoch cannot, of course, be overestimated; nor, for the matter of that, its obscurity and difficulty, if this prince is sometimes represented as the legislator of feudalism and sometimes as its destroyer—both possible points of views, and true in certain relations. At all events, he stood half way between the Norman Conquest, which introduced fundamentally new principles of administration, and Edward I., with whom the English Constitution took its final shape; and it was the peculiar shape in which he cast the institutions inherited from Anglo-Saxon times and from the Norman conquerors which made possible the great constitutional development of the thirteenth century.

The principal value of the work is as an intelligible description of the condition of society and government at this turning-point in English history, and of the reforms effected by Henry II. Take, as a specimen of the work, this passage, relating to the administration of justice (p. 55):

"It is scarcely possible to estimate the difficulties in the way of justice when Henry came to the throne. The wretched freeholders, summoned to the Shire Court from farm and cattle, from mill or anvil or carpenter's bench, knew well the terrors of the journey through marsh and fen and forest, the dangers of flood and torrent, and perhaps of outlawed thief or murderer, the privations and hardships of the way; and the heavy fines which occur in the King's rolls for non-attendance show how anxiously great numbers of the suitors avoided joining in the troublesome and thankless business of the court. When they reached the place of trial, a great medley of business awaited them, as questions of criminal jurisdiction, of feudal tenure, of English 'sac and soc,' of Norman franchises and Saxon liberties, with procedure sometimes of the one people, sometimes of the other. The days dragged painfully on as, without any help from trained lawyers, the 'suitors' sought to settle perplexed questions between opposing claims of national, provincial, ecclesiastical, and civic laws, or made arduous journeys to visit the scene of some murder or outrage, or sought for evidence on some difficult problem of fact. . . . The procedure of the courts was antiquated, and no longer guided by consistent principles. Their modes of trial were so cumbrous, formal, and inflexible that it was scarcely possible to avoid some minute technical mistake which might invalidate the final decision. The business of the larger courts, too, was for the most part carried on in French, under sheriff, or bailiff, or lord of the manor. . . . When each side in a trial claimed its own customary law, and neither side understood the speech of the other, the president of the court had every temptation to be despotic and corrupt, and the interpreter between him and his suitors became an important person, who had much influence in deciding what mode of procedure was to be followed. . . . The men of that day looked too often with utter hopelessness to the administration of justice; there was no peril so great in all the dangers that surrounded their lives as the peril of the law; there was no oppression so cruel as the oppression wrought by the harsh and rigid forms of the courts. From such calamities the miserable and despairing victims could look for no help, save from the miraculous aid of the saints."

The Constitution and its reforms are, if the most important, yet only one of the large subjects discussed in the book. The personality of Henry and his court and realm, the collision of the civil and ecclesiastical authorities, the conquest of Ireland, the civil wars, are all treated with equal lucidity and graphic interest. And if we have dwelt especially upon the graphic character of the work, it must not be understood to be lacking in the substantial qualities of scholarship. Its chief value is to supplement works of an analytic character, like that of Bishop Stubbs; yet it need not be used solely to supplement, but will serve by itself as a brief but correct outline of the Constitution and its history at this period.

In the middle of page 10 *Lorraine* should, of course, be *Touraine*. In the middle of page 47 it seems that we should read *canon* law instead of *civil* law; at any rate Gratian's *Decretum* was canon law. We ought to add that this work not merely presents a general sketch, but is full of incident, sometimes very entertaining.

Elizabeth Barrett Browning. By John H. Ingram. (Famous Women Series.) 16mo, pp. 264. Boston: Roberts Bros. 1888.

It seems strange that eighteen other women, many of them of far less distinction, should have preceded Mrs. Browning in this series; but the fact is explained by there being the least possible material in her case for an interesting biography. During the twenty-seven years since her death, her friends have carefully refrained from giving to the public any records of her life, save when Mr. Horne printed her letters to him. This wise forbearance can perhaps not be prolonged by those who are called upon to make familiar to another generation an illustrious name, but it renders their task a difficult one. Its difficulties have been in no degree overcome by Mr. Ingram. His pages are as dull, as clumsy, as inadequately thought out, and as imperfectly phrased, as possible. He has contented himself with accomplishing the work merely of a compiler, bringing together the trivial information to be gathered from Miss Mitford, Mr. Story, and the Horne letters, and connecting such passages with criticisms by Poe and inferior writers, throwing in occasionally a prose paraphrase by himself of one of Mrs. Browning's poems, or such remarks as "No poet ever penned a more poetic piece," or that "her poetic inspiration was of the highest, the most august conceivable," or comments on "the magnificent aspirations, the glowing thoughts, the brilliant scintillations of genius, the innumerable gem-like passages of pathos, the passionate rushes of language, and the daring assaults upon time-honored customs with which this crowning work of woman's genius is replete"; alternating with quotations about "a horror sublime in its simplicity—of

which Dante himself might have been proud," etc.

Such guides scarcely point out the true objects for admiration in Mrs. Browning's writings; and it would require remarkable intelligence to derive from this book an accurate impression of her sensitive and high-strung nature—on one side ignorant, narrow, self-willed, and intellectually obstinate; on the other full of accomplishment, sweetness, and generous humanity. The best things in the volume are the accounts of "Flush," Mrs. Browning's spaniel; and those are not very good.

Tales of the Birds. By W. Warde Fowler. With illustrations by Bryan Hook. Macmillan & Co. 1888. 8vo, pp. 209.

THIS book is handsomely printed on heavy paper, in large type, with wide margins, and several examples of an artist's mannerism. The reading-matter is less laudable, and we should doubt that it would engage an adult mind, other than a reviewer's. The author seems to us either to have tried to write a book, or to have taken a contract to that end. The birds are made to try to tell tales like persons, but seem to labor under the author's own disability, and it would have been better to leave them wagging their tails to suit themselves. Altogether, we fancy that the publishers' declaration, "The right of translation and reproduction is reserved," must be taken humorously. It is the best thing in the book.

BOOKS OF THE WEEK.

Bailey, J. B. Modern Methuselahs. London: Chapman & Hall.
Besant, W. The Eulogy of Richard Jefferies. Longmans, Green & Co. $2.
Better Times: Stories, by the Author of 'The Story of Margaret Kent.' Boston: Ticknor & Co. $1.50.
Blavatsky, H. P. The Secret Doctrine: The Synthesis of Science, Religion, and Philosophy. Vol. I. Cosmogenesis. William Q. Judge. $5.
Burnett, Mrs. Frances Hodgson. Kathleen: A Novel. Philadelphia: T. B. Peterson & Bros. 25 cents.
Century Magazine. May, 1888, to October, 1888. The Century Co.
Channing, Rev. W. E. The Perfect Life, in Twelve Discourses. Scribner & Welford.
Chaucer. Selected and Edited by Frederick Noël Paton. London: Walter Scott; New York: Thomas Whittaker.

The Thompson Street Poker Club. White & Allen. 50 cents.
The Voice of Nature. A. C. Armstrong & Son. 60 cents.

Fine Arts.

THE VERESTCHAGIN EXHIBITION.

WHATEVER creates a sensation in Europe, whether in the arts, the drama, or in literature, nowadays inevitably finds its way to New York. The exhibition of pictures by M. Vassili Verestchagin has been a little late in arriving, however, for some of the works now to be seen at the galleries of the American Art Association were shown in Paris fully ten years ago. Since then this collection has been exhibited in the important cities of Europe, finishing up with London, where it was shown last spring. Ingenious advertising, claptrap, and humbug found their highest expression in the methods employed here on behalf of the Munkacsy pictures the past two winters, and it is due to the Verestchagin management to say that so far their ways have been much less objectionable. No "private view for the clergy" or anything of that sort has been announced, and the accessories of the exhibition are of a different kind from those which distinguished the Munkacsy shows, with their mysterious gaslight effects and their hired weepers and attendants with muffled tread. Indeed, the arrangement of the Verestchagin galleries is elegant and in excellent taste. There are some very handsome rugs hung up here and there, some fine old tiles and pieces of pottery, some effective drapery and other articles used in the decoration of the rooms.

But the pamphlet is here. It appears in this case in the form of two appendices to the catalogue: Appendix No. 1, "Progress in Art," and Appendix No. 2, "Realism." Both are from the facile pen of M. Verestchagin himself; and in these the artist, or, as he is denominated in the catalogue, the "Painter, Soldier, Traveller," sets forth his principles and defines his creed. In "Progress in Art," great stress is laid on the necessity of depicting events which occurred out of doors, in out-of-door light, and not under the concentrated light of the studio window. The author in this does no more than repeat the teachings of Édouard Manet and Claude Monet, who preached the doctrine of *plein air* long before him, and, what is more, practised what they preached. The objections, "Not only in the perfect construction of their pictures, but also in the sublimity of conception, the old masters stand on an unapproachable height, and we can only strive after them," to quote M. Verestchagin's summary of such speeches; and again, "The same assertion blocks the way, 'The old masters have done thus, and therefore . . . ,'" are not so often heard at the present time, but it is not because of M. Verestchagin's work that this is the case. As we have said, the new doctrine was preached before his time. Bastien-Lepage was one of those who pushed it to complete and satisfactory results. M. Verestchagin, if judged by some of his works at the galleries in Twenty-third Street, has signally failed to do so. Take, for example, one of the pictures in the series of three which are grouped under the title of "Eye for Eye, Tooth for Tooth—Crucifixion by the Romans," No. 91. This picture represents the Crucifixion of Christ and the two thieves, as M. Verestchagin supposes it to have happened. He has visited the place; he has made studies there, presumably of the landscape and of the types of the people as he finds them in our time. The crucifixion took place out of doors. Does this picture look like a scene out of doors? Is there any air in this pasty gray and black sky? Is this hot color, this brickish red and yellow in the flesh tones, like the effect of diffused light? Are these brown shadows on the under sides of hands and arms, and under the chins of the people in the crowd, ever seen out of doors? And this flat look in everything—these heads, which are only masks cut out on the background, and these crudely colored garments, these garish whites and reds and yellows—do things look like that out of doors? Assuredly not; and if all this was not done under the disadvantage of artificial lighting "inside of four walls," then it is but a lame attempt to paint *en plein air*.

In the second appendix to the catalogue, "Realism," our artist-author says: "I hold, though, that the art of representing subjects in a realistic manner does not entitle a person to the name of realist," and he then proceeds to annihilate De Neuville because he painted some pictures of the Zulu war without going to Africa to get realistic effects after the war was over. "There are no Britishers nor Zulus to be found in the pictures. Instead of the former, we behold Frenchmen dressed up in British uniforms, and instead of Zulus, the ordinary Parisian negro-models, reproduced in various more or less warlike attitudes;" and the author asks, "Well, is that realism?" and answers quite rightly, "No." It is a matter of fact, however, that the pictures were painted principally in order to introduce portraits of British officers in the action, and this M. de Neuville did, and did very well on the whole. As for his own position as an artist and his own influence on civilization, M. Verestchagin quotes approvingly the following passages from an article published in a religious journal in London, the *Christian:* "These paintings are the work of a Russian, Verestchagin—a painter equal to any of his contemporaries in artistic ability, and beyond any painter who ever lived in the grandeur of his moral aims and the application of his lessons to the consciences of all who take the least pains to understand him. . . . I will only say that he who misses seeing these paintings will miss the best opportunity he may ever have of understanding the age in which he lives; for if ever the nineteenth century has had a prophet, it is the Russian painter Verestchagin."

A good part of this essay on "Realism" is devoted by the author to defending himself against the adverse criticisms which some of his pictures have received from those who have said that they are not true; and M. Verestchagin avers that he did them on the spot, and that they *are* true. We shall have to take his word for it: our business is now to consider how well he has represented pictorially what he saw. The first and one of the most important things in making a picture is composition. M. Verestchagin, however much he may insist upon the necessity of painting things just as they are, has nevertheless a tendency, very marked in some of his pic-

tures, to force a scene from life with its irregular grouping into arbitrary lines; he exhibits a decided preference for the triangle in composition, and uses it whenever possible. Note the perspective lines of the top of the wall at the left in the picture of the Crucifixion, and those of the tops of the three crosses on the right converging to the centre of the picture, in proof of this. The same thing is found in the "Blowing from Guns in British India," No. 92, in which the long row of soldiers and the victims at the mouth of each gun, the line of soldiers in the distance, and the line of the hills beyond, all converge to a point at the extreme left. The effect is forced and artificial. It is seen again in "The Kreml," No. 90, and in each of the pictures catalogued under the title "Solomon's Wall," No. 13. As to general truthfulness of effect, in the rendering of values in sunlight and in shadow, for instance, there are varying degrees of merit in M. Verestchagin's work. In some of the pictures he exhibits marked skill in representing difficult effects on a large scale. In "The Window of Selim-Shisti's Monument," No. 51, a picture in which a number of Mohammedans in white clothing are shown grouped about a white marble veranda, in full sunlight, he is notably successful. The general effect impresses one as being true to nature, and the picture, moreover, is excellently painted in detail. "The Private Mosque of the Great Moguls in the Palace of Delhi," No. 61, is another example of successful treatment of large masses of white. The white marble walls and floors of the court and portico are in diffused light, with strong reflections, and the painter has made good use of the opportunity to produce a striking effect with simple means. The broad expanses of white marble are painted with just sufficient detail, and the differing values are rendered with much exactness of observation. Color notes of green and yellow, found in the costumes of the people praying in the portico, are introduced in the prevailing scheme of white with excellent results. Another picture, which shows M. Verestchagin's appreciation of subtle values, is a small canvas, a study from nature apparently, "The Earth Huts at Shipka," No. 76—a camp of soldiers, with the ground covered with a deep snow. But it is in the smaller of the two pictures called "Solomon's Wall," No. 13, that M. Verestchagin is seen at his best. It is quite the best picture in the collection, to our mind, and if there were more like it the purely art interest of the exhibition would not be so overshadowed by the sensational interest to which so much prominence is given. This picture, which must not be confounded with the larger one with the same title and the same catalogue number—an inferior performance—possesses fine qualities of color, and is excellent in ensemble.

Of the numerous pictures of military subjects, of the pictures which we have been told present the horrors of war as they have never before been presented on canvas, there is little good to be said. "The Conquered," No. 88, a field covered with dead bodies, with a priest and a soldier in the foreground, is tame and uninteresting. "The Spy," No. 84, and "The Road of the War Prisoners," No. 86, are equally commonplace, though the story of the latter as related in detail in the catalogue is horrible enough. "After the Battle," No. 81, showing the tents of the hospital surgeons and a large number of wounded men after the battle of Plevna, tells its story better, but is of indifferent merit artistically, while "Before the Attack," No. 79, is cheap and tawdry in the extreme. M. de Neuville, whom M. Verestchagin affects to despise, has painted this sort of subjects infinitely better, and so have other military painters of the modern French school.

Scattered through the galleries are numerous small studies of heads in oil, "Russian Types," "Bhutanese of Sikkhim in the Himalayas," "Hindu Workman," "Portrait of a Jewish Rabbi," etc., in which we might have expected to find some evidence of technical ability. Though usually pretty fairly drawn, they are, without exception, very weakly painted, and in no case do we find the slightest charm of color. "The Portrait of a Jewish Rabbi," No. 38, for example, is hot and "foxy" in color, and exceedingly hard and dry in *facture*. The wrinkles in the forehead are naïvely indicated by crooked lines of blackish paint. Where the artist has been unembarrassed by the difficulties inherent in the mere technical handling of color, his attempts at character study are more successful. His pencil drawings and drawings in oil wash on canvas, a number of which are hung in a gallery apart, and catalogued under the heading of Sketches, are many of them excellent, and some of them even admirable. They are among the most interesting things in the exhibition.

In the pictures illustrating the life of Christ, there is not so much ground for impugning the artist's motives as the sensational incident which occurred when they were exhibited in Vienna might have led us to expect. Realistically treated, and with as much of the *couleur locale* as it is possible to put into the composition at this late day, no doubt the picture of "The Holy Family," No. 45, possesses elements of truth and probability. It is likely that Verestchagin's picture comes nearer to being a representation of facts than do those of the same subject by Raphael and other masters of the Renaissance, who merely painted comely Italian women in conventional robes of blue or red, and beautiful children; or than those by Rembrandt do, who painted the common people of his native town in their every-day costume, as the companions of Christ. Nevertheless, his "Holy Family" is merely a picture of an Oriental family in a shady courtyard, where the father and an apprentice, one of his sons possibly, are at work at a carpenter's bench, and the mother is seen seated on the ground nursing an infant, and some other children are playing near by; while the son who was to become the Great Teacher sits apart at the bottom of a flight of stone steps, reading from a scroll which he holds in his hands. It is a fairly well-painted picture, and there is a good feeling of atmosphere in it, but it is not otherwise remarkable. No one, in looking at it, certainly, would think it was meant for a picture of the Holy Family, were it not that M. Verestchagin, in spite of his loudly heralded realism, has adopted the conventional type of head for his figure of Christ. Herein he renounces his realistic principles, and may be justly charged with sensationalism. Of the other pictures in this series there is little to be said, except that "The Prophecy," No. 49, and "Jesus in the Desert," No. 47, are strikingly suggestive of Claude Monet in the treatment of the landscape.

The largest picture in the exhibition is a huge canvas representing a procession through a street in Jeypore, with the Prince of Wales and his staff riding in company with the Maharajah and other native chiefs on the backs of elephants. It is called "The Future Emperor of India," and is much better done than show pictures of this sort are wont to be. There is decided ability of a certain order shown in the management of this panoramic canvas, and some very good painting in parts. It is needless to say it is theatrical; from the nature of the subject it could scarcely help being so. It will no doubt prove to be one of the most attractive features of this latest of picture shows, where the bass-drum accompaniment, though somewhat muffled, is yet loud enough to be offensive to delicate ears.

"Every child in America should have them."—*New England Journal of Education.*

"The 'Young Folks' Cyclopædia' should be in every juvenile library."—*From a Report of the Connecticut Board of Education.*

HENRY HOLT & CO., Publishers, New York.

THE ISLE OF PALMS.

By Dr. C. M. Newell. 12mo, 460 pp. Price, $1.50. Illustrated by our best Marine Artists.

"Dr. Newell's new Ocean-romance is crowded with stirring incident and thrilling adventure. No one but a sailor could have written it, and only those who have witnessed such scenes can appreciate the marvellous fidelity of the descriptions. The wild, warring elements have for him a special fascination, which he pictures for landsmen with singular vividness."—*Boston Transcript.* 'The Isle of Palms' is even more to a boy's liking than 'The Voyage of the Fleetwing.' It is the only story that describes a battle with the giant Devil Fish, which nearly destroyed the ship. But that which will most delight the juveniles of all ages is the pursuit and final capture of the most beautiful Mermaid known of in Wonderland.

Would You Like to Be Guided in a Helpful, Instructive Course of Reading approved by

Lyman Abbott, D.D., Edward Everett Hale, D.D., James H. Carlisle, LL.D., and other eminent men?

More than 60,000 persons are pursuing such a course under the direction of the Chautauqua Literary and Scientific Circle. We quote a few words from these students:

"Many a lonely hour has been cheered, and thought and memory turned into new and delightful channels by these readings. I hope to be better and stronger intellectually for the hours spent with my books."—*New York City.*

"I regret that I could not have had the advantage of such a course in early life; but it has brought so much comfort and happiness that I rejoice in the blessing, even though it came to me a quarter of a century late."—*Maine.*

PLATO. Phœdrus, Lysis, and Protagoras. Translated by the Rev. Josiah Wright, M.A. (Golden Treasury Series.) 18mo, $1.25.

ROMAN MOSAICS: or, Studies in Rome and its Neighborhood. By Hugh Macmillan, D.D., LL.D., F.R.S., author of 'Bible Teachings in Nature,' etc., etc. Globe 8vo, $1.50.

"In these various chapters the author sometimes wanders far away from his subject, but only to enrich it with a luxury and a wealth of wise reflection and sound sentiment, as well as with a literary grace and skill that will charm and delight the reader."—*Week.*

THE ASPERN PAPERS; and Other Stories. By Henry James, author of 'The Americans,' 'Daisy Miller,' 'The Princess Casamassima, etc., etc. 12mo. $1.50.

"Will rejoice his admirers. . . . The last of the three is a capital specimen of Mr. James's best work."—*Philadelphia Evening Telegraph.*

"It is as a short story writer that we think Mr. James appears at his best, and in this volume he may be read in his most attractive and most artistic vein. . . . When he writes on the limited scale to which he has proportioned these three clever stories, his wit, his sarcasm, his fine touches of humor, and the sharp outlines of his character sketching gain by the comparison."—*Boston Saturday Evening Gazette.*

MACMILLAN & CO.,

NEW YORK,

112 Fourth Avenue.

D. Appleton & Co.

PUBLISH NOVEMBER 21st:

Astronomy with an Opera-Glass.

A POPULAR INTRODUCTION TO THE STUDY OF THE STARRY HEAVENS WITH THE SIMPLEST OF OPTICAL INSTRUMENTS. With maps and directions to facilitate the recognition of the constellations and the principal stars visible to the naked eye. By Garrett P. Serviss. 8vo, cloth. Price, $1.50.

A considerable portion of the material in this volume appeared in "The Popular Science Monthly." The reception these articles met with encouraged the author to revise and enlarge them for the present work.

Memory:

WHAT IT IS AND HOW TO IMPROVE IT. By David Kay, F.R.S.E. Volume VIII of "The International Educational Series," edited by W. T. Harris, LL.D. 12mo, cloth. Price, $1.50.

"The whole science of education may be said to be embraced in the question of 'How to improve the Memory.' If the author's views on the subject are correct, then the whole system of education as at present conducted is on a wrong basis."

California of the South:

ITS PHYSICAL GEOGRAPHY, CLIMATE, RESOURCES, ROUTES OF TRAVEL, AND HEALTH RESORT. Being a complete guide to Southern California. By Walter Lindley, M.D., and J. P. Widney, A.M., M.D. With maps and numerous illustrations. *New edition, fully revised, and with additions.* 12mo, cloth. Price, $2.00.

Donovan: A Modern Englishman.

A NOVEL. By Edna Lyall. *New cheap edition.* Forming No. 17 of "Appletons' Town and Country Library." 12mo, paper. Price, 50 cents.

A cheap edition of 'Donovan' has long been called for by those who have recognized its merits, and wished to see its influence extended. It falls within the range of thought stimulated by 'Robert Elsmere,' and books of its class.

THE POPULAR SCIENCE MONTHLY

Foster, M.D., Editor of the New York *Medical Journal*. Volume I now ready. Sold by subscription only. Full descriptive circular sent on application.

1, 3, & 5 Bond Street, New York.

ROBERT CLARKE & CO.,

CINCINNATI.

NEW PUBLICATIONS.

MASTER VIRGIL, the Author of the Æneid, as he seemed in the Middle Ages; a Series of Studies by J. S. Tunison 8vo, $2.00.

Contents: 1. An Apology. 2. Virgil and the Devil. 3. Virgil in Literary Tradition. 4. Virgil's Book of Magic. 5. Virgil the Man of Science. 6. Virgil the Savior of Rome. 7. Virgil the Lover. 8. Virgil the Prophet. 9. Virgil in Later Literature.

THREE HUNDRED TESTIMONIES in Favor of Religion and the Bible by Distinguished Men and Women. By Rev. T. Harrison, D.D. 12mo, $2.00.

"The work is really rich and invaluable; it deserves a place in every library."—*Bishop Vincent, President of Chautauqua Circle.*

NARRATIVE OF A JOURNEY Down the Ohio and Mississippi in 1789-90. By Major Samuel S. Forman of New Jersey, with a Memoir and Notes by Lyman C. Draper, LL. D. 12mo, paper 50c. cloth 75c.

MANUAL FOR BUILDING AND LOAN ASSOCIATIONS, embracing the Origin and History of Coöperative Societies; Objects and Benefits of Building Associations; Plans and Methods of Organizing and Conducting Them; Legislation; Constitution and By-Laws; Forms and Descriptions of Books, Blanks, and Papers; Interest and Dividend Tables, and a comprehensive Variety of Practical and Useful Information and Suggestions. By Henry S. Rosenthal. 12mo, $1.50.

ADVENTURES OF PIONEER CHILDREN; or, Life in the Wilderness. A Portrayal of the Part Performed by the Children of the Early Pioneers in Establishing Homes in the Wilderness. Acts of Unequaled Bravery and Patriotism. Adventures with Wild Beasts and Brutal Savages, etc. By E. Fenwick Colerick. Illustrated. 12mo, $1.00.

CHROMATIC CHART AND MANUAL OF PARLIAMENTARY LAW. By J. Ross Lee. 24mo, stiff paper, 25 cents, leather 50 cents.

The "Chart" answers all the questions that are likely to arise in any assembly. It presents them instantly, fully, and plainly. No turning of leaves, no following of lines, no reading of abbreviations, but simply requiring a look, that is all; for the "Chart" shows at a glance everything needful to be known concerning each motion, and these needful things are presented to the eye, without the necessity of reading. It shows that the author has carefully mastered his subject.

CHEMICAL EXPERIMENTS FOR MEDICAL STUDENTS, arranged after Beilstein. With extra blank leaves for students' notes. By W. S. Christopher, M.D. 16mo, $1.00.

The experiments cover work with the principal metals and acids, using Beilstein's examples. In addition, the more important alkaloids and some organic compounds of medical interest are considered. In physiological chemistry, the work deals with the proteids and carbo-hydrates, the digestive processes, blood, bile, milk, and urine. The acid tests recently introduced for the clinical examination of stomach contents are also given. It may be used in conjunction with any systematic treatise on the subject.

ALFRED KELLEY, OF OHIO; His Life and Work. By Hon. James L. Bates (Privately printed; only a few copies offered for sale). 8mo, $2.00.

The personal efforts and official life of Mr. Kelley are so intimately blended with the development of the resources of Ohio, with its commercial and financial prosperity, and with the establishment and maintenance of its credit, that this narrative necessarily includes much of these departments of the history of the State.

SKETCHES OF WAR HISTORY, 1861-65. Papers read before the Ohio Commandery of the Loyal Legion of the United States. Illustrated with Maps and Drawings. 2 vols., 8vo, net $4.00.

THE LIFE, JOURNALS, AND CORRESPONDENCE OF REV. MANASSEH CUTLER, LL.D. By his Grandchildren, Wm. P. Cutler and Julia P. Cutler. Steel portrait and two views. 2 vols., 8vo, $5.00.

A MANUAL FOR NOTARIES PUBLIC, General Conveyancers, Justices, Mayors, Consuls, etc., as to Acknowledgements, Affidavits, Depositions, Oaths, Proofs, Protests, etc., for *every State and Territory*, with Forms and Instructions. By Florien Giauque. Net, cloth, $2; leather, $2.50.

THE STUDENTS' LAW LEXICON. A Dictionary of Legal Words and Phrases, with appendices explaining abbreviations and references to reports, and giving the meaning of Latin and French maxims commonly found in law books. By William C. Cochran. 12mo, $2.50.

FAMILY EXPENSE BOOK. A printed account book, with appropriate columns and printed headings for keeping a complete record of family expenses, for each day, week, and month of the year, with an itemized statement of expenditures for the year; also, a servant's account, showing name, date of engagement, and rate of wages, with dates and amounts of cash payments. 12mo, cloth, 50 cents.

Any of the above sent by mail prepaid on receipt of the price.

Pisistratus and Clisthenes—XVI. The Greeks in the East.

"It is one of the strong books of the day, and, I suppose, the ablest book on Greece that has yet been written."—*Julius H. Ward.*

"The history is well fitted to be of good service as a text-book in colleges and universities; but its interest reaches out into a wider field. It has more than a merely educational value, and will be welcome to those who are familiar with its subject for the dignity of its style, for its comprehensiveness, and for the value which attaches to its author's scholarly judgment."—*Scotsman.*

List of Educational publications and separate circulars of the Story of the Nations, German and French Classics for students, etc., etc., sent on application.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

"A young American could scarce y qualify for citizenship better than by reading the Forum."

THE FORUM.

CONTENTS FOR DECEMBER:

COUNT TOLSTOI'S RELIGIOUS VIEWS. Archdeacon F. W. FARRAR.—A specific explanation of the error of Tolstoi's interpretation of Christ.
THE PRICE OF LIFE. EDWARD ATKINSON.—A bird's-eye view of the earnings of all classes of Americans.
A POSSIBLE REVOLUTION IN MEDICINE. Dr. AUSTIN FLINT.—Discoveries in bacteriology; the possibility of preventing all infectious diseases; perhaps the greatest advance in medicine.
THE NEW SYSTEM OF NAVAL WARFARE. PARK BENJAMIN.—Absolute safety against invasion; the new dynamite cruiser "Vesuvius."
TEACHING THE MECHANIC ARTS. Prof. THOMAS DAVIDSON.—No man a gentleman who cannot earn his living.
A SIMPLER SOUTHERN QUESTION. GEORGE W. CABLE.—The bugbear of negro domination.
THE SOUTH AS A FIELD FOR FICTION. Judge A. W. TOURGEE.—The romantic aspects of the Confederacy and of the Freedman.
PRISON LABOR COMPETITION. Z. R. BROCKWAY, Supt. of the Elmira (N. Y.) Reformatory.—Productive labor the only method of reforming criminals.
A REIGN OF LAW IN SPELLING. Prof. FRANCIS A. MARCH of Lafayette College.—The moderate demands of scientific spellers.
TO MARRY, OR NOT TO MARRY. HENRI BROWNE.—A common-sense view of the matter; how romance has idealized and misrepresented it.
THE ROLE OF CHEMISTRY IN CIVILIZATION. Prof. W. CROOKES, President of the London Chemical Society.

"The *Forum* has taken the foremost place in popular discussions because it has dealt with important subjects honestly, impartially, and at the hands of those who know something about them."—*Boston Herald.*

Postal Notes and Money are at the risk of the sender, and therefore remittances should be made by money-order, draft, or registered letter, to

HOUGHTON, MIFFLIN & CO.,

BOSTON.

11 East Seventeenth Street, New York.

THE ISLE OF PALMS.

By DR. C. M. NEWELL. 12mo, 460 pp. Price, $1.50. Illustrated by our best Marine Artists.

"Dr. Newell's new Ocean-romance is crowded with stirring incident and thrilling adventure. No one but a sailor could have written it, and only those who have witnessed such scenes can appreciate the marvellous fidelity of the descriptions. The wild, warring elements have for him a special fascination, which he pictures for landsmen with singular vividness."—*Boston Transcript.* 'The Isle of Palms' is even more to a boy's liking than 'The Voyage of the Fleetwing.' It is the only story that describes a battle with the giant Devil Fish, which nearly destroyed the ship. But that which will most delight the juveniles of all ages is the pursuit and final capture of the most beautiful Mermaid known of in Wonderland.

PUBLISHED BY

DE WOLFE, FISKE & CO., Boston.

FINE SET, MAGAZINE OF AMERI- can history, richly bound, for sale by A. S. CLARK, Bookseller, 34 Park Row, New York city.

Now Complete. Vol. IV Just Ready.

A History of England.

By the Rev. J. Franck Bright, D.D. 4 vols., with numerous Maps and Plans, 12mo, cloth. $6.75. Volume I. Mediæval Monarchy: A.D. 449–1485, $1.50; Volume II. Personal Monarchy: A.D. 1485–1688, $1.75; Volume III. Constitutional Monarchy: A.D. 1689–1837, $1.75; Volume IV. Growth of Democracy: A.D. 1837–1880, $1.75.

"On the whole, this is probably the best English history for reference in existence."—*The Nation.*

"Our judgment assigns it the first place among textbooks on English history, a study which is becoming increasingly popular and most wonderfully instructive to American youth."—*Journal of Education.*

A Short History of England

From the Earliest Times to the Present Day. By Cyril Ransome, M.A. With Maps and Plans, 12mo, cloth, $1.50.

"Is just the history adapted for students, both of high schools and colleges. In about 450 pages the important events in the growth of the British Empire and its Constitution are treated in concise form, and in plain, straightforward style."—*The Princetonian.*

Would You Like to Be Guided in a Helpful, Instructive Course of Reading approved by

Lyman Abbott, D.D., Edward Everett Hale, D.D., James H. Carlisle, LL.D., and other eminent men?

More than 60,000 persons are pursuing such a course under the direction of the Chautauqua Literary and Scientific Circle. We quote a few words from these students:

"Many a lonely hour has been cheered, and thought and memory turned into new and delightful channels by these readings. I hope to be better and stronger intellectually for the hours spent with my books."—*New York City.*

"I regret that I could not have had the advantage of such a course in early life; but it has brought so much comfort and happiness that I rejoice in the blessing, even though it came to me a quarter of a century late."—*Maine.*

Scribner & Welford's

NEW BOOKS.

The Reminiscences and Recollections of Capt. Gronow;

Being anecdotes of the camp, court, clubs, and society, 1810–1860. With portrait, four woodcuts, and twenty etched and aquatint illustrations from contemporary sources by Joseph Grego. Illustrated throughout, in 2 vols., royal 8vo, cloth, gilt top, with 25 illustrations in duplicate, one on plate paper, remarque proofs, and the other on Whatman paper, with titles, and colored by hand, $20.00, each copy numbered.

NOTE.—It has been the lot of Capt. Gronow, as he informed his readers, "to have lived through the greater part of one of the most eventful centuries of England's history; to be thrown amongst most of the remarkable men of his day, whether soldiers, statesmen, men of letters, theatrical people, or those whose birth and fortune—rather, perhaps, than their virtues and talents—have caused them to be conspicuous at home and abroad." A pronounced taste for fashionable society, an early introduction to the best circles, the advantage of possessing an extensive acquaintanceship with the most conspicuous celebrities of his day, an omnivorous appetite for racy anecdotes, a retentive memory, which, without effort, gathered and stored up the literary waifs and strays—the conversational "small change" which passed current in his generation—were in themselves elements sufficient to qualify the gallant Captain as an exceptionally entertaining *raconteur*.

John Leech's Pictures of Life and Character.

From the collection of "Mr. Punch." Containing nearly 900 pages of pictures. Complete in one magnificent volume. In an extremely handsome and appropriate cloth binding, $10.00.

The genius of Leech has never been seen to greater advantage than in this gallery.—*Morning Post.*

A History of French Painting.

From its Earliest to its Latest Practice. Including an Account of the French Academy of Painting, its Salons, Schools of Instruction, and Regulations. By C. H. Stranahan. Illustrated. One vol., 8vo, $5.00.

In character Mr. Stranahan's book is historical, critical, biographical, and descriptive, covering the whole field of French art with detailed thoroughness, and filling a place that has always been vacant. Its information is so copious and exact—the volume has nearly 500 large octavo pages—that as a work for popular reading and reference it will have no rival. The rich and artistic reproductions of sixteen famous paintings, and the cover, designed by the well known artist, E. H. Blashfield, make the work especially appropriate as a useful and beautiful holiday gift.

Millet's "Setting Out for Work."
Gerome's "A Collaboration."
Troyon's "The Ford."
Lefebvre's "The Dream."
Le Nain's "The Peasant's Meal."
Daubigny's "Landscape."
Rigaud's "Louis XV."
Bastien-Lepage's "October."
Meissonier's "The Sergeant's Portrait."
Bauguereau's "The First Christmas Hymn."
Lesueur's "The Three Muses."
Lebrun's "Triumph of Alexander."
Watteau's "Rural Fete."
David's "The Oath of the Horatii."
Poussin's "Et Ego in Arcadia."
Bracquemond's "An Impressionist Etching."

Men and Measures of Half a Century.

Sketches and Comments. By Hugh McCulloch, Secretary of the Treasury in the Administrations of Lincoln, Johnson, and Arthur. 1 vol., 8vo, $4.00.

The scope and value of ex-Secretary McCulloch's work may be gathered from the following summary of a few of the leading topics which he discusses and of the men of whom he gives reminiscences:

Massachusetts in 1833—Boston Men, Webster, Quincey, Everett, Longfellow, Holmes—The Boston Clergy, Channing, Gannett, Parker, etc.—Unitarianism—Journey to the West—Indiana Leaders in 1836—The Harrison Campaign—"Tom" Corwin and Robert C. Schenck—Banking in Indiana—Beecher at the Height of his Career—Lincoln and the War—Chase, Fessenden, and other Leaders—Grant, Hancock, McClellan, and other Generals—Johnson's Administration and Character—English Society—Arthur and Cleveland—The Tariff—Our Shipping Policy, etc.

"Five hundred pages of more force or pungency, of greater candor and of more deliberate disturbance of accepted national judgment and of established taste about the incidents, personages, and details of the War of the Rebellion, are not to be found in our literature."—*The Chicago Tribune.*

"We find what we want in every page—the author's keen recollections of distinguished men and important affairs."—*The Philadelphia Press.*

"He writes with a freedom and candor which men rarely use in print."—*The Independent.*

"Hardly any other volume of contemporary memoirs is entitled to greater consideration than this. We have had political reminiscences, but it is doubtful whether any other volume on public affairs is more informing than this one."—*Boston Herald.*

A full and detailed circular of any of the above books mailed upon application.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 29, 1888.

The Week.

JUDGE DANIELS, of the Supreme Court of this State, writes a letter to the *Herald* in a commendably grave tone on the subject of bribery in elections. The contagion, according to Judge Daniels, has gone beyond the illiterate and vicious classes, and has invaded the otherwise respectable ranks of society; and herein lies the danger. It is of the nature of this malady to grow by what it feeds on, and there is no assignable limit to its spread. "The vice," says Judge Daniels, "or crime, as it may be more correctly denominated, is one of appalling magnitude, having a direct tendency to undermine the foundation on which the national and State Governments must be maintained, if they are to be maintained in the future; for they can securely stand only on the intelligence and political integrity of the voters themselves. If that is to be corrupted by the use of money in the elections, then ultimately, and at no very distant period, the wealthy will buy the prominent and important offices. Men of moderate means or without means, and still possessing intelligence, experience, ability, and unswerving integrity, must in that event retire from the political field. They will be as completely ineligible as though declared to be so by the Constitution, both State and national; and that will hand the republic over to an aristocracy as surely as it would be if in legal theory it had been placed on that foundation." The Judge thinks that, while much may be done by a ballot law to lessen bribery at the polls, no such law can entirely prevent it. He favors penal legislation much more stringent than the present, and provisions for taking the testimony of the bribed on condition that it shall not be used against themselves. He does not refer to the English system of limiting the total amount of money which may be spent at elections—a system which it would probably be difficult to introduce here, though by no means impossible if all parties were in favor of it. What we have to fear is, that those who profited in the recent election in New York by means of bribery, on both sides of politics, will equip a lobby to prevent any change in the law which might disable them from committing the same crime in future elections.

Reports of deep interest on the question of ballot-reform come from all quarters. In at least a dozen States organized movements are in progress to secure legislative action upon the subject. In Indiana, as the Indianapolis *Sentinel* remarks, ballot-reform "is to-day the question of questions." The *Sentinel* is devoting much space to the discussion and explanation of the Australian and English laws, and is doing really valuable service in giving intelligent direction to the popular interest. Steps are also being taken in Connecticut for the drafting of a bill to be presented to the next Legislature, and similar projects are reported from several Western States. In all quarters the conviction is strong that absolute secrecy in the act of voting is the primary requisite in any system of reform which may be proposed.

So far as New York State is concerned, we are glad to be able to announce that a bill, similar to the Saxton bill which Gov. Hill vetoed, will be presented to the Legislature as soon as it meets in January, and will be pressed with all possible speed to a passage. The most painstaking efforts will be made to have this new measure conform as far as possible to the Governor's objections, so far as those objections are intelligible. The trouble with the Governor's "reasons" for the veto is that, when they are not trivial, they are either disingenuous or based on ignorance. Then, too, while pretending in the body of his veto message that he was unable to approve the measure because of certain textual defects and unconstitutional provisions, he concluded by denouncing the principle upon which it was based as a "mongrel foreign one." He will be given a chance, if the Republicans of the Legislature prove to be sincere in their advocacy of the reform, to pass judgment upon the new measure at a sufficiently early day to enable him, in case he vetoes it, to return it to the Legislature with his objections. It will then be possible for the Legislature either to amend it in accordance with his views, or to attempt to pass it unchanged over his veto.

The Republican denunciation of John J. O'Brien continues, and in its heat a good deal of interesting "inside" truth is being revealed. Mr. Nugent, a Republican candidate for Coroner, who was unmercifully "knifed" by O'Brien, follows Col. Shepard's example, and gives financial data as to the correct means for estimating the enormity of O'Brien's "treachery." He says:

> "O'Brien and his gang did not run my tickets out of their boxes at all. They got no money from me, but they got it from almost every other candidate, Democratic and Republican. Tim Campbell says he would not have run but for their urging. When he ran they fixed his assessment at $100 an election district. He paid it, and then they took $4,500 from his opponent, McCarthy, and supported McCarthy. They got $2,000 from H. K. Thurber for the ordinary expenses of his friend Schwartz for candidate for Congress, and $5,000 to run the district. They took money from Douras, the County Democracy candidate for Coroner, to run him alone. They took money from the Republican County Committee for Erhardt, from Tammany Hall for Grant, and from the County Democracy for Hewitt. They got at least $30,000. Every captain in the district had $400 on election day to buy voters for the candidates O'Brien and Rourke indicated."

It thus appears that H. K. Thurber has a $2,000 basis for his hot indignation, which explains fully his zeal for reform. Taken together with the handsome sum which Col. Shepard says O'Brien received from the National Republican Committee, this $30,000 from local committees and candidates must have given O'Brien about the largest profits which he has ever received from the "business" in a single election.

It being agreed on all sides now that O'Brien is a rascal and a cheat, we should like to ask the Republicans who are denouncing him what they have to say about his fitness for the office of Chief of the Bureau of Elections. If he is too great a rascal to be a Republican district leader, how does it happen that for years the full power of the Republican party has been exerted to keep him in the office which gives him control of the entire election machinery of the city? How does it happen that not a single Republican newspaper or Republican leader in this city has ever said a word against his continuance in that office, long after his term has expired, or exerted a particle of influence to get him out of it? We should like very much to have some information upon this point. O'Brien is now, by the highest Republican authority, declared to be, taken all in all, the worst man in his party in the city—a politician without honor or shame, and a traitor who sells his party for cash at every opportunity. How happens it that not a single Republican has a word to say about this bad man's unfitness for the important public office which he holds? Is the tremendous fact that for years the Mugwumps have been saying that he was a rascal, a sufficient excuse for this silence? Was that sufficient reason for putting him in the office, and for keeping him in it for so long a time after his character was notorious?

Mr. Cleveland's plurality in Virginia is only about 1,500 on the face of the returns, and the Republicans claim that they would have carried the State if there had been a free vote and a fair count. An attempt is to be made to take the matter before the courts, and at least to bring out the facts, if nothing else can be done. We earnestly hope that a thorough investigation may be made. Wherever there is just ground for suspicion that anything is wrong about an election, a thorough and impartial inquiry ought to be made. But we trust that investigation into the recent Presidential election will not be confined to the State of Virginia. There ought to be a vigorous overhauling of Indiana, to the end that it may be known how far the system of buying "floaters in blocks of five" contributed to the success of the Republicans in carrying the State. Much more important than either of these inquiries will be the investigation which we hope to see made by a Congressional committee into the sources of the immense campaign funds raised by the National Committees, with especial reference to the contributions made to the Republican treasury by Trusts, and to the demand for $400,000 made upon the land-grant railroads by a statesman in the clothing trade, who is

now talked of for a Cabinet place under Gen. Harrison.

The last canvass was a very remarkable one in various ways, as we have heretofore pointed out. The reliance of the Republicans on English quotations, and their almost complete avoidance of discussion of the tariff from the American point of view, was a very curious phenomenon, which has been in large measure explained by the revelations since made about the use of money in the canvass, and also, we are ashamed to add, about the use made of house-to-house scandal about Mr. Cleveland. We think the way in which this scandal-mongering was organized and carried out was a remarkable exhibition of electioneering skill, though, of course, there is no self-respecting American who must not blush over it. As the scandal was composed of simple, unadulterated lies, and was intended to counteract the effect on the popular imagination of the President's marriage with a charming woman, and of his happy family life in the White House, it was clearly perceived that it would not do to let it get into the newspapers, where it could be pounced on and exposed, and its authors punished. Accordingly, it was kept out of print with really wonderful care, considering how indiscreet newspapers are. Only one indiscretion of this sort was committed by a clergyman in Worcester, Mass., and he was so promptly knocked senseless by a letter from Mrs. Cleveland that it put all his scandalmongering brethren on their guard, so that no squeak of it ever afterwards got into print.

But the propagandism was kept up with great vigor. The Baptist ministers, at a Conference in Washington, were charged with it before they left for their homes, and spread it in their congregations and through letters to their professional brethren. Children were told of it at the Sunday-schools. We have heard of one case where it was actually carried round from house to house by a female colporteur, who used to weep in telling it. At dinner-tables in the cities it was freely repeated, and always on the authority of somebody who was present at some horrid scene. It reached this office frequently during the summer, but never in a shape to be taken hold of. There was always something dim and shadowy about the name and residence of the witness. Within the last week, however, we for the first time lighted on one of the worst of these stories in the mouth of a reputable man, who was able and willing to name his authority. We accordingly wrote to the authority, and are informed by him that the story was, from top to bottom, a cruel, brutal, and silly invention, which he knew was in circulation, but, as long as it was not published, shrank from publicly contradicting. The old Puritan theologians had a strong sense of existence of corporate guilt—that is, of the responsibility before God Almighty of whole communities, nations, cities, and churches, for the sins of individual members. Whole towns used to fast and pray because some of the inhabitants had fallen victims to the lusts of the flesh. If this doctrine were now held, there is not a Republican in the land who ought not to be on his knees, shedding tears of shame and repentance over this most disgraceful episode in the party history—unparalleled, so far as we know, in its baseness, its meanness, its cowardice, its wickedness, as well as its ingenuity.

The Prohibitionists in this State are in considerable excitement over the surprisingly frank admission of Warner Miller and other Republicans that the high-license issue was forced to the front for the purpose of securing Prohibition votes for Harrison. In all the many tributes which have been paid to Mr. Miller for his brave stand on this question, much stress is laid upon the fact that it was because of his course that the Prohibition vote for President in this State was materially reduced as compared with the vote of last year. The *Voice*, Prohibition organ, cites these utterances as evidence that Mr. Miller's candidacy was merely a trick; that his fight was not against the saloons, but against the Prohibition party; that his election was not hoped for; and that there is no sincerity in the Republican professions of zeal for temperance reform. We merely cite this as the Prohibition view, but we are constrained to add that we have been surprised at the frankness of the admissions which Mr. Miller and other Republicans have made. They are incautious, to say the least, in view of the sinuous course of the Republicans of this State on the temperance question, as revealed in many ways, and most luminously in the famous Shook telegram to the editor of the *Tribune* in regard to giving "Republican saloon-keepers the protection to which they are entitled."

If the Republicans prove to have obtained control of the House of Representatives, they will owe their narrow majority in that body directly and plainly to the saloons of St. Louis. That city is represented in the present Congress by three Democrats; it will be represented in the next Congress by three Republicans; the change in these three districts is what converts the House from a Democratic into a Republican body, if it is Republican; and the change in these three districts is due to the revolt of the saloons against Francis, the Democratic Mayor, who enforced the Sunday Closing Law, and against all candidates of the party which would nominate for Governor a man who thus declared his independence of the liquor interest. The saloons are prompt in claiming the credit of the Republican victory. The St. Louis *Tribune*, a German paper which supported the Republican party throughout the campaign as a better party for the liquor interest than the Democratic, says that "the great Republican victory in St. Louis, without the least doubt, is to be attributed to the agitation of the Personal Liberty League," and points out that "from St. Louis three Republicans are chosen to Congress, *of whom two are Germans.*" What the Republican party may expect of these allies whom it has gained from the saloons of St. Louis may be inferred from the tone of the *Freie Presse*, a leading German Republican paper of Cincinnati, which talks in this way: "The comparatively small majority which the Republicans obtained in the city and State at the last election should be a warning for our Republican legislative body to keep their hands off the Dow law [taxing saloons], and off other objectionable measures. A disregard of this warning would be the downfall of the Republican party at the next election. Everything would fall in the hands of the Democrats, from the Governor to the Mayor, and even the Senatorship."

The disastrous effect of any alliance with the saloons upon the attitude of a political organization with regard to temperance was strikingly shown in Connecticut just before the recent election. A "committee of twenty" leading citizens was appointed in Hartford some time ago to consider what measures could be adopted to restrict the liquor evil. On the 8th of October this committee received and unanimously adopted a report of a sub-committee on the license question, recommending that the Committee of Twenty should apply to the County Commissioners to raise the license fee from $300 to $400, and to deny licenses to places in the neighborhood of a factory where there is a general opposition to the license by the managers and workmen connected with the factory; to places where other business is transacted (except hotels and restaurants); and to places in buildings which are used in part as dwelling-houses. All of these recommendations were so obviously reasonable and wise that they should have needed no support in argument; but to answer any possible objection which might be raised by the Commissioners, a committee was appointed to appear before that body, consisting of such well-known men as Nathaniel Shipman, Judge of the United States District Court of Connecticut, Col. Jacob L. Greene, President of the Connecticut Mutual Life Insurance Company, and Mr. Henry C. Robinson. These gentlemen accordingly went before the County Commissioners on the 25th of October, and urged the adoption of the above propositions. On the 31st of October the Commissioners announced to the Committee that they declined to adopt any of their suggestions. What was the reason? Simply this. The Commissioners were all Republicans, and the Republican party, by nominating Morgan G. Bulkeley for Governor, had adopted the policy of trying to carry the State by bidding for the saloon vote.

The stock market has gone from bad to worse since the election, disappointing the successful party and surprising the defeated one in about equal measure. The good, the bad, and the indifferent securities have suffered alike. It was generally supposed that relief from the political tension would have a healthful effect upon business, and that, whichever party might carry the election, the removal of an uncertainty would be beneficial in every way. This belief was shared, if not expressed, by all, but the result has been precisely contra-

ry to the common expectation, as regards the stock market. General business outside of stocks has not shared the depression. The reports from commercial centres are quite encouraging, and this fact warrants the hope that the depression in Wall Street is only temporary; but for the time being it is unmistakable. Several causes have contributed to the "want of confidence" betokened by the situation in Wall Street, the most important of which is the so-called trunk-line war, which the trunk-line managers tell us is not a war, but merely an investigation, or a means of finding out what has happened to their traffic. It is of small consequence to railway shareholders whether it is a war or an inquest, if their receipts are shorn by the process. Undoubtedly, if the war, or the investigation, should come to an end, and if rates were restored to a paying basis, one heavy cloud would be removed; but it must be borne in mind that the depression began before the trunk-line trouble broke out or was even suspected, showing that there was a deeper cause than a local railway squabble.

We have little doubt that this deeper cause is the uncertainty which still hangs over the operations of the national Treasury. The present system of alternate glut and relief cannot last. It is a highly artificial condition, opposed to all reasonable conceptions of business. It is hardly consistent with the operations of a sane mind to go on from month to month piling up money that is not wanted, and then disgorging it in premiums to bond speculators, which premiums must necessarily rise as the market contracts and the surplus grows. Public opinion will not tolerate such proceedings indefinitely. The surplus must be choked. It must be suppressed in a rational way, and not by offering the country a flood of cheap whiskey as an alternative to a financial crisis; nor must it be got rid of by extravagant appropriations, amounting to a disguised thievery of the money of the tax-payers. Now, the election of Gen. Harrison is believed to have added something to the difficulties of the precedent situation. The policy recommended by Mr. Cleveland—of squaring the receipts by the expenditures, the taxes by the public needs—has received a check, and no other policy has been formulated to take its place. The underlying cause of depressions in Wall Street is want of confidence, signalized by a general withdrawal of capital from the customary fields of employment, while waiting to see what will happen. The present depression is of this nature. It is aggravated by other things, but its groundwork is the uncertainty hanging over the Treasury, its surplus, and its next chief.

The exportation of a few million dollars of gold last week came at a time when any suspicious circumstance was pretty sure to add to the prevailing distrust in the circles of finance. It has the effect, according to street parlance, to "play into the hands of the bears." But it cannot be considered a factor of any importance in comparison with other present influences in depressing the stock market and creating distrust among investors. In the first place, the exportation of gold that has already taken place is insignificant in itself. We are producing about $35,000,000 per annum, and if we were to export the whole of this annual increment, the fact would signify little when we reflect that we have gained since the first of January, 1879, nearly $500,000,000 of this metal, as the following figures, drawn from the commerce and navigation reports, and those of the Director of the Mint, will show:

Gold imports 1879-1887.....	$351,702,763
Gold exports 1879-1887.....	157,304,749
Net imports 1879-1887.....	194,398,014
Gold production 1879-1887.....	302,100,000
	$496,498,014

It is possible to be glutted with gold, as with any other article of commerce; and when this condition occurs, an exportation of the surplus is both necessary and healthful. There is nothing in the present condition of business to show that the movement of gold at this time is other than healthful. If it shall have the effect to break the back of the wheat speculation at Chicago, which still prevents that staple from moving, it will be altogether wholesome. Indeed, a much larger exportation of the metal would be regarded as a cheap deliverance from the deadlock.

We venture to call the attention of those Republicans who, while believing in tariff reform, voted for Gen. Harrison, in serene confidence that if elected he would kick over the platform on which he was nominated, to the signs of appetite which their party is showing in regard to the surplus. From every quarter of the land there are unmistakable indications that the clamor to spend all the surplus in one way or another is going to be tremendous. If the tariff-reform Republicans are to get any hearing for their views they must be up and doing without delay. There are, we believe, many thousands of them who are convinced, not only that the burden of tariff taxation should be reduced, but that the greatest danger which threatens the continued supremacy of their party is its tendency to go to the extremes to which its high-protection element is pushing it. If this element carries the day, there will be nothing for the tariff-reform Republicans to do but to swallow their convictions or to turn Mugwumps. It is in order to spare them from the horrors of the latter fate that we give them this warning. The present race of Mugwumps, according to unanimous and oft-repeated Republican authority, is completely extinct. Think what a responsibility would rest upon the party if within a year or two it should be the cause of the birth of a new race of them!

We call the attention of H. K. Thurber, John F. Plummer, the Home Market Club of Boston, and Pat Ford, to the surprising information which comes from Indianapolis that Gen. Harrison has selected as his private secretary a gentleman of English birth. What would have been the emotions of all these broad-minded patriots if President Cleveland had made such a choice as that? They unfurled the Union Jack as the true Cleveland ensign, and went into systematic forgery as a business on much less provocation—in fact, upon no other provocation than that the British press had spoken favorably of the President. We doubt very much if they could have endured at all the spectacle of a man of British birth standing guard at the door of the White House, and "poisoning" the mind of the President towards all true Americans in search of high-protection benefits, subsidies, and other favors at the expense of the people. It is a cause for national thanksgiving that they were not put to the test; for, instead of relieving themselves with lying and forgery, Thurber, Plummer, and Ford might have plunged at once into "war."

A writer in the Paris *Figaro* gives the French public some account of Gen. Harrison, in which he makes the General's great-grandmother the granddaughter of Pocahontas, the celebrated Indian princess. He also makes him the lineal descendant of Harrison the regicide, whose execution it describes, and makes his descendants emigrate to America. But they would assuredly have gone to Massachusetts as Goffe and Whalley did, and not to Virginia, as Gen. Harrison's ancestor did. The descent from the regicide Harrison is not, we observe, claimed in Gen. Harrison's biographies. The Frenchman denies that he is cold in manners, but admits that he does not remember names or faces well: but, says he, after the first moment he thaws out, and is very agreeable. Harrison is, moreover, a philosopher of the "ancient sort," meaning, we suppose, what is called "one of Plutarch's men." Of Mrs. Harrison the Frenchman speaks in the highest terms, and says her "five-o'clock teas" in Indianapolis are much frequented. She is strong in epigrams and puns, but knows when to hold her tongue; and a woman who knows when to be silent is a superior woman.

Apparently the Floquet Ministry have committed an additional if not final folly in the proposal of an income tax. They are at their wits' ends for money, and have accordingly introduced a bill putting a tax of 1 per cent. on incomes derived from invested capital, and a half of 1 per cent. on professional incomes, exempting all below $400 a year. The French bourgeois are up in arms against it. They are very particular about their privacy—probably more so than any other civilized people. They have succeeded better than any other in preventing its being invaded by the newspapers, and they are still more strongly opposed to having it invaded by the tax collector. They have never submitted, and probably never would submit, to the inquisition which taxpayers undergo in some of the New England States. They look with horror on the idea of having these money matters known throughout the "quarter," and commented on by business rivals. Hence, the probabilities are that the bill will never become a law; but the mere talk of it has increased the hostility to the Republic which seems to be slowly permeating the whole of French society.

WANAMAKER.

EVERY reader of the newspapers is aware of the appearance in the political arena, within at most nine weeks, of a gentleman named Wanamaker. That he is already a great political personage is plainly to be seen from the stories about him, and it makes little difference whether these stories are true or false. A person of whom it is reported that Quay says that he is going to ask only one thing of Gen. Harrison, and that is that Wanamaker shall have whatever he wants, must be a considerable person, whether Quay ever said it or not. A man who is discussed in the newspapers as likely to get his choice of places in the Cabinet must be an important and influential man in his party, even if everything the newspapers give out about his prospects be unfounded. Wanamaker is such a man. If we were to believe half what we hear about Wanamaker, we should expect to see him the guide, philosopher, and friend of the next Administration, to see him become to Harrison what Blaine was to Garfield. All this, as we have said, within nine weeks or thereabouts.

What is the meaning of this sudden rise? Who is Wanamaker? Wanamaker is the owner of an immense store in Philadelphia, in which he sells almost everything that is used by civilized man or woman. His business has grown wonderfully within a few years, mainly of course through his own energy and enterprise, but largely by means of the most seductive advertisements about clothing, in which the air of candor, of impartiality, of sympathy both with the frugal and the lavish, with the ascetic and the luxurious, has long been the envy and admiration of the clothing trade, and has really revolutionized its literature. But how does all this make Wanamaker a great politician within the short period of nine weeks? Is he an orator? Has he made speeches for the party? No; we doubt if he ever made a political speech in his life. Has he written books, pamphlets, or articles for the party? No; we doubt if he ever in his life wrote anything but puffs of his own wares. Is he an old party Sage, who has long sat in its councils and given it the benefit of his wisdom and experience? No; he never was heard of in the party until nine weeks ago, and has, as far as is known, no wisdom or experience except in the keeping of a large variety store. Has he been identified with any great cause which the party has now taken up and made its own? No; all his fame has been won in the clothing business. Has he ever held any public office in which he established any claim on public gratitude by able administration? No; his undoubted administrative abilities have been displayed entirely within his own store, and the only American who has had the benefit of them is Wanamaker himself.

To what, then, is his sudden rise due? To the fact that he has made an enormous contribution in money to Quay's campaign fund, and to a successful attempt to extort $400,000 for it in the last week of the canvass, the full nature of which we trust to see revealed when Congress meets. In other words, Wanamaker has bought for cash—or thinks he has bought for cash, and Quay thinks so, too—a controlling interest in the formation of the next Administration of the United States, and has actually gone about boasting of his bargain. He believes that he has acquired, by means of a check payable on demand, the moral right to sit in President Harrison's Cabinet, and the right to be consulted with regard to the appointment of his colleagues, and the right to fill many subordinate offices with persons of his own selection.

"What impudence!" many good people will say. No; it is not impudence at all. Wanamaker is a man of his time. As a purchaser of political influence and honor, he is the product of a system which has been in existence and growing for twenty years. He is distinguished simply by having bid higher than any of his predecessors. He found the practice of purchasing a claim to high office by heavy contributions in money to the party funds firmly established before he decided to add a political branch to his huge store. For fully twenty years the doctrine that a man who subscribed heavily was entitled to a great place, and justified in feeling swindled if he did not get it, has been striking deeper and deeper roots in the political soil. Wanamaker has paid so much that he naturally feels entitled to several places, or "a controlling interest" in the governmental business. In other words, he has brought us one step nearer to the possibility, which now stares us in the face, of the purchase of the entire Administration from the National Committee of the winning party for a sum which many of our rich men could now afford to pay for such a luxury, and which, as well as we can judge, need not be higher than say $4,000,000. No such chance has been offered to wealth in the modern world or in the ancient world since the Prætorian Guard sold the Roman Empire at public auction. All that is needed now is some such regulation in the interest of fair dealing as a tariff of prices. A man who is asked to subscribe handsomely ought to know exactly what he can have for his money, so as to avoid the subsequent complaints and heart-burnings which of late have been too common. The upset price of the State Department, of the Treasury, of the Interior, and so on down, should be given in black and white, and there should be a day and hour fixed in the canvass when the bids should be closed and the places awarded in case of victory.

The reasonableness of this arrangement and the blamelessness of Wanamaker will be more apparent if we point out that, under all popular governments, political parties give the offices to the men who furnish the means of carrying the elections. A party which has waged a successful war thus honors its soldiers and financiers; a party which has triumphed by persuasion, by winning the majority over to its way of thinking, like the Republican party in 1860, thus honors its orators and writers: but a party which has gained possession of the Government with money, naturally and properly honors the men who provide the money. This is, as the boys say, "the long and the short" of Wanamaker. It explains him, and justifies him; but we cannot honestly say it makes us proud of him. In fact, to be entirely candid, we think, as a politician, he makes the American people an awful warning to the civilized world.

AN INVESTIGATION NEEDED.

THAT Quay has thought himself authorized to sell place and patronage to Wanamaker for cash, and has sold them, is something which no reputable person questions. That Wanamaker believes the bargain will be carried out by President Harrison, there is equally good reason to believe. That Wanamaker knows well, in spite of his "Bethel," that Quay and Dudley used the money for criminal purposes, we are confident Congress can bring to light by an investigation. The Democrats have a majority in the present House, and have ample time in which to set a committee to work between now and the 4th of March, 1889.

There ought to be, and we believe there is, patriotism enough in the majority to secure such committee, no matter who may be touched by the result of the inquiry. The best men of both parties begin to be appalled by the corruption of the last election, as the facts continue to come to light. There is a growing determination, in all parts of the country, that the crimes against free government which have disgraced the country during the last three or four months shall not be repeated. Preparations are being made in every direction for taking the ballot out of the list of vendible commodities. But these preparations would be greatly strengthened, and the work of reformatory legislation made more sure, by thorough inquiry into the use made of money by both parties during the canvass. Quay and Wanamaker have felt so sure of impunity that they hardly took any pains to conceal their operations until after the election, when, like fraudulent bankrupts, they burnt their books and papers. Documentary evidence of their villany is therefore perhaps now scarce, but they can be summoned and put on the rack of cross-examination, as can hundreds of others who were either their victims or confederates. There is really little difficulty in getting at the truth of the matter, probably not half as much as there was in the Crédit-Mobilier case, which was laid thoroughly bare by putting a few men on oath. Something of this kind is needed to shock the popular conscience, and present vote-trading to the popular eye in its true light. Newspaper charges produce but little impression, especially when they come from the defeated party after an election. Judicial examination and proof are needed to bring home to people the distance to which politicians have carried the Government on the road to damnation.

We have no idea that Gen. Harrison will be disposed to deliver the places which Quay has sold. We feel sure he will not repeat the blunder committed by Mr. Hayes of rewarding with office men suspected, whether justly or unjustly, of cheating him into the Presidency. We take it for granted that he will not knowingly allow the Government of the United States to be converted into mer-

chandise and sold in "job lots." But every one in his position is naturally disposed to receive with suspicion charges made against men to whom he owes his election. It is but human, and by no means discreditable, that he should give Quay and Wanamaker the benefit of every possible doubt, and be ready to believe, what they are sure to tell him, that if their conduct were judicially investigated, they would be found blameless. Such men are always eager to be examined as long as nobody is waiting to examine them, and their eagerness always produces a considerable impression on their friends. Consequently, an investigation would probably do as much good in informing President Harrison's judgment as in rousing popular indignation. It would bring before him clearly the tremendous fact that this Government has reached the parting of the ways, and that on him the great duty devolves of deciding which it shall take. The election has at last made the country aware, not only that the present close division of parties in doubtful States makes the temptation to bribery almost overwhelming, but that we have among us a very large body of rich men who think it no harm to bribe in defence of what they consider their own interests, and a large body of poor men who have been bribed so often that the association of duty with the ballot has faded from their memories.

With this situation Gen. Harrison will have to deal. His manner of appointing his Cabinet and filling the other leading offices will do a great deal either to encourage or discourage those in both parties who think that the Government must be saved now or never; that after another plunge into the slough, even the most hopeful will give up the struggle. Hitherto, we have only had to contend with the vague expectation of men who subscribe largely to campaign funds, that they will get an equivalent in public honors and salaries in case of victory, and who modestly conceal their pretensions and make no public sign if they are disappointed. But to-day we are confronted with actual purchasers, holding what they believe to be "a call" on the President of the United States for such offices as they may designate, in return for cash. Nothing would strengthen Gen. Harrison so much in dealing with such a pair as proof of their guilt under oath, and we believe that if the House will do its duty such proof can be had.

AN EXTRAORDINARY CONFESSION.

THE *Mail and Express* is the accredited evening organ of the Republican party in this city. If the editor does not contribute wisdom to its councils, he undoubtedly contributes money to its chest. He knows all about its receipts and expenditures, and when he talks about the way its money goes, he undoubtedly speaks by the card. This makes a story to which he gave currency in his columns on Thursday, the most extraordinary, as far as our recollection goes, in the history of politics. It is this: That the National Committee, on the Saturday before election, paid to "a Republican State leader" the sum of $150,000, none of which went to the County Committee or to the "necessary and legitimate" expenses of the campaign—all of these having been met by a distinct donation of $40,000 from the National Committee, and contributions from individuals; that the $150,000 referred to was to be used in the purchase of three "movements," viz., the "James O'Brien movement," estimated at 10,000 votes; the "Coogan movement," estimated at 30,000; and the "John J. O'Brien movement," an unknown quantity, but commonly called in politics the Eighth or "banner district." Now, these "movements," though bought and paid for, were not delivered. Says the chronicler:

> "As to the Coogan movement, it promised 20,000 more votes for Harrison and Miller than it delivered, and collapsed, after polling about 9,000 for Coogan for Mayor, into the arms of Tammany Hall, which presented the only other Romanist for that office.
>
> "The James O'Brien movement promised 10,000 more votes than it delivered.
>
> "The John J. O'Brien movement kept its word pretty well for Harrison, miserably for Miller, and not at all for Erhardt.
>
> "In other words, the Eighth District Republicans were sold for Governor to Hill partly, and wholly to Grant for Mayor, and the last for the same reason that the Coogan movement went to him, that he was a Romanist. Of course the H. J. Grant party assumed and paid all the so-called campaign expenses of both the Coogan and J. J. O'Brien movements which came to Grant, and this in utter disregard of the fact that the Republicans had already paid them. It is also probable that the Hewitt people paid dearly for the song of success as sung to them by both of these sirens.
>
> "If Col. Cruger and Capt. Erhardt will move for the trial and expulsion of John J. O'Brien from the Republican Committees, it is more than probable that his ability to abuse the confidence of the Republicans of this city will be terminated by his performance of November 6, 1888.
>
> "The success of the Republican party in this city is to be achieved by educating the masses in Republican doctrine, by the circulation of the Republican newspapers, and the continual holding of mass-meetings; and we hope we have seen the last of attempts to buy votes *en bloc*, in all which attempts for the past twenty-six years we have been buying experience and not votes—been filling and trimming the lamps of our opponents and emptying our own."

It will be observed that the reason here given for abandoning "the attempts to buy votes *en bloc*," which have now been made for twenty-five years, is not that the practice of buying votes "*en bloc*" or otherwise is illegal, or immoral, or disgraceful, or un-American, or sinful, but that the last and most expensive attempt did not succeed. Not one word of condemnation of the practice of buying votes on moral or patriotic grounds does the article contain. Republicans are warned away from it, and urged to try the plan of "circulating Republican newspapers and the continual holding of mass-meetings," but solely because the commission agents who get the money do not keep their bargains. A more extraordinary revelation, we think, has never been made, and the naïveté with which it is made adds to its value. The system of purchase cannot be a thing which the Republican leaders in this city think it worth while to keep secret, or the editor of the *Mail and Express* would hardly be familiar with it; and we may be sure that the arguments he urges against it, in his simple-minded way, are but repetitions of what he has heard in the more familiar talk of the local managers.

There was a time when we should have said that "these abominable principles and this more abominable avowal of them" would rouse in this city, from respectable men of all parties, a storm of indignation, when the very stones of Broadway and Fifth Avenue, at least, would rise and mutiny. If any one had predicted in 1872, that by 1888 a Republican organ would declare against wholesale bribery by Republicans in the city simply as a poor business venture, and confess that it had for years been carried on with the connivance or acquiescence of men like Messrs. Walter Howe, Theron G. Strong, C. N. Bliss, Elihu Root, Edward Mitchell, and Van Rensselaer Cruger, we venture to say that he would, in almost any respectable company, have been denounced as a slanderer. And we confess that, had he predicted that this miserable story could be told by a Republican newspaper in this city, without drawing forth from these gentlemen immediate and indignant denials, either of complicity or knowledge, we too should have said he was a malignant pessimist. We should have told him scornfully that on the morning after this fatuous revelation of iniquity appeared, all the gentlemen we have mentioned, and a score of others, would either publicly have given the lie to every word of it, or have declared that if such practices were carried on they were carried on without their cognizance, and that, in testimony of their shame and confusion, they would leave no stone unturned to bring the perpetrators of them to justice. But thus far the matter, we grieve to say, appears to excite no sensation whatever. The Better Element is silent. The *Tribune* is silent. The Union League Club, and especially "the Committee on Political Reform" (Heaven save the mark!), is silent. The Boys are silent. But unless this Government is doomed to shameful ruin, this silence will not last long. The grief with which the daily revelations of the way in which the late election was conducted, both by victors and vanquished, is filling tens of thousands of American hearts will, before all is over, become flaming wrath. The rascals who buy and sell the Government will have to run or hide, and so will the wretched hypocrites who roll their eyes and propose to quit the business because their coparceners steal the money.

THE SUGAR TRUST AND THE SUGAR TAX.

WHEN Senator Allison made his speech introducing the Finance Committee's substitute for the Mills bill, on the 8th of October last, he laid much stress on the fact that the Senate bill was more in the interest of the consumers of sugar than the House bill was. He charged that the House bill was drawn in the interest of the Sugar Trust, and that the Senate bill would make a difference of $6,000,000 in favor of the public as compared with the Mills bill, and a still greater difference as compared with the present law. Upon this showing the Senator justly felici-

tated himself and his associates and the country; for what he said was true, as we shall now show. The subject is a complicated one, but we will endeavor to make it plain.

Imported sugars may be roughly classified as raw and refined, the raw being either wholly unfit for human consumption, or so repulsive to sight and taste that it will not be consumed in that state by civilized people. The tax on raws is imposed according to the polariscope test, beginning at 75 degrees for the lowest grade, at which the present duty is 1 4-10 cent per pound. For each degree higher than 75 there is an additional duty of 4-100 of a cent per pound up to 100 degrees, where the duty is 2 4-10 cents per pound. From this point onward the classification is by the Dutch standard of color; No. 13 to No. 16 being 2¾ cents per pound duty, No. 20 being 3 cents, and all above 16 to No. 20 being 3½ cents. The protection accorded to the Trust is the margin between the duty on raw and refined. It is fair to take the duty on sugar of 96 degrees polariscope test as the standard for raw. The following table will show the margin of protection allowed per hundred pounds under the present law, under the Mills bill, and under the Senate bill:

	Raw. (96 deg.)	Refined.	Protection.
Present duty	$2 24	$3 50	$1 26
Mills bill	1 82.2	2 80	0 97.8
Senate bill	1 12	2 00	0 88

The Mills bill reduces the bonus which the present law gives to the Trust 28 2-10 cents per hundred pounds. The Senate bill reduces it 38 cents per hundred pounds. Mr. Allison's contention is accordingly justified: the Senate bill reduces the protection to the Sugar Trust nearly 10 cents per hundred pounds *more* than the Mills bill does. We will now quote exactly what Mr. Allison said on this subject, viz.:

"The difference between the substitute which we propose and the House bill as respects sugar is a difference of $6,000,000 in the aggregate per annum to the consumer. By the House bill the tax upon the people of the United States is $6,000,000 per annum more than the Senate substitute, as the duty is paid by the people who consume the sugar, and, in my judgment, it is practically the only case in all these dutiable lists where the consumer pays the duty; and, as the Senator from Massachusetts [Mr. Hoar] very justly and very properly observes, it bears heavily upon the poor and upon those who have large families. Six million dollars to whom? Where will it go? It is between 13 and 16. Why is it that the refining interest insists all the time upon that relation of 13 and 16? It is that the centrifugal sugars can come in between 13 and 18, and thus go into consumption without the intervention of the refiner. Therefore it is that they want to make the line of demarcation strongest between 13 and 16, in order that all sugars that come in here may be raw sugars, and thus pass through the processes of refining in our country; and I repeat that the Senate substitute makes a difference of one-fifth of a cent, or $6,000,000 per annum, in favor of the consumers of sugar.

"What is the effect of that? According to the census of 1880, there was twenty-seven and a half millions of capital invested in sugar refining in the United States. I have not been able to get the accurate statistics between then and now, but I assume that there is certainly not more than $50,000,000 of capital engaged in that industry now. So this concession made to sugar-refiners in the House bill, as compared with the Senate bill, is 12 per cent. upon all the capital of all the sugar refineries in the United States; and yet the Senators who have made the minority report upon this bill, including the separate and distinct report of the Senator from Kentucky, endorse these House provisions as respects the question of sugar, and then they denounce all Trusts. Why, they legislate by the provisions of this House bill $6,000,000 into the pockets of the Sugar Trust, 12 per cent. per annum upon their capital, and take it out of the pockets of the people of the United States, and denounce the Republican party and this substitute for administering to and fostering Trusts! Consistency is a jewel that is not found in this minority report any more than it is in the report of the Senator from Kentucky."

We trust that the public, without regard to sex, color, or previous condition of servitude, will take notice of this aspect of the sugar tax and of the proposed changes in the same. The Sugar Trust is, in our judgment, the most pernicious and extortionate of all the protected Trusts; it has greater powers of mischief than any other, and it is doing more mischief than any other. The American people have a gloomy prospect ahead, in any case, in dealing with these daring and unscrupulous combinations, but the prospect will be gloomier still if there is any backing down on the part of the Senate from the position here taken. If it is the intention of the Senate to keep its promise to turn several millions per annum out of the gains of this protected monopoly into the pockets of the people, they will receive due and proper thanks; but if they depart from their declared purpose of giving relief to the people, the reason will be only too plain, viz., that, in order to attract votes, they held out a promise before the election which they did not intend to fulfil. We believe that a proper investigation would show that American refineries can turn out refined sugar as cheaply, if not more so, than any others in the world, and that therefore any protection granted to the Trust is a sheer gratuity taken from the poor to be added to the superfluities of the rich. We consider, also, that the lawsuits set on foot under State authority to dissolve corporations that have entered into the Trust are worse than useless, because they turn attention away from the real evil, and hold out the expectation of relief in a quarter from which it can never come. The source of the gains of the Sugar Trust is the tariff. Let the public fix their eyes on Washington City, and not on Albany, if they would see where their money goes, and who gets away with it.

THE SILVER COINAGE.

It is a long time since the silver coinage has engaged any considerable share of public attention. The last discussion of the subject that could be considered really important took place four years ago, when Mr. Cleveland, then President elect, addressed his letter to Congressman Warner advising a discontinuance of the coinage. This led to an attempt on the part of Mr. Randall, Mr. Carlisle, and other leading Democrats to procure legislation in the short session of 1884–5 for a temporary cessation of the coinage, but it failed on a test vote. In the following session Mr. Bland of Missouri made an effort to get a "free coinage" bill passed in place of the present law, which provides for the coinage of not less than two nor more than four millions per month; but this failed also by a pretty decisive vote in the House.

So things have gone on under the act of 1878 until the coinage amounts to about $300,000,000. One circumstance, not anticipated by either the silver or the anti-silver men, has created a vacuum in the circulation, to fill which the newly coined silver has served a useful purpose. The gradual shrinkage of the national-bank circulation, due to the calling in of the bond security upon which it rests, must needs be supplemented with something, and the only things available were certificates based upon gold or silver or both. Both have been employed, but mostly silver, because gold certificates cannot be issued of smaller denominations than $20. The field of ordinary hand-to-hand circulation was left to the silver certificates. In addition to this vacuum, created artificially although not designedly, there was a natural vacuum produced by the growth of the country, especially its growth westward and southward, where banking facilities are relatively small. This accounts, we think, for the major part of the demand for certificates for circulation during the past four years. Still another and not insignificant vacuum has been created by the suppression of small bank-note and greenback circulation, and the issue of silver certificates of the denominations of one and two dollars in place thereof.

It is useless to inquire whether these voids in the circulation might not have been filled more advantageously in other ways. We think that the filling of them with silver was slovenly, expensive, and unscientific; but we acknowledge at the same time that it provides a guarantee fund of 75 per cent. to secure the circulation; that is, that the bullion value of the silver held by the Treasury against the certificates is within 25 per cent. of their nominal value. As the Government has received from the purchasers and present holders of the silver certificates 100 cents for each dollar, it is bound to make good the difference at all times and under all circumstances. It has been provided with funds for this purpose, and is under the highest moral obligation to the people to see that nobody is a loser by the decline in silver. If a liquidation were called for now, there would be a loss to the Government, because some of the purchases of bullion were made at higher prices than those now prevailing; but this fact does not impair the moral obligation to the holders of the certificates.

The Treasurer of the United States tells us in his annual report that the coinage during the past fiscal year was $32,484,673, and that the "net distribution" increased only $39,156. This means that gaps in the circulation already mentioned have been practically filled. The report says further, that the Treasurer is of the opinion that the people have all of these coins they want or are willing to take, and recommends that if the purchases of silver are to continue, the bullion be put into the form of heavy bars or ingots, arguing that the present supply of the dollars will be sufficient for any demand there is likely to be for

them, and that any increase of the certificate circulation could be based with perfect safety on the uncoined metal.

This suggestion is not likely to be adopted by Congress. It involves too wide a departure from the idea with which the silver coinage was entered upon. This idea was the restoration of "the dollar of the fathers." It was a popular superstition, which would no more be answered by "heavy bars or ingots" than devotion to a Hindu idol would be answered by the Litany of the English Church. Nor do we conceive that the piling up of silver bricks in the Treasury would answer any useful purpose; it would be like the accumulation and storing of pig-iron or anything else. The piling up of unused dollars is indeed the same thing, in an economical sense; but the silver craze is to be cured only by observation and experience of the folly in its original and true form. When the demand for these dollars for purposes of circulation shall have been fully satisfied, and the pile of unused dollars begins to grow just in proportion to the coinage—that is, by two millions per month—there will be a struggle in Congress between the advocates of "free coinage" and their opponents. It is best, in our opinion, to have that fight in the open field when it comes, and not to attempt to disguise it in any way.

THE SOCIAL USES OF THE "KICKER."

THAT ingenious gentleman who chooses to be known as "M. Quad," adds to his merit as an amusing humorous writer the virtue of being in private life, not merely occasionally, but consistently and on principle, a "kicker." He fights habitually against the manifold small impositions and ill-treatment which beset every man who lives, and especially who moves, in our social system of "modern conveniences." Every one of these has its reverse side of inconvenience, unless worked with absolute smoothness, and since this depends upon good faith and good will in the fallible persons charged with their administration, the chances of annoyance and suffering arising from our elaborate way of modern living far exceed anything known to our fathers and grandfathers. Unhappily, most men submit to such impositions and ill-treatment without resistance or protest, either because they are in a hurry, or because they want courage, or are easy-going and lack so much of genius as consists in "an infinite capacity for taking pains." Such people deserve all that they suffer, but the public good demands that they should be stirred to better ways, as has just been done by a bit of "M. Quad's" personal history.

We cite here an article of his creed:

> "I really and truly believe that the day will come when the kicker will be classed where he belongs, and be entitled to the reverence due him. I look upon him as a philosopher and a philanthropist. He stands forth one man out of ten thousand. He is actuated by the most unselfish motives. He is the real reformer."

We accept this creed heartily, and enjoin it upon all well-affected readers. Our Positivist friends will require no commendation of it, since it affords to men of common mould a way of joining the élite of humanity and of obtaining reverence—in short, of becoming a part of the "Grand Être" to which worship is to be paid—a thing heretofore possible only for geniuses, heroes, and saints. But there is a considerable remnant, after deducting the Positivists from the sum of population—a remnant, wholly indifferent to the worship of future generations, who must be won by prospect of the approval and applause of men of their own time, of which the "kicker" is always secure. He has always the sympathetic regard of his own class—the small but strong band of developed and active remonstrants. He has from the great class of potential kickers—the men of good intent but infirm resolution—the respect and gratitude felt by all right-minded people towards those who stimulate them by high example in working out their own ideals. And from the enormous crowd of *fainéants* the "kicker" receives dull but abject homage, as to a person who accomplishes things which they have dreamed not of. In short, the "kicker" is the Mugwump of private life, with the inestimable advantage over Mugwumps of public life that, by his own single power, he is able at any time to carry out "his bright designs." The political Mugwumps must wait and combine, must argue and convince, must persuade vast numbers that David B. Hill is not a nice person to be Governor of New York, for instance, before they can effect their end; but the social Mugwump is a majority by himself, and, so to speak, elects whatever he elects.

This is the high charm of kickery to those who know the art. It never fails. This result happens, not only because it is always a contest of right against wrong, though adept kicking always is that, and all the eternal forces work for it; but because a great part of the almost invariable success of kicking comes from the more prosaic fact that circumstances always are on its side—such a circumstance as the law, for example. The kicker's injury is likely to be against law; and even when the strict law may chance the other way, the equities are in his favor. Observe the case of "M. Quad" at Niagara Falls. When he had frightened away a mob of swindling hackmen with a revolver, the leader sought to have him arrested for carrying a deadly weapon, but no one would issue a warrant. One justice said: "Every man coming to visit the Falls ought to come with two revolvers, and the oftener he fires into your crowd, the better it will be for the few honest people here. I wish more kickers would come here." Besides the law, there is the constant certainty, in the case of wrongs done by employees of corporations or of the Government, that they are directly opposed to the interests of their employers, and must be disapproved and righted when made known. See how "M. Quad" caused the retirement of the Elmira ticket-seller. In fact, we scarcely know a more grovelling superstition than the common notion that it is by the desire and under the eyes of Presidents and Boards of Directors that one's trunks are smashed, or telegrams delayed or non-delivered, or luggage missent or kept back, or fruit-baskets plundered in transit, or any other form of robbery or wrong, including impertinence or abuse, is committed against the peace of their customers. The fact is very much the other way; and in such cases any one who will make his complaint in the highest quarters is very sure of sufficient amends. The natural inference is always "that as long as no one kicked, everything must be going all right and everybody satisfied;" and that is why the kicker, while defending his own right and maintaining his self-respect, is at the same time a friend of humanity.

In short, kicking, of sufficient quantity and quality, is a remedy for the lesser as well as for the greater evils of life, and whereas, against the latter, joint effort and particularly time and circumstance are required, against the former the kick may always be ready and efficacious, though single. And it is seriously true that a certain preparation for effectual public kicking in affairs of great consequence is the habit of private revolt against small forms of injustice and wrong. A man who will make a baggage-smasher pay for smashing, who will spend five dollars' worth of time to get a twenty-five cent overcharge refunded, who will give a day to removing the cause of a five minutes' delay which has cost him his train, will be ready to deal effectively with affairs of national administration. To "kick" implies high qualities—self-respect (as we have said), self-forgetfulness, contempt of ease, some courage (though not so much as may be supposed), and tenacity of will. These things are not plentiful, but a virtue of the practice of kicking is that it breeds them. And with kicking enough, and good enough, the face of the world would be changed. But if this be so, it may be after all that kicking, in the last analysis, is irreligious, since a doctrine of future rewards would be of little constraining power in a world such as this would be if everybody, upon due occasion, should kick.

LUCIEN BONAPARTE.—II.

PARIS, November 16, 1888.

WE left Lucien Bonaparte in 1810 on his way to America; he was stopped at Cagliari, and the English Consul refused him a passport. He left the port, and found himself arrested, and prisoner of war on an English frigate; he was taken first to Malta and afterwards to Plymouth. After a short residence at Ludlow, in Wales, he was obliged to remain in Worcestershire, where he bought an estate called Thorngrove, and remained quietly till 1814.

He was allowed to return to Rome after the fall of the Empire and the abdication of Napoleon at Fontainebleau. The Pope conferred on him the dignity of a Roman Prince: he became the Prince of Canino. Then came the return from Elba and the Hundred Days. The *Moniteur* of March 21, 1815, announced the return of Napoleon in these lines:

> "The King and the Princes left last night. His Majesty the Emperor arrived at eight o'clock in his palace of the Tuileries. He entered Paris at the head of the troops which left it in the morning to oppose his passage. The army formed since his disembarkation could not advance further than Fontainebleau. His Majesty reviewed several bodies of troops en route, and marched constantly in the midst

of an immense population which welcomed him."

What would Lucien do when he heard of this miraculous return? He might have remained quietly in Rome, knowing that the Coalition would re-form against his brother; but his brother Joseph, who had rejoined the Emperor almost immediately, pressed him to come to Paris. Napoleon received him with unusual affection; he offered him and placed round his neck the cordon of the Legion of Honor, the same which he had worn from the Island of Elbâ to Paris. Lucien had no house in Paris; Napoleon told him that he might take the Palais-Royal (the property of the Duke of Orleans, who had left the capital after the return of Napoleon). Lucien installed himself in the Palais-Royal, and kept all the servants that the Duke of Orleans had left behind him. Lucien had been received like the prodigal son, and the Emperor, says the author of the memoir which is before us, promised to restore to him by a *senatus consultum* all his privileges and honors. The *senatus-consultum* was never signed, but in the *Moniteur*, which was then the official paper, Lucien was mentioned several times as His Imperial Highness, as well as his brothers Joseph and Jerome. He was appointed a Deputy by the Electoral College of Isère. The Emperor admonished him that he did not wish him to sit in the Legislative Body. "He suspects me," says Lucien in his notes, "of having a secret ambition to be made President, with the idea of making a new 18th Brumaire against him. I became very indignant. Joseph reconciled us." On June 1 a great ceremony took place on the Champ de Mars. The additional articles to the Constitution of the Empire were proclaimed before the five hundred deputies. The Emperor had on his right Joseph and Jerome, and Lucien on his left; fifty thousand soldiers, or national guards, were present. "Under his plumed hat," says M. Thiers, "the handsome face of Napoleon was grave and almost sorrowful. People looked in vain for his wife and son, and everybody felt the isolation which had been produced round him by the inexorable will of Europe."

Lucien, not having been allowed to sit in the Chamber of Deputies, had been inscribed by his brother among the Peers. The Emperor left for the army on the 12th of June. The news of the disaster of Waterloo arrived soon afterwards, and Count Carnot, Minister of the Interior, the grandfather of the present President of the French Republic, made on the 21st of June the following communication to the House of Peers:

"The Emperor arrived at eleven o'clock, and convoked the Council of Ministers. He announced to them that the army, after a signal victory on the plains of Fleurus [Ligny], where the élite of the Prussian army was destroyed, fought a great battle two days afterwards, four hours distant from Brussels. The English army was beaten the whole day, and was obliged to abandon the battle-field; six English flags were taken, and the day was decided when, towards night, evil-minded parties spread an alarm and occasioned a disorder which the presence of his Majesty could not stay. This disorder was followed by disaster which nothing could check."

This is certainly a most extraordinary account of the battle of Waterloo. The *Moniteur* continued it by saying that the Emperor was going to confer with the Ministers on the means of re-forming the army, and to concert with the Chambers on the legislative measures which the situation rendered necessary. Prince Lucien Bonaparte was introduced with the other Ministers in the Chamber of Representatives. He presented a message from the Emperor, and asked the Chamber to sit in secret committee with the Ministers. The next day another imperial message was brought to both Houses, which was no other than Napoleon's abdication: "My political life is ended, and I proclaim my son, under the name of Napoleon II., Emperor of the French." This message was brought to the Peers by Carnot, and to the Representatives by Fouché, Duke of Otranto.

In the House of Peers, Lucien spoke on the abdication. He moved that the House should declare solemnly that it recognized at once Napoleon II. as the Emperor of the French. "I give the first example, and swear fidelity." A member of the House of Peers, Count Pontécoulant, opposed the motion. "The House," he said, "was not willing to make a decision without formal deliberation"; and, continued he, "I will ask Prince Lucien by what right he speaks in this Chamber? Is he a Frenchman? I recognize him not as such. . . . He invokes the Constitution, and he has here no constitutional title. He is a Roman Prince, and Rome is no longer a part of the French territory." Pontécoulant ended by saying that the son of Napoleon was in the hands of the enemies of the country, and for himself he could not recognize him as his sovereign so long as he did not reside in France. Lucien protested: "I am not a Frenchman in your eyes, I am one in the eyes of the whole nation."

Lucien had opposed to the end the abdication of his brother; he had even proposed to him to make a new 18th Brumaire. Napoleon knew that he could no longer resist; he left Paris, and retired to Malmaison. Lucien received from the Provisional Government an order to quit the French territory. He sent a friend, M. de Châtillon, to Fouché to ask him for passports. Fouché gave him four passports, under different names; on one, the bearer, M. de Châtillon, was entered as Inspector-General of the Post-Office of France, with a special mission in England. Lucien was to be the secretary of M. de Châtillon. One of the passports was in the name of Marquis Rocca-Priora, an Italian nobleman returning to his country. When Châtillon returned with the passports, he found the Palais-Royal, where Lucien waited for him, surrounded by a threatening populace; the palace was guarded by troops. Lucien left Paris in the early morning, and stopped at Neuilly, in the villa of the Princess Borghese. He sent Châtillon to Malmaison, where the Emperor still remained, with a draft on him for 250,000 francs, claimed by him for advances made to the Civil List, for his expenses at the Palais-Royal. Châtillon rode to Malmaison: "The spectacle I found there," he says: "was heart-breaking. In the park, round the castle, on the lawn, were the tents of the last invincible grenadiers of the Imperial Guard. Their attitude showed courage and anger. I saw on their faces that they had no other will but to defend their idol to the last extremity, and to die for him." Châtillon saw the officers of the Emperor's staff, Generals Bertrand, Las Cases, Montholon. He was shown into the room where Napoleon was sitting, and handed him Lucien's letter. Napoleon signed and said: "The Viceroy Fouché will see that this is paid, on my signature"; then he added, "Does Lucien go with me? What are his plans?" Châtillon answered that he did not know; but that he had been obliged to leave the Palais-Royal, which was besieged by the Royalists. King Joseph had taken the road to Havre, where an American ship was waiting for him. Joseph hoped to escape; he hoped also that the Emperor would join him at Havre. "I have thought of that; but no. . . . I cannot leave France otherwise than as a sovereign. I will embark on a war-ship. Tell Lucien to go to England; we will see each other there!"

Châtillon left the Emperor, whom he had seen for the last time, rode to Paris, saw Fouché and showed him the order for the payment of 250,000 francs, signed by Napoleon. Fouché was member of the Provisional Government. Without a moment's hesitation, he did all that was necessary for immediate payment; the sum was paid to Châtillon the same day, and he returned with it to Neuilly. The next day, Lucien left for Boulogne, intending to take refuge in England. Fouché's passports did their work; but as soon as he arrived he changed his mind. He was afraid of being made prisoner, as he had followed the fortunes of his brother during the Hundred Days; he turned his back on England and took the road to Rome. The passports worked again, and he returned to Italy as the Marquis of Rocca-Priora. He was, however, arrested in Piedmont and lodged for a while in the citadel of Turin. After four months of prison he was delivered by the interference of Prince Metternich, and allowed to proceed to Rome. He was really half a prisoner in Rome, and not allowed to leave it till the death of Napoleon in 1821. From that moment he became free, but he remained an exile from France. In 1836 he fell ill, and in June, 1840, while he was on his way to Siena, he died at Viterbo on the 29th of June. He was sixty-five years old. His remains were transported to Florence, where they still are.

It is evident that the book which has now been published on Lucien is an attempt to place his successors on the same footing as the successors of the other brothers of Napoleon. The anonymous author tries to prove that the conduct of Lucien in 1814 and 1815 put an end to his exclusion from the imperial family, as this family was defined by the Constitution of the Empire. Lucien had a son, Pierre-Napoleon, who was born in Rome on the 11th of October, 1815, and led an adventurous life in America, in New Granada, in Ecuador, in Italy, in Albania, and other places. He came to France in 1848, and entered the French foreign legion. When the Empire was reëstablished, Napoleon III. kept him in the background; Prince Pierre was not much seen at the Tuileries, and lived in retirement at Auteuil or in Corsica. He shot in 1870 a journalist, Victor Noir, who had come to his house as a second for Pascal Grousset, who had a quarrel with him; he was acquitted by the High Court of Bourges. Napoleon III. always refused to give his consent to a marriage contracted by Prince Pierre, and it is rather curious that the son of Lucien went through the same difficulties, with respect to his marriage, that Lucien himself did. This marriage had been civilly and religiously celebrated, but, according to the terms of the *senatus-consultum* of the Second Empire, Pierre could not marry without the permission of the sovereign. Prince Pierre Bonaparte died at Versailles, at the age of sixty-five, leaving two children, Prince Roland, born in 1853, who married in 1880 Mademoiselle Blanc, the wealthy daughter of M. Blanc of Monaco; and a daughter, who is married to Marquis Christian of Villeneuve.

Correspondence.

THE PURCHASABILITY OF FARMERS.

To the Editor of The Nation:

Sir: Everybody knows that it was done,

and pretty nearly everybody has an idea as to how it was done. It was a timorous prophet who did not chance the guess, before the election, that the result of it would be full of surprises. The prediction was, doubtless, the child of the uncertainty in pretty nearly all minds. It was only the man with no mind worth mentioning who knew all along how the election would turn. I confess to an opinion before and a theory since the election. One of the "surprises" gives the key to it.

A greater surprise than the result of the election itself is the reception given the effort to educate the people on the subject of tariff taxation. In the strong manufacturing localities, pretty generally, the vote in favor of tax reduction is greater than was the Democratic vote four years ago. This shows that the "American laborer," by whom is meant the laborer of whatever nationality engaged in our mills and factories, got his eyes open to the fact that the tariff is a tax, and that it protects the employer but not the employed. This is one-half the great surprise. The other half is the fact that in the agricultural localities, pretty generally, the vote in favor of a high tariff is greater than was the Republican vote of four years ago. These two facts constitute the great surprise of the campaign. What does the second half indicate? Either that the rural voter is thicker-witted than the mill and factory voter, or something else. I think it is something else; and that something marks Chairman "Matt" Quay as the most successful "practical" politician of modern times. He understands where to apply "practical" methods of the Dudley variety, and make them count, in "blocks of five" or more. He knows that a given amount of what the late President Arthur called "soap" will accomplish greater results, if applied among agriculturists, than if applied among men who work for day wages, no matter how small.

A special correspondent of the Philadelphia *Ledger*, who was sent through Indiana, reported as to the progress of the campaign to secure the 15,000 "floaters," that this purchasable vote was not confined to the "bum" class of the cities, but existed in quite as great degree in the rural districts, among men who own the land they till. And I have it on authority not to be questioned, that in some of the richest agricultural counties in New York the votes of farmer delegates to nominating conventions, and later in the elections, are regularly purchasable; that such delegates generally receive from five to ten dollars *and their dinners* for their votes in conventions, and the going price for votes at the elections—else they cannot be counted on. And it makes no difference how well conditioned they are. They may own, clear of debt, from one to four hundred acres of rich land, perfectly improved and stocked, and still they demand their price, and get it.

Chairman Quay knew the value of this vote and the cost of it. He had money enough—more than any chairman of a National Committee ever had before. I quote the *Ledger* again, as the highest authority in this locality, as saying in to-day's issue that the Chairman of the City Republican Committee thinks Philadelphia Republicans "did very well to send Chairman Quay $400,000, besides raising all they did for the city campaign." Other wealthy localities did quite as well according to their abilities, and Quay and Dudley did with the money what Bill Tweed did with his; and they can ask, with quite as much show of impudence as he did, "What are you going to do about it?" It is an awful question to consider; but possibly we may one day vote direct for President, and with a strictly secret ballot; and then the Quays of all parties will have their answer. P. PICKLE.

PHILADELPHIA, November 17.

DID THE TARIFF DO IT?

TO THE EDITOR OF THE NATION:

SIR: The *Nation* of November 15 remarks upon the effect of the Democratic attempt at tariff reform in some of the principal wool-producing States, and points out that the Republican pluralities in these States in the recent election are much less than they were in 1884. It may not be without interest, in the same connection, to examine the vote of Saginaw County, Mich.

Saginaw County has a population considerably over 60,000, and the cities of Saginaw and East Saginaw, separated only by the Saginaw River, constitute the business and financial centre of the salt and lumber interests of the Saginaw valley. Here the great lumber and salt-producing establishments of the valley are located, and here we have a large laboring population who find employment in, and who are dependent upon, these industries. The manufacturers interested in the production of salt and lumber made a strong fight against the reform policy of the President, and, possessed of ample means, they doubtless used their money in the usual way to convince the workingman that the tariff on salt and lumber was principally in the interest of the workingman and higher wages—with this result: In 1884 the Democratic vote of the county was 7,047, and the Republican vote 5,939, showing a Democratic plurality of 1,108; in 1888 the Democratic vote was 8,924, and the Republican vote 6,723, giving a Democratic plurality of 2,201. Mr. Tarsney, unfortunately beaten for reëlection to Congress by the outside Republican agricultural counties, squarely advocated the Mills Bill, and the putting of salt and lumber on the free list, as did the candidates on the county ticket and other Democratic speakers, who thoroughly discussed the question before well-attended meetings in the cities and throughout the county, with the result above stated. All this would seem to indicate, so far as this county is concerned, that the tariff did not do it, and apparently that this discussion tended to convince the workingmen that the tariff on salt and lumber does not increase their wages; and the greater part of them seemingly voted the Democratic ticket.

It is true that the Republican plurality in the State is much greater than in 1884, the cause of which has been clearly pointed out by the Detroit *Free Press*. In many counties examined the total vote of 1884 was much less than in 1880, the Democratic vote in those counties being greater in 1884 than in 1880, and the Republican vote less. While the total vote this year is very much larger than in 1884—the Democratic increase being over 25,000 above the vote of 1884, fully equal to the increase in population—the Republican vote is enough larger to give the increased plurality over that of 1884, showing that the increase in the Republican vote of this year is largely made up of Republicans who, for reasons easily understood, refrained from voting in 1884. There were some Democratic farmers in this county, interested slightly in sheep, who became frightened at the cry of "free trade," and, not knowing what it meant, thought it must be something terrible, and therefore voted the Republican ticket. Of those the most was made; but as the increase in the Democratic vote was as large, proportionately, in the country as in the cities, it follows that fully as many Republicans as Democrats changed sides.

The Democratic vote of Saginaw County was larger because of the attempt to reform the tariff, and I believe it was larger throughout the State for the same reason. D.

NOVEMBER 17, 1888.

THE DIRECT VOTE FOR PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: I do not see the force of your objection (page 386 of last *Nation*) to a popular vote for President. The necessity for a careful and patient counting of the votes before the result is known may exist under either system, and did occur four years ago in New York; but can we not, after enduring two or three months of racket and uncertainty during the canvass, wait a week or ten days more to learn the result? With improving facilities, the delay would be less and less at every election, while the "strain" you refer to, now due largely to the infrequency of the delay, would certainly be far less if it were a regular and understood thing that the result should not be known for some days.

Nothing could well be stupider or more clumsy than the present system, framed on the theory that the people were not equal to the task of choosing their own rulers, but must depute special individuals to do it for them. Something might, indeed, be gained conceivably were the Electors free to meet, debate, and finally choose either from popular nominees or from others; but we have long ago abandoned this one idea which made the system endurable, and the Electors are now simply machines to record the choice of State majorities.

And the system not only is clumsy and stupid, but *may* work gross injustice—may elect of two men the choice of a small minority of the people. Let a bare majority of the Electors come from States carried by very small majorities, while the other States have been swept by enormous majorities the other way—a perfectly possible case, unless we can show that this could only be from impossible sectional feeling—and it is plain that a small minority of the people might elect.

Why not *vote directly* for the man of our choice? Then a Democrat in Vermont would feel some spirit to vote, knowing that his vote would tell in the grand total, while now it goes for nothing. Then we should see everywhere new inspiration and rallying to the polls. Then there would be an end, also, to the mischiefs of "pivotal States." Of course it will be a gain to separate the national from all other elections, but we want the popular vote.

Respectfully, H. D. C.

EASTPORT, ME., November 19, 1888.

[In the last issue of the Galveston *News* received at this office, published a fortnight after the election, we read: "The official returns of the election in Texas are slow in coming in, and it is probable that the vote of many counties will not be correctly given until the *News* can arrange the returns or the Legislature counts the vote for Governor. The vote for electors is counted the third Monday in this month." The question whether Harrison or Cleveland has a plurality of the popular vote will very likely depend upon the count in Texas, and yet the leading newspaper of that State, two weeks after the election, had no sufficient basis for a judgment as to how large the Democratic majority would prove to be.

Without going more deeply into this question, we will add that it is obvious that the

longest interval between the November election and the first of March is none too long for the new President to make the necessary arrangements for the personnel of his Administration, and that both he and the outgoing President should at the earliest possible moment be relieved of all uncertainty as to the result of the election.—Ed. Nation.]

THE ENGLISH MISSION.

To the Editor of The Nation:

Sir: Your editorial in the last number of the *Nation* upon "The English Mission" touches upon, though it does not discuss, a most interesting topic, viz., the impossibility of an American Minister to England doing his duty to his country without incurring the hostility of the Irish-Americans at home. This duty you have defined in several articles to be the cultivation of friendly relations with the court and people of the country to which he is accredited, and the protection of American citizens against unjust treatment. But if there be a large and arrogant class of his fellow-citizens at home who detest the English Government, and would do everything in their power to cripple it or involve it in a war with the United States, they are pretty sure to vent their rage upon any American representative who accepts or returns the hospitality of the English people, as most of our Ministers for the last fifteen years have found out to their cost. If, at the same time, the unfortunate Minister happens to be named in connection with an important office at home, as, for instance, the Chief Justiceship, he is quite certain at the last moment to find his pathway blocked, be his fitness for the place never so conspicuous.

The truth is, that no American Minister would be entirely satisfactory to this turbulent class who did not spend his time in stumping Ireland for Home Rule and hurling thunderbolts at the Foreign Office—a kind of interference which our English cousins would resent as forcibly, if not as summarily, as we did the unfortunate blunder of Lord Sackville. It makes a wonderful difference, however, whose ox is being gored. The men who denounced the loudest "foreign interference" in our elections are the very ones who eighteen months ago were holding public indignation meetings at the dictation of the Irish, and even inducing our State legislatures to pass resolutions calling upon the English to extend the blessings of home rule—a proceeding of which we are all now as heartily ashamed as we shall be of the Sackville incident in a year from this time.

We are sometimes tempted to ask ourselves whether we have a really independent press in this country, *i. e.*, a press which is as independent *in fact* as it is *in law*. We Americans are said to be unanimously in favor of home rule; yet what has made us so? Is it because we have formed our judgment deliberately upon the merits of the case, or because our newspapers are controlled by, or afraid of, the Irish, and our foreign correspondence and telegrams emanate from Irish sources? Can it be possible that the Irish are always right and the English altogether wrong? It would seem so, judging from the tone of our press; and yet I am informed that among the American residents in London there is a practical unanimity of sentiment directly opposed to that which obtains at home. Is it because they are better informed or not so well informed as we? Is it not still an open question whether our experience with the Irish vote has demonstrated their fitness for self-government, or has disclosed defects of character which, uncontrolled, would be fatal to civil liberty and the rights of a minority? Could an Irish parliament be safely intrusted with the power of fixing the compensation to be paid English landlords for their lands? It seems, from Mr. Davitt's latest utterances, that nothing less than this will satisfy the demands of the Home Rulers.

I have put these questions, not from any antipathy to the Irish, but to show some of the difficulties which beset the path of the American Minister, who would be more than mortal if he did not to some extent imbibe the feelings of those by whom he is surrounded. I think you are quite right in believing that Mr. Harrison will experience great difficulty in finding a man of intellectual or political prominence to fill this place who aspires to be anything more than a social figure-head. John Douglas.

Detroit, November 23, 1888.

THAT DENVER CITY CONTRACT.

To the Editor of The Nation:

Sir: During the campaign I read, time and again, the statement in Republican papers, that a contract for 5,000 tons of iron castings for a Denver Cable Railway had been let to an English firm. The statement was variously used as a campaign argument in favor of high protection. I have also seen frequent mention of the matter in the *Nation*.

I wish to say that this contract for 5,000 tons of iron castings for the Denver Cable Railway has been let to the Centropolis Car Works of this city. The contract was let to the lowest and best bidder, and numerous English and American manufacturers submitted bids, I understand. I write you of the fact, because, from your frequent mention of the campaign "canard," I judge that you will be glad to hear the truth about it.

Respectfully, C. M. Harwood.

Kansas City, Mo., November 24.

THE SEDUCTIVE SIMILE AND THE DOCTOR OF DIVINITY.

To the Editor of The Nation:

Sir: The affection which poor old Goriot had for his daughters, was scarcely less masterful than that of most religious writers and speakers for a simile or metaphor drawn from the well of science undefiled. And this love unspeakable is, for some reason, in the majority of instances, requited almost as badly in the latter case as in the former. Rev. Newman Hall, who follows in the footsteps of Homer and compares the race of men with the race of leaves, furnishes, in the *Independent* of November 15, a most choice example of how treacherously the quagmires of an unknown land may entrap the over-confident footsteps of careless wanderers in search of similes. "The leaf is beautiful, yet it fades!" exclaims Dr. Hall; and if he had paused after this apt observation, all would have been well, but some wicked fairy impelled him to continue:

"The leaf fades when its work is done. It has an important function as the lungs of the plant. The sap circulating through its surface receives the oxygen breathed in from the atmosphere. This combines with the carbon, and, by the influence of light, is so changed as to be capable of depositing new material as the vitalizing current descends behind the bark, forming each year a new ring around the stem."

Not to mention the weird "deceptive cadence" in the second sentence, it may be noted that it would be difficult to collect a greater show of inaccuracy than is furnished by the following clauses. The sap does not circulate through the surface of the leaf. It does not receive oxygen. This does not combine directly with carbon. The oxygen is not changed so as to be capable of depositing anything. New material is not "deposited" by the sap. There is no "vitalizing current" behind the bark. A new ring is not formed by descending sap. The "vitalizing" part of the tree does not descend. The new ring is not formed around the stem, nor is it necessarily formed every year. With these few trifling corrections the observations of Dr. Hall may be permitted to pass muster, but without them they are but a fresh illustration of what perennial amusement may be derived from noting the well-meaning but misguided zeal exhibited by the average theologian in pursuit of science. I am, sir,

Conway McMillan.

THE POWER OF THE CHURCH.

To the Editor of The Nation:

Sir: For many years I have looked upon the *Nation* as a good friend to the Church and the ministry. Friends who speak to us the most important truths fearlessly are not so common that we can afford to flout those who thus draw our attention to the most serious ailments.

In speaking of the decline of the power of the Church you are doing the Church a service, and you are again in the right, notwithstanding the objection of your correspondent. After all has been said that can be said regarding changed circumstances, adaptation to the times, and all the various explanations that go to show what a difficult problem is, in these days, presented to the Church, the fact remains that the great lack is in the Church itself. Dr. Marcus Dods says: "Were the members of the Church leading a supernatural life, unbelief in the supernatural would become impossible. Were the supreme, living, present power of Christ manifested in the actual superiority of his people to earthly ways and motives, it would be as impossible to deny that power as it is to deny the power of the tides or of the sun." In spite of the few conspicuous exceptions, is it not true that the Protestant Church to-day stands for prosperity? The wonderful appliances, methods, the unsurpassed activity—may they not be interpreted to mean, how to get on in the world? If it be insisted that the cross of Christ must be accepted as the symbol of the life, is it not an offence, not to the world alone, but also to the Church?

Observe that the attitude of the rulers of the Church toward unwelcome truth, toward unaccredited but truth-loving teachers, is the same as in the time of Christ. Does there arise a bold spirit who hopes for reform from within, he is instantly confronted by the determined opposition of those who have risen to power under the existing order of things, who have come to be recognized as leaders of thought and formulators of opinion. Witness the course of the American Board, and of powerful "religious" newspapers.

The Christianity of the Church and of churchly authority must be displaced by the Christianity of Jesus of Nazareth, and then will it be discovered that the force of Christianity has not spent itself, and why it is that "there is no more power in that force."

Yours truly, Edwin T. Hiscox.

Notes.

Houghton, Mifflin & Co. will soon publish 'The Open Door,' by Blanche Willis Howard.

Longmans, Green & Co. announce 'Son of a

Star,' an historical romance by Dr. B. W. Richardson, who now, like many another eminent member of the medical profession before him, ventures his reputation in the field of fiction; and 'Masks or Faces: a Study in the Psychology of Acting,' the title which Mr. Archer has finally given to his 'Anatomy of Acting.'

Ginn & Co. have nearly ready a new edition of 'Allen and Greenough's Latin Grammar,' whose last revision was made eleven years ago. The same publishers will have ready in January 'The Leading Facts of French History,' by D. H. Montgomery, author of 'The Leading Facts of English History,' etc.

A wholly new edition of 'Worcester's Academic Dictionary' is promised by J. B. Lippincott Co., with full etymologies, additional words, and fresh illustrations.

P. Blakiston, Son & Co., Philadelphia, have just ready a revised edition of Reese's 'Medical Jurisprudence and Toxicology' and the 'Physician's Visiting-List' for 1889.

The Rev. James B. Converse, Morristown, Tenn., has in press for publication by himself 'The Bible and Land,' a refutation of Henry George.

Charles. T. Walter, St. Johnsbury, Vt., will issue for the holidays 'The Story of the Puritans,' by Wallace Peck, with humorous colored illustrations by Kemble; 'The Legend of Psyche, and Other Verses,' by Carrie Warner Morehouse; and 'The Dorcas Society,' by James Buckham.

The 'Poèmes Complets' of Edgar Allan Poe, translated by M. Gabriel Mourey, with an introduction by J. Péladan, will shortly be published in Paris by M. Dalou.

The Historical Society of Rhode Island, says Mr. S. S. Rider, in his Providence *Book-Notes*, has issued a proposal for the publication of a map of the State, "defining the territories of the Indian tribes, and the Indian names of localities therein, wherever they can be discovered." Mr. Rider has himself, it appears, bestowed much labor on a similar project. It were much to be wished that each New England State would compile such a map.

Though a great number of artists, including the author himself, have furnished the illustrations to Victor Hugo's 'Ninety-three' in the handsome edition of the Messrs. Routledge, the result is not inharmonious, and we rank the two volumes as among the best of the series to which they belong. As we have here, in intention at least, an historical novel, of a time which has been recorded pictorially as hardly no other, the designers had an easy task in borrowing and adapting. A certain number of portraits of Revolutionary characters are given both in action and as pure embellishments; in the latter case leaving something to be desired—say, a facsimile reproduction of old prints.

As a manufactured article, in no respect (save portability) is the edition of the 'Memoirs of Count Grammont' just published by Gebbie & Co., Philadelphia, to be preferred to that we noticed about a month ago (London: Nimmo; Philadelphia: Lippincott). The letter-press is inferior; the illustrations proper—etchings after Delort—are given at second-hand, and not completely. On the other side must be set down numerous familiar portraits of the beauties and mistresses of Charles II.'s court, of Charles himself, of James II., and of sundry courtiers; together with an appendix from Mrs. Jameson giving the lives of Mrs. Lawson, Lady Bellasys, and the Duchess of Portsmouth. The binding is in simple green cloth, in good taste.

A similar comparison must be made between the 'Manon Lescaut' reissued by Gebbie & Co. and the same work as brought out three years ago by Geo. Routledge & Sons. So far as our memory serves, they are identical, being illustrated and adorned by Maurice Leloir. Possibly this is a remnant of the earlier edition, but it *seems* as if the bloom were off and we were dealing with something not quite fresh.

The third volume having the imprint of Gebbie & Co., 'Nuremberg,' owes nothing except legitimately to other sources. It is a small folio, containing on alternate pages Longfellow's poem on the town, and illustrated abundantly by full-page photogravures, mostly of buildings, statuary, and general views within the walls. The Gebbie & Husson Co.'s process has been made use of here. Apparently it admits of considerable retouching, so that one sometimes suspects an engraving to be the base of a plate; but the majority of these have the stamp of nature views, and altogether they form a very pleasant souvenir of one of the most interesting places in the world. Two ladies, Misses Mary E. and Amy Comegys, have contrived the book, and have supplied for each stanza an initial letter, the derivation of which is scrupulously stated in a table. The local color would have been maintained and heightened if these had all been drawn (as none were) from the early MS. and printed book collection in the captivating National Museum at Nuremberg.

The first volume of Schumann's correspondence, turned into English by May Herbert, and published some months ago as an independent volume by George Bell & Sons, London, has just been added to the Bohn series ('Early Letters of Robert Schumann, Originally Published by his Wife.' New York: Scribner & Welford). Two years ago, on its first appearance in Germany, we examined this most interesting collection at some length. The translation has been none too laborious, and is not minutely faithful, paraphrase being frequently resorted to without, so far as we have examined, falsifying the sense of the German text. The public is benefited by having this edition made more accessible.

For "Bohn's Select Library," 'The Perfect Life'—twelve discourses of Channing's—has been taken over from the original series. "Bohn's Artist Library" offers a new edition of the late Mrs. Charles Heaton's 'History of Painting,' a work first published in 1872. Mr. Cosmo Monkhouse, justly thinking it worth the labor, has thoroughly overhauled it, verifying dates, rewriting notices, and supplying judicious footnotes by way of confirmation, correction, or elucidation. He also appends chronological lists of the painters of each country. The chapter on the extinction of painting in Italy has been rewritten by Miss Annie Evans. The work has thus been greatly enhanced in value for reference, while retaining a degree of readableness very uncommon in manuals of this compass.

A very taking edition, cheap only in price, of 'Robert Elsmere' has just been brought out by Macmillan & Co. We incline to think it the best as well as the latest.

Very dainty is the little edition of Macaulay's 'Lays of Ancient Rome,' produced by the Chiswick Press (New York: White & Allen). The type is small, but the judicious display makes it far from illegible. The two ballads of "Ivry" and "The Armada" are appended, and there is a medallion-portrait frontispiece. The American publishers would have done wisely to follow some such model in making over Samuel Waddington's 'The Sonnets of Europe.' They have, in fact, got up a showy rather than a handsome volume.

The 'Chaucer' of the "Canterbury Poets" series (London: Walter Scott; New York: T. Whittaker) has been selected by Frederick Noël Paton, who furnishes an introductory sketch and a glossary. His editing has consisted, apart from these services, in avoiding and omitting what it is no longer possible to read aloud. The volume is very pretty.

Long's translation of the 'Thoughts' of Marcus Aurelius has been added to the "Knickerbocker Nuggets" series of the Messrs. Putnam, where it should on every consideration be found.

A countryman and disciple of Count Tolstoi's has deemed it a service to mankind to make a complete English translation of his 'What to Do' (or, 'What Must We Do Then?'). Renouncing any remuneration for himself, he has offered the manuscript to an American publisher on the sole condition of giving it a popular form and circulation. This has been done in good faith and in fair typography by T. Y. Crowell & Co. We should recommend that the reading of this singular work begin with the "Note to Chapter XL.," with which it closes. It is the most absolute piece of mediævalism that can be imagined, restricting the sphere of woman to bearing children ("the greatest possible number") and reading the Gospel. "In order to appropriate the highest view of life," says Tolstoi, "I think there is no need of [her] visiting lectures."

Dr. A. L. Meissner, well known to our teachers of German through his German grammar (whether in the original or in the Joynes-Meissner shape), has lately published a companion volume, 'Practical Lessons in German Conversation' (Hachette & Cie.) It is prepared for use after the pupil has mastered twenty-eight lessons in the Grammar. We do not pretend to have examined the Conversations in every detail, but we have read enough to satisfy ourselves that the book is well planned and well executed. In the first place, the exercises are truly progressive. In the next place, they are interesting and practical, wholly free from the Ollendorffian "grandfather-shoemaker" business, and introducing such topics as usually interest educated men and women. Perhaps some of the fables and shorter stories might be suppressed. Lastly, the rendering from German into English is extremely close and idiomatic. We have noted a few slips. Of course *erst recht* is a hopeless *crux*; but surely it is not to be rendered by 'also' (p. 41): 'truly' would be better. Nor is old Blücher's *Orientierung* expressed by "topographical survey" (p. 199) any more than it would be by "place-hunting." Shall we speak of the *Kaiserliche Stadt-Post-Amt* as the "Royal Urban Post-office?" "City Post" would be quite enough; the Anglo-American heart rebels against logical renderings of German titles. But all these are very minute blemishes. The book as a book is deserving of high praise, and we commend it to all interested in the subject, with the hope that it will find an American publisher.

One is struck most, perhaps, in looking over the latest bound volume of *Harper's Young People*, with the number of articles which are obviously addressed to parents. Such are those on the forcing system, on the football season, on the care of teeth, on the awkward age, on keeping a diary and having an allowance, on the clothing of children, on the social relations of boys and girls, on the training of their voices, on the moral influence of games, on the choice of a school, on the learning of French and German, etc. These disquisitions, if they did nothing else but induce parents to read what their children are reading, must be judged a useful function of the magazine. Since we lately spoke of the trying type used in the letter-box department of *St. Nicholas*,

it is fair to say that *Harper's Young People* is open to the same censure. There is among the illustrations a noticeable number of process plates from photographs or from paintings.

The list of contributors to the *English Illustrated Magazine* for the past year (Macmillan) is brief as compared with corresponding magazines in this country, but it is weighty. The contents are mainly insular—of English scenery and coaching ways and art and olden homes—yet not without glimpses and excursions abroad. Mr. Henry James and Mr. Marion Crawford are the two American writers for the volume, and they both offer something of or for their own country—Mr. Crawford his national hymn. The typography and the illustrations of the magazine are, as usual, pleasing to the eye and of a good kind.

The most interesting paper in the *Scottish Geographical Magazine* for November is Mr. A. S. White's "Notes on the Distribution of Trade-Centres," which is accompanied by an excellent map of the world, showing the important productions of each country, the principal trade-routes, both by sea and by land, as well as the ocean cables and prominent steamship routes, with distances attached. The very full and instructive account of the Dutch East Indies by Emil Metzger is concluded in this number.

The November Proceedings of the Royal Geographical Society is largely taken up with an account, by Mr. D. W. Freshfield, of the mountains of the Central Caucasus, a region which has just acquired a melancholy interest from the loss in crossing a glacier of Mr. Donkin, Secretary of the Alpine Club, and a Mr. Fox, together with two Swiss guides. Mr. Donkin, son of the late Professor of Astronomy at Oxford, was an excellent amateur photographer, and one of his mountain pictures has been reproduced to illustrate Mr. Freshfield's article. Several of the papers read before the British Association, the most important being Sir F. de Winton's on the "Commercial Future of East Africa," are also given.

The bibliophile princes of the house of Bourbon having been celebrated in a previous number of *Le Livre*, the Bourbon princesses who merited the same epithet are the subject of the leading paper in the October number. An etched group of their portraits completes the parallel. The second paper is by M. Victor Fournel, and treats of the "Dramatic Pastoral in the Seventeenth Century," beginning with the 'Astrée' of Honoré d'Urfé. It is a very interesting review, in which we remark what is said of the seventeenth century being much more concerned with man than with nature. Poets and prose writers, with rare exceptions, were alike deficient in feeling for landscape. "The group of odes written by the young Racine, and collectively entitled 'Paysages, ou Promenades de Port-Royal-des-Champs,' shows us only a got-up (*arrangée*) and slightly Jansenist Nature. What more expressive in its absolutely unconscious simplicity than the stage directions in the prologue to the 'Malade Imaginaire,' which is very characteristic: 'The scene represents a rural spot, but very pleasant withal.'"

No. 32 of the Bibliographical Contributions of the Library of Harvard University is curious indeed. The title, "Mathematical Theses of Junior and Senior Classes, 1782-1839," by no means reveals the ground of interest in this collection. This is to be found in two particulars—the distinction attained by so many of the authors of these theses, usually in fields utterly remote from mathematics; and the preservation of views and measurements of houses and lands in and about Cambridge which have no little antiquarian and pictorial value. There are about forty-four of these surveys, elevations, and perspectives, and it would be a happy thought if some friend of the College would bear the expense of their publication on a uniform scale. Here is James Savage, the prime authority for American genealogy, furnishing a colored view of churches and college buildings; Alexander H. Everett, the diplomatist, a colored "Templi Episcopalis Delineatio Perspectiva"; the future Dr. Jacob Bigelow, a perspective view "of the seat of the Hon. Francis Dana"; the future jurist, Theophilus Parsons, a perspective representation of University Hall; the future clergyman, Alexander Young, and the Latin lexicographer, Frederick P. Leverett, perspective views of St. Paul's Church and David Sears's new house in Boston respectively. If it is odd to meet with Harrison Gray Otis calculating a lunar eclipse for the year of his graduation, and adorning his thesis with a Virgilian epigraph, still more so is it to find his brother orator, Wendell Phillips, on the eve of his graduation, showing "Some beautiful results to which we are led by the Differential Calculus in the development of Functions." Little did the intending lawyer suspect how his own function was to be developed in the eclipse of Otis.

An interesting exhibition is in progress, at the Boston Museum of Fine Arts, of Albert Dürer's engravings, etchings, and dry-points, and of most of the woodcuts executed from his designs, together with eight original drawings. The catalogue fills eighty pages.

—The December *Harper's* surrenders unconditionally to the time of year and makes itself a Christmas number, not by virtue of two or three articles, but on the strength of its entire table of contents. The range of entertainment offered is such that only those who refuse to be pleased on principle can fail to find something to enjoy. Even the historical article by Theodore Child, "A Christmas Mystery in the Fifteenth Century," is made attractive to the most casual reader by its light and easy style and striking illustrations, though this is not saying that a closer study will not be amply repaid. It is the most meritorious piece in the whole number, and is greatly indebted to the drawings of M. Merson, whose knowledge of the archæology of the subject enables him to make the scenes of the old ecclesiastical drama lifelike and interesting in a high degree. Mr. Howells has a farce in the style of admirable fooling with which he has made us familiar. Another sample of the dialect story, "Sosrus Dismal," is highly successful in bringing out the superstitious *fond* of the negro, and disappoints only in the sharp corner turned at the end to fetch up with a suspicious bit of pathos. Of the other short stories and sketches, Grace King's "The Christmas Story of a Little Church" is by far the best. A short but satisfactory sketch of F. S. Church is accompanied by a half-dozen engravings from his paintings and drawings. Mr. W. H. Gibson's "Midnight Ramble" is a striking study of what might be called nocturnal botany; the great differences between the appearance of flowers by day and that by night are well shown by his drawings and described by his pen. Anna D. Ludlow has a long and ambitious poem, of which the most that can be said is that two or three times she comes very near writing the strong line which might have helped one to forget the turgidity and triteness of all the rest. Mr. Stedman has a half-dozen swinging stanzas on Morgan, the buccaneer, marred only by two infelicitous rhymes in the last one. We recall no number of a magazine setting out to be a special Christmas issue which achieved so consistent and successful a result as this first number of the seventy-eighth volume of *Harper's*.

—The *Atlantic* moves on with a Puritan's serene unconsciousness of times and seasons, and withal a Puritan's steady adherence to a worthy ideal. The present number does not yield a jot to the supposed demand for "special attractions" at this time of year, except so far as good literature may be attractive—and it may seem to many even specially so in the midst of the rush of merely amusing writing. President Hyde has a short article on the future of the country college. He thinks he sees a permanent place for it midway between the academy and the university. This, of course, depends upon the definition of academy and of college, and upon whether the possibility of the two blending into one, as in Germany, is to be admitted. In any case, social tradition and vested interests will be sure to make the day of the country college continue for a long time, whether the strictly educational argument for its existence can be successfully maintained or not. In "A Flight in the Dark," two Boston girls carry on a dialogue about all the deep things in philosophy, with an audacity that recalls the *Dial* days, with an air of old experience that will make unbelievers laugh, and yet with an intelligence and earnestness which, taken with the occasional dashes of humor thrown in to show that the writers do not take themselves too seriously, win the attention of even a sceptical reader. Mr. Henry A. Clapp furnishes a discriminating study of the artistic life of the late William Warren. Delightful reading is found in Susan Coolidge's "A Convent School of the Last Century." It is the Abbaye aux Bois that is described, and the material is drawn from the diaries of a quondam inmate, Princess Hélène Massalski. The school-girl's artless records leave one wondering anew at the identity of human nature in all ages. In particular do the deep conspiracy and final revolution of the Classe Blanche, to secure the removal of an incompetent teacher, show how the revolutionary spirit was abroad in France at that time. But one poem appears in the number, some anonymous verses entitled "At Alfred de Musset's Grave." That they are printed where they are is a proof that they are worth printing.

—*Scribner's* for December has a seasonable frontispiece in the shape of a bit of winter landscape, and follows it up appropriately with Mr. Hamilton W. Mabie's "Winter in the Adirondacks." To the advantage of being a pioneer, so far as we know, in writing of winter in the North Woods, Mr. Mabie adds a practised style, and is greatly helped by the fine illustrations which face his pages. Altogether, the article attractively opens an attractive number. A distinct addition to the knowledge of most of us is offered in Will H. Low's "Old Glass in New Windows," which hints at the history of glass-staining for decorative purposes, and describes with considerable detail the revival, or almost re-creation, as the writer thinks, of the art in America. The accompanying illustrations are necessarily disappointing. If a painting suffers loss in engraved reproductions, the case must be worse with a stained-glass window. The other art article of the number is a slight sketch of Botticelli, with copies of a half-dozen of his paintings, by George Hitchcock. The poetry is superabundant. There is a certain grace and sad tenderness in Ellen Burroughs's "The Madonna," and a strength which is rugged to the point of shapelessness in the anonymous poem, "The

Lion of the Nile"; the other poetical performances do not invite comment. The story-telling is complete in itself, with the exception of Mr. Stevenson's new serial, and is done by H. C. Bunner, Rebecca Harding Davis, W. M. Taber, and John J. À Becket. The late Mr. Wallack's reminiscences are brought to a close. The present instalment is pretty haphazard, and of no serious historical value while of slight artistic importance, but will serve to revive many kind memories and past enthusiasms. Thackeray comes into the narrative. Mr. Stevenson's "Christmas Sermon" is the only one of its kind that will be preached this year. His text is taken from the Gospel of Failure, and his meditations thereupon are better fitted, most will think, to the remorseful retrospect of the last day of the year than to the traditional jollity of Christmas. One might guess it was the gloom of Scotch Presbyterianism thus reappearing in the luckless inheritor of its traditions, and sourest, of course, at the time of a fond and superstitious observance of a festival that smacks strongly of popery. This is far from saying, be it noted, that there is not much sound sense and good morals in the rather lugubrious discourse.

—Mr. Ernest Satow, now the British Consul-General of Siam, who resided nearly twenty years in Japan, and is probably the foremost of Anglo Japanese scholars, has employed his recent vacation in Europe in a characteristic manner. Believing that in the archives of Rome, Lisbon, and Madrid there were many interesting relics of the literary labors of the Jesuit and other Roman Catholic missionaries in Japan of the sixteenth and seventeenth centuries, he explored these collections during the past spring and summer. He has discovered many interesting facts hitherto unknown, and documents which will throw light upon a period of Japanese history possessing the highest interest for the western world. The publication of his results may be looked for perhaps next year, though the desire for thorough work, for which this tireless scholar is noted, may prompt him to continue his researches. In Japan, also, the study of the native Christianity of the sixteenth and seventeenth centuries is carried on with ardor by Mr. Séki, the Japanese editor of the *Nichi-Nichi Shimbun* (or *Day-by-day Newspaper*) of Tokio. In this paper, Mr. Séki has recently printed the results of his personal studies, made while in Italy, of the pictures and letters left in Rome by the daimios of Kiushiu, A. D. 1585. These nobles visited the Pope, journeying by way of Mexico, after a voyage of three years. Besides settling interesting points of local interest to Japanese scholars, the letters give a charming picture of St. Peter's, then fresh with the colors of Raphael and Michael Angelo. Among other discovered articles was a portrait of a Japanese noble, Hasékura, of Sendai, who also visited Rome as a Christian delegate to the Pope. This, with other paintings, was found at the house of an Italian noble. It is now within range of easy possibility that we may yet have a scholarly and unimpassioned history, by a native Japanese, of Japanese Christianity. Certainly, the popular verdict concerning the Hollanders, as well as of Taiko and Iyéyasu, needs to be revised, since nearly all that we know definitely concerning the expulsion of Christianity from Japan has been furnished by men between whom and the Hollanders and Japanese rulers no love was lost.

—The Russian Physical and Chemical Society, a committee of which organized very fully-equipped parties at seven stations for observing the total solar eclipse of 1887, has just published in its *Journal* the full report by Prof. Egoroff. The stations were scattered as much as possible through Russia and Siberia, but at only three of them was the sky propitious enough for successful observations. Petrovsk, Krasnoiarsk, and Possiet were the favored localities, the last being on the eastern Asiatic coast. Krasnoiarsk was perhaps the best station of all, the photographers obtaining no less than fourteen excellent pictures. These widely separate localities were specially favorable for the detection of rapid changes in the sun's corona, should such take place; but although nearly two hours of time intervened between the occurrence of the total eclipse at Polotsk and at Possiet, the figure of the corona did not materially change during that interval. It was a repetition of the type of corona previously observed in 1869 and 1878, and corresponded in a general way to the epoch of minimum spots on the sun. The complex coronal filaments about the solar poles are well exhibited on the Krasnoiarsk negatives, and are important as leading to generalizations about the structure of the corona, and ultimately of the sun itself. The vastly extended cloud-areas did not work so complete a wreck of meteorological hopes, although even these results are slender enough. The work of twenty-five separate stations is generalized by Prof. Hesehus, who finds the progress of the lunar shadow followed by a slight lowering of the atmospheric pressure, which is explained by a condensation of atmospheric vapor. The decline of a few degrees in air temperatures was greatest shortly after the total eclipse; and the force of the wind was somewhat diminished, perhaps also on account of condensation of vapor. The usual nocturnal effects upon plants, insects, and animals are represented as well pronounced.

THE RANDOLPH ENIGMA.

Omitted Chapters of History Disclosed in the Life and Papers of Edmund Randolph, Governor of Virginia; First Attorney General of the United States; Secretary of State. By Moncure Daniel Conway, Author of "Pine and Palm," "The Wandering Jew," etc. G. P. Putnam's Sons. 1888.

In this Life of Edmund Randolph we have an attempt, as earnest as it is sincere, to restore to its pedestal in our national pantheon the effigy of a statesman who once filled a conspicuous place in the eyes of the whole country. In the elemental stir of the Revolutionary era, and in the formative period which followed it, few names gathered to themselves a more sudden brightness or shone with a serener lustre than the name of Edmund Randolph. The light of those times, fierce as it was, had discovered no public flaw in his character when, in the year 1795, even more suddenly than his sun had risen in the political sky, it went down while it was yet noon, and sank below the horizon in a cloud of obloquy and suspicion. It is the aim of Mr. Conway to rehabilitate the reputation of the distinguished personage to whom, as he thinks, the initiation and the ratification of the Constitution of the United States were especially due; and in rendering this tardy justice to a forgotten worthy he has filled up some "omitted chapters of history" pertaining to the digest of the Constitution, the organization of our Federal Judiciary, and the conduct of public affairs under the Administration of Washington.

Commencing with a lively sketch of society in Williamsburg, Va., while as yet young Randolph was a student of William and Mary College, Mr. Conway gives us a pleasing picture of his early training and high social surroundings. His father, a skeptic in religion and somewhat of a pococurante in politics, was King's Attorney for the Colony of Virginia at the outbreak of the Revolution, and fled, with Lord Dunmore, the provincial Governor, to England. Edmund refused to follow the lead of his Loyalist parent, and at the early age of twenty-two—he was born August 10, 1753—found himself left to win his own way in the world with very limited resources. In the year 1775 he was aide-de-camp on the military staff of Washington, but, having been bred to the law, he soon resigned this post, and was appointed Attorney General of Virginia in 1776. In that same year he sat in the Convention which framed the Constitution of Virginia, the first Constitution formed by any State after the Declaration of Independence. In 1777 he was commissioned as a Delegate to the Continental Congress, and thenceforward continued for several years to serve alternately as a member of this body and as the Attorney General of his State. In 1786 he was placed by the Virginia Legislature at the head of the Commission appointed to confer with similar Commissions from other States in the Annapolis Conference—that prelude of constitutional reconstruction. Later in the same year he was chosen Governor of Virginia, and in 1787 was a leading member of the Federal Convention. The large share he had in the digest of the Constitution was already matter of history, but Mr. Conway sheds new light on the constructive genius which Randolph brought to that great deliberation. It is known that he refused to sign the Constitution in the shape it finally took, but none the less gave to its ratification a zealous support when, in the Virginia Convention of 1788, the question of its adoption or rejection seemed to him the article of a standing or falling Union of the States.

On the accession of Washington to the Presidency in 1789 Randolph was appointed Attorney General of the United States. He organized our Department of Justice under the Constitution. Here, too, he showed his constructive talent by projecting amendments to the Judiciary Act as drawn by Ellsworth. While sympathizing as a Cabinet officer with the general political ideas of Jefferson, he was thoroughly national in his principles of constitutional interpretation. It was at Jefferson's suggestion that Randolph succeeded him in the office of Secretary of State in 1794. Motives of political prudence conspired with motives of political ambition to dictate the resignation of Jefferson. He could no longer bring his positive opinions into correspondence with the non-partisan policy of Washington, and was glad to quit his "hot-water office," though he did not do so without dropping in the ear of the President what Mr. Conway calls "a small deposit of distrust" as to the qualifications of the successor.

Randolph's administration of the State Department covers the aftermath of Genet's demagogy, the Whiskey Insurrection in Pennsylvania, Spanish aggressions in the Mississippi Valley, disunion mutterings in Kentucky, Indian hostilities, and the rumor of British machinations on our northern frontier, to all which was finally superadded the political ferment excited by Jay's treaty. As the official spokesman of the Administration, he was called to educe some sort of formal harmony out of all these discords. It is known that the embarrassments of his position came to a sharp crisis in the complications which attended the ratification of Jay's treaty with England. That treaty was framed November 19, 1794, and was

approved by the Senate on the 24th of June, 1795, with a reservation of its twelfth article relating to the West India trade—a reservation which would call for further negotiations if that article was to be amended and retained as an integral part of the treaty. The Federalists in the Cabinet were clamorous for an immediate ratification of the treaty, *sans phrase*. The Republicans throughout the country were clamorous for a rejection of the treaty in its entirety, as being insulting to France and detrimental to American interests. While the mind of Washington, torn with anxiety by these civic feuds, was vibrating between the advantages and the disadvantages of the Convention, a British order in council, newly revived for the seizure of the United States provision ships bound to France, suddenly came to give preponderance to his objections against the commercial part of the treaty. The Federalist members of the Cabinet were incensed at this hesitation. Randolph defended it, gave official exposition to the grounds on which it was based, and, in a letter to the President under date of July 12, drew up the project of future negotiations under this head to be conducted with the British Minister, Hammond. The President gave provisional instructions to proceed on this theory, but, before any negotiations in this direction had been opened, he went to Mount Vernon on the 15th of July. On the 22d of July he reiterated his opinion against an unconditional ratification; on the 25th of July he directed Randolph to communicate the grounds of his provisional determination to the other members of the Cabinet; and on the following day it was that Hammond changed this drift of events by placing in the hands of Wolcott, the Secretary of the Treasury, that ill-omened despatch of Fauchet which was big with the fate of Randolph and with the fortunes of the pending negotiation.

This despatch, as our readers know, was an intercepted document which had been captured at sea by a British cruiser, had been forwarded to London, and subsequently sent by Grenville, the British Secretary of State, to Hammond, with instructions to communicate its contents "to well-disposed persons in America" in such way as might be "useful to the King's service."

The despatch purported to have been written by Fauchet, the French Minister at Philadelphia, in report to his Government on the course of events and evolution of parties in the United States. On its face the paper was very damaging to Randolph's official loyalty, and, if read in an invidious sense, was not without its reflections on his personal integrity. At the points where the revelations of the document seemed most incriminating, a reference was made by the writer to former despatches No. 3 and No. 6, of which, indeed, this communication, entitled No. 10, professed to be the key and exposition.

It will be seen at once that such a paper, referring as it did to "precious confessions" alleged to have been made to the writer by Randolph, bristling throughout with injurious animadversions on the financial policy of Washington's administration, taxing his special supporters with a design to introduce absolute power under the military guise of suppressing the Whiskey Insurrection, specifically charging that certain Democratic leaders, "with Randolph, no doubt, at their head," had at one time been balancing in their minds whether they would support the Government or join hands with the Pennsylvania insurgents; and, finally, gravely alleging that on one occasion Randolph had intimated to him that with a few thousand dollars the French Republic might have made itself at this crisis master of the situation by buying up four men among the leading "patriots"—such a document, we repeat, coming to light in a time of popular giddiness and confusion, was well adapted to shake the confidence of Washington in the Secretary whose advice he was following in a critical conjuncture. The Federalists in the Cabinet, Wolcott, Pickering, and Bradford, were quick to see the handle that could be made of the weapon for destroying the influence of their Republican colleague. Accordingly, the President was hastily summoned from Mount Vernon; Pickering, with the aid of his French grammar and dictionary, got up a hasty translation of the despatch; and, on the return of Washington to Philadelphia on the 11th of August, the startling "find" was communicated to him, accompanied by the Federalist Secretaries with the free denunciation of Randolph as a detected "traitor."

At a Cabinet meeting, held on the following day, the whole question of ratifying the treaty was reopened. A hot discussion ensued between Randolph and the Federalist majority. To this discussion Washington put an end with the simple words: "I will ratify the treaty." The conditions previously meditated were dismissed from view. Not a word was dropped as to the cause of this sudden change. Randolph was directed to communicate to Hammond the decision which had been reached, and to do so at once. On the following day the preliminary papers were drawn up. On the 14th of August the President made a friendly visit to Randolph at his home. On the 15th he invited the Secretary to dinner, and repeated the same civility on the 18th; but on the following day—all preliminary arrangements for the signing of the treaty having now been completed—he laid the accusing document before Randolph in the presence of Wolcott and Pickering, with a request that he would read it (the French original was used in this ordeal) and would make such observations on its contents as he judged proper. It is admitted that Randolph read the paper through without blenching. He made at the time some running comments on its several paragraphs, and promised to give at a future day a full explanation of everything in the despatch, so far as it related to him. On the next day he resigned his post, hurried off a day or two later in quest of Fauchet at Newport (R. I.), where he was on the eve of taking ship for France; procured from him an exonerating certificate, and, on the 18th of December following, published the well-known "Vindication."

From that day to this "the Randolph case" has been one of the enigmas of our history—an enigma perplexing alike for its putative implications against the honor of Randolph, and for its putative implications against the candor of Washington in his demeanor towards Randolph from the 11th to the 19th of August, as well as against the President's justice in apparently prejudging the case against his Secretary before any examination could be had into the grounds of an indictment resting on the unsupported allegations of a soured diplomatist.

In spite of the ardent defence which Mr. Conway brings to the exculpation of his hero, it is probable that Randolph will still remain for many minds an enigmatical character, at least in some phases of his case; but that probability only enhances our satisfaction that this book has been written, and that it has been written in the spirit of a genuine biographical enthusiasm for its subject. Alike for his talents, which were great, for his services, which were sometimes as solid as they were brilliant, and for his misfortunes, which were pathetic, it was fitting that Randolph should have, even at this late day, the benefit of a motion for arrest of judgment in the grand assize of history. The case that was made out against him in the court below—a Cabinet council embittered against him by the very patriotism of its members—was a case which rested purely on "suspicions," and on suspicions drawn from a very suspicious document written by a very suspicious person, cast on our shores by the eruptions of the French Revolution in its most volcanic period. In the nature of the case, it was almost impossible to traverse charges at once so insinuating and yet so nebulous as those which left their blight on the name and fame of our second Secretary of State; but in order that the enigma which these charges create may be seen in its just proportions, it seems to us that we should carefully discriminate between the suspicions which properly relate to Randolph as a public officer, and those which relate to him as a man of truth and honor. When this distinction is clearly grasped, we shall probably find in it a solution of the enigmatical manner in which Washington addressed himself to the earlier aspects of this distressing complication; and with this clue in hand we may perhaps find a resolution of the main point at issue against Randolph himself, an issue which concerns his personal honor as something much more worth preserving than his repute for official prudence.

It is plain that Washington, for reasons discovered to him after his return to Philadelphia on the 11th of August, was suddenly minded to take away his confidence from Randolph as a safe adviser at that trying moment. Having determined to do so on the strength of the suspicions excited by the Fauchet despatch, he was probably confirmed in that resolve by another document which suddenly came to increase the involutions of this embroglio. Mr. Conway tells us that on the second day after the return of the President from Mount Vernon, the Secretary placed in his hands that most surprising despatch of July 29, 1795, the purport of which, as abbreviated by Washington, is given in the twenty-fourth chapter of this volume. Mr. Conway might have found the full despatch in the archives of the State Department. So far as we know, it has never been published. On its face it helps to make the darkness of the Randolph enigma only the more visible. In that paper Randolph writes to Monroe, our Minister at Paris, to put him on his guard against the truthfulness of any representations which Fauchet shall make to him on returning to France. It is further averred in this same communication that Fauchet, from the first moment of his career in the United States, "had wrapped himself round with intrigue"; had pretended great attachment to the President while secretly hostile to him; had associated chiefly with enemies of the Administration; had been in close league with Genet while professing to disapprove of his course; and had sought to worm out the secrets of the Government from certain members of the Cabinet, of whom, adds the Secretary, "I am not one." When it is remembered that *this* despatch, under Randolph's own hand, was communicated to Washington on the second day after the intercepted despatch had been brought to his notice, it will be easy to see that the President might well have his confidence shaken in the perspicacity of his Secretary, who, if not misleading, had confessed himself to have been steadily misled by the wily Frenchman. On the supposition of Randolph's guilt, this letter was a blind, and involved a fresh imputation on his straightforwardness. On the supposition of Randolph's innocence,

the letter was a new accusation against his prudence. It is not surprising, therefore, that the President, in view of this letter, was the more resolved to overrule the Secretary whose advice he had been following in a public transaction which called for the gravest circumspection. And certainly Randolph could not have been sufficiently circumspect if what he said about Fauchet were true. If what Fauchet said about *him* were true, then the grounds of suspicion against the Secretary were deepened. The ambiguity was bifurcated.

But it is important to observe that the decision of the public question immediately in hand did not carry with it any foregone decision of the case raised against the integrity of Randolph by the allegations of Fauchet. For, after the decision of this public problem had been reached, we find Washington frankly admitting, in his own careful study of the Randolph incident in every conceivable light (as preserved in the paper handed to Wolcott), that subsequent inquiry might result in the unequivocal acquittal of the Secretary. This fact alone suffices to show that the treaty question had been decided on grounds entirely irrespective of the question raised by the despatch as to Randolph's probity. On the decision of this latter question would depend his retention or dismissal as a member of the Cabinet. The anxiety of Washington to do exact justice in the premises is proved by the pains he took to provide himself with a conspectus of all the elements in the case. He made for his own enlightenment an elaborate abstract (indited in his own neat hand) of all the letters written by Randolph to Monroe during the period of Jay's negotiations, and later down to July 30, 1795. Then he made a careful brief of Fauchet's despatch. It is probable that this work was done in the interval between August 11 and August 19. It is certain that the abstract of Fauchet's despatch was made from Pickering's translation or from some contemporaneous recension of it, because the textual citations which Washington makes are not taken from the authentic version as published in Randolph's "Vindication." When the "Vindication" appeared, Washington made an abstract of it also.

It is, as we conceive, from a failure to make a proper discrimination between these two possible aspects of Randolph's case that Mr. Conway never essays any defence of Randolph's career which does not seem to imply that the private honor of the man was bound up with the impeccability of the Secretary; and in like manner he formulates no theory of Washington's conduct in the affair which does not proceed either on the hypothesis of Washington's decaying intellect at this period, or on the still more improbable hypothesis that Washington, in the exercise of a pitiless and remorseless patriotism, consented to the destruction of his friend as a vicarious sacrifice, offered up without blemish or spot, to appease the malignant powers then working for the ruin of the country. It seems to us that "'twere to consider too curiously to consider so." The enigma is better solved by supposing a divided duty on Washington's part adjusted to meet a divided view of Randolph's conduct as a man and as a public officer. There is nothing abstruse or disingenuous in such a psychological dichotomy. We can find an exact parallel to it in the conduct of Randolph himself. Even after he had, as he reports, discovered the criminal duplicity of Fauchet, he tells Monroe that on the eve of the trickster's departure for Europe he invited Fauchet to dinner, and made a proffer of friendly services, which, if due to him from motives of political prudence or of public duty, were certainly in no wise due to him either as man or minister.

The situation of Randolph in the hour and article of his doom lacked no element of the tragical. By his letter to Monroe of July 29 he had smutched the character of Fauchet as that of an unscrupulous villain. By Fauchet's intercepted despatch it appeared as if Randolph had been the confidant of this dissembler. Yet when confronted with the damaging paper, it was the cruel necessity of Randolph's equivocal position that he was bound to make an appeal for justification to the very man who had stabbed him, and to seek a certificate of exoneration from the diplomatic adventurer whose truth and honor he had just discredited. In the archives of the French legation at Philadelphia Fauchet always described Randolph as "an honest and upright man." In his letters home he complained that Randolph "played the sincere and made false confidences to him." Hence it is that in the matter of Randolph's guilt or innocence, we entirely concur with Mr. Trescot in dismissing from our sight the exculpatory letter given by Fauchet to the ex-Secretary. Two rays of light countering against each other make darkness, but two rays of darkness do not make light by their antithesis. Fauchet could not erase his stigma by a few scratches of his pen, for it was not the scratches of his pen which had made the stigma. The sole sting of his despatch was in the apparent circumstantiality of his statements.

The trials of Randolph did not end with his political overthrow. He was prosecuted as a defaulter, and, at the end of a long litigation, a formal judgment was entered up against him. Nothing perhaps helped more to barb the poisoned arrow of Fauchet than the well-known fact that Randolph, "the St. Sebastian of all arrows," as Mr. Conway calls him, lived in a state of chronic pecuniary embarrassment, and this from no prodigality of his own, but from pious duty to dependent relatives. To this day his name is borne on the registers of the Treasury at Washington as a debtor to the United States in the sum of $60,000. We have satisfied ourselves that the default is, as Mr. Conway represents, a purely fictitious one; that the technical claim of the Government has been more than satisfied, and that gross injustice is done to Randolph's memory by the perpetuation of this unmerited reproach.

If compelled to make our own résumé of the blended good and evil in the life and fortunes of Randolph, we should still recur substantially to the judgment of Madison. He said: "Randolph's greatest enemies will not easily persuade themselves that he was under a corrupt influence of France, and his best friends cannot save him from the self-condemnation of his political career as explained by himself." In saying that Randolph's own "Vindication" involved a "self-condemnation of his political career," Madison means that the non-partisan attitude affected by the Secretary as between the Federalist and the Republican parties, in their then existing stage of differentiation, had become impossible. In this view Madison was plainly right. Randolph's career as Secretary of State covers the birth-pang of party government in our country. Parties there had been before, but government by party dates among us from the ratification of Jay's treaty and the fall of Randolph as a professedly non-partisan Secretary. From that time forth even Washington was unable to effect a synthesis of divergent political opinions, and was constrained to rule as a Federalist chief. No Republican would take the portfolio which Randolph dropped from his hands in indignation and disgrace.

If compelled to construct a psychology of our own for the explanation of the enigmatical character of Randolph as a man and as a statesman, we should say, under correction, that with none of Wentworth's "Thorough" he had too much of Falkland's large discourse of reason and too little of Falkland's executive faculty for grasping the horns of a political dilemma when, in a time of storm and pressure, a choice must be made at the dividing of ways. Mr. Conway tells us that it is a family trait of the Randolphs to "look on the other side" of every question, and to "make the most of its claims"; that Edmund Randolph had "a refining mind"; that there was nothing of the "irreconcilable" in his nature; that he always had "a provoking ability to conceive that he might be wrong," which maimed his capacity for leadership; that he had the large mind which is long in its poise, and was "incapable of partisanship." It seems to us that the learned biographer has not made a sufficient use of his own psychological analysis in explaining the checkered fortunes of Randolph's career. We here perhaps may find the very *mot* of the Randolph enigma, if it can only be admitted that this remarkable man had the defect of his qualities. This mental peculiarity may not only explain his infelicities as a man of affairs, but may also account in a measure for the harsh delineations of his character as drawn by political friends like Jefferson, and by political enemies like Wolcott and Pickering. Even Jefferson's libellous caricature, as Mr. Conway holds it, may perhaps be blended into a composite photograph of Randolph's political physiognomy without entirely destroying its verisimilitude. What to Jefferson seemed the inconstancy of a "chameleon" may have been the receptiveness of a large mind, reflecting many aspects of opinion by virtue of its very many-sidedness. Such men are always liable to be misunderstood and will often be denounced as "trimmers"; they will often prove irresolute in action, and so, in times of stress, are liable to be crushed, as Randolph was, between the upper and the nether millstones of partisan conflict. We suspect there was a streak of *Hamlet* in the fine porcelain of Randolph's nature.

We feel so much indebted to Mr. Conway for the contribution he has made to our knowledge of an interesting and obscure epoch in American history, that we forbid ourselves to indulge in criticism on the arrangement of his materials; but there are points in his narrative where, as it seems to us, he has not duly profited by the Horatian maxim, *Tantum series juncturaque pollet.* In a second edition we would advise that the full text of Randolph's remarkable letter of July 12, 1795, should be given in explication of the even balance of opinions involved in the ratification or rejection of Jay's treaty. Nothing finer in the way of analysis ever came from the "refining mind" of Randolph. The letter to Monroe, under date of July 29, 1795, should also be given in its entirety, with a discussion of its possible relation to the nexus of events which combined to seal the Secretary's fate in Washington's mind. The proof-reading of the volume leaves much ground for complaint. We began a collection of misprints, but found that we could not cope with their number and variety.

CHILDREN'S BOOKS.

As the holiday season approaches, Mr. Howard Pyle comes before us again with a book "written and illustrated" by himself. 'Robin Hood' and 'The Wonder Clock' are succeeded by 'Otto of the Silver Hand' (Scribners).

Merry England and Fairyland are followed by mediæval Germany. It is a tale of robber barons and holy monks, of peaceful cloistered days, and wild nights of fire and blood, that is here told—and well told in the main; a tale of incident that would be thrilling if only the actors had a little more vitality in them. They play their parts spiritedly enough, kill and are killed, bless and curse, and love and are made love to in a quite lively and satisfactory manner as long as they are on the scene, but they never come to life and walk off about their own business; one feels that between their exits and their entrances they are lying quite peacefully in their box doing nothing, and that when the curtain is rung down, a little change of paint and costume will fit them for other rôles to come. There is nothing kenspeckle about them, and with new properties and furnishing they may, with skilful handling of the wires, strut through many another piece.

The English is straightforward and transparent, but not as simple as is usual with the author, and the book is marred by passages of commonplace eloquence like the following:

"Beyond these squalid huts lay the rushing, foaming river, spanned by a high, rude, stone bridge where the road from the castle crossed it; and beyond the river stretched the great, black forest, within whose gloomy depths the savage wild beasts made their lair, and where in winter time the howling wolves coursed their flying prey across the moonlit snow and under the network of the black shadows from the naked boughs above."

This is "the right butter-woman's rank to market;" and the steady, jug-trot pound of the adjectives is annoying to a sensitive ear.

To create living characters is rare; to attain to perfection in style is rare. If Mr. Pyle has not done these two rare things, he has made a good story and told it in sound language, and these things also are rare enough. As far as the text is concerned, the balance must incline to the side of praise. How of the illustrations? The answer to this question depends largely upon what one may consider to be the true limit of imitation. No one can look long upon the drawings in any one of these three books of Mr. Pyle's without thinking of Dürer. The imitation is patent in style and handling. Well, it is a good style, and has been imitated before and will be imitated again; and if one has not a style of his own, he could pick up many a worse than this. And the imitation is singularly good. One admires this easy mastery of an Old-World manner by an artist of our day and country; it is strangely like the real thing Yes, it is *too* like the real thing. As one looks, a bit here and there—a stump, a wing, the rump of a great white horse—assumes a strangely familiar air, and one begins to realize that Mr. Pyle has made other use of his portfolio of old engravings than the study of a method and the absorbing of a manner. Where does this stop? Where does imitation cease and direct copying begin? What is Mr. Pyle's, here, and what is Dürer's? It is impossible to say. Much there must be of Mr. Pyle's own, and much that is good and strong enough to stand alone; but when suspicion is once aroused it covers everything alike. Mr. Pyle is an artist of ability and training. Let us beg of him to stand upon his own two feet that we may judge his stature, and not, by mounting on the shoulders of a taller man, make himself seem shorter than he is.

Mr. Chester Loomis's illustrations of Mother Goose ('Familar Selections,' E. P. Dutton & Co.) seem to invite a dangerous comparison, for their similarity in general style to M. Boutet de Monvel's delightful illustrations of French popular songs is unmistakable. It is hardly necessary to say that such a comparison would not be favorable to Mr. Loomis; but comparisons are odious, and we will not make any. Taken by themselves, Mr. Loomis's drawings have very considerable merit; they possess much delicate humor and a fine flavor of naïveté, and they show a decided decorative sense. They are, as all colored illustrations should be, in pure outline and flat tint, without modelling, and the color schemes are generally delicate and well chosen. In short, Mr. Loomis's work is altogether right and sound in style, and if not the best *in* its style, is very nearly as good as the best.

It is probably safe to assume that Mr. Palmer Cox's 'Queer People with Paws and Claws' (Philadelphia: Hubbard Bros.) will be as popular with the children as were those other queer people, 'The Brownies.' More experienced palates may find the flavor of both drawings and text somewhat crude and insipid; but little folks have simple tastes, and this food is at least pure and wholesome, and there is not an indigestion in a platter-full of it.

A juvenile classification may not injuriously be given to the stout volume called 'Library of Universal Adventure by Sea and Land,' which has been compiled and edited by Messrs. W. D. Howells and Thos. Sargeant Perry, and published by the Harpers. The is nothing to indicate the part of each editor in this undertaking, but we will hazard a guess that Mr. Perry has had the laboring oar. From the youthful point of view, this collection leaves little to be desired in point of range and variety. Capt. John Smith's captivity among the Turks, Capt. Cook's fate, Baron Trenck's sufferings, the mutiny of the *Bounty*, even the horrors of the Black Hole of Calcutta (though the last would seem to be ruled out by the editorial definition of "adventure" as something personal) are all to be found here; but we have also more modern episodes, like Louis Napoleon's escape from Ham, Dr. Judson's imprisonment in Burmah, Frederick Douglass's escape from slavery, and Owen Brown's flight after Harper's Ferry. Sport is not neglected, but Sir Samuel Baker is not drawn upon. In the American section one might have expected to find something from Lewis and Clarke.

The editing is somewhat open to criticism. In general, the condensation and abstracting resorted to impair one of the uses of such a collection, viz., the comparison of styles. Then, it is not easy to distinguish between the editorial insertion and the original narrative—to determine, for example, who is responsible for the expression, on page 519, "He was not long, however, before he made another effort to recover his liberty." Acknowledgments of the sources are not always made, nor uniformly, as at the beginning or end of an extract. This is slovenly, and so has the proof-reading been. "Two or three excepted; they were unacquainted with each other," we read on page 521; "Sièyes," on page 546; "Waterman," in the table of contents, for Waterton, etc. An error which has been adopted on trust is the spelling of Meriam with double *r*, in Owen Brown's story. But this is a slip which John Brown's latest biographer falls into. It is also misleading to say, as on page 270, that this companion of Brown's "was of the wealthy Massachusetts Merriams." The cuts are numerous, but hit or miss, being taken according to the nearest aptitude from the publishers' store of blocks. That on p. 276 is ludicrously far-fetched. Finally, should not such veteran book-makers have provided an index?

'Zigzag Journeys in the Antipodes' (Boston: Estes & Lauriat), by Hezekiah Butterworth, is marked by the excellences and faults of its predecessors in this series. The book is attractively got up, and the illustrations are numerous and excellent, but the text is far too evidently written for the pictures. As these often have nothing to do with Siam, the ostensible subject of the journeys, there is an irritating disconnectedness between the various chapters. These are simply a patchwork of stories, extracts from books or papers, and wandering reflections, pervaded with a gentle sentimentality chiefly in regard to cruelty to animals. The amount of information about the antipodes, compared with the size of the volume, is small, though no doubt correct.

The heroes of 'The Boy Travellers in Australasia' (Harpers), by Thos. W. Knox, visit the Sandwich Islands and various other groups in the south Pacific before they reach Australia and New Zealand, descriptions of which form the principal part of the volume. This earlier portion we have found more entertaining than the latter—we presume from the fact that many of the chapters on the English colonies are so packed with facts and statistics as to make the reading of them like eating pemmican. The author would have left on his young readers a far more lasting impression of the wonderful growth and present condition of these colonies, had he selected a few of the most important facts and dwelt upon them. As it is, however, this series stands easily at the head, so far as our knowledge goes, of its class of "imaginary voyages"—a field of literature which we hope is about exhausted. The book is excellently manufactured, with maps conveniently placed upon the inside covers at either end. It, together with those preceding it, might be used to advantage in schools in connection with lessons in geography.

'The Knockabout Club in the Antilles' (Estes & Lauriat), by F. A. Ober, is a rambling description of the various West Indian islands, written to accompany pictures of all degrees of excellence and appropriateness. It contains considerable information, and enables the reader to form a fairly strong impression of the life and scenery of the places visited. Had the author omitted the humorous passages in which he vainly strives to lighten the monotony of his narrative, and been more careful to avoid error in his historical summaries, his book would have been more valuable.

Considered as a story simply, 'The Cat of Bubastes' (Scribner & Welford), by G. A. Henty, is the most interesting of this prolific writer's tales which we remember. The scene is laid partly on the shores of the Caspian and partly in Egypt, forty years before the Exodus, and there are many good descriptions of the life, amusements, and religious observances of the Egyptians of that time. The author attempted too much, however, in introducing Moses into one of his chapters, and he gives a very shadowy impression of the Hebrews. Their district is invariably spelled Goschen, an innovation for which the present Chancellor of the Exchequer is probably the innocent cause. The illustrations are fair.

It is only natural that the first part of 'Children's Stories of the Great Scientists' (Charles Scribner's Sons), by Henrietta Christian Wright, should be better adapted to the reading of children than the last. The stories of Galileo, Newton, Franklin, and Linnæus, telling, as it were, of the beginnings of science, lend themselves easily to a picturesque and graphic treatment, while this is almost impossible in narrating the discoveries of Lyell, Agassiz, Tyndall, and Darwin. The author has been very successful in the early chapters, that on Linnæus being especially interesting; but in the latter she has apparently forgotten

that she was writing for the young. We have noticed more errors than should have crept into a work of this character, the most important, perhaps, being that which makes Concord, Mass., and not Concord, N. H., the early home of Count Rumford.

THE STORY OF TURKEY.

The Story of Turkey. By Stanley Lane-Poole, assisted by E. J. W. Gibb and Arthur Gilman. G. P. Putnam's Sons. 1888.

THE study of history is a serious matter—not because history repeats itself, as Dr. Arnold used always to be saying, or that a knowledge of Thucydides may be as useful to an American statesman as personal experience, or because, as Hegel remarked, an historian is a prophet turned round; but because the history of the past helps to explain to us the present. D'Haussonville says: "It is certainly not in the past that we must seek the key of the future. Events succeed one another after certain rules, and are not reproduced. Even when you are most tempted to find them nearly the same, you discover more difference than resemblance." But in knowing the chain of events which link the past to the present, in understanding how and in what way any nation or country has come to exist as it exists to-day, we have the key to the contemporary politics of that country. This is the point on which Freeman and the new school of historians lay great stress, either in so many words or by implication. But serious as it is when considered in this way, history can be made very entertaining, and be so flavored as to suit the lightest palate and the most delicate digestion. Certain historical periods are so wonderfully interesting that they can be written so as to be as amusing as a novel, or can even be easily described in novel-form. From this point of view, however, we are inclined to agree with Miss Mitford that the *mémoires pour servir*, the materials for history, are more amusing than the history written from them.

Unfortunately, the book before us is not of a kind to satisfy either those who read for instruction or those who read for amusement. It is not sufficiently detailed for the latter; and as for the former, its faults may easily be imagined from its title. At first sight, one thinks "The Story of the Nations" is not a bad idea; but on a moment's reflection one sees the danger of a lack of historical perspective—that the picturesque side, the story and not the history, will be given, and that each writer will so espouse his subject as to magnify the virtues, minimize the faults, and even conceal the crimes of the nation about which he is writing. All of these faults can be found in the present volume, which labors also under the difficulty that its chief author is an Englishman; and passion for or against Turkey or Russia has so taken possession of Englishmen nowadays that it is the hardest thing in the world for them to treat either country with impartiality. Mr. Stanley Lane-Poole is, we believe, a relative of the well-known Arabic scholar Lane, the author of 'Modern Egyptians' and the translator of the 'Arabian Nights.' He is himself an Arabic scholar (which he shows too much here in preferring Arabic to Turkish spelling), and is an authority on Eastern numismatics; but apparently he had never occupied himself with Turkish history until, as his literary executor, he edited the biography of Lord Stratford de Redcliffe, which naturally gave him a strong pro-Turkish bias.

As a history, the volume before us cannot for a moment be compared with two books of about the same size, the 'Histoire de l'Empire Ottoman,' by Le Vicomte A. de la Jonquière—one of the historical manuals published by Hachette, an excellent, trustworthy, and entertaining book—or the 'Ottoman Power in Europe,' by Prof. E. A. Freeman, which, although in a certain way prejudiced, is the best book on the subject in English. Even as a story, it is below both of these books. It is made up chiefly from the 'History of the Ottoman Turks,' by Sir Edward Creasy, himself a condenser of Von Hammer's large history, and from the book of Knolles and Ricaut, published in 1680, of which Horace Walpole says: "Considered as history, it is a collection of fables; and as to style, it is the most tiresome book in the world, with periods a page long." Surely, there was no necessity for printing in black-letter a translation from Froissart; and if the book had to be made up of extracts, there were in the last century a number of men—to say nothing of Lady Wortley Montagu—who wrote amusing accounts of Turkish politics, life, and manners, although they might have to be translated from French, Italian, or even Russian. The chapter on the conquest of Constantinople is avowedly almost entirely quoted from Gibbon. It was probably the best thing that the writer could do, although modern scholars have corrected Gibbon's account in several particulars.

As to the illustrations, some, like the landscape views, the medal of Mohammed II. (pp. 102–3), the portraits of Suleiman (pp. 166, 180, and 192), and of Roxolana (p. 196) are excellent. Others, like the view of St. Stephen's Cathedral at Vienna (p. 228), and the mosaic of St. Sophia (p. 326), have nothing to do with the subject. Others, like a Turkish merry-making (p. 16), a Turkish meal (p. 66), the plan of Constantinople (p. 108), were probably interesting in the original size, but are here so reduced as to be unintelligible. Others, like the battle of Prince Jem (p. 142), may have been interesting when originally published, but, being neither contemporary pictures, nor based on a study of life at that time, are out of place. Others still are simply absurd.

As far as historical perspective is concerned, after taking out three chapters which will be considered later, there are 255 pages devoted to history, of which 204, or four-fifths, are given to the rise of the Turks; yet in all this space we are not told who or what the Turks really were, or why they rose so quickly. A picturesque episode like that of Prince Jem, to which in Hammer there are given about thirty pages of the whole eighteen volumes, and in Jonquière's about two pages out of 650, is here stretched out to fill a chapter, and is not well done in that. The part played by the Turkish navy, and especially by the great Khair-eddin Barbarossa, the understanding of which is necessary to any knowledge of Turkish history, is entirely omitted, in order to form a separate volume of the 'Story of the Corsairs,' which can be so easily abridged from the French of Jurien de la Gravière, or still better from the Italian of Guglielmotti. The story of the decadence of Turkey, which to us would be far more interesting than that of its rise, because it would explain to us the present condition of the Ottoman Empire, and why vigorous young Christian nations should be developed out of its ruins, is condensed into fifty pages. The author, in a simple-minded way, gives as a reason for this treatment that: "To tell the various stages of decay in detail would only weary the reader with a catalogue of defeats, varied by occasional reprisals" (p. 207). In the twenty-five pages called "The Sick Man," from 1812 to the present time, with the exception of the longish and rather unnecessary account of the diplomatic activity of Lord Stratford de Redcliffe, there are almost more errors than sentences, some of them dragged in arbitrarily through dislike of Russia, as where it is implied that the victory of Russia in the last war was rather owing to bribing the Turkish commanders than to good fighting, or through suspicion of Mr. Gladstone's foreign policy.

Three chapters are contributed to this volume by Mr. E. J. W. Gibb, who is favorably known for his studies on Ottoman poetry, of which the chapter on Ottoman literature is practically a summary. He succeeds in showing us how feeble and uninteresting Turkish poetry is when compared with Persian; but he gives too little attention to the prose literature. He might well have inserted some remarks about the chronicler Vassyf, and about Resmi Ahmed Effendi, who wrote a very amusing account of his embassy to Frederick the Great, as well as a history of the Turco-Russian war of 1769-1774, extracts from which appeared in *Macmillan's Magazine* for 1880. The chapter on Stambul is weak and wordy, although it endeavors to give a picture of life in the Turkish capital in the eighteenth century. That on Ottoman administration is a dry catalogue of the names of Turkish dignitaries in olden times, compiled from the well-known 'Tableau Général de l'Empire Ottoman' of Mouradjea d'Ohsson. We get tired of hearing about the Kilar Kiyahyasi, or controllers of the buttery, of the Bostanji Bashi, or of the Top Arabaji Bashi. We do not care for more than a general description of the Sultan's household in early times, but we should like to know something about the real working of Turkish administration, and especially of provincial administration before the reforms of Mahmoud II. in the early part of the present century: why those reforms were necessary, what they were, and why they have not succeeded. We are put off with a catalogue of eunuchs, gardeners, pages, and cooks; but perhaps, if we look at it philosophically, we may find in this very catalogue a partial answer to our questions.

Western China. By Virgil C. Hart, B.D. Boston: Ticknor & Co.

THE "Province of the Four Streams," or Szchuen, was once the largest of the eighteen provinces of China, and anciently contained the capital of the Empire. Though rarely visited by foreign travellers since Marco Polo's time, it is in many respects the most interesting of all the divisions of the Middle Kingdom. Its people are noted for their devotion to literature, religion, and art. Into it the Buddhist missionaries from India first came and began the propagation of their faith. In natural beauty and luxuriance, and in the evenness of distribution of the wealth of its inhabitants, it leads the other provinces. One obtains a good idea of the self-sufficiency of Chinese resources and civilization when he realizes that this western province, which is farthest from the ocean and from contact with the outside world, ranks with the best of the divisions of the Empire, and excels many of them in population and material and intellectual wealth. In its area of little less than two hundred thousand square miles it maintains a population of forty-five millions. Considering the large amount of land occupied by mountains and infertile tracts, in addition to the acreage devoted to the cultivation of the poppy for smoke, and millet and Indian corn for intoxication, the superiority of Chinese economy over that of the West is manifest.

The valuable portion of the soil is comprised within the four natural basins formed by the

rivers running north and south, and these occupy what is a rough eastern half of the area. Besides the Chinese inhabitants, the tribes of the Lolo people, with whom Mr. Baber has made us acquainted, live in those intervales and mountain-fastnesses of the western half of the province which are properly part of the high tablelands of Thibet. The feuds of centuries are still maintained, and the Chinese, unable, despite their forts and garrisons, to control these mountaineers, suffer from their man-stealing propensities, and considerable number of people in the valleys and lowlands are annually murdered or enslaved by the raiding Lolos. In addition to the abundant crops of every staple known in China, Sz-chuen is noted for its well-regulated supply of natural gas, which, after a flow of over eighteen centuries, seems inexhaustible. The "fire-wells," being near the great rock-salt deposits, are utilized to boil the kettles of brine pumped up from the strata, which are bored by native machinery of wood, bamboo, and iron.

In the municipalities of this, as of other parts of China, the habits of the people, the excess of the rapacious official class, the jealousy and intermeddling of the Government, and the lack of the proper corporations to levy taxes for the requirements and necessary expenses of city economy, tend to paralyze public spirit. Yet, despite all their discouragements and the defects of their political system, the people seem to take a noticeable pride in what we consider to be public works and ornaments. Foot-paths from village to village, broad roads wide enough for two teams and paved with flagstone between the cities, stone memorial arches and gateways, substantial bridges of masonry, colossal bronze images, and artistic metal work of an elaborate and imposing sort, testify to the local pride and artistic spirit of the inhabitants. Notable are the iron suspension bridges over torrents and high-banked streams. Mr. Hart describes the bridges as gems of native art, some of them having at one end a tablet recording the date of construction and giving the donors' names. Indeed, the number of pagodas, brick, stone, and metal structures and works of art in the province is surprising, and on and around Mount Omei, the great Buddhist centre, bewildering. It is of fascinating interest to study this primitive home of the Buddhism of Chinese Asia, and to recognize in the names of the various avatars and attributes the originals of Corean and Japanese developments. Some of the most recent phases of "Reformed" Buddhism in Japan claim to be but revivals of the ancient forms of the faith taught here.

The author, Rev. Virgil C. Hart, started from Hankow April 11, 1887, by steamer to I-chang and thence by native boat to Chung-king in Sz-chuen province, to reëstablish the mission of the American Methodist Episcopal Church, which had been so tragically closed by the riot of July, 1886. He describes the river voyage, incidents of travel, the great brine and fire wells, the historical monuments of the classic city of Chen-teu; and, after properly devoting three readable chapters to the great Buddhist monasteries, towers, pagodas, relics, and works of art on Mount Omei, winds up with a general description of his field of work and a survey of the missionary problem. A dozen illustrations, a map, and an index add to the reader's pleasure. The author's style needs brightening up, if he would win the readers he particularly desires to have; but all who are interested in China will hail this work as a positive addition to the first row of their books illustrating the great Empire. The telegraph wire is now stretched over many thousands of miles in the long-isolated land, and the inevitable railway through mid-Asia to Europe cannot long be delayed. It is certain that the "Province of the Four Streams" will be the first of the western Chinese provinces to be tapped and traversed by iron rails. Mr. Hart's accurate monograph is, therefore, not only a pleasing record of travel, but a timely picture of one of the least known yet most valuable portions of the earth's surface. Students of Corean and Japanese Buddhism will find the volume of special interest.

Old Chelsea: A Summer Day's Stroll. By E. B. Martin. Illustrated by Joseph Pennell. London: T. Fisher Unwin.

FOR upwards of three hundred years the suburb of Chelsea has attracted more remarkable people than all the other suburbs of London put together. Mr. Martin has inadvertently revealed the secret of this attraction in giving the derivation of the name—from the Saxon *chesel*, meaning gravel, and *ea*, a bank. That wise man Sir Thomas More, who built himself a great house on the river in 1520, knew well the sanitary superiority of gravel to clay, and it is safe to assume that the same knowledge influenced Pepys, Addison, Smollett, Chesterfield, Walpole, Benjamin Franklin, and the host of other worthies, male and female, to whose dwellings in Chelsea Mr. Martin's text and Mr. Pennell's admirable illustrations introduce the reader. The book is brimful of historical and other information, and leaves on the mind the impression that all the most interesting English men and women since the days of Henry the Eighth have been in some way or other connected with Chelsea. As to American celebrities, we have, besides Franklin, Philadelphia, great-granddaughter of Wm. Penn, and named from the city of her birth, who married Lord Cremorne, and died in Chelsea in 1825. Probably very few travellers from the City of Brotherly Love who in times past visited Cremorne Gardens, suspected the existence of so curious an association between their quiet homes and the dubious splendor of that particular corner of Chelsea. The gardens have disappeared into the mist of an unregretted past, but the well-advised traveller of to-day will not fail to visit Chelsea, as being a part of old London but little damaged by the march of modern improvement; and in so doing, he will find this little book an indispensable companion.

How the Peasant Owner Lives in Parts of France, Germany, Italy, Russia. By Lady Verney. 8vo, pp. 234. Macmillan & Co. 1888.

THESE half-dozen papers, collected from the *Nineteenth Century*, renew the persistent war Lady Verney wages against peasant proprietorship. She continues, as in her previous publications, to spend her strength more in contemplating and narrating ills that have existed and still exist, than in investigating what may be the possible ways of improving matters. Even if her point of view were unquestionable, and it were admitted that the miserable conditions to be found in connection with land held in such small parcels that they cannot be properly cultivated, were due solely to such tenure of land, it is none the less certain that, as long as the size of holding is considered as outside the proper sphere of immediate legislation, the tendency to division and sub-division must increase or diminish precisely to the degree in which it will be in accordance with the general economic intelligence of the nations affected by it; and consequently the discussion should turn on facts carefully chosen for their economic importance. Lady Verney is not very successful in this respect; and it is in rather a feminine tone that she expresses rather incoherent doctrines. But her writings are full of good feeling, if not of good sense.

BOOKS OF THE WEEK.

YOUNG FOLKS' CYCLOPÆDIA of { *Common Things...$2.50.* / *Persons and Places.$2.50*

HENRY HOLT & CO., Publishers, New York.

Treasures for the Children.

THE PIED PIPER OF HAMELIN. By Robert Browning. With thirty-five original illustrations by Kate Greenaway. Engraved and printed in colors by Edmund Evans. Medium 4to, boards, $2.00.

The designs which Miss Greenaway's fancy has pictured for this most pathetic classic of childhood, by one of the greatest poets of the present period, are as winning and as full of airy gracefulness as those in the many other works illustrated by her hand.

THE DIVERTING HISTORY OF JOHN Gilpin. Showing how he went further than he intended and came safe home again. By William Cowper. With illustrations by H. Rosa. Printed in tints. Oblong 4to, flexible boards, $1.50.

"*The artist has shown a due sense of humor in grasping the comical moments of this favorite piece, and his sketches are full of life. The text is in fantastic type, and is broken by smaller drawings also in color. In its tasteful cover the book makes a capital present for a child.*"—New York Commercial Advertiser.

FRIENDS AND PLAYMATES. With colored illustrations designed by Mars. Oblong 4to, cloth, $3.00; boards, $2.50.

As in its companion volume, 'Our Darlings,' the charming and varied illustrations leave the text but scant room to say what it has to say. But this the reader, whether young or old, will readily forgive when he has once opened the covers and beheld the delights thus revealed.

STORIES OF PERSONS AND PLACES in America. By Helen A. Smith. Copiously illustrated. 4to, boards, with lithographed double covers, $1.50.

"*We have been struck with the combination of thoroughness and pleasing adaptation to the minds of the young which Miss Smith exhibits, and commend this lavishly illustrated book as a capital introduction to American history.*"—The Critic.

PYTHIA'S PUPILS. From the German of Eva Hartner. By Mrs. J. W. Davis. With original illustrations. 12mo, cloth, $1.25.

"*An ideal story for young girls.*"—Albany Journal.

"*One of the most delightful girl stories of the year.*"—Baltimore American.

"*It will always be a favorite in the domestic circle.*"—Boston Saturday Evening Gazette.

For sale by all booksellers, or sent, postpaid, on receipt of the advertised price, by the publishers,

George Routledge & Sons,

MACMILLAN & CO.'S NEW BOOKS.

A New Poem by Wordsworth.

THE RECLUSE: A Poem. By William Wordsworth. *Immediately.*

Library Edition of 'Robert Elsmere.'

ROBERT ELSMERE. By Mrs. Humphry Ward, author of 'Miss Bretherton,' 'Milly and Olly,' etc. Library Edition. 2 vols., globe 8vo, $3.00.

"At last an edition of 'Robert Elsmere' has appeared in the United States, though of English manufacture, which is equal, as a piece of book-making, to the prime literary quality of the work itself."—*Boston Herald.*

"A work of true genius."—*New York Tribune.*

"It is indeed a great book."—*American Magazine.*

"One of the most remarkable novels ever written,"—*Boston Beacon.*

"A masterpiece. Certainly it is better worthy of study than anything in the literature of recent years. The production of 'Robert Elsmere' is distinction for our generation."—*St. Paul Pioneer Press.*

"One of the strongest works of fiction that has appeared in England since George Eliot."—*The Critic.*

The Late Emperor Frederick.

FREDERICK, CROWN PRINCE AND EMPEROR. A Biographical Sketch Dedicated to his Memory. By Rennell Rodd. With an Introduction by her Majesty the Empress Frederick. With Photograph Portrait. 12mo, $1.25.

By Matthew Arnold.

ESSAYS IN CRITICISM. Second Series. By Matthew Arnold, with Prefatory Note by Lord Coleridge. Globe 8vo, $1.50.

CONTENTS: The Study of Poetry—Thomas Gray—Wordsworth—Shelley—Milton—John Keats—Byron—Count Leon Tolstoï—Amiel.

CHARLES LAMB'S ESSAYS OF ELIA. Printed on hand-made paper at the Chiswick Press. Edited by Augustine Birrell. With six etchings by Herbert Railton. 2 vols., post 8vo, $3.50; with gilt tops, $3.75. Also an edition on large paper, limited to 100 copies. 2 vols., post 8vo, $7.00.

"Charles Lamb would count himself a fortunate man could he see the new edition of 'The Essays of Elia' which Macmillan & Co. send us. . . . These matchless essays are issued in two small volumes, beautifully printed on the kind of paper that ought to receive such humor and such thought, interspersed with miniature etchings by Herbert Railton. The editor, Mr. Birrell, contributes a characteristically bright introduction."—*Christian Union.*

ESSAYS THEOLOGICAL AND LITERARY. By Richard Holt Hutton, M.A., author of 'Essays on Some of the Modern Guides of English Thought in Matters of Faith.' Third Edition, revised. 2 vols., globe 8vo, each $1.50.

ESSAYS ON SOME OF THE MODERN GUIDES OF ENGLISH THOUGHT IN MATTERS OF FAITH. By R. H. Hutton, M.A. Globe 8vo, $1.50.

CONCERNING MEN; and Other Papers. By the author of 'John Halifax, Gentleman.' 12mo, $1.25.

"I do not think I shall be alone in the opinion that this, the latest volume of Mrs. Craik's essays, is also the best."—*J. A. Noble in Academy.*

ROMAN MOSAICS: or, Studies in Rome and its Neighborhood. By the Rev. Hugh Macmillan, D.D., LL.D., F.R.S., author of 'Bible Teachings in Nature,' 'The Sabbath of the Fields,' etc., etc. Globe 8vo, $1.50.

"In these various chapters the author sometimes wanders far away from his subject, but only to enrich it with a learning and a wealth of wise reflection and sound sentiment, as well as with a literary grace and skill that will charm and delight the reader."—*Week.*

SOME CONTRIBUTIONS TO THE RELIGIOUS THOUGHT OF OUR TIME. Being Sermons and Addresses delivered in London, Cambridge, Bristol, and elsewhere. By the Rev. James M. Wilson, M.A., Head Master of Clifton Village and Chaplain to the Lord B shop of London. 12mo, $1.75.

By J. H. Shorthouse.

THE COUNTESS EVE. By J. H. Shorthouse, author of 'John Inglesant,' 'Sir Percival,' etc. 12mo. $1.00.

THE ASPERN PAPERS; and Other Stories. By Henry James, author of 'The Americans,' 'Daisy Miller,' 'The Princess Casamassima, etc., etc. 12mo. $1.50.

"These stories show that Mr. James has a power and effectiveness of literary style unsurpassed in modern fiction."—*Boston Journal.*

"The 'Aspern Papers' is like a miniature by a master hand—perfect in finish and yet full of suggestive touches. . . . Both the other stories, from beginning to end, enhance the reader's attention."—*Scottish Leader.*

COACHING DAYS AND COACHING WAYS. By W. Outram Tristram. With numerous Illustrations by Hugh Thomson and Herbert Railton. *Immediately.*

THE AMERICAN COMMONWEALTH. By James Bryce, D.C.L., M.P., Regius Professor of Civil Law in the University of Oxford, and author of 'The Holy Roman Empire.' *Shortly.*

VOL. XLVII.—NO. 1223. THURSDAY, DECEMBER 6, 1888. PRICE 10 CENTS.

TWENTY QUESTIONS

ON

TOPICS OF THE DAY.

1

Should Dakota remain a Territory?

See "Dakota," by P. F. McClure, in HARPER'S MAGAZINE for February, 1889.

2

What is the meaning of the discussion about "the spirit of unrest" in the religious world?

See "The Clergy and the Times," by Archdeacon Mackay-Smith, in HARPER'S MAGAZINE for January, 1889.

3

What is the matter with Ireland?

Read, in HARPER'S MAGAZINE for January, 1889, "Manufacturing Industry in Ireland," by Mr. Commissioner MacCarthy, Dublin.

4

Upon whom has the mantle of George Eliot fallen?

See Constance Fenimore Woolson's serial story, "Jupiter Lights," in HARPER'S MAGAZINE for 1889.

5

What are the prospects of Russia in case of a European war?

Read a paper on the Russian Army by a Russian General, in HARPER'S MAGAZINE for 1889.

6

What has Ruskin done for modern life and thought?

See articles by Anne Thackeray Ritchie and Dr. Charles Waldstein, in HARPER'S MAGAZINE for 1889.

7

What does amateur photography amount to?

See "Modern Amateur Photography," by F. C. Beach, Ph.B., in HARPER'S MAGAZINE for January, 1889.

8

Who talk the best English?

Read "Colloquial English," by Professor A. S. Hill, in HARPER'S MAGAZINE for January, 1889.

9

Where are the most graceful and sympathetic essays on our modern life to be found?

See the "Editor's Easy Chair," by George William Curtis, in HARPER'S MAGAZINE.

10

What is the real condition of the Russian people?

See "A Russian Village: an Artist's Sketch," by Vassili Verestchagin, with illustrations by the author, in HARPER'S MAGAZINE for 1889.

11

What are the characteristics of life at a great imperial court?

Read, in HARPER'S MAGAZINE for 1889, two papers on "Social and Court Life in Russia," by Vicomte Eugene Melchior de Vogüé, one of the "Forty Immortals."

12

Why do art collectors frequent the Hotel Drouot?

See "Hôtel Drouot," by Theodore Child, in HARPER'S MAGAZINE for February, 1889.

13

Does Canada want to be annexed?

See article on the Dominion of Canada, by Charles Dudley Warner, in HARPER'S MAGAZINE for March, 1889.

14

Has Sir Walter Scott lost his charm for this generation?

To be answered by the reception which the public gives to 'Abbotsford,' a description (never before published) by Sir Walter Scott, in HARPER'S MAGAZINE for 1889.

Public Library

15

Why did England undertake the Hunza-Nagar expedition just ended?

See "Nepaul, the land of the Goorkhas," by Henry Ballantine, in HARPER'S MAGAZINE for February, 1889.

16

What are the present tendencies of literature?

Read the "Editor's Study," by William Dean Howells, in HARPER'S MAGAZINE.

17

Is the "Nebular Hypothesis" tenable?

See "The Origin of Celestial Species," by Prof. Norman Lockyear, in HARPER'S MAGAZINE for 1889.

18

What degree of development has been reached in Norway?

See three papers entitled "Norway and its People," by Björnstjerne Björnson, in HARPER'S MAGAZINE for 1889.

19

Have the riches of Shakespeare been exhausted by artists and critics?

See Edwin A. Abbey's illustrations of Shakespeare's Comedies, and accompanying text by Andrew Lang, in HARPER'S MAGAZINE for 1889.

20

What are always topics of the day?

The wit and humor of the "Editor's Drawer," conducted by Charles Dudley Warner, in HARPER'S MAGAZINE.

If you wish to be informed on every subject of interest, subscribe at once for HARPER'S MAGAZINE. A year's subscription makes an acceptable Christmas present. $4 00 a year.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. — 10

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding. — 15

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 9,100 copies. The Subscription List is always open to the inspection of advertisers.

***Copies of THE NATION may be procured in Paris of Brentano Bros., 17 Avenue de l'Opéra; and in London of B. F. Stevens, 4 Trafalgar Square, and George Street, 30 Cornhill, E. C.

Schools.

Alphabetized, first, by States; second, by Towns.

CONNECTICUT, Clinton.

MORGAN SCHOOL, FOUNDED BY the late Chas. Morgan of New York, a thorough preparatory school for both sexes. DWIGHT HOLBROOK, A.M., Principal.

CONNECTICUT, Middletown.

WILSON GRAMMAR SCHOOL.—A Preparatory School for Boys. $500 per year. For Circular address E. W. WILSON, A.M.

MARYLAND, Baltimore.

EDGEWORTH BOARDING AND DAY School for Girls will reopen on Thursday, the 20th of September. Mrs. H. P. LEFEBVRE, Principal.

MARYLAND, Baltimore,

UNIVERSITY OF MARYLAND.— Law School. Nineteenth annual session, October 8, 1888. Address HENRY D. HARLAN, Sec'y.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School. Address the Dean. EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston.

INSTITUTE OF TECHNOLOGY. Courses in Civil, Mechanical, Mining, and Electrical Engineering, Chemistry, Architecture, etc. JAMES P. MUNROE, Sec'y. FRANCIS A. WALKER, Pres.

MASSACHUSETTS, Boston, 259 Boylston Street.

CHAUNCY-HALL SCHOOL (6rst Year). —Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. Of the twelve candidates presented by Chauncy Hall at the June examinations only one had any condition in mathematics. The location of the school building, on Copley Square, is especially attractive, and is very near the Institute.
Preparation for Harvard, with or without Greek.

MASSACHUSETTS, Boston, 112 Newbury Street.

THE MISSES HUBBARD'S SCHOOL for Girls will reopen October 1, 1888. A limited number of boarding scholars will be received.

MASSACHUSETTS, Cambridge, Larch Street.

HOME FOR BOYS.—DR. ABBOT ADMITS not more than four boys into his family, to fit for college or educate privately. Separate tuition, with best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D.

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys (twenty-second year).—Begins October 1, 1888.

MASSACHUSETTS, Quincy.

ADAMS ACADEMY.—PREPARA- tory boarding school for boys. School reopens September 12, 1888.
For all information apply to WILLIAM EVERETT, Ph.D.

NEW YORK, Suspension Bridge.

DE VEAUX COLLEGE.—A Military Boarding School for Boys. WILFRED H. MUNRO, A.M., President.

NEW YORK, Syracuse.

MRS. C. M. WILKINSON'S HOME School for Girls. Number limited to ten. $1,000 per year. No extras. School year begins September 19, 1888. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Louisa M. Alcott, Hon. Andrew D. White.

PENNSYLVANIA, Bryn Mawr, near Philadelphia.

BRYN MAWR COLLEGE.—A COL- lege for Women. The Program stating the graduate and undergraduate courses of study will be sent on application.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for Young Ladies reopens Sept. 28, 1888.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

ENGLAND, London.

TO FAMILIES GOING ABROAD.—A lady of birth and high social position offers a refined English home and high class education, with her own daughters, from first class professors in English, French, Music, Drawing, to the daughters of gentlemen. References by permission to her personal friends, Sir Percy and Lady Douglas, Lord Richard Browne, Lord Brassey, Sir Francis and Lady de Winton, Sir Arthur and Lady Mackworth, General and Mrs. Lempriere, General Sir T. I. Bissett, and others. Highest references required. Terms, inclusive, £200 a year. Address M. M., care of Messrs. Holt, Laurie & Co., 17 Whitehall Place, London. See prospectus at the office of "Nation."

JAMAICA, Potsdam School, Sta. Cruz Mts.

THE REV. W. D. PEARMAN, M. A. (Cambridge), prepares for Business and Universities. In the Cambridge University Local Exams., 1884, a Potsdam boy stood 2d in Greek and 10th in Latin, of all England. For terms apply as above.

Teachers, etc.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., PRI- vate Tutor, 19 Ware St., Cambridge, Mass.

What Better Gift

to make a child than one of the Saving Fund Trust Deposit Certificates of THE KANSAS INVESTMENT COMPANY?

This affords to parents an excellent opportunity of illustrating to children the earning power of money and the importance of saving. Ten Dollars deposited twice a year for ten years yields the sum of $300.00, when deposited with The Kansas Investment Co.

This Company issues

Safety Fund Trust Deposit Certificates

payable ten years after date of issue in the following amounts:

$300, requiring 20 deposits of $10 semi-annually.
600, requiring 20 deposits of 20 semi annually.
900, requiring 20 deposits of 30 semi annually.
1200, requiring 20 deposits of 40 semi-annually.
1500, requiring 20 deposits of 50 semi-annually.
1800, requiring 20 deposits of 60 semi-annually.
2100, requiring 20 deposits of 70 semi-annually.
2400, requiring 20 deposits of 80 semi-annually.
2700, requiring 20 deposits of 90 semi-annually.
3000, requiring 20 deposits of 100 semi-annually.

If the holder should wish to discontinue further deposits at any time before the twenty deposits have been made, the Deposit Certificates will be worth, at the expiration of their term, an amount equal to all the deposits made thereon, together with interest at the rate of four per cent. per annum (compounded semi-annually) from the respective dates of each. Every certificate shows what this amount will be for any number of deposits made. The entire amount of all deposits on these Certificates is held as a *Special* Trust Fund and is invested in real-estate first mortgages, the interest on which is again invested and placed with the trustee, and these Certificates are the direct obligation of the Company.

Certificates will be issued when first deposits are made. Write to us at our home office in Topeka, Kansas, or at 101 Devonshire Street, Boston, and Application Forms will be furnished. Deposits may be made by post-office money order, bank draft, registered letter, or express, or at either office of the Company.

The Nation.

Recent Press Comments.

"THAT the *Nation* was the forerunner and the first successful example of independent journalism as it exists to-day may be asserted without fear of successful contradiction; and it must be reckoned to-day as among the most worthy representatives of the new departure in newspaper methods."—*Philadelphia Times.*

"THE *Nation* has fairly fulfilled its promise to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"MANY changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"WE have often had occasion to differ widely with the *Nation*; but its intelligence, its courage, and the great service it has rendered to purity and independence in public life, have always received our heartiest recognition. The *Nation* has appealed especially to thinkers and students, and although its constituency of readers has been comparatively small, its influence has been out of all proportion to its circulation. Its success has been almost contemporaneous with the rise of a new school of thinkers on public questions in this country."—*Christian Union.*

Scribner & Welford's
NEW BOOKS.

The Reminiscences and Recollections of Capt. Gronow;

Being anecdotes of the camp, court, clubs, and society, 1810–1860. With portrait, four woodcuts, and twenty etched and aquatint illustrations from contemporary sources by Joseph Grego.

Illustrated throughout, in 2 vols., royal 8vo, cloth, gilt top, with 25 illustrations in duplicate, one on plate paper, remarque proofs, and the other on Whatman paper, with titles, and colored by hand, $20.00, each copy numbered.

The Life and Times of Girolamo Savonarola.

By Prof. Pasquale Villari. Translated by Linda Villari. Portraits and Illustrations in Photogravure. New Edition, Revised and Enlarged. 2 vols., royal 8vo, cloth $9.00.

This is the work of an eminent scholar, who has made a special study of the period of the Renaissance. It is founded on the results of much original research, not only in the archives of the Government, but also among papers preserved by the families of the old Italian nobility. The search has brought to light many new documents of great importance, and in the light of them the author has considered Savonarola both as philosopher and as statesman. The work may be considered the only one that does full justice to the life and public services of one of the most remarkable men of his time, and one of the most brilliant lights of mediæval history.

Jerusalem.

The city of Herod and Saladin. By Walter Besant and E. H. Palmer. Map and Frontispiece. New edition, revised and enlarged. Crown 8vo, cloth, $3.00.

Old Chelsea:

A Summer Day's Stroll. By Benjamin Ellis Martin. Illustrated by Joseph Pennell. Sq. 12mo, cloth, $2.50.

NEARLY READY.

Napoleon at St. Helena.

By Barry E. O'Meara, Body Surgeon to the Emperor. A New Edition, with copious Notes and other additions, and embellished by several colored Plates, Portraits, and Woodcuts. In two vols., demy 8vo, cloth, $10.00; half calf, $15.00.

Messrs. S. and W.'s stock of richly bound and rare books is now unusually full and attractive, including choice library sets and single volumes, many of them bound in new and beautiful designs, and all selected with the utmost care. Full Catalogues of our regular stock, also of choice and rare books, will be mailed, if desired, to those interested.

New Holiday Juvenile Catalogue ready.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

THREE
STANDARD WORKS

The Diary and Letters of Gouverneur Morris.

Minister of the United States to France, Member of the Constitutional Convention, etc. Edited by Anne Cary Morris. With two Portraits. 2 vols., 8vo, $7.50.

The interest attaching to Morris's Diary and Letters is personal and social, as well as political and historical. His picture of French society and French politics, previous to and during the Revolution, has a photographic accuracy of detail that is full of value, and is presented with a candor that is most entertaining. His letters to Washington, Jefferson, and others reveal his patriotic spirit, his soundness of judgment, and his shrewd, native wit. The work practically opens with his departure for France in 1788, and is brought down to his death in 1816—a contribution of the greatest importance to the social and political history of a memorable period.

A History of French Painting.

From its Earliest to its Latest Practice. Including an Account of the French Academy of Painting, its Salons, Schools of Instruction, and Regulations. By C. H. Stranahan. Superbly illustrated. 8vo, $5.00.

As a contribution to the history of art the value of this work is not easily over estimated. Every phase of the subject is treated with detailed fulness, and the work thus occupies a place that has always been vacant.

"The season has brought no more valuable book than this. It is an encyclopædic volume, deserving of a place in the library of every one who would know the art history and theories of his time."—*Buffalo Express.*

Men and Measures of Half a Century.

Sketches and Comments. By Hugh McCulloch, Secretary of the Treasury in the Administrations of Lincoln, Johnson, and Arthur. 1 vol., 8vo, $4.00.

"Without question, the great book of the year."—*Cincinnati Inquirer.*

"It contains more of interest to the general reader than any book published of late years."—*Minneapolis Tribune.*

"An intensely interesting book."—*Philadelphia Inquirer.*

"Few such works have appeared in this country."—*Providence Journal.*

PUBLISHED AND FOR SALE BY

CHARLES SCRIBNER'S SONS,

743–745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 6, 1888.

The Week.

If the President's message of last December gave the country a surprise by its boldness, the present one will do hardly less. The Communism of Capital is the principal topic of his discourse, and in handling it he uses terms here and there which may be considered injudicious, but the groundwork of the indictment he brings against the combination, or caste, that enjoys protection and establishes monopoly under the tariff is perfectly true. If the terms employed in characterizing this privileged class seem harsh, some allowance must be made for the natural feelings of one who has good reason to believe that the recent election was snatched away from him by an unparalleled expenditure of money for the purchase of "floaters in blocks of five," and that this crime was committed by those who enjoy special favors under the revenue laws at the expense of the great body of their fellow-citizens.

In characterizing this tariff arrangement as a species of socialism, the President is within the lines of the best scientific authority of the age. There is a well-remembered passage in Bastiat's attack upon the socialism of his time, in which he showed that the doctrines of Louis Blanc were the logical outcome of protective tariffs, and that all the arguments which make for the one make for the other also. Concede that it is right to make laws to put money into the pockets of one class on the theory that their expenditures for wages and materials enrich the whole community, and you are estopped from arguing that any other use of the taxing power would not have the like effect. From these premises the doctrine was formulated in France that it was wise and judicious also for the Government to establish national workshops, and to lend money to workingmen for the same purpose. It was not a long step to declare that it was the duty of the Government to furnish remunerative employment to everybody. This is what we shall come to, if the doctrine continues in force that the Government must see to it that steel-rail-makers, sugar-refiners, salt-boilers, the owners of pine forests, and other persons make satisfactory profits. And we shall come to this complexion all the more rapidly if this doctrine shall be supplemented by the practice of extravagant and unnecessary appropriations of public money to get rid of the inconvenient surplus in the Treasury. If that portion of the message which treats of the communism of capital gives a shock to the capitalistic class, it is precisely what they need, for capital can have no secure foundation under universal suffrage except through equality of rights and privileges. The laws must not only secure such equality, but they must seem to do so. The door must be closed to dispute upon that point, and it never can be closed so long as any portion of the community is taxed for the benefit of any other.

We observe that Secretary Vilas does not explain in his annual report his reasons for withholding for a period of ten months the opinion of the Attorney-General on the subject of public lands within the so-called "second indemnity limits" of land-grant railroads, and in the meantime making rulings contrary to that opinion. A vast deal of trouble and annoyance, and great expense, have been caused both to the railroads and to settlers on the indemnity lands, the former being obliged to defend the latter in thousands of cases against claim-jumpers. If it were intended to set aside the opinion of the Attorney-General as a rule of guidance, and take the case to the Supreme Court on the chance that the opinion was wrong, we should be able to understand the erratic course adopted, although we should not see much use for an Attorney-General as a permanent branch of government if his opinions were to be habitually ignored; but in this case it appears that there was no intention to set aside the opinion for good and all, but only during the campaign. If this was the idea, it was as futile as it was unprincipled; for the land question was scarcely heard of in the political contest, being completely swamped by the tariff question.

All intimations which have come from Indianapolis during the past few weeks are to the effect that John Sherman is to be Gen. Harrison's choice for Secretary of State. Even such a devoted Blaine organ as the Philadelphia *Press* has published information, apparently drawn from authentic sources in Indianapolis, that Mr. Blaine would not be a member of the Cabinet. In view of these facts the following special despatch from Augusta, Me., in the *Tribune* of Tuesday, is interesting:

"One of Mr. Blaine's most intimate friends says that, while no formal offer has been made, there is good reason to believe that Gen. Harrison will first offer the place of Secretary of State to the man who might have been nominated for the Presidency if he would have taken it, and who is to-day the most highly esteemed Republican in the land; and, further, that Mr. Blaine, after much consideration, and after taking the counsel of several of the members of the Maine delegation and other men in whom he has confidence, has intimated to them that he would accept the Secretary of State's portfolio if it were offered him."

That so unusual an announcement as this should be made in the official Blaine organ at this time, seems to indicate some solicitude on Mr. Blaine's part concerning Gen. Harrison's intentions. It is, in fact, nothing less than a public notification to him of what Mr. Blaine and Mr. Blaine's friends expect from the new President.

In view of the reputation for obstinacy which Gen. Harrison has, this experiment by the Blaine contingent will be an interesting one to watch. It has been suspected for some time that they were not entirely satisfied with the view which Gen. Harrison takes of his obligations to them. If this despatch be as official as it seems, it forces upon the General the necessity of deciding at the outset of his Administration whether he or Mr. Blaine is to be President. He cannot put Mr. Blaine at the head of his Cabinet, after a notification of this kind, without confessing that he is not his own master. In fact, Mr. Blaine's friends have taken the course which gives the new President the best possible excuse for ignoring their claims.

The faithful Philadelphia *Press*, talking on Saturday of the value of the "Advisory Committee" as a collector and distributor of campaign funds, said, by way of accounting for the enormous size of Wanamaker's treasury:

"The legitimate expenses of a national political canvass have come to be enormous. There is a great educational work to be done; a vast literature to be created and circulated; an army of speakers to be brought into the field; various organizations to be made and mobilized; machinery to be perfected for getting out the full vote; safeguards to be provided against fraud; all the immense enginery for persuading and marshalling at every fighting point the last score among six million voters."

Well, now, this being so, why did Wanamaker and Quay, when they had finished their noble work, burn their books and accounts? Missionary, tract, and Bible societies, societies for mutual improvement and for aid to home study, lyceums and lecturing associations, not to speak of charitable and philanthropic associations, do not, after six months of unusual activity, commit all their papers, vouchers, and books of accounts to the flames. No such thing, surely, is ever thought of in Wanamaker's Bethel Sunday-school. Why, then, was it done by the Advisory Committee? Religious and educational organizations, such as the Advisory Committee seems to have been, on the contrary, when they have raised a large sum of money, and spent it in worthy ways, are usually eager to preserve and spread the record of it, that others, coming after them, may be encouraged to do likewise. In fact, the more one reflects on the Wanamaker-Quay holocaust, the more mysterious it seems.

But does not Col. Elliott F. Shepard, as religious a man as Wanamaker, and, indeed, probably the most religious Republican in the world, say that Wanamaker's Committee paid "Johnny" O'Brien or his assigns $150,000 for the purchase of three "movements" in this city, which O'Brien wickedly failed to deliver? Now, under which head did this transaction come? Was this sum devoted to "educational" purposes, or was it used in the "creation and circulation" of "a vast literature," or the hire of "speakers," or the "mobilization of organizations," or "in safeguards against fraud," or in "persuading

and marshalling"? Col. Shepard appears to think it came under none of these heads, but that it was intended to be used by certain parties not named, and was actually used, in the gratification of common physical needs, such as whiskey, tobacco, imported raiment, diamonds, light wagons, and trotters. The grief of Wanamaker when this news reached him must have been too sacred for description.

Has anybody seen in a Republican newspaper any call for a Congressional inquiry into the charges of bribery in the recent election? We have been able to find but one, the Indianapolis *Journal*, namely. What is the reason of this silence? It is very likely that an inquiry would show improper use of money by both great parties, but this does not deter Democratic Congressmen and newspapers from demanding a thorough investigation. Why are the Republicans so much more timid? No patriotic man can deny, in view of the mass of evidence on the subject, that such an inquiry is imperatively necessary, and we should therefore expect to see honorable and public-spirited men and journals demanding that it be authorized and pushed without fear or favor. There is no surer method for disproving the charges if they are false, and none more certain to arouse the public conscience to a sense of the threatened danger, than the complete exposure of them in all their details if they are true.

The Rev. Dr. Parkhurst, in his excellent Thanksgiving sermon last week, put one point regarding the demoralizing effect of the use of money in elections with remarkable force. After referring to the well-recognized evils of the practice, in making cattle out of citizens, putting our institutions more and more at the mercy of demagogues, and sapping the foundations of the republic, he brought out another feature of the matter which is not always recognized when he said:

"Suppose you contribute to campaign purposes—that is a convenient euphemism—suppose you contribute to campaign purposes $50,000, which you cannot say you *know*, but which you are *morally certain*, is going to be applied in purchasing votes. Now, you don't do that hoping for nothing again. That is business: you expect in some way to get it back again. That is investment: it is investing in futures, as you call it on the Street, as much as when you buy wheat that is not grown yet. You take stock in the prospective Administration; you lay down so much cash, and you take a trust *mortgage* on the Administration, and no matter how good a man the President may be, the first thing he will have to do when he gets established in office will be to pay off his mortgages. Men are already beginning to clamor for their dividends, and next March Washington will be crammed full of coupon-holders."

The Thanksgiving sermons of Bishop Coxe and the Rev. Dr. Storrs present a very striking contrast. Bishop Coxe, with the fear or favor of no party before his eyes, denounced in plain and indignant terms the use of bribery by both parties in the Presidential election, saying that in no previous election had there been such wholesale purchase of votes, and that when one hears on trustworthy authority that whole States were bought, the honor of American politics was indeed being degraded, and we were fast falling into a bad state of affairs. Dr. Storrs had evidently heard nothing about such a national danger as this, for he gave thanks at much length that men of high character had been chosen; that we had heard the news of their success so soon; that the vote was so decisive; that all danger of a military dictatorship had passed away, and that the solid South was doomed. The only perils which he could discern on the political horizon were the rum influence in politics, and the aggregation of population in cities. He had evidently not seen the pious Col. Shepard's statement of the failure of O'Brien to use good Republican money to buy votes in this aggregated population, nor had he ever read Col. Dudley's directions to buy "floaters in blocks of five."

Mr. Joseph G. Cannon of Illinois is the low-tariff, anti-subsidy candidate for the Speakership of the next House, if the Republicans have a majority of that body. Mr. Cannon was the first man who "made a break" against that clause of the Chicago Platform which demanded the repeal of the whiskey tax "rather than the surrender of any part of our protective system." He has been for years an uncompromising opponent of steamship subsidies, and in one case at least prevented the House from concurring in a Senate bill which had the subsidy feature attached to it. He has made his mark in such an unmistakable way that there can be no doubt what his candidacy signifies. It means the opposite of Mr. McKinley on the vital issues of the day. The latter is the candidate of the Chinese-wall protectionists. Mr. McKinley has lost ground as a party leader since the Senate Committee threw out his free whiskey plank, and adopted a bill which avowedly abandoned a part of our protective system. His election as Speaker is therefore not probable. But it may turn out that McKinley and Cannon will mutually efface each other, and let in Mr. Reed of Maine, whose position on the tariff question is satisfactory to the protected classes and the subsidy-hunters, although not so wild-eyed and fanatical as that of Mr. McKinley. This is a case for that kind of a compromise where one side gets all the fruits of victory and saves to the other side a decent appearance.

The workingmen of the country have an instructive object-lesson on the relation of tariff to wages in the conduct of the carpet-manufacturer, Higgins. During the late campaign, Higgins was a bitter opponent of the Democratic candidates, "British free trade, and pauper labor of Europe." He believed in "American markets for American manufactures, and American wages for American workingmen." The *Times* reports that he compelled his men to march in the Republican parade, and threatened them with discharge if they did not vote for Harrison. No sooner was the election over, however, than he discharged 700 of his men, and announced that he should reduce the wages of those whom he retained from 10 to 15 per cent. He was informed that he had signed an agreement not to reduce wages without giving the men two weeks' notice, and he has magnanimously consented to abide by that agreement, so that the reduction will take effect on December 17. Simultaneously with the reduction in wages comes the announcement that the price of carpet will be advanced from 2½ to 7½ cents per yard. So that the "triumph of protection" will reduce the workingmen's wages at the same time that it enhances the price of the carpet which he has to buy.

The anti-pooling clause of the Inter-State Commerce Law is discussed in the annual report of the Commerce Commission in a spirit of fairness and good sense. The evils growing out of secret rate-cutting and frequent railroad wars are admitted and commented upon. The suggestion so frequently and gratuitously made, that it is in the power of the railroads themselves to put an end to all this by mutual agreement without pooling, is also considered. The difficulty of holding all to an agreement once made, without pooling, is acknowledged; but the Commission are not prepared as yet to recommend a repeal of the anti-pooling clause. They look forward, however, to the possibility of something of that nature becoming imperative in the future. This seems to us to express pretty fairly the attitude of public opinion at the present time. It is an attitude of expectancy, and is very well exhibited in a collection of opinions just published in *Bradstreet's*, embracing those of railway officials, students of railway problems, and editors of railway and other journals. In this "symposium" it is a fact of much importance that most of the class who may be called railroad professors favor "pooling under regulation." Mr. Simon Sterne means by "regulation" the regulation of the Commerce Commission itself. Prof. E. R. A. Seligman thinks that the prohibition of pooling will end in the swallowing of the weaker by the stronger lines, and that this would be worse than pooling. Prof. Hadley says: "I should like to see pooling legalized and regulated, but do not believe that Congress will do it." Senator Reagan of Texas, on the other hand, says:

"Having in view all the Trusts, combines, and pools in nearly all the important branches of commerce, by which the great body of the people are plundered for the benefit of the few, I can conceive of no greater single wrong to the people at large than a repeal of the anti-pooling provision of the Inter-State Commerce Law."

The Court of Appeals has decided, as was generally expected, that the dissolution of the Broadway Railroad Company by act of the Legislature does not affect the rights of the mortgagees or other creditors, or, in fact, in any way affect the ownership of the property, which consists in the right to run a street railroad along Broadway, and is held in perpetuity by the creditors of the late company or their assignees. The mortgagees may in fact now either work the road themselves, or sell the right to work it. The court admits fully the right of the State to terminate the life of corporations organized under its laws, and the right of the Attorney-General

by suit to forfeit the franchises of a corporation, or to regulate and restrain it in the exercise of such franchise, but denies the right of anybody to touch the property held by the corporation. The inconvenience of this rule, where the property consists in the privilege of perpetually running vehicles in the most crowded streets of a great city, is obvious enough. Hence, the decision may be fairly called a solemn warning against the policy of bestowing such franchises as the city railroads hold. In fact, if the city does not possess the right of regulating fares, or raising the taxes so as to diminish the value of the property, it has no control over the street railroads whatever. The good it does the State or city to dissolve a railroad corporation does not, therefore, clearly appear. When any other business corporation goes out of business, its property is sold and divided, and disappears, but the property of a street-railroad company "goes on for ever." Sharp certainly builded better than he knew. He has in the Broadway Railroad a monument more enduring than brass. We have probably not heard the last word on this subject even yet.

The folly of Vermont in clinging to an antiquated system of holding elections and opening legislative sessions has just been illustrated again. Formerly the State elected a new Governor and Legislature every September, and the Legislature met on the first Wednesday in October, under an unwritten law which required adjournment on the day before Thanksgiving, which comes on the last Thursday of November. Finally the annual system was given up, and elections now come every other year, but the time for holding elections and opening the Legislature was not changed. The result is, that the Legislature is always pressed for time during the closing week, and the most important business is rushed through in helter-skelter fashion. Nor is this the only evil of the system. Every Presidential year the State has two elections—one for State officers in September, and the other for Presidential electors in November. There is absolutely nothing to be said in defence of this method, while one would suppose the argument of expense alone sufficient to compel a change. Not the least of the advantages of a change to holding all elections in November would be the fact that it would allow the Legislature to meet, like those of so many other States, in January, and sit as long as should be necessary to do the work well.

If Mr. Edison is at work, as reported, upon a phonograph which will reproduce in an audible voice a morning newspaper for every breakfast-table, he ought to reflect upon the moral responsibility which the success of such an experiment will entail upon him. He would be a reckless father who should deliberately set a phonograph of that kind a-going at his breakfast-table. Imagine, for instance, the effect upon a respectable family of listening to the first page of one of Tuesday's morning papers in which the place of honor is given to a detailed account of an adventure by a notorious gambler in a haunt of other gamblers, with full particulars of the man's disreputable career. The reader can skip this kind of news if he wishes to, but he would have to listen to it, and have his family listen also, if he had to take his news in regular order from the mouth of a phonograph. In fact, few heads of families would tolerate an infliction of current "journalism" in that form for longer than five minutes; after that they would either order the instrument out of the house, or smash it with the first heavy weapon within reach.

The Irish home-rule question harasses the British Government in every quarter of the globe. It has occupied for the last seven years two-thirds, at least, of the time and attention of the British legislators at home. It has had an unpleasant and at times dangerous influence on the relations of Great Britain and the United States. Within a few weeks it has made its appearance in a very annoying form at the antipodes. Sir Henry Blake is an Irishman, belonging to a landlord family, who began his official career as an officer of the constabulary. He was then made a resident—that is a paid—magistrate; and in that capacity had something to do with enforcing the last Gladstone Coercion Act, executing writs of ejectment, and so on. He was then made Governor of Newfoundland, and recently was promoted to the Governorship of Queensland, Australia. But no sooner is this done than the Prime Minister of the colony announces that they do not wish to receive him; that his antecedents make him obnoxious to a portion of the Queensland public, and that they think they ought to be consulted in the choice of a Governor. In other words, the Government of Queensland is afraid of the "Irish vote," and does not conceal the fact. The Colonial Office in London, while denying the right of a colony to dictate the selection of a Governor, does not care to push matters to extremities with a colony like Queensland, and therefore sacrifices Blake; but it is a bitter pill for the Unionists. The *Economist* says the incident is one of "grave importance."

The new penal code which has passed the Italian Chamber of Deputies, and is now before the Senate, has some sections bearing on modern forms of labor troubles, which are in line with the legislation towards which all civilized countries are moving, if they have not already enacted it. This new code is a revision of the one now in force, or rather a consolidation, with amendments, of the different codes of different provinces. It was laid before the Chamber by Chancellor Zanardelli, November 22, 1887, and referred to a committee whose chairman and secretary were the eminent jurisconsults, Mancini and Villa. After exhaustive study and discussion, it was passed with but slight changes, and is expected to receive the sanction of the Senate also. Among the six kinds of "crimes against liberty" which are enumerated is the class of "crimes against freedom of work." Article 156 provides a punishment of 20 months' imprisonment and a fine of from 100 to 3,000 lire in the case of any one who "with violence or threats limits or destroys in any way the free pursuit of industry or commerce." Article 157 provides the same punishment, except the fine, for those who "with violence or threats cause or prolong a stoppage or suspension of work, with the purpose of forcing, to the prejudice of either workingmen or employers, either an increase or a lowering of wages, or of terms of employment other than those previously agreed upon." Article 158 deals directly with the leaders in any such conspiracy on the part of workmen or combination on the part of employers, and provides a punishment in their cases of imprisonment for three years and a fine of 5,000 lire.

These provisions of the new law really constitute a positive gain for Italian workingmen over the existing code. Under the terms of the code of 1859, employers can be punished only when they conspire to lower the wages of workingmen, or to force new conditions of employment upon them, *in an unjust and cruel manner;* while, on the other hand, laborers become exposed to prosecution for starting an agitation without *a reasonable cause.* As will at once be seen, such statutes leave immense discretion to the judge called upon to administer the law, as to what constitutes an unjust and cruel manner or a reasonable cause. The new code proposes to do away with all distinctions between employers and workmen, and to make the provisions of the law simple and clear. As was said by Chancellor Zanardelli, in his report accompanying the new code, it goes upon the supposition that "a man's labor is a piece of property of which he may dispose, like any other, to any man, as he pleases, provided only that, in the exercise of his own rights, he does not interfere with those of another."

The latest device of M. de Lesseps to raise money for his Panama scheme is to give a preference to the last bonds issued in the matter of interest payments. If this means that the interest on the latest bonds shall be paid first, some doubt must exist as to payment of the interest on the earlier bonds. Such a plan of finance is a confessed bankruptcy. The *Économiste Français* of November 10, alluding to the practical failure of the Lesseps stumping tour in the provinces, says:

"The combinations to which the promoters of the Panama enterprise are compelled to resort ought to open the blindest eyes. In spite of the postponement of the closing of the conditional subscription, it is said that hardly one-half of the 200,000 bonds will be taken, and, to render the subscription valid according to the announced programme, recourse must be had to a financial group which shall take the other 100,000 bonds on private terms. This expedient, which must cost a round price, will support the market quotation of the securities for a few weeks. It is permissible to compare the direction of the enterprise to a prodigal borrowing at any price. Moreover, it seems that the public is deceived by the pretence that 200,000 bonds are subscribed at 350 francs, when half, if not more, are taken by a syndicate of bankers at a price not stated, and probably very low. The company persists in refusing to liquidate: it cannot escape liquidation, but it will come to it under more and more disastrous conditions."

THE CORRUPTION FUND.

As a further and additional reason for selling a Cabinet place to Mr. Wanamaker, it is now stated that he was the organizer of an "advisory committee" of business men who raised and had the handling of all the money, to the exclusion of the wicked Quay, who was not allowed to touch it. "The able, adroit, and experienced politicians of the Committee of course brought the resources of their skill into play," the Philadelphia *Press* says, "but they did it through legitimate channels." The "business men," too, whom Wanamaker called around him, "doubled their subscriptions," we learn from another source, "when they found the project in the hands of business men instead of politicians. When men bemoan the use of money," adds the *Press*, "which has become inseparable from our elections, though the amount is exaggerated, let them remember and rejoice at the movement which brings the most trusted and responsible business representatives to guide it in proper directions." We have no doubt that this "Advisory Committee of Business Men" will hereafter be a regular appendage of the National Committee.

What all this means is simply that the men who wish to buy places under a new Administration for cash mean hereafter to deal directly with the President, and not as heretofore through an intermediary. Previous to this late canvass the Chairmen of the National Committees secured the large subscriptions as best they could, in a quiet, not to say underhand, way. Their amounts and the source from which they came were not made public, and all the subscriber got for his money was a sort of shamefaced and vague understanding that when the good places came to be distributed, he should not be forgotten. The reason of this was simply that it is only since the war that the idea has sprung up that a subscription in money gave a man a "mortgage" on the Administration, to use Dr. Parkhurst's phrase. In the older days it was assumed as a matter of course, and as something due to his character, that a man who gave money to a campaign fund gave it from love of the cause, and looked for nothing personal in return. Any other construction he would have treated as an insult. After awhile, however, as money became more necessary, managers began to promise, and subscribers began to expect, something in return for the money, but did not wish to have it known. This vague arrangement, however, has not worked satisfactorily. It left the incoming President in ignorance of his indebtedness, and consequently led to his disappointing some of the large donors in ways which made them positively, but secretly, furious. They did not dare to air their wrongs in the newspapers, because the press had not yet recognized the venality of offices, and because they had nothing to show in the way of a contract; so they took their satisfaction in private cursing and denunciation of the Administration, and in vows not to be fooled again in the same way.

In the appointment of the "Advisory Committee," composed of leading subscribers who put up their money in open daylight, and are in formal and visible communication with the candidate, and who make no secret that they expect value for their checks, another and very important step towards the plutocratic system has been taken. It will hereafter be a settled practice to take one member of the Cabinet, at least, from the Committee. Of course he will usually be, as in Wanamaker's case, the Chairman. And, we may be sure, the Committee will not long be content with one place. Before very long they will demand more, and rich men will try to get into the Committee, and have their donations noised abroad, as the sure way to a "Cabinet position." There is no road in politics so well known, in fact, as that on which our Government is now travelling; it is worn with the footsteps of many nations in all ages. Wanamaker is really one of the most familiar figures in history. He has stood behind a dozen thrones, and overthrown half a dozen republics.

The New York *Times*, in supporting the suggestion that the use of money at the late election should be investigated by Congress, thinks it necessary to guard against the suggestion that the inquiry might be made the basis of an impeachment of Gen. Harrison's title to the Presidency. There can be no danger of anything of the sort. The materials for any such contest must be furnished by some State or States, as the law exists at present; it cannot be created by anything a committee of the House of Representatives could discover. Votes which come in from any State without dispute or challenge, will have to be counted, and there is no sign or prospect, or indeed a possibility, of any such dispute arising in any State that Gen. Harrison has carried. He has been lawfully elected, even if he owes his majorities to corrupt voting. There has nowhere been any question raised of fraudulent registering or counting, or of any culpability on the part of returning officers. All that is charged against the Republican managers may, we presume, be charged against the Democratic managers also. It may as well be admitted, if only for the purposes of the inquiry, that, with larger means at their disposal, the latter would not have left Quay and Wanamaker so much to boast of; but to be entirely candid it must also be said that an inquiry would not be as damaging to the Democrats as to the Republicans. A well-known legal saw says that when two parties are equally to blame, the one who has got hold of the thing in dispute is the best off as regards legal right; but this rule does not hold good when the time comes to apportion moral responsibility. The victor then gets the larger share of blame. The man who profits most by a wrong is the one who has the worst standing in the court of morals, even when he has many confederates or participators.

What the inquiry is needed for is, not to raise any dispute, or contest any claim, or introduce any disturbance whatever into the devolution of the Presidency, but to inform the public judgment touching the evil to be dealt with. The public attention is now turned to it, and there is a strong and growing disposition to deal with it, which, however, needs to be fortified by evidence of some more positive sort than is to be found in newspaper charges or the reports of individuals. As long as there is no official, sworn testimony on the subject, tens of thousands will evade the formation of any opinion about it, or giving any aid in obtaining remedial legislation. We saw during the canvass how easy it was, even for clergymen and other professional moralists, to shut their eyes to the Republican forgeries as long as the proofs of them were only to be found in the newspapers. The very same plea will avail others now in shutting their eyes to the prevalence of vote-buying. But get a few managers on the witness-stand under oath, and all the vagueness and uncertainty which now surrounds the subject would vanish in a few hours.

The Crédit-Mobilier investigation is a fair example of what an inquiry of this sort may do in throwing light on dark subjects. When it was begun, we feel sure very few people indeed supposed anything serious would come of it. Before it had gone on many days it had ruined two or three members of Congress, including the Vice-President, and terribly smirched the reputation of several others. The Blaine investigation, the Sharp investigation, and the Croton Aqueduct investigation are all examples of the great public value of the inquisitorial powers of the Legislature. The more partisan and unreliable the press becomes, the more valuable these powers are.

How unreliable, when party interests are involved, the press is considered by a great many intelligent men, may be gathered from the account given of it by the Rev. Dr. Parkhurst in his sermon on electoral corruption on Thanksgiving Day. It is true that all the knowledge most people have of public matters they learn from the daily press, but it is clearly not this kind of knowledge that makes them very indignant or rouses them to action. For this something more substantial is necessary, and it is the Legislature only that can supply it. The attention of ministers, if we may judge from Bishop Coxe's and Dr. Parkhurst's remarks, has at last been called to the subject. It is needless to say that a very large proportion of the men who supply the money for electoral corruption are either members or attendants at Christian churches, and are, or are desirous of being thought, amenable to religious influences. We must help the ministers to get at the consciences of these men, or whatever it is that does duty as their consciences; and the only way to help them is to supply them with ammunition which the sinners cannot pooh-pooh as "newspaper charges."

THE SENATE TARIFF BILL.

THE changed position of parties has given fresh importance to the Senate Tariff Bill. It is reasonable to expect that the complexion

of any measure which passes that body will give color to the entire policy of the Republican party during the next four years. At all events, it will be the best evidence attainable of the view which leading Republicans take of their victory in the recent election. The resolution of the Senate Committee to call up their bill and press it to a passage, to the exclusion of all other general legislation, is therefore highly commendable. We may infer from this action that the leaders of the party hold themselves bound by their promises during the campaign to revise the tariff and reduce the revenue, and that they would consider it dangerous to delay such action.

The fact of most importance, we might say of overshadowing importance, is the condition of the Treasury surplus. It is imperative that this should be cut down to the measure of an economical administration. All parties are agreed upon this point. The question *how* it shall be done is the great issue of the day. The views of the Senate Committee were stated in their report on the 4th of October. Their plan, we may remind our readers, consisted of two principal measures, viz., a large reduction of the duties on sugar, and a repeal of the internal-revenue tax on tobacco, the tax on cigars being reduced but not altogether repealed. The reduction of revenue proposed by them was substantially as follows:

From sugar	$27,759,783
From tobacco	24,371,460
Additions to free list	6,428,095
Alcohol used in the arts	7,000,000
	$65,559,338

Of this total sum, upwards of $52,000,000 comes from the two items of sugar and tobacco.

The Senate bill is a protective measure (except in the item of sugar) of a very glaring and offensive description. It increases the duty on wool one cent per pound, and this proposed increase comes at a time when the prices of wool are rising in all the markets of the world. A reaction has come in the market for this staple, following upon a long period of depression. During the period of low prices there was a great slaughtering of sheep both here and abroad. In some important districts the price obtainable was not sufficient to pay for shearing and transportation. The supply was therefore reduced in obedience to a natural law, and now the turn has come. Woollen-manufacturers are complaining bitterly that they cannot get back the money they are required to pay out for materials and labor. And at this crisis in their affairs it is proposed to add 10 per cent. to the cost of imported wool by statute, while natural causes have advanced it nearly 30 per cent. It is believed by good judges that an advance of 40 per cent. would shut up a large number of woollen mills that have maintained a struggling existence under the present duties on wool. We look to see the Senate Committee abandon the proposed increase of tax on wool, more especially since the chief wool-growing States showed a lessened Republican vote in the recent election.

The reduction of duties on sugar is a step in the direction of free trade, forced by the necessity of getting rid of a lump sum of the surplus. Naturally a protectionist committee would look to see where the largest reduction could be made with the least amount of squealing. The sugar-planters and the Sugar Trust are numerically a small congregation. On the other hand, the revenue from sugar is about one-half of all the collections under the tariff. We showed in a recent article that the Senate bill reduces the protection to the Sugar Trust more than the Mills bill does. The Albany *Argus* has criticised our showing, upon the ground that we have taken the wrong standard for purposes of comparison. We took for a standard 96 degrees polariscope test, the comparison resulting as follows:

	Raw. (96 deg.)	Refined.	Protection.
Present duty	$2 24	$3 50	$1 26
Mills bill	1 82.2	2 80	0 97.8
Senate bill	1 12	2 00	0 88

The *Argus* says that the standard of comparison should have been 92 degrees, because that was nearer the average of all importations for the last fiscal year. The total importation for the year was 2,781,159,645 pounds. Of this amount 1,312,655,232 pounds were at or above 95 degrees. There is considerable variation between different years as to this point, but if we take the standard suggested by the *Argus*, the comparison will stand thus:

	Raw (92 deg.)	Refined.	Protection.
Present duty	$2 08	$3 50	$1 42
Mills bill	1 69.4	2 80	1 10.6
Senate bill	1 04	2 00	96

The *Argus* admits that so far as sugar alone is concerned, the Senate bill reduces the protection to the Trust more than the Mills bill does, but contends that there is another clause in the Senate bill which nullifies all this, makes the matter worse for the public, and "guarantees the Sugar Trust all its raw material free of duty." This is the clause which puts molasses of the lowest grade on the free list. This molasses is not used by refiners directly, but is bought by them from boilers, who are protected, under the tariff as it now stands, at the rate of about 88-100 of a cent per pound of sugar produced by boiling. Under the Mills bill they would have about 82-100 and under the Senate bill about 84-100. All this will be amply discussed when the bill comes up for consideration.

It is commonly believed that no bill will be passed by both houses at this session. Although the obstacles in the way are very considerable, we do not look upon the case as hopeless. A bill embracing the sugar and tobacco clauses and the Senate free list might pass with some slight modifications; but we should think it highly improbable that the House would consent to augmentation of any protective duties at this time, or any further robbing of Peter to pay Paul.

THE CHURCHES AND THE CITY.

THERE has been a Conference sitting at Chickering Hall which began on Monday evening, and continued during the next two days, in obedience to a call signed by many of the prominent clergymen and churchgoers in the city. The fact which has called them together is this:

"The population of New York city has for years been steadily and rapidly increasing, while at the same time the number of churches has been relatively decreasing. In 1840 there was one Protestant church to every 2,000 people; in 1880 one to 3,000; in 1887 one to 4,000."

Every one will interpret this fact in a different way. That it means something by no means pleasant or hopeful, however, every one will agree. The churches contain a very large proportion of the wealth, intelligence, public spirit, and right-mindedness of the community. They are, if not the only, the chief organizations we have, whose direct aim is to exert, in the highest sense, a civilizing influence. If they are not multiplying in proportion to population, therefore, it means that the forces of barbarism are in some degree gaining on us.

It would appear from the call to the Conference that the churches are at last beginning to understand that they have ceased, or are rapidly ceasing, to be a purifying and aggressive power, and that something needs to be done about it; in other words, that if they mean to hold their own as moral and religious agencies, they must, once for all, cease to be what too many of the Protestant churches are, pleasant and fashionable Sunday clubs, where wearied business men have their intellectual palates tickled once a week with music, good society, and soothing reflections on life, and death, and judgment. Some of them have tried, with much outlay and labor, to do their duty towards the city poor and ignorant by establishing missions and outlying chapels, and so forth, and some of the subjects set down for addresses at the Conference seemed to indicate a conviction that what is needed is a further extension of this system of missionary effort. We may instance the following as being suggestive of such effort, namely, on "The Bohemian Element," "The Italian Element," "The Colored Element," "Our Duty to the Foreign Population."

One of the things we hope from the Conference is a great clearing of both the clerical and lay mind on this subject. The poor, and ignorant, and barbarous, and anarchical, and indifferent of this city, or of any other, are not what they were fifty or one hundred years ago. They cannot be any longer won, or persuaded, or raised, by simple preaching, or even by almsgiving. They have become too knowing or too cunning for that. They are envious and suspicious of the rich and well-to-do, and they are tired of the old gospel of contentment when delivered by people who have all the comforts this world can give. Nothing touches them nowadays but the spectacle of self-sacrifice. Therefore no impression, or very little impression, can be made on them by churches which worship in fashionable quarters, on $100,000 lots, in $500,000

buildings, in which sittings are bought and sold with a heavy brokerage to the sexton, at enormous prices, and reserved for occupation by the owner as jealously as his private parlor; in which the music is hired at the cost of an opera troupe in a small German city, and discussed in the same temper and with the same standards that people apply to Patti or Nilsson. It is impossible to persuade a poor man that these are really religious organizations, and that they are really meant to show mankind the way to heaven. Nor can they "corner" a poor man by asking him, as some church-goers do occasionally, how it would be possible to "run the church," human nature being what it is, without selling the pews at high rates, if not, as in some cases, to the highest bidders. He will not argue this point. He says it is for Christians to find out how to make room for him at God's altar, and he makes merry over spiritual insight which is unequal to the solution of this extremely earthly problem. In short, the attack on "the Bohemian Element," and "the Italian Element," and "the Colored Element" must begin in the churches themselves by the display of greater simplicity and of greater indifference to money, and by some approach, for at least one day in the week, to the asceticism which once conquered the world.

Two or three Protestant churches have made a step in this direction, and we know of nothing in the religious worship of the city which is half so moving as the spectacle they present when crowded on Sunday with a plainly and even shabbily dressed multitude, who truly know what that weight of care is

> "That crushes into dumb despair
> One-half the human race."

But the two or three which have turned over a new leaf work under great disadvantages as long as the majority, a few blocks away, continue to carry out the club idea, and pastor and people give Satan full swing during the hot summer months, when the poor swelter and their children perish in the tenement-houses. There cannot be two standards of fitness in Christian life. If the free church be the real thing, there must, the poor man will say, be something wrong with the club-church; and what kind of creed is it which covers both with its blessings and promises? In short, if religious organizations are to make any impression on the masses of ignorance and barbarism which are accumulating in New York, they must work under a common discipline, and with the same outward signs of sincerity and good faith.

THE SILVER QUESTION IN ENGLAND.

THE final report of the Royal Commission, charged to investigate and report upon the silver question, has reached us. As is already known, the Commission were equally divided on the question whether any steps should be taken to promote international bimetallism, six members being opposed to such steps and six favoring them. In the former list are the names of Lord Herschell, the Hon. C. W. Fremantle, Sir John Lubbock, Sir T. H. Farrer, Mr. J. W. Birch, and Mr. L. H. Courtney, all of whom are more or less known on this side of the water as men of weight in politico-economic discussions. The only names on the other side which have any recognized standing outside of their own country as masters of these questions are Sir Louis Mallet and Mr. J. A. Balfour. In addition to the double report, Sir Louis Mallet and Mr. D. Barbour make supplementary reports on their side of the controversy, which is the bimetallic side, intimating that the line of reasoning employed by their colleagues is not entirely satisfactory to them. The other side, the monometallists, recommend efforts to "sustain silver" by the issue of ten and twenty-shilling notes or certificates, based on silver at its market value and redeemable in that metal. From this project Sir John Lubbock and Mr. Birch dissent.

It is considered in England that the equal division of the Commission leaves the whole question exactly where it was in the beginning, and as though no investigation at all had been held. We think it will do rather more: we think it will impress most people who take pains to read the document with the idea that the subject is beyond the ken of all but Omniscience, and that, where so much mist and confusion are found, or can be produced, by twelve men vested with authority to send for persons and papers, it would be highly inexpedient to do anything. Without undervaluing the weighty arguments and judicial tone of the report signed by Lord Herschell and his colleagues, or the importance of the facts they have brought together, it seems to us that they have not laid proper stress upon the strongest argument that makes for their side of the case, viz.: that the monetary function of government is simply to give the force and sanction of law to that which business experience has evolved and put in practice; in other words, to agree that whatever is the law merchant shall be the statute law also; that when the former changes, the latter shall change, but no sooner.

The gold standard has come to pass in the way of nature. It was not foisted upon civilized mankind by any act of Parliament, or Reichstag, or Congress; nor could any of these, or all of them together, have so foisted it if it had not come upon us before they took notice of it. The thing being here, it is presumptively a good thing. The presumption is, also, that any attempt by Parliament, Reichstag, or Congress, or all combined, to do away with it, and to substitute something else for it, would be pernicious in the extreme, or would only be prevented from being so by the utter futility of the attempt—the utter impossibility of changing, by the mere alteration of a statute, a course of events which does not depend upon any statute, and which has come about naturally. To declare what shall be legal tender is a very different thing from prescribing what estimation mankind shall put upon silver and gold respectively. It is this estimation that makes standards of value, and unmakes them when they cease to be serviceable and satisfactory. The six bimetallists decline to discuss the ratio at which gold and silver should be coined, looking upon that as a matter of detail. So it was considered by the two monetary conferences held in Paris in 1878 and 1881, but the conferences always adjourned just before reaching that interesting point in the debate.

The *Economist* condemns *in toto* the project for issuing silver certificates in England. This is the weakest part of the Herschell report. It is part of a vague idea entertained by the Commissioners of holding silver up by the tail, another part being a general missionary effort to induce foreign countries to use more silver than they find for their advantage. What economic science demands, above all things, is that silver be allowed to find its own level, so that production and consumption, as in other things, may balance each other.

THE 'LITTLE LORD FAUNTLEROY' COPYRIGHT CASE.

THE official report of the copyright case which arose out of the unauthorized dramatization of Mrs. Burnett's 'Little Lord Fauntleroy,' has recently been published (Warne & Co. vs. Seebohm, *Law Reports*, 39 Chancery Division, pp. 73-83). This suit presents some points of more than usual interest. Mrs. Burnett published her work in the *St. Nicholas*, and arranged with Warne & Co. for its simultaneous reproduction in England, where the British copyright was registered by the plaintiffs. Neither in the arguments of counsel nor in the opinion of the Judge is it mentioned that the author is not a subject of Great Britain, nor is any notice taken of the fact that she was not at any time during the publication of her book within the territory of the United Kingdom. This is of importance to American authors, as going to show that simultaneous or first publication in Great Britain, together with registration there, will of themselves enable the author to maintain suit in defence of the copyright; and that the expense of a journey to Canada or other British territory at the time of publication may be omitted without jeopardizing the protection given by the English courts.

The defendant, Seebohm, dramatized Mrs. Burnett's story in a three-act comedy, and wrote to the author for her sanction to its representation. This she refused to grant, being under the impression that she had legally reserved to herself the right to dramatize her own work. But the domestic copyright legislation of England does not enable the author to reserve this right. Any one may dramatize another's novel and publicly represent it without the least regard to the wishes of the author of the original. The defendant, therefore, was within his legal prerogative in producing his drama on the stage; and this was conceded at the trial, the counsel for plaintiffs admitting that it was "not sought to interfere with the representation of the play." Mr. Seebohm, however, seems, in his dramatization, to have made more than "a fair use" of the original, the evidence going to show that the

principal situations in the novel were reproduced in the play, and the plot of the latter was in all its salient points identical with that of the former, while all the principal ideas were taken from the novel; a considerable portion of the dialogue was copied word for word, and explanatory and descriptive passages in the story were introduced into the play in the form of dialogue. It was also in evidence that four manuscript or type-writer copies of the drama had been made, one having been sent to the Lord Chamberlain, and the other three having been retained for the use of the actors. The plaintiffs claimed that this imitation of the original, together with the multiplication of copies, constituted an infringement, and suit was brought for an injunction and a surrender of the copies. Damages were not asked for.

Justice Stirling rendered an opinion on May 10. After having made a comparison, he concludes that the play copies from the novel to an extent which would render it an infringement in case it had been printed and distributed. But the act of 1842, still in force in Great Britain, defines copyright to be "the sole and exclusive liberty of printing or *otherwise multiplying copies* of any subject to which the said word is herein applied"; and in previous decisions, as the Justice points out, it has been adjudged that the gratuitous distribution of copies may constitute an infringement. "This being so," he continues, "I am unable to see that the multiplication of an indefinite number of copies of a play (which, if printed and published, would be an infringement of copyright), for the purpose of enabling that play to be publicly represented, can be otherwise than an infringement;" and he holds that what has been done and was intended to be done by the defendant does constitute an infringement, no less than if the latter had printed and published his play. A perpetual injunction is therefore granted to restrain Seebohm from "printing or otherwise multiplying copies of his play containing any passages copied, taken, or colorably altered from the plaintiffs' novel." But in keeping with this qualified injunction, an order for the cancellation of the existing copies, requested by the plaintiffs, was denied, upon the ground that it may not be impossible for the defendant to sever the passages which he has extracted from the novel from the rest of his work; and in order that he may have an opportunity of doing so, he was required (1) to state on oath what copies exist, (2) to extract from them and cancel all passages "copied, taken, or colorably imitated from the plaintiffs' book," and (3) to satisfy the latter that all such objectionable parts have been extracted from his drama.

How much weight this decision may have in subsequent cases turning upon the dramatization of novels is a matter of interesting speculation. But a careful reading of the official report of Justice Stirling's long and cautiously worded opinion leads to the belief that conclusions based upon early and imperfect newspaper reports of the case claimed more than was warranted. It is clear that this judgment does not decide that an unauthorized dramatization of a novel for representation is not permissible under the English copyright law; nor does it forbid the making of such copies of the play as are necessary to produce the representation. The copies in this case were not ordered to be confiscated, but simply to be expurgated of the matter contained in them which infringed the copyright of the novel, the statement being distinctly made in the opinion, that "so long as he does not print or otherwise multiply copies of the *novel*, any person may dramatize it, and may cause his drama to be publicly represented." But the decision will certainly have the good effect of forcing the dramatist to use greater caution in preparing his play, and will check the unjustifiable wholesale appropriation of the original writer's work; and it is to be hoped that when the long-called-for codification of the jumbled mass of English statutes which relate to copyright is accomplished, the author will be definitely secured an equitable control over the dramatization as well as the translation of his work.

LONDON SOCIALISTS.

LONDON, November 12, 1888.

To any one who has been in London for the last four or five years it has been a curious study to watch the development of Socialism, or, as William Morris and his associates would call it, the Social Revolution; for the movement, slight in some ways, is important enough in others.

Four years ago, if one went to Kelmscott House on the Upper Mall in Hammersmith, one heard Morris give lectures to a few friends from the Upper Mall, to Walter Crane from the other side of London, and to a handful of long-haired men from no one knew where. In the old studio, lighted by a few oil-lamps, with the designs of Morris and Burne-Jones on the walls, more in those days was said about the ancient Sagas than Socialism, except, perhaps, at the end of the principal discourse, when one of the long-haired men—comrades, Morris called them—would get up and talk social equality and economic liberty with ineffectual mildness.

I used sometimes, in these early days, to see Morris at public meetings; I remember especially the great Social Purity meeting in Hyde Park, of which Mr. Stead of the *Pall Mall Gazette* was the hero. Almost at the end of the procession of societies on foot and societies in drags and vans, there came a wagon, decked with a red flag, in which sat William Morris with his daughter, who wore the red cap of liberty, and the same friends from the Upper Mall. When the speeches began, I found John Burns in one part of the park, holding forth with his usual eloquence to a great crowd, who, as he cried down the vices of Marlborough House and praised the virtues of the workingman, listened attentively even while they laughed. In another corner was William Morris—for already these two Socialists had agreed to disagree—haranguing his daughter and the friends who had come with him. No one else stopped to listen.

But by degrees there was a decided change in the Sunday evenings at Kelmscott House. The Sagas were forgotten, and Socialism won the day. Well-known Socialist leaders came to lecture. It was there I first heard George Bernard Shaw argue with that logical coolness which occasionally makes a convert among educated men, and always fails with the people. Hyndman and Champion sometimes spoke; distinguished foreign Socialists, like Stepniak, were invited. There was usually an animated discussion after the lecture, in which both sides of the question were set forth with equal fairness. But soon William Morris himself began to take the principal part, and this meant another change in the character of the little Hammersmith meetings. For, many as are Morris's accomplishments, there is one thing he cannot do—he can neither argue nor endure argument. That he is sincere in his Socialism, no one can for a moment doubt; but that Socialism appeals to his emotions, rather than to his intellect, is as unquestionable. He is an enthusiast, or, I should say, a fanatic. His sympathies are strong, his temper quick and hot. He is so carried away by the thought of human misery and the picture of what might be under certain impossible social conditions, that he cannot stand contradiction, he cannot listen to reason. For him there is but one side to the case. His eyes have been so well opened to human wrongs, he is blind to human justice. His own lectures are wild, incoherent ravings; when he does not lose his temper outright, his favorite argument in answer to his opponents is, "My friend does not believe what he says in his heart!" This is not an argument which appeals to men whose opinions, whatever we may think of them, are the result of serious thought and study.

It seemed to me that each time I returned to Kelmscott House after an interval of absence I found fewer conservative Socialists, if I may so call them in want of a better name—I mean those who believe in working out socialistic reforms by constitutional means—and a greater number who, though they might not accept the name, were Anarchists rather than Socialists. There was less quiet reasoning; what sounded very like rank treason was talked; capitalists—a class, by the way, to which William Morris himself belongs—were threatened, the millennium announced There was a disposition to fight even upon the slightest provocation. One evening I went there with two or three Americans who were curious to hear Morris lecture. Almost upon our arrival a fiery German Socialist cried out against the *gentlemen* who wear white ties and tall hats and abuse Socialists behind their backs, but, brought face to face with them, have nothing to say.

Even at this time, while Morris's influence was lessening with people of his own class, he seemed to make no headway with the masses for whose emancipation he was working. Sometimes on Sunday afternoons in Hyde Park, I would find Champion surrounded by workingmen, to whom he was talking in plain, strong, and very sensible language. John Burns was sure to draw a crowd, as he is still. But William Morris, despite his red flags and violence, rarely attracted more than a dozen or so listeners.

It is now just a year ago since Morris publicly, through the press, protested against the execution of the Chicago Anarchists — martyrs, he called them. Yesterday a great meeting, it was announced, would be held in Hyde Park, after preliminary meetings in other parts of London, to celebrate the anniversary of their martyrdom, and, at the same time, to commemorate the famous 13th of November, when thousands of Socialists were routed by a handful of police, and Trafalgar Square was held by grenadiers and life guards. As Mr. Shaw said to me, since both the executions in Chicago and the defeat in the Square meant the failure of

the Socialists, there was not much reason for celebration. However that may be, when I reached Hyde Park, I met, coming out of the thick yellow fog, detachments of Socialists and Anarchists, with red flags flying; and once they had grouped themselves around the two wagons, the speeches began. The principal speakers were Mr. Cunninghame Graham, M. P., who, it will be remembered, was John Burns's fellow-prisoner after last year's disturbances in the Square, and who is always to be found where there is a chance of notoriety: Mrs. Parsons, the widow of Parsons, the Chicago Anarchist; and William Morris, who, as a Socialist reporter puts it, "had come there solely to stand by the widow of the man of the masses who had fallen—no matter how—in the fight with the classes." One or two leading Socialists were in the crowd, but they took no active part in the proceedings.

This crowd was made up principally of the very outcasts of society—the poor unfortunate creatures who, perhaps through no fault of theirs, have fallen so low as to be incapable, not only of reforming society, but of saving themselves from their own degradation. With them, of course, were the discontented who would not stoop to honest work under any circumstances. I noticed there was a strong foreign element present, made up mostly of Polish Jews and Germans. I saw but two or three respectable persons, the most conspicuous of whom was Sir Charles Warren himself, unrecognized, and listening with a smile to the groans that were given at every mention of his name. The talk of the people round me had a strong Anarchist flavor. There was a good deal said about the bombs to be thrown at the next meeting in Trafalgar Square. One American told me it had grown too hot for him at home, where, indeed, hardly any one would listen to him, and so he had come to England. And it is to this rabble, from whom even decent Socialists expect no help, William Morris to-day is appealing. These are the men to whom he looks for support, and who will give it to him only so long as it consists but in cheering his denunciations of the powers that be.

Morris's career has been a strange chapter in the history of Socialism in England, and is characteristic of the change the last four years have brought about. There have been innumerable splits among the English Socialists, too infinitesimal to be noticed; but one, more marked, has divided them into two parties, as opposed to each other in doctrine and policy as are the Conservatives and Liberals. On the one side are the men who are becoming daily more and more convinced that before social conditions can be bettered, man himself must be developed mentally and morally, and that the only way to accomplish this is to take advantage of existing educational and political means. Champion has run for Parliament; make-believe parliaments—and this form of make-believe is very popular with Englishmen—have been formed as a sort of training-school for aspirants to public and political life; the Fabian Society distributes leaflets, and its members give series of lectures in public West-End halls. We may think they are working for the unattainable; but we must admit that, at least, they do not believe that human nature can be changed in a day, or that, once men profess themselves Socialists, the millennium will have come.

On the other side are the Socialists who seek to gain their ends by rousing, as they express it, the masses to a sense of their wrongs, but really by inflaming the very lowest forms of class hatred. Indeed, many no longer can be considered Socialists; the Social Democratic Federation has degenerated into a red Anarchist organization. Inflammatory speeches in Hyde Park and the East End, hints or plain statements as to the necessity of using force, revolutionary talk, are their weapons of reform. They look for the successful solution of the most difficult social problems to the ignorant and degraded, who, if matters were to come to a crisis, and the capitalists and upper classes were to be destroyed, would, after their victory, hold exactly the same place in the social ranks which is theirs to-day.

It is because William Morris is so well-known and loved and respected for the great work he has given to the world, that one cannot help regretting the fact that he is rapidly becoming identified with the party of violence, rather than with the party of reform. And the worst of it is that to-morrow, if he and the crowds who listened to him in Hyde Park were in danger, these brave men, who tell you of the bombs they are going to throw but always run at the first charge of the police, would turn their backs upon him, and allow him to pay the penalty of their folly and cowardice. After having wrecked his factory at Merton Abbey, looted his shop on Oxford Street, sacked his house in Hammersmith, and burned his manor on the upper Thames, they would leave him in the lurch. The truth is, William Morris is on the horns of a dilemma.

BOLOGNA IN THE LAST CENTURY.

Bologna, November 8, 1888.

The celebration held last August in honor of Galvani (which had been postponed on account of the cholera two years ago) naturally brings one to think of what life was in Bologna a hundred years ago, when this physicist was conducting the experiments which led to his discovery of animal magnetism. For this materials are ample—in part printed, and especially in the great collection of manuscript diaries and letters belonging to the Municipal Library, which also has a good store of engravings, illustrating thus the outward appearance of the town, as well as its life. It is curious to compare a drawing preserved here of a demonstration in the anatomical theatre in 1747 with a photograph taken in the present year, or a reconstruction by G. Amato of the same subject from a miniature made in 1734. But perhaps what strikes one most at first in the old drawings is the falsity of effect in interiors as well as in street views, coming from the fact that distance and space are disproportionately magnified. It seems to be only since the advent of photography that any but an extraordinarily clever draughtsman has succeeded in putting human figures in their proper relations to a given space, as seen from a single point of view, or at least from a usual point of view.

Luigi Galvani was born in 1737, and was attached under various titles to the University of Bologna from 1763 until his death in 1798. The accident which induced him to carry on his experiments occurred in 1780. The decisive discovery was on September 26, 1786, on the terrace of his house in the street now called after Ugo Bassi; but this he chose still to verify by a variety of methods before exclaiming that the body of an animal is an organic Leyden jar. He formally published the result of his researches in 1791. These dates are mentioned simply for convenience, and to show during what period of time Galvani lived. If the materials for his biography be scanty, they are plentiful enough for that of his townsman, the Marchese Francesco Albergati-Capacelli, the play-writer, who died six years after Galvani, and was born nine years before him. On this subject Ernesto Masi has written an entertaining monograph; and from this, with the help of Corrado Ricci's recently published book on the Bolognese theatres, * and a few similar studies, it is easy to obtain a fair view of the times in which Galvani lived.

Although it was about 500 years since Bologna had placed itself under the protection of the Pope, and had, while often turbulent and disobedient, been governed by a papal legate, yet, up to the French Revolution, it kept all the forms and claimed to possess the independence of an aristocratic republic. It was called the Bolognese nation, and had at Rome an Ambassador who asserted the same rights and privileges as those of other states. When Galvani was born, the papal legate was Cardinal Prospero Lambertini, who in 1740 became Pope Benedict XIV., to whom Voltaire dedicated his tragedy of "Mahomet" (of which the presentation copy, with Voltaire's autograph, is still in the University Library), and to whom Horace Walpole erected a monument. President De Brosses saw him in Bologna in 1739, and described him thus:

"When we don't go there, we pass our evening *tête-à-tête* with the Cardinal Archbishop Lambertini, a good fellow without any airs, who tells us many good stories about women or about the Court of Rome. I have taken pains to remember some of them for use on occasion. He is especially fond of talking and hearing about the Regent and his confidant, Cardinal Dubois; and says to me sometimes, 'Parlate un poco di questo Cardinale del Bosco.' His conversation is very agreeable; he is witty and gay, and has a knowledge of literature. He has a habit of using in the construction of his phrases certain expletives little suitable to a Cardinal; and in that, as well as in everything else, he is very like the late Cardinal Le Camus, for he has excellent morals, is very charitable, and very assiduous in his archiepiscopal duties."

When Lambertini became Pope, he sent to Bologna the famous Cardinal Alberoni, whose militant disposition made him conceive plans of reform greatly distressing to the Bolognese, who feared that they should lose the last remnants of their republican institutions. Albergati, who had already been appointed Senator, held in 1753 the office of Gonfaloniere for the usual period of two months, and had the same office again in 1783, in both cases being obliged to spend large sums of money in pomp, shows, festivities, and largesses to the populace. One of his friends describes going to see him, and finding him with the distracted air of a man full of business, until he begins to speak of his Comedies and to praise them, when the Gonfaloniere becomes again polite and courteous, asks him to sit down, and offers him a cup of chocolate. On his lamenting that affairs of state should divert him from the theatre, Albergati replies:

"Listen, my dear friend; I will speak to you in all frankness. It is quite true that the Gonfalonieri ought to have very little time, and perhaps none at all, because they are supposed to use it on public business and in presiding over the affairs of the nation. But with us in Bologna matters are (to tell the truth) somewhat different. We have many persons who charitably relieve us of the weight of the government. First, at the distance of 300 miles, there is in Rome a priest dressed in white, who, as sovereign of our city, is the first to lighten our public cares. Then the priest dressed in white sends us every few years a priest dressed in red, who has under him many priests dressed in black, who have under them a layman distinguished by a fine medal which hangs from his neck, who has under him fifty or sixty persons, who, notwithstanding a terrible display

*Ernesto Masi: 'La vita, i tempi, gli amici di Francesco Albergati commediografo del secolo xviii.' Bologna: Zanichelli, 1878. 8vo, pp. 491.
'I Teatri di Bologna nei secoli xvii e xviii: Storia aneddotica di Corrado Ricci.' Bologna: Successori Monti. 1888. 8vo, pp. xxii, 737.

of arms, are really the most courteous and lovable people in the world, always seeking to embrace their likes, and to protect them from the asperities of the weather by conducting them to a perfectly safe place, where no rent is paid. The Gonfaloniere of Bologna is therefore aided by the white priest, the red priest, the black priests, the man with the medal, and the fifty or sixty courteous and amiable people who distribute among themselves all the various parts of the public administration."

Many of the Bolognese nobility went into the Church; but even the others were compelled by the constitution of the state, such as it was, to become acquainted with the methods and language of public business. Otherwise, they were given up to amusement, to good living—for was it not *Bologna la Grassa?* and to literature—for was it not *Bononia Docta?*

Literature was indeed an amusement in the eighteenth century. There were at one time in Bologna a great number of academies, *i. e.*, clubs for conversation and the reading of essays and sonnets. The name of Lelio della Volpe, the publisher, constantly recurs in the letters of the time, with most affectionate mention. It was in his back shop that the literary reformers of Bologna used to talk away their evenings, while sitting on rough, hard benches. The Abbé Roberti, when he had been sent back to his native Bassano after the suppression of the Jesuits in 1773, recalling with delight the twenty years he had passed in Bologna, the pleasant breezes of the villas, and the gossip over the chocolate, says that he never passed by Della Volpe's shop without lifting his big shovel-hat and bowing low in honor of all the wisdom gathered therein.

Literature was an amusement for women as well as for men, and Galvani had as colleagues in the university three learned ladies—Laura Bassi, who taught philosophy; Anna Morandi Manzolini, who held a chair of anatomy, and Clotilda Tambroni, who was an excellent Greek scholar. But their merits were not great enough to astonish us. The Tambroni knew Greek no better than Mrs. Browning, or many other young women, unknown to fame, whose education has been a little different from the ordinary; the Bassi was a philosopher of the same stamp as many French ladies of the last century, who, like her, corresponded with Voltaire, but not to be compared, says De Brosses, with Signora Agnesi of Milan; and the Morandi was really only a clever modeller in wax, whose skilful productions gained her business offers even from London and St. Petersburg.

The University had much fallen off from its ancient reputation; and in 1745 Pope Benedict XIV., who knew his Bologna well, wrote to a friend:

"The learned in ecclesiastical matters are of three kinds. The first have a good stock of information, read constantly, and remember what they read; so that they are not only good for conversation, but on occasion can supply useful information. But if they don't go further, they are generally in practice not only useless but pernicious. Among these (I say it in confidence) we ought to put Cardinals Passionei and Monti, and, perhaps, also, if he were alive, Mgr. Fontanini. The second are those who have no stock of learning of this kind and do not know where to put their hands in case of need, but who have a capital of good logic and of experience in judging, and know how to make good use of the information given by the first I mentioned. These have value, but not full value; partly because they cannot work without the aid of others, partly because they do not possess the principles of ecclesiastical criticism, and found their system either on authors who are not esteemed, or on documents of doubtful authenticity. In the number of these might be put even the most celebrated canonical lawyers now in Rome. The third are those who have their learning at command, remember what they have read, as well as facts, are logical, possess adequate judgment, draw due inferences, and know which are the most esteemed authors and what documents are uncontroverted. These are really the men who deserve the most consideration. Among these the first place in Italy belongs to the Abbé Muratori; and of these the Holy See has need. With tears in our eyes we say that in Bologna there is neither the first, nor the second, nor the third class; and, we may add, there never will be, these being trades, and trades of continuous hard work, which must not be interrupted by laziness, or plays, or coffee-houses, or refreshment rooms, or by running about from house to house. May God preserve you, who have no equal in your own line, and through your continual teaching may He make people learn something of the natural sciences—a strong point in Bologna—and even make ecclesiastics able at least to know that the Trinity is a mystery and not a mountain, and that the Sacraments are not military offices. Behold the reply to your last, together with the Apostolic Benediction."

The life of the upper classes was in those days one continual round of amusement. In summer they had their villa life, with private theatricals, riding parties, dances in the open air, and fireworks. In winter there were the theatres, the public conversazioni, masked balls, gambling, and their academies. Duels were frequent, gallantry was one of the chief features of life, and *cicisbei*, whether harmless or other, had become an established institution. The ladies, De Brosses said, quote "Racine and Moliere, sing the Mirliton and the Béquille, swear by the devil but scarcely believe in him." The Emperor Joseph II., when spending the evening at the conversazione of the nobility, was struck with the number of abbés at the gaming tables, and remarked: "Oh! I see, these ladies are playing with their spiritual directors." The favorite games were those of chance, although yearly forbidden under the severest penalties—a fortress for the nobles, and the galleys for the common people; but no attention was paid to the Legate's proclamation, and the penalties were not enforced. From the 1st of January the Legate permitted the nobility to wear masks, on which there was a procession of masqueraders in carriages, headed by the civic authorities and starting from the Town Hall. A few days afterwards the same permission was granted also to the common people until the end of the Carnival.

Among those most given up to private theatricals was Albergati, who had constant performances in winter at his palace in town, when he was not at Venice; and in summer at his splendid villa at Zola on the Modena road, of which De Brosses gives us a description, while Longo, in his 'Memorie,' has left an entertaining account of the life there. Albergati began by acting himself; then translated French plays; then composed pathetic tragedies in the French style; and finally—being an ardent reformer of the stage—wrote comedies after the model of Goldoni, whose friend and disciple he was. His plays are now relegated to the history of the stage, although useful as realistic pictures of the manners and morals of the time. Although he had by them exposed himself to the hatred and malice of his own caste, Zola was a rendezvous for the literary society of Italy; and he succeeded in continuing on equally good terms with Goldoni and Baretti, the two Gozzi and Bertinelli, Cesarotti, Alfieri, and Monti. He was for many years in frequent correspondence with Voltaire, whose literary dictatorship outside of France is very noticeable in all the memoirs of that time; and was protected by King Stanislas Augustus of Poland, who made him Chamberlain, Adjutant-General, and Knight of St. Stanislas. Besides French he had studied German and English, and had translated the "Discourse on Medals" and other essays of Addison. Owing to his unfortunate propensity to fall in love, his private life was full of variety. At the age of nineteen, his parents, in order to settle him, married him to a young countess; but the union was unhappy, and the wife's father made a petition for the dissolution of the marriage attended by much scandal. The Pope, who was a family friend, decided the cause himself, without giving reasons, in Albergati's favor, annulling the marriage, allowing both parties to marry, and thus restoring Albergati's honor. The unfortunate countess entered a convent and soon after died. The Pope personally announced the decision to Albergati's mother, and referred to the subject in several other letters, in one of which he says to him:

"The Countess Laura Mariscotti, our witty Bolognese lady, who died some years ago here in Rome, used to say that every woman ought to marry, so as not to miss the fine chance of possibly being left a widow. If what she said about women might be said about men, we should apply it to you, who, in the widower state in which you now are, seem to enjoy that calm which you did not enjoy when you had a wife. Keep your good friendship for us, and salute your mother, the Marchesa, in our name, and receive, both of you, the Apostolic Benediction."

A few years later, a correspondence with a literary lady at Venice led Albergati to the brink of matrimony; but when at last he went to Venice to see her, he skilfully escaped, and soon married another Venetian of the middle class, whose family was in some way connected with the stage. According to the laws of Bologna this marriage was not legal unless he gave up his privileges as a noble, to which his family, and even the Pope, would not consent; but it was a long time before the Pope would legitimize the marriage and the children born from it, and then only on the intercession of the King of Poland, who had been godfather to Albergati's eldest son. Seventeen years passed, during the latter part of which the Marchesa Cattina, as the Venetians call Caterina, was jealous and hysterical, if not worse—although Albergati concealed his domestic misery as best he could—and at last committed suicide at Zola. In spite of there being witnesses to the suicide, Albergati's enemies, the nobles whom he had satirized, made so much talk that he was imprisoned for several months on a charge of murdering his wife, but was in the end triumphantly acquitted, and a good part of the rest of his life was spent in a successful effort to be exempted from the expenses of the trial. With the youthfulness which characterizes the old men of the eighteenth century, he soon married again—this time a ballet-dancer, who survived him.

The theatre of Albergati at Zola, although the best, was but one of the many which showed the fashion of the time for acting in private. During the eighteenth century, mention is made of forty-five private houses in Bologna where plays were more or less often performed, to say nothing of villas, schools, and even convents and monasteries, the representations in these latter being of a religious or at least serious character. Even Pope Lambertini had in his youth performed with great success the traditional part of the Doctor in the old Italian comedy.

The company of Medebach came to Bologna in 1752, and acted many of Goldoni's comedies with great success. The author had been there some years before, and had gained some money by selling to the directors of these theatres copies of three of his plays; but we have no information that they were ever acted. Goldoni in his memoirs tells in a very entertaining way an incident which occurred to him just after his arrival, in the café opposite the Church of San Petronio, when he was the involuntary

but amused witness of a controversy between some of his unknown enemies and his equally unknown partisans. It was at this time that he made the acquaintance of Albergati, whose guest he was both then and afterwards, and with whom he remained in constant correspondence. Medebach's company came back again in 1772, and then acted, not only the comedies of Goldoni, but those of his great rival, Gozzi. These representations were in the new and now existing Communal Theatre, which was built after the old Malvezzi had been burnt down. The contract provided that the theatre should be closed on Friday, on the eves of the Assumption and Nativity of the Virgin; that there should be no fireworks of any kind, or anything obscene, immodest, or contrary to religion, and that due quiet and modesty should be observed. Medebach came back again in 1779; but his representations were interrupted "by most prudent order," in consequence of violent earthquakes, and were not begun again till 1782. Tragedies of Alfieri appeared on the Bologna stage only at the very end of the century—the "Antigone" in 1797, and the "Virginia" in 1798. The plays of Metastasio held possession of the stage for sixty years, from 1730 till 1790; but these were always set to music, and the same text was often sung to the music of very different composers. The music of the "Didone Abbandonata," by Antonio Mazzoni, executed in 1752, happens to be the only one of forty different scores of this opera which is not mentioned by musical historians.

But it is impossible to speak briefly of the triumphs of Metastasio, of the interesting history of the Philharmonic Academy, or even of the visit of the English musical historian, Dr. Charles Burney, in 1770, when he heard for the first time Mozart, who was just passing his examination for his admission as an honorary member of the Academy. All this has been too recently and too well treated by Vernon Lee (Miss Paget) in her entertaining book, 'Studies of the Eighteenth Century in Italy.'

The great composers whose names appear most frequently in connection with the opera are Cimarosa, Hasse, and Jomelli. The Communal Theatre was opened in 1762 with the opera of "Il trionfo di Clelia," words by Metastasio and music by Gluck; and the composer himself came to Bologna to direct the representation. It was a failure. The critics, while appreciating the regularity of the composition, found it as solemn as a requiem sung in church; and Gluck soon went away, well provided with pence, but very poor in applause, so that the loungers about Bologna used to sing,

"Dman el part el Cluch:
El va per Triest;
Ch'al faga ban prest,
Perche el è un gran Mamaluch."

which may be roughly translated:

"To-morrow goes Gluck,
He leaves for Trieste;
The soonest the best,
For he's a big Mameluke."

Gluck, however, had a return of popularity, for his "Orfeo ed Euridice" was played in 1771, and the "Alceste" was well given, with general approval, in 1778. Gluck, who was then in Milan, preparing an opera for the new theatre there, was invited to Bologna to direct the "Alceste," but he was unwilling to risk a second experience.

When Goethe was in Bologna in 1786, he kept himself aloof from society, and speaks only of the pictures and his general impressions of the place. About the local dialect, of which a specimen has been given above, he says: "The Bolognese speech is a horrid dialect, which I should never have looked for here—rough, abbreviated, and so forth. I don't understand a word when they talk together. Venetian is noonday light in comparison." This agrees with what Mme. de Staël says in 'Corinne': "Bologna is one of the towns where you find a very great number of men learned in different ways; but the people there produce a disagreeable impression. Lucile expected the harmonious language of Italy that she had been told of, and was painfully surprised by the Bolognese dialect, than which there is nothing rougher in northern countries." Exaggerations aside, the dialect is not of the smoothest; but, like the Milanese and the Bergamasque, it is interesting, as showing the influence of Northern peoples even while Latin was still a living language. It is a pity, by the way, that so many are forced to use 'Corinne' at school as one of their first French reading books. Reading it again now, especially here in Italy, and regarding it, not only as an attempted representation of Italy and Italian life before the French Revolution, but especially as showing Mme. de Staël's personal views of Italian literature and art, it is deeply interesting; and even the most careless reader must admit its charm.

But—I was going, perhaps rightly, to say unfortunately—after the Italy described by Mme. de Staël, after the charming life in Bologna in the time of Albergati, came the French Revolution, and then the invasion of Savoy in the autumn of 1792. As a conclusion of long debates the Senate intrusted the Gonfaloniere with the sum of 120 francs to protect the town, which he divided among three churches for prayers—a method perhaps as sensible as any other for expending such a large sum. The French finally entered Bologna on June 19, 1796, in perfect peace—7,000 men commanded by Augereau—the first shock that they gave to the inhabitants being that they cut in two some of the processions in honor of Corpus Domini. To show their respect for property and religion, they shot a soldier who had stolen a chalice from a church: but they emptied the public treasury; took all the artistic and scientific treasures from churches, galleries, and museums; sacked the Monte di Pietà, leaving only those pledges that were worth less than forty dollars; made great requisitions in substance; and imposed a tax of 4,000,000 livres tournois, payable in eight days, on the upper classes. This was the French manner of conferring freedom. In the reorganization which followed, our friend, Albergati, was appointed Censor of the Press and Inspector of Theatres, and was even promised a professorship of dramatic literature in the reorganized University. A certain quondam marquis, then citizen Saverio Calvi, weary of the constant demands on his purse, stuck up in various parts of the town a notice of this tenor:

"Liberty, Equality, Fraternity, &c. The citizen Saverio Calvi, finding himself in the greatest need, through lacking money enough to assist the grievous necessities of the Republic, for which the Government has imposed on him a forced Loan of 10,000 Francs; and being obliged to pay in a few days the surtax of 8 per cent., and on the 20th of December next the anticipated tax of 6 per cent., and being anxious to take every measure for giving the Government proof of his patriotism, has resolved to sell an Estate situated in the Commune of Calderara, &c., &c. If any of those many rich honest men who have not only made very great profits from the operations of the war, and who are also not included in the list of the takers of the forced loan, desire to purchase this estate, they may apply, &c."

Albergati, who had permitted the publication of this notice—either without thought or from appreciation of the joke—was removed from both his offices. Such a hubbub, however, was created that he was restored. In 1802 he was again removed because he forbade the publication of a translation of Rousseau's 'Nouvelle Héloïse,' and especially because he justified his action in the matter. His love of France and of French literature, like that of Alfieri and of every other Italian, had been cured by events. E. S.

Correspondence.

THE SECRET BALLOT AND BRIBERY.

To the Editor of The Nation:

Sir: I notice that the *Nation* is of the opinion that "a secret ballot is the surest as well as the simplest remedy for bribery at the polls." Allow me to call your attention to the working of an absolutely secret ballot in Canada, where, under the Dominion Elections Act, at least two general elections have been held, under rules and regulations which render it altogether impossible to discover how an individual votes, unless he is absolutely illiterate and unable even to make a cross. It is a fact that, in the Provinces of New Brunswick and Nova Scotia, bribery and corruption prevail to an enormous extent at the Dominion general and by-elections, quite as much so since the act was perfected—about eight years ago—as before, and that election expenses are continually on the increase. In one largely agricultural constituency in the Province of New Brunswick, over $30,000 is said, by well-informed persons, to have been paid by two opposing candidates for the purchase of votes at a general election under the above act, and I have every reason to believe that I am safe in saying that not a single Dominion election contest has been held in either New Brunswick or Nova Scotia, during the last eight years, without a large expenditure for the purchase of votes by one or all of the candidates. When I tell you that many voters expect to be paid for their day, as they put it, before they will vote for the party to which they belong, or with which they are in sympathy, you will understand the extent to which bribery at our Dominion elections prevails.

I do not believe that one per cent. of the votes purchased are lost to the purchaser by the operation of the secret ballot, as there is a feeling, even among men who will sell their votes, that when you have taken a candidate's money you are bound to vote for him as a matter of business, and I think the contract is rarely broken. The law with regard to bribery at elections is as stringent here as in England, and the penalties severe; and yet the law is decidedly unpopular, and election petitions are seldom carried through. Perhaps the provisions of the English Election Act, limiting the legitimate expenditure according to population, and vacating the seat for an excess even of such legitimate expenditure, and the provision under which a constituency can be disfranchised for a period, when bribery has been proved to have largely prevailed—which are not found in the Canadian act—have had a good deal to do with suppressing corruption at elections in England. Public opinion in England is also in sympathy with the law, but with us I fear the like cannot be said. Actual experience in Canada leads one to believe that one cannot depend upon a secret ballot alone to insure purity at elections. The result under the act in the Provinces of Ontario and Quebec is altogether similar to that in the maritime Provinces, and the corruption prevailing all over Canada at the last general election under a secret ballot was some-

thing colossal for a comparatively poor country. C.

November 25, 1888.

[The bribable Canadian electorate appears to be in the middle stage of corruption, as holding itself bound in honor to its purchaser, and no doubt has its analogy in our farmer class of traffickers. It is quite otherwise with the "floaters" of our great cities, who have to be plied with liquor, and actually shut up overnight, and finally driven to the polls like cattle, with ballots in view, in order to make sure of their getting but a single wage and voting as agreed. The type of this class is sometimes roiling in wealth, like John J. O'Brien, whose infidelity to his Republican hirers is now causing so much grief in moral-idea circles.—Ed. Nation.]

A PROPOSED CONSTITUTIONAL AMENDMENT.

To the Editor of The Nation:

Sir: As it seems to be the inalienable right of every American citizen to try to improve on the Constitution of the United States, I wish to take a hand at it myself.

To the proposition to change our electoral system to a direct vote for President and Vice-President, you have raised the very serious objection of the long delay and consequent uneasiness and loss, before the popular majority could be ascertained. Yet it must be admitted, on the other hand, that there are grave objections to the present system. The first in importance is, that the choice of Presidential candidates is practically restricted to States whose vote is supposed to be doubtful and decisive. The second is, that the larger States *really* have an undue preponderance. I say *really*, though not *apparently*. It is all right that the *people* of New York should have thirty-six votes, and those of Connecticut only six; and, in fact (since two votes are given to each State irrespective of population), the advantage *seems* to be with the smaller States. But the fact that *each State casts its vote as a whole* really makes the voting power of a citizen of New York six times as great as that of a citizen of Connecticut. A majority of 1,000 in New York means thirty-six votes—the same majority in Connecticut only six votes.

Now there is a simple change, that has always seemed to me to carry out our system of representation more symmetrically than the present system, which would do away with both these evils, without, so far as I can see, being liable to the objection you make to the popular election. Our electoral representation is based upon our Congressional representation, in which the two Senators represent the whole State, and the several Representatives their respective districts, on a basis of population. So we have our two electors-at-large, representing the whole State, and the several district electors. My proposition, then, would be this: *Let the electors be voted for by those whom they represent.* Let the two electors-at-large be voted for by the whole State, and each district elector only by those in his own district. This plan would, I think, have the following advantages:

(1.) It would preserve the principle of State equality and sovereignty represented in the constitution of the Senate, that would be lost in a direct, popular election.

(2.) It would put the voters of all the States more nearly on an equality, as the Congressional districts are approximately of equal size, and a majority in each would choose one elector.

(3.) It would destroy the preponderating influence of a few States that limits the choice of candidates, and makes some States the prey of corrupting influences.

(4.) It would destroy sectionalism, breaking up the solid South and the almost solid North into constituencies whose votes would be divided between the different candidates.

(5.) The result could be ascertained more quickly than in a popular election, though perhaps not always as quickly as on the present plan. But this difficulty cannot be absolutely avoided on any scheme, as witness 1876.

There may be difficulties in the plan that I do not see, which you or others may point out, and there is the great practical difficulty that confronts all such remedies—the difficulty of getting it adopted; since the average politician does not sit down to consider the merits or demerits of any plan in itself, but enters at once into a calculation as to the probable effect upon his party's chances. Respectfully, H.

Wilmington, N. C., November 30, 1888.

THE EXTENT OF THE SOUTHERN QUESTION.

To the Editor of The Nation:

Sir: What is called nowadays the Southern question is simply this: Can the Republican party use its power in the Federal Government to bring out the colored vote in the Southern States, and to have it freely cast and fairly counted? At first glance, there being sixteen Southern States, the question looks much more important than it really is. The returns of the poll taken on the 6th of November show that in the eight States of Delaware, Maryland, Virginia, West Virginia, Kentucky, Missouri, North Carolina, and Tennessee, the Republicans, white and black, can well take care of themselves. There are sixty-five Congressional districts in these States, of which seventeen have returned Republican Representatives. The plurality for Cleveland over Harrison in all this immense stretch of country is about 104,000, or an average of 1,600 for each district. That does not look very "solid."

There are two other States, Texas and Arkansas, in which the majority of the Democrats over white Republicans and all negroes together is so great that there is very little motive for silencing or counting out the latter; it is not done to any great extent, and the prevention of the occasional wrongs committed in this or the other county could not help the Republicans in a national party.

This reduces the question practically to the six cotton States of South Carolina, Georgia, Florida, Alabama, Mississippi, and Louisiana, with their forty districts and fifty-two electors. To the Republican politician who approaches the task of establishing "a free vote and a fair count" in these six States, three considerations will occur:

(1.) Can the necessary legislation be carried through Congress?

(2.) Will it, looked at from the mere partisan standpoint, do any good?

(3.) Will it pay all round?

The Republican majority in the lower house is very narrow. It comprises eighteen Southern members—the seventeen mentioned already and Mr. Coleman of New Orleans. All but three of them are elected by constituencies made up in the main of whites, and would endanger their reëlection by voting for any sort of a "force bill." Without sounding all of them, it would hardly be worth while to launch out upon the "new crusade."

It might not, however, be impossible to pass an act of Congress which would introduce the secret, so-called Australian, ballot (such as we have in our Louisville city elections) in the election of members of Congress everywhere, North as well as South, and thus strike a blow at bribery and the influence of capital as well as at intimidation. Anything beyond such a measure, applicable to the whole country, would only stir up bad blood, and lead to no more tangible results than the efforts of Gen. Grant with his Kuklux laws and Federal garrisons and of his United States judges with their injunctions. In fact, those Kuklux laws have been torn to pieces by the judgment of a Republican Supreme Court. It would require the very highest skill to draw up new force laws whose invalidity would not be apparent at first glance. Moreover, the cotton States can make their suppression of the colored vote strictly lawful by simply copying from the Constitution of Massachusetts the reading and writing test for the suffrage.

The third and last consideration is, Will a policy of aggression against the cotton States pay, in a partisan sense? Suppose South Carolina, Florida, Mississippi, and Louisiana can be redeemed—say thirty electors; suppose that, in these four States and in Georgia and Alabama, twenty members of Congress can be gained through the negro vote, how much will be lost elsewhere? Is it not cheaper and easier to "buy" Indiana and the two Virginias than to start on the hazardous enterprise of upsetting by force the governments of six States with their seven millions of people? Moreover, is not a bird in the hand worth two in the bush? The white Republican districts in Maryland, West Virginia, Kentucky, Tennessee, and Missouri are irretrievably lost as soon as the sectional and race issues are reopened—with the single exception, perhaps, of Houck's district in east Tennessee. Moreover, the election of Coleman in New Orleans shows that to let well alone promises good results, even in a Gulf State.

Considering all this, the Republican politicians, if they undertake a new crusade under the banner of the bloody shirt, can do so only for one reason, viz., that they wish to take up the sectional war cry to consolidate the North, being afraid of further discussion of the tariff, and deeming it impossible to keep the Northwest any longer in line for the humbug of "protection." L. N. D.

Louisville, November 30, 1888.

THE "PROTECTIVE" POLICY APPLIED.

To the Editor of The Nation:

Sir: The Protectionists argue that it is right and proper for our Government to guard our workingmen from direct competition with the "pauper labor" of Europe. This is done, they say, by imposing a tax on all imported articles which compete with those produced here. The tax increases the cost of the imported article, and enables the home producer to sell at a higher price than he could otherwise get. This is the only way a tariff import can "protect" anybody. It enables the home producer of competing articles to sell at a higher price. It therefore increases his profits, and hence enables him to pay his workmen better wages; or it enables him to earn an average profit, and therefore continue a business which, without this "protection," would be unprofitable.

This, I think, is the gist of the argument, fairly stated. Whether the assumptions on which it is based are true, I do not purpose to

inquire. Assuming that, if true, they justify the policy adopted, is not a "protective tariff" a very limited and inadequate application of the principle?

Whatever increased profits our manufacturers of "protected" articles get, or whatever increased wages they pay their workmen, must come from other classes—the consumers of their products. These increased profits, or increased wages, are certainly not paid by foreigners, because the highest possible "protection," hence the greatest possible profit and the highest possible wages, would result from the absolute exclusion of all foreign products which compete with those of home production. But, if it increases the general prosperity, and if it is right and proper to build up one industry at the expense of another, or at the expense of the community; or if it is right to secure to our laboring men a fair compensation by imposing a tax on consumers—why should they limit their demands to the paltry sums now paid them? If this principle is sound, the only valid objection to the Henry George system of taxation is that it is entirely too modest and moderate in its demands. On this hypothesis, the Anarchists are the only sensible people in this country, and the only true economists.

If workingmen are entitled to "fair" wages, to be drawn from a fund secured by taxation, and if they are themselves the proper judges of what is "fair," they are great fools, it seems to me, if they are content with the paltry sum they now receive. If it is right to take one dollar out of my earnings, or my accumulations, to increase the earnings of another man, it is equally right to take ten or a hundred, if the majority think it will be to their advantage.

J. N. L. S.

Dayton, Ohio.

A FARMER ON THE MISSIONARY OF FREE TRADE.

To the Editor of The Nation:

Sir: I, a farmer, am greatly interested in what you say about the necessity of winning over the farmers to the right side of the tariff question. Permit me to offer a suggestion.

Before the election, in discussion with a protectionist, I asked him to point out to me the justice of taxing one class of citizens for the benefit of another class—in other words, of permitting the wool growers, for instance, to levy tribute upon all who wear woollen garments. He replied substantially, "If you put it in that light, there is nothing to be said; but *we do not look at the question from a moral standpoint.*" Do not his words express the mental attitude of most of the advocates of the present tariff? When the farmers can be made to look at the question from the moral standpoint, you will begin to win them over. The slave power was overthrown by compelling men to look at the question from the moral standpoint. The difficulties in the way of getting men to take that view of the question were enormous—well-nigh insuperable. There was not to be found, in any authoritative code of ethics, any explicit and unequivocal condemnation of slavery. The institution to which men looked for light was inconsistent and self-contradictory in its teachings. South of Mason and Dixon's line, it defended slavery; north of that line, it defended and denounced it. But whether it defended or denounced it, in doing so it contradicted itself, and so destroyed its moral influence. In spite of these difficulties, however, all classes were finally persuaded to look at the matter from the moral standpoint, and we know the result.

Now, protection is as wrong as slavery; for protection *is* slavery. The essence of slavery is, I take it, that one man, by force of law, appropriates to his own use a part (not all, for the slave must live) of the earnings of another man. If this is correct, all consumers of steel in any form are the slaves of the steel manufacturers; all wearers of woollen garments are the slaves of the wool-growers; all men who live in houses are the slaves of the lumber kings; and so on through the long list. It is a curious fact that the name "Republican," which meant, thirty short years ago, an opponent of slavery, has now come to mean a defender of the same "sum of all villanies." In the recent canvass the Republican party was the party of slavery, and the Democrats the party of freedom. Strange metamorphosis!

If slavery was wrong, protection is wrong; and "if slavery is not wrong, nothing is wrong." Protection is robbery. It steals a slice from the poor man's loaf; it strips the coat from his back; it sends his children out to face the blasts of winter in cotton rags, because if he buys woollen garments for them the wool-growers fine him and put the money in their pockets. It adds a percentage to his rent, and the lumber monopolists pocket that. On every steel tool that he buys, it compels him to pay tribute to the steel men. Part of the cost of every pound of sugar consumed in his family is tribute to the sugar planters. If, after each of the protected classes has levied its contribution, they leave the victim a living, they do no more than the slave owner.

But if your missionary would make the farmer, or anybody else, look at this tremendous question from a moral standpoint, he must *have* a moral standpoint. He must carry with him, among his documents, a code that does not contradict itself; a code that does not mean different things to different men; a code that the missionary would not only like to see other men put in practice, but one that he is willing to practise himself. He must have, in short, a distinct, explicit, and definite belief about questions of morals, which he is ready to defend in the face of the world.

Your missionary has been abroad, in fact, for many years. Why has he failed? Why are good and honest men yet to be found willing to defend a wrong so gross and palpable? Perhaps the explanation is to be found partly in the fact that the missionary of reform has no moral standpoint, has no authoritative and practical code of ethics, has no belief about ethical and kindred questions that he is willing to defend in the face of the world.

H.

Notes.

A posthumous work by the late Sir Henry Maine, on International Law, is about to be published by Henry Holt & Co. It has been edited by Messrs. Frederic Harrison and Frederick Pollock of Lincoln's Inn.

Macmillan & Co. will issue immediately 'Japan and Its Art,' by Marcus B. Huish, founded on papers in the *Art Journal*, but thoroughly revised and extended. The book, say the publishers, is the result of a year's constant intercourse with the most competent Japanese expert, and of a study of the principal European collections. It will contain upwards of 100 illustrations.

A new edition of Darwin's 'Origin of Species,' from the sixth and last London edition, is announced as nearly ready by D. Appleton & Co.

Ticknor & Co. publish shortly the autobiography of Sister M. Frances Clare, the "Nun of Kenmare."

'American History' for younger readers, by Miss Sheldon, on the plan of her 'General History,' is in the press of D. C. Heath & Co., Boston.

The quarterly circular of the Librairie des Bibliophiles contains several welcome announcements. In the cheap and admirable "Nouvelle Bibliothèque Classique," Montaigne will shortly be completed by a sixth and seventh volume, the latter containing a glossary and an index; and of the twelve volumes of the Voltaire, the fifth and sixth are about to appear. In the beautiful and sumptuous "Bibliothèque Artistique Moderne," in the making of which M. Jouaust has been rivalled only by M. Conquet's most successful efforts, we are to have the "Théâtre" of Alfred de Musset, with a preface by M. Jules Lemaitre, and drawings by M. Charles Delort, etched by M. Boilvin. This will be preceded by a volume of Gérard de Nerval's short stories, and followed by the 'Chartreuse de Parme' and 'Rouge et Noir' of Stendhal, illustrated by M. Dagnan-Bouveret. In the smaller "Petite Bibliothèque Artistique" will come the 'Vicar of Wakefield,' with etchings by M. Lalauze, and 'I Promessi Sposi,' with etchings by M. Bramtot. The single-play edition of Molière, uniform with the "Petite Bibliothèque Artistique," with prefaces by M. Vitu and a most remarkable series of illustrations by M. Louis Leloir, etched by M. Champollion, goes on its triumphant career. "L'Étourdi" and the "Dépit Amoureux" have already appeared, and the "Précieuses Ridicules" will follow before the end of the year; and thereafter a play a month is the programme.

'Playwriting: A Handbook for Would be Dramatic Authors, by a Dramatist,' is the title of an ill-written and (from a literary point of view) vulgar book recently published in London. Nevertheless, it is not without merit; and its earlier chapters, on the purely practical part of the playwright's calling, are likely to be serviceable to the beginner. It is unfortunately true that, with all the writing about the stage, never more frequent than now, there is no treatise on the art of writing for the stage, although no work is more needed. The appalling ignorance of the physical conditions of the theatre revealed by many apprentice playmakers is known only to those who are asked to read their impossible productions. Therefore we welcome the present roughly written handbook. Its teachings, such as they are, may be supplemented by a study of the prefaces and 'Entr'actes' of M. Dumas *fils*, and of the two lectures of M. Legouvé on Scribe and on the author of "L'Abbé de l'Épée." Better than anything else, perhaps, would be a prolonged and regular reading of M. Sarcey's weekly feuilletons in the *Temps*.

That infinitely laborious undertaking, the ninth edition of the 'Encyclopædia Britannica,' has just been completed by the publication of vol. xxiv. (Boston: Little, Brown & Co.; New York: Chas. Scribner's Sons). The event is very properly to be celebrated by a dinner of the editor and his colaborers next week at Cambridge (Eng.). We shall return to the final volume after examination.

The Rev. E. E. Hale's classical patriotic *jeu d'esprit*, 'The Man Without a Country,' has been reissued in handsome style by Roberts Bros., with restrained and very apt illustrations by Frank T. Merrill. A product of the deep feeling of the civil war, and intended to touch the minds of the rising generation especially, it not unnaturally went to the extreme of inculcating "Our Country, right or wrong." Chaplains, in Marryat's novels at least, have been known to swear terribly in the

heat of an engagement. One of Mr. Hale's distinguished townsmen, too, hazarded a correspondingly unmoral toast, in the days of Texan annexation and slavery extension—"Our Country, however bounded." Mr. Hale's patriotism, as the late Presidential campaign showed, now bears the name of protectionism, and he is ready to treat his countrymen with reference to the mother country as poor Nolan was treated with regard to his own—*i. e.*, he would, if he could, not have them hear the name of England, or so much as read about her, and would make of the United States a nation without a human brotherhood.

The two volumes (III. and IV.) concluding the Poems in the new edition of Whittier's writings, have now appeared (Houghton, Mifflin & Co.). They are divided into "Anti-Slavery Poems, Songs of Labor and Reform" and "Personal Poems, Occasional Poems, The Tent on the Beach." Any one familiar with his Whittier knows that these categories are not rigorous; that a singularly large proportion of the product of this impulsive poet might be labelled "occasional verse"; and that this is eminently true of the personal poems. Very many of these latter, however, beginning and ending with verses to Garrison, are grouped under the Anti-Slavery heading, *e. g.*, the lines to Silas Wright, Thomas Shipley, and Daniel Neall; whereas those to Charles B. Storrs are unexpectedly separated from the abolition series. The needs of the bookmaker must, of course, be consulted, but it is a pity not to have *all* the personal poems under one rubric in a noble gallery. In Volume III. the explanatory prefaces to the several poems are almost a syllabus of the history of the struggle between North and South. In this volume, too, are the two or three instances of humorous rhyming so much in harmony with Whittier's innate mirthfulness, which he seldom indulges in print. If the "To ———" is still a sacred reticence, we see no reason for keeping "J. P." (John Pierpont) a mystery in the table of contents. The appendix to Volume IV. embraces the early poems which Whittier would prefer to have forgotten. They are cunningly printed in a type so small as to discourage the majority from reading them. An index of first lines and one of titles, and a chronological list of the compositions, complete the admirable equipment of this edition. Judged by quantity, at least, this list shows no marks of age: Whittier's muse was much more prolific in 1879 than in 1869. The Prose Writings are to follow.

Many will be glad to find procurable a second edition of the late Bronson Alcott's estimate of the character and genius of his greater townsman ('Ralph Waldo Emerson, Philosopher and Seer.' Boston: Cupples & Hurd). It is a close, just, and coherent portrayal—the prose essay, of notable distinction as style, being confirmed by verse precedent and succeeding—and is an interesting two fold memorial. Likenesses of the two friends face each other, and some small cuts show us the *locus* of either genius. Finally, some stanzas on Emerson's death, by Mr. F. B. Sanborn, "The Poet's Countersign," fill out the thin volume.

That indebtedness to Emerson which Herman Grimm professed so strongly in his 'Fünfzehn Essays' (1882), he acknowledges once more in the preface to Miss Sarah Holland Adams's translation of his 'Life of Raphael' (Boston: Cupples & Hurd.) He even finds that "a striking analogy exists in the nature of these two men." The present translation has given Prof. Grimm an opportunity to revise the text of 1872, and to express his views "quite positively." The chapter on the "Camera della Segnatura" has been rewritten and condensed. Miss Adams, on her part, has omitted a few passages of historical research and some of subtle analysis. She receives Grimm's hearty commendation for the quality of her work. He is engaged, he tells us, upon a minute account of his thirty years' study of the "Disputà" and the "School of Athens," to the latter of which one of his Fifteen Essays was devoted. We may recur to the present volume.

An historical work touching its thirtieth year, 'Henry III., King of France and Poland: His Court and Times,' by Martha Walker Freer (Mrs. Robinson), has just been reissued in three volumes by Dodd, Mead & Co. Its minute particularity is not in accordance with the present fashion of writing history; nor does its length —one of the consequences of the excessive details in which the compiler indulged—recommend it to our busy age. But the importance of the epoch measurably redeems the above defects and the lack of vivid, picturesque presentation.

In a style uniform with the author's 'Memorials of Westminster Abbey'—and therefore of elegant simplicity—A. D. F. Randolph & Co. have just brought out the late Dean Stanley's 'Historical Memorials of Canterbury,' the first American from the eleventh London edition. We miss, to be sure, the etched adornments of the former work, for we can hardly call such the rather hard portrait of Stanley. There is a plan of the Cathedral.

Bartholomew's 'Handy Reference Atlas of the World' (Geo. Routledge & Sons) takes the shape which its name implies—a volume, 12mo, fitted for the ordinary shelf, and easy to hold in the hand. The maps are, of course, of moderate scale, not overloaded with details. An index facilitates search for the unknown. Finally, there is a condensed presentation of the geographical statistics of the leading States of the world. There are no innovations in the grouping of countries or sections of the globe in the map series. The United States and South America have been managed as well as was practicable. The principal cities and their suburbs are properly looked after. Altogether, this volume is good to have at one's elbow and to give away.

To any one desiring helpful suggestions for family amusement or social merry-making, Miss Lucretia P. Hale's 'Fagots for the Fireside' (Ticknor & Co.) will be a great boon. In a series of connected chapters (the "Bundles of Fagots") a circle of friends are represented as playing games, and the directions for these —more than a hundred games being described —are clearly and pleasantly given. The narrative style contributes to the graceful ease with which this is done, to say nothing of Miss Hale's literary facility. It should be added that most of the games require no further *matériel* than pencil and paper or cards.

Mr. Hugo Hirsh's 'Tabulated Digest of the Divorce Laws of the United States' (H. Gower Hose, Publisher, P. O. Box 158, Brooklyn, N. Y.) is worth having by any one who would see and compare at a glance the causes of divorce in all the States and Territories of this country. It is on a single, large, thick, strong, folded sheet in covers; and this spreads out and shuts again in a manner which is unusually convenient.

At a season when people begin to overhaul their list of periodicals with a view to subscriptions for the coming year, let us call the attention of all to *Garden and Forest*, a "Journal of Horticulture, Landscape Art, and Forestry," published from the *Tribune* building in this city. In the nature of the case, we cannot often refer to it, but we take occasion now to testify to its excellence above any publication of the kind in this country. Its very appearance would speak to all who are capable of recognizing what is first-rate. The editor, Prof. C. S. Sargent, is well known as a very high authority in horticulture and forestry, and the tone of the paper is such as to make it welcome in every cultivated family. It is full of good and very varied writing, of a practical sort, and it is seldom that a number is lacking in literary flavor. Every issue has one or more illustrations, and generally a process cut (after a photograph from nature) representing some rare flower or distinguished tree. There is no rubbish or padding, nothing to offend the intelligence or the taste of the reader. The level aimed at is maintained with ease. Such an enterprise should have no grudging or doubtful support.

We must repeat our good word for the *Technology Architectural Review* (Boston: Henry D. Bates), like *Garden and Forest* in its first volume. The latest issue has another of Mr. Emmanuel Brune's masterly drawings from the antique (a Corinthian capital), and two *projets*, one of a public library. The students of the Massachusetts Institute of Technology who are behind this undertaking are supplying something attainable nowhere else on this side of the water.

The *Classical Review* for October (London: David Nutt) announces that its arrangements with Ginn & Co., Boston, will enable its conductors to enlarge the magazine by an additional sheet, commencing January, 1889, and thus make room for American scholars, among whom Prof. T. D. Seymour of Yale, Prof. J. H. Wright of Harvard, and Prof. W. G. Hale of Cornell will serve as a cis-Atlantic editorial committee.

Sun and Shade, published by the Photogravure Co., will, in its December number, be wholly given up to plates of children, including an example of color printing.

The August-September number of the *Library Chronicle* prints the admirable address of the President of the Library Association of the United Kingdom at the Glasgow meeting, and contains also an abstract of the proceedings. While the practical side of the librarian's profession was by no means neglected, it is evident from the titles of such papers as "Elzevir Bibliography" by Chancellor Christie, "Watermarks in Collation of Fifteeners," "The Brothers Foulis and the Glasgow Press," "A Bibliographical Martyr," and others of a like nature, that more attention is given to purely bibliographical subjects than has been customary at the meetings of the American librarians. It was announced that the Borrajo prize for the best essay on the history of printing in England to the Year 1800 had been awarded to E. Doubleday of the Nottingham Library. The council of the Association was instructed to make arrangements for holding the meeting of 1889 in Paris.

In the November number of the *Centralblatt für Bibliothekswesen*, Dr. G. Knod makes a contribution to the bibliography of Jacob Wimpfeling, a noted figure in the history of German education; and Dr. T. Gottlieb furnishes transcripts of some seven or eight mediæval catalogues of Italian church and monastic libraries, none of which, however, offer anything very important to the student of mediæval bibliography or history. The recently issued third supplement to the *Centralblatt* is a bulky number of 350 pages, containing the elaborate classification of the subject catalogue of the Halle University Library. The introduction, by the librarian, O. Hartwig, gives an interesting account of the circumstances under

which the classification was carried out, and describes with considerable detail the method of cataloguing adopted. As the books are arranged on the shelves in substantially the same order as in the subject catalogue, we have here an example of a relative location system which may be compared with some of the American plans. The scheme has been very carefully worked out, and will well repay examination by those interested in such matters, though it is likely that most librarians will agree with Dr. Hartwig in thinking that, after all, only certain fundamental divisions can be looked upon as common to all libraries, and that a satisfactory system of classification for any given library must be largely an individual one, or, in other words, must be worked out with reference to the conditions and objects of that particular library. In this case, for instance, the classification of jurisprudence is carried out into an unusual minuteness of detail, and occupies more than one hundred pages, or about one-third of the volume.

The death is announced on November 19 of the Princess Elena Koltzoff-Massalsky, better known in literature as Mme. Dora d'Istria. The daughter of Prince Michael Ghika, she was born at Bucarest in 1828. On the overthrow of her uncle, the reigning prince of Wallachia, she went into exile with her father, travelled and lived in nearly every country in Europe, specially in the Balkan Peninsula, and even made a long journey in the United States, an account of which was published in the *Neologos*, a Greek newspaper of Constantinople, with the title of "Labor in America." She wrote on nearly every subject, but was especially known for her papers in various reviews and journals on the peoples of Eastern Europe, their songs and their folk-lores.

—The December *Century* has no article standing out above the general level, though that level is, as usual, one of excellence. If Henry Ward Beecher's paper on his visit to England in 1863 could have been anything more than the unfinished Aladdin's window it is, it would have been such an article, no doubt; as it is, its interest is, of course, only pathetic. It is pieced out, to be sure, by Dr. Buckley's account of Beecher's struggle with the Liverpool mob; but this, though valuable as the testimony of an eye-witness, adds nothing to what was known of the affair before. The second instalment in the series of reproductions of Italian art is given in a short article on Duccio, ornamented by three of Mr. Cole's engravings in his best style. F. Hopkinson Smith gives a half-score of his Mexican sketches in connection with a letter-press which is altogether charming in its accurate observation. So faithfully does the writer give back the true tone of Mexican life that it is only fair to presume that the slips in Spanish which disfigure his pages are the printer's fault, not his. His sketches for the most part are suggestive bits, but are far inferior to the spirited drawings, in the same field, which Mrs. Foote has given us—a sample of her fine work being shown in the frontispiece of this very number. Henry James's article on London, with illustrations by Joseph Pennell, will give pleasure to many readers. Mr. James writes more about the London of the idea than the London of actuality, and attempts to render the impressions found in his own consciousness rather than the results of gazing abroad with the physical eye; but, of course, his paper is all the more characteristic and entertaining for that. The Lincoln biography is working clear of the smoke of battle-fields, and gives in this number a highly interesting account, with some important and hitherto unpublished documents, of the way the country, through the man who spoke its will, felt its way to emancipation. The "Romance of Dollard" does not disappoint the expectations raised by the first chapters. On what theory the Irish story of Mr. Jessop is printed, it is hard to imagine. It is both vulgar and witless.

—The drawing of 'A Peccary Hunt,' by Frederic Remington, in the last number of *Harper's Weekly*, is an interesting illustration of the transitional and experimental stage of current pictorial methods in the delineation of animal locomotion. The two horses in the foreground are evidently either directly copied from instantaneous photographs, or drawn in positions made familiar to us through photography, while the more distant horses and all of the peccaries are drawn in the old-fashioned, full-spread position of the conventional sporting print. The result is very curious. When Mr. Muybridge first made public some of his photographs, it was almost universally believed that, while his results might be of scientific interest, they could be of little service to artists, whose business was with appearances, and whose conventional methods gave more of the *appearance* of motion if they gave less of the facts. So rapid, however, has been the education of eye of all who have paid any attention to the subject, that in this present drawing of Mr. Remington's our old ideas are seen to be reversed, and the positions which are demonstrably correct give a much greater impression of speed than do the conventional ones. The foremost horses not only seem to be passing rapidly before us, but the position of the feet is suggestive to the ear as well as to the eye, and one seems to hear the cadenced pound of a thundering gallop as they pass. The more distant horses, on the contrary, if they seem to move at all, seem to be gliding silently through the air, like the phantom horses in the "Walküre," without touching hoof to ground. A study of the two manners of depicting motion, here brought together within the limits of the same drawing, will go far to convince one that the total abandonment of the older one is only a matter of time. Whenever the public has become sufficiently educated in the new methods to lose the sense of strangeness, and whenever the artists have sufficiently mastered them to acquire freedom in their application—being no longer bound to the mere copying of photographs, but *possessing* a knowledge of the true philosophy of motion and applying it unconsciously—then the revolution will be complete, and a return to old methods will no longer be possible.

—Mr. Sidney S. Rider of Providence, R. I., whose name is well known in the American book-trade, resents the use of such terms as "socialist" and "communist" when comments are made upon his opposition to the International Copyright Bill which is now pending before the House of Representatives; and in *Book-Notes* for November 24, he particularizes his reasons for opposing this measure. Using the somewhat hackneyed illustration of the man who, by the labor of his hands, guided by the intelligence of his mind, produces a story or a history, instead of a wheelbarrow, he exclaims, "Is it not the property of the man who made it? Certainly it is, and it is entitled to just the same protection, as property, as it would have had had it been a wheelbarrow." There may be two kinds of property in a book, he continues, and therefore two different owners. "The author owns the literary property, while the manufacturer owns the mechanical production, to wit, the book itself. The putting of a manuscript into type and printing it upon paper, certainly can give the workman no right of ownership in the manuscript. . . . It is the *author*, not the *workman*, who did the work with the pen. Him, then would I pay. The workman has no right of property in the author s work."

—It may be inferred from these quotations that Mr. Rider is not opposed to the idea of securing by law the literary property of the foreign author. But he does object to the bill now being pushed, and his reasons are frankly stated as follows:

"Senator Chace's international copyright law refuses to recognize this literary property in English authors, unless it can be made, under the protective-tariff principle, to become a source of profit to the mere American manufacturer of the book. . . . Their ownership in their own property cannot be recognized unless the English authors produce their books through some American publisher. This arrangement is for the purpose of enabling the mere manufacturer of a book to obtain out of me, his own countryman, a larger price than he otherwise could by any fair dealing; and this twist upon me, Senator Chace, as a legislator, is assisting this manufacturer to obtain."

The advocates of the Chace bill are neither fair nor wise in calling those who do not approve of this special measure, "enemies of international copyright." One might with equal justice denounce all persons who conscientiously oppose the Blair bill, as opponents of education. No doubt the former sincerely believe the Chace bill to be the only law that can be obtained from Congress at this time; but they should not forget that this is an era of free and frank discussion, and should see that it is impossible to prevent the publication of reasons for disapproval, and that the wise course is, therefore, to meet the objections advanced with honest arguments, and not attempt to discredit those who conscientiously refuse to endorse the legislation proposed, by stigmatizing them as opponents of an equitable international copyright law.

—We have received from the American Polytechnic Company of Buffalo, N. Y., some specimen pages and a number of plates extracted from a forthcoming work entitled 'Ancient Egypt, or Mizraim,' and edited by Dr. Samuel A. Binion of Baltimore, Md. This is to be a great work, in dimensions at least, and its object is to reproduce in a single collection the treasures of engraving and colored lithography which lie buried in the imperial productions of France in Egyptology—the 'Description de l'Égypte' authorized by Napoleon I., the 'Monuments de l'Égypte' of Champollion, the 'Monuments Égyptiens' of Prisse d'Avennes, and the German 'Denkmäler aus Ægypten und Æthiopien' of Lepsius, and we presume the Italian 'Monumenti' of Rosellini—productions inaccessible to most students in England and America, and altogether beyond the use of merely English readers. A duplication of the finest pieces in these magnificent publications ought to form an incomparable portfolio, illustrating Egyptian archæology and architecture as they appeared half a century ago, more or less, some (indeed, many) changes for the worse having taken place in the monuments since then; and certainly the specimens laid before us are faithful to their originals, though perhaps somewhat more highly tinted. While most of the pioneers above-named sought only to preserve scientific accuracy, the latest, Prisse d'Avennes, went after the most beautiful things, and whatever is repeated from his hand will be artistic and attractive in the highest degree. It would be premature to forecast the success or criticise the execution of this grand work before it is finished. Dr. Binion

writes in a popular style, but here in like manner the amount of text offered us in this instalment is far too scanty for judgment. We observe, however, that he does not write the Egyptian form of the name Chefren uniformly —"Chafra" on the first page, but "Khafra" elsewhere; also, that he quotes Mr. Petrie as rendering the words *nofer nuter, neb khaui* by "the good god, the king of the two lands," in which either Mr. Petrie must be wrongly transcribed or himself guilty of the slip, for *neb khau* means 'King of Diadems,' while 'King of the Two Lands' would be *neb taui*.

—The aim of the 'New English Dictionary,' now for four years in publication at Oxford, is of the highest. It aspires, in "regard to each individual word, to show what new uses have arisen and when; to illustrate these facts by a series of quotations ranging down from the first-known occurrence of the word," etc. Seldom has it fallen below its high aim, as we have been glad to testify again and again on the appearance of each of its successive parts. But sometimes Homer nods. The word "capitol" affords one instance. In one transferred sense this word is defined, "The edifice occupied by the Congress of the United States in their deliberations." To illustrate this meaning we have the following: "1843 *Penny Cycl.* xxvii, 98. The President's house is situated at the opposite extremity of Pennsylvania Avenue from the Capitol." Only this and nothing more. The year one thousand eight hundred and and forty-three was the first occurrence of the sense above mentioned known to Dr. Murray and his lexicographical staff. This era was the thirty-first year after British troops had burnt the Capitol in Washington, and were described by their Chaplain Gleg (p. 139) as "gathered on the Capitol Hill." But the occurrence of the word "capitol" to mean a building for the Congressional deliberations is much older than 1814; it is older than the erection of such a building in the first years of this century. On October 1 (1793) Jefferson writes: "Dr. Thornton's plan of a Capitol has been produced, and has captivated the eyes and the judgments of all" (Works, iii, p. 508). More than this—in the lowest deep a lower deep—on April 10, 1791, Jefferson writes about "preparing plans for the Capitol" (iii, p. 237). It seems to Yankees rather hard that their Capitol should remain for more than forty years ignored by the very foes who burned it down. In truth, they might well be glad to forget that act of savagery.

—In respect to the other American signification of the word "capitol," namely "the state-house, or house in which the Legislature holds its sessions," the 'New Dictionary' is still more deficient. This new use of the word is illustrated by no quotation whatever. There is nothing to show either when it arose, or whether it gave rise to the national meaning of the word or was derived from it, or from what other source. But, since "capitol" has become to Americans—or at least to the politicians among them—a magic word no less than was "glory" to Frenchmen under the first Napoleon, these points deserve elucidation. The name was given to a state-house earlier than to any national edifice. Jefferson, in his 'Notes,' written in 1781, mentions "the Capitol of Virginia at Williamsburg" (p. 221); but the word had the same import there long before Jefferson was born. In 1699 the state-house in Virginia having been burnt, the Assembly passed "an act directing the building the Capitol," etc. (Henning, Statutes, vol. iii., p. 197). In 1705, after providing for a site for the building, it was ordained "that the said building shall forever be called and known by the name of the Capitol." Where the Virginian legislators obtained the word "capitol" in the sense of government-house, it may not be possible to ascertain. The word, however, had been used in that political sense, in English, as early as 1653 by Sir Thomas Urquhart, in his translation of Rabelais ('Gargantua,' §§ 2-6), "The cake-makers went to the Capitol of Picrochele." Some Old Dominion planter must have read Rabelais. But the translator had very slightly changed the original *capitoly*, written by Rabelais about 1535, and that word then and immemorially had been borne by the state-house in Toulouse. It seems clear that, from the era of Roman conquest, capitol in Provence meant government-house. Du Cange quotes Aulus Gellius as saying that the colonies were a sort of images of the Roman people, and so had theatres, baths, and capitols ("Erant coloniæ quasi effigies Romani Populi, eoque jure habebant theatra, thermas, capitolia"). The word "capitol" as a state-house has largely died out abroad, and in Great Britain never had any currency; but in our Greater Britain it has become as potent a vocable as palace or parliament-house ever was anywhere. It was therefore worthy of a less perfunctory treatment than it has received from the all-embracing dictionary of the English Philological Society.

FRANCE AND THE CONFEDERATE NAVY.

France and the Confederate Navy. An International Episode. By John Bigelow. Harper & Bros.

Mr. Bigelow's modest little book has a far higher value as history than many more pretentious volumes that bear the name. What he playfully terms an "international episode" was in truth a diplomatic intrigue of the first magnitude, in respect to the parties concerned in it as well as in the interests at stake. It was nothing less than the attempt of the Confederacy, with the active coöperation of the Emperor Napoleon III., to make France play the same part for the Confederates that she played in 1778 for the Revolutionary colonies. The story has up to this time remained buried in the captured Confederate archives, where no one seems to have thought of looking for it until Mr. Bigelow unearthed it. Parts of it were known to the individual actors, and one of these, Capt. Bulloch, the Confederate naval representative in England, has published his narrative; but, though an active an important agent, he was only a subordinate, and there was much with which he was unacquainted. Mr. Bigelow himself played no insignificant part in the story, seeing that he was the chief instrument in bringing the intrigue to nought, but his actual knowledge of the facts at the time was confined to what was essential for carrying his point—the rest he could only surmise; and even with such piecing out as Bulloch's subsequent account afforded, his story was incomplete until he obtained the Slidell-Benjamin correspondence. This filled in all the remaining gaps, and the result is like a child's puzzle, where the scattered and misshapen parts, put together by expert hands, reveal an unexpectedly perfect picture.

When Capt. Bulloch, from his agency at Liverpool, in the summer of 1862, accomplished the extraordinary feat of getting the *Alabama* to sea, in spite of the protests and the evidence of her character submitted by the American Minister, he was in reality killing the goose that laid his golden eggs. The notoriety of the incident, and the strong light that was thrown upon everything and everybody connected with it, exposed Bulloch's methods, while the long vistas of diplomatic controversy which each capture of the cruiser with its accompanying bill for damages opened out to her Majesty's Government, quickened even the Palmerston Ministry to a sense of neutral obligation. Bulloch continued his ship-building, but with many misgivings. Early in 1863 he perceived indications that the completion of the Lairds' rams would be attended with serious difficulty, and the seizure of the *Alexandra* in April increased his apprehensions. The apprehensions proved to be well founded; for though the *Alexandra* was finally released, the protracted trials kept her in durance until she could no longer be of any service, and in the following September the rams were effectually headed off by Mr. Adams's famous ultimatum. Nor was any ship-of-war ever afterwards constructed for the Confederates in England.

Bulloch had originally selected England in preference to France as the locality of his agency, because it afforded greater freedom of action, a cheaper market, and a clearer and surer knowledge of the limitations imposed by the law. The French neutrality proclamation was rigorous in its provisions, and although the Emperor was thought to be well-disposed towards the Confederates, it was likely that his disposition would depend mainly on their failure or success. Bulloch was therefore satisfied to confine his operations to England. In the latter part of 1862, however, when he saw that sooner or later he might be compelled to shift his ground, the urgent representations of Slidell, the Confederate Commissioner in Paris, led him to turn to the Continent. Slidell's report was more than encouraging. He had received most positive assurances from the highest sources that the naval projects of the Confederates would not be interfered with in France, and that any plausible representation of the builders, holding out a fictitious destination of the vessels, would be accepted by the Government.

The Cabinet at Richmond eagerly concurred in Slidell's views. Secretary Mallory of the Navy Department would thus be enabled to get his ships, and Secretary Benjamin of the State Department looked for a still more important advantage in the prospect of embroiling France with the United States. The authorization to proceed with the ships was accordingly despatched to Bulloch. The plan could not be carried out immediately, as the finances of the Confederacy were passing through one of those critical stages which unavoidably recurred at intervals, and the funds in the Liverpool Sub-Treasury were at a low ebb. In the spring of 1863, however, the Erlanger loan was floated. The method by which this was done is tersely described by Mr. Bigelow, who gives Mason's London despatches as his *pièces justificatives*. From these it appears that Mason, upon the advice of Erlanger, who was placing the bonds, authorized the latter to expend £1,500,000, or half the total amount of the loan, in "bulling" the market, in consequence of which fictitious operation the bonds advanced 4¼ per cent.

Bulloch now had money enough to begin, and in April he concluded a contract for four corvettes with Arman, a shipbuilder of Bordeaux. Arman, like Laird in England, was a member of the Legislature, and something of a personage, or at least on friendly terms with personages, and he too had secured his assurances. Accordingly, his application for permission to build the four steamers, with batteries of fourteen thirty-pounder guns, for trade in the Pacific, obtained a cordial assent from the Minister of Marine, whose professional intelligence

apparently received no shock at learning that merchant steamers required this formidable protection against the pirates of the China Seas. Emboldened by their success, and by renewed "assurances," Slidell and Bulloch made a further contract with Arman in June, for two heavily armored rams. Work on the six vessels began immediately after the closing of the contracts, two of the corvettes being sublet to M. Voruz, a shipbuilder of Nantes.

Until Mr. Bigelow brought to light the Confederate archives at Washington, no one, except the parties directly concerned, knew exactly what was the nature of the "assurances" received by Slidell, upon which he and Bulloch acted. Even Bulloch was ignorant of them, or at least professed to be, when he published his history in 1884. Mr. Bigelow's documents tell the whole story, and they tell it in Slidell's own words. Apart from its intrinsic interest as the history of Confederate diplomacy, it throws a valuable side-light upon the character and methods of the Emperor—methods which present a singular mixture of candor and duplicity, actuated solely by self-interest. First and last, he gave Slidell three interviews. The Confederate Commissioner knew his man, and in the conferences used little subterfuge. In fact, the unblushing directness in which these two—the "high concocting parties," as Mr. Bigelow aptly terms them—unmasked themselves in their negotiations, is not the least remarkable among the extraordinary revelations of the book. In the second interview, at St. Cloud, in October, 1862, the Emperor himself led up to the subject of ship-building by asking why the Confederates had not created a navy. Slidell promptly replied that the Southern leaders had not at the start favored a naval development, but that they now saw their error, and were endeavoring to correct it by building vessels; "that the great difficulty was, not to build, but to man and arm them, under the existing regulations for the preservation of neutrality; that if the Emperor would give only some kind of verbal assurance that his police would not observe too closely when we wished to put on board guns and men, we would gladly avail ourselves of it." To which the Emperor replied, with delightful candor, "Why could you not have them built as for the Italian Government? I do not think it would be difficult, but *I will consult the Minister of Marine about it.*"

It would be hard to find, in the annals of modern statecraft, a parallel for this monumental piece of imperial knavery. At this very time the Emperor, through his Ministers, was making professions to the United States of the strictest neutrality, as indeed his proclamation, apart from any further assurances, sufficiently indicated; while in a private interview with the Confederate Commissioner he was assenting to the baldest propositions for its violation, and even volunteering to consult his Minister as to the subterfuge by which his own edict could be safely evaded, and the conditions upon which he would himself connive at the evasion!

The third interview between Slidell and the Emperor occurred eight months later, in June, 1863, about the time that the contract for the rams was concluded. The same agreeable frankness was maintained between them in reference to the ship-building conspiracy. Indeed, Slidell's report of the interview treats the question rather as a matter of course, a thing touched upon by the way, about which the most perfect understanding should exist, and in fact existed. "I expressed my thanks to him," so his narrative reads, "for his sanction of the contracts made for the building of the four ships-of-war at Bordeaux and Nantes. I then informed him that we were prepared to build several ironclad ships-of-war, and that it only required his verbal assurance that they should be allowed to proceed to sea under the Confederate flag, to enter into contracts for that purpose. He said that we might build the ships, but it would be necessary that their destination should be concealed." At this Slidell demurred a little, but presently withdrew his point; and thus this precious agreement was concluded, by which the Emperor, who had by proclamation forbidden his subjects "to concur in any manner in the equipment or armament of ships-of-war" of either belligerent, secretly consented to the delivery of "several" ironclads to the Confederate agents, on the sole condition that the scheme should not be found out.

Unfortunately for the success of the conspiracy, the agents were unable to fulfil the conditions. Two months after the bargain was completed, and when the construction of the six ships was well advanced, Mr. Bigelow, at this time the Consul-General of the United States at Paris, received a visit from a man whom he designates as "M. X." "M. X." appears to have been one of those professional spies who make a substantial living in Europe as political "fences"—receivers of stolen goods in the way of State secrets. This gentleman, in the prosecution of his worthy occupation, had become possessed of a series of original letters and papers which had passed between Arman, Voruz, Slidell, Bulloch, and Erlanger in reference to the ships, which he offered to dispose of to Mr. Bigelow for 20,000 francs. As the documents were clearly genuine and the proof they contained overwhelming, and as the proposed fleet, if it ever got to sea, would work untold mischief to this country, Mr. Bigelow wisely concluded that the information was cheap at the price—in fact, it would have been cheap at almost any price—and closed at once. The documents were delivered to Mr. Dayton, the American Minister, and were by him immediately laid before M. Drouyn de Lhuys, the Minister of Foreign Affairs.

Never was there a more complete exposure. The correspondence proved beyond the shadow of a doubt that a gigantic scheme was on foot to create a Confederate fleet in direct violation of the prohibitions of the French neutrality laws and of the Emperor's proclamation. The circumstances could not fail to suggest a suspicion that the Government itself was compromised. About this, of course, nothing was said in Mr. Dayton's protest. M. Drouyn de Lhuys affected great surprise at the revelation, and perhaps not without reason, for he was probably not aware of the full extent of the Emperor's complicity. He at once assured Mr. Dayton that the ships would not be permitted to sail, and he presently caused the withdrawal of the authorization given by the Minister of Marine. He even went so far in carrying out his part in the diplomatic opéra bouffe as gently to upbraid his colleague for having given the permission, to which the latter innocently replied that he "was obliged to believe the statement of the contractor that the vessels were for service in the China Seas, and it was well known that vessels in these waters required a certain armament."

Meanwhile the Emperor kept prudently in the background. Obviously it would have been wise for the Confederate Commissioner to have done likewise. He had nothing to complain of, for the Emperor had done all that he had promised, and the exposure of the plot had made it impossible for him to go further, as indeed he had cautioned Slidell beforehand. But this, apparently, Slidell could not understand, and, with an almost inconceivable effrontery, he addressed a letter to the Emperor, intimating that the imperial Ministers, without their master's knowledge, were interfering with the ships, and expressing "entire confidence" that his Majesty, upon learning the fact, "will take the necessary steps to prevent it"; which, he, Slidell, was unable to do, owing to the confidential character of the Emperor's communications to him. He added that he was induced to write, because the subject involved "not only vital interests of the Government which he represents, but very grave and delicate personal responsibilities for himself." The letter, as might be expected, failed of its object, and, as Mr. Bigelow suggests, it is not surprising that Slidell never had another official interview with the Emperor.

There is little doubt that Napoleon III., even after the affair was exposed, would have been willing enough to let the ships go, if the Confederacy had shown any signs of increasing strength; not on account of the "delicate personal responsibilities" of any individual, but because it accorded with his policy. He coquetted with the question for six months, during which the building went on, until finally Mr. Seward sent a sharp despatch which demanded immediate attention. The contractors were then ordered to sell the ships, and in a short time all of them had been disposed of to foreign governments. One ram, the *Stonewall*, was sold to Denmark, and subsequently came into Bulloch's possession, but under circumstances for which France could not be held responsible. She was too late to be of any use to the Confederacy, and was laid up at Havana, and ultimately delivered to the United States.

This is in substance the remarkable story that Mr. Bigelow has to tell, and he has told it well. In form, his book is primarily a documentary study, three-fourths of its space being taken up by official papers; but the author's narrative, drawn largely from his personal experience, and enlivened with much caustic observation and incisive comment, connects the documents and fills out the gaps in the story. In this way he has produced a work which is not only of the first importance to students, but full of interest for everybody; while it has the special merit of giving his personal views, and at the some time presenting *in extenso* the evidence upon which the views are founded.

RECENT NOVELS.

The Story of an African Farm. By Ralph Iron (Olive Schreiner). Boston: Cupples & Hurd; and Roberts Bros.

With the Immortals. By F. Marion Crawford. Macmillan & Co.

An Iceland Fisherman. By Pierre Loti, Translated from the French by Clara Cadiot. W. S. Gottsberger.

It is no longer an open question whether the novelist shall be at once a story-teller, a critic of life, and an authoritative commentator on its primitive mystery. He and the public have settled that controversy, and he is now an autocratic judge of his own proper license and limitation. So it has come to pass that, no matter what incidental distractions the novelist who appeals to intelligence may permit himself, he elects chiefly to discourse with gravity on the beginnings of things, and to interpret sagely the humanly unknowable. Since the choice is his own, he doubtless gets much gratification out of the pose philosophical; but it sometimes seems as if the public had sold him a precious

birthright, had bartered one of its few harmless joys for a mess of pottage which, just as likely as not, turns out both heavy and sour. Yet the public is, on the whole, singularly slow to perceive the inferior quality of its pottage, and the novelist must be the blindest of leaders if he fail to secure temporary adherents to his conclusions about life and death and immortality, or worshippers for the moment of his unrecognized inconclusiveness. Should he have power and charm, hardly any one will find out that, with all his fine phrasing, he has not solved any one of the riddles of existence. His apparent solutions are adopted enthusiastically, and for a day he wears the honors due to him who has at last found truth.

Thus, if the world were not fickle and variable, most of all in its superficial religious heresies, the novelist might become responsible for much of what orthodoxy decries as stubborn and harmful error; and if the people who discover in the gloom of 'The Story of an African Farm' a finished exposition of the Ultimate were not sure to find it in greater perfection somewhere else, next month, there would be good cause for legal restriction of novelists to the field of sentimental romance. For the thought in the book, though strong, is not wide, and the truth towards which the author gropes is presented most clearly to her in a form graceless, hard, and repellant. There is no roundness or completeness in what seems to be the utterance of an eager, restless, joyless mind, thinking aloud, without any definite conception of finality, much less predetermined conviction. There is no more of breadth in the argument than in the characters of the story, and no more of conclusiveness than of continuity and climax in its construction. Story and independent reflection are similarly fragmentary and full of one-sided suggestiveness, and it is curious to observe just where the thought and its expression in action cease to be natural to the characters in their conditions, and become arbitrary assumptions of their creator. In almost all the characters one may discover the dividing line or point, and most clearly in the principals, Waldo and Lyndal.

Waldo is by nature reverential, spiritually imaginative, slow to grasp ideas, faithful to hold, ambitious of opportunities in life, but too visionary and self-distrustful to make them. Body and soul he is subjected to a discipline of tyranny always repressive and often abusive. Disappointment and bitter sorrow pursue him. It is inevitable that such a man, seeing his personal faiths, hopes, and ambitions perish, shall reason: "So perish all faiths, hopes, and ambitions. The struggle and strife of which life consists, mean nothing, for to the man as to the beetle comes the same end—each dies and returns unto dust. Immortality is a myth and God is a lie." So far, the development is the sad work of circumstance and nature; then, in comes the author, and provides Waldo with the philosophy of the Stoics, making him discover blessedness in the serenity of sky and stars, presenting his personal sorrows as needful individual sacrifice for the harmony of the whole.

In the girl, Lyndal, there is still more of the author, and less of the self-confident, untamed, pathetically ignorant child of an African farm. One cannot say that her development is impossible, because impetuous, vigorous woman nature, unrestrained by traditions or ever-watchful conventionalities, and let loose in the world, is an incalculable force. It is pitiable, yet possible, that such a creature should come to degradation through the passion of love. None the less, her cold, pedantic reasoning about her dishonor is abnormal; her treachery towards Emmy, the friend of her childhood, inconceivably mean; and her behavior in some situations monstrous. Altogether, Lyndal is less a possible, actual woman than an illustration of free-thinking run wild. With the bare possibility in view of such moral depravity resulting from liberty of thought and action to women, it is no wonder that conservatism tightens the strings round their minds and souls. Thinking is almost as dependent upon liberty and opportunity as is doing, and it is not altogether irrational to hold that if we never permit woman to think differently from us, she will never dream of doing what we disapprove.

The minor characters are more children of the soil than is either Waldo or Lyndal, and from them one concludes inferentially that, among the author's discouraging theories, that of a certain equality between brutal instincts and earthly happiness has a prominent place. Tant Samie, the gross, selfish, vituperative Boer woman, is a most unpleasantly consistent and realistic incarnation of this dogma, but Bonaparte Blenkins is only a caricature combining the personal loathsomeness of Stiggins and of Squeers, and with none of the ludicrous characteristics which give those gentlemen an excuse for being. To sum up the whole matter, if the African farm were the wide world in miniature, and the people who there come and go largely representative of humanity, then we might as well swing back to the age of cave-dwellers, for a step forward is but a step towards a yawning gulf of black despair; we should be wise to believe that there is a hideous futility about human effort, displayed in whatever direction, and might comfortably settle down to grovel with the beast that perisheth no more than we do. Happily, however, the arid and dreary African farm is not the world, and the people whose miserable lot is cast there have not conceived in the dimmest fashion the infinite possibilities which are man's heritage. The world has indeed dreary spots enough and to spare, and life has its ugly shapes. It is quite possible that the 'Story of an African Farm' may convince some people with pessimistic predisposition that the dreary spot is a comprehensive desert, and the ugly shape the whole of life; therefore it is to be regretted that so much of unquestionable power should not have been restrained until wider experience brought wider knowledge and purer light.

To read 'With the Immortals' is to be present at a prolonged moonlight symposium of select and selected souls. Mr. Crawford does not speculate about whether the soul has a future estate, and, if so, what kind of an estate that may be. He cuts the Gordian knot. After some flimsy and rather doubtful science by way of explanatory preface, he plunges us into a company of "materialized" spirits, and delivers us to the mercy of their immortal tongues. There is audacity in the experiment, and the audacities of the book do not end here. Mr. Crawford, as every one knows, has written a number of good novels, and has displayed great versatility, besides showing himself a much-travelled person; yet his most ardent admirers would hesitate to ascribe to him the keen wit and deep tenderness of Heine, the stern moral sense and ponderous vocabulary of Dr. Johnson, the sensuous grace of Chopin, and the commanding clearness of Julius Cæsar. He has dared to challenge the criticism of high comparisons, for it is to the conversation of such notable dead that we are bidden to attend. They talk about everything on the earth beneath, but preserve an aggravating reticence about the heavens above, whither each at his hour was presumably transported. The picture of the nomadic existence (seeing men though by them unseen, until Chard let loose his artificial thunderbolts and lightning) which they lead in upper air, could not discompose the most timid mortal. To the socially ambitious it may cause a prospective pang, for, lo! there are *sets* in heaven. The idea of wandering for ever and for ever in immensity, coldly excluded from the clique of one's desire, is not without its terrors. On the other hand, there is always the chance of being eternally embraced by the very best society. This is the only interesting fact about existence in space that the "Immortals" vouchsafe to us, perhaps because each is so full of supplementary ideas connected with his earthly calling, but not committed to paper before his exit from the world.

The interest of Mr. Crawford's work lies entirely in comparing the ideas and expressions which he imputes to great men of the past with those set down in their own works and ascribed to them by contemporary writers. For a few chapters this provides a novel and pleasing entertainment, and then becomes very dull. The imitation of Johnson, whose idiosyncracies were neither delicate nor elusive, is admirable, and that of Heine, the spirit of refined contrasts and the essence of subtle irony, is extremely clever. Cæsar has more of pomposity than of the confident dignity which helps to make him an imperial figure, and his everlasting, condescending smile, if once caught by Johnson, would have wrecked the circle's harmony. Mr. Crawford displays familiarity with the life and time of a number of conspicuous men of several countries and ages. He shows himself to be a man of wide reading, a pretty straight thinker, and a lively and independent critic. Probably no one will read his book through, yet there is no reason why it should not rank with Landor's 'Imaginary Conversations,' or be as long referred to by people profoundly ignorant of its contents.

"Pierre Loti's" work illustrates admirably the definition of art as life seen through a temperament. It is among the finest expressions of the realistic movement in literature, for, while the author portrays external life with careful fidelity, he also responds to the throbbing of the great heart of existence and clothes the commonest things with beauty. A nature so tuned to sympathy with mankind is irresistibly drawn towards tragedy, and instinctively lingers in scenes where sorrow treads close on the heels of joy, and where the shadow of death lies heavy across robust life. The 'Iceland Fisherman' is profoundly sad. Quite free from morbidness and artificial gloom, its pain is intrinsic. Its tragedy is not accidental, but the abiding truth for people who dwell by a northern sea and depend on it for existence. Year after year the fishing fleet sails away; but hardly ever does it happen that every boat comes back to port, or that no woman, waiting at home, passes from the anguish of hope deferred to dogged acquiescence or dull despair. The soul of Loti's work is in his identification with the permanent truth of the Breton fisher's life. Should he separate himself from that, we should have a graphic picture of a rough, honest, frugal people, living carelessly and contentedly enough, at close quarters with death; but the heart would remain untouched and the imagination cold. The physical peculiarities of his scenes give opportunity for the display of his rare and versatile descriptive ability, and at times he is marvellously vivid. One can almost feel the *Marie*, scudding before a nor'-wester, through the grey mist that for ever veils the Iceland coast; one can plainly see the spectral bark, *La Reine Berthe*, looming up from the fog, then, wraith-like, fading away. The impression made by the whole sad episode of the

young Sylvestre's voyage to Tonquin can no more be effaced from a sensitive mind than the sound of the wind, sweeping through miles of forest at night, can be lost beyond recall by a sensitive ear.

The translation renders fairly well the spirit of the original, but introduces some novelties in English idiom. We are not accustomed to say that we invent stories "upon" a person, or that we prefer you "than" some one else; and we are trying to educate ourselves beyond the tenacious "different to." The phrase "of when a child" can hardly be considered an improvement on "during childhood," and the spasmodic effort to give the sailor's talk a flavor of illiteracy produces useless discord.

MORE HOLIDAY BOOKS.

Goethe's Faust. From the German by John Anster, LL.D., with an introduction by Burdett Mason. Illustrated by Frank M. Gregory. White & Allen.

The Mirror of the World. By Octave Uzanne, with 160 illustrations by Paul Avril. London: John C. Nimmo.

Gleanings from the "Graphic." By Randolph Caldecott. George Routledge & Sons.

Log-Book Notes Through Life. By Elizabeth N. Little. White & Allen.

The Besom Maker, and Other Country Folk Songs. Collected and illustrated by Heywood Sumner. Longmans, Green & Co.

THE heavy battalions of the army of holiday books are at last in the field. In size and elaborateness the new edition of "Faust," with Mr. Gregory's illustrations, is one of the most imposing books that have appeared of late years. The page is almost gigantic, being 20½ inches by 15, and there are ten photogravure plates in colors, varying somewhat in size and shape within the limits of 15 inches by 9¾, and 18 smaller "process" plates in black and white, besides the title-page and minor decorations. The mechanical execution of the plates is excellent, and the printing of the book, while not as artistic as might be desired, is clear and good. Unfortunately, it must be added that the merit of Mr. Gregory's drawings as works of art is not at all on a level with the ambitious nature of the publication. They are introduced with a solemnity that prepares one for great things. Says Mr. Mason:

"Since the first publication of 'Faust,' it seems to have ever been the theme upon which painters and musicians have tried their skill. In those editions that have hitherto appeared, the greatest of living artists have supplemented them with their illustrations; but, strange as it may seem, it is an absolute fact that until now few efforts have been made to introduce the powerful element of color in portraying the scenes of 'Faust.' . . . In the plates accompanying the present text, the reader will not fail to remark the element of *life* that enters into the subject, and the thoughtful coloring inclines us to hazard the assertion that a new light may be thrown upon the reading of this famous work. . . . Realizing the exceeding great value of accuracy in the details of so important a book, they [the publishers] have sent the artist to the places and scenes in Germany which are so strongly linked with the story of Faust."

After this one is somewhat surprised, in looking through the volume, not to find one novel idea, one composition that is not almost as old as the poem, one detail of costume or furniture that could not be supplied from a hundred New York studios, one bit of background that might not, to all appearance, be copied from the scenery at the first performance of Gounod's opera. Mr. Gregory is not without talent. He possesses, evidently, a very considerable ability in handling water-color; his drawing, if not first-rate, is respectable; and his coloring (in so far as one can judge of it by reproduction) is pleasing if not perceptibly "thoughtful." With this equipment, acceptable work might have been done on a slighter theme: but he is miserably overweighted with his subject, and still more with this most ill-judged introduction. Probably he is responsible for neither, and must suffer for his publisher's sins. We sincerely wish him better luck next time. Let us ask, in conclusion, why no mention is made anywhere between the two covers of the fact that it is only the first part of "Faust" that is here given.

In 'The Mirror of the World' we have another book by MM. Uzanne and Avril, of the type of 'The Fan' and 'The Sunshade'—a type we cordially detest. Each page has its illustration, and each illustration is as irregular in shape as it can be made, and the text is squeezed into the remaining space; sometimes the drawings make an irruption into the margin, and sometimes the text covers half the drawing; sometimes the drawings are printed in red, sometimes in blue, and sometimes they are emblazoned with all the colors known to heraldry, and more than all the metals. M. Avril's designs are exceedingly clever, exceedingly *chic*, and in exceedingly bad taste. M. Uzanne's text is as patchy and *décousu* as the illustrations, and decidedly less clever. The book is luxuriously got up, with a magnificence of paper and printing and a thoroughness of execution worthy of better contents.

It is rather a pity that the 'Gleanings from the *Graphic*' were ever gathered together. They are only the gleanings of the lamented Mr. Caldecott's talent, and the best of his work had already been harvested. There is, of course, some of his old cleverness and humor; but the best of it is not here, and the world would be contented if it had only the best. Every man who has his bread to gain does much work that the world, and he himself, would "willingly let die," and it is a doubtful service to the dead to bring together the waifs and strays of his production. It is only from the feast spread by the greatest that we would gather the crumbs.

'Log-Book Notes' is a collection of sentimental verse from various sources, not printed, but lettered in exceedingly bad taste, and illustrated by feeble and badly executed marine compositions. It is not to be commended.

The racy English country-folk songs collected by Mr. Sumner have a charm in their very rudeness and simplicity; and the naïveté with which sense yields to rhyme or rhyme to sense is delightful. Take, for example:

"His jacket was a deep sky-blue and curly was his hair,
His jacket was a deep sky-blue, *it was, I do declare,*"

or,

"Here's the blackbird and thrush, we will join their sweet song,
We'll be jovial together now harvest is done,"

or the cadence of "Heigh down, ho down, duffle-green petticoat" and "My ducy dulcy officer." The best of all, however, is the last stanza of "The Besom-Maker":

"And when the corn grew up upon its native soil
All like a little baby bright with its waving smile,
Then I bundles up my broom cuts and I binds 'em tight and spare,
And my besoms folks they please 'ems, for I'm the darling of the fair."

This surely smacks of the soil, and its mixture of poetry and impossible grammar is inimitable.

To make his illustrations in keeping with the rusticity of the songs, Mr. Sumner has drawn them in the manner of the old-fashioned wood engraving. In the best of them the imitation is very successful, and they might almost pass for the work of Bewick. They are very uneven in quality, however, and the best are more remarkable for manner than for matter, while the worst are pretty positively bad; but these are few in number, and in the main the archaic style of the drawings harmonizes well with the text. If the lettering had been done in such imitation of old type as Mr. Howard Pyle knows so well how to manage, there would have been little fault to find with the book, which, as it stands, is a very pleasant piece of quaintness. The original music to which the songs are sung is given in every case.

CHILDREN'S BOOKS.

IF we had had the ordering of the compilation from Tolstoi called 'The Long Exile, and Other Stories for Children' (T. Y. Crowell & Co.), we should have put at the very end the three parables with which the book opens. At the front should have stood the Fables and Scenes from Common Life, the Early Days, Stories of My Dogs, and Stories from Physics, Zoölogy, and Botany; in the middle, "Yermak, the Conqueror of Siberia" and "Bear-hunting Worse than Slavery"; and next to the last the inimitable "School Scenes at Yasnaya Polyana." By this gradation the young reader's progress would have been greatly facilitated, and a division would have been made between what is obviously "for children" and what is dubiously so. Even in the truly juvenile portion we meet with one passage so painfully real that we barely excuse it for the lesson of humanity and mercy it is meant to inculcate. We refer to the cruel beating of an overridden horse by the narrator himself when a boy (p. 141). There is in this something of the same pitilessness that did not spare us in 'Anna Karénina,' where, after Vronksy has broken the back of his favorite mare in the hurdle race, he kicks her to make her rise.

Quite the most charming portion of the volume is the school episode, so well calculated to make one fall in love with Russian young folks. The freedom in disorder, the earnestness to learn, the frank and sound relation between the sexes, the walks with the teacher through the snow-carpeted wood in the darkness, the rivalry in composition, in which the teacher participates, so that the story must be proclaimed "The Work of Makárof, Morózof, and Tolstóï,"—all this is in the best vein of the novelist and the philanthropist. Any teacher who will read these pages will feel a fresh stimulus at least. We should like to transcribe the whole chapter, but we must confine ourselves to the following pregnant extract, of which we would emphasize the fourth paragraph:

"In the first class we tried compositions written on some given theme. The early themes, which naturally enough first came into our heads, were descriptions of simple objects, such as corn, a cottage, a tree, etc.; but, to our extreme amazement, their labors on these subjects almost brought the tears into the pupils' eyes, and, in spite of the help of the teacher (who divided the description of corn into the description of its growth, or of its manufacture, or about its use), they strenuously refused to write on themes of such a nature, and, if they wrote, they made incomprehensible and most ridiculous mistakes in spelling, in language, and in idea.

"We tried the experiment of giving up compositions on such subjects, and all were as delighted as though we had bestowed a gift upon them. Compositions on so-called simple subjects, so much affected in schools, such as a pig, a kettle, a table, seemed immeasurably more difficult than the writing of stories based on their own experiences.

"One and the same mistake is always repeated, as in all other matters of instruction—the simplest and most common seems to the teacher to be easiest, while to the pupil only the complicated and vivid seems easy.

"All the text-books of natural sciences begin with general principles, text-books of language with definitions, history with divisions into periods, even geometry with definitions of such abstract concepts as space and the mathematical point.

"Almost all teachers, guiding themselves along such a path of thought, give out for their first subjects of composition the definition of a table or a bench, and cannot persuade themselves that for the description of a table or a bench one needs to stand on the very highest plane of philosophical and dialectical development, and that the same lad who is shedding tears over his composition about tables or benches will describe admirably the sentiment of love or hate, the meeting of Joseph and his brethren, or a squabble among his companions.

"The subjects which they best like to write about are the description of events which have taken place under their own eyes, or the repetition of stories which they have heard."

'Stories of Persons and Places in America' (George Routledge & Sons), by Helen Ainslie Wright, is an attempt, by grouping together sketches of historical events with descriptions of historical places, as well as pictures of manners and customs of the colonial days, to give a comprehensive view of this country. This aim is very fairly reached, though the method pursued gives the book a disconnected character and makes it hard to read continuously. It might serve as a text-book provided its errors were corrected. To mention a few of those which we have noted: Quebec is no longer garrisoned by the English; the Pilgrims did not spend "over four months" in exploring Cape Cod for a settlement; Louisiana does not "adjoin" Florida; the assertion that the battle of Lundy's Lane, of which perhaps not one child in a thousand ever heard, "is regarded as one of the greatest events of American history, and has been ranked as, next to Bunker Hill, the most important contest we ever had," is simply amazing. The appearance of the book is attractive, and the illustrations are uniformly good.

A most natural, pleasing, and at times touching story is that of 'Two Little Confederates' by Thomas Nelson Page (Scribners). The scene is laid in a plantation in Old Virginia at the time of the Rebellion, and the adventures described are those of two boys who, though too young to join the army, yet come freely in contact with the excitement, anxiety, privation, and sorrow which war entails. The result is a charming book for children, whether boys or girls.

The world is so well-stocked with fairy-stories that it seems foolish to add to their number unless some originality of design or beauty of execution furnish the new ones with an excuse for being; but to mix up the old machinery with modern ideas does not argue either wit or genius, and is apt to produce a tasteless hodge-podge, where what is silly and grotesque overpowers what is pleasing. An example of this is 'Prince Vance' by Eleanor Putnam and Arlo Bates (Roberts Bros.).

A bright, quaint story by Frances Eaton, otherwise "Sargent Flint," is called 'A Queer Princess and her Friends.' The "Princess" is a motherless little girl brought up by an adoring circle of elders. Queer and precocious she is, but also sweet and lovable. Her playmate and house-mate, Dick, a poor boy educated and cared for by Miss Minerva, an eccentric aunt of the "Princess," is a noble little fellow, but too refined for his antecedents. Various other child-figures add to the drollery and charm of the book, among whom Miss Flora is the greatest oddity. The story seems long-drawn-out, being a succession of scenes rather than a brisk narrative, and the style is peculiar; but the humor, good sense, and warm-hearted feeling make us forget the faults of the book.

The publishers are D. Lothrop Co., who also give us 'Romulus and Remus,' by Charles Remington Talbot. This is an amusing story of two dogs, which look so exactly alike as greatly to puzzle their respective owners. Many laughable situations arise from the mistakes made.

Children between six and twelve years will be delighted with 'Sparrow, the Tramp,' by Lily Wesselhoeft (Roberts Bros.). In this the animals and birds of a household, and an outsider in the shape of a sparrow, are made to hold converse with each other, and to make plans for defeating the mischief of Graywhis ker, the rat, and so forth. It is brightly and prettily told.

The name of Nora Perry is always a guarantee of pleasant reading, and such we find in 'The Youngest Miss Lorton and Other Stories' (Ticknor & Co.). Full of variety and vivacity, imbued with good sense and kindly feeling, these stories are not only attractive, but also well adapted to sow good seed in the mind of girlhood.

Another pleasant book for girls is Susan Coolidge's 'Clover' (Roberts Bros.), a sequel to the "Katy" books. It is something of a novelette, as it describes the wedding of one young lady and the lovers of another. Probably few of its readers will object to the heroine for being faultless, or to the story in general for being mainly compounded of sugar-plums.

'Little People, and their Homes in Meadows, Woods, and Waters,' by Stella Louise Hook (Scribners), is an attempt to convey some elementary information about insects and spiders to children under the very thin disguise of fairies, brownies, and the like. We believe in fairy stories, well told and unadulterated; and there can be no question that, for most children, the facts of natural history, so interesting and wonderful in themselves, have a perennial charm. But the two kinds of literature mix about as well as oil and water. Brought into an unnatural juxtaposition, the fairy tale is apt to seem silly, and the facts more or less fictitious. At all events, we have never seen an attempt at such a combination, and their name is legion, which was not unsatisfactory and distasteful. The present work is no exception to the rule. It contains a vast number of very interesting and, for the most part, authentic data about which it treats. If the unwise attempt to combine two incompatibles had not been made, if the stories of the various insects had been frankly and naturally told, it would have deserved, and perhaps have attained, gratifying success; under the circumstances, however, it is impossible to recommend it unreservedly, though this conclusion is arrived at with regret. Still, the mythical infusion is not very strong, and perhaps may be ignored by youthful readers. The illustrations, though a little scratchy, are fairly good. They suffer by the absence of any explanatory legend on the pages where they are printed, with one or two exceptions. It is tormenting to have to go back to a table of contents for such information. The typography is good and the binding neat, but there is no index.

The events of the year 1863 are the subject of Mr. C. C. Coffin's 'Marching to Victory' (Harper's), the second of the volumes devoted to the history of the Civil War. The greater part is necessarily taken up with an account of the military operations; but those civil events, both at home and abroad, directly connected with the war, are also intelligently treated. The author's descriptions of the great battles, especially those of which he was an eye-witness, are exceedingly spirited. He would have given a better idea of each battle as a whole, however, if many of the minor details, such as the movements and fortunes of each separate brigade engaged, had been omitted. Due credit has been given to the valor and patriotism of the Confederates, and, but for a few passages where the author's feelings have got the better of his judgment, the book will give its readers a clear conception of the magnitude of the contest, and at the same time inspire in them a true pride in the men, both North and South, who fought it. Numerous illustrations, maps, and an index add to the value and attractiveness of the volume.

The Mapleson Memoirs. 1848-1888. 2 vols. Belford, Clarke & Co.

In these two oddly named volumes we find an odd account of an odd career, and we get a "mental photograph" of an odd character. Before Mr. Mapleson, Ebers had written 'Seven Years at the King's Theatre,' and Lumley had recorded his reminiscences of the London opera; but neither of these earlier managers was as pleasantly humorous, as frankly cynical, or as amazingly impudent as the author of the 'Mapleson Memoirs.' The one book with which we thought for a moment to compare these volumes was Véron's 'Mémoires d' un Bourgeois de Paris'—and there are not a few points of analogy; but Véron was a man and a manager of another kind from Mr. Mapleson. In the main, Véron was telling the truth to the best of his ability, while Mr. Mapleson's account of his own haps and mishaps must be received as largely fiction—like the memoirs of that other amusing adventurer, Giacomo Casanova de Seingalt. In the present taste for scandal, for gossip, for personal details, these volumes ought to be popular, as their author abounds in anecdote, and he has an unequalled faculty of "giving away" everybody against whom he has a grudge. His rivals, Mr. Gye in England and Mr. Abbey in America, he hates heartily, and he assails them in season and out of season; but he reserves his sharpest stiletto for the artists who have sung under his management in Italian opera. Men and women, tenors and sopranos, are all etched by the acid of his maliciousness. If there be any who yet cling to this outworn form of musical art, we can recommend them to these volumes, that they may see what little wisdom goes to the performing of Italian opera. A tenor picked up at the door by accident, a tenor who had never read the part which he was suddenly induced to appear in, a tenor who had not the faintest idea as to the plot of the play or the meaning of the part he had been performing with success—these are the figures Mr. Mapleson sets before us, and it is with such as these that he has been giving Italian opera in Great Britain and the United States for many years. If anything were needed to show the inartistic nature of Italian opera as it lingers to-day, these revelations of one of the chief speculators in that form of amusement ought to suffice. He tells us, for instance, that Mme. Patti and Mme. Nilsson absolutely stipulate in their engagements that they shall not be expected to attend rehearsals; and he informs us that not infrequently one of the singers who appears with Mme. Patti may never have met her until they stand before the public, and that a third singer sometimes ingeniously contrives to introduce the newcomer to the lyric star in the course of the early scenes of the opera. The petty rivalries and the childish caprices of world-renowned singers surpass belief—the basses and contraltos being relatively saner and soberer than the tenors and sopranos, for

whom no freak of irresponsible eccentricity seems too extravagant.

Perhaps one of Mr. Mapleson's paragraphs may fairly serve as a specimen :

"Some rude critics having declared of Signor Fancelli's singing that it would have been better if he had made a regular study of the vocal art, he spoke to me seriously about taking lessons. But he declared that he had no time, and that, as he was making money by singing in the style to which he was accustomed, it would be better to defer studying until he had finished his career, when he would have plenty of leisure" (ii., 288).

Mr. Mapleson is at all times delightfully British in his patronizing attitude towards America, although he has a faculty for blundering about American matters, phenomenal even in an Englishman. He was pleased with his reception here, and he repeatedly asserts that he and his company, on their arrival in American cities, were greeted by thousands of citizens accompanied by military bands. Curiously enough, he omits to tell us that the President of the United States met him on the dock, or that he was escorted to his hotel by the entire American army. Perhaps this omission will be rectified in the next edition, when it would be well, also, to correct the many misprints. There is an index of proper names, which is a most welcome appendage to a book as full of anecdotes as this.

History of the Christian Church. By Philip Schaff. Vol. VI. History of the Reformation. Vol. I. Charles Scribner's Sons.

The present volume of Dr. Schaff's History treats of that period which is commonly called the Era of the Reformation. It begins with Luther and goes as far as the Diet of Augsburg, a period of only thirteen years. The last volume before this, the fourth, carried the history of the Church only to the beginning of the great war of the Investitures in the year 1073. This leaves, therefore, somewhat more than 400 years to be handled in the fifth volume, if Dr. Schaff should ever see fit to address himself to that task. This enormous disproportion will always be a source of regret to all those who believe, as we do, that Dr. Schaff's book is, on the whole, as far as it has gone, altogether the best book on church history for the use of students. The wide learning and broad sympathies of the author make his earlier volumes indispensable to any reader of English who desires to get the latest word on the great questions involved. The abundant references to literature, contemporary and modern, are perhaps the most valuable feature of the whole work.

Why Dr. Schaff, with many years of vigorous life before him, should have made so long a skip from the eleventh to the sixteenth century, may be guessed from the first words of this sixth volume : "The Reformation of the sixteenth century is, next to the introduction of Christianity, the greatest event in history." The Reformation means to him the outbreak under the lead of Luther and Calvin, and its history seems to him, therefore, a thing that can be properly told by itself. This is a point of view in which he has the example of most of the older writers on the subject, but it is one which we hoped the great work of Canon Creighton had definitely made an end of. The real interest of the Reformation to the historian is not in the outbreak so much as in the long preparation for it. The principles of the Reformation were all distinctly enunciated long before Luther ; and his true position in history is not as the great originator, but as the fiery and often inconsequent leader of the people, who dared to put into a telling, popular form ideas which were already struggling for expression.

That Dr. Schaff should have allowed himself to be governed by this view is the more to be regretted because the earlier writers, influenced, perhaps, by the same considerations, have always treated the period immediately before the time of Luther in a decidedly stepmotherly fashion. It is next to impossible to recommend to students a good book on the fourteenth and fifteenth centuries. The greater dramatic interest of the following period has drawn popular attention away from a time which, if we are seeking for the really fertile age of the new ideas, is distinctly more interesting.

The best justification for Dr. Schaff's choice, however, is in the fact that he has given us a book decidedly more useful to the student than any other history of the Reformation with which we are acquainted. His personal enthusiasm for the character of Luther lends a warmth to his presentation which does not detract from its value as (on the whole) a very accurate one. He sees the faults of his hero, but he regards them as those of a man who was too much of a man not to have great faults. The work has especial interest as the first Protestant history which has met the attacks of Janssen in detail. Answers to Janssen there have been enough ; but a complete history, written by a Protestant with this latest attack in view, had not yet been written. Our author's attitude towards his opponent is dignified and fair-minded. He admits his great learning and his desire to get at "historical truth" ; but he denies his point of view from the start, and, with that denial, must reject his conclusions.

To say that this is a great or an original book would be extravagant praise. It is, however, a true and a useful book.

Montesquieu. By Albert Sorel. Translated by Melville B. Anderson and Edward Playfair Anderson. [The Great French Writers.] Chicago: A. C. McClurg & Co. 1888.

M. Sorel's study of Montesquieu is one of those pieces of literary criticism, so common now-a-days in French literature, which suggest many more questions than they answer. It is an *aperçu*, the object of which is to make a sketch, to present a picture, to give us an idea of a man, without committing the author to any particular views, or involving his judgment in serious responsibility. The fashion was set, not, as many people seem to suppose, by Sainte-Beuve — for every word uttered by Sainte-Beuve was weighty and to the point—but by a race of imitators, who failed to perceive that his manner was nothing without what lay behind it. M. Sorel does his work very well. He gives us a fair notion of what Montesquieu did, but he does not contribute much that is new. We knew before that Montesquieu was one of the pioneers of modern political philosophy; that he helped, without knowing or intending it, to pave the way for the French Revolution; and we strongly suspected that a great deal of his speculation was wholly groundless, or, rather, that the groundwork of his speculation was often flimsy and unsubstantial. Perhaps the exhibition of this weakness is the best part of M. Sorel's work.

If we ask ourselves, What did the 'Esprit des Lois' contribute to political philosophy? we do not feel very confident of more than one thing, and that one certainly of great interest to American students—the idea of the separation of the three departments of government, entirely undreamt of in the ancient world or in the middle ages, now a commonplace fact. This is one of the great political discoveries of history, as important as the representative principle or the laws of political economy. It is a curious fact that almost all the advances in political science of any importance have been made since Montesquieu's time, and to a great extent because he pointed out the way.

But what we should like to have is, not a vague impression of all this, but a definite estimate of Montesquieu's position. Was he anything more than a skilful describer of what he saw, or was he an original thinker? Was what he learned in England thought so striking on the Continent because it was strange, or because, by a comparison of French and English polity, he really brought out a contrast pregnant with political meaning? Did he owe his vogue in great measure to his literary qualities and his social position? No one can answer these questions satisfactorily but a master of the philosophy of government. A purely literary estimate will not do. We do not by any means desire to condemn M. Sorel's essay. It is very pleasant and easy reading, and has a slight individuality of style which the translators have succeeded in preserving very well.

Die Italienische Literatur der Renaissancezeit. Von Adolf Gaspary, Professor an der Universität Breslau. Berlin : Robert Oppenheim. 1888.

The writer on classic Italian literature has to complain rather of the abundance than of the scantiness of his material. So popular has the study of the national authors become with Italians of our generation, that even while a student writes, vast quantities of fresh pamphlets are incessantly accumulating, until the work of revision seems almost endless. The apparent hopelessness of the task, however, has not deterred two competent teachers from giving a connected form to the results of modern investigation. The one, Bartoli, a scholar whose taste for original research has been favored by his position in the University of Florence, began publishing in 1878 his great 'Storia della Letteratura Italiana,' of which he has now produced seven volumes (one of them unfinished), devoting the seventh to Petrarch. The other, Gaspary, a man of good judgment and philosophical bent, but forced by his situation to rely mainly on the works of others, has mastered his subject with admirable thoroughness. He brought out, over three years ago, the first volume of his 'Geschichte der Italienischen Literatur' (largely the result of his lectures in Berlin), and now offers us the second, a study of the Renaissance.

The new volume begins with Boccaccio, and should have carried us to Tasso; but three chapters on the sixteenth century, treating respectively of the *novella*, of the treatise, dialogue, and letter, and of history and biography, were crowded out of this part and left over for the third. Whole chapters are given to Boccaccio, Bembo, Ariosto, Castiglione, and Pietro Aretino; one chapter deals with Poliziano and Lorenzo de' Medici, another with Pulci and Bojardo, another with Pontano and Sannazaro, still another with Machiavelli and Guicciardini. Thus the work of each of the great masters is presented in its entirety. The writings of the less important authors are, on the other hand, assigned to their proper places in the chapters on "The Successors of the Great Florentines," "The Humanists of the Fifteenth Century," "The Vulgar Tongue in the Fifteenth Century and its Literature," "Lyrical Poetry in the Sixteenth Century," "Heroic Poetry in the Sixteenth Century,"

"Tragedy," and "Comedy." Since, however, the influence of the masters is traced in the productions of their followers, and the works of the minor authors receive some attention in the chapters devoted to the leaders, the whole book seems, in spite of its arrangement, to form an uninterrupted history of literary development in Italy. This appearance of unity could not, of course, be obtained if the author's language were at all clumsy or disconnected; but Gaspary displays here, as in the first volume, a wonderful gift of easy transition, and a clear, graceful, natural style, which makes every part of the subject appear in its proper light, and renders the book an attractive one, not only for specialists, but for all readers who have the least interest in letters.

Four Years with the Army of the Potomac. By Regis De Trobriand, Brevet-Major-General U. S. Vols. Translated by George K. Dauchy. With Portrait and Maps. 8vo., pp. xix, 757. Boston: Ticknor & Co.

THE original book by General De Trobriand was written in French and published in Paris soon after the close of the civil war. The translation by Lieut. Dauchy is exceptionally well done, and the publishers have brought the English edition out in excellent style. The author was a French resident of New York when the war began, and became Colonel of the Fifty-fifth New York Volunteers, known as the French Regiment. His service was wholly in the Army of the Potomac in the Third and afterwards in the Second Corps. His opportunities for observing were good, and he has told his experience in a very lively and attractive way. Written for European readers, the book is more full in general explanation of the causes of the Rebellion and the political phases of the struggle than would have been necessary if it had been intended for American use; but even in this part of his work the author is never dull. The most valuable and interesting matter is, of course, the personal narrative of experience.

The chapters upon the organization of the volunteer regiments in this city, the first lessons in camp life at Washington, the transfer to Fortress Monroe, the siege of Yorktown, and the battle of Williamsburg, are very telling and vivid pictures of those events. They carry with them such internal evidence of the sincerity of the author that they are authoritative and fully trustworthy. General De Trobriand was prostrated with the Chickahominy fever soon after the advance towards Richmond, and his sufferings are made to add to our knowledge of the vicissitudes of military life. His account of the practical working of the Sanitary Commission and of the devoted, untiring labors of its officers in the field, from Mr. F. L. Olmsted down, is one of the very best in print. The picture of the noble women at their work upon the hospital boats at White-House stirs one's heart to-day as if the event was of yesterday.

The author's personal estimate of the prominent men with whom he came in contact is also useful, as supplying traits of character and individual peculiarities which help us to give living substance to the important actors in the great contest. The part which suffers most by lapse of time is the general criticism of campaigns, and the apportionment of merit and blame among those in highest responsibility, both military and civil. Our means of adequate judgment to-day are many fold greater than they were in 1865; even a general of brigade had, at that time, to jump at conclusions, whenever the subject was beyond the scope of his personal knowledge. The spirit of the book is a fair and candid one, though the author was not without personal prejudices, and it is a record of honorable service in a stirring military career.

Lectures on Geography, delivered before the University of Cambridge during the Lent Term, 1888, by Lieut.-Gen. R. Strachey, President of the Royal Geographical Society. Pages 211. Macmillan & Co. 1888.

THE four lectures printed in this volume were evidently intended to call the attention of university students to the science of geography rather than to give them any detailed information concerning that extensive subject. Gen. Strachey's presentation of the general facts of geographic science is well calculated to accomplish the end he had in view. In the first chapter he gives an excellent summary of the steps in the progress of the knowledge by which geography came to be at once a science and an art. The remainder of the book is devoted to that part of the earth science which now receives the general name of Physiography. The operation of physical forces on terrestrial phenomena, the influence of the form and movements of the earth, as well as of the external features, on the condition of organic life, is in the main the theme of the three succeeding lectures. In all that relates to the application of geographic science to the interests of man, Gen. Strachey is a distinguished master of his subject, and therefore this little book, though it contains less than 50,000 words, is worth the attention of the many persons who desire to obtain authoritative short accounts of the several sciences.

The critic who seeks a point upon which to hang objections could find it in the failure of the author to dwell on the geological side of geographic history. The best results of modern geographic inquiry consist in the body of knowledge which has been gained concerning the history of continental growth. There is no subject better suited to catch the attention of university students than this, for the reason that it calls for the constructive imagination which it is the first function of academic training to develop, and it serves in an admirable manner to aid in the training of that faculty. Although our author touches upon the hypothesis of geological evolution, it does not seem to the present writer that he makes sufficient use of this department of knowledge.

The style of the book is generally good. There are a few unreasonably long parenthetical sentences, which leave the reader a little in doubt as to the author's meaning. This difficulty probably arises from printing lectures as they were delivered, when accent could qualify the phrase in a way beyond the power of punctuation. The book is excellently printed, but there is unhappily no index and a very insufficient table of contents. This is the more to be regretted as certain parts of the work have a decided value for students.

BOOKS OF THE WEEK.

Alcott, A. B. Ralph Waldo Emerson. 2d ed. Boston: Cupples & Hurd. $1.50.
Allen, A. The Heart of Don Vega. Westerly, R. I.: George C. Champlin.
Barron, E. A. The Viking. Chicago: A. C. McClurg & Co. $1.
Bernhardt, W. German Novelettes for School and Home. Vol. II. Boston: D. C. Heath & Co.
Bliss, W. R. Colonial Times on Buzzard's Bay. Boston: Houghton, Mifflin & Co. $2.
Burt, B. C. A Brief History of Greek Philosophy. Boston: Ginn & Co. $1.25.
Corning, C. R. Aalesund to Tetuan: A Journey. Boston: Cupples & Hurd. $2.
Dimond, Mary B. A Handbook for the Pilgrims: Thoughts by the Way. Chicago: A. C. McClurg & Co. 75 cents.
Encyclopædia Britannica. 9th ed. Vol. XXIV. and last. Ura—Zym. Boston: Little, Brown & Co.
Fillmore, J. C. Lessons in Musical History. Philadelphia: Theodore Presser.
Fitzgibbon, H. M. Early English and Scotch Poetry. 1250–1300. White & Allen. $1.25.
Freer, Martha W. Henry III., King of France and Poland. 3 vols. Dodd, Mead & Co. $7.50.
Grimm, Prof. H. Life of Raphael. Boston: Cupples & Hurd. $2.
Haggard, H. R. Colonel Quaritch, V. C. A Tale of Country Life. George Munro.
Heald, Sarah E. Mother Kate and the Brownies. Philadelphia: Sunshine Publishing Co.
Kendall, H. The Kinship of Men: An Argument from Pedigrees; or, Genealogy Viewed as a Science. Boston: Cupples & Hurd. $2.
Lanman, Prof. C. R. A Sanskrit Reader: With Vocabulary and Notes. Parts I., II., and III. Boston: Ginn & Co.
Law, E. The History of Hampton Court Palace. Vol. II. Stuart Times. Illustrated. London: George Bell & Sons.

Winter, W. Wanderers. Boston: Ticknor & Co.
Wood, J. G. Natural History Readers. No. V. Boston School Supply Co.

Fine Arts.

THE AUTUMN EXHIBITION AT THE ACADEMY.

We are not accustomed to expect much that is remarkable at the autumn exhibitions at the Academy. It is something to be thankful for each year if the autumn exhibition proves to be in any way better than its predecessors. So much may be said of the exhibition this year, not because of a more general excellence than usual (for the bulk of the work shown is about as cheap and uninteresting as it well could be), but because certain notable pictures show that some of the best of our painters have thought it worth while to send their best work, and their presence is sufficient, happily, to lift the exhibition to a respectable level.

Mr. William M. Chase has never exhibited a more pleasing portrait than the full-length figure of a lady in black, "Portrait of Mrs. C.," No. 315. He has painted portraits in which were to be found more precise drawing and more careful construction, but he has never painted one of more agreeable aspect or anything more successful as a piece of quiet tone. The pose of the figure is easy and natural, there is much grace in the poise of the head, and the hands are delightfully treated. It is very cleverly painted throughout, and is excellent in style. "Portrait of a Lady," No. 353, by Kenyon Cox, is a small, seated figure of a lady painted in three-quarter length. It is as different as possible in general treatment from Mr. Chase's portrait. It is especially notable for accurate drawing, and is precisely and firmly constructed. Better drawing is seldom seen nowadays than Mr. Cox's work in this little portrait, and it is painted with extreme delicacy of touch. It is excellent in color also, and entirely free from hardness in modelling. These two portraits are, each in its own way, quite equal to the best work in our current exhibitions.

Good qualities of construction and a fine sense of character are found in the profile head of a woman by Reginald C. Coxe, "Portrait Study," No. 432; and in the small "Portrait," No. 88, by Henry O. Walker, there is direct and simple drawing and refined sentiment in the expression of character in the subject, a young woman in a white dress, painted in three-quarter length. It is a trifle dry in painting, and somewhat wanting in air, but it is excellent in other respects, and is especially good in style, the gentility of the subject being expressed in every line. A portrait of fine aspect, but which is deficient in solid qualities of painting, is one of a gentleman in a fur-trimmed coat, by Jared B. Flagg, "Portrait," No. 449. Another is that of "George Bruce," No. 263, by President Huntington, but of this it should be said that the artist was, no doubt, deprived of the essential requisite for painting a portrait, namely, direct and constant study of the sitter from life. There is good drawing and good painting in the picture of a little girl in a white dress standing by a doorway in a room panelled in white wood, "Portrait Study," No. 17, by Samuel Isham, and conscientious work in the soberly treated figure of a gentleman seated at a table in a studio, "Portrait, Mr. W. B. F." No. 85, by Charles Foster. Mr. Rice shows an excellent head, freely though firmly painted, "Portrait," No. 404, and Mr. Beckwith a three-quarter length of a lady in a white ball dress, seated in a wide chair, in which there is much clever brush-work, "Portrait of Mrs. S.," No. 430. A good canvas is "Portrait of Roger Upton," No. 445, a seated figure of a young man, by Frances Hunt Throop.

Scenes of summer life in city and country are abundant at the Academy, and in no field of painting is there greater incapacity exhibited. The modern idea of painting figures in out-of-doors light—a most excellent idea when the painter who adopts it is sufficiently well-trained to cope with its many difficulties—has been seized by the tyro, and the result is distressing to contemplate in many pictures in the present exhibition.

It is needless to particularize, however; we shall do better to mention some of the pictures of this sort which are successful, and among them we find a certain number which are very good. Of these, perhaps Mr. Herbert Denman's "Girl Playing Tennis," No. 205, is the most complete. It is preëminent in its class, in the qualities of light and air. The figure of the young girl in the foreground before the net is good in movement, it is well observed in respect of comparative value with the landscape, and the landscape itself is charmingly painted. Of a more sober cast is the scene in the harvest field, "The Last Shock," No. 306, by Edgar M. Ward. The time is evening, and the figures of a man who is placing a cap-sheaf on a shock of grain, and of a young woman at his side, are relieved against a background of farm lands under the fading light of nightfall. Figures and landscape are robustly and soundly painted. Along with these two pictures, which are typical of different methods but both of which are ably and competently handled, are an out-door picture of two young ladies in light summer costumes in a boat, "Among the Lotos Lilies, Sandusky Bay," No. 51, by Charles C. Curran, in which the effect of sunlight is well rendered and the values of figures and landscape are in general well observed, but in which there is little or no charm of color; a small picture, with the facetious sort of title not yet out of favor in American art, "The Labor Question in the South," No. 286, by William Verplanck Birney, a deftly painted bit showing a black boy rolling on the grass by the side of a deserted tea cloth spread on the lawn in the shadow of overhanging trees; a breezy picture of a girl in white seated, tiller in hand, in the stern of a boat with a background of sea and shore, "The Port Tack," No. 308, by W. M. J. Rice; and a kitchen interior in an old-fashioned house with a simpering girl drawing a bucket of water, "The Old Well," No. 443 by C. R. Grant, quite cleverly painted and sinning chiefly by excessive prettiness; "Gardening," No. 108, by John J. Hammer, a pretty girl in a vegetable patch; and Mr. Denman's little picture of a scene on the East River, "Terrace of Rheinlust, Swimming Bath," No. 439, should also be mentioned.

Further, "The School Belle," No. 177, by S. J. Guy, and "Daisy," No. 362, by J. G. Brown, may be noted, as characteristic examples of the manner of two well-known illustrators of certain phases of American life. There is nothing so good in its way in the exhibition as the interior with a young woman in a red dress playing the harp, "A Solo," No. 133, by Kenyon Cox, a fine piece of color and excellent in ensemble. The hands touching the strings are expressive, though they seem a trifle large, and the head is especially good in character. More gay, and perhaps less conscientious, is another interior, "Sunlight in the Studio," No. 326, by Irving R. Wiles, which shows a girl in soft drapery of black reclining on a divan in the half-light under a canopy in a studio, with a ray of sunlight falling on the top of a writing-desk against the wall. Figure and accessories are painted with a free brush, and though it is exceedingly clever painting, it is in no way suggestive of that false cleverness which exhibits dexterous technique at the expense of truth of values and proper drawing. The picture is, moreover, pleasing in color, and is free from jarring notes, a quality that is rare enough to be noted when found in pictures of studio interiors, wherein many painters seem to delight in bringing together all sorts of incongruous elements. Mr. Ward's "Busy Tack Workers," No. 291, is a good interior, with two young women at a table under a strong light from a window, though color is not a feature of it. "Holland Love-Making," No. 90, by Henry B. Wechsler, is a good example of Munich methods tempered by honest observation of nature. The figures are well drawn, there are good qualities of light and air, and the story is well told.

The nude receives but scant consideration, and aside from an excellent "Study," No. 364, by Clifford P. Greyson, Mr. Denman's graceful figure of "Psyche," No. 366, and Mr. Rice's somewhat attenuated "Naiad," No. 231, there is nothing to note, except a decoratively treated group of two figures, "At the Fountain," No. 18, by Charles Foster, a canvas of agreeable aspect and marked by scholarly drawing. "Daphnäe," No. 367, by George W. Maynard, is a fanciful profile head of a young girl with a crown of leaves on her brow, which may be properly classed as decorative work. It is gracefully limned and delicately colored. It would be charitable, perhaps, to speak of a picture called "Eleanore," No. 324, by F. J. Waugh, as a decoration if in so terming it some excuse might be offered for its flatness of effect and its washed-out tone. It is in no way truthful in depicting objects in atmosphere, as it is entirely untruthful pictorially by reason of its photographic hardness of line. The crude attempts of honest beginners in painting out of doors are preferable to this colorless landscape and characterless figure. Genre pictures of varied subject are shown by Leon and Percy Moran, Thomas Hovenden, Constant Mayer, Stanley Middleton, B. West Clinedinst, J. H. Witt, E. L. Durand, C. Y. Turner, E. L. Henry, Charles X. Harris, and J. Wells Champney, and there is a pretty fancy, neatly painted, called "Sunbeams and Dewdrops," No. 390, by Charles C. Curran. A curious picture in a humorous vein is "The Tramps," No. 102, by S. W. Van Schaick, which shows a skilful sort of brush-work applied to a trivial motive.

In landscape and marine painting there is less than might have been expected at an autumn exhibition opened at the end of the summer's work in the country, but there is perhaps almost the usual complement, though it seems of a poorer quality as a whole than in preceding years. Mr. Harrison's sea views, Nos. 34, 360, and 422, are noteworthy, and curiously like them in scope and treatment is the "Storm," No. 122, by Frank W. Benson, though it is not without personal merit. Other marines are contributed, by Howard R. Butler, "Moonrise," No. 355; by F. K. M. Rehn, "Surf Breaking Over a Wall," No. 444; and by Alexandrina Dupré, "Broken Adrift," No. 91. A crisply painted effect, a tugboat puffing through the hazy atmosphere of the bay on a September day, is "Afternoon, North River," No. 414, by Reginald C. Coxe.

Among the best of the landscapes are those signed by H. Bolton Jones, Edward Gay, R. W. Van Boskerck, Hamilton Hamilton, H. M. Rosenberg, Carleton T. Chapman, F. De Haven, R. A. Eichelberger, and Walter L. Palmer.

Would You Like to Be Guided in a Helpful, Instructive Course of Reading approved by

Lyman Abbott, D.D., Edward Everett Hale, D.D., James H. Carlisle, LL.D., and other eminent men?

More than 60,000 persons are pursuing such a course under the direction of the Chautauqua Literary and Scientific Circle. We quote a few words from these students:

"Many a lonely hour has been cheered, and thought and memory turned into new and delightful channels by these readings. I hope to be better and stronger intellectually for the hours spent with my books."—*New York city.*

"I regret that I could not have had the advantage of such a course in early life; but it has brought so much comfort and happiness that I rejoice in the blessing, even though it came to me a quarter of a century late."—*Maine.*

CELEBRATED ARTISTS. Sketches of their Lives and Works. With translations on copper of fifteen notable paintings by Fameng, Monzies, Unger, and others. Descriptive texts and biographies by A. Chevillard Lenoir. Fifteen etchings from paintings by Detaille, Schonleber, Munkacsy, Jules Breton, Nordgren, and others. Head and tail pieces and initial letters in red and black. Limited edition. Folio, cloth, gilt, plates on guards, size 12x17, $10.00.

25 copies printed on Japan paper, including a duplicate set of the plates on Whatman paper. Plates mounted on guards and bound with a wrapper of Japanese paper. The whole enclosed in portfolio of Japanese cloth, making a sumptuous volume, $25.00.

AN AUTUMN PASTORAL. The Death of the Flowers. By William Cullen Bryant. A Series of seventeen photogravure illustrations, after original drawings by C. E. Phillips.

1 vol., quarto, cloth, gilt edges, plates on guards, $5.

Quarto, flexible seal, plates on guards, $8.00.

THE SONG OF THE BROOK. By Alfred Tennyson. A series of fifteen original and beautiful photogravure illustrations, after original drawings by William J. Mozart. The text of the poem is interwoven with the illustrations, and all is printed with the greatest care on paper of the finest quality.

1 vol., quarto, torchon binding, title in embossed gilt and bronze. $3.00.

1 vol., quarto, cloth, gilt edges, plates on guards, $4.

1 vol., quarto, full flexible seal, gilt edges, $7.50.

GEMS OF ART. A Collection of Twelve Photogravures. From original paintings by Corot, Bougereau, Le Rolie, Jaquet, Voltz, and other celebrated artists.

Quarto, 12x14, bound in cartridge board and Japanese leather paper, $3.00.

GEMS OF FRENCH ART. Reproduced in photogravure by Goupil & Co., with descriptive text. Ten plates after paintings by Dupré, Le Rolle, Lobrichon, Allonge, Flemeng, Mercie, and others.

1 vol., quarto, cloth, gilt edges, $3.75.

BY LAWN AND LEA. Poems by Tennyson, Wordsworth, and other well-known poets. With seventeen color and sixteen monotint plates from original water-color sketches by Alice M. Baumgras.

1 vol., quarto, lithographed cover, tied with chenille, $1.50. Bound in tinted parchment cloth, with lithographed design on side and back, $2.00.

MISSION SKETCHES—Santa Barbara. Sketches of the old Santa Barbara Mission, where are gathered the Franciscan Friars. A series of ten plates from sketches by Mrs. K. S. Torrey, including a descriptive introduction.

1 vol., small quarto, 7⅛x7⅛ inches, torchon cover, illuminated title on side, $1.00.

BITS OF NATURE. Ten views of natural scenery from different places of interest. Printed from photogravure plates on Japan paper and mounted on boards.

Size 10x12, in portfolio envelope, tied with ribbon, $1.50.

THROUGH DAVID'S REALM. A book of Holy Land Travel. By Rev E. S. DeG. Tompkins. With over 150 illustrations of Palestine scenery from sketches by the author. The numerous illustrations to this book are very cleverly drawn, comprising landscapes, figures, street scenes, architecture, etc. They will be reproduced by a similar process to that used in Daudet's 'Tartarin on the Alps,' and with a new and novel style of binding cannot fail to prove one of the most attractive books of the year.

1 vol., 12mo, cloth, $2.50.

FROM QUEENS' GARDENS. Selected poems of Mrs. Browning, Jean Ingelow, Adelaide Procter, Christina Rossetti, and others. Edited by Rose Porter.

1 vol., square 16mo, cloth, gilt edges, $1.25.

Full calf or seal, flexible, round corners, gilt edges, $2.25.

STAFF AND SCRIP. Gems of Recent Thought. Selected by J. H. Gilbert.

1 vol., square 16mo, cloth gilt, gilt edges, $1.25.

Full calf or seal, flexible, round corners, gilt edges, $2 25.

KING OF THE NIGHT. By Barry Cornwall. Illustrated with fifteen full-page illustrations by C. E. Phillips. Printed on superfine toned plate paper.

Tinted torchon board, photogravure medallion and title in blended bronzes on side, tied with chenille, $1.25.

Full American seal, flexible, gilt edge, $1.75.

Full fancy embossed leather, gilt edges, $2.00.

For sale by all booksellers, or will be mailed on receipt of the price. Send for a catalogue, descriptive of fifty new books or new editions for holidays.

NIMS & KNIGHT, Troy, N. Y.

LONGMANS, GREEN & CO.,

HAVE READY THIS WEEK:

1.

Notes of Conversations with the Duke of Wellington, 1831-1851.

By the Late Earl Stanhope. Crown 8vo, cloth, $2.50.

2.

Mr. Brander Matthews's New Book.

Pen and Ink:

Papers on subjects of more or less importance. By Brander Matthews. With a poem by Andrew Lang and "An Epistle to the Author" in verse by H. C. Bunner.

LARGE PAPER EDITION, consisting of 110 copies printed by De Vinne & Co., on Van Gelder hand-made paper, with etched portrait of the author. Large 8vo.

3.

Epochs of Modern History. (*New Volume.*)

The English Restoration and Louis XIV., 1648-1678.

By Osmund Airy, one of H. M. Inspectors of Schools. Fcp. 8vo, cloth, $1.00.

NEW BOOKS:

The Life of the Right Honourable Stratford Canning, Viscount Stratford de Redcliffe,

K.G., G.C.B., LL.D., etc. From his Memoirs and Private and Official Papers. By Stanley Lane-Poole. With 3 portraits. 2 vols., 8vo, cloth, $12.00.

"The life of Stratford Canning, based on piles of authentic materials, and well composed in nervous English by Mr. Lane-Poole, will be welcome to all who cherish the memories of great men and desire to know their title-deeds to esteem and fame."—*Spectator.*

"A model of condensed and vivid biography, with the materials so neatly put together that the unobservant reader is likely to overlook the tact with which the work has been constructed. . . . The book, indeed, while having the charm of biography, is much more a contribution to nineteenth-century history than a biography of the usual type."—*Athenæum.*

The Letters and Private Correspondence of the late Daniel O'Connell, M.P.

Edited, with Notices of his Life and Times. By Wm. J. Fitzpatrick, F.S.A. 2 vols. 8vo (1,000 pages). With etched portrait. $9.00.

"A couple of volumes which will be promptly and eagerly scanned by all Irishmen who respect the genius and services to his country of the great O'Connell. There is such a store in them of valuable historical as well as personal record and sentiment as will render the book welcome universally in America, the Colonies, as well as at home."—*Irish Times.*

Completion of T. Hill Green's Works.

Works of Thomas Hill Green,

late Whyte's Professor of Moral Philosophy, Oxford. Edited by R. L. Nettleship, Fellow of Balliol College. 3 vols. Vol. III. MISCELLANIES. With Memoir, Index to the three volumes, and Portrait, 8vo, 21s. Vols. I. and II., price, 16s. each.

"The concluding volume of the late Professor Green's collected works is in many respects the most interesting; for if it gives us less of the philosopher than its two predecessors did, it gives us more of the man—the man whom Mrs Humphry Ward has recently made known to the great mass of 'general readers' by the striking though decidedly imaginative picture which she has drawn of him in 'Robert Elsmere.'"—*St. James's Gazette.*

By the same Author.

The Witness of God and Faith.

Two Lay Sermons. Edited with an introductory notice by the late Arnold Toynbee, M.A. 12mo, 75 cents.

Two New Books by Mr. Andrew Lang.

Grass of Parnassus.

A volume of selected verses. By Andrew Lang. Fcp., 8vo, printed on hand-made paper and bound in cloth, gilt top, $1.75.

The Gold of Fairnilee.

By Andrew Lang. With 15 colored illustrations after drawings by T. Scott and E. A. Lemann. 4to, cloth, $2.00.

A New Volume of Folk Songs, with Music.

The Besom-Maker,

and Other Country "Folk Songs." Collected and illustrated by Heywood Sumner. With music. 4to, boards, $1.00.

For sale by all Booksellers. Sent on receipt of price by the Publishers,

LONGMANS, GREEN & CO.,

15 East Sixteenth Street, New York.

NEW GIFT BOOKS.

Fairy Lilian.

By Alfred (Lord) Tennyson. Illustrated by the most distinguished artists of the day. The volume is a marvel of the printer's art, showing on each page a delicate border in tint surrounding the illustration in black. Cloth, full gilt, $6.00; full seal, $8.00; tree calf, $13.00.

The Bugle Song,

And Other Poems. By Alfred (Lord) Tennyson. Fully illustrated by the best American artists. 1 vol., small quarto, cloth, full gilt, $1.50; full American seal, gilt edges, $2.50.

Recent Italian Art.

A portfolio of 16 beautiful photo-etchings from the best paintings of modern Italian artists like Amos Cassioli, Gaetano Chierici and Tito Conti, with descriptive text by Walter Rowlands, author of 'American Painter Etchings.' 1 vol., folio (12x17), cloth, $7.50.

Goupil Gallery of Photogravures.

This charming collection of French masterpieces presents ten photogravures by *Goupil et Cie.* of Paris, from recent Salon favorites, accompanied by descriptive text by a well-known art critic. 1 vol., large quarto, cloth, beveled and full gilt, $3.75.

Song Birds and Seasons.

A series of delightful essays on out-door life, reminding one of Thoreau and Burroughs, illustrated by a celebrated foreign artist, with many beautiful drawings engraved on wood in the highest style of the art. 1 vol., quarto, cloth, full gilt, $5.00.

*** For sale by booksellers, or sent, prepaid, on receipt of price by*

ESTES & LAURIAT,

PUBLISHERS,

BOSTON.

Important New Verse.

SONGS OF TOIL, BY CARMEN SYLVA

(QUEEN OF RUMANIA).

Translated from the German by John Eliot Bowen of the *New York Independent*. With a memoir.

The only published volume of translations of these beautiful lyrics by ELIZABETH, QUEEN OF RUMANIA, whose nom de plume is "Carmen Sylva," and whose works are now attracting much attention in all parts of the civilized world.

The volume contains the original verses, in German, as well as the translations.

SONGS FROM BÉRANGER.

Translated in the original metres from the French by Craven Langstroth Betts. With notes and a memoir.

An entirely fresh translation of the best work of the great French poet. The only recent translation made by an American.

(*Songs of Toil* and *Songs from Béranger* are uniform with the 13 other volumes in Frederick A. Stokes & Brother's series of 16mo, POETICAL WORKS.)

IN THE NAME OF THE KING.

By GEORGE KLINGLE, author of 'Make Thy Way Mine.'

A new volume, uniform with the former one in every way. Certain to have as great a success as 'Make Thy Way Mine,' which is saying much.

WOOD BLOOMS.

By JOHN VANCE CHENEY, author of 'Thistle-Drift.'

A collection of Mr. Cheney's strongest and best verses, containing many new poems.

OLD AND NEW WORLD LYRICS.

By CLINTON SCOLLARD, author of 'With Reed and Lyre.'

A volume of Mr. Scollard's most interesting work, comprising several poems which have been published in leading periodicals, etc., and a large number of recent verses now first printed.

(*Wood Blooms* and *Old and New World Lyrics* are uniform with *Point Lace and Diamonds, Cap and Bells, Madrigals and Catches*, and *Thistle-Drift* in the new series of AMERICAN VERSE. For full description send for catalogue.)

Each one of the above volumes is a 16mo, printed from entirely new electrotype plates on very fine laid paper, with wide margins.

New half cloth binding, with vellum-cloth backs and half sides covered with tracery in gold. Outer half-sides in delicate colors and gold. Gilt top. Each volume, $1.00. Dainty parchment paper covers, uncut edges. Each volume, $1.00.

Send for catalogue for descriptions of many styles of costlier bindings.

Two rich holiday books, with facsimiles of water-color designs.

I. SEA VISTAS IN MANY CLIMES.

Contains the following illustrations:

THE GOLDEN GATE, SAN FRANCISCO; IN THE BAY OF NAPLES; FORT MARION, ST. AUGUSTINE; DUTCH PINCKS, OFF SCHEVENINGEN; VENETIAN FISHING BOATS; TWILIGHT, MARBLEHEAD; ON THE CORNICE ROAD; BASS HARBOR LIGHT, MT. DESERT. By SUSIE BARSTOW SKELDING.

II. BITS OF DISTANT LAND and SEA.

Contains the following illustrations by HARRY FENN and SUSIE BARSTOW SKELDING:

THE SEA OF GALILEE FROM TIBERIAS; MORNING, VENICE; CHURCH OF THE NATIVITY, BETHLEHEM; ALEXANDRIA; THE MOUNT OF OLIVES FROM JERUSALEM; THE BAY OF NAPLES AND VESUVIUS; JERUSALEM FROM MOUNT SCOPUS; ON THE COAST OF HOLLAND.

The illustrations are accompanied by many poems by the best writers, handsomely printed, with very wide margins, on especially fine laid paper.

Each is a beautiful oblong 4to, richly bound in an entirely new style. Backs and half sides of white vellum cloth, covered with graceful design of shells, grasses, etc., outlined with gold and filled in with pink and blue. Outer half-sides of cloth, stamped with title and appropriate design in color and gold. Full gilt edges. Each volume in a suitable box.

Price, each, $3.50.

Humor, Biography, etc.

THE GOOD THINGS OF LIFE. FIFTH SERIES.

"These yearly publications have a popularity unrivalled of its kind"—*N. Y. Star.*

Frederick A. Stokes & Brother publish the only volume from "Life" which accurately represent that brightest of American humorous papers, and are not intended to deceive the public.

The FIFTH SERIES now ready. Equals or surpasses any of the previous volumes.

Each volume oblong quarto with highly ornamental and humorous design on cover in color and gold. Cloth, bevelled boards; gilt edges, each $2.50.

A new volume in the series of American Wit and Humor.

THE GOLDEN AGE OF PATENTS.

By WALLACE PECK.

A most amusing parody on Yankee inventiveness. Filled with clever skits, well illustrated by various humorous artists.

"The Automatic Bull-Catcher," "The Multum-in-parvo Train," "The Burglar Bed," etc., etc. Taken from *Life*. Uniform with 'Chips Unnatural History.'

Each volume is bound in bright covers, with appropriate designs in gold and colors. Each, 50 cents.

Three new volumes of 'Lives of the Presidents.'

I. GROVER CLEVELAND.

II. TAYLOR, FILLMORE, PIERCE, AND BUCHANAN.

III. ABRAHAM LINCOLN AND ANDREW JOHNSON.

By WILLIAM O. STODDARD,

Author of the other six volumes in this important series for young and old.

The nine volumes are bound uniformly in red cloth, with attractive design in black and gold on covers, showing portraits of Washington, Lincoln, Grant, and Garfield. Each volume, $1.25.

A new book in the series of "Games."

THE GAME OF CHESS.

An entirely new edition. Based upon Staunton's great work, and containing all essential parts of it—the complete work except endings of games and problems and some of the illustrative games.

The only really valuable and thorough work on chess in small compass and at a moderate price.

Cover with chess problem in colors and gold. Uniform with 'Pole on Whist,' 'Poker,' and 'Euchre.' Each volume, 50 cents.

A striking new-old publication—a facsimile of an old Roman book or MS.

EIGHT SONGS OF HORACE.

This facsimile of an old Latin MS. is in the shape of a scroll of heavy parchment paper, wound about a wooden cylinder, with a white enameled knob at each end, and tied with a thong. The first eight pages are lithographed and consist of a title-page in Latin, together with one of the rude colored portraits of Horace, such as adorned the more pretentious volumes of the Roman bookseller, and followed by eight characteristic songs of the genial society poet of the time of Augustus. These are printed side by side in the Latin, in an alphabet gleaned from old MSS., an artist having made a full drawing for each page.

Following this Latin part are a title-page and translations of all the verses in English.

Most interesting to any one, but especially to those of classical tastes or education, and instructors who know the value of models based on careful research and study.

Each in a cylindrical box, $2.00.

FIFTEEN CALENDARS FOR 1889.

At prices ranging from 25 cents to $3.00. For full list send for catalogue.

The most important is

XII. THE TENNYSON PHOTOGRAVURE CALENDAR. A companion to 'The Shakespeare Photogravure Calendar.'

An original design for each month has been made by W. ST. JOHN HARPER, *and each design has been beautifully engraved by the photogravure process.*

The designs are printed in various colors, and each illustrates a quotation from Tennyson, appropriate to the month. Each photogravure is printed on a separate leaf, and the twelve are tied together with a white ribbon, and have roughened edges.

Each, in a box, $1.50.

Notable Art Works.

MADONNAS BY OLD MASTERS.

One of the most important art-works ever undertaken in this country.

Ten photogravures after old masters' paintings of Madonnas which have received universal recognition and admiration. Photogravures have been made because they give vastly more accurate reproductions of the great originals than is possible in the case of any etchings or engravings, however excellent.

Text, including an important new essay on "THE MADONNA IN ART," by RIPLEY HITCHCOCK, author of "*Etching in America.*"

Size of Page, 17½ by 13 inches.

Titles of Madonnas and Names of Painters:

THE MADONNA DI SAN SISTO, *by Raphael;* THE HOLY FAMILY, *by Murillo;* THE MADONNA DELLA SEDIA, *by Raphael;* THE MATER DOLOROSA, *by Guido Reni;* THE IMMACULATE CONCEPTION, *by Murillo;* LA BELLE JARDINIÈRE, *by Raphael;* THE BURGOMASTER MEYER MADONNA, *by Holbein;* THE MADONNA DEL GRANDUCA, *by Raphael;* THE MADONNA DELLA SCALA, *by Correggio;* THE MADONNA OF THE DIADEM, *by Raphael.*

DE LUXE EDITIONS.

I. IMPRESSIONS ON SATIN, $30.00.

II. IMPRESSIONS ON THIN, SILKY JAPAN PAPER, $20.00.

The photogravures contained in the above are neatly matted, and, together with the leaves of text, are placed loosely in handsome folios, so that they can readily be removed for framing, if desired.

Both editions I. and II. are inclosed in portfolios of a rich embossed white and brown material, with wide backs of cardinal-red, rough-grained morocco.

REGULAR EDITIONS.

III. Regular impressions on plate paper, bound in covers of white and brown material, embossed in "basket pattern," and having white vellum cloth back entirely covered with tracery in gold.

Title in suitable gold lettering in a panel of white vellum cloth on side.

Each, in a box, $10.00.

IV. Same as III., but loose in *portfolio* of same materials and designs, tied with pale brown ribbon.

Each, in a box, $12.50.

IMPORTANT NEW ETCHINGS.

A NEW COLLECTION OF ETCHED PLATES BY WELL-KNOWN AMERICAN ARTISTS.

Text, including an important new essay upon "THE FUTURE OF ETCHING," by RIPLEY HITCHCOCK.

Size of pages, 17x12 inches.

List of Etchers and Titles of Plates:

JAMES D. SMILLIE,	*What O'clock is it?*
C. A. PLATT,	*The East River from Brooklyn.*
W. ST. JOHN HARPER,	*Lucile.*
E. W. KEMBLE,	*Uncle Remus and the Little Boy.*
C. D. WELDON,	*Tokens.*
OTTO H. BACHER,	*Sailing Toy-Yachts in Central Park, March.*
J. A. MITCHELL,	*A Political Marriage.*

ARTIST-PROOF EDITIONS.

I. VELLUM PROOFS, Limited to Two Copies, Signed and Numbered. *Remarque Proofs on vellum, accompanied by proofs on Japan paper.* Price per copy, $75.00.

II. SATIN PROOFS, Limited to 25 Copies, Signed and Numbered. *Proofs on satin.* Price per copy, $30.00.

III. JAPAN PROOFS, Limited to 100 Copies, Signed and Numbered. *Proofs on Japan paper.* Price per copy, $20.00.

All etchings contained in the above copies are *Remarque Proofs, Signed by the Etchers.*

All styles of the *Artist-proof* editions are inclosed in handsome portfolios of a rich embossed white and brown material, with embossed leather backs. All have ornamental lettering in dark brown panels on the side, and are tied with silk floss.

REGULAR EDITIONS.

IV. Regular impressions on etching paper, bound in covers of embossed and bronzed material, with dark green vellum-cloth backs and corners, covered with gold ornamentation. Limited to 600 copies. Each, $7.50.

V. Same as IV. but in *portfolio* of embossed and bronzed material, with dark brown vellum-cloth backs and corners, covered with gold ornamentation, tied with ribbons. Limited to 75 copies. Each $10.00.

EACH COPY *of each of the* FIVE EDITIONS *is signed and numbered.*

At all bookstores, or sent (at publishers' expense) to any address on receipt of prices advertised. Mention THE NATION. AN ANDEAN ROMANCE. By William Westall. 12mo, paper. Price, 40 cents.

1, 3, AND 5 BOND STREET, NEW YORK.

Bjornson's Dramatic Masterpiece.

SIGURD SLEMBE.

A Trilogy in Prose and Verse.

Translated from the Norwegian by WILLIAM MORTON PAYNE. 1 vol. Crown 8vo. $1.50.

WHAT THE CRITICS SAY:

"I recognize masterly rhythm in your English verse and prose, choice strong diction, and something very like the 'grand manner' throughout. . . . I feel like the discoverer of a new realm."—*Letter from Mr. E. C. Stedman to the Translator.*

"His [the translator's] work is well done, and he deserves praise for his fidelity to the original, and the vigor and purity of his English."—*Prof. H. H. Boyesen in the Christian Union.*

"The figures in this dramatic trilogy are tremendously real, but the realism is the powerful image of a poetic brain; and though the scenes lie back in the twelfth century, they have an immediateness of force which is the result of high poetic art."—*The Atlantic Monthly.*

"We have never before read an English book of over three hundred pages with so pure an Anglo-Saxon vocabulary. Whole pages appear with scarcely a word of Latin origin. Line after line is composed entirely of monosyllables. So simple and compact are the style and expression that the reader is frequently reminded of Lincoln's speech at Gettysburg and of certain passages of Scripture."—*Chicago Globe.*

Dante's Divine Comedy.

Translated into English Verse, with Notes and Illustrations, by JOHN AUGUSTINE WILSTACH, Translator of the Complete Works of Virgil. 2 vols. Crown 8vo, gilt top. Vol. I. has a photogravure of Ary Scheffer's Dante and Beatrice; Vol. II. a photogravure of Dante, Latini, and Corsi Donati, probably by Giotto. $5.00.

"Mr. Wilstach follows up his meritorious version of Virgil's works with a translation of the greater poet who looked up to Virgil as master, guide and friend, and one which vindicates to itself a place among the existing English versions by its peculiar merits. . . . We welcome Mr. Wilstach's book, not only for its careful exposition of the allusions in the full notes he has appended to each Canto, but for the merits of the rendering itself. It is the fruit of scholarly and careful study of the great master, and adds another name to the few of our American scholars who have truly earned a place among the Dantists."—*Prof. R. E. Thompson in The American, Philadelphia.*

"We confidently predict that this translation of Mr. Wilstach's will supersede all previous ones, by reason of its superior merits as a translation, its poetic purity, its copious explanatory notes, and admirable general arrangement, together with its typographical excellence; and that it will become the standard English edition of the *Divina Commedia.*"—*Omaha Republican.*

**** *For sale by all Booksellers. Sent by mail, post-paid, on receipt of price by the publishers.*

Houghton, Mifflin & Co.,

BOSTON,

11 East Seventeenth St., New York.

The Perfection of American Book Making.

"The large type, the broad pages, the substantial and tasteful binding of these volumes give them an appearance of finality. No one certainly could desire to possess the works which have appeared in this edition in any more elegant or substantial form."—*Christian Union.*

UNIFORM EDITION.

THE MAN WHO LAUGHS. By Victor Hugo. With 140 illustrations from designs by D. Vierge and G. Rochegrosse. 2 vols., royal 8vo., cloth, $6.00.

NINETY-THREE. By Victor Hugo. With numerous illustrations from designs by Victor Hugo, Bayard, Brion, Vierge, and other eminent French artists. 2 vols., royal 8vo, cloth $6.00.

NOTRE-DAME. By Victor Hugo. With numerous illustrations from designs by Victor Hugo, Bayard, Brion, Johannot, and other eminent French artists. 2 vols., royal 8vo, cloth, $6.00.

THE TOILERS OF THE SEA. By Victor Hugo. With 150 illustrations from designs by Chiffart, D. Vierge and Victor Hugo. 2 vols., royal 8vo, cloth, $6 00.

With 'The Man Who Laughs' and 'Ninety-Three' is completed the publication of this edition of Hugo's great romances, begun two years ago with 'Les Miserables' (now sold only through McDonnell Bros. of Chicago). In all that goes to the making of really fine editions—heavy and rich paper, profuseness and splendor of illustration, the highest skill in engraving, the utmost care in presswork, and appropriate and tasteful binding—the publishers are confident that no existing edition can in any respect be compared with this.

"Hugo, with his erudition and his passion, his knowledge of all the chords of the human heart, a knowledge which depends as much upon sympathy as upon intellect, is one of the great masters whose places along the centuries will always be few and far between."—*New York Journal of Commerce.*

UNIFORM WITH THE HUGO EDITION.

THE WANDERING JEW. By Eugene Sue. With 128 illustrations from designs by A. Ferdinandus. 3 vols., royal 8vo. cloth, $10.00.

"It is printed in the same sumptuous style as the works of Hugo and Dumas, which this house has published, and is in every way a fitting complement to these masterpieces of French literature which have been issued by this house in the present and previous years. The illustrations are all by the same artist, Ferdinandus, and therefore preserve throughout a unity of conception and design which cannot be achieved when various hands have been engaged on one and the same work."—The Publishing World.

UNIFORM WITH THE HUGO EDITION AND WITH 'THE WANDERING JEW.'

THE COUNT OF MONTE-CRISTO. By Alexandre Dumas. With nearly 500 illustrations from designs by G. Staal, J. A. Beuce, and other eminent French artists. 5 vols, royal 8vo, cloth, $15.00.

"One of the most perfect and beautiful publications of the season is the superb new edition of the standard English version of 'The Count of Monte-Cristo' published by the Routledges of this city and London—a worthy member of that list of standard foreign fiction, especially of a classical rank, which this house is augmenting each month."—The Independent.

THE ROMANCE OF A POOR YOUNG MAN. By Octave Feuillet. With 100 illustrations and portrait of the author. From designs by Mouchot, engraved by Méaulle, 4to, tapestry covers, in a box, $7.50.

The tapestry binding with stamped colored designs, the heavy richness of the paper, the beauty of the open typography, Mouchot's carefully studied and well drawn illustrations and their skilful and artistic engraving by Méaulle combine to make this edition everything that a fine edition of such a work should be.

GEORGE ROUTLEDGE & SONS, 9 Lafayette Place, N. Y.

Littell's Living Age.

In 1889 THE LIVING AGE enters upon its forty-sixth year. Approved in the outset by Judge Story, Chancellor Kent, President Adams, historians Sparks, Prescott, Ticknor, Bancroft, and many others, it has met with constant commendation and success.

A WEEKLY MAGAZINE,
it gives more than
THREE AND A QUARTER THOUSAND double-column octavo pages of reading matter yearly, and presents, with a combined freshness and completeness nowhere else attempted

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature, and from the pens of the

FOREMOST LIVING WRITERS.

THE ABLEST AND MOST CULTIVATED INTELLECTS, in every department of Literature, Science, Politics, and Art, find expression in the Periodical Literature of Europe, and specially of Great Britain.

THE LIVING AGE, *forming four large volumes a year*, furnishes, from the great and generally inaccessible mass of this literature, the only compilation that, while within the reach of all, is satisfactory in the COMPLETENESS with which it embraces whatever is of immediate interest, or of solid, permanent value.

IT IS THEREFORE INDISPENSABLE to every one who wishes to keep pace with the events or intellectual progress of the time, or to cultivate in himself or his family general intelligence and literary taste.

OPINIONS.

"No man who understands the worth and value of this sterling publication would think of doing without it. . . . Nowhere else can be found such a comprehensive and perfect view of the best literature and thought of our times."—*Christian at Work, New York.*

"It is a *living* picture of the age on its literary side. It was never brighter, fresher, or more worthy of its wide patronage."—*Zion's Herald, Boston.*

"It is one of those few publications, weekly or monthly, which seem indispensable. . . . The only possible objection that could be urged to it is the immense amount of reading it gives. There is nothing noteworthy in science, art, literature, biography, philosophy, or religion, that cannot be found in it. . . . Such a publication exhausts our superlatives."—*The Churchman, New York.*

"Replete with all the treasures of the best current thought, the best fiction, and the best poetry of the day. . . . It stands unrivalled."—*The Presbyterian, Philadelphia.*

"It maintains its leading position in spite of the multitude of aspirants for public favor."—*New York Observer.*

"By the careful and judicious work put into the editing of THE LIVING AGE, it is made possible for the busy man to know something of what is going on with ever increasing activity in the world of letters. Without such help he is lost."—*Episcopal Recorder, Philadelphia.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"In it we find the best productions of the best writers upon all subjects ready to our hand."—*Philadelphia Inquirer.*

"The readers miss very little that is important in the periodical domain."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"It is edited with great skill and care, and its weekly appearance gives it certain advantages over its monthly rivals."—*Albany Argus.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"For the amount of reading matter contained the subscription is extremely low."—*Christian Advocate, Nashville.*

"In this weekly magazine the reader finds all that is worth knowing in the realm of current literature."—*Canada Presbyterian, Toronto.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Christian Advocate, Pittsburgh.*

"It is indispensable to all who would keep abreast of our manifold progress. . . . It is absolutely without a rival."—*Montreal Gazette.*

Published WEEKLY at $8 00 a year, *free of postage.*

☞TO NEW SUBSCRIBERS for the year 1889, remitting before Jan. 1st, the numbers of 1888 issued after the receipt of their subscriptions will be sent *gratis.*

Club Prices for the best Home and Foreign Literature.

["Possessed of THE LIVING AGE and one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Phila. Eve. Bulletin.*

For $10 50, THE LIVING AGE and any one of the American $4 monthlies (or *Harper's Weekly or Bazar*) will be sent for a year, *postpaid*; or, for $9.50, THE LIVING AGE and the *St. Nicholas* or *Scribner's Magazine.*

Profusely Illustrated by Hugh Thomson and Herbert Railton.

Coaching Days and Coaching Ways.

By W. Outram Tristram. With illustrations by Herbert Railton and Hugh Thomson. Extra crown 4to, cloth, elegant, $6.00. *This day.*

A New Story by the author of 'John Inglesant.'

The Countess Eve.

By J. H. Shorthouse, author of 'John Inglesant,' 'Sir Percival,' etc., etc. 12mo, $1.00.

"It is, after 'John Inglesant,' the most impressive of the author's works. It is inferior to that only in the number of its characters and the complexity of its movement. Its action is all within the human heart. . . The story is told with unfailing delicacy and unflagging power. Its effect is spiritualizing. Its psychological finesse, its dramatic adroitness, its dexterous relation and avoidance of perils, its correct and perspicuous diction, its purity, tenderness, and grace combine to constitute it an absorbing romance and a strengthening force in a period of depressing and destructive fiction."—*Margaret F. Sullivan, in the Chicago Tribune.*

The Nation

VOL. XLVII.—NO. 1224. THURSDAY, DECEMBER 13, 1888. PRICE 10 CENTS.

The Nation (editorial), March 31, 1887:—"Much the most promising attempt yet made in this country to found a journal devoted to the philosophy of law and politics."

The Boston Herald, July 14, 1886:—"This new periodical . . . is a clear proof of the rise of a new school of social and political thinkers in this country. . . . It must be said, with gratification and in all sincerity, that if the Political Science Quarterly continues to discuss great themes with the fulness and large research that is here manifested, it will soon take its place among our most useful and important journals. So far it has surpassed all reasonable expectations."

The Spectator, London, May 14, 1887:—"A high-class American magazine to which there is not an equivalent here. . . . It is admirably edited and arranged."

VON HOLST in the *Deutsche Literatur-Zeitung*, Berlin, October 2, 1886:—"Ernste und tüchtige Arbeit. . . . Die meisten [Artikel] werden dem Denken des europäischen Politiker, Forscher, Publicisten und Journalisten manche werthvolle Anregung geben, und seinen Gesichtskreis in mehr als einer Hinsicht dankenswert erweitern."

MAURICE BLOCK in the *Journal des Économistes*, Paris, July, 1886:—"Voilà le premier numéro d'un recueil qui promet. J'ai lu avec beaucoup d'intérêt tous les articles de ce volume, et s'il continue à se maintenir sur la même hauteur, il occupera bientôt un rang distingué."

POLITICAL SCIENCE QUARTERLY

EDITED BY THE FACULTY OF POLITICAL SCIENCE OF COLUMBIA COLLEGE.

WITH the December number (1888), the *Political Science Quarterly* completes its third year. It has kept its readers informed concerning the most important movements of foreign politics, but it has devoted its chief attention to questions of present interest in the United States. It has discussed, for example, socialism, the immigration problem, the labor question, and the "Trust," and all these matters not in single articles, but repeatedly. It has also treated the banking question, the railroad question, and the question of codification. In the field of active politics, it has endeavored to cast light on the problem of the surplus, the operation of the customs tariff, the civil service, the government of our cities, and the machinery by which we nominate and elect our officers.

THE DECEMBER NUMBER (1888)

Contains, among its leading articles, a study of the influence of socialism upon English politics, by Mr. William Clarke, a Cambridge graduate and a London journalist; an argument for private enterprise versus public business management, by Prof. Arthur T. Hadley; a discussion of the legality of "Trusts," by Prof. Theodore W. Dwight; an analysis and criticism of the law of 1887 regulating the electoral count, by Prof. John W. Burgess; an account of the practical operation of the official or State ballot system in England, by Mr. Edwin Goadby, a prominent Liberal politician; and a summary of the legal questions which have arisen under the English ballot act, by Mr. H. H. Asquith, M. P.

Among the American CONTRIBUTORS to the *Quarterly* are:

President Francis A. Walker of the Massachusetts Technological Institute.
Professor F. W. Taussig of Harvard University.
Professor Henry W. Farnam of Yale University.
Professor Arthur T. Hadley of Yale University.
Professor Theodore W. Dwight of the Columbia College Law School.
Professor John W. Burgess of Columbia College.
Professor Anson D. Morse of Amherst College.
Professor George B. Newcomb of the New York City College.
Professor John B. Clark of Smith College.
Professor Woodrow Wilson of Wesleyan College.
Professor Simon N. Patten of Pennsylvania University.
Professor Henry C. Adams of Michigan University.
Professor Edward W. Bemis of Vanderbilt University.
Professor J. [illegible] Jenks of Knox College.
Frederic A. [illegible]ft of the State Department, Washington, D. C.
Worthington [illegible] the State Department, Washington, D. C.

Horace White of the *Evening* [illegible] Bowen of the *Independent*, C. B. Spahr of the *Christian* [illegible]d. Perry Powers of the *Chicago Times*, Albert Shaw of the *Minn*[illegible]*polis Tribune*. For the coming year,

Public Library

1889,

The *Political Science Quarterly* is able to promise, in addition to the continued support of leading American publicists, a more extensive coöperation on the part of distinguished English and continental lawyers and economists. The present number (December, 1888) contains three English articles; and in the course of the coming year the *Quarterly* expects to publish an article on the study of English legal history, by Prof. F. W. Maitland of Cambridge University; a description of the organization of the English legal profession, by Mr. G. P. Macdonnell of the London bar; a study of contemporary French politics, by M. Gauvin of Paris; and economic papers by Profs. Cohn of Göttingen and Leser of Heidelberg.

The department of book reviews will be conducted on the same principles as during the past three years, viz.: (1.) The most important publications in political science to be noticed; (2.) Every book to be referred to a specialist, who publishes his opinion over his signature; (3.) Every notice to be primarily a *compte-rendu*, indicating the scope and tendency of the book reviewed.

*** *Communications in reference to articles, reviews, and exchanges should be addressed to Prof. Munroe Smith, Columbia College, New York City*

Yearly subscription, $3.00. Single copies, 75 cents. Subscriptions to the *Nation* and *Political Science Quarterly* received by us for $5.50. Back numbers and bound volumes can be obtained from

GINN & CO., Publishers, 743 Broadway, New York.

GASTINEAU'S CONVERSATION METHOD WITH THE FRENCH.

THE CONVERSATION METHOD for SPEAKING, READING, and WRITING FRENCH. Intended for self-study or use in schools. With a system of pronunciation based on Websterian equivalents, and entirely new devices for obtaining a correct pronunciation. By EDMOND GASTINEAU, A.M., Graduate of the Université, Paris, and Principal of the Conversation School, New York.

The method here adopted is so far as possible that which a person follows in a foreign land when surrounded by those who speak only the French. In such cases the ear is incessantly struck with the sound, not of single words, but of complete sentences and perfect idiomatic forms; and thus a limited but sufficient collection of such sentences and idioms is gathered by the learner. The CONVERSATION METHOD supplies the pupil from the outset with sentences in common use, coupled with their translation and pronunciation, so that they may be easily memorized and mastered, and turned to immediate conversational account. They are then rehearsed in colloquial exercises, and when thoroughly familiar, analyzed, and the words of which they are made up inserted into other forms and idioms to express a still greater variety of meaning.

This forms the basis of the method.

GASTINEAU'S CONVERSATION METHOD, for Introduction, $2.00.

IN EXAMINING BOOKS

FOR

PRESENTS

It is well to bear in mind the following very attractive new publications:

KNICKERBOCKER NUGGETS. "Little gems of bookmaking," containing the best literature in a unique and most beautiful form. Fifteen numbers now ready, of which the latest issued are: XV. *THOUGHTS OF THE EMPEROR MARCUS AURELIUS ANTONINUS* ($1.00); XIV. *STORIES FROM THE ITALIAN POETS*, by LEIGH HUNT (2 vols., $2.00); XIII. *THE ESSAYS OF ELIA*, by LAMB (2 vols., $2.00); XII. *IRISH MELODIES*, by MOORE, illustrated ($1.50); XI. *THE ROSE AND THE RING*, by THACKERAY, illustrated ($1.25). The first series, comprising 18 volumes in handsome case, $19.

BRITISH LETTERS, illustrative of Character and Social Life. Three volumes, beautifully printed. $3.75 and $4.50.

"A thoroughly delightful series."—*Boston Times.*

PROSE MASTERPIECES FROM MODERN ESSAYISTS. Comprising single specimen essays (each selection is *unmutilated* and *entire*) from Irving, Leigh Hunt, Lamb, De Quincey, Landor, Sydney Smith, Thackeray, Emerson, Arnold, Morley, Helps, Kingsley, Curtis, Lowell, Carlyle, Macaulay, Froude, Freeman, Gladstone, Newman, Leslie Stephen. Compiled by G. H. PUTNAM. Three volumes, 16mo, cloth, $3.75; gilt tops, extra, $4.50; half calf extra, $7.50. Large-paper edition, with portrait, three volumes, octavo, gilt tops. $7.50.

"Three charming little volumes, showing admirable judgment on the part of the editor."—*Chicago Tribune.*

"A most admirable collection, which presents not only specimens of the best English style, but the methods of thought and characteristic modes of expression of the several writers."—*Magazine of American History.*

HUMOROUS MASTERPIECES FROM AMERICAN LITERATURE. Edited by EDWARD T. MASON. Three volumes, printed uniform with 'Prose Masterpieces from Modern Essayists.' The editor covers with his selections American literature from the time of the first writings of Washington Irving to the present day. $4.50 and $3.75.

"Three delightful volumes . . . full of rich surprises."—*Hartford Post.*

"Real masterpieces. . . . selected with admirable skill and taste."—*Newark Advertiser.*

THE COMPLETE ANGLER: OR, THE CONTEMPLATIVE MAN'S RECREATION. By ISAAK WALTON and CHARLES COTTON. New edition, edited by JOHN MAJOR. With eight etchings, ten hand-colored plates, and seventy-four wood-engravings. Octavo, cloth extra. $3.00.

*** This is a sumptuous reprint of the charming MAJOR edition of 1844.

PROVERBS AND PHRASES OF ALL AGES. By ROBERT CHRISTY. Classified subjectively and arranged alphabetically. Two volumes, large 12mo, half cloth. $5.00.

*** Believed to be the most comprehensive and most conveniently arranged compilation in its department.

AMERICAN LITERATURE, 1607-1885. By CHARLES F. RICHARDSON. Two volumes, octavo, cloth. $6.00.

"A work that is a credit to the writer and to the nation, and which has a grand future."—*Hartford Post.*

"The most thoughtful and suggestive work on American literature that has been published."—*Boston Globe.*

AMERICAN ORATIONS, FROM THE Colonial Period to the Present Time. Selected as specimens of eloquence and with special reference to their value in throwing light upon the more important epochs and issues of American History. Edited, with introduction and notes, by ALEXANDER JOHNSTON. Large-paper edition, limited to 600 copies. Three volumes, octavo, with twenty-one portraits on steel, uniform with the large-paper edition of "Prose Masterpieces." $7.50.

FOR YOUNG PEOPLE.

THREE GREEK CHILDREN. A tale of the Peloponnesian War. By ALFRED J. CHURCH. Twelve full-page illustrations, printed in colors. $1.25.

TALES OF KING ARTHUR AND HIS KNIGHTS OF THE ROUND TABLE. By MARGARET VERE FARRINGTON. With 29 illustrations by Fredericks and others. Octavo, cloth. $2.00.

The brave deeds of the knights of old, and the poetic charm that attaches itself to everything connected with chivalry, will always prove a most fascinating theme for romance, and the tales told in this volume cannot fail of proving most fascinating reading.

THE STORY OF THE NATIONS. 21 volumes ready, each illustrated, $1.50. See separate prospectus.

THE SILVER TREASURY. Being the Holiday Edition of 'Poetry for Home and School.' Selected and arranged by ANNA C. BRACKETT and IDA M. ELIOT. Handsomely printed in octavo with ornamental borders and 36 illustrations. Cloth, $2.25.

"An idea carried out with discrimination and intelligence."—*N. Y. Nation.*

GREAT THOUGHTS FOR LITTLE THINKERS. By LUCIA T. AMES, Boston. With 21 illustrations, 12mo, cloth. $1.50.

"It is a wonderful book, and fills a place long vacant. The author has an enviable gift of putting profound thoughts simply. In fact, the book is the history and philosophy of religion made easy. I should think the children would be delighted with it, and I am sure their parents will be."—*From the Rev. Theodore C. Williams.*

"It was a happy thought to prepare it, and it could only be written by one who loves children and knows how to reach them."—*From the Rev. Julius H. Ward of Roxbury.*

"The book is filled with important questions, which are presented in such a simple way that every child may understand them."—*Hartford Times.*

New list of Books of Real Value, and Illustrated Catalogue of Books for Young People, sent on application.

G. P. PUTNAM'S SONS,

27 and 29 West 23d Street, New York.

Important New Books.

THE STORY OF THE AMERICAN SAILOR. By Elbridge S. Brooks. Uniform with the 'Story of the American Indian' by the same author. Illustrations by Bridgman. 8vo, $2.50.

The complete story of Jack's daring, endeavor, and achievement from prehistoric times to the days of the "Brave Old Salt" and the yacht *Volunteer*. The result of much study and careful research, it is nevertheless as dashing, as brilliant, as picturesque as Jack himself, when Jack is at his best. As the first consecutive account ever attempted, it will appeal to all lovers of blue water and to all admirers of the exploits of American seamen.

GLIMPSES OF GREAT FIELDS. By Rev. J. A. Hall. 12mo, $1.25.

Force; mind; life: the brain; the spiritual body; God; man; immortality.

A scholarly, inspiring book, that deals sledge-hammer blows at the benumbing tenets of materialistic philosophy.

It should be as widely read as John Fiske's 'Idea of God' or Prof. Drummond's 'Natural Law.'

WARWICK BROOKES'S PENCIL PICTURES OF CHILD LIFE. With Biographical Reminiscences. By T. Letherbrow. 28 exquisite photogravures. 12mo, $1.25.

"The gentle and sweet side of child nature could hardly be better given. The reproductions by Kurtz are capital, and of an accuracy and fine fidelity beyond the reach of wood-engraving. The slightest of all in mere physical bulk, yet the weightiest in artistic metal is this dainty little volume."—*The Nation.*

"All classes of people may appreciate his charming work."—*Boston Journal.*

"There is a tenderness, at the same time a truthfulness, which is truly delightful."—*Phila. Item.*

OLD CONCORD: HER HIGHWAYS AND BYWAYS. By Margaret Sidney. Fully illustrated. 8vo, $2.00.

"Both a practical guidebook and an agreeable fireside itinerary. The pleasant discourse is much aided by very judicious selections of bits of scenery, houses, interiors, etc., copied after nature by process engraving."—*The Nation.*

"These sketches have a charm of color and life which a photograph never can rival."—*Woman's Journal.*

"With expert skill and with special delicacy in respect to both insight and expression, the author has made the place real to the reader."—*Congregationalist.*

LONGFELLOW REMEMBRANCE BOOK. An outline of the poet's life, by E. S. Brooks; the story of his boyhood, his home-life, and his relations with children, by Rev. Samuel Longfellow; Whittier's memorial poem; Miss Guiney's poem on the unveiling in Westminster Abbey. With portraits and illustrations. Small 4to, in box, $1.25.

"Any young person into whose hands falls that little treasure cannot fail to have awakened in him a love, not only for the poet, but for his works as well."—*Public Opinion.*

THE STAR BEARER. By Edmund Clarence Stedman. Illustrated by Howard Pyle. Heavy, hand-made, Japanese paper; proof impressions on Japanese silk paper; press work in black, red, and gold; fastenings of Japanese gold cord. In box, $1.25.

THE LOST EARL. With Other Poems and Tales in Verse. By J. T. Trowbridge. Now first published in book form. Illustrated, 8vo, cloth, $2.00.

Twenty-one poems—narrative, satirical, imaginative, philosophical, commemorative, poems of nature, lyrics, quatrains and epigrams. They are marked by feeling, naturalness, and exquisite finish.

ACROSS LOTS. By Horace Lunt. 12mo, $1.25.

The fields and woods and meadows in all their varying moods; the insects, birds, and flowers—all the common objects in nature, are described with a sympathetic tenderness and fidelity worthy of Burroughs at his best. Such chapter titles as "A March Ramble," "Wood Notes and Nest Hunting," "Field Notes in Seed Time," "Cross-cut Views of Winter," indicate the character of the book.

At the bookstores, or sent postpaid by the publishers,

D. LOTHROP CO., Boston.

HOUGHTON, MIFFLIN & CO.'S

NEW BOOKS.

POEMS OF EMMA LAZARUS.

With a biographical sketch and a portrait of this noble woman, zealous philanthropist, and admirable poet. 2 vols., 16mo, gilt top. $2.50.

THE SOUL OF THE FAR EAST.

By Percival Lowell, Author of 'Chosön,' etc. In unique binding. 16mo. $1.25.

A book of great interest on the language, art, religion, and imagination of the peoples of Japan and Eastern Asia.

THE COURTSHIP OF MILES STANDISH.

Fully illustrated, tastefully bound. Cloth, $6.00; full levant, $12.00.

"A remarkable book."—*London Spectator.*

Houghton, Mifflin & Co.,

BOSTON.

11 EAST 17TH ST., NEW YORK.

N. B. A Catalogue of their publications, with 43 portraits, sent to any address.

E. P. DUTTON & CO'.S

NEW HOLIDAY BOOKS.

The Cathedrals of England and Wales.

By Charles Whibley, B.A. With a Preface by the Rt. Rev. Henry C. Potter, D.D., LL.D. An *edition de luxe*, with 16 full-page plates, reproduced in color from the original water-color drawings, and upwards of 40 vignettes in monotint. Large folio, 96 pages, richly bound in gilt cloth, $25.00.

"Let me congratulate you on the beautiful volume on 'The Cathedrals of England and Wales.' It is an exquisite specimen of the printer's art, and a very interesting addition to a literature increasingly attractive to a steadily increasing number of readers."—*Bishop Potter.*

"The beauty of the book, and especially of the vignette illustrations, is very remarkable, and one makes easily, by the aid of its letter-press and larger pictures, that most pleasant of all things to make, 'a Cathedral tour of England.'"—*Bishop Doane.*

"It is surprising such luxuries of literature are not more frequently given to us, especially at the Christmas season, when money is so profusely wasted on gifts that please but for a moment, and then are forgotten. I commend this work to sensible persons willing to make presents to their pastors, to young people, or to dear friends."—*Bishop Coxe.*

A Midsummer Night's Dream.

An *edition de luxe* of Shakespeare's play. Illustrated with six exquisite full-page plates in color and a number of charming vignettes in sepia monotints by the illustrator of "Undine." Large folio, 60 pages, superbly bound in white silk cloth, with central medallion printed on satin in colors. In box, $15.00.

"The perfection of chromo-lithography would seem to be reached here. . . . The artist has dwelt by preference on the fairy spectacle, but shows much appreciation of the comic element of the play, and his pictures of Master Bottom and his assistants are full of humor. The printing of the text leaves nothing to be desired."—*Art Amateur.*

All Things Bright and Beautiful.

A gallery of English modern art, with 18 full-page illustrations and poems by Wm. Allingham, Austin Dobson, and others. Large 4to, cloth, $6.00; Japanese calf, $7.50.

The Bells.

By Edgar Allen Poe, with new and beautiful illustrations by Percy Tarrant. Printed in rich brown monotint. 4to, 20 pages, monotint cover, 75 cents.

"Poe's musical poem of the bells lends itself with wonderful facility to artistic illustration. It is a perfect carnival of winter and an idealization of Christmas joys, in this new and beautiful presentation."—*New Haven Palladium.*

O Little Town of Bethlehem.

A Christmas carol. By the Rev. Phillips Brooks, D.D. Quarto, beautifully illustrated, 75 cents.

Floral Friends.

Familiar flowers, with appropriate verses by prominent poets. With illustrations in color and monotint. Small 4to, board covers, cloth backs, 40 cents.

Onward.

A selection of hymns and Scripture texts for a month, illustrated with many colored plates, vignettes and monotints. Small 4to, 32 pages, illuminated board covers, 50 cents.

"The book will give much pleasure."—*N. Y. Evangelist.*

"An exceptionally artistic and attractive little gift-book for the holidays."—*Boston Sat. Eve. Gazette.*

As Thy Days So Shall Thy Strength be.

A daily companion for a month, containing favorite hymns and texts. Richly illustrated with exquisite pictures and vignettes in color and monotint, by Fred. Hines. Large 4to, 32 pages, illuminated board covers, $1.50; bevelled, gilt extra, $2.50.

For sale at the bookstores or sent by mail, postage paid, on receipt of price.

*** For other Publications of GEBBIE & COMPANY see Catalogue.

Scribner & Welford's
NEW BOOKS.

Dreams and Dream-Stories

By ANNA BONUS KINGSFORD, M.D., of Paris, President of the Hermetic Society, author of 'The Perfect Way in Diet,' etc., etc.; and part author of 'The Perfect Way; or, The Finding of Christ.' Edited by EDWARD MAITLAND. Crown 8vo, cloth, $2.25.

The Perfect Way;
Or, THE FINDING OF CHRIST.

By ANNA BONUS KINGSFORD (M. D. of the Faculty of Paris) and EDWARD MAITLAND (B. A. Cantab). Revised and enlarged edition, being the first with the authors' names. Square 8vo, cloth, uncut tinted paper, $3.75.

"It is a book that will be largely read by students of esoteric philosophy, theosophists, and investigators of recondite branches of thought and philosophy."—*Boston Transcript.*

The Life and Times of Girolamo Savonarola.

By Prof. PASQUALE VILLARI. Translated by Linda Villari. Portraits and Illustrations in Photogravure. New Edition, Revised and Enlarged. 2 vols., royal 8vo, cloth, $9.00.

This is the work of an eminent scholar, who has made a special study of the period of the Renaissance. It is founded on the results of much original research, not only in the archives of the Government, but also among papers preserved by the families of the old Italian nobility. The search has brought to light many new documents of great importance, and in the light of them the author has considered Savonarola both as philosopher and as statesman. The work may be considered the only one that does full justice to the life and public services of one of the most remarkable men of his time, and one of the most brilliant lights of mediæval history.

Jerusalem.

The City of Herod and Saladin. By WALTER BESANT and E. H. PALMER. Map and Frontispiece. New edition, revised and enlarged. Crown 8vo, cloth, $3.00.

John Leech's Pictures of Life and Character.

From the collection of "Mr. Punch." Containing nearly 900 pages of pictures. Complete in one magnificent volume. In an extremely handsome and appropriate cloth binding, $10.00.

The genius of Leech has never been seen to greater advantage than in this gallery.—*Morning Post.*

Old Chelsea:

A Summer Day's Stroll. By Benjamin Ellis Martin. Illustrated by Joseph Pennell. Sq. 12mo, cloth, $2.25.

Studies in the Poetry of Robert Browning.

By James Fotheringham. Second edition, revised and enlarged. Crown 8vo, cloth, $2.25.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

The Nation.

NEW YORK, THURSDAY, DECEMBER 13, 1888.

The Week.

WE should think that President Cleveland would read the talk of Civil-Service Commissioner Edgerton, as reported in the Baltimore *American*, with more or less remorse. Mr. Edgerton denounces the system which he has been appointed to administer "as a hollow and extravagant fraud." Moreover, he has been talking this way ever since he was appointed, in 1885, without the smallest concealment, and ought to have been summarily removed when it was first heard of. He is a perfect specimen of the "old-fashioned Democrat" from Indiana, except that he is usually neatly dressed and his nose is not red. His ideas about the public service are those of the Jacksonian period; and as he was seventy years old when he was appointed, at the solicitation, we believe, of the late Chief-Justice Waite, there was not the smallest likelihood that he would change them, in the light either of experience or of any other light. From nothing, however, has the President suffered in popular estimation so much as keeping in office, as administrators of the Civil-Service Law, men who hated it and wished to make it inoperative. All the discredit wrought by these worthies has fallen on him in the shape of charges of fraud and hypocrisy. Of course honest men would not retain offices which they were not willing to execute fairly, and the consequence is that the President has had to bear the blame of a parcel of civil-service impostors, like old Mr. Edgerton in Washington, Postmaster Jones in Indianapolis, and Deputy-Collector Davis and Surveyor Beattie in the New York Custom-house, whom he ought to have got rid of promptly, as his worst enemies. Mr. Edgerton, much as he fumed, was cunning enough not to resign, however.

The *Tribune* printed on Saturday morning a column of honest indignation from Mrs. Whitney, the wife of the Secretary of the Navy, about the vile slanders circulated during the past six months by Republicans, both lay and clerical, about President Cleveland's married life. They have been disgraceful, not only to the American name, but to human nature. The particular story to which Mrs. Whitney refers—there can be no indiscretion now in saying, as Mr. Depew admits it—was told by Mr. Depew at a dinner-table in this city, as on the authority of Mr. Henry Watterson. It was the confidence with which it was produced on this occasion that led to an appeal to Mr. Watterson for the facts. Mr. Watterson answered at once, showing that the charge was an absolute invention. A copy of this letter was sent to Mr. Depew by a gentleman who was present at the dinner, with an expression of hope that he would, whenever the opportunity offered, contradict the story on Mr. Watterson's authority. This was about two weeks ago. Whether Mr. Depew has ever taken any notice of it we do not know, but we hope he has.

There is abundant material for fresh uneasiness among the Blaine followers to be found in a recent article in the Indianapolis *News*. The editor is a warm personal friend of Gen. Harrison, and even if he does not speak with the latter's knowledge, he would not make so bitter an assault as he does upon Mr. Blaine if he had reason to think that by so doing he would offend the General. When, therefore, he denounces as "insufferable" the assumption of Mr. Blaine's closest political friends, like Mr. Boutelle, that Mr. Blaine would get no more than his deserts if he were given the Secretaryship of State; when he speaks of the reception of Mr. Blaine in this city on his return from Europe as "cut-and-dried," and designed to "carry him through the campaign as the central figure"; when he says that so far as they succeeded in this design they "handicapped" the Republican campaign; when, worse than all this, he says that "Blaine is thoroughly distrusted and feared as a corrupt and unsafe man by one-half the people of the country, and has lost the confidence of the thinking element of his own party"—all this is ominous for the hopes of the Blaine disciples.

A story comes to us on good authority which throws strong light upon the current Republican view of the use of money as a political force. A rich aspirant for a United States Senatorship in a State which shall be nameless, consulted a Republican Congressman as to the advisability of investing $25,000 in a project for starting a newspaper to run against a paper of Mugwump tendencies, with the two-fold hope of driving the latter to the wall and influencing public opinion in favor of the rich man's aspirations. The Congressman had had considerable experience in efforts of that kind, and he advised against the investment of the money in that way. He was convinced, he said, that the influence of the press in politics was greatly overestimated; the chances were that if the $25,000 was paid over, it would not result in the objects desired—the paper would only live till the money was spent, and the giver would in all probability have nothing to show for it when it was gone. A much better way would be to use the money directly in getting the "right kind of men" elected to the Legislature: in that way a statesman was pretty certain to get a quick return on his investment.

Does anybody question the prevalence of this view in the Republican party? Did the Republican press or Republican money exert the more powerful influence in the late campaign? We doubt if ever there was in this country a Presidential campaign in which there was less of sincere argument in a party press than there was in Republican journals between July and November last. The tariff question, which was the leading issue, was scarcely argued at all. There were some clap-trap arguments put forward on the wage question, and many childish appeals to prejudice by pretences of British sympathy with the Democrats; but of serious argument there was scarce any worth mentioning. The documents distributed by the Republican Campaign Committee bore the same character. Certainly there was no appeal to anybody's intelligence discernible in them. Yet the Republicans won, and no intelligent observer of their methods, revealed in many ways since election, can doubt that their view of the relative power of the press and of money coincided closely with that of the Republican Congressman whose advice we have cited. They applied the money directly.

John J. O'Brien and his Eighth Assembly District Republican Association have been expelled from the party fold by a very large vote in the County Committee, and the *Tribune* declares that the "lesson taught is one that will not soon be forgotten." But what is the lesson? What have O'Brien and his associates been punished for? There is nothing in Friday night's proceedings which throws much light on this point. The first charge against O'Brien for misconduct in the last election was made in the evening Republican organ of this city, and was that he had taken from the National Republican Committee a large sum of money to be used in buying votes *en bloc*, and had not kept his agreement. This was subsequently enlarged by a statement by Mr. Nugent, a Republican candidate for Coroner, that O'Brien had collected "assessments," amounting to $30,000, from various local candidates, and had made no return to Republican candidates in votes at the polls. The sub-committee which investigated the matter put the money aspect of the case into their report, charging that O'Brien received $1,700 from the Republican candidate for Congress, and made no satisfactory return in votes. Yet in the report presented to the full County Committee on Friday night, on which O'Brien was expelled, there is no reference to money, but a vague charge that he and his associates did not "loyally support the entire Republican ticket."

Now, the only way in which O'Brien could have "loyally supported" the entire ticket would have been to have bought an equal number of votes for all candidates. It was because he did not do this that he was arraigned by the religious editor of the party; and by H. K. Thurber, who is said by Mr. Nugent to have given him $2,000 to be used in behalf of the Republican Congressional candidate; and by the Better Element of the Union League Club, whose money he has put in his pocket for lo! these many years. If he had used the money which was

given him for the purpose designed, that is, if he had "loyally supported" the entire ticket, by rolling up a Republican majority for all its candidates, would he have been expelled? How has he "converted" the Eighth Assembly District from a Democratic to a Republican stronghold? Simply by the free use of good Republican money, put in his hands by good Republicans with the distinct understanding that he was to buy votes with it. Not one of his accusers on Friday had a word to say against the methods which he used for so many years. They denounce him for "treachery" in failing to use them in the way they wished him to, but they had no harsh word for the methods themselves.

It will have been noticed by some of our readers that Col. Bliss, in a recent interview, traverses Col. Shepard's statement that $150,000 was put in O'Brien's hands the week before election for the purchase of three "movements" in this city for the Republican party. It is quite clear, however, that, in alleging that "no such sum of money was put in any one's hands for use on election day," Col. Bliss asserts more than he can possibly know. The proof of a negative is proverbially difficult, and we should therefore disregard his denial, even if he were as religious a colonel as Col. Shepard, which we fear he is not, or if he had as much money as Col. Shepard, which we presume he will not maintain that he has. When there is a conflict of veracity between two Colonels, the one who is the most religious and the richest inevitably, other things being equal, obtains most credence.

Defensive eulogies on John Wanamaker continue to reach us in Republican papers, supported by arguments showing that, as a successful business man, he would probably administer the Post-office Department successfully. This shows how difficult it is to get into the Republican editorial mind, in its present condition, the real nature of the objection to Wanamaker as a Cabinet officer. Perhaps he would administer the Post-office Department well; but there are several men in the wholesale clothing and Yankee-notion business in this city and Boston who would administer it just as well, and also be willing to pay a good round sum for the place. It would be worth $100,000 to Rogers, Peet & Co., or Devlin & Co., or Simmons & Co., as an advertisement, to furnish the Government with a Cabinet Minister. What we object to is the sale of a Cabinet office to any man, however able or however successful as a storekeeper, in return for a contribution to campaign funds. No one would have thought of Wanamaker for a Cabinet place if he had not raised money for Quay. To talk of him now for such a place is really to propose the sale of the chief offices, after every election, to the largest donor of money. The thing ought to be stopped in the beginning, and Wanamaker is the beginning. The rule ought to be, not that a man who gives freely should get high office, but that giving freely should, in common decency, disqualify a man for high office. If Wanamaker does not see this, other people must see it for him. The Republican mind at the East is completely perverted on this subject. To it corruption, as we see in this city, consists, not in buying offices, but in getting money for the purpose of buying offices, and using it for other things.

A recent pilgrim to Indianapolis gives it as his opinion that Gen. Harrison has not yet made up his mind about Wanamaker, although, he adds, the President-elect is daily receiving letters from clergymen urging him to summon the Philadelphia clothier to his Cabinet. It is altogether likely that the latter statement is correct. Nor should the fact be set down to the discredit of the clerical letter-writers. Their action and recommendations are not meant either to approve or condemn the kind of political activity displayed by Wanamaker in the late campaign. They look upon him as a sort of acquaintance or even friend. His "Clergymen's Department" has long been an established and profitable part of his business, and the frankly confidential letters sent by him to the "reverend clergy" of the United States, with disinterested advice on the subject of the purchase of clothing, and with "simple directions for self-measurement," have made his name a household word in thousands of parsonages.

Mr. Holman has offered a resolution instructing the Judiciary Committee of the House to investigate the use of money in the Federal elections, including both receipts and expenditures. We are glad to see that the Philadelphia *Press* cordially approves of this, adding the valuable suggestion that it is much better that the Senate should undertake this work than the House, as the House goes out of office in two months, while the Senate is a continuing body. It proposes that Quay, Dudley, and Wanamaker should all be summoned. It thinks that Wanamaker and Dolan will be willing to tell all they know about the money, and as to Quay and Dudley, and insists that if these worthies are examined, Brice, Barnum, and Scott must be examined too. This is all right. Everybody of prominence on both sides who is known to have raised or spent money for electioneering purposes, ought to be summoned. We are very sorry now that Quay and Wanamaker should have burned their vouchers and books of account. In all investigations about money the vouchers and the ledger and day-book are, of course, worth fifty times as much as oral testimony—are so valuable, indeed, that their destruction or concealment raises in law a presumption of fraud.

The debate in the Senate on the duty on structural iron is instructive as showing what a fearful and oppressive tangle the present tariff is. Here is a duty equal to 102.75 per cent. ad valorem, one of the greatest monstrosities in the revenue system of any country in the world. The Senate Committee propose to reduce the duty to 1 1-10 cent per pound, equal to about 90 per cent. ad valorem. Senator Plumb offered an amendment reducing it to one cent per pound. Senator Allison opposed the amendment because the duty on blooms and billets (the raw material of structural iron) is so high that the manufacturers of the latter must be compensated and something left over for them. The duty on blooms and billets rests on the duty on pig-iron, and this in turn rests on the duty on iron ore. So by successive steps we climb from a duty of 41 per cent. on ore up to 102 per cent. on beams and girders, and no part of the stairway can be removed without letting down the whole, which is not to be thought of. Then Mr. Allison and Mr. Aldrich are confident that domestic competition will eventually bring down the price, although it has not had that tendency during the past five years. This means that the plundering of the public on all the steps of the stairway, from iron ore up to beams and girders, should be allowed to continue indefinitely. The fact that there is a "combine" of the manufacturers of structural iron to prevent competition, mentioned by Mr. Plumb, was brushed aside by Mr. Allison, who had received information that new manufactories of iron and steel beams were starting, which, in his opinion, would put the law of competition in force by and by. But no guarantee was offered that the new ones would not join the combination.

The Direct-Tax Refunding Bill, which caused so much excitement and filibustering in the House last summer, will probably be passed soon and be vetoed by the President (as it ought to be), and then left to the next Administration to deal with. The supposed evil which it is intended to cure by this measure having existed for more than a quarter of a century, it will not be greatly aggravated by a few months' longer delay. The bill is a bad one, because it looks towards a distribution of the surplus among the States. The money paid under the Direct-Tax Law of 1861 was legally and constitutionally paid and received. It is not distinguishable from any other collections made by the Government as to its rightfulness. It is therefore just as proper to distribute any other money to the States as this money. No argument can be made upon legal grounds for sending back to the State of New York the money she paid under the Direct-Tax Law that would not justify sending back the estimated sum which her citizens pay in customs duties. The argument that some of the States did not pay their share, and that hence an inequality exists, may be good for collecting the unpaid shares now. Moreover, if it is a question of correcting old inequalities, there is a much older and larger one in sight, namely, the $28,000,000 "deposited" with the twenty-six States which constituted the Union in the year 1837. In order to make things equal now, this money ought to be paid back, or a proportionate amount should be deposited with the twelve States that have since been admitted, not to mention the just claims of our worthy Territories.

A new complication has arisen regarding "the Irish vote" in this country which politicians will probably find harder to deal with than any preceding one. It appears that mackerel fishing off the Irish coast has lately experienced a considerable revival, and about two years ago Irish salt mackerel began to make its appearance in this country in large quantities, but in an unsatisfactory condition, owing to the Irish ignorance of how to cure the fish for the American market. Somebody went over, however, and showed them how; and now a large supply is said to come from Ireland, and it is increasing rapidly, owing to the high price in our market. The Gloucester fishermen have therefore taken the alarm, and demand the imposition of higher duties on the imported article, and the National Convention of Wholesale Fish-Dealers are to take the matter up. How Republican politicians will meet this demand, it is difficult to see. We doubt if the devotion of the Irish to protection is so great as to make them support an attempt to crush a rising industry of their unfortunate countrymen at home. In the last canvass, the free trade they were taught to hate was "English free trade." Nothing was said to them about Irish free trade, and, so far as we know, nothing has appeared in the London *Times* on that subject, so that there is nothing to quote. What we should do in this embarrassing situation, were we in the place of these politicians, would be to forge an extract from that journal something like this:

> The news that Irish salt mackerel is making its way into the American market in considerable quantities promises, by diminishing discontent, to make the enforcement of English law in that island easier than for some time back. The exportation ought to be encouraged in every way possible, so as to silence the agitators, and extinguish what they ridiculously call the national feeling. What better use can a Celt turn himself to than catching and salting fish for Anglo-Saxons to eat?—*London Times.*

The unreasonable conduct of Sheriff Smith of Birmingham, Alabama, in defending the jail against the demands of the citizens who wanted to take out a man named Hawes and hang him to a convenient tree, led to the lamentable consequence of killing ten men and wounding thirteen others. The alley in front of the jail where this unwarrantable resistance on the part of the Sheriff and his assistants took place resembled, after the action, a hotly contested engagement of infantry against entrenchments. The ground was strewn with the dead and dying, streams of blood filled all the low ground and formed pools here and there, and the buildings and fences within range were riddled with bullets. Public indignation was roused to the highest pitch, and the Governor of the State was appealed to to bring the Sheriff to justice, which he declined to do. Nevertheless the Sheriff and the Chief of Police were arrested for murder, and they will be lucky if they escape lynching in place of Hawes. The crime of the latter has ceased to excite animadversion in Birmingham, having been overshadowed and dwarfed by the greater barbarity of the Sheriff. In the presence of this "holocaust" it is to be feared that less attention than it deserves will be given to the shooting of one Beidler in the streets of Texarkana by a boy of seventeen whose father had had a personal encounter with Beidler, in which nothing more deadly than fists and billets of wood had been used. Nor should we lose sight at such a time of the meritorious activity of the White Caps in Ohio and Indiana, who are holding night sessions of court and administering justice over large tracts of country.

The natural and proper exultation over the revival and probable permanent establishment of the Thomas orchestra should not cause forgetfulness of the fact that the great want of a proper music-hall remains unprovided for. Chickering Hall, with many advantages, has the incurable fault of being too small. The provision of a fitting place for the performance of great music is one of the first æsthetic necessities of New York. Possibly enterprise may be quickened by the knowledge that even London suffers from the same want; it has nothing between St. James's Hall, which seats only about 1,800 persons, and the Albert Hall, which seats over 8,000. The consequence is, that with a body of 8,000 to 10,000 amateur chorus singers in London, and with choral music at the highest pitch of popularity, there are almost no performances. London is suffering, as is New York, for want of a hall with an orchestra to hold say 500 of band and chorus, and an auditorium to seat 3,000 persons. Perhaps emulation, and the satisfaction of seeing New York provided with a structure which London waits for, may heighten public interest in the project of a music-hall fit for our needs.

Lord Salisbury, according to Mr. John Morley, never makes a speech without "at least one blazing indiscretion." His comparison of the Irish to Hottentots in the matter of capacity for self-government was one of these; his announcement that one of his colleagues in the Cabinet was worth more than the whole eighty-six Parnellite members of Parliament was another. He got into the way of saying such things when he was a writer for the *Saturday Review*, in the days when it made a specialty of scorn and contempt for everybody who did not keep hunters or had not graduated at Oxford or Cambridge, without distinction of race or religion, and Mr. Disraeli described him as "a master of flouts and sneers." His last indiscretion, however, appears to be likely to get him into more trouble than any of the others. Englishmen grow increasingly sensitive, as the years roll by and Russian railways creep up nearer to the northwestern frontier, about the feelings and opinions of the natives of India. Everything that can be done is being done to humor them and attach them to the British connection. A great many of the upper class are becoming Anglicized; they are educated in England, and practise at the English bar, occasionally try to get into Parliament, and distinguish themselves frequently as speakers on the stump. One of the most prominent of them, Dadabhai Naoroji, a Bombay Parsee, ran for Parliament as the Liberal candidate in the Holborn district of London at the election before this last one, and was defeated. He is an able and well-educated man and a good speaker, and has the usual swarthy Indian complexion. In a late speech Lord Salisbury ridiculed the Liberals of this district for having had a "black man" for their candidate. The East Indians have learned to swallow insults in silence, but have immense capacity for steady and protracted hate. When an Englishman sneers at one as a "black man," they know that he has in his mind the epithet "nigger," which is the common Anglo-Indian description of the Indian subjects of the Queen, and they know what contempt the epithet expresses. Consequently, the Anglo-Indian press has taken the matter up very warmly, as they think (and most English Liberals agree with them) that Lord Salisbury has been sneering at the expense of the Indian Empire.

Mexico has probably suffered more than any other country from the steady depreciation of silver, for the reason that it is her principal article of export. An attempt to help matters was made in the law of June 6, 1887, which aimed to diminish the cost of production of the metal by the removal of various domestic taxes. The resulting gain has been slight, though the miners are grateful even for that. Just now a new "blow at Mexican silver" is being aimed by Spain. Some time ago that country ordered the discontinuance of the circulation of the Mexican dollar in the Philippine Islands, and now proposes to coin a "colonial dollar" for use in Cuba and Porto Rico, as well as in her colonial possessions of the East. This will not only cut off an existing demand for Mexican silver, but will throw back upon the Mexican Government a part of the outstanding coinage. Fear of this may have been the spur urging on the Mexican Chamber to the latest law upon the subject. This measure, which passed its first reading on November 13, directs the President to exert himself to procure an agreement among the Latin countries, England, and the United States for the use of an international silver coin. The debate was only notable for bringing to light what is probably a new epithet among the many astonishing ones applied to silver; a deputy called it "the red globules in the blood of commerce." As to the project itself, it will undoubtedly come up in some shape before the coming American Congress, from which gathering more may be expected than from the simple initiative of Mexico. Among the great practical difficulties in the way of the scheme may be mentioned the widely varying monetary units of the South American States. To make a coin easily exchangeable with them all would almost require higher mathematics of the kind Robert Morris proposed to employ to harmonize the different monetary units of the Confederation.

LESSONS OF THE FIGURES.

We have compiled a table which presents at a glance the total vote cast for President at the recent election, in comparison with the votes of 1880 and 1884, in all but a dozen of the States. In most cases the figures are official; in all the rest they contain returns from all the towns of a State, and will vary but slightly from the official count, with the single exception of West Virginia, where, however, it is known that there is a Democratic plurality for President of about 1,000. We omit the figures in the half-dozen Southern States where the Republicans made no fight, as well as those for the westernmost States of the Union. The figures of the Prohibition vote are given for each year, but the labor vote so generally disappeared this year that it did not seem worth the space it would take:

	1880.				1884.				1888.			
	Rep.	Dem.	Gbk.	Pro.	Rep.	Dem.	Lab.	Pro.	Rep.	Dem.	Pro.
Maine	74,089	65,171	4,408	95	72,209	52,140	3,953	2,160	73,794	50,481	2,691

The feature of this table which is most likely to arrest attention is the remarkable shrinkage which the Republican vote suffered in 1884, as compared with the dimensions which it should have reached, according to all the laws which govern such matters. Take New York, for example. It has always been claimed that the Republican candidate for President in 1884 received tens of thousands of votes which had always before gone to the Democrats, and which were cast for Hancock in 1880; and yet the Republican candidate for President in 1884 received only 562,005 votes, against 555,544 thrown for Garfield in 1880, which shows that the normal Republican vote of 1884 was smaller by tens of thousands than it should have been. In Connecticut the Republican candidate had received 67,071 votes in 1880; despite a considerable increase in population, the Republican candidate in 1884 polled but 65,923 votes. Massachusetts in 1880 had given the Republican candidate 165,205 votes; the State contained a great many more voters in 1884, but the Republican candidate was supported by only 146,724 of them.

The figures for 1888 emphasize this showing. In New York the Republican vote, which, despite the large accessions from the Democracy, increased by only about 6,000 from 1880 to 1884, was 88,000 larger in 1888 than in 1884. Making due allowance for the many thousands of votes which Harrison secured from the Democratic side through the alliance with the saloons and through the use of "boodle," it yet remains true that the normal Republican vote this year shows the large increase reasonably to be expected every four years in this great and growing State, but which was not shown in 1884. In like manner in Connecticut the Republican vote, which fell off 1,148 from 1880 to 1884, has risen again, so that it shows in 1888 the gain of 7,513 over 1880, which might fairly be expected in eight years. Massachusetts furnishes the most impressive illustration of the same fact. The Republican vote in 1888 is 18,687 larger than in 1880, but at the same time it is 37,168 larger than in 1884. Before the election just held, there may have been excuse for some doubt as to what it was that defeated the Republican party in 1884; but in the light of these figures no candid person can longer question that it was the candidate of 1884 who was responsible. The verdict of history on that matter is rendered by the returns of the election of 1888.

As regards the tariff issue, the showing is altogether encouraging to the friends of reform. It was the tariff issue which finally elected Garfield in 1880, after the failure of the bloody-shirt cry in the September election in Maine had forced a change of base. But observe how much less effective the tariff scare was this year than eight years ago. In 1880 Garfield carried New York by more than 21,000 plurality; in 1888 Harrison would not have carried it except for the Harrison and Hill saloon-vote combination. In 1880 Garfield carried Indiana by 6,600 plurality; in 1888 Harrison, with "State pride" to help him and an unexampled boodle fund, has only 2,300, and Gen. Hovey, the Republican candidate for Governor, frankly confesses that they could not have got that if the President's record on the pension question had not given them the votes of thousands of Democratic soldiers. In 1880 Connecticut gave the high-tariff candidate over 2,500 plurality; in 1888 it gives its electoral votes to the low-tariff candidate. In 1880 New Jersey gave only 2,000 plurality against the high-tariff policy; in 1888, over 7,000. Rhode Island gave nearly 7,500 plurality for the high tariff in 1880; only about 4,500 in 1888. New Hampshire, over 4,000 eight years ago; less than 2,500 now,

The same thing holds true among Republican States at the West. For example, in Ohio over 34,000 for the high-tariff candidate in 1880; less than 20,000 in 1888. In Illinois, over 40,000 in 1880; only 22,000 in 1888. In Wisconsin, almost 30,000 in 1880; only about 21,000 in 1888. In Iowa, 45,000 for the high-tariff candidate over both the Democratic and Greenback tickets in 1880; less than 32,000 in 1888. East or West there is nothing discouraging to those who believe in a thoroughgoing reform of the tariff.

But the tariff reformers must be prepared to lose electoral votes in the South which they have hitherto had. The half-dozen States which lie nearest the North are drifting towards Republicanism, and towards Republicanism on the tariff issue. Both Virginia and West Virginia almost crossed the line this year; neither can any longer be counted among sure Democratic States. Some of their neighbors incline to keep them company. It is extremely unlikely that the old slave States will ever vote together again in a Presidential election.

The tariff reformers have two sources of strength for the future. One is found in the older manufacturing States of the East, where the workingmen are already getting their eyes open. New Jersey and Connecticut ought to be retained, and New York put where we believe it would have been if the issue had been presented free from complications this year, while New Hampshire and Rhode Island ought to be won over. The other field to cultivate is the agricultural States of the West. Indiana believes in tariff reform, Illinois is missionary ground, other States in that part of the country are not hopeless. A readjustment of party lines in such directions as we have indicated is greatly to be desired. A Republican State or two in the South would do more than anything else to eliminate the sectional issue from our politics, and to enable the Democrats, on a good platform, to carry one or two of the great Western States.

AN EDUCATIONAL TEST.

An immense deal of stuff regarding the "Southern question" has been published in the newspapers, both South and North, since Harrison's election, but for the most part it has not deserved serious attention. Two Southern journals, however—the Charleston *News and Courier* in South Carolina and the Montgomery *Dispatch* in Alabama—have advocated a policy which merits thoughtful consideration. It is the establishment of an educational test for the suffrage.

The *Dispatch*, which was first to suggest this policy, declared that the ills which have befallen the Southern States since the war have come chiefly from the dense ignorance which pervades so large a proportion of the electorate, and it pointed out that Northern States, like Massachusetts, shut out ignorance from the ballot-box. It advised Alabama to follow the example of the New England State. "If a mere consideration of expediency, an abstract respect for the dignity of the ballot," it said, "has induced Massachusetts to withhold the right of suffrage from the illiterate,

the incompetent, and the corrupt, considerations a thousand-fold more imperative urge us to adopt that policy." The *News and Courier* admitted that South Carolina had rudely established a certain sort of educational test in what is known as the eight-box law, under which the ballots for different officers must be deposited by the voter in different boxes appropriately inscribed, and no vote placed in the wrong box is counted; the result being that the ignorant voter is pretty sure to make mistakes, as nobody is ever allowed to help him out of his trouble—at least if he is a negro. But the Charleston paper frankly confessed that this was an evasion, after all, and advised grasping the difficulty squarely at once, and amending the State Constitution so as to impose an educational qualification.

The *News and Courier* appears to take it for granted that such a change would result in diminishing the State's representation in Congress and in the Electoral College, under the provisions of the Fourteenth Amendment, but insists that it would be better to lose a Congressman or two than to go on as at present. But it is by no means certain that the establishment of an educational test would operate in this way. The section of the amendment in question reads as follows:

"Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens, twenty-one years of age, in such State."

It will be seen that everything would depend upon the judicial construction put upon the expression, "denied to any of the male inhabitants of such State, or in any way abridged." What is required to constitute such denial or abridgment? In many Northern States the right to vote is restricted in various ways. In New York, for example, nobody can vote who has "not been an inhabitant of this State one year next preceding an election." This, of course, cuts off every year a number of men who would otherwise be entitled to vote. Moreover, a man must have resided in the county for at least four months. He might have lived in the State to old age, but if he had lived on one side of the East River until last August, and then moved to the other side, he would not have been able to vote anywhere in November. Still further, in New York city a man must be registered, and that requires his personal presence at the place of registration on one of four specified days. Every year it happens that men lose their votes because, although well enough to go to the polls on election day, they were too ill for some time previous to go to the place of registration. There is no doubt that in New York at least 3 per cent. of "the male inhabitants of such State, being twenty-one years of age and citizens of the United States," are prevented from voting by these restrictions upon the suffrage, and if the basis of representation were to be reduced in proportion, the State would lose one of its thirty-four Congressmen and of its thirty-six electoral votes; but no reasonable person would claim that the amendment to the Federal Constitution was intended to be construed in that way.

Take the case of the poll-tax, payment of which, as well as the ability to read, is required by Massachusetts. This requirement debars a considerable number of men from voting. Either they cannot afford to pay the money as election day approaches, or they would rather save the money than enjoy the privilege of casting a ballot. Thousands, and even tens of thousands, of dollars are put out by the party committees in Boston for the payment of poll-taxes in every closely contested canvass; but nobody would maintain that Massachusetts ought to lose one of her twelve Congressmen because one in twelve of her voters may be kept from the ballot-box by this poll-tax test.

As to the educational test. The census of 1880 showed that there were in Massachusetts 496,692 white males above the age of twenty-one, of whom 30,956, or almost one-sixteenth, were unable to write. Nearly all of these were of foreign birth, and many of them had not lived long enough in this country to become naturalized. But suppose that all of the 30,956 in question were citizens, otherwise entitled to vote: could the State be punished by the Federal Government for their illiteracy?

Suppose that South Carolina or Alabama gave notice in 1889 that on and after the fall election of 1890 no man should vote who could not read the Constitution in the English language and write his name—to copy the Massachusetts test: would that be, in any proper sense of the words, either a denial or abridgment of the right to vote? At least a year's notice would be given, and the capacity to read could be acquired by any man in a year. Would the fact that a number of men did not acquire the capacity be ground for mulcting the State?

Our Government was established upon the theory of popular intelligence; it was expected by the founders that everybody who voted would know how to read his ballot. The idea of leaving an election to be decided by men of whom a majority cannot write their names is intolerable; and yet in South Carolina more than half the men above the age of twenty-one in 1880—106,934 out of 205,779—were so ignorant as this. It was nearly as bad in Alabama, 120,858 out of 259,884. Certainly the nation ought not to punish a State for trying to introduce intelligence into its government.

The really serious difficulty in the way, we suspect, will be with the whites. This is not a question which applies solely to the negroes, although, of course, it would chiefly affect them. Almost one-sixth of the white men in South Carolina, quite one-sixth in Alabama, were unable to write their names eight years ago. It was still worse in North Carolina—almost a quarter. It may well be doubted whether the evils of negro rule will appear terrible enough to cause white men to disfranchise themselves.

RICH BOYCOTTERS.

One of the ablest economists in England, Mr. Henry Sidgwick, the author of 'Methods of Ethics,' in an address before the British Association defended the theory of protection against those who denied the moral right of governments to impose taxes for the purpose of promoting domestic industry; but at the end he ruined his argument for protectionist purposes by laying it down that no nation in the world had virtue or self-restraint or ability enough to administer a system of protection through legislation. It was sure to debauch, he held, both the legislature which enacted the tariff and the "interests" which profited by it. There is nothing new in this argument. It owes whatever force it has in Mr. Sidgwick's mouth to the fact that it comes from a man who attaches no importance to the moral objections to protection of which some free-traders make a good deal. But it is an argument which gives new weight to the considerations urged by Mr. Cleveland in his last message—that high tariffs, maintained for the benefit of the rich, teach socialism to the poor, and make them eager to get hold of the Government, that they, too, may fill their pockets through class legislation.

Curiously enough, too, they seem to lead to the adoption by the rich of some of the practices by which the poor tyrannize over their fellows in pursuance of socialistic aims. Nobody has yet forgotten the fight we had in these parts, over two years ago, with the trades-union boycotters. They asked to be allowed to enforce a system of exclusive dealing by which anybody who did not agree with their views about wages and hours and the methods of work should be, if a laborer, prevented from getting any employment, and if an employer, prevented from selling his goods. Before public sentiment was thoroughly roused against them, and the law brought into play to restrain them, they had made the lives of thousands of laborers miserable, and threatened scores of employers with ruin. They rioted in the streets, and blocked them up, and stopped the traffic on great lines of railroads, and in some districts, as during the great Southwestern strike, produced an almost total suspension of industry. When all was over, and they found the law too strong for them, they actually tried, as in this State, to get the law changed so as to make their attacks on persons and property legally justifiable, or at least harmless.

Those who recall the public indignation at these tactics on the part of Labor, will be astonished to learn that Capital shows signs of designing to resort to them also, in defence of its present legal privileges in this country. The Home-Market Club, which has its headquarters in Boston, and includes most of the New England manufacturers, is said to have been so much exasperated and alarmed by the attack on the tariff made by the Democrats in the last

election, that it proposes a "plan of campaign" not unlike that to which the slaveholders resorted before the war, with the view of warding off assaults on their property as contained in "the peculiar institution." That is to say, they propose to enter into an agreement to consign their goods for sale in this city to none but Republicans, to employ in their mills only Republican superintendents who control the voting hands, and to add to their existing black list of turbulent laborers the names of noted Democrats. Our older readers will be reminded by this of the blacklist of Northern wholesale houses which used to be made up in the slave States, so that Southern dealers might avoid them, and of the blackmail which Southern newspapers used to levy on timorous Northern traders and publishers, to pay for exemption from denunciation as "abolitionists" or enemies of the South and her institutions. That was a very painful chapter in the history of the country, and, indeed, one may say, in the history of human nature, and one which probably no one who saw slavery crushed, ever expected to see repeated here in defence of any cause or "interest."

It is hard for boycotting to flourish on American soil. The manners, the feelings of the people are utterly opposed to it. But it is everywhere the chief weapon of a privileged class which finds itself assailed in its property or in its privileges. It was the chief defence of the landlords in England against the abolition of the Corn Laws. It was the chief defence of the slaveholders against the attacks on slavery, and it will doubtless play a large part in the defence of the tariff. To assail the tariff is, in the eyes of a great many people, to assail their property and consideration in the community, and the whole system of things in which they find their mundane happiness. They, therefore, repel it with the utmost bitterness. The man who questions its sanctity is an incendiary and leveller, a confederate of foreign enemies and rivals. They want to drive him out of the community, to close his mouth on the platform, stop the circulation of his books and newspapers, and discredit his morals, exactly as the slaveholders used to do with the abolitionists, and the landholders with Cobden and Bright. In fact, the work is so odious that they cannot conceive of anybody engaging in it without being paid for it, and therefore to the other charges against him they add that of being a hireling.

What is this privilege, defended with such desperation? It is the privilege of selling goods to people who do not want them at a price fixed by yourself, and of preventing their going to any other market than yours. But is it not unprecedented that a claim on its face so unreasonable should be defended with such fierceness and even malignity? Not at all. The more unreasonable a claim is, the more ferociously does a man assert it. The claim to hold men in chattel slavery was much more unreasonable, and was maintained at the cost of filling a whole continent with blood and fire. The claim of the exclusive right to sell bread to the English people at prices fixed by the men who grew the wheat, was pushed to the verge of civil war, as essential to the maintenance of the British monarchy. We have seen in this city and all over the country large bodies of men ready to maim, kill, and burn in defence of the right to stay in another man's service against his will at wages fixed by themselves.

In fact, the desire to live on one's neighbor is as old as human history. It shows itself in new forms in every generation. It is universal, potent, and apparently indestructible. It has survived the attacks of all the great religions and systems of philosophy. It furnishes all the most serious problems of government and of morals in our day, and has managed in this country to-day to form an alliance with both religion and patriotism which makes it exceedingly formidable, and calls for extraordinary patience and good temper on the part of those who think they have a right to spend their earnings in their own way.

THE FRENCH SPOLIATION GAME.

The newspapers from time to time call the attention of the public to the reappearance, often under some new form, of some amusing old "game," by means of which trustful countrymen are taken in and done for by city sharpers. Bunco, the gold-brick swindle, the sawdust and panel games seem to have an eternal lease of life, and no amount of experience on the part of the public, or exposure by the press, impairs their popularity or success. In many cases, to be sure, the victim is himself simply a would-be sharper over-reached by a more cunning student of human nature, and therefore has no special desire to set the machinery of justice in motion; but in others he is innocent of all intention to do wrong, and it is this innocent class—the worthy men who are tempted by old though dimly remembered friends to drop into a picture exhibition for a few minutes; or who, to facilitate a real-estate transaction, draw their money out of the bank and place it in the hands of what the lawyers call a "gratuitous bailee"—on whose steady support and confidence the greatest reliance of the merry dogs who take them in is placed.

It is curious to notice that, while games of this sort carried on by private persons attract a great deal of notice in the press, practical pecuniary jokes of equal ingenuity and much greater magnitude, perpetrated by sovereign governments, are treated as a matter of course; and instead of bright, newsy accounts of them being written up by the best reporters, they are dismissed in a paragraph or item the force of which few persons but those immediately interested comprehend. This would be easy to understand if the victims in these cases were always, as they are sometimes, foreigners. When a Government plays the well-known and favorite repudiation game by borrowing a sum of money abroad and meeting the demands of the creditors by pointing out to them that it is a maxim of the common law of the borrowing country that it cannot be sued, and that consequently a claim for money had and received will not lie, it is natural enough that the newspapers of the borrowing country should not enlarge upon the matter. It would be unpatriotic and short-sighted to do so, as it would spoil the market in the future. But when the game is played by a Government upon its own citizens, the case is different. We should expect the press to take the matter up, and the papers in opposition, at least, to make a noise about it—especially so, in the case of one of the oldest and most favorite games (or "rackets" as they are now generally called) played by any modern Government. One which has now gone on for about a century has been managed with surprising skill by every political party which has obtained possession of the Government, has enriched the Treasury with the spoils of four generations of "claimants," as the victims are amusingly called, and bids fair, in some form or other, to be played quite as long as bunco, or the three-card monte trick, or the panel-game. We refer to the manner of dealing by the United States Government with what are called the French Spoliation Claims.

The first step in the French-claims racket, as in all these cases, was, of course, to obtain possession of the claimant's property; and this was done by means of what, as we look back upon it, must be regarded as a comical trick. A large number of American merchants had suffered a variety of depredations at the hands of French cruisers, for which there was no cause or excuse. Vessels had been seized, taken into prize courts and condemned, cargoes had been destroyed, and damage had been inflicted to the extent of several millions of dollars. There was no state of war between the two countries, and, when called upon for an explanation, the French only gave the somewhat depressing reply that their patriotism was aroused to such a pitch that they could not readily distinguish between the vessels of their enemies, the English, and those of a people "speaking the same language and having the same habits." There was no remedy except through the Government, and the Government was quite equal to the occasion. "Bring the claims to us," it said; "file your documents and proofs, and you need give the matter no further thought." Accordingly, the merchants and the insurers and the consignees all brought in their claims and filed them, while the Government went to work to obtain redress. And obtain redress it did. In season and out of season it urged upon France in the gravest way the wrong and injustice which had been done; in season and out of season it loudly demanded, in the name of justice, honor, international law, and all the other abstractions which figure so much in these cases, that France should settle these claims; and finally a settlement was made of a very peculiar description. France had certain claims against us for having broken treaties made with her in 1778. Our Government had no claims of a similar character against France, but it represented, as an attorney might, the claims of its citizens for the marine spoliations. A happy thought suddenly struck it. Why not

barter away the claims of its citizens against the French, and get France to relinquish her national claims against the United States? No sooner said than done. As old Timothy Pickering tersely put it, our Government "applied the merchants' property to buy off those old treaties." By these proceedings, according to familiar principles, not only of justice, but of international law, the United States became liable to its citizens for their property, which it had put to such excellent diplomatic use.

Then the fun began. The Government having assumed the liabilities of France, the only remaining thing to be done was the payment of them. But when the claimants asked for the money, they began to realize that it was one thing for the Government to assume the claims, and quite another to get them paid. The early way of meeting the claims was as follows: One year a bill would be introduced into Congress for the payment of the claims, and would be passed by the House; but, lo and behold! it would be thrown out in the Senate. Another year the bill would pass the Senate, but then it would be thrown out in the House. When it failed to pass the Senate, the House was always sorry; when it failed to pass the House, the Senate deplored the result; when, as on one or two occasions happened, it passed both houses, then the President vetoed it, and both houses deplored his action. Forty-five favorable reports of committees, seven bills passed by the Senate, and two by the House, encouraged the claimants. The failure of all these efforts depressed them. The victims, of course, got quite excited and anxious over it, and their excitement afforded for a long time a great deal of sport. They always seemed to be just on the point of getting their claims paid, when, presto! the legislative thimble, under which the measure had last been seen, was lifted up, and there was nothing whatever beneath it.

And so the game went on year after year. One generation of impoverished claimants died and another came on the scene, claim-agents advertised and took powers of attorney, the hopes of the victims were stimulated to just the point necessary to keep the fun alive, and still the claims were unpaid.

It was obvious, however, that the game could not be kept up for ever in this way. In the course of time the claimants, however innocent, and however well satisfied of the justice of their claims, would see what it all meant, and cease to make any claims. Then the joke would die out; for the joke consists, not merely in getting and keeping what belongs to somebody else, but in encouraging him to believe that you are determined to see that he gets it back, meanwhile slyly frustrating his eager efforts to do so. A few years since, however, it became plain that the old racket could not be worked to advantage any more. The claimants were getting tired, and in a tedious way were beginning to complain that the whole thing was a swindle, and it looked as if they might pretty soon abandon the claims altogether. This would never do. Clearly some step must be taken to revive their waning hopes, and accordingly a device was hit upon which shows that the ingenuity of the sons is at least equal to that of the fathers. It consisted of the passage of a bill sending all the claims to the Court of Claims (a thing repeatedly asked by the claimants), with a direction that the court should determine their validity and certify the amounts due from the Government. Such was the bill actually passed by Congress, and signed by President Arthur in 1885. The claimants were delighted. At last, they cried—such of them as were left to cry—justice will be done us! At last we shall get our dues! Accordingly they went into court and made their arguments; and the Government was heard on its side gravely contending that there was nothing in the claims (it is the duty of the Attorney-General to see that no injustice is done to the United States, and that no one cheats or circumvents it or imposes upon its confidence), and finally the Government's own court solemnly decided that the claims were valid and ought to be paid. But have they been paid? Not at all. This was the point of the whole thing. The act made no provision for their payment, but only for a discussion of the question whether they should be paid, and jocosely reserved to Congress the right to refuse to pay them at all. In the solemn language of the court:

"So peculiar a jurisdiction was probably never before imposed upon a strictly judicial tribunal. The rights of the claimants, if any exist, arise from the acts of the political branch of the Government, done in the protection and aid of the nation. For such rights there can be no remedy other than that granted by the Legislature. In this instance the Legislature has elected to transmit to the judiciary, under certain restrictions, the examination of the claimants' demands, with the proviso that the conclusion reached in this forum shall not be finally binding upon either party, but that the defendants, as well as the claimants, have reserved to them an appeal, not, in the regular line of judicial procedure, to the Supreme Court of the United States, but back again *to that body from which alone any remedy can come to the citizen for wrongs done him by his Government.*" (Davis, J.)

Does the amusing character of the French spoliation game now become apparent? For two years, the Court of Claims has been examining and certifying judgments on French spoliation claims; that is, the court passes the claims, and, like other judgments of the court, they are included in the annual appropriation bills. But then, for some mysterious reason, there is such a difficulty between the two houses in coming to an agreement upon the items of the appropriation bills that the French claims are at the last moment left out. When the bills reach the President, he finds that these items are not included. The time has come for raising the thimble. What do we find beneath it? Nothing at all? As before, ladies and gentlemen, nothing whatever.

THE EUROPEAN PROSPECT.

EUROPEAN statesmen and financiers are again discussing, as they discussed last year, the chances of a Continental war next spring. The London *Economist* goes over the ground carefully in its last issue, and warns the investing public that the eagerness just now of various governments to raise loans, and the readiness of the great bankers to recommend them, contain no assurance of peace. The great bankers who put the loans on the market are, it says, satisfied, and reasonably satisfied, that there will be no outbreak of hostilities during the next few months, or long enough to enable them to place the bonds, and further than this they do not look; but ordinary investors must look further. If they do look further ahead, it maintains, they will see good reason to fear war before long, either through a collision between Austria and Russia on the Danube, or through a revolution in France and the rise of a dictator who will be compelled to go to war in order to secure his seat.

That a crisis of some kind is rapidly approaching in France, the *Economist* feels very sure. Boulanger is gaining ground in popular respect; the meetings of the Chambers are becoming more and more disorderly, and the Ministry are giving way as to the need of revising the Constitution. When the Constituent Assembly meets for revision, nobody knows what will happen. And that Russia's patience over the loss of her influence in the Balkan peninsula is fast reaching its limits, and that the Czar's disposition to meddle in Bulgaria has been greatly increased through the accession to power of the Radical or philo-Russian party in Rumania, is very probable. Then there are troubles in Servia which may bring about an Austrian occupation of Belgrade, which would be sure to precipitate Russian interference; Finally, the armaments of all the great Powers are so heavy that statesmen have begun to doubt "whether a war, terrible as its results would be, would be more injurious to their people than a protracted continuance of the present condition of extreme preparation, under which every fifth man in Europe is a drilled soldier, liable to be called out for an actual campaign."

All these are things which of course it behooves everybody who thinks seriously of investing in new Russian, French, Italian, or Hungarian loans to take into account; but they might very well cause him to put his money into something else without feeling really apprehensive of an outbreak of hostilities in the spring. The larger considerations are really as strongly in favor of peace now as they were a year ago. It is true that the future is very uncertain in France, and that a revision of the Constitution might bring Boulanger to the top, in the character, if not of dictator, of a sort of lord protector of the Republic. But anyone who thinks Boulanger would rush into war, and would have the French people at his back in doing so, overlooks the fact that the French have undertaken no war, since they repelled the Duke of Brunswick's invasion, without having either a tried military leader, or an army whose superiority to all other armies was not questioned by Frenchmen. There is no such leader now, and there is no such army. For the first time Frenchmen doubt the ability of their troops to save France from invasion. That the army did not save France in 1814

and 1815 was accounted for by the fact that it was exhausted by twenty years of victory. In 1870 there was no such excuse, and the national pride has not recovered from 1870. The enormous size of the present army does not reassure the public; for the larger the army, the greater the talent needed to direct its operations, and there is not a man in France, fit for active service, who has given proof of ability to manœuvre 50,000 men in the field. Finally, the stories of corruption in the civil service, of which the air is full, naturally dispose people to ask, What is the state of things in the supply departments of the military service? What would a declaration of war bring to light? Boulanger has not given any sign of capacity to dissipate these doubts.

In the next place, although it may be true that European statesmen are asking themselves whether actual war would not be a relief from the terrible burdens of the present state of preparation, it is also true that they have been asking themselves the same question for the last forty years, during which the remedy of war has been tried several times without bringing relief. After the wars of 1859, 1866, 1870, and 1877 the armaments continued steadily to increase. In fact, the lesson of every war to military men during the last half-century has been the need of more men and guns and horses. Whether a Power be victorious or vanquished, immediately after the peace it sets about adding to its army and navy; so that the world does not look on war any longer as a means of so settling disputes as to do away with the need of increased preparation for hostilities. The war of 1866 increased both the Austrian and Prussian armies. The war of 1870 increased the French, German, and Italian armies. The war of 1877 increased the Russian army. The people now know this very well, and do not look to war as a lightener of burdens.

There is no doubt that the situation on the Danube looks doubtful. Gen. Gourko, the hero of the Balkan campaign in 1877, and now Governor of Warsaw, recently made a speech at a dinner in that city in which he openly threatened both Austria and Germany, and said that, should the occasion arise, the Russian Army would know the road both to Vienna and Berlin. But probably nowhere is the uncertainty of war more strongly felt than among Russians, and especially in the mind of the present Czar. The war of 1877, which was a great military success, left Russia worse off on the Danube, and further away from Constantinople, than she was before she undertook it; and yet she had nobody to deal with but the Turks in the field and the British on paper. What would be the issue of a collision with the combined Austrian and German armies, nobody can guess—the Czar no better than anybody else. Statesmen do not run over all these considerations in public; but that they weigh heavily on their decisions there can be no doubt. To call out the strength which every nation now puts into military operations, involves responsibility so tremendous that the men who will lightly venture on it will probably become rarer and rarer. There is no man now on the European stage who has the kind of courage that it needs except Bismarck, and most likely advancing years have taken it even from him.

THE GUADALUPE VIRGIN.

RECENT events in Mexico have called unusual attention to the patron saint of that country, Our Lady of Guadalupe. A native writer has taken advantage of the popular interest, and has published what may be called an attempt to give the natural history of the famous apparition of 1531. Every volume of Mexican travels, from Bernal Diaz to the compilations of the latest newspaper correspondent, has given an account, in one way or another, of the miraculous appearance of the Virgin to Juan Diego on the spot where now stands the shrine built in her honor; and the details of the story are familiar to all readers. Such narratives get scant courtesy at the hands of intelligent men nowadays. Curt dismissal, as but a new instance of a popular delusion, or a fabrication of the priesthood, is the most they can expect. But such a study as the one referred to, which seeks in contemporaneous records the raw material out of which the story grew or was framed, must always have an interest of its own, if only as being a new triumph of reason over superstition.

Considerable importance attaches to the very name Guadalupe. By this name, so the story runs, the Virgin directed that her miraculously painted picture should be called. But she was talking to an Indian, and presumably in one of the Nahua dialects. Now, it is affirmed by competent scholars that the letters *d* and *g* do not occur in those languages, and that the nearest an Aztec could come to saying Guadalupe would be *Tecuatalope*. The ancient name of the hill where the apparition is said to have taken place was Tepeyac. Whence, then, came the name Guadalupe? No certainly-traced connection can be made out, but it is a fact of great significance that Spain had her own Lady of Guadalupe, before the Conquest. According to the 'Monarquía de España' of Salazar, a Virgin known by that name was the object of special worship in Cáceres, a small village of the Province of Andalusia. Very suggestively, though at the same time very aggravatingly, since the clue leads to nothing, the historian says that Hernan Cortes was much given to the service of this Virgin, and that he had placed in her shrine a silver lamp and a scorpion of gold encrusted with emeralds. This last, of course, was a votive offering. Now, Mexican history reveals no connection at all between Cortes and the Mexican Virgin of Guadalupe; yet, under the circumstances, it is easy to believe that one existed of which all trace has been lost. At any rate, it is worth knowing that a Virgin of Guadalupe was no novelty to the conquering Spaniards. In fact, a report of a Viceroy to Philip II., in 1575, says that the Mexican Virgin was called Guadalupan, from her resemblance to one of the same name in Spain.

Among the direct antecedents of the special cult of the Virgin on the hill of Tepeyac must be taken into account the well-established fact that the same spot had long been the scene of pagan rites of great religious importance. The Indians regarded the place as sacred long before they were taught to venerate it by the priests of Spain. Sahagun, for example, relates that the temple to the Virgin but succeeded an older one of the Aztecs in the same locality. The same Catholic historian also says that, just as the Indians now gather from leagues around to share in the great festival of Guadalupe Day, December 12, so in pagan times thronging multitudes used to go yearly to the same place to join in one of the greatest of the heathen feasts. More striking still is it to notice the deity formerly worshipped on the spot where now the Virgin is held in such veneration. It was one of the seats of Tonantzin. That word is variously translated "Mother of the Gods" or "Queen of the Virgins." Thus no violent wrench in the religious ideas of the natives was required in their transition from one faith to another.

As indicative of the willingness of the monks who accompanied the Spaniards to utilize the preconceptions of the Indians for their own purposes, it is worthy of mention that the Franciscans early had a hermitage upon the hill of Tepeyac. This they had dedicated to the special worship of the Virgin Mary, though she was not yet known as the Virgin of Guadalupe. Even after the apparition was said to have taken place, and the Christian service had been introduced, many of the old Indian rites, dances, songs, etc., continued to be in use, as is attested by writers who were scandalized by the fact. Thus the good monk Sahagun says of the Indians: "And still they come great distances to seek their Tonantzin, just as they used to do, and this devotion is highly suspicious, since there are churches of Our Lady everywhere, but they do not go to them; yet they keep on coming leagues to their Tonantzin"; and Tanco witnesses to the mixture of heathen with Christian ceremonies that long prevailed at the Guadalupe shrine. Add the fact that others of the modern holy places of Mexico have borrowed no small part of their sanctity from foregoing pagan times—this is the case, for example, with the seat of the other renowned Mexican Virgin, Our Lady of Remedios—and it will not be hard to imagine how deft fingers put the new Christian patch in the old pagan garment.

It was not until 1757 that the Holy See granted the request of its Mexican subjects, and gave permission for the religious celebration of Guadalupe Day, assigning the proper prayers and offices. Even in the decree conceding this, Benedict XIV. used language which is very cautious, and does not commit the Church to actual belief in the apparition. This was observed by Juan Bautista Muñoz, who read an essay on the question before the Royal Academy of History of Madrid in 1794. And the Academy itself, in the "notice" which it prefixed to the essay in its published proceedings, said: "The careful and reverent criticism with which this scholar examines the origin and growth of these popular legends, demonstrating by means of trustworthy documents their want of solid truthfulness, and, at the same time, the reasonableness of the worship paid the sacred painting, always to be held in respect even if it never appeared in the way alleged, is wholly in keeping with the reserve and distrust with which the Holy See looked upon the popular belief." In close, if surprising, keeping with this is the pastoral of the Mexican Bishop of Tamaulipas, dated October 15, 1887. Its material parts are as follows:

"Inasmuch as certain priests have asked what they ought to say to those believers and sceptics of their respective parishes who inquire of them if the apparition of Our Lady of Guadalupe must be considered a dogma of faith defined by Benedict XIV., or at least by the present Archbishops of Mexico, these priests saying that the difficulties raised by the Protestants on this point are causing great harm to the faithful, the Most Illustrious and Reverend Bishop makes the following reply:

"'The Catholic Truth is as clear as noonday, and so should be its preaching and teaching to all believers. We desire and command that all our priests imitate the Apostle Paul in knowing only *Jesum Christum et hunc crucifixum* (1 Cor. 2, 2). Neither we nor any other Bishop, except the Roman Pontiff, can give definitions of faith. Benedict XIV. simply conceded, what was besought, that by the mediation of Our Lady of Guadalupe our prayers might be offered before the Throne of God, assigning also the proper offices; which act signifies only that such a service is pious and good, without saying anything in reference to a private belief. Therefore our priests must not confound a private faith in the apparition at Guadalupe with the sacred articles of Catholic faith, nor hesitate to say, when the circumstances call for it, that believers are not obliged to accept the apparition. Let them honor with solemn services the most holy Mother of God, under the national name of Guadalupe, as our Patron and Protector, but in their conversation and preaching, let them not speak of the apparition of Tepeyac.'"

This pastoral letter was called forth amid the general excitement aroused a year ago by the proposed temporary transfer of the Guadalupe painting to the Cathedral of Mexico. Archbishop Labastida desired to make extensive repairs in the Guadalupe church, and afterwards to restore the sacred figure to its beautified resting-place. He had a precedent for such action in the similar measures taken in 1836, when the painting of the Virgin was for a time in the convent of the Capuchins. But it was strongly suspected that the Archbishop was determined to give the great demonstrations, sure to be made on such an occasion, a political turn. It was feared that the scheme was a trump card of the reactionary party. Consequently, great opposition to the plan was manifested. Prominent Liberals petitioned the Government to prohibit the intended public procession, erection of triumphal arches, coronation of the Virgin, etc. What steps the Government took is not accurately known; but the Archbishop was, in some way, led to defer the solemnity, which had been fixed for the 31st of last December, until a time when, to use his own words found in the edict which he issued, "the public mind shall have calmed."

It only remains to add that the Bishop of Tamaulipas has been compelled to eat his own words. A second pastoral letter on the Guadalupe Virgin appeared under date of August 8, 1888. It runs as follows:

"His Excellency, Cardinal Monaco, Secretary of the Sacred Congregation of Rites of the Roman and Universal Inquisition, in an official note of July 9, just received, writes as follows: 'Their Excellencies, the Cardinals Inquisitors General, have severely condemned thy manner of conduct and speech in opposition to the miracle or the apparition of the Most Holy Virgin Mary of Guadalupe.' And inasmuch as we have never intended to separate ourselves by so much as a jot from the teaching and determinations of the Holy See, or of its worthy Tribunals or Congregations, we say to all those who may have read our writings, that we also severely condemn our manner of conduct and speech in opposition to the miracle or apparition of the Most Holy Virgin Mary of Guadalupe, and that we recall, annul, and disown all our writings in which anything may have appeared, express or implied, against the miracle or apparition of our Lady of Guadalupe."

THE *TIMES* COMMISSION.

DUBLIN, December 1, 1888.

THE *Times* Commission is dragging its slow length along. We are now at the twenty-second day, and seem little nearer the conclusion of the accuser's case than we were at first. As yet there has been none of that irrefragable proof we were led to expect of the direct connection of Mr. Parnell with the crimes of the last ten years in Ireland. The *Times* has now at its disposal all the accounts and proceedings of the National League, and all the Land League documents still existing. Still we hear nothing of consequence that the newspapers did not tell us long ago. It is, in fact, not individuals that are being tried, but a country in a state of revolution; and hitherto the evidence has rather gone to strengthen a case for that revolution. As an Irish statesman lately said in Parliament, we are now having laid before us in a concrete form the deplorable results of misgovernment in Ireland.

Until the establishment of the Land League, Ireland lay helplessly bound in the fetters of a land system that paralyzed her energies, and prevented real advance in civilization. Left to herself, or the force of her own public opinion, she would long ago gradually, and without what would have been felt to be loss to the landlords, have modified the social order to her own needs. No minority could continue to hold a majority to such a system; but Ireland was held down by the irresistible power of England, which at the same time was not influenced by her opinion. Nay, so great is the chasm in Ireland itself, resulting from the middle and upper classes being enabled to depend entirely on England, that they also, living beside or among the Irish people, were ignorant or careless regarding the land customs that were crushing the country. Go back as far as we like, and we find the same force at work—a hopeless, grinding increase of rent upon the tenants' own improvements. Inglis, the traveller, was a singularly acute observer and by no means sympathetic. When he travelled in Ireland in 1834, it was the same story all over the country—excessive rents repeatedly raised. Opening the book at random the other day, I came upon a passage where, in the County Wexford, he found the people making a brave struggle to live in a civilized manner: "I went into the house of a farmer owning forty acres when he and his family were about to begin dinner. It consisted of potatoes, buttermilk, sweet skimmed milk, barley bread and butter. The farm had been four generations in the farmer's family. His great-grandfather paid six shillings per acre, his grandfather ten shillings, his father one pound, and he paid two pounds." Ten years later we had the Devon Commission, with its terrible disclosures. But nothing was done. Checked for a time by the famine, the screwing up of rent continued. The landlords held that the tenants were entitled to only a bare subsistence. Efforts at decency and improvement were regarded as proofs that there was a margin upon which the rent could be increased. "You are not the kind of tenant we want," said an agent to a cousin of mine who remonstrated against a rise. "You, with your style of living, may not be able to live and pay: we want a different class of tenant, who will be satisfied to live humbly and pay more." I heard upon good authority of a farmer's rent being increased because, while taking a son to an English school, he had the misfortune to meet "the agent" on board the steamer. If he could afford to give his son English schooling, he could afford to pay a higher rent. Ireland was kept at starvation point, and in famine times had to beg round the world.

Lord Kenmare's agent, giving evidence a few days ago before the Commission regarding those Elysian pre-Land-League days, said that then he often knew the tenants to be "blue with hunger." They were "blue with hunger," and yet there was little outrage, and, as Mr. Gladstone has put it, like people in a beleaguered city, they blindly clutched, each man regardless of his neighbor, at the only means of support available. This was all only nine years ago: how was it that we in Ireland, not connected with the land, failed to perceive how impossible it was that such a state of things could be continued? Even those who had given their lives to the study of the question, had lost hope of a remedial settlement. Outraged humanity must in the end assert itself, and the explosion came. And it is really this explosion that the *Times* Commission is trying. So long as the people continued in mute and hopeless ignorance, regarding it as manifest destiny—that state of life to which Providence had called them, to be like sponges squeezed for the benefit of others—of course they were in the main quiet. In the main: from time to time and here and there, where oppression was worse than ordinary, took place acts of violence before which would pale most that have since then occurred. The moment those arose who unsparingly denounced the system and put their hand to its destruction; the moment a great organization was started to unite the tenants and work for reform, that moment it was inevitable that the flood-gates of the dammed-up indignation and realized sense of wrong and bitterness of generations should be opened, and we should have the ocean of horrors now being depicted. In the ferocity of the people too often evidenced (men even dancing around the blood of a murdered landlord) is shown, as in a mirror, the hatefulness of the system producing such results. Without a movement of like vehemence, reform was impossible; and, looking back at all that has since occurred, and all that has been accomplished, I for one marvel at the comparative bloodlessness and absence of suffering with which the change has been effected.

We have the extraordinary spectacle of the Law Courts in London trying the revolution, while all over Ireland the courts are busy utilizing it, and helping thousands, alike the poorest tenant and the families of chief justices, to wring from their landlords the benefits it has secured. If there were any sincere non-political belief in the unrighteousness of the land agitation as a whole, those who profess to disapprove ought not to share the advantages due to it.

So far, the revelations before the Commission have tended to strengthen and consolidate the Irish National party, and inspire it with greater confidence than ever in its leaders. The judges seem to be against Mr. Parnell and inclined to favor the *Times*. It is difficult otherwise to account for the admission of so much apparently irrelevant and redundant evidence. What will be their decision? If it be purely legal, if the circumstances of Ireland be ignored, the judges may easily, from their standpoint, conclude that there was a combination against the landlords, resulting in outrage, which the leaders failed to do their best to suppress. If it be a judgment on the reasonableness of and necessity for the movement, this will be largely influenced by the strength of the case for the defendants.

There is something cruel in the costs to which the latter are subjected. £23,000 have already been collected, almost entirely in Ireland. When all comes in from the States, Australia, and England, supposing we have £50,000, that will hardly be too much. This is a small sum compared to what is being spent in law expenses by the tenants through the litigation to which they are forced in Ireland before the commissions and courts to seek reductions in their rents. An effective, statesmanlike settlement of Irish affairs is being continually postponed, and we are plunged more and more deeply into a chaos of litigation, uncertainty, heart-burning, and demoralization, upon which batten an increas-

ing number of lawyers and a widening circle of officialism. The *Times* has, besides practically boundless resources at its back, the whole force of the Government. This is an issue between the people of Ireland and a newspaper, in which the Executive might be expected at least to remain neutral; yet so used are we to our paid officials and Castle system of government being pitted against the people, that we are hardly struck by the entire Irish Executive being practically placed at the disposal of the *Times*. A small army of police and magistrates and persons in Government employment has been maintained in London upon full salaries for weeks, and will doubtless be renewed and maintained so long as there is a chance of dragging down the character of the people who pay them, and the representatives in whom that people trust.

Apart from the possible decision of the judges, it is difficult to say what will be the general effect of the proceedings of the Commission upon the British public. We should have little fear if they were fully reported in the papers; but editors generally omit those passages which tell against their own views; and even the *Times*, which was wont to report correctly, has not been altogether free from making slight alterations in its own favor. The reduction of the Conservative majority at the Holborn election on Thursday does not look as if the action of the *Times* was serving the Government, and there is something to show that the English people are getting tired of this eternal round of coercion and bickering. The abandonment of the Van and Wheel Tax and of the Irish Drainage Bills; the evident shock to the House of Commons at the attempt of an Irish police constable, by a ruse, to serve Mr. Sheehy, M. P., with a Crimes Act summons within the House itself; the small majority on Mr. Bradlaugh's motion regarding that unfortunate Mr. Moroney who, for refusing to be sworn in an inquiry into some plan of campaign proceedings, has been kept nearly two years in prison—these may be but straws in the wind, it would be possible to attach too much significance to them; nevertheless, in estimating the drift of British opinion, we cannot put them out of consideration.

Besides the Commission, there is not much to remark upon here at present. Agrarian crime has perhaps diminished, but everything is pervaded by the canker of coercion, distrust, hatred, and unsettlement. One of the latest efforts of the dominant party to extend peace and good will through Ireland is advertisements that have appeared in the newspapers from one of the chief land-agent firms of numerous farms to be let—"Protestants only need apply." The opposition of the Parnell and Liberal parties to a further grant of £5,000,000 for the extension of peasant proprietary under Lord Ashborne's Act rests mainly upon political grounds and questions of general expediency. Were it not so strongly advocated and urged by Mr. Smith and Mr. Balfour, it would have the approval of some who now, at least, stand neutral in the discussion. D. B.

A BAVARIAN PEASANT PLAY.

LEIPZIG, November 19, 1888.

IT is with a fine touch of traditional contempt that we Anglo-Saxons are wont to accord to the Frenchman a superiority over ourselves in the pleasant art of acting. Like George Eliot's "Mr. Craig," we have "heard tell" that one Briton can lick ten Frenchmen, and we would not willingly deprive such feeble creatures of any inferior advantage that nature may have bestowed upon them. With respect to the Germans, however, the case is different. They enjoy somewhat the same physical advantages as ourselves, they have no reputation for the *spirituel*; and yet, with them also, we are compelled, I think, to the same admission. American acting is, as a rule, better than British; but such players as can be heard in almost any small German city are not to be found in America outside of two theatres in New York, nor in all England away from Mr. Irving's establishment in the Strand. Nor is acting the only point in connection with the theatre upon which we of the Anglo-Saxon race are open to the accusation of inferiority. If I were attempting an article upon the "present condition of the stage" (which Heaven forbid! the topic has been overdone) I should find it instructive to note that here in Germany the plays of Shakspere are repeated at least five times for every once they are given in England, and, making due allowance for the representations of wandering stars, twice as often as they are performed in America. Goethe, Schiller, Lessing, and the other native dramatists are as frequently, but no more so, before the eye of the public; and the small street-boy, for the equivalent of five cents, can hear the masterpieces of his country's literature performed by competent actors. Perhaps the roseate view of the German stage that this calls up will be clouded for some when I add, as devotion to historical accuracy compels me to do, that Offenbachian opéra bouffe, long since dead in its native land, still flourishes here, and may be heard at a slightly increased cost of admission. The correct principle of political economy here displayed, in taxing a luxury higher than a necessity of life, will have to be counted in excuse of the performance.

But the German stage does not run all to classical drama, any more than it does entirely to free-and-easy opéra bouffe; and it is in the middle ground lying between these two extremes that one must dig, if he is seeking something novel and representative to talk about. Most modern German plays which occupy the largest acre in this middle ground, share with most modern German novels a common defect—they are distinguished for nothing in particular. The best one can say for them is that they are pleasing, and the worst, that they are apt to be sentimental. But if few will be found to claim for them any striking originality, there will be still fewer willing to deny that they testify to a healthier state of public taste than do the wretched burlesques and idiotic extravaganzas that appear to fill most English and American theatres. The extravaganza could never succeed in Germany: its flimsiness of structure is too fatally at variance with the national appetite for solidity—in amusement as well as in other things.

If, however, it is still the mission of the stage to depict more or less faithfully, according as it is able, the manners and customs of the day, then we may be grateful for a class of plays that exists in Germany, and for one company, at least, in whose behalf it may be claimed that they in great measure fulfil this lofty purpose. They concern themselves, indeed, with only one class of people—the peasants; but as this class is a very numerous one, and as its present customs are likely, in common with all other customs not conforming to the standard set for all by this great century of democracy, soon to disappear, one need not so much regret this limitation. Indeed, the limitation is essential when one comes to consider that these plays, in order to be true to the life, must be spoken in dialect, and that it is not easy to find actors equally at home in the language of the field and mountain and that of the drawing room. It was my good fortune, a few weeks ago, to see one of these plays performed by the company to which I have alluded—an admirable organization of actors, whose home is in Munich, but who spend most of their time in travelling from city to city. The name of the play was "The Crucifix-Carver of Ammergau," and the scene was laid, as in all the other plays of the troupe, among the peasants of Upper Bavaria. The story told was a simple one, containing, however, incident enough to prevent the action from ever flagging, and plot enough to bar any accusation of its having been written merely as a setting for some pretty dancing and singing. Nothing is made to occur that could not very well take place among the simple mountaineers with whom the play is concerned; and, if we except the fact that geniuses, among painters as among peasants, are becoming rare nowadays, none of the personages display qualities above their station.

The first scene, which takes place in the public room of the inn at Ammergau, introduces us to all the principal characters of the little drama. The landlord, who has just been chosen burgermeister, is receiving the congratulations of his fellow-townsmen. His foster-daughter *Loni*, and an incorrigible peasant-girl employed as her assistant in the kitchen, are serving the guests with beer. On the stove in the corner is seated an old man, of ragged and unshorn appearance, who cuts splinters from a bit of wood, and contributes, from time to time, chips of wisdom to the conversation. He and *Loni* appear to be great friends, and the young girl, who has all the country robustness of body and roughness of speech, treats him with a tenderness that she shows for no one else. Among the landlord's visitors are *Trandl*, an old woman with a great deal to say for herself, and her son *Pauli*, who brings with him a crucifix that he has just finished carving on an order from the innkeeper. The crucifix is much admired, and while it is being exhibited, *Fritz Baumeister*, an artist who spends his summers in the village to paint the scenery there, comes in and declares it to be the work of a genius. *Baumeister* offers to take *Pauli* to the city with him to study; but the lad is in love with *Loni*, and, although she has nothing but hard words in return for his patient devotion, he cannot make up his mind to go away and give her up.

While the artist is talking to *Pauli*, *Loni* is the subject of a conversation between the new burgermeister and one of his neighbors, who asks the girl's hand for his son *Muckl*. The match is considered a very desirable one for *Loni*, who is only a foundling left at the door of the inn when a small baby. But the girl, advised by *Lehnl*, the old man on the stove, and following her own inclinations as well, declines *Muckl*, a self-assured, blustering fellow, after first making fun of him, and the landlord refuses to compel her against her will. *Muckl* himself comes in in time to hear of his defeat, and he carries it off with an assumption of raillery that only partially conceals his chagrin.

The next scene shows the cow-keeper's hut on the hillside, where *Loni* sleeps alone in order to lead the cattle early to pasture. A young girl, or *Deandl* (the peasant word for *Mädchen*), is yodling, as *Loni* and old *Lehnl* come up the hill. *Pauli* and the artist come down from the mountain, where they have been painting all day, and some of the villagers, among them a half-witted boy who is always asking for a present from every one he meets, pass by on their way home from work and exchange greetings. When all the others have gone,

Lehnl remains to talk to *Loni* about *Pauli*, whom he wishes her to marry. The better to persuade her, he reminds her of her lonely position in the world, and this leads her to reproach her parents for having, as she thinks, heartlessly abandoned her. The old man tells her that she cannot divine her parents' motives, and he speaks with so much passion of the nature of parental affection that she guesses a part of his secret, and he is obliged to confess that he once had a child, whom misery and want and the death of his wife had compelled him to abandon. Of course, the audience at once understands that *Loni* is this child, but he does not tell her so, and she goes into the cabin, while he disappears in the wood close by. As soon as both have disappeared, *Muckl* comes on the scene and creeps stealthily towards the hut. Unfortunately for his ends, he overturns something on the bench in front of the door, and the noise of the fall brings old *Lehnl*, who has not gone far, back to the hut. *Muckl* tries to escape without being seen, but as the old man is in the way, he gives him a push that causes him to fall over backwards and strike his head against a sharp stone. The sight of blood alarms *Muckl*, and as he hears footsteps approaching, he conceals himself in the woods, from which he sees *Pauli* emerging. *Pauli* comes to *Lehnl's* rescue, and bathes his wound with water from the spring near by. The old man, who thinks he is going to die, speaks of *Loni* as his child, and *Pauli* promises not to betray his secret. *Muckl*, who has heard it all, escapes, and *Pauli* takes *Lehnl* to his own cottage.

At the beginning of the third act, we are introduced to the official appointed by the village to assume charge of all the wedding arrangements for the year. He it is who announces the matches, delivers the invitations, engages the band, and draws lots to see who shall be partners in the dance. When there has been no *Verlobung*, or engagement ceremony, for a long time, he takes it upon himself, in order that his administration may not be discredited, to provide one, and assists young people to make up their minds and come to an understanding. He is a jolly old man, profusely decorated with colored ribbons, and has a series of jokes, of the order we eloquently describe as "gags," all written out beforehand for use on the festal occasion. The scene represents one of these occasions, when several young couples have been betrothed, and the whole village is gathered to dance and drink to their honor and future bliss. Each village character is called out in turn to hear what the Master of Ceremonies has to say about him, and to be laughed at by his comrades. The jokes relate, for the most part, to his personal appearance, and are not, as a rule, witty enough to bear repetition. Before the lots are drawn for partners in the dance, *Muckl*, who has thought of a plan to conceal his part in the affair of the previous evening, persuades the Master of Ceremonies to put the names of *Pauli* and *Loni* together on one of the slips of paper. The old official has long had his eye on this pair, and he readily consents.

When the announcement is made, *Loni* is very angry, and declares that she will not dance with *Pauli*, whose fashion of quiet, long-suffering love-making has greatly exasperated her. All the peasants cry out at her refusal, and tell her that the lot is the will of God. *Loni* is obstinate, however, and then *Muckl* comes forward and impertinently asks her why she keeps up such a pretence when the whole village knows that she is going to marry *Pauli*. *Loni* declares that this is a lie, and then the coward asks her, in the hearing of all the others, what *Pauli* was doing the evening before on the hill by the cowherd's hut. The poor girl grows crimson with shame at the insinuation, and is angrier with *Pauli* for having given occasion for such a reflection on her character than she is with *Muckl* for making it. Just then the young crucifix-carver, who has heard of his good luck at old *Lehnl's* bedside, runs in to claim his partner in the dance. *Loni* turns upon him furiously, and slaps his face in the presence of the assembled villagers. *Pauli* stands for a moment dazed by the blow; then he realizes who it is that has done him the harm, and tells *Muckl* that he will know how to punish him. As for *Loni*, he tells her that she shall dance that dance with him, and after that he will never speak to her again. With his strong arm he lifts the girl bodily off the floor, and sets her down at the other end of the room. Then he rushes out, leaving *Loni* to bear the gaze of all the eyes turned upon her, and the curtain falls. As he is an excellent actor, it is only fair to observe that he has a chance to return two minutes afterwards and bow his thanks to the audience. *Loni* on this occasion comes forward with him, and they both smile and appear very happy. You see, this is an absurdity common to peasant plays and Shaksperian tragedy.

In the next act there is a session of the Common Council of Ammergau at the inn, and an excited dialogue is carried on between the burgermeister and the next leading citizen. No one else is given a chance to speak, and one member slumbers peacefully until somebody mentions refreshment, when he wakes up, and declares that he must clear his throat with a little beer. Some time is supposed to have elapsed since the scenes of the last act, and *Baumeister*, the artist, is anxious to return to the city. He wishes, however, to take *Pauli* with him, and as he has tried in vain all other means to get the young man to consent to go, he determines at last to make *Loni* speak to him. The girl demurs at first, but when she understands how important it is for *Pauli's* future, she reluctantly consents. Then follows an amusing scene between the two young people. *Loni* has had time, since *Pauli* has ceased to come near her, to find out that she loves him. She begins now by asking him to go away, because it is for his own good, and because his presence in the village is embarrassing to her. *Pauli* is naturally very angry, but he replies that he will go because the place has become hateful to him. Then *Loni* discovers that she has brought about just what she does not want to have happen. In despair, she suddenly bethinks herself of his old mother, and tells him, with as much show of sincerity as she can command, that he ought not to leave her. This is very transparent, *Pauli's* mother being abundantly able to take care of herself, and the young man is somewhat mystified. *Loni*, however, takes courage to beg him to shake hands with her; and once their hands have touched, explanations follow quickly, and the question of *Pauli's* departure is indefinitely postponed. The play might well come to an end with this scene of mutual understanding, but another act is taken to explain old *Lehnl's* relations to the newly-betrothed pair. The old man, who is now recovered from his wound, will not hear of remaining to humble his daughter in the eyes of the village by declaring himself to be her father. He wishes to go away, and holds *Pauli* to his promise not to tell *Loni* his secret. While they are arguing about it, *Loni*, who has learned the truth from *Muckl*, steals up behind them and embraces *Lehnl*, claiming him as her father. After this, there are no more intricacies to be unravelled, and the curtain falls on the usual picture of felicity.

This is the story, and there remains to be said only a word or two about the characters. Some of them are very amusing, and have evidently been studied in their setting. First, there is the half-witted boy *Loisl*, to whom something desperate is always happening, and who pervades the play with his cry of "'Schenk mir etwas!" (Make me a present of something.) A long, bony lad, with a curious peaked face, always holding out a hand for something to be dropped into it—he would be a striking figure on the canvas of any painter. Then there is *Resl*, the kitchen-maid at the inn. (The similarity of masculine and feminine proper names among German peasants is constantly misleading.) *Resl* is one of the sulky sort of *Dienstmädchen* that look daggers at you whenever you express a desire, and are animated on all occasions by a spirit of obstinacy that is simply mulish. For instance, *Resl* comes in with her broom, and insists upon sweeping the floor upon which the company has assembled to dance. Even after the dance has begun, she pursues her intention, and is not satisfied until she has caused the burgermeister to trip and nearly fall to the ground. As a specimen of the loquacious old peasant woman, superstitious and a gossip, *Pauli's* mother, the *Lohner-Trandl*, as she is called, is a character very well drawn. Losing her temper, with her prayer-book in her hand, she bangs it against the table to enforce her words, and then, remembering what book it is, she lifts it up and kisses it passionately, in hopes of soothing its injured feelings. *Pauli* himself is of course somewhat idealized, as a stage hero must be; but *Muckl*, his rival, is an excellent example of the ease-loving, swaggering peasant, good-natured, and at bottom good-hearted, but liable to be carried away by his passions, and capable of any meanness to protect himself from the consequences. *Lehnl*, the old pedler, belongs to the class of general dramatic conceptions rather than to that of particular types, but it is noteworthy that he is represented with no qualities above his class. The landlord, the master of marriage ceremonies, the village teacher, and the artist are all characters sketched with care enough to take their places in the background of a canvas by Defregger.

Correspondence.

INDIFFERENCE TO CORRUPTION.

To the Editor of The Nation:

Sir: The discussion invoked by the lavish and effective use of money in the late election has so far been characterized by a lassitude of expression which bodes ill for the immediate correction of the evil. It may be pleasant enough to attribute this coolness in the presence of a danger which menaces the perpetuity of our institutions to an ignorance of it, or to the usual reluctance of the defeated to confess before the victor to the pangs of defeat. But there is noticeable about the whole discussion a want of hopefulness which is not accounted for by either of these explanations. Is it because people do not grow indignant over what they think to be hopeless, or remote of remedy; or, worse still, because they are indifferent to it? Certain it is that we hear nowhere a voice full of that burning indignation which stirs masses of men to remedial action.

I believe the true explanation to be that thoughtful men see in the appearance of Mr.

Wanamaker and his like in our national politics the symptom, not of a temporary evil, but of one inherent in free government, the remedy for which is not the makeshift of legislation, but the slow growth of an intelligent civic virtue. Where men have come to worship wealth, as they have in this country, they learn to hold their freedom as their property, but without the obligations of property; and there will always be found those who will sell their freedom, and ambitious rich men to buy it. What sort of rich men these are who find in the ignorance and corruption of voters a way to gratify their detestable ambitions, we all know. Wanamaker is only a type of them, long ago described by Ben Jonson in his "Magnetic Lady," where Sir Moth, enumerating the manifold uses of wealth, says:

> "Wealth gives a man the leading voice
> In all conventions, and displaceth worth,
> With general allowance to all parties.
> It makes a *trade* to take the wall of virtue,
> And *the mere issue of a shop* right honorable."

Was Ben Jonson a prophet? Did he see "the mere issue of a shop" in years to come assume the shape of a Cabinet officer of "the greatest nation on earth"?

Respectfully, ROGER W. CULL.

BALTIMORE, December 7, 1888.

THE BASIS OF AN INVESTIGATION.

TO THE EDITOR OF THE NATION:

SIR: Before it is too late to collect the evidence, would it not be a good plan to start a preliminary investigation into the use of money at the last national election, especially in New York? The report of this investigation could be made the basis of a well-signed petition to Congress, such as could not be ignored, asking for a committee of inquiry, with full powers to summon witnesses and compel the production of documents.

The testimony of the committees of both parties, the accounts of the banks where they made their deposits, and the examination of some of the business men who raised money, and of the John J. O'Briens and Barney Biglins who received it, would, it seems to me, arouse the public conscience.

The preliminary investigation would require funds, and I am encouraged to believe that the necessary amount can be raised if a subscription is properly started. Would not your paper undertake the charge of the preliminary investigation and the request for funds?

Could there be any better work for reform just now than this?—Yours truly,

R. H. DANA.

BOSTON, December 7, 1888.

THE CHOICE OF ELECTORS.

TO THE EDITOR OF THE NATION:

SIR: In the last number of the *Nation* your correspondent "H." suggests a Constitutional amendment for choice of Presidential electors by Congressional districts, instead of, as at present, by whole States.

This amendment was highly recommended in an article in the *North American Review* for January, 1877 (vol. 124, 1) by the late Richard H. Dana, jr., and it seems to have no small advantages over any other plan. Up to the present, this reform has not received the attention it appears to deserve, and one objection to it seems to have been that, if carried out, it would have worked to the disadvantage of one party or the other. Just now, however, seems to be a peculiarly favorable time for urging the change. We have seen the evils of confining the contest for President to a few large doubtful States, as in the last election, under the present system; and to-day the Congressional districts are nearly evenly divided between the parties, and also the majority of electors, if chosen by districts, would be on the same side as if chosen by States.

Yours truly, D.

BOSTON, December 8, 1888.

REFORM IN ELECTIONS.

TO THE EDITOR OF THE NATION:

SIR: The readers of the *Nation* will probably be interested to hear of another successful experiment in municipal reform. The last Legislature passed a bill applying to elections in the city of Louisville the principles that have been repeatedly advocated in your columns, and the measure received its first thorough trial last Tuesday. The law provides that the ballots be printed by the city and arranged in the form of a stub-book. The voter's name, after having been verified on the registration books, is recorded on the stub from which the ballot is torn. The ballot is then indorsed by the clerk and handed to the voter. The latter retires to an apartment where he is completely hidden from view, indicates by a cross the candidates of his choice, and places the ballot (folded) in an envelope, which is then deposited in a sealed box. No one, except the officers of the election and a representative of each candidate, is permitted within fifty feet of the polls; nor is there any possibility that any one of these can know how the ballot has been cast except in the case of blind voters.

The law, though apparently intricate, is, as the above sketch will show, really very simple, and it worked admirably. The election of last Tuesday was the first municipal election I have ever known which was not bought outright. As a matter of fact, no attempts at bribery were made, and a few comparatively unimportant infringements of the law will be severely handled.

A law of this kind does more, however, than prevent bribery: it prevents in the first place, intimidation, which is all the more galling because it is felt by those whose dearer interests will not allow them to record their honest convictions. How far motives of this kind have in the past led to results which do not represent the wishes of the voters themselves, there is, of course, no means of telling. It is cowardly, to be sure, to yield to such considerations; but it can never be prevented by any denunciation, however severe. The law now in operation, by removing all witness of a voter's action, makes intimidation of any kind impossible.

In the second place, the election proved that when the market for the floating vote is cut off, voters of this character become altogether indifferent to their privilege of suffrage. The bill creates a precinct for every 350 regularly registered voters, and in the precinct where I vote I suppose there are between fifty and a hundred colored voters, and perhaps more; yet I was informed by a friend who was representing a candidate at the polls that up to three in the afternoon only three negroes had voted. It will be evident at a glance how much this fact can accomplish, not only towards making the intelligent vote effective, but also towards bringing it out in full strength. The danger of their being outvoted by hirelings once removed, the opportunity of making their influence felt is again extended to the better classes.

But no reform, however salutary, can be secured except at the price of constant vigilance, and, for the benefit of those interested, I will detail a scheme by which it is proposed in the future to restore to the purchasable element its former power. It is arranged that some early voter shall, instead of enclosing his ballot in the envelope provided, deposit an empty envelope, or one containing a blank slip of paper. This ballot, filled now by some one on the outside, is to be handed to a hireling with instructions to place it in the envelope and bring back the ballot which he receives from the clerk; and this blank ballot, when handed to the bummer without, will witness that he has fulfilled his contract and entitle him to his due reward.

The plan seems plausible enough, though it will require considerable astuteness in the manager, and rather more intelligence in the purchased voter than that unsavory individual is ordinarily endowed with. A single break in the chain would necessitate a new start; and a traitor would possess unimpeachable evidence of the whole plot. Still, a change has been suggested which would reduce to nothing even this chance for fraud. The envelope can be dispensed with; and, with a little mucilage, the ballot may be folded and sealed. This, of course, would prevent all fraud by interfering with the original operation. F.

LOUISVILLE, KY., December 8, 1888.

THE ST. LOUIS CONGRESSIONAL ELECTION.

TO THE EDITOR OF THE NATION:

SIR: Your readers are so accustomed to see that the *Nation* bases its opinions and conclusions only on correct and proved premises, that those of us in this city who value its great influence for good were greatly astonished at the articles in your issues of November 21 and 28, in which you ascribe the large Republican majority for Governor at the last election here solely to the saloon influence.

Of the saloon in politics, we, alas! all know; but we also know, and we need only to point to your columns for the assertion, that the saloon is for itself first and all, and next only for that party, be it Democratic or Republican, which holds its caucuses or primaries there, spends most money, and pays most liberally for helping to run the Machine. Granted that the German beer-saloon is more sought after, on the average, by Republican statesmen, it must be equally granted that the Irish-American whiskey saloon is the arena where the Democratic Machine men fight their most effective battles. To contend that at that election the Democratic workers attained such a degree of moral purity as to keep aloof disdainfully from all saloons is, to say the least, a delusion.

Per contra, it is well known here that the most powerful liquor interest in this city, the brewers', employing and influencing, directly and indirectly, thousands of voters, exerted itself to the utmost, openly and earnestly, in favor of Francis, the Democratic candidate for Governor. It is whispered that they did this in return for Francis's assurance that prohibition, which is being strongly agitated in the State, will find no favor from him as Governor. Be that as it may, that fact would seem to eliminate the beer-saloons as the "only factors" that brought about the Democratic defeat.

As to the Sunday liquor law, the alleged enforcement of which you say was resented by the united saloon influence against Francis, you are greatly misinformed. That law took effect only a few months ago. It was enacted over thirty years ago, but had been treated, under an old police justice's decision which nobody had contested, as a dead letter by every city administration, Mr. Francis's included. A Prohibitionist unearthed it, made a test case, and brought it up to the Supreme Court, which

affirmed its legality and ordered its enforcement, with which latter Francis had nothing to do, inasmuch as that lies with the Police Commissioners, to whom the mandate of the court was directed.

The *Nation* undoubtedly took its information from the columns of the St. Louis *Republic*, an ably conducted Democratic paper, whose energetic, though sensational, warfare against the slums and political saloons has the approbation of all decent men of both parties. But the purity of purpose of that paper is slightly tarnished by the fact that it had nothing to say on that subject until after the election and after the defeat of its party. As Goethe says: "Man merkt die Absicht und man wird verstimmt," or, badly translated, One divines the purpose and gets out of humor with it.

The signal defeat of the Democrats can be easily explained, though it must be confessed that the most ardent Independent did not hope for such a crushing verdict against the dominant party. The forces that were at work to bring about this result were many; but foremost of all of them was the growing disgust and bitterness, by leading citizens of all parties, against a low, corrupt Democratic ring in this city, the like of which, in brazenness, venality, and open defiance of every moral standard in politics, cannot be exceeded by its prototypes in New York and Baltimore, whom the *Nation* has so often and so effectively pilloried in burning words. This ring controls all primaries, barters offices, and invites the highest bidder for nomination to municipal, judicial, and Congressional positions. Its leader and "boss" is a low, vulgar, and ignorant blacksmith, to whom Governor, Mayor, Aldermen, nay, even Judges, bow and scrape, whom they address as "Colonel," with whom they shake hands—most of them would want to wash them afterwards—and whom none would hire as a porter.

Of the existence of this ring all decent Democrats are intensely aware and intensely ashamed; and two years ago, when the Congressional elections revealed the most astounding registration frauds, a committee of leading citizens, with Democrats in the majority, met and determined to investigate them and to bring the perpetrators to justice. Funds were subscribed, the best legal talent engaged, the frauds were ferreted out, and submitted to the Federal Grand Jury, ending in the indictment of forty or more "workers," and in the trial, conviction, and sentencing of most of them—the prosecuting United States District Attorney being a Democrat. At the investigation of these frauds, and in the course of the contest by Mr. Frank, the then Republican candidate for Congress, and by Mr. Kline, candidate for a judgeship, it was proved on actual count of the ballots that, irrespective of the fraudulent registry votes, these gentlemen were elected by absolute majorities. After two years' useless wrestle in the courts and before the Congressional Committee, each abandoned the contest in disgust. Both of them were elected this year to the same positions by sweeping majorities.

The registration officer under whom these frauds were committed was promptly discharged by the then Governor, and a new officer appointed, a highly respected, honest, and fearless man, against whom, though an old Democrat and ex-Confederate, the ring levelled its most venomous shafts, denouncing him as a renegade because he would insist on executing the registration laws in an honest way. He resisted successfully; and this time, at least, all decent citizens were assured that the registry books did not contain names of dead men nor copies of hotel and boarding-house registers.

That the Independent vote was the largest factor in this result is shown by the simple fact that Cleveland received in this city two thousand votes more than Francis, clearly indicating that two thousand Democrats, sick of the ring, voted with the Republicans. The Democratic nominee for Public Administrator, who had filled that office with great credit for the last two years, received, though on the same ticket with Francis, six thousand votes more than the latter—surely showing an independent appreciation of a good officer, which had nothing to do with saloon influence.

The fact is, that the conviction had grown silently in this community that the too long continued power of one party had led to its corruption, as it always does, to the absolute and arbitrary rule by ringsters, Machine men, and bosses, who had tried bills of prices on all nominations from highest to lowest, on laws to be enacted, and on franchises that were asked for. That this conviction was deep-seated, and extended over a larger circle of earnest Democrats than anybody had any idea of, is shown by the result. The saloon is bad enough, but it is seen and operates in the glaring gas-light: the rings and Machines are worse, because they are not seen, and operate in the dark. A. U.

St. Louis, December 8, 1888.

NASHVILLE AND MEMPHIS.

To the Editor of The Nation:

Sir: In your issue of November 22, in your criticism of Phelan's 'History of Tennessee,' you state that "it is to this railroad (Memphis and Charleston) that Memphis, the commercial capital of Tennessee, owes much of her wealth."

Outside of her large receipts of cotton, one cannot see why Memphis should be called the commercial capital of this State, and I venture to call your attention to a few statistics from the latest sources obtainable. Memphis is in Shelby County, Nashville in Davidson; and only figures for the counties can be had.

	Shelby.	Davidson.
Merchants' state tax, 1886.	$18,145.33	$29,445.91
Personal property assessed, 1888	3,395,621.00	13,868,947.00
Manufactured products (Census 1880)	4,759,091.00	9,385,211.00
Banking capital and surplus (1888, R. G. Dun & Co.)	3,600,000.00	4,500,000.00

The merchants' tax given is taken from the last Comptroller's Report; and the tax is levied on statements made under oath by the merchants as to the amount of capital used in their business. Subscriber.

Nashville, December 3, 1888.

Notes.

Harper & Bros. publish this week Mr. Howells's new novel, 'Annie Kilburn,' and Walter Besant's 'All Sorts and Conditions of Men' in the library edition of this author's works.

The signs of a broadening of the French literary horizon are visible on all sides, but perhaps none is more obvious than the recent announcement of a complete translation into French of Marlowe's plays, with a preface by M. Jean Richepin, who is himself sometimes a maker of mighty lines.

M. Alphonse Lemerre, the publisher of most contemporary French poets, has formed an alliance with M. Guillaume, who devised the decorations of 'Tartarin sur les Alpes,' to issue a new series of illustrated novels, to begin with M. Daudet's 'Les Femmes d'Artiste' and MM. de Goncourt's 'Sœur Philomène,' and to include later M. Bourget's 'Mensonges.' This "Collection Guillaume-Lemerre" will cost only four francs a volume.

The fifth volume of 'Appletons' Cyclopædia of American Biography,' ending with Sumter, has just reached us. The sixth, and last, with analytical index and supplement, is promised in January, when we can speak of the completed work further than the saying here that, both in virtue of its extent and of its fresh appearance, it supersedes everything of the kind, and is indispensable for reference.

'Irish Pictures,' by Richard Lovett, M.A., is one of the best we have seen of the series of "Pictures of Different Countries" published by the Religious Tract Society and by Nelson & Sons, New York. The views are, for the most part, true to nature and to the spirit of the scenery, and the letterpress is written in a kindly, fresh, and appreciative spirit. A good balance is preserved throughout the work. The illustrations of ancient Irish art and architecture are, in spite of too dark a shade over many of them, interesting. The volume is fit to take its place on the shelves of any collection of books relating to Ireland, and will, we are sure, have a large sale, both as a souvenir to those who have visited the localities referred to, and as a book of reference to those who are anxious to have some idea in their mind's eye of places they read and hear of. Double the price of the book spent on photographs would not give as true an idea of the country. The delineations of west-coast and southern scenery are peculiarly true and impressive.

The little volumes of "Cassell's National Library" multiply apace, some of the latest being Shakspere's "Romeo and Juliet" and "Taming of the Shrew," Spenser's 'Complaints,' Southey's 'Curse of Kehama,' more of Plutarch's Lives, Carlyle's Essays on Burns and Scott, Sir William Petty's Essays on Mankind and in Political Arithmetic, and Defoe's 'From London to Land's End.'

English readers have at last obtained access to Schopenhauer's "Fourfold Root of the Principle of Sufficient Reason" and his essay on "The Will in Nature" ('Two Essays.' Scribner & Welford.) It would have been much better to omit the latter and to have included the essay on the "Basis of Morals," as this essay has not yet been given to the English public, while the substance of "The Will in Nature" was incorporated in the greater work already translated. Unfortunately, also, scholars must approach the translation with some mistrust, for the reason that it is Bohn's publication, and the translator's name does not appear. Comparison with the original text shows the usual mistranslations: *ja* is translated by "as well as"; *vollends* by "let alone"; "time-server" misses all the force of *Ministerkreatur* as applied to Hegel. These are only samples. Besides, the translation is too literal to give any adequate conception of Schopenhauer's literary style.

The railroad articles in vols. iii. and iv. of *Scribner's Magazine*, now lying bound before us, are quite the feature of the year, in point of interest either of text or of illustrations. They are the work of several hands, recognized experts, and render the useful service of making that which is familiar, but little comprehended, both intelligible and impressive. Doubtless, they will some day be made into a book. Mr. Kobbé's "Behind the Scenes of an Opera-House" is in the same class. Next come the personal memoirs and reminiscences, as, of Lester Wallack, Hugh McCulloch, and Gen. Sheridan. Mr. Wilson's papers on the Egyptian pyramids and temples satisfy the curiosi-

ty of the tourist and the scholar. Science is cared for in Prof. Young's account of the eclipse expedition to Russia, and in Prof. Shaler's "Rivers and Valleys"; the musical art in Mr. Apthorp's editing of Mendelssohn's Letters to Moscheles; history in Mr. Roper's Waterloo; and belles-lettres in Mrs. Fields's "Shelf of Old Books." We are far from exhausting the solid worth of the table of contents; but we have done our duty by the magazine from month to month.

The Christmas numbers of *Paris Illustré* and of *Figaro Illustré* (International News Co.) are resplendent in gold and color—the latter, as costing more, offering more, both in the way of text and of pictures; the former (with its condescension to the nursery) being more in key with the season. Both are in English, and both have pieces of music. The most striking literary feature in either is "The Garden of Terror" (*Figaro*), an awful vista of the possibilities of tyranny and ferocity in Russian serfdom, vouched for as true by the writer, M. Eugène Melchior de Vogüé. There is a touch of the *ben trovato* in the clerk's droning over the cataleptic master—"I shall rise; I shall overtake those who offend me; I shall reduce them to dust," at the very moment when the brute revives, and orders to the gallows his victims who had been insulting his supposed dead body.

A clever short story, "La Belle Américaine" (a Philadelphian, if we may hazard the conjecture suggested by her name), ushers in the Christmas number of the *English Illustrated Magazine* (Macmillan.) It is from the practised hand of W. E. Norris, and can be enjoyed by everybody. He calls the heroine Sally that he may remark, "In England the diminutive Sally has a distinctly plebeian ring; . . . one doesn't make use of it in addressing any of one's relations who may have been afflicted by cruel parents with the name of Sarah." Mr. Norris is quite right in intimating that this prejudice does not extend to America. In other respects the number is noticeable chiefly for its increased store of illustrations.

A writer, M. G. de Léris, in *L'Art* for October 1, takes note of the proposed "Congrès général des femmes, national et international, pour l'Exposition Universelle du Centenaire en 1889," having in view a Federation of Women to offset the Federation of Men in 1789. This leads him to furnish a topic for the debates of the Congress, viz.: Why are women not admitted to membership in the Académie des Beaux-Arts, whereas from 1673 to 1783 they were admitted—if rarely and at last grudgingly—to the Académie de Peinture, which was abolished in 1791 to make way for the present institution? M. de Léris does not discuss the question himself, but he makes a valuable historic investigation into the number and personality of the *académiciennes*, of whom the last, the most prolific in art works, and perhaps the greatest of all, was Mme. Vigée-Le Brun. His biographical discoveries are set forth in a very interesting manner, with the aid of portraits in the case of seven, including the earliest and the latest. There is material here for a more extensive monograph, in which copies of the extant works of the women celebrated should figure.

Another, the fifth, conversation on "Book Illustration" enlivens the *Portfolio* for October. It nominally relates to the effect of fashion, but in its discursiveness it covers a good deal of ground very suggestively. The dying out of the school of English landscape engraving is deplored, and that of etching would be predicted if it required any apprenticeship like steel engraving. Wood engraving will hold its own, says Mr. Hamerton, by virtue of its convenience in multiplying impressions—and for higher reasons, we will add. "The Critic," in this symposium, has a little dig at William Morris's socialism—this caterer to the luxurious adornment of homes setting himself "in favor of art as against luxury," and "contrasting the two as if they were opposed."

Prang & Co. send us their customary samples of Christmas and New Year cards and tokens, among which scent-bags and booklets are included. The proportion of flower subjects seems small, and something might be said in praise of this, seeing that meadow flowers at least—violets, clover, buttercups, and the like—have no natural association with the Christmas season; neither can we consider as in place these representations of "eternal spring" and "glorious autumn." Of all the designs we like best the calenders—one in pocket-book shape; another a card having a slot in the middle, through which shows the calendar printed on a silk ribbon that can be drawn to right and left, etc.

The first of the more pretentious calendars to reach us is the "Life of Christ Calendar" published by White & Allen. The dozen sheets bound by a silken cord have each a fairly decorative color design surrounding the monthly card; but, somewhat singularly, though the beginning is with the birth of the Saviour, the chronological sequence is not kept up either for the life or for the year. An opportunity like that of the cursing of the barren fig-tree, for symbolizing the season, is quite neglected. From Silver, Burdett & Co., Boston, we have "The Musician's Calendar"—the customary card background and pad, which Prof. Frank E. Morse has edited with exceptional skill, employing good selections in prose and verse, and noting the dates of birth and death of the chief composers. The musical-minded will find this much to their taste.

The first game of the season that has been sent in to us is one called "Chivalry," combining elements of both chess and checkers (Salem: George S. Parker & Co.). The publishers will not hear of anything but chess being superior to it among board games, and they adduce confirmatory opinions from chess-players. Without attempting to test this judgment, we think we can pronounce "Chivalry" easy to learn, ingeniously novel, and likely to captivate.

Mr. F. G. Adams, Secretary of the Kansas Historical Society, and Prof. W. H. Carruth, have thought the acquirement of municipal suffrage by women in their State worthy of commemoration. Their pamphlet, 'Woman Suffrage in Kansas: An Account of the Municipal Elections in Kansas in 1887, as Told by the Newspapers of the State' (Topeka: Geo. W. Crane Publishing Co), is an orderly digest of the press comments before and after the elections, as to which we remark that the Republican papers were generally favorable or respectful, the Democratic generally (but not always) the reverse. An introduction to this body of extracts gives a brief but lucid review of the steps leading up to the partial victory of the suffragists, which they owe to their alliance with the Women's Christian Temperance Union in 1886. The story is instructive, and this pamphlet is certain to have a permanent value for students of our political development. The compilation is in excellent taste. In 1888 the vote cast by women was 31 per cent. of the male vote; in 1887, 37. But there seems to be a difficulty in ascertaining the returns, and the two elections were not of equal interest *per se*.

No. 137 of the *Zeitschrift* of the Berlin Geographical Society furnishes a large geognostic map of the Sierra Nevada de Santa Marta, in the State of Magdalena, Colombia, with four profiles.

—In the inaugural lecture of Professor Maitland, whose accession to the chair of Downing Professor of the Laws of England, at the English Cambridge, we mentioned lately, he deals with the question "Why the History of English Law is not Written." The reason for this is not found in any lack of material; the English lawyer may know "that within a quarter of a mile of the chambers in which he sits lies the most glorious store of material for legal history that has ever been collected in one place, and it is free to all, like the air and the sunlight."

"Next year will see the seven hundredth birthday of English legal memory. . . . If we must fix a date at which English law becomes articulate, begins to speak to us clearly and continuously, the 3d of September, 1189, is perhaps the best date that we can choose. The writer whom we call Glanvill had just finished the first text-book that would become a permanent classic for English lawyers; some clerk was just going to write the earliest plea-roll that would come to our hands; in a superb series of such rolls, law was beginning to have a continuous written memory, a memory that we can still take in our hands and handle. . . . Seven hundred years of judicial records, six hundred years of law reports! Think how long a time seven centuries would be in the history of Roman law."

Vast and all but unmanageable as is this bulk of material, Englishmen, says this excellent critic, have hardly done "what might have been expected of them by those who do not know them well. . . . There is . . . some danger lest the history of English law should be better known and better taught in other countries than in England."

"And now, why is our history unwritten? In the first place, . . . because of the traditional isolation of the study of English law from every other study, an isolation which is illustrated by the fact that it is only of late years—late years to us who have been dealing with centuries—that English law has had a home in the universities. . . . Blackstone's work was the first-fruits of a professorship of law; . . . the imperishable monument of what may be done by obliging a lawyer to teach law. . . . In the second place, . . . the earlier ages of English law are so little studied because all English lawyers are expected to know something about them."

The lawyers, however, are after the modern interpretation of the old law, and not the old law itself; and they rest content with that.

—Then comes the question of who is to write the History of English Law.

"A thorough training in modern law is almost indispensable for any one who would do good work on legal history. . . . The persons who possess very fully one of the great requisites for the work are, as a rule, very unlikely to attempt it. . . . If they have the taste, they have not the time . . . for historical research. . . . Where, then, lies our trust? Perhaps in failure. . . . The law student should be prepared for either fortune. The day may come when, in the bitterness of his soul, he will confess that he is not going to succeed. . . . That is the hopeful moment. . . . In that day of tribulation may it be remembered that the history of English law has not been written. . . . Short of the very greatest work, there is good work to be done, . . . large provinces to be reclaimed from the waste. . . . At least, he can copy, . . . arrange, digest, make serviceable. . . . The great man, when he comes, may fling a foot-note of gratitude to those who have smoothed his way, who have saved his eyes and his time."

All this comes with grace and with force from one who, already, in his early manhood, has made the most valuable contributions to a knowledge of our early legal annals. Would that his words might rouse the ambition of some of our own

lawyers or students of the law whose fortune may enable them to follow or help others in following these admirable suggestions.

—In the interest of those who give, and especially of those who give mistakenly, cannot a similar study to that of Canon Taylor in the October and November *Fortnightly Review* be undertaken in regard to the management, operations, and results of the various American Missionary Societies, by some one who is interested and yet not prejudiced? American missionary work all over the world has devoted itself of recent years much more to civilization, education, and medical aid, than to conversion. In the Levant the work has been among Christians—Armenians, Greeks, Bulgarians, and Copts; for the whole history of the societies would hardly furnish half-a-dozen converts from Islam. The greatest success has been among the Armenians, where several large Protestant communities have been formed. These have, however, of recent years given great anxiety to the missionaries, because, having been brought up in the strict Congregationalist doctrine, that each church is independent and sufficient to itself, they no longer wish to remain under tutelage, and threaten to return to the Orthodox Armenian Church unless they are allowed the management of the funds collected for them in America. Nor can they see why native pastors should not receive as good salaries as foreign missionaries. In Egypt, the American missionaries do good medical work, and support a number of small schools; owing to lucky investments in real estate in Cairo, they possess a considerable income of their own, and much of their time is taken up in its management. In the larger towns of Turkey—Beirut, Smyrna, Constantinople, Salonika—the missionaries live in good and often handsome houses, with sufficient servants, and surrounded by every European and American comfort. They are far better off than country clergymen at home, because they preach but few sermons, have absolutely no parish work, receive fairly good salaries, are sure of a pension for their old age, of occasional journeys home with expenses paid, and know that funds will be found somewhere to send the boys to school and college. At Manissa (Magnesia) the missionaries used to occupy the best house of the place, a former harem of the Pasha, which was furnished well, where they had a large library, engravings and photographs, a Steinway piano and cabinet organ, and received most of the magazines and illustrated papers. At Constantinople the mission has become a mere business institution. The ladies conduct a large and flourishing girls' school called "The Home," and the men run a large printing establishment called "The Bible-House," where they print Bibles, books, and religious or mildly secular papers in several languages. They go to their offices in the morning and return to their families at night, like so many men of business at home. The missionaries in the interior have occasional hardships, apart from their loneliness; but each case of difficulty is promptly taken up by the American Minister at Constantinople, who is sometimes a Catholic, and happens just now to be a Hebrew. Indeed, missionary complaints form by far the greater part of the work of our Legation at Constantinople, and its reclamations on other subjects are less regarded because it is supposed to exist for the sole purpose of protecting Protestant missionaries. Unfortunately, this cannot be helped just now, because the French, insisting on an erroneous interpretation of an obsolete treaty, claim to be the sole protectors of Catholicism in the East, and insist so jealously on this claim that no American Catholic missionaries—if such exist—would be allowed by the Propaganda to ask, in case of difficulty, for the protection of their own Government.

—The American missionaries have founded in Turkey three great, important, and extremely useful educational establishments—the College at Aintab; that at Beirut, chiefly medical, which got into ill-repute a few years ago in consequence of the dismissal of some of its best professors, who were suspected of leanings to Darwinism; and Robert College on the Bosphorus, which, in order to preserve its freedom of action, has been obliged to cut itself loose from all connection with the Missionary Societies. Without underrating in the least the services which American missionaries are rendering to education in the East, we should be glad if some one would show the relation which education bears to conversion in missionary effort, and how much of the money collected is devoted to the conversion of one sect of Christians to another. Let people give as much as they choose, but allow them to do it with their eyes open, and to know for what they are giving. In any other branch of life it would be considered false pretences, malversation, and a breach of trust to persuade little Sunday-school children to give up their hardly earned pennies for the purpose of "enlightening the darkness of the poor heathen," and then spending it in proselytizing Armenian Christians or in supporting a school for Greek girls at Athens.

—Three additional volumes of the new Weimar edition of Goethe's works have recently been received (New York: B. Westermann & Co.): Vol. ii. of the "Gedichte," vol. ii. of the "Tagebücher," and vol. iii. of the "Briefe." The last comprises the letters of the early Weimar period, from Goethe's arrival in November, 1775, to the close of 1778. As in the previous volumes, the order of the letters is chronological—an arrangement of the greatest assistance to the student of the poet's own life and growth; and to the reader who does not share Grimm's enthusiasm for the Frau von Stein correspondence (which forms by far the largest part of the present volume), it may not be unwelcome to find the succession of rapturous missives now and then interrupted. The record of *Postsendungen*, compiled from the original lists, which was begun by Burkhardt in vol. ix. of the *Goethe-Jahrbuch*, is continued in an appendix at the close of the present volume for the years 1775–78. It affords fresh evidence of the astounding extent of Goethe's correspondence, for many existing letters are not recorded, while the lists show many not known to be in existence.

—The volume of the journals contains the only essentially new matter, apart from questions of text-criticism and chronology. The present volume covers the period from 1790 to the end of 1800, one of fruitful activity on the part of the poet, and embracing the first years of his intimacy with Schiller. We have here the journals from which was prepared the 'Reise in die Schweiz im Jahre 1797,' from which something may be gleaned by the student of Goethe's style, though but little compared with what is offered in the 'Letters and Journals from Italy to Frau von Stein and Others,' recently published; for the poet now keeps his diaries by proxy, and most of the entries are dictated to his secretary. All spontaneity is lost, and the several entries have been fitted to a scheme; the traveller's impressions, as recorded for us, seem like dried botanical specimens rather than fresh wayside flowers. Blunders on the part of the secretary, due either to ignorance or to mistake in hearing, keep the learned editors busy; but the personal flavor is lacking. To Goethe's home life and family the references are few and meagre; "die Meinigen" are mentioned once or twice, and the sending of letters to "Dem. Vulpius" is noted, but that is all. The lists of misprints in preceding volumes would seem to show that even German editors, engaged in a task like the present one, sometimes nod.

—News has been received, under date of Godthaab, October 4, that Frithiof Nansen, the young and daring Curator of the Bergen Museum, and leader of the Danish expedition which was fitted out last summer for the passage from east to west of the Greenland ice, has successfully reached the west coast, after a perilous journey across the interior of forty-six days. The crossing of the great inland ice began at Uminik, somewhat north of the sixty-first parallel of latitude, and therefore at a point not very far from the southeastern extremity of the peninsula. The objective point of emergence was Christianshaab, a small colony on Disco Bay, situated beyond the sixty-eighth parallel; but furious snowdrifts, coupled with other difficulties of passage, obliged the party to seek a more southerly course, with the result of landing them at Ameralik Fjord, near Godthaab. By comparing these points, it will be observed that the transit was made across only the southwestern corner of Greenland; and consequently, while due credit must be given to the explorers for what has actually been accomplished, it can scarcely be said that the expedition has effected its full purpose of making known the true interior of this *terra incognita* of geographers. The actual details of exploration have not yet been made public, but sufficient is patent to indicate that the entire region is one vast ice-bound area, unrelieved by the oases which had been conjectured on purely theoretical grounds by Nordenskjöld, and which that explorer, in a somewhat less fortunate expedition, himself failed to find.

—Whether we have in these apparently endless ice-fields the remains of the glacial period of geologists, or merely the self-succeeding deposits of snow and ice which have normally accumulated in a region of vast precipitation and comparatively little melting, must be left for future explorers to determine. The same holds true with regard to the determination of the thickness of the ice itself, and of the configuration or relief of land-surface underlying the ice. It is certainly a little anomalous that in a region where the cloud-line descends to so low a level as it does in Greenland, the snow accumulation over the far interior, at an elevation of from two to three miles, should be so prodigious as present researches seem to indicate. Or may it after all be that, further to the north, and deeper in the interior, there is a diminution in the extent of the ice-cap, or even a complete disappearance, as has been suggested by Nordenskjöld? The highest elevation reached by Nansen and his party was about 10,000 feet, and for several weeks the transit was made at an altitude of over 9,000 feet. The interior elevation of Greenland is seemingly much greater than has been generally supposed, and may yet be found to tower to the heights demanded by the extreme glacialists, although the observations of preceding Danish explorers—Hammer, Holm, and others—tended to the conclusion that the interior, instead of gradually rising, sloped off towards the north and east. Determinations made from an altitude of some 7,000 feet, except in so far as isolated mountain summits rose above this point, indicated a negative horizon. Comparatively little discomfort ap-

pears to have been experienced by the party during their wanderings, which were interrupted by snow only for a period of four days. The extreme temperature recorded was between 40° and 60° F.

TRAINING THE MEMORY.

"*Loisette*" *Exposed*, together with Loisette's Complete System of Physiological Memory. By G. S. Fellows, M.A. New York: G. S. Fellows & Co. 1888.

Memory and Its Doctors. By Dr. E. Pick. London: Trübner & Co. 1888.

Memory Systems, New and Old. By A. E. Middleton. First American edition from the second English edition, revised and enlarged, with a Bibliography of Mnemonics, 1325–1888. By G. S. Fellows, M.A. G. S. Fellows & Co. 1888.

Memory. Its Logical Relations and Cultivation. By F. W. Eldridge-Green. London: Baillière, Tindall & Cox. 1888.

Memory: What it Is and How to Improve it. By David Kay. London: Kegan Paul, Trench & Co. 1888.

'"LOISETTE" EXPOSED' contains the essential principles of Dr. Pick's system of memory training, a full account of the "Loisettian Art of Never Forgetting," and some interesting facts relating to the Memory Professor, Marcus Dwight Larrowe, alias Alphonse Loisette. From this book it appears that, while "Professor Loisette" condemns Pick's system, and is subject to the illusion that he has made "a great discovery," "destined to work as great a revolution in educational methods as Harvey's discovery of the circulation of the blood in physiology," the best part of his system of "Instantaneous Memory" is an application of principles expounded by Dr. Pick several decades ago, and contained in a little book ('Memory and the Rational Means of Improving It') published in London in 1861. Evidently the Professor, in spite of his training, is the victim of paramnesia, or false memory. Before the appearance of '"Loisette" Exposed,' Middleton and Appleby in England had called attention to the similarity of the "Loisettian Art" and other mnemonic systems; and some in America were suspicious of a school that could be entered only by those ready to bind themselves to secrecy. But Pick's book was out of print; those uninitiated in the secret of the new system had little direct evidence against it, and the initiated were under $500 bonds to keep silent. Accordingly, the Professor continued to earn a very handsome living by teaching an art "wholly unlike mnemonics in conception, process, development, and results."

The main principles of Pick's system of memory training, as given in the first part of '"Loisette" Exposed' and in 'Memory and its Doctors,' are deductions from the general laws of the association of ideas, and the Herbartian principle that two ideas of equal strength, meeting in the mind, blend. "An idea never comes back to the mind by itself, but is always recalled by another." Ideas that impress the mind strongly, and blend with other vivid ideas, are easily recalled. Hence, "the only means to strengthen the memory, or rather to facilitate remembrance, is not to deal with memory at all, but to find means to strengthen ideas which are too weak to make an impression." This may be done in two ways. "The first means is to concentrate our attention on as few ideas as possible at the same time"; the other "is *comparison*." We can compare ideas that are similar or opposite. By noting qualities that two ideas have in common, and others by which they are distinguished from each other, we force the mind to give attention to them. Ideas thus compared blend, so that afterwards, when one is recalled, the other will recur also. Thus, if we wish to remember the series of ideas represented by the following list of words: Book, printing, newspaper, telegraph, Atlantic cable, America, cotton, Manchester, Sir Robert Peel, free trade, navigation, Australia, gold, jewelry, etc., the method is as follows: Attend exclusively to the first two ideas in the series, noting any qualities in the two that are naturally associated; in like manner compare the second and third; and so proceed through the list, taking care at each step to confine the attention to the two ideas compared, giving no heed for the moment to the other ideas in the list. One who has never noticed carefully the influence of association upon memory will be surprised to find that, after once reading the list in this manner, it is easy to repeat the words in the exact order in which they are printed. The reason is evident. The first invariably suggests the second, the second the third, and so on. In the case of ideas that are neither similar nor opposite, the advantages of this system are not as evident. The method for such cases is thus given by Pick:

"Each idea has some relation with a great number of other ideas. We must look amongst the ideas connected with those two which we desire to retain, for the purpose of finding points of comparison. For example, if we have to compare or combine *paper* and *youth*, we must look for one or more ideas which by their insertion will establish a chain of relative or connecting ideas between the two which are to be compared. This process is, in some respects, an arbitrary one; and each particular person will establish his own chain of connecting links, according to his own taste and experience. Thus, one will say that *paper* can be compared with *white color*, this with pure, and pure with *youth*. Another will work out the combination in this way: paper, engine, force, youth. Another will compare: paper, book, imagination, youth. . . . By this means a combination sufficient to insure the power of recalling any two given ideas, only one being presented to the mind, can always be obtained."

If Pick's rules are strictly followed, and each person makes his own "chain of connecting links," this associating process may be helpful even in case of diverse ideas; for it is at least a device for keeping the attention fixed upon the two given ideas for a considerable length of time. The extreme to which this method may be carried appears in Loisette's lectures. He "uses none of the associations of mnemonics," but calls the linking of diverse ideas "correlation." The following passage from 'Memory and its Doctors,' in which Pick quotes from 'Loisette,' gives an illustration of the latter's "correlations," and will show one way "to learn a book at one reading":

"To remember the following phrase after one reading, 'The active principle of the stomach is a hydrolytic ferment named pepsin,' you make the following correlation': '*Active* . . . chief actor . . . warrior prince. *Principle* . . . interest . . . rest . . . rest for digestion . . . digestive organ. *Stomach* . . . machination . . . machine . . . press . . . hydraulic press. *Hydrolytic* . . . droll . . . laughter . . . excitement. *Ferment* . . . firmament . . . sun . . . heat . . . burning . . . pepper . . . *pepsin*.'"

One can readily believe that a pupil who has patience to work out in this manner every sentence of a book will become either a "Memory-Athlete" or a madman. Yet the Pick-Loisette system contains much that is valuable; and to those who love secrecy, the Professor's instruction is probably worth what it costs.

'Memory Systems New and Old' gives an historical sketch of the Memory Doctors from Simonides to "Loisette." To this is appended an extensive bibliography of literature upon memory and mnemonics, and an account of the Loisette-Fellows controversy. This second part of the book reveals the interesting fact, that, upon the first appearance of '"Loisette" Exposed,' Loisette in vain offered $6,000 for the withdrawal of the book from the market, afterwards obtained an injunction from the Supreme Court restraining the sale of it while the legal action was pending, and finally effected a compromise by buying the unsold copies of the book together with the plates for $4,000. As "Loisette" continues to advertise his "Marvellous Memory Discovery," we would recommend the works of Pick and this book by Middleton and Fellows as valuable preliminary reading for those intending to become members of the "Loisettian School."

Of all the various mnemonic systems ever taught, it is safe to say that those of Pick and his pupils are the best. The ancient systems, with their principles of localization and visualization—by the imagination connecting the thing to be remembered with some definite place, perhaps in a real or imaginary house—are helpful only to a certain class of minds. The mediæval systems, with their good advice, and prescription of drugs, pills, perfumes, sneezing powders, plasters, and good living, are little improvement upon the ancient systems on which they are based. And a large part of the modern systems, with their nonsense words, stories, correlations, doggerel rhymes, vile puns, and keys larger than the doors they are to unlock, tend to madness. But the system of Pick and the various modifications of it contain, amid whatever amount of mnemonic chaff, the genuine wheat of sound psychology.

'Memory: Its Logical Relations and Cultivation' is written by a physician. In opposition to the view of Bain and others, that a reproduced impression occupies the same parts of the brain as the original impression, the author endeavors to prove "that memory is a definite faculty, and has its seat in the basal ganglion of the brain, separate from, but associated with, all the other faculties of the mind." This "faculty" he divides into "sensory memory" and "motor memory," and locates the former in the optic thalami, the latter in the corpora striata. Leaving this doubtful physiology and the author's phrenological psychology, the rest of the book is more valuable, treating, among other topics, of "the connection between the motor and the sensory memories," the border-land of memory proper, where unconscious or automatic activities are performed, and, finally, the "cultivation of memory." The author gives some sensible advice in regard to the necessity of good health, so that one may do mental work "when the nervous force is abundant." And one of the best parts of the book is the list of rules for the cultivation of "the motor memory." This refers to "the memory required for the performance of co-ordinated muscular movements which have to be learnt."

The last book upon our list is a work of much study and research, containing a vast number of footnotes with quotations in support of the text. The book might serve as an anthology on the subject of memory. To one, however, who is not satisfied with this multitude of fragments, but would refer to the writers mentioned, the author's method is very tantalizing, for he nowhere gives a reference to the work and chapter quoted. Mr. Kay's views of memory are very different from those expressed in the book just noticed. In his opinion, "not the brain alone, but the whole body, is the true

seat of memory." Thus, "when a sensation that has once been in the mind is recalled, the same parts are affected and the same physical conditions reproduced as when it was originally present." Accordingly, a good part of the book is devoted to a study of the nervous system, the senses, the relation of the mind to the body, and our unconscious mental processes. This presentation of physiological psychology is generally good, and shows an acquaintance with modern science; but amid so much evidence of untiring research, it strikes one as strange that the author constantly appeals to Sir William Hamilton, Dr. Carpenter, and Prof. Bain, and ignores Lotze, Fechner, and Wundt. Perhaps the most serious defects of the book are due to a lack of familiarity with German studies in psycho-physics. Of the hundreds of quotations given, comparatively few are from German writers; and the author makes no mention of the experimental studies of memory by Ebbinghaus and others. Another lack, more readily pardoned on account of Ribot's excellent monograph, is the absence of any study of diseases of memory, and the anomalous conditions that appear in insanity and hypnotic states; nor does the author give any historical sketch of the various conceptions of memory that have been held in the past. But while the book lacks much that is necessary to a complete study, it is by far the best work yet written upon the general subject of memory.

The means of improving the memory, according to Mr. Kay, is not a mnemonic system, but a proper method of education. As the organs of sense and the muscles, as well as the brain, are concerned in memory, "in order to improve the memory, special attention must be given to the training of the senses." By nature's method, each sense is trained separately. Here ordinary educational methods are radically at fault. Even in teaching the alphabet, we distract the child's attention by forcing it to do three things at once—to apprehend the form of the letter with the eye and the sound with the ear, and to master the pronunciation with the vocal organs. Instead of doing this, the child should master the various processes involving the different senses separately, attending to one thing at a time. Thus the senses will be trained to accurate observation, and the communication of knowledge "made the means of improving the memory." Here the author's method is in some respects unique, and it deserves consideration.

MORE NOVELS.

The Strange Adventures of a House-Boat. By William Black. Harpers.

The Mystery of Mirbridge. By James Payn. Harpers.

Through the Long Night. By Mrs. E. Lynn Linton. Harpers.

Uncle Tom's Tenement. By Alice Wellington Rollins. Boston: W. E. Smythe Co.

Amos Kilbright, and Other Stories. By Frank R. Stockton. Charles Scribner's Sons.

A HESITATION about disturbing agreeable memories may deter those who ten years or so ago loitered through England at the wheels of Mr. Black's "Phaeton" from accompanying him on a similar journey in a "House Boat." Such misers of pleasurable impressions may cast aside caution and embark with assurance of enjoyment on the *Nameless Barge*. They will renew acquaintance with Queen Tita, as gracefully inconsequent in maturity as in youth, and with that insignificant person, her husband, whose irony has taken on flavor with years. If Belle's absence is to be regretted, Peggy is a charming substitute, and her banjo no less romantic an appurtenance than was Belle's zither. Peggy's love affair with the middle-aged Scotch warrior may not stir such sympathetic emotion as did that between Belle and the ingenuous Uhlan of fierce moustaches, yet the case of crabbed age and youth is not too flagrant to excite disapprobation. Peggy, even if deprived of the adventitious fascination of a banjo, would be a delightful creature, and no nation except the United States has the slightest claim upon her. She is the happy medium between immodest effrontery and self-conscious prudishness. Her vivacity and self-possession are thoroughly American, and her irrepressible coquetry has an innocence and audacity possible only to girls who think no evil because they have never been hedged in by restraints which inevitably suggest its existence. She makes a striking figurehead for the *Nameless Barge*, and permeates with her abounding vitality all the scraps of song and story. Though the water-ways of England are not strictly suggestive of Scotch history, Mr. Black's loyalty to the Highlands is sufficient reason for a detailed narrative of Prince Charlie's sorrows and of the devotion of Cameron of Lochiel. Any one who, by the reading of Vernon Lee's violent denunciations of the "drunken brute," in her 'Countess of Albany,' may have lost sight of the gallant and brilliant Charles Edward of '45, is commended to the perusal of Queen Tita's glowing narrative and plea for the defence. Several other historical episodes are similarly invested with new life by the manner of their telling. The manner of the book is its distinction. It is a light, fluent, informal manner, and has, besides, the rare quality of repose without an insinuation of stupidity.

If to repeat one's self in fiction, however acceptably, be an offence, then Mr. Black is of course culpable, but at least he is not so comprehensively criminal as are his compatriots who repeat both themselves and their multitudinous colleagues. Mr. James Payn is a veteran offender. He believes in a plot, and whenever he wants one, he goes fishing with a dragnet on the high seas of romantic intrigue. Whatever he may land is as much his as another's, and with great cheerfulness and deftness he proceeds to arrange his hap-hazard catch in the way that shall most cleverly conceal its "ancient and fish-like smell." When he went fishing for the wherewithal to concoct 'The Mystery of Mirbridge,' he struck a school of ruthless villains and one of rural innocents. The common waters of romance abound in these species and they always swim in company. Along with the villains and the innocents came an English nobleman, sharing about equally the qualities of his sharply contrasted society, and with additional weaknesses peculiar to the class in which he was unfortunately born. Lord Trevor's folly is the foundation of the mystery, which, from the start, is not profound, yet is carefully revealed by the author many times before the finish.

Mrs. Lynn Linton's affections unquestionably cling to plot, but she never arrives at superb indifference to a modicum of congruity between character and conduct. Several of the characters in 'Through the Long Night' are so carefully studied from life and so confidently developed that their effective force is scarcely diminished by their relation to a sequence of stereotyped events. The newest of these characters in fiction, and perhaps the rarest in life, is Caleb Stagg, who, inheriting the uncouth person, tongue, and manners of plebeian parents, has a refinement of sentiment in pitiable contrast to his external vulgarities. He is truly one of Nature's noblemen, and it would be possible to forget that he is an "omad'haun" if Mrs. Linton were less addicted to the use of this unusual, disparaging epithet. Though the signs of the times point to the supplanting of the English aristocracy by the English plutocracy, it is difficult to believe that the picture drawn by Mrs. Linton of the supreme power of wealth is not an exaggeration. The spectacle of the lion and the lamb lying down together could not be more surprising than that of an Earl's daughter cherishing a platonic friendship for Caleb Stagg, a man recently emancipated, by his father's lucky strike, from the miner's pick and shovel; or than that of the Earl himself affably dining at the table of an ex-female cook. Such instances of the levelling tendency of the gold that glitters are not morally shocking, but there is something repulsive about its effect on well-born mothers with beautiful daughters to sell. Mrs. Linton is a social essayist of keen perception and chary of immoderate assertion, yet she says that her Mrs. Clanricarde, who threw the unwilling Estelle at Caleb Stagg's head, is emphatically a modern mother, who "will welcome as her son-in-law a moral leper or a physical, if sufficiently well-gilded." Mr. Anthony Harford, who buys Estelle, declined with thanks by Stagg, announces the advent of the "cow-boy" in English fiction. Thus it appears that the impression made by Buffalo Bill and the Wild West Show on the jaded sensibilities of the Old World was not evanescent, but had that quality of permanence which is reflected in the literature of every age and country.

The luxury of reading an author's preface is one in which it is said critics alone indulge. Trusting, then, to their known avidity for the prefatory tidbit, Mrs. Rollins, in 'Uncle Tom's Tenement,' addresses it to them exclusively, and by full and humble confession deprives them of several otherwise possible expressions of their natural malevolence. Having read the preface, the most depraved critic cannot indulge in indignant charge of plagiarism, or in flippant comparison between 'Uncle Tom's Cabin' and his 'Tenement,' and between the literary effectiveness and reformatory might of Mrs. Stowe and Mrs. Rollins. In a spirit of mean revenge, he may say that he never would have discovered that Mrs. Rollins had "hitched her wagon to a star," had she not made such a point of telling him, and then he must proceed candidly to consider the merits of the wagon dissociated from the glory of the star.

The question of tenement-house reform does not lend itself easily or naturally to literary treatment. Tenement-house filth and misery are a grim fact of modern civilization—a fact without any aspect which stirs the souls or fires the passions of mankind. Particular cases of tenement wretchedness excite individual sympathy, but an appeal to a community for the improvement of a whole range or district of tenements must, for any hope of response, be made to the reason, and not to the heart. Such improvement is a practical matter of expediency, even of self-interest, and the more thoroughly the movement towards it is divested of sentimental humanitarianism and of romantic generalization, the more surely will it be carried on by the hard-headed, close-fisted capitalist, whose purse can do more to remedy the evil than can all the sympathetic tears that could possibly be shed by all the town. Even the

most dreadful feature of the evil, and that on which Mrs. Rollins lays most stress, the enforced immorality of women, would more urgently demand helpful interference if its actual proportions were set forth dispassionately in solemn facts and figures. This criticism of the inappropriateness of Mrs. Rollins's method for hastening a reform which she has much at heart, does not include criticism of her intention. Her motive is serious and fine, and it is only to be regretted that she should not have chosen a simpler form of expression—one that by its cold directness should move people with any semblance of conscience to resolve that "something must be done about it."

The Canadian author of 'The Young Seigneur' has also done his best to kill the poor critic's business and his quietus make with a bare preface. He tells the critic a number of things which his book is not, and kindly mentions that thing most like to which it is—a plan of "a future for the Canadian nation." It is not incredible that a critic might unaided have found out what the book is not, but the author's help is invaluable for the purpose of stating what it is. The Young Seigneur had "a system," he felt almost like saying "a commission of revelation." Unfortunately, he had not the gift of tongues without which commissions of revelation are mere honorary appendages, mystical, of no practical utility, good for decoration only, like the "K. C. B." which several of his countrymen are privileged to engrave on their cards. His future Canada is to be an "ideal Canada"; it is to include the "imperial idea" and "*l'idée Canadienne*," and its "aim is to lead the nations, not to be led." The comprehensiveness of this scheme leaves nothing to be desired by Canadians, and, while it remains in its present inchoate shape, the rest of the world need not tremble. Fortunately for other nations, the Young Seigneur met a violent and totally unexpected death before he became coherent enough really to do any harm. It is rather odd that this book should have some value, neither for what the author says it is not, nor for what he says it is, but for something he seems to have overlooked. This not too conspicuous value is in a few incidental French-Canadian figures, which are hints of real life rather than conscious sketches.

Mr. Stockton's vein of humor is astonishingly productive, and if its yield is not always without alloy, it is never mere dross. The adventures of the materialized spirit "Amos Kilbright" have not the irresistible comicality of most of the author's short stories—the conception is too farcical; but some of the details are just funny enough to redeem the whole. The point of the irony in "Plain Fishing" is strained, and so is that in "The Reversible Landscape"; but in "Dusky Philosophy" there is great joy for the soul that can revel in that absurdity which is pure in its essentials and perfectly limited by art. There is no choice between "Brudder Pete's" sermon on the seven devils which possess all women, and the parables illustrating that "truf is mighty and ought not to be hendered from prevailin'." The negro unassisted is apt to be amusing, and the negro helped out by Mr. Stockton is inimitably ludicrous.

HOLIDAY BOOKS AGAIN.

Old Songs. With Drawings by Edwin A. Abbey and Alfred Parsons. Harper & Bros.

Salon de 1888. Par Eugène Montrosier. Paris: Ludovic Baschet; New York: J. W. Bouton.

A History of French Painting, from its Earliest to its Latest Practice. Including an Account of the French Academy of Painting, its Salons, Schools of Instruction, and Regulations. By C. H. Stranahan. Charles Scribner's Sons.

Coaching Days and Coaching Ways. By W. Outram Tristram. With illustrations by Herbert Railton and Hugh Thomson. Macmillan & Co.

Baby's Lullaby Book—Mother Songs. By Charles Stuart Pratt. Water colors by W. L. Taylor. Music by G. W. Chadwick. Boston: L. Prang & Co.

The Home of Shakespeare. After water-color sketches by Louis K. Harlow. Boston: L. Prang & Co.

Mr. Abbey's collection of 'Old Songs,' with his own illustrations, is *the* holiday book of the season, indubitably. It is a late day to say anything new of Mr. Abbey's work, which is, we are happy to know, appreciated by artists, critics, and public at its full worth. He is, in his own domain, easily the first of living artists, and is without rivals who can even seriously contest his preëminence. The present collection not only is equal to the best of his former work, but contains some of the best work he has done. The illustrations of "Sally in our Alley," in particular, seem to us to be on as high a level as even Mr. Abbey has ever reached. The charm, the refinement, the distinction of these drawings is altogether inimitable and delightful. Mr. Abbey is always at his best in his pen-drawings, and in the few drawings in tone contained in the volume there seems to be slightly less than his usual merit. Mr. Parsons contributes a number of head and tail-pieces, initials, etc., which are graceful and well done, and the publishers have given a sumptuosity of binding, print, and paper to the volume which makes the presentation worthy of the contents. The total result is a gift-book as nearly perfect as we can ever expect to see.

Perhaps in a strict classification M. Baschet's publication should not be placed among holiday books, but it comes to us at holiday time and would prove an acceptable holiday present; and it has this in common with the professed holiday books, that its illustrations are its primary reason for existence. M. Montrosier's text is mainly of the good-humored and complimentary sort common in such publications, where the artists who lend their work for reproduction naturally expect a *quid pro quo* in the form of praise; but he becomes critical occasionally, as when he says of Gérôme that he has been "a Tacitus, and is to-day little better than a teller of anecdotes," and when he finds fault with the tendency of the French artists of to-day to paint genre subjects on a scale worthy of the most lofty flights of historical painting. There is much truth in his complaint that "it is on a surface as vast as that of the 'Marriage in Cana' that our artists exhibit to us a consumptive mother or a drunken father."

The collection of photogravure reproductions from pictures and statues of the last Salon gives the familiar impression of a prodigious quantity of ability and training combined with a minimum of originality or genius. Whether it is that the original things do not get into such collections, or that their quality is lost in the air of general excellence, it is hard to say; but these collections of modern French art seem all alike and all disappointing. One sees in them the evidence of the existence of a school which for thoroughness of educated talent and the general high level of ability has probably never been equalled, but one does not see a great work: one is astonished, but one is rarely charmed. Nevertheless, the great works exist, and only from such a background of generally diffused knowledge can start forth the masterpieces of a Millet or a Baudry. Other nations produce great but unbalanced artists: the French alone produce masters, because they alone have a school. Either the Salon of 1888 did not contain a masterpiece, which M. Montrosier intimates was the case, or the masterpieces it contained have not found their way into this volume; but we are shown many pieces of a high degree of excellence, among which we may mention three examples of the suave and sugared correctness of Bouguereau, a very clever nude "study" by Toudouze, and a charming idyl by Raphael Collin called "Fin d'Été." The genre pictures do not seem as interesting as usual, but the reproduction of "La Crèche," by Mme. J. Delance-Feurgard, showing the long rows of suspended cradles in a foundling hospital, gives an impression of what should be an interesting piece of tone in whites. Some of the portraits are interesting from their subjects rather than from any artistic preeminence, notably M. Bonnat's "Jules Ferry" and "Cardinal Lavigerie," and M. J. Koppay's drawing of the Norwegian dramatist Ibsen. The sculpture, including M. Turcan's group "L'Aveugle et le Paralytique," which obtained the medal of honor, seems but mediocre, though much of it is technically admirable.

Mrs. Stranahan's volume also may find a place here on account of the season at which it appears, although it differs even more widely than the last from the accepted type of holiday book. It is a laborious and exhaustive compilation of the history of French painting, and contains a mine of information about art, artists, and art institutions, which is rendered available by a good index. The author probably does not pretend to great originality in criticism, but her judgment is catholic enough to distinguish the good in very various work, and to appreciate both David and Manet. We have not read the book through, but wherever we have dipped into it we have found it sound and sensible, if not inspiring. It contains sixteen photogravure plates from celebrated French pictures of various epochs, but the value of many of them is marred by the fact that they are reproduced from engravings rather than from the originals.

Most, if not all, of 'Coaching Days and Coaching Ways' has already appeared in the *English Illustrated Magazine*, and the book bears the marks of its origin upon it. The text is in the pleasant, gossipy, magazine style, and the numerous illustrations are up to, but not above, the level of magazine work. The notes of places, bits of old inns, etc., by Mr. Railton, are interesting, but are too spotty in effect to be altogether pleasing to the eye, and the figure subjects by Mr. Thomson are clever, but somewhat too ponderously and deliberately humorous. The book is lavishly got up as to paper and type, but the cover is not to our taste.

The two gift-books that come to us from L. Prang & Co. are so much alike that they may be dealt with together. They are both printed in colors, and both lithographed throughout—text and pictures and all. The lettering is not particularly beautiful as decoration, and is annoying to read; and a rather feeble prettiness is the highest range of artistic merit in the illustrations.

An Apology for the Life of Mr. Colley Cibber, written by himself. A new edition with notes and a supplement by Robert W. Lowe. 2 vols., 8vo. London: John C. Nimmo; New York: J. W. Bouton.

There is no need now to praise Colley Cibber's 'Apology'; it is one of the best books about

the stage ever written, and it contains an absolutely incomparable gallery of verbal portraits of the great performers of the beginning of the last century. For an English actor or actress to have sat for his picture to Cibber is to have made sure of an immortality quite as secure as that of the Bostonian who was painted by Copley. And it was this marvellous artist in letters, this master of the difficult art of character drawing, whom Pope chose as the hero of the 'Dunciad'! Time was, when people thought that other artist of an exceeding skill, Boswell, also to be a fool. (There is, indeed, a certain likeness between Boswell and Cibber, which is well worthy of elaboration.) What Dr. Hill has done for Boswell's 'Johnson,' Mr. Lowe has done for Cibber's 'Apology.' He has purified the text of the second edition, the latest revised by the author. He has apparently verified every quotation, explained every allusion, and corrected every error of Cibber's—for Colley, with all his power of bodying forth a character, was careless of dates and reckless often as to the strict sequence of events. He has prefixed a reprint of the rare 'Historia Histrionica: An Historical Account of the English Stage,' first published in 1699 and admirably adapted to introduce Cibber's description of the London theatres as he first knew them. He has supplied a supplementary chapter, tracing Cibber's career to the actor's death in 1757, in the course of which he sketches the history of the battle between Cibber and Pope, and shows how completely Cibber got the better of the quarrel. He has prepared a list of Cibber's writings (in which we regret to see a repetition of the current British blunder that Mr. Henry Irving was the first actor of our time to discard Cibber's version of "Richard III": the credit is really due to Mr. Edwin Booth) and a bibliography of the writings about Cibber. He has appended a reprint of Tony Aston's 'Brief Supplement to Colley Cibber, Esq., His Lives of the late famous Actors and Actresses.' He has selected from the sixth edition of the 'Apology,' published in 1822 under the name of a man called Bellchambers (but, possibly, as Mr. Lowe has shown, the work of a man called Burn) such biographical notes as seemed worth preserving —the book thus despoiled, commonly known as Bellchamber's "Cibber's 'Apology,'" being a perfect model of how not to edit. He has prepared also an ample index, which seems exact as far as we have been able to test it. And in doing all these things he has done well, for he has given us an edition in all points excellent of a book deserving the most excellent editing —an edition worthy to be ranked with Dr. Hill's "Boswell's 'Johnson'" and with Canon Ainger's 'Lamb.'

While the editor has thus done his duty nobly, the publishers have not lagged behind. The book has been printed at the Chiswick Press; and type, paper, and presswork are all thoroughly satisfactory. Only 510 copies of the octavo edition have been printed, and only 305 of a larger-paged edition—"each copy numbered as issued and the type distributed." There are twenty-six added plates, all portraits and all copper-plate mezzotints newly engraved by Mr. R. B. Parkes, from "the best and most authentic originals," says the publisher's preface—and this we take to mean that they are after the earlier engravings mostly, and not direct from the original paintings. Among these twenty-seven plates are two portraits of Colley Cibber; one of his father, the sculptor; one of his son, who was a scoundrel; one of his daughter, the odd Charlotte Charke; and two of his daughter-in-law, Susanna Maria. There are also eighteen chapter-headings sketchily etched by M. Adolphe Lalauze after contemporary engravings, and consisting chiefly of scenes from the plays to which Cibber is making constant reference. Although these are very slight, they add not a little to the interest of the edition. It remains to be said further only that the volumes are issued with gilt tops, uncut edges, and a simple and dignified Roxburghe binding.

American Weather. A Popular Exposition of the Phenomena of the Weather, including hot and cold waves, blizzards and tornadoes, etc. Illustrated with thirty-two engravings and twenty-four charts. By Gen. A. W. Greely, Chief Signal Officer U. S. A. Dodd, Mead & Co. 1888. 286 pp., large 8vo.

DURING the seventeen years' existence of the Government Weather Bureau, there has been no adequate presentation, in form adapted for intelligent but unprofessional readers, of the results gained from the great mass of records gathered concerning American weather. Professor Loomis of Yale has done more than any one else, not excepting the members of the Signal Service, to formulate and define the characteristics of our weather. His papers have been presented at the semi-annual meetings of the National Academy of Sciences for many years, and now constitute a body of information that has attracted universal attention among meteorologists, although it is unread and unknown among the thousands of Americans who would gladly be better informed on the heat and cold, flood and drought, in which they live; but Professor Loomis's papers were not prepared for this class of readers. The same is true in even a higher degree of the volume on the 'Recent Advances of Meteorology,' written by Professor Ferrel during his connection with the Signal Service, and published a few years ago as an appendix to one of Gen. Hazen's annual reports; it is original and profound, but it has not affected the popular attitude of meteorology in this country; it was not intended to do so. The professional papers of the Signal Service in their early issues bid fair to include treatment of our unsolved weather problems; but these have been cut off by the strict interpretation of the law founding the Service, in which no explicit authority is given for such publications. The official annual reports of the Chief Signal Officer can hardly be criticized for the absence of popular matter; they are filled chiefly with statistical summaries reported from the observing stations in all parts of the country, valuable to the student, but less readable than a dictionary to the ordinary outsider.

There is therefore manifestly a clear field for a popular work based on the materials stored away by the Signal Service, and Gen. Greely will surely find a large circle of readers who will for this reason need no further recommendation of his book than that afforded by his name on the title-page. He has long been connected with the service, and most honorably; his experience has been varied from the torrid deserts of Arizona to the frigid shores of the polar sea. Being now at the head of the service, he has its ample store of records at his disposal, and some of his leisure has been given to putting them in shape for popular understanding. The records and the leisure cannot be put to a better use, and the publication of 'American Weather' will undoubtedly tend to advance the interests of our Weather Bureau in the future. It is an excellent thing for a country when its leading officials prepare elementary books on their special subjects of study. Geikie has made illustration of how great a range of writing a leading investigator may cover—from the technical reports issued as Director of the Geological Survey of Great Britain to primers on physical geography for use in the most elementary schools. He should have more imitators in this country.

Judging of its contents by the title of Gen. Greely's book when it was first announced, we must confess to some disappointment on reading it now, for more than half its pages are occupied with other subjects than weather. Several chapters are given to the commonplace of meteorological physics, and these are not distinctively better than similar chapters in text-books; space is also given to the description of the usual meteorological instruments, and of some unusual ones: all of this might, in our opinion, have been occupied to advantage by increased attention to the matter indicated by the title of the book. When the direct consideration of American features is reached, ninety-six pages are given to American climatic averages, and it is only at page 178 that the nominal subject of the book is taken up, leaving it less than half the pages of the volume. Of the twenty-four colored plates (which, by the way, are not numbered, although referred to by numbers in the text), only two are concerned with non-climatic averages; the rest all deal with annual and seasonal means, and cannot be used in understanding to-day's weather, or in solving that continual problem, the weather of to-morrow. Of the thirty-two figures in the text, actually only two are devoted to the illustration of our weather, a subject which might well require abundant diagrams. From all this, we can only conclude that American weather has not yet, even after seventeen years' work, received such study as will draw its secrets from it.

But Gen. Greely's book certainly contains much that the domestic weather prophet will read with interest and instruction, even though it does not refer chiefly to his avocation. Passing over the conventional parts already referred to, mention should be made of the excellent series of charts illustrating our normal atmospheric conditions in different seasons. No other work can approach Gen. Greely's in this respect, as far as the United States are concerned. The charts show the distribution of mean temperature, and of our absolute maxima and minima; the number of days in the year with a daily mean above 50° and below 32°; the mean variability of January temperature from day to day; the mean cloudiness for January and August; the average dates of the first and last killing frosts; and other similar elements. The barometric pressures are given for January and July without the usual reduction to sea-level, in order to show that the winter pressure, as actually observed in our continental interior, is less and not greater than the summer pressure, as the reader of text-books might conclude; but this departure from the ordinary method does not seem advisable, as pressure is not a climatic factor, and is important only in giving explanation of the course of the wind, which it fails to do if not reduced to some standard level of reference. The winds on the January chart over the Western plains all run in contradiction to the pressure gradients; thus, in correcting one ground of misapprehension, we fear that this chart may give rise to the more serious one, that the average wind of the interior in winter blows in disobedience to Buys-Ballot's law.

Under the heading of "Storms," areas of high and low pressure are described, and a good number of striking narrative accounts are given, which, being authoritative, will soon form the staple material of our text-books. The descriptive pages on cyclones, cold-waves, and

blizzards are excellent, but would have been improved by freer illustration. Little space is allowed for accounts of tornadoes; the time of their passage at a given place is said to be five or ten minutes—an obvious misprint for seconds. Weather prediction is dismissed with little more than two pages of rules; perhaps this subject has not yet been sufficiently discussed for fuller statement and illustration. Some consideration of certain notable failures of prediction, showing the great inherent difficulties of the work, would, we think, have been edifying to the public.

The subject is illuminated, but by no means exhausted. It is to be hoped that in some later year, when our weather types are better classified, Gen. Greely may give us a second volume.

Footprints of the Pioneers in the Ohio Valley. A Centennial Sketch. By W. H. Venable, LL.D. Cincinnati: Robert Clarke & Co.

THIS book is a fagot of quotations, to which the author has contributed little more than the band which ties them together; but possibly he could not otherwise have better secured his end. His aim was to furnish such details regarding the settlement of the Ohio valley as an average reader would crave on its centennial year. With this view he brings forward original eye-witnesses—pioneer explorers, settlers, and lookers-on. Their testimony is the more welcome because it was gleaned, much of it, from books out of print and hard to procure. The information thus given does not lack vividness, variety, or raciness. The writer, however, interlards his prosaic details with about a dozen poems, which often come in as incongruously as if they were recited by witnesses in the midst of their testimony in a court of justice. Such purple patches seem as ludicrous as the gay feathers pinned on an Indian's blanket.

The woodcuts, all poorly executed, are analogous to the letter-press, that is, they are an odd mixture of fancy and fact—portraits realistic, perhaps, though their origins are not related, and ideal scenes which seldom have more verisimilitude than was to be seen in the picture of the Israelites crossing the Red Sea, which was all one dead wall or barn-door of Spanish brown.

The facts, mainly concerning the rise and ante-steamboat progress of Ohio, the mother-State of the Northwest, are stated with tolerable accuracy; yet Kentucky is said to be "old in comparison with the other States added to the Union since the Revolution" (p. 20). The writer had forgotten that Vermont is older than Kentucky by well-nigh a year. The admission of Vermont was in 1791, February 18, or March 4; that of Kentucky was in 1792. Again, the United States in 1783 are described as "a larger section of America than the territory north of the Great Lakes and the St. Lawrence" (p. 15). In fact, the area of our Union was then 813,765 miles, which is less than one-fourth of 3,524,152 miles included in the region north of it and retained by Great Britain. Lewis and Clarke are declared "the first white men to traverse the continent by traversing its water courses" (p. 104). It was 1805 when those explorers reached the Pacific, but that ocean had been reached a little further north a dozen years before, in 1793, by Alexander Mackenzie, who had been knighted for his exploit in 1801. The original name of Cincinnati (Losantiville) is traced to its originator John Filson, but it is not so analyzed as to show why the name was given to a settlement opposite the mouth of the Licking. The letter L is the initial of Licking, and *os* is Latin for mouth. It is only when the first syllable is explained that the rest of the hybrid becomes plain of itself.

Many pages betray careless proof-reading, or something worse. Thus, La Salle's name *Cavelier* is spelled as though it were the title cavalier. This error may be a misprint, as no doubt Willis Creek (p. 16) is for Will's Creek, as well as Caiuga, Scaneateles, etc. (p. 97), *an* insignia (p. 59), Missouri had water *connected* with the Pacific, and the date 1785 (p. 96) when Dr. Eliot, late of St. Louis, is described as writing in Boston. But the area of the Northwestern territory is set down as 265,878 *acres* (p. 105). Can "acres" be a misprint for "miles"? At best it can be called by no more charitable name than heterography. The English are spoken of as "*basing* a prior right to the continent by virtue of Cabot's discoveries." No hint is given as to any basis for this basing.

Five or six pages are dedicated to the buckeye, a tree which has given a sobriquet both to Ohio and Ohioans; but we are not told what the tree is, nor yet how it came by its name. Webster is equally unsatisfactory. He says: "Buckeye—a tree, the *Æsculus flava*, indigenous in the Western States; *Æsculus glabra* is the fetid, or Ohio buckeye"—a definition worthy of Bardolph's elucidation of "accommodated." But this word is one proof among ten thousand that the New Dictionary of Dr. Murray is first, and all the rest are nowhere. What does that say of buckeye? "It is the American horse-chestnut," quoting for the first appearance of the word in any book Morse's Geography, 1789-96, and adding that the tree is so called from the hilum of the fruit (the mark or scar where a seed is attached to its base) having the appearance of a stag's eye.

But, on the whole, the readable style of this centennial sketch, which is now seasoned by seasonableness, as well as its store of piquant anecdotes, and the rarity of many of the extracts, must secure the booklet a wide circulation. It will satisfy a popular demand.

Microscopical Physiography of the Rock-making Minerals. By H. Rosenbusch. Translated and abridged by Jos. P. Iddings. John Wiley & Sons. 1888.

AMONG the many advances in natural sciences during the last twenty years, none has been more remarkable or fruitful than the introduction of the use of the microscope in geology. In botany, in physiology, throughout the organic world in short, the value of the microscope in revealing hidden processes of life and disease had long been recognized. Its use in these sciences was, however, a simple and direct increase of the power of the human eye, magnifying it many hundred times. The processes of formation of the crystalline rocks, which have congealed from a fused mass, in most cases long ages ago, could not be discovered by direct observation, since they had long ceased to act. By cutting these rocks, however, into thin sections, thinner than a sheet of paper, so that they became as transparent as glass, and studying their internal structure under polarized light—light whose vibrations have been reduced to a single plane by passage through a Nichol or calcspar prism—and with due regard to the laws of optics and of crystallization of the various minerals which enter into the composition of rock-masses, the geologist has been finally enabled to trace the development of the various rock ingredients from the original fused magma of the granites, basalts, and other eruptive rocks, and thus take a long step in advance in the study of the constitution and manner of formation of the earth's crust, which must at one time have been entirely in a molten condition. In this minute and laborious study, the Germans, as might have been expected, have been the pioneers, although this line of research was first suggested by an Englishman, Sorby, who made some interesting discoveries with regard to liquids enclosed in quartz and precious stones.

In 1873 Ferdinand Zirkel, one of the youngest professors of the University of Leipzig, who had made this subject his special study, and had been teaching it to his pupils for a number of years, published the first book upon the subject, entitled 'The Microscopical Characteristics of Minerals and Rocks.' In 1874 Prof. Zirkel was induced to visit this country and examine the large collections of eruptive rocks illustrating the geology of the then little known Rocky Mountain region, made by the members of the Geological Exploration of the Fortieth Parallel, under the direction of Clarence King. The results of this study formed the sixth volume ('Microscopical Petrography') of the publication of this survey, and was the first introduction of the subject to the American scientific public.

In the fifteen years that have elapsed since Zirkel's first publication, the number of persons making a study of this subject has vastly increased, and during this time great changes have taken place which have almost revolutionized it. Many of Zirkel's somewhat empirical conclusions have been modified by his more philosophic successor in the field, H. Rosenbusch, formerly of Strassburg, now of Heidelberg University, who now stands as the acknowledged authority throughout the scientific world. The second edition of his great work upon the microscopic study of minerals and rocks, of which the subject of the present notice forms the first volume, has been translated and abridged by his former pupil, Mr. Jos. P. Iddings, and thus made available for the American student who is unfamiliar with the German tongue. Mr. Iddings has brought to his task a valuable experience in the work of the United States Geological Survey, qualifying him to supplement many omissions in the original work in regard to American occurrences. His abridgment consists mainly in the omission of certain historical data, all material necessary for the instruction of the student having been carefully retained. This translation will undoubtedly constitute for a long time to come the standard authority upon microscopical petrography, the only other works upon the subject in the English language being elementary treatises of comparatively little value.

Roman Mosaics; or Studies in Rome and its Neighborhood. By Hugh Macmillan, D.D., LL.D., etc. Macmillan & Co. 1888.

THESE "Mosaics" are pictures of Rome wrought in a background of Presbyterianism by the hand of a Scottish divine. As a result, they are decidedly lacking in the sparkle of the gems seen in the shops about the Piazza di Spagna, the loss of which is perhaps compensated by many highly improving moral reflections concerning the objects portrayed, set forth in very elaborate rhetoric. In the obelisks, for example, the author sees "the eternal sun, thus fittingly represented by an object that lifts its stern finger in unchangeable defiance of the vicissitudes of the seasons and the ages." The Cumæan Sibyl suggests to him that "God did not leave the Gentile nations without some glimpses of the truth which He had revealed to His own chosen people," inasmuch as "beneath the gross external polytheism of the multitude there were deep, primitive springs of godli-

ness, pure and undefiled, working out their manifestation in noble lives; and those who have ears to hear can listen to the sound of these ancient streams as they flow into the River of Life that makes glad the city of our God."

Nothing could illustrate more strikingly the author's mental attitude towards Rome than his reflections upon the fact that malaria prevails in the beautiful park of the Villa Borghese, which he expresses thus:

"The sting of the serpent is in this Eden. Cursed is the ground for man's sake in the fairest scene that his industry and genius and virtue can make for himself; but cursed with a double curse is the ground that he makes a wilderness by his selfishness and wickedness. And this double curse, this fatal Circean spell, has come upon these beautiful grounds in common with all the neighborhood of Rome because of ages of human waste and wrong-doing."

Sentiments like this prevent one's giving the book a cordial recommendation to those who seek a sympathetic companion in the Eternal City; this it can be only to those whose chief delight in a visit to Rome or Athens is in witnessing the fulfilment of the prophecy that there should be not one stone left upon another.

As to its expressed endeavor to "supply some of that curious knowledge," of interest to the antiquarian and the historian, which guide-books overlook altogether, the author frankly confesses that twelve years have elapsed since his "memorable sojourn in Rome," and that he has had no opportunity to repeat his visit and to add to or correct his first impressions, "desirable as it might be to have had such a revision for the sake of this book." This avowal contains its own comment, and relieves the reviewer of an extremely unpleasant duty.

The Eulogy of Richard Jefferies. By Walter Besant. With a portrait. Longmans, Green & Co.

"THERE are not in the whole English-speaking world," observes Mr. Besant in the course of the book we have to notice, "which now numbers close upon a hundred million, more, I suppose, than forty thousand who read Jefferies's works. Out of the forty thousand not one-half have read them all." This is, it is to be feared, but too true. Jefferies would not have died under the painful circumstances which must have accelerated his end, had the reading public shown greater appreciation of his work. We should not be surprised if far more were to read Mr. Besant's 'Eulogy' than ever opened the pages of 'The Gamekeeper at Home' or 'Amaryllis at the Fair': most of us prefer knowing something about an author to actually reading him. Moreover, Richard Jefferies was exactly that kind of writer who appeals to a very select class of readers, the true lovers of nature.

Mr. Besant has done his work well. He has lifted just enough of the veil—and this should be the criterion of success in literary biography—to make us eager to see more. Although he writes his life, Mr. Besant declares he never saw Jefferies's face. But "he followed the fortunes of this man, and read, not only his books and his papers, but learned his personal history, and heard what he was doing, and watched him curiously, unknown and unsuspected by himself." "Perhaps in this strange way," Mr. Besant goes on to say, "by reading all that he wrote, by connecting his work continually with what I learned of his life and habits, and by learning, day by day, all the things which happened to him, I may have learned to know him more intimately even than some who rejoiced in being called his friends." But, although he followed his career so closely, Mr. Besant never knew until too late—and it was characteristic of Jefferies's pride that not even his sister knew of it—of the terrible poverty of his later days. Jefferies's history is a melancholy one—a weary struggle against neglect, poverty, and sickness, terminating in a painful and untimely death. Yet it is not without its inspirations. We feel genuine admiration for the indomitable spirit of the man, his determination to rise superior to the snubs of publishers and the neglect of the public, his eagerness to be continually at work against the terrible odds of protracted ill-health.

Richard Jefferies was born near Swindon in Wiltshire; and it was here, in the meads of Coate Farm, and along the neighboring downs, that his absorbing love of nature was fostered. He started in life as a country journalist, with the one object of making money—and, by the way, in describing his experiences in this employment, Mr. Besant takes occasion to give many useful and wholesome hints to aspiring young journalists. Although one is compelled to admire Jefferies's spirit and devotion to work, one cannot help being mentally vexed at the many opportunities of rising to immediate success which he missed. He labored under the inability to see his true bent and capacity. His first real success lay in the publication in the *Times* of a letter upon the agricultural laborer. This letter—which Mr. Besant gives in an appendix—if followed up by others of the same kind, might have insured the author a permanent post on a great journal as an agricultural authority. But Jefferies, with a fatal persistency, continued to believe that his genius lay in novel-writing, and spent valuable time and energy in producing works which, considered as novels, are worthless. Jefferies never was or could be a successful novelist—he had no story to tell. His power lay in describing natural scenery and rural life with a faithfulness and a brilliancy almost unrivalled. Neither the 'Natural History of Selborne' nor 'Walden' contains anything finer than detached portions of Jefferies's works. Mr. Besant instances an article which appeared in *Longmans' Magazine* in 1883, under the title of "The Pageant of Summer," as Jefferies's masterpiece. We are sorely tempted to quote from this really splendid paper, but space forbids. One of the most interesting parts of Mr. Besant's book is that chapter, on "The Story of My Heart," which, in the light it throws on Jefferies's religious views, is quite a study in psychology. Mr. Besant does well to add a list of Jefferies's works, with the name of the publisher of each—a task of no little difficulty, since Jefferies was continually changing his publishers.

At first, we were disposed to quarrel with the unusual title of this book; but, as we read on, we felt that Mr. Besant was justified in saying in his preface that "he called it so because he could find nothing but admiration, pure and simple, for that later work of his, on which will rest his fame and abiding memory."

Frederick, Crown Prince and Emperor. A Biographical Sketch, Dedicated to his Memory, by Rennell Rodd. With an Introduction by Her Majesty the Empress Frederick. Macmillan & Co. 1888. 12mo. pp. 197.

THIS brief and unpretending sketch, undertaken at the request of the Empress Frederick, and published for the benefit of the London Throat Hospital, is smoothly written, and is rendered attractive by open print, thick paper, and a good photographic portrait. Avoiding all reference to politics, and indeed to all important events except those in which the Emperor bore a direct personal part, it still contrives to give a distinct impression of the noble traits which secure to this Prince his unique position among the rulers of Prussia, and which, in combination with the far different qualities of his son and successor, render his untimely death a source of regret to the friends of rational and enlightened government.

Unlike his father, Frederick did not sink the civilian in the soldier, but, nevertheless, when called on to do his duty in time of war, he acquitted himself with such distinction that he gained the admiration of his countrymen and the respect of the foe; and he rendered valuable service in fostering attachment to the common fatherland among its antagonistic fragments. While his father and Bismarck saw in united Germany merely an added means of glorifying Prussia and aggrandizing the House of Hohenzollern, his aspiration was to found a real German Empire, the component parts of which were to be conciliated by having their rights, their susceptibilities, and even their prejudices respected, and were to be held firmly together, not by force, but by the conviction that by holding loyally together they were best subserving the interest of each separate section. He said that he never received a compliment that pleased him better than when a Bavarian trooper, to whom, after the battle of Wörth, he addressed a few friendly words, exclaimed: "If only we had had your Royal Highness to lead us in 1866, you would have seen how we would have thrashed those cursed Prussians!"

In the interest which he took in the fine arts, as well as in every movement to ameliorate the condition of the masses of the population, he emulated the example of his father-in-law; and in the simplicity and fidelity of his family life he presented to the world one of the not too frequent exceptions to what is customary among reigning sovereigns. Mr. Rodd quotes from a private letter of Sir Beauchamp Walker, who, as British Military Attaché, accompanied the Crown Prince's staff in 1866 and 1870, the following passages, which we believe have not before appeared in print:

"The great characteristic which distinguished him was his coolness in difficulty; whatever happened, he and Blumenthal kept their heads clear. His judgment was calm in action; his consideration was humane in success. . . . He was not only the most lovable, but the noblest man with whom I ever associated—noble in his acts, noble in his speech, noble in his judgment of others. I never knew him to say an unkind thing of any one, man or woman, living or dead—not that his judgment of others was always favorable, but that it was never expressed in other than the most kindly terms."

Daniel O'Connell. By J. A. Hamilton. [International Statesmen Series.] Philadelphia: J. B. Lippincott Company.

THIS is a useful little book. No real Life of O'Connell has yet been written, or probably can be written until the Home-Rule question—a fresh development of his Repeal agitation—has been settled. Mr. Fitzpatrick's volumes of O'Connell's Letters, which have only just appeared, are an advance towards such a memoir; meanwhile, Mr. Hamilton's *précis* is welcome, particularly refreshing after the wordiness and pomposity of the only other complete Life — Miss Cusack's. While he has not fully caught the spirit of the period in Ireland, or the necessities of her position, or the fact that O'Connell and his associates, with all their faults and failings, were the necessary outcome of the time, he has given us a well-digested memoir. It is, perhaps, truer and fairer than if it were from the pen of an unqualified admirer. The stronger and coarser traits of O'Connell's character, are, as they should be, brought to the reader's notice, while full justice is done to his great abilities and noble

strivings for his country and the whole world. It is profoundly sad. Surely such continued apparent waste of life and energy as is here depicted, and which has been going on in scores of lives working with the same intent ever since 1800, cannot go on for ever. It is interesting to note that the number of Irish voters (now 740,000) were reduced from 300,000 to but 26,000 at the time of Catholic emancipation.

Errors are inevitable in such a book, drawn from so many sources and so condensed; slips such as "Armagh," at page 95, for, we presume, "Athlone," should be seen to in the next issue; and it would relieve the feelings of some readers if "huge" were not so often used.

BOOKS OF THE WEEK.

Abbey, E. A., and Parsons, A. Old Songs, with Drawings. Harper & Bros.
Allen, G. This Mortal Coil. D. Appleton & Co. 50 cents.
Amery, C. F. Charley's Wonderful Journeys. Illustrated. Forest and Stream Publishing Co. $1.50.
Beach, C. F., jr. A Manual of the Law of Wills, as Determined in the Leading Courts of England and the United States. San Francisco: Bancroft-Whitney Co. $3.
Bierbaum, Prof. F. J. History of the English Language and Literature from the Earliest Times until the Present Day. B. Westermann & Co.
Blanden, C. G. Tancred's Daughters, and Other Poems. G. P. Putnam's Sons. 75 cents.
Brine, Mary D. A Dozen and One. Cassell & Co. $1.50.
Brookes, E. S. The Story of the American Sailor. Boston: D. Lothrop Co. $2.50.
Carrington, P. B. Patriotic Reader; or, Human Liberty Developed. Philadelphia: J. B. Lippincott Co. $1.20.
Chambers-Ketchum, Annie. Christmas Carillons, and Other Poems. D. Appleton & Co.
Clark, A. Register of the University of Oxford. Vol. II., Part 3. Oxford: Clarendon Press; New York: Macmillan.
Codman, J. Winter Sketches from the Saddle. G. P. Putnam's Sons. $1.
Colmore, G. Concerning Oliver Knox. London: T. Fisher Unwin.
Compayré, G. Lectures on Pedagogy. Theoretical and Practical. Translated by W. H. Payne. Boston: D. C. Heath & Co. $1.
Cornoz, Susanne. Our Children and their Friends. Illustrated. Cassell & Co. $1.25.
Delia Bacon. A Biographical Sketch. Boston: Houghton, Mifflin & Co. $2.
Doniol, H. Histoire de la participation de la France à l'établissement des Etats-Unis d'Amérique: Correspondance diplomatique et Documents. Vol. III., Parts 1, 2. Paris: Alphonse Picard.
Duff, Mary Graham. Some Noted Sculptors and their Homes. 2 Vols. Boston: Soule Photograph Co.
Fawcett, E. The Confessions of Claude. Boston: Ticknor & Co. 50 cents.
Field, H. M. Gibraltar. Illustrated. Chas. Scribner's Sons. $2.
Gear, L. H. A Treatise on the Law of Landlord and Tenant. San Francisco: Bancroft-Whitney Co. $3.
Goodyear, W. H. A History of Art. A. S. Barnes & Co. $3.50.
Grossman, Rabbi L. Some Chapters on Judaism and the Science of Religion. G. P. Putnam's Sons. $1.50.
Haggard, H. R. My Fellow-Laborer. George Munro.
Harlow, Louis K. The Home of Shakespeare. After Water-Color Sketches. Boston: L. Prang & Co. $3.
Hereford, Elizabeth J. Rebel Rhymes, and Other Poems. G. P. Putnam's Sons. $1.
House, E. H. Yone Santo, a Child of Japan. Belford, Clarke & Co.
Hubbell, W. The Curse of Marriage. American News Co. 50 cents.
Jessop, Rev. Dr. A. The Coming of the Friars, and Other Historic Essays. G. P. Putnam's Sons. $1.75.
King, R. Ohio: First Fruits of the Ordinance of 1787. Boston: Houghton, Mifflin & Co. $1.25.
Longfellow, H. W. The Village Blacksmith. Illustrated. E. & J. B. Young & Co.
Mayeux, H. A Manual of Decorative Composition. Illustrated. D. Appleton & Co.
McHatton-Ripley, Eliza. From Flag to Flag: A Woman's Adventures in the South during the War, in Mexico, and Cuba. D. Appleton & Co.
Molesworth, Mrs. A Christmas Posy. Illustrations by Walter Crane. Macmillan & Co. $1.25.
Montrosier, E. Salon de 1888. Cent planches en photogravure and quatre frontispièces gravés à l'eauforte. J. W. Bouton. $20.
Morris, Anne Cary. The Diary and Letters of Gouverneur Morris. 2 vols. With Portraits. Charles Scribner's Sons. $7.50.
Mother Goose. Cassell & Co. $2.50.
Nason, Emma H. White Sails. Boston: D. Lothrop Co. $1.50.
Old Friends with New Faces. Mother Goose. Illustrated by Will Gibbons. E. & J. B. Young & Co.
Pratt, C. S. Baby's Lullaby Book. Water-colors by W. L. Taylor. Music by G. W. Chadwick. Boston: L. Prang & Co. $7.50.
Riddle, A. G. The Tory's Daughter: A Romance of the Northwest, 1812—1813. G. P. Putnam's Sons. $1.50.

HENRY HOLT & CO., Publishers, New York.

Would You Like to Be Guided in a Helpful, Instructive Course of Reading approved by

Lyman Abbott, D.D., Edward Everett Hale, D.D., James H. Carlisle, LL.D., and other eminent men?

More than 60,000 persons are pursuing such a course under the direction of the Chautauqua Literary and Scientific Circle. We quote a few words from these students:

"Many a lonely hour has been cheered, and thought and memory turned into new and delightful channels by these readings. I hope to be better and stronger intellectually for the hours spent with my books."—*New York City.*

"I regret that I could not have had the advantage of such a course in early life; but it has brought so much comfort and happiness that I rejoice in the blessing, even though it came to me a quarter of a century late."—*Maine.*

HAVE NOW READY:

THE GALLERY OF A RANDOM COL-

LECTOR. By Clinton Ross, author of 'The Silent Workman.' 16mo, cloth, $1.25.

"A dainty, handsomely printed volume, containing a dozen stories, every one of which is full of interest and entertainment. . . . His stories are all of the best character, and the reader will lay them down well satisfied that he has been fully paid for the time he has spent in their company."—*Christian at Work.*

"A collection of sketches and stories deserving a word of special notice on account of the care with which they are all written, and a certain liveliness approaching here and there to Stevensonian distinction, which characterizes some. . . . The author can tell an old-fashioned romantic love affair in a simple and pleasing fashion."—*The Spectator (London).*

"We have here an alcove of water-colors or first proofs, fresh, refined, illustrative; sketches from the memoirs or the memories of a keen observer whose mind is stored with curiosa, and who points us to them suggestively with the delicacy of a connoisseur, knowing but not eulogizing his good things overmuch."—*Critic.*

ESTABLISHED 1840.

A. L. LUYSTER,

NEW YORK, 98 Nassau Street,

LONDON, 10 Silver Street.

THE ROMANCE OF A POOR YOUNG Man. By Octave Feuillet. With 100 illustrations and portrait of the author. From designs by Mouchot, engraved by Méaulle, large 4to, tapestry binding, in a box, $7.50.

The tapestry binding with stamped colored designs, the heavy richness of the paper, the beauty of the open typography, Mouchot's carefully studied and well drawn illustrations and their skilful and artistic engraving by Méaulle combine to make this edition everything that a fine edition of such a work should be.

A THOUSAND MILES UP THE NILE. By Amelia B. Edwards. With upwards of 70 illustrations engraved on wood by G. Pearson, after finished drawings executed on the spot by the author. 2d edition, revised by the author. 8vo, cloth, $2.50.

This beautiful book by Amelia B. Edwards was published at a high price in 1876, by Messrs. Longmans & Co., and has for some years been out of print and scarce. It is now reproduced with the original plates at the suggestion of many friends of the charming author.

THE HANDY REFERENCE ATLAS of the World. By John Bartholomew, F.R.G.S., etc. With 100 maps and plans, full geographical statistics, and a complete index. 12mo, cloth, $3; half morocco, $4; Persian morocco, $5.

The maps (strongly mounted on guards) are made from the latest surveys and give not only the most recent geographical and political information, but also the principal physical and commercial features of the world. Nearly fifty pages of the volume are devoted to closely (yet clearly) printed statistics, and a copious index ingeniously indicates both the map and exact spot on it where any given place can be found.

Its 12mo size enables the reader to readily consult it in his hand without recourse to stand or table, and permits of its being placed on the shelf with other library volumes.

A TRIP ROUND THE WORLD IN 1887-88. By W. S. Caine, M.P. With 250 original illustrations by John Pedder, H. Sheppard Dale, George Bickham, and the author. 12mo, cloth, $2.50.

The prominent position occupied by Mr. Caine in British politics and in social circles, and the kind reception which he met with both in the United States and Canada during his travels, encourage the publishers to look for a wide success of this book.

Sold everywhere. Sent, postpaid, on receipt of price by the publishers,

TICKNOR & CO., Boston.

A Fascinating Book for Young People.

THE HOUSEHOLD HISTORY

OF

The United States and Its People,

FOR YOUNG AMERICANS.

BY EDWARD EGGLESTON.

ILLUSTRATED WITH 75 HISTORICAL MAPS AND DIAGRAMS, AND MORE THAN 350 DRAWINGS BY THE BEST ARTISTS, EXHIBITING HISTORICAL EVENTS, COSTUMES, MANNERS AND CUSTOMS, ARMS, IMPLEMENTS, INVENTIONS, MODES OF TRAVEL, ETC.

The Household History of the United States will delight young readers and readers of every age, not only on account of the beauty of its appearance, but because of the charming and animated style of the narrative.

It is illustrated in a novel and strikingly effective manner. Engravings adorn every page, and appear in the text and in the margins. There are full-page illustrations in colors, maps in colors line the covers, and many small maps are inserted in the text. The work is handsomely printed, and bound in a very attractive manner.

Square 8vo, cloth, decorated. Price, $2.50.

THE COUNTESS EVE. JOHN INGLESANT.
SIR PERCIVAL. A TEACHER OF THE VIOLIN, and Other Stories.
THE LITTLE SCHOOLMASTER MARK.

LIBRARY EDITION OF 'ROBERT ELSMERE.'

ROBERT ELSMERE. By Mrs. Humphry Ward, author of 'Miss Bretherton,' etc. New Library Edition. 2 vols. Globe 8vo. $3.

The New York *Tribune* says: "It is a brilliant transcript of the intellectual and religious agitation that is to-day going on among the clergy of all the churches with reference to the credibility of revelation. It is an epoch-marking as well as an epoch-making book, because it at once reveals the religious doubt and unrest of the age, and brings into a well-defined focus the vague speculations to which that doubt and unrest give life. It attempts to answer the question, 'Whither shall all these things tend?' . . . In any case, it is an interesting sign of the times which no thoughtful man can afford to overlook."

Queen Mary, and Harold.
Becket, and Other Plays.

THE WORKS OF ROBERT BROWNING. New and Uniform Edition. To be completed in sixteen volumes. Published monthly. Globe 8vo, each $1.50. The edition will contain more than one portrait of Mr. Browning, and a few illustrations.

Volumes 1 to 8 are now ready.

NEW ILLUSTRATED WORKS.

MEMOIR OF PETER DE WINT. By Walter Armstrong, B.A., Oxon., author of 'Alfred Stevens,' 'Scottish Painters,' &c. With 24 full-page illustrations in Photogravure. Super royal 4to, $10.50.

"Mr. Walter Armstrong's short account of the life of De Wint is a model biography in its way, and the 24 charming photogravures with which the book is adorned illustrate in an admirable manner the different styles of this great artist."—*London Times.*

SCOTTISH PAINTERS: A Critical Study. By Walter Armstrong, B.A., author of 'Alfred Stevens,' &c. With many Illustrations, including Fifteen Etchings, by Rajon, Geddes, C. O. Murray, and others. Folio, cloth, gilt, $7.50.

THE ART OF SKETCHING FROM NATURE. By Philip H. Delamotte, Professor of Fine Arts in King's College, London, and Ladies' College, Kensington. With Examples from English Masters and well-known water-color Artists. Second Edition. With Twenty Colored Plates and numerous Wood Engravings. Folio, cloth, gilt tops, $7.50.

LANDSCAPE. By Philip Gilbert Hamerton, author of 'Etchings and Etchers,' 'The Graphic Arts,' &c., &c. Columbier 8vo, with about Fifty Illustrations. $35. Large-paper copies, with proofs of the Illustrations, bound in vellum. Folio, $70.

"The illustrations of 'Landscape' are of a kind to which a special and distinguishing praise must be given. In complete artistic quality no book-illustration of the day equals them. They are, as the preface asserts, at the high-water mark of what can be done in this vein, and in consonance with the purpose of the book. . . . The get-up of 'Landscape' is superlative; the art of book-making in our day can go no further.—*Nation.*

JAPAN AND ITS ART. By Marcus B. Hursh, LL.D., Editor of 'The Art Journal.' With numerous Illustrations. 12mo, $3.

MRS. OLIPHANT'S TWO POPULAR WORKS, elaborately illustrated, 2mo, each $1.

THE MAKERS OF FLORENCE: Dante, Giotto, Savonarola, and their City. With Portrait of Savonarola, and Sixty Illustrations by Delamotte.

THE MAKERS OF VENICE: Doges, Conquerors, Painters, Men of Letters. With numerous Illustrations.

THOMAS POOLE AND HIS FRIENDS. By Mrs. Henry Sandford. With Portrait. 2 vols., 12mo. $5.

ESSAYS IN CRITICISM. Second Series. By Matthew Arnold. With Prefatory Note by Lord Coleridge. Globe 8vo, $1.50.

CONTENTS: The Study of Poetry—Thomas Gray—Wordsworth—Shelley—Milton—John Keats—Byron—Count Leo Tolstoï—Amiel.

ROMAN MOSAICS: or Studies in Rome and its Neighborhood. By the Rev. Hugh Macmillan, D.D., LL.D., F.R.S., author of 'Bible Teachings in Nature,' 'The Sabbath of the Fields,' &c., &c. Globe 8vo, $1.50.

"In these various chapters the author sometimes wanders far away from his subject, but only to enrich it with learning and a wealth of wise reflection and sound sentiment, as well as with a literary grace and skill that will charm and delight the reader."—*Week.*

A NEW STORY BY MRS. MOLESWORTH.

A CHRISTMAS POSY. By Mrs. Molesworth, author of 'Carrots,' 'The Cuckoo Clock,' 'Tell Me a Story,' etc., etc. With Illustrations by Walter Crane. 16mo, $1.25.

"Mrs. Molesworth is in my opinion, considering the quantity and quality of her labors, the best story teller for children England has yet known. This is a bold statement, and requires substantiation. . . . Mrs. Molesworth's great charm is her realism—realism, that is, in the purest and highest sense.—*Edward Salmon in the Nineteenth Century.*

WITH ENGRAVINGS AFTER PALMER.

MILTON'S MINOR POEMS. With twelve engravings after Samuel Palmer. Royal 4to, $7.50. A few copies on large paper can also be had, bound in vellum, price, $27.50. With etchings by Rajon.

TWELVE ETCHINGS. By the late Paul Rajon. With a sketch of the life of the artist by F. G. Stephens. Imperial 4to, $8. *Next week.*

VOLUME I OF THE OXFORD ENGLISH DICTIONARY.

A NEW ENGLISH DICTIONARY ON HISTORICAL PRINCIPLES. Founded mainly on the materials collected by the Philological Society. Edited by James A. H. Murray, B.A., Hon. M.A., LL.D., with the assistance of many scholars and men of science. Vol. I. A.B. 4to, half morocco, $13.

BOSWELL'S LIFE OF SAMUEL JOHNSON, LL.D., and Journal of a Tour to the Hebrides. Edited, with Notes, etc., by G. Birkbeck Hill, D.C.L. 6 vols., 8vo, $12.

"An edition which for splendor, accuracy, and completeness excels that of any other English classic."—*Westminster Review.*

BY DR. MARTINEAU.

A STUDY OF RELIGION. Its Sources and Contents. By James Martineau, D.D., LL.D. 2 vols., 12mo, $4.50.

TYPES OF ETHICAL THEORY. By the same author. Second edition. 2 vols., 12mo, $4.50.

"The most important and original work which English philosophy has produced for at least a century and a half."—*Spectator.*

THE CIVILIZATION OF SWEDEN IN HEATHEN TIMES. By Oscar Montelius, Ph.D. Translated from the Second Swedish Edition (revised and enlarged by the author) by the Rev. F. H. Woods, B.D., with Map and 205 Illustrations. 8vo, $4.00.

SMITHSONIAN INSTITUTION. New Volume.

A TABLE OF SPECIFIC GRAVITY FOR SOLIDS AND LIQUIDS. (Constants of Nature, Part I.) New edition, revised and enlarged. By Frank Wigglesworth Clarke, Chief Chemist, U. S. Geological Survey, Smithsonian Institution. 8vo, $3.

THE AMERICAN COMMONWEALTH. By James Bryce, D.C.L., M.P. Regius Professor of Civil Law in the University of Oxford, author of 'The Holy Roman Empire.' 2 vols., 8vo. *Next week.*

GLEANINGS IN SCIENCE. A Series of Popular Lectures on Scientific Subjects. By the Rev. Gerald Molloy, D.D., D.Sc., Sometime Fellow of the Royal University. With Illustrations. 8vo, $2.25.

ESSAYS THEOLOGICAL AND LITERARY. R. H. Hutton, M.A., author of 'Essays on Some of the Modern Guides of English Thought in Matters of Faith.' New Edition, revised. 2 vols., globe 8vo, each $1.50.

LIFE OF WILLIAM B. ROBERTSON, D.D. Irvine. With extracts from his Letters and Poems. By James Brown, D.D., author of 'The Life of a Scottish Probationer.' With two portraits. 12mo, $2.25.

Double Christmas Number, with nearly 100 Pictures.

Price, 30 cents; Annual Subscription, $1.75.

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation

VOL. XLVII.—NO. 1225. THURSDAY, DECEMBER 20, 1888. PRICE 10 CENTS.

SUMPTUOUS ART WORKS

Illustrated by

ABBEY AND PARSONS.

THESE TWO SUPERB VOLUMES CAN NEVER GROW OLD. THEY WILL BE VALUED AS LONG AS PEOPLE SHALL LIKE TO SEE GENIUS INTERPRETED BY GENIUS AND PRESENTED IN THE HIGHEST FORM OF BOOKMAKER'S ART.—*N. Y. Herald.*

Old Songs.

With Drawings by EDWIN A. ABBEY and ALFRED PARSONS. With Mounted India Proof Frontispiece, left loose for framing. 4to, Ornamental Leather Cover, Gilt Edges, $7.50. (*In a Box.*)

"*Mr. Abbey's collection of 'Old Songs,' with his own illustrations, is the holiday book of the season, indubitably. Mr. Abbey is, in his own domain, easily the first of living artists; and is without rivals who can even seriously contest his preëminence. The present collection not only is equal to the best of his former work, but contains some of the best work he has done. . . . The charm, the refinement, the distinction of these drawings is altogether inimitable and delightful. . . . The total result is a gift-book as nearly perfect as we can ever expect to see.*"—N. Y. Evening Post.

"*A superb volume. It will make an admirable Christmas gift.*"—Boston Transcript.

"*Mr. Abbey's illustrations of these Old Songs breathe an abundant sympathy with their spirit. The work of an artist saturated with his subject, a master in pen-and-ink designs, charmingly vivacious, versatile, and appreciative. Mr. Parsons's headpieces and tailpieces are most delicate.*"—N. Y. Tribune.

"*An artistic delight of the most genuine and unquestionable sort.*"—N. Y. Sun.

She Stoops to Conquer.

A Comedy. By DR. GOLDSMITH. With Five Full-page Photogravure Plates, Five Proofs on India Paper of Full-page Drawings, and numerous other Illustrations by EDWIN A. ABBEY and ALFRED PARSONS. Folio, Leather, Illuminated, Gilt Edges, $20.00. (*In a Box.*)

"*A union of choice and permanent literature, of exquisite and characteristic art, and of the highest typographical skill.*"—GEORGE WILLIAM CURTIS.

"*Mr. Abbey has brought arch humor, delicate sense of character, and relish for broad fun to the interpretation of a masterpiece of literature. . . . He has applied such skill and such sympathy that he has fairly made himself a partner of the dramatic enterprise.*"—WILLIAM DEAN HOWELLS.

"*No work in black and white has been more truly artistic, and no success more unqualified.*"—HENRY JAMES.

"*It seems to attain the very summit of excellence as an art production.*"—AUSTIN DOBSON.

☞ *The above works are for sale by all booksellers, or will be sent by* HARPER & BROTHERS, *postage prepaid, to any part of the United States or Canada, on receipt of the price.* HARPER'S CATALOGUE *sent on receipt of Ten Cents in stamps.*

Stability, Experience, Protection, and Provision for the Future,

all combined in the new policy of the

MANHATTAN

LIFE INSURANCE COMPANY

OF NEW YORK.

ORGANIZED - - 1850.

This old Company now offers to the public its new

SURVIVORSHIP DIVIDEND PLAN,

Which affords all the advantages of Life Insurance during the earlier years of life, and at the same time makes a provision for old age, as the Policy-holder can surrender his Policy at the end of the Survivorship Dividend Period, and receive its full value in cash—thus combining INVESTMENT and PROTECTION.

LEE & SHEPARD, Publishers,
BOSTON.

EIGHTH EDITION.

A BOOK OF POEMS.

By JOHN W. CHADWICK. Eighth Edition, revised and greatly enlarged. Cloth, red edges. Price, $1.25.

"He has in a very eminent degree the poetical temperament, the imaginative grasp of life and the world which belongs to the singer. His thoughts turn to song without effort, and while we detect the echoes of Lowell and others of his favorite poets in his verse, there is a voice of his own there which echoes nobody. . . . It is years since we first met with some of these poems, and they never have left our memories. Such are 'Rowena Darling,' 'The Story of Medardus,' 'Sealed Orders,' and before all the rest 'The Gate Called Beautiful.'"—*The American.*

"Mr. Chadwick's verse is always simple and graceful in expression, sincere in feeling, and thoroughly sympathetic with the sorrows and aspirations of humanity."—*Christian Union.*

Sold by all booksellers. Mailed, postpaid, by the publishers, ROBERTS BROTHERS, Boston.

Calendars for 1889.

NIMS & KNIGHT, Publishers,

TROY, N. Y.

THE GEORGE ELIOT CALENDAR FOR 1889. The handsomest block calendar ever made. The back consists of a portrait of George Eliot, a view of her home and the Dunnithorne Arms, and ideal portraits of Romola and Hetty. The block is made up of wise, witty, and pointed selections from her works. Each calendar in a box, 75 cents.

THE SCHILLER CALENDAR FOR 1889. A new edition of this popular calendar, with a *weekly* pad. The dates are to be printed in large type in carmine ink, with selections below in German and English from the works of Schiller. Each calendar in a box, 50 cents.

SUNSHINE CALENDAR FOR 1889. A new and pretty calendar, comprising lithographed pages for each month, with appropriate poems by popular authors and a very attractive cover. Each leaf is hung to a metal rod, and arranged to turn over from month to month. Each calendar in a box, 75 cents.

THE YEAR IN THOUGHT CALENDAR for 1889. A new and novel calendar, edited by Mrs. A. N. Bullens. Each month of the year has a beautiful stamped and illuminated design. An appropriate poem accompanies each month's design, followed by a page of brief selections for each day in the month, and other poetical selections. The title on the cover is stamped in gilt and silver, the decoration is a dainty etching in shape of a bell, printed on flexible ivory. 1 vol., small quarto, bound in antique hand-made board, ragged edges. Each book in a box, $1.25.

For sale by all booksellers, or will be mailed, postpaid, on receipt of the price.

TAUCHNITZ EDITION.

2,500 volumes at 50 cents. Thieme-Preusser, German and English Dictionary, $4.25. The German-English part, separately, $3.00. Teubner & Tauchnitz's Greek and Latin Authors. Brugmann's Comparative Grammar, $5.00 net. Lemcke, Grammar of Skat, the German Game of Cards, $1.00. All foreign and American periodicals.

B. WESTERMANN & CO.,
838 Broadway, New York.

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

SPECIAL BARGAINS IN BOOKS AND Autographs. Free lists sent.
E. L. DIDIER, 1524 John St., Baltimore.

REMBRANDT—155 EXQUISITE IL-lustrations—Sent post-paid on receipt of $1.
THE BOOK ANTIQUARY, Easton, Pa.

CHOICE BOOKS OF THE SEASON.

Memoirs of Count Grammont.

By Anthony Hamilton. Edited, with Notes, by Sir Walter Scott.

The only edition printed from the original French plates bears the imprint of J. B. Lippincott Company, the authorized American publishers. Imperial 8vo. With Portrait of Author, and thirty-three etchings by L. Boisson, on India paper, from original compositions by C. Delort. Edition limited to 780 copies for England and America.

"No other book furnishes an equally vivid picture of life at the Court of Charles the Second, and the 'Memoirs' of Grammont continue to hold their own in the favor of reading men. . . . The illustrations are refined in execution, polished, expressive, and full of human interest."—*New York Tribune.*

Uncut edges, bound in cloth, $18.00; full morocco, $30.00.

New Reduced Edition, facsimile of the original folio, at a popular price.

Lamia.

By John Keats. With Illustrative Designs by Will H. Low.

"This book, so popular last year, is now reproduced in smaller proportions, but with all of the original illustrations, and printed and bound with great care and taste. It is a gem among holiday gift books."—*New York Herald.*

"When Will H. Low's beautifully illuminated edition of Keats's 'Lamia' came out last year we went into raptures over it—nothing so exquisite was published. The charm of its classic and mystic art is still potent in the popular edition issued this year. The drawings retain their beauty of line in reduction and the soft, yielding cover is seductive to the eye and touch."—*Philadelphia Press.*

Bound in cloth, gilt top, rough edges, $5.00; full leather, stamped, $6.00; tree calf, $10.00.

"The book is perfectly lovely in every possible particular that can make a book absolutely charming."

Leaves from the Life of a Good-for-Nothing.

Translated by Mrs. A. L. Wister, from the German of Joseph F. Von Eichendorff.

Eichendorff's 'Leaves from the Life of a Good-for-Nothing' is one of the choicest masterpieces of German literature, and Mrs. A. L. Wister is the best of German translators. J. B. Lippincott Company have freely bestowed the resources of the printer's and binder's art in publishing the work, and the result is the most delightful holiday book of the season. The illustrations are by famous German artists, reproduced with exquisite grace and fidelity by the photogravure process.

"One of the loveliest gift-books that has yet made its appearance. Mrs. Wister is noted for the perfection with which she gives to her translations the aroma of the original. The aroma in this case is as fresh as lavender and as fragrant as sweetbrier."—*New York Morning Journal.*

Price, in cloth, $5.00; full leather, $6.00; tree calf, $10.00.

Three Artistic Books, with Finest Wood Engravings.

THE CLOSING SCENE.

A Poem. By T. Buchanan Read. An elegantly-illustrated octavo volume, uniform with the Artist's edition of Gray's 'Elegy' and Goldsmith's 'Hermit.' Cloth, $3.00; alligator, $3.50; morocco, gilt, $4.50; tree calf, $7.50.

THE HERMIT.

A Ballad. By Oliver Goldsmith. Profusely illustrated. Engraved by Fred. Juengling. Uniform with the Artist's Edition of Gray's 'Elegy,' and Read's 'Closing Scene.' 8vo, cloth, $3.00; alligator, $3.50; morocco, gilt, $4.00; tree calf, extra, $7.50.

GRAY'S ELEGY.

An Elegy written in a Country Churchyard. By Thomas Gray. *Artist's Edition.* 22 elegant Illustrations, 8vo, cloth, $3.00; alligator, $3.50; morocco, gilt, $4.50; tree calf, extra, $7.50.

Works of Reference and Library Reading in Holiday Bindings.

WORCESTER'S UNABRIDGED DICTIONARY. Thoroughly revised. Sheep, $10.00; half Turkey morocco, $12.00; half Russia, $12.00.

LIPPINCOTT'S PRONOUNCING GAZETTEER OF THE WORLD. Royal 8vo, sheep, $12.00; half morocco, $15.00; half Russia, $15.00.

LIPPINCOTT'S PRONOUNCING BIOGRAPHICAL DICTIONARY. By J. Thomas, M.D., LL.D. 1 vol., imperial 8vo, sheep, $12.00; half morocco, $15.00; half Russia, $15.00.

CHAMBERS'S ENCYCLOPÆDIA. A *new edition.* Vols. I. and II. ready. *Entirely revised and rewritten.* Complete in 10 vols. Price, per vol., cloth, $3.00; cloth, uncut, $3.00; sheep, $4.00; half morocco, $4.50.

ALLIBONE'S QUOTATIONS. By S. Austin Allibone, LL.D. Complete in 3 vols.

1. POETICAL QUOTATIONS.
2. PROSE QUOTATIONS.
3. GREAT AUTHORS OF ALL AGES.

Price, per set, in cloth, $9.00; half Russia, $12.00. Each sold separately.

ALLIBONE'S CRITICAL DICTIONARY OF AUTHORS. By S. Austin Allibone, LL.D. 3 vols., imperial 8vo, extra cloth, $22.50; sheep, $25.50; half morocco, $31.50; half Russia, $33.00.

THOMAS'S MEDICAL DICTIONARY. By Joseph Thomas, M.D., LL.D. Imperial 8vo, extra cloth, $5.00; sheep, $6.00.

UNITED STATES DISPENSATORY. (New) 16th edition. By Wood, Remington, and Sadtler. Price, in extra cloth, $7.00; best leather, raised bands, $8.00; half Russia, raised bands, $9.00.

BULWER'S NOVELS. Library edition. Complete in 47 vols. 12mo, cloth, gilt top, $58.75; half calf, gilt extra, $117.50. Lord Lytton edition. Complete in 25 vols. Large 12mo, price, per set, cloth, $31.25; sheep, $43.25; half morocco, new style, gilt top, $62.50; half calf, $62.50.

PRESCOTT'S WORKS. New Popular edition, at a greatly reduced price. Edited by J. Foster Kirk. In 15 vols. 12mo, price, per vol., in new style cloth binding, $1.50; in sets, cloth extra, $22.50; half calf, $37.50.

THE MERCHANT OF VENICE. Vol. VII. of the Variorum Edition of Shakespeare. Edited by Horace Howard Furness, Ph.D., LL.D., L.H.D. Royal 8vo, cloth extra, gilt top, $4.00. Previously issued: 'Romeo and Juliet,' 'Hamlet' (2 vols.), 'Macbeth,' 'King Lear,' and 'Othello.'

GARRETSON'S WORKS. "Thinkers and Thinking," "Brushland," "Hours with John Darby," "Odd Hours of a Physician." Sets, 4 vols., 16mo, extra cloth, in box, $5.50.

THE WRITER'S HANDBOOK. A Guide to the Art of Composition. 12mo, half morocco, $2.50; half Russia, $3.50.

READER'S REFERENCE LIBRARY. 9 vols., 12mo, half morocco, gilt top, in box, $22.50. Each volume sold separately, as follows: The Writer's Handbook, $2.50; Brewer's Reader's Handbook, $3.50; Brewer's Dictionary of Phrase and Fable, $2.50; Brewer's Dictionary of Miracles, $2.50; Edwards's Words, Facts, and Phrases, $2.50; Worcester's Comprehensive Dictionary, $2.50; Roget's Thesaurus, $2.50; Ancient and Modern Familiar Quotations, $2.50; Soule's English Synonyms, $2.50.

HALF-HOURS WITH AMERICAN HISTORY. Selected and arranged by Charles Morris. 2 vols., crown 8vo, cloth, $3.00; half morocco, $5.00; three-quarters calf, $6.50.

HALF-HOURS WITH THE BEST AMERICAN AUTHORS. Selected and arranged by Charles Morris. 4 crown 8vo vols., cloth, $6.00; half morocco, $10.00; three-quarters calf, $13.00; 8vo size, 4 vols., half cloth, $16.00.

HALF-HOURS WITH THE BEST FOREIGN AUTHORS. Selected and arranged by Charles Morris. 4 vols., crown 8vo., cloth, gilt top, $6.00; half morocco, $10.00; three-quarters calf, $13.00.

*** *For sale by all Booksellers, or will be sent by the Publishers, free of expense, on receipt of the price.*

J. B. LIPPINCOTT COMPANY,

715 and 717 Market Street, Philadelphia.

The Nation.

NEW YORK, THURSDAY, DECEMBER 20, 1888.

The Week.

AMONG the telegrams from Paris last week on the financial collapse of the Panama Canal Company, was one saying that the Government would not step into the company's shoes and undertake the completion of the canal, because there was an understanding with the United States in the year 1880 that the latter would not interfere with the work so long as it remained a private enterprise. The corollary of this proposition was, that if it became a Government enterprise, the United States would look upon it as an infringement of the Monroe doctrine. We have no doubt that this is a controlling consideration with the French Government, for, whatever their own diplomatic correspondence of the period may disclose, all the public documents on our side concur in the opinion that governmental control on the part of any European Power or combination of Powers would be inadmissible. We may cite President Hayes's special message to Congress on the 8th of March, 1880, and President Garfield's inaugural message on the 4th of March, 1881. The language employed by the latter is substantially a permit on our part to the Lesseps Company, or any other private undertaking which shall have obtained the requisite authority from the Columbian Government, to make a canal if it can. It is equally a notification to the world that we could not allow a foreign Government to make a lodgment on the Isthmus, where it would necessarily stand, with force and arms, between our Atlantic and our Pacific coasts. This is the position which we hold officially, and it is the position which all parties and factions sustain. Public opinion is unanimous on the subject.

We cannot doubt that this is a consideration of the greatest weight with the French Government, and that it will spare them a great deal of embarrassment in dealing with a desperate situation at home. The stock and bond holders of the Lesseps Company might be strong enough to overcome the reluctance of the Ministry to take up the work if there were not a stronger opposing force in sight. There is but one alternative. If the French Government will not step into the shoes of the bankrupt corporation, some new company must do so, or the work must be abandoned and the money already spent must be lost. So far as the Lesseps Company is concerned, it is probably lost already; for it is extremely doubtful whether a syndicate of capitalists can be found or formed in the world who will pay more than a nominal price for the débris on the Isthmus on condition of completing the work. There are still two engineering problems of great magnitude unsolved, namely, the control of the floods of the Chagres in the rainy season, and the supply of water to the upper level of the lock-canal in the dry season. No new company will put up money until a clear understanding is obtained on both these points. The former is the more important of the two. With unlimited means, a sea-level canal can be built, but it is not certain that the Chagres can be controlled. The river crosses the line of the canal at twenty-two places; at times it rises forty feet in a few hours. With anything less than a dam of unexampled size and strength, it would put the canal in constant jeopardy, and might destroy it in a few hours. Whatever the future may have in store for this profligate and ill-starred enterprise, it seems certain that holders of both shares and bonds (except those of the lottery loan for which deposits have been made with the Crédit Foncier) will lose their entire investment.

We are told that Mr. Huston, the Chairman of the Indiana Republican Committee, has been covered with ridicule because he has been a candidate for a "Cabinet position," and tried to get a resolution through the Committee endorsing him for the place. We do not see any good cause for the ridicule, however, except the fact that his campaign contribution was only $10,000, with which he met some of the Committee's bills. It is, of course, absurd for a man of his experience to expect a "Cabinet position" for so small a sum as this, in these days when election expenses are so heavy. He must have been dreaming when he thought of getting even the War Department for that sum. We do not believe that it would, in the present state of the market, bring anything better than a South American mission, or possibly a consul-generalship.

Without meaning to speak lightly or disrespectfully of a man who is "worth about $15,000,000," we must observe that we think Mr. Wharton Barker, or his friend Col. W. B. Crooks of Philadelphia, is very bold to expect to get the Secretaryship of the Treasury for $41,000. We are sure Gen. Harrison will not dispose of it to any man for any such sum as that, and particularly to a man who, if he has $15,000,000, could pay twice that amount without feeling it. If we are not greatly mistaken, John Wanamaker of Philadelphia would pay more than twice as much for the Post-office, which is not worth half as much as the Treasury. In fact, Gen. Harrison will make a great mistake if he lets any "Cabinet position" go for less than $100,000. The War Department is worth that, and the Navy say $150,000; and we would not, were we in his place, put any man, no matter who he was, in the Interior, Treasury, or State Department for less than $200,000 each. If the applicant has not paid as much as that to the last campaign fund, he can give his note for 1892. Wharton Barker, though bent on eminence, has evidently a very frugal mind. He wants cheap greatness, but he cannot have it in this Republic, we trust.

Apropos of Wharton Barker, were not the Union League Club's resolutions of Thursday aimed at him and Wanamaker, as well as at the wretched Platt of this city? They were excellent of their kind, a better piece of work than the Union League Club has done for many a day. One of them "warmly protests" against "the studied efforts which are being made with undisguised impertinence to force his [the new President's] hand, and to put upon him clamorous applicants for places in his Cabinet, on the ground of alleged partisan services, or pecuniary contributions, or local control." This sounds like the better days of American politics, and will meet with a hearty response from every man who loves his country intelligently, but it certainly covers two-thirds of the gentlemen who are now in the field as candidates for "Cabinet positions." At least this proportion plead "partisan services, or pecuniary contributions, or local control." It ought to be not only possible for Gen. Harrison, but incumbent on him, to say to a candidate who claimed a place in return for money paid into the party treasury, that if he really wished an office, it was most unfortunate that he should have made a large pecuniary contribution, as this of course made his appointment impossible; that it would have the appearance of a sale, and, in point of fact, would be the sale of a place of trust under the Government, and therefore probably an indictable or impeachable offence under Section 5502, U. S. Rev. Statutes. Anyhow, if the President did not violate the letter of this section in giving an office in return for contributions, he would certainly violate the spirit of it, and a man of Gen. Harrison's character would certainly make no distinction between these two things.

Senator Hiscock was very much stirred up by some remarks of Senator Berry on the proposed increase of duty on cotton ties. Mr. Berry had stated that the tax proposed by the Finance Committee would amount to twenty cents for every bale of cotton produced. Mr. Hiscock contended that the ties could be sold and were sold in Liverpool, after the cotton was unbaled, for two-thirds of their original cost, so that the tax was only seven cents a bale. Mr. Berry did not understand the facts to be such as Mr. Hiscock had stated, but "if they were true," he said, "the argument of the Senator is that instead of robbing the farmers of the South of twenty cents a bale, we are robbing them of only seven cents a bale, and therefore we have a right to take this small amount because it is small." It had been previously stated and admitted that there was no manufacture of cotton ties in this country, and it was stated in the title

of the bill under discussion that it was a measure "*to reduce taxation.*" The proposed increase of duty from 35 per cent. to 108 per cent. was, therefore, a case where untruth had been added to robbery, but Mr. Berry only mentioned robbery. This characterization excited Mr. Hiscock to a high pitch. He said that he had heard that cry about the robbery of the tariff on the hustings in the campaign, that a verdict had been taken upon it before the people, that the verdict was "largely in favor of a protective tariff," and so he didn't want to hear any more of such talk for four years to come, when there would be a chance to try it over again.

The illogical position of the honorable Senator from New York can be easily shown without wandering very far from his own doorway. He is a member of the Finance Committee which reported this bill. Among the provisions to which he assented is one which reduces the duty on refined sugar about 50 per cent. This clause was explained and defended by Senator Allison in terms which implied that the present duty on refined sugar amounted to robbery, and the robbery of very poor people. He did not use the word robbery, but what he said was that the House bill, which reduced the duty much less than the Senate bill, "legislated $6,000,000 into the pockets of the Sugar Trust." If that is not robbery under the forms of law, perhaps Mr. Hiscock and Mr. Allison can explain to each other, or to the public, where the difference lies. Now, suppose that some Senator gets up when the sugar schedule is reached, and declares that since the people have given a verdict "largely in favor of a protective tariff," therefore nobody has a right to say that the Mills bill legislates $6,000,000 into the pockets of the Sugar Trust, or that the present tariff gives that direction to double that sum of money. Suppose that Senator Payne has an interest in sugar-refining as well as in structural-iron making, and objects to any reduction in the duty because the people have passed upon these questions in the election. Suppose that he or some other Senator proposes to increase the duty 50 or 75 per cent., giving the same reasons. It is not improbable that both Mr. Hiscock and Mr. Allison would call it robbery. If they did not, they would certainly consider it such. But whatever Mr. Hiscock may consider it or call it, he will be compelled to hear the thing called by its right name a great many times before the next four years roll around. The Constitution has not limited tariff discussions to four-year periods, nor has it given to one party the exclusive right to choose the terms of the debate.

Now that the Democrats want to admit New Mexico as a State, the Republicans object to the proposition, and a good many party organs, which either are ignorant themselves or presume upon the public forgetfulness, represent the project as having always been a nefarious Democratic scheme which the good Republicans have always fought. Thus the Philadelphia *Press* says that "the Democratic politicians have been trying to make it a State for very nearly forty years," concealing the fact that it is only about a third of forty years since Democratic politicians were opposing, and Republican politicians advocating, its admission. In the Forty-third Congress the Republicans had 49 of the 74 Senators, and 195 of the 292 Representatives. At the first session of that Congress the House passed a bill for the admission of New Mexico by a vote of 160 to 54, and at the second session the Senate also passed the bill, although it was happily so amended in the closing days of the session that it fell to the ground between the two branches. This was the last serious effort that has been made in the case of New Mexico, and the Republicans must bear the shame which all candid people now confess was involved in the proposition to give what the *Press* properly calls a "half-breed, unprogressive population" equal power in the United States Senate with New York and Pennsylvania, simply because, as New Mexico then seemed likely to be Republican, the dominant party thought this an easy way of strengthening its hold upon the country. It is pleasant to find that Republican organs now treat with respect an argument against the admission of New Mexico which was spurned with contempt by Republican advocates of the scheme in Congress fourteen years ago.

The Wheeling *Intelligencer* suggests that the name of its State be changed from West Virginia to Kanawha. It holds that every State should have a distinct name, a well-sounding name, a name taken, if possible, from some distinctive feature of its own, and, if feasible, a name which preserves some rich native Indian name—all of which requirements are met for West Virginia by Kanawha. Every right-minded American will wish the *Intelligencer* success in its most commendable effort to bring about a reform which was contemplated, but unhappily not carried through, when the State was formed. One good effect of the change in West Virginia's case might be to persuade Washington Territory to become the State of Tacoma, and Wyoming to take on another designation, and to prevent the admission of two States called Dakota—all things earnestly to be desired.

The *Voice* figures out the Prohibition vote returned in 1888 as nearly 250,000, against a trifle over 150,000 in 1884, but it claims that the vote actually cast this year was some thousands larger, charging election officers of both the old parties, in North and South alike, with having suppressed the record of a good many Prohibition ballots. As the total for St. John in 1884 contained many thousands of votes from men who did not believe in prohibition, but who supported that party because they were unwilling to cast their ballots for either Blaine or Cleveland, while Fisk received no such support this year, it seems reasonable to suppose that the genuine Prohibition vote has doubled since 1884. But the outlook for the future of the party cannot be considered encouraging. One-eighth of the total vote for Fisk was cast in this State, but the Prohibition vote in New York this year was nearly 12,000 less than last year. Moreover, everybody can see that if it had sunk still nearer to zero, the outlook for the cause of temperance in this State during the next three years might have been much more promising than it now is. Indeed, Connecticut is the only State where the party has really thrown its influence on the side of temperance. The Republicans of that State having nominated a champion of the saloons, it seems clear that the running of a Prohibition candidate for Governor took away from Bulkeley many votes which might have been retained if the only alternative for dissatisfied Republicans had been the Democratic ticket, and thus prevented the disgrace of Bulkeley's receiving a plurality of the popular vote—although unhappily he is to get the office through the Legislature. But with this exception we know of no State where the practical effect of running a Prohibition ticket was beneficial to the cause of temperance; and so long as the Prohibition party occupies this attitude, there is little probability of its becoming a power.

As nearly as can be estimated, the number of women who voted for School Committee in Boston on Tuesday week was about 17,000, being 80 per cent. of the number registered. The number registered fell over 5,000 short of the number assessed, and there seems no doubt that this falling off occurred among the Catholics, the influence of the Church having all along been thrown against the participation of women in politics. While no analysis of the woman vote is possible, it seems clear that an overwhelming majority was cast on the Republican side. So long as the Catholic Church maintains its present attitude on the question, the effect of extending the suffrage to women in Boston and elsewhere will naturally be to strengthen the Republican party. Once convince the politicians that this is the state of the case, and the prospect of securing municipal suffrage, and indeed full suffrage, for women will be greatly improved. Many students of the subject have held that the movement would ultimately be carried to success through being taken up as a party measure, and it is at least possible that Massachusetts will ultimately give woman the ballot because the Republican politicians have become convinced that they can in that way strengthen their party.

Nearly twenty years ago a strong attempt was made to commit the Republican party in Massachusetts to woman suffrage. The advocates of the cause held a convention in Boston September 29, 1870, at which they resolved to seek "recognition" from the approaching conventions of the two great parties. A committee accordingly presented a memorial to the Republican Convention, and asked the adoption of a resolution declaring that the party was "heartily in favor of the enfranchisement of woman, and will

hail the day when the educated intellect and enlightened conscience of the women of Massachusetts find direct expression at the ballot-box." This appeal provoked an animated discussion, and the advocates of the resolution were hopeful of carrying it, but they were finally beaten by a vote of 196 to 139. The woman-suffragists next appealed to the Republican Legislature at its meeting the following January, and came still nearer success there, a motion to submit a constitutional amendment striking the word "male" from the clause relating to the electoral franchise being only defeated in the House by the casting vote of the Speaker. This was the high-water mark of the movement, and since 1871 it has pretty steadily lost ground in Massachusetts, until revived by the recent Boston incident, which may easily prove to have made it again a burning issue.

The petition of certain actors for protection from the ruinous competition of the pauper actors of Europe may be the means of arousing men in other professions to make a similar request. There was a time, a few years ago, when journalists might have joined in a general movement of this kind, but the profession has become so thoroughly "Americanized" of late years that foreign talent, if it be educated, is in slight demand. The language and style in which the "successful" American papers are written constitute of themselves an almost insurmountable bar to all foreigners. They can only be mastered by a residence of many years in this country. English theatrical managers declare that the "real reason why English actors are monopolizing the American stage is that they speak English, which the average American actor does not." That is the difference between the theatrical and journalistic professions. Anybody can see by a mere glance at the most successful newspapers of America, in this city or elsewhere, that there is no English monopoly of the profession at the present time.

Hard times appear to be in store for the International Company of Mexico, at least so far as its operations in Lower California are concerned. The Mexican Government sent out a special agent some months ago to investigate the International's affairs, and he has just published—or rather the Government has, in the *Diario Oficial*—his report, which is of a most damaging character. He visited all of the colonies established by the International, carefully compared the state of things in each with the official returns which the company had made, confronted the lists of colonists with the actual inhabitants he found, examined deeds and mortgages, and, in fact, made a thorough study of the situation. He charges that the company's surveys are largely fictitious; that it has not kept to the terms of its contract in either the number or the nationality of its colonists actually in the Territory; that it has sold lands in larger sections than permitted by its charter; that it has parted with some of its rights under the concession granted it to other corporations, and has done this in an illegal manner; that it has sold land to aliens in violation of the law; and that it has unlawfully taken possession of lands, not only not granted to it, but actually owned and occupied by Mexican citizens. Any one of these specifications, if sustained, would justify the Mexican Government in annulling the International's charter. No official step in that direction has been taken as yet, but the publication of the report in the Government organ may be taken as a notice to the International that it must satisfactorily dispose of the charges or suffer for it. The only defence thus far made by the company is a violent attack upon the capacity and honesty of the agent. It admits, also, that some of its official reports have been confused and misleading, though not, it maintains, dishonest.

The work of the Commission sitting in London on "Parnellism and crime" apparently entered on a new stage of indefinite length on Wednesday week, on the announcement of the Attorney-General that he was going to call witnesses as to the condition of counties of which he had made no mention in his opening address. Under this programme, he may go over every county in Ireland except two. The court and the Parnellite counsel protested vainly. The object of this prolongation is probably two-fold. The proving of the long catalogue of crimes and outrages, under the nose of the English public, is expected to have a good political effect in strengthening the hands of the Government and helping it at "by-elections"; and then it defers, until the public mind is saturated with these horrors, the proof of the genuineness of the Parnell letters which form the *crux* of the whole investigation. The general impression, however, we believe, in London now is that the *Times* is playing a losing game, that its confidence in the authenticity of the letters is gone, and that it is simply trying to make a masterly retreat. The result of the Holborn election shows clearly that, even in the metropolis, the investigation is damaging rather than helping the Unionist cause.

Monday's debate in the House of Commons revealed the extreme perplexity of the Ministry about Suakim. Lord Salisbury is on record as thinking that Egypt would do well to evacuate it; but he now maintains that he only said this as a private person, and that it is open to him as Prime Minister to hold a different opinion. The Opposition are pressing the Government to know whether it will allow another attack on the Arabs at Suakim, even if it endangers the lives of Emin Bey and Stanley; but they can get no positive answer, probably because it has not made up its mind. Nor would it be easy to explain the use of driving away Osman Digna's forces from the town if they are not to be pursued into the interior and prevented from coming back again. It must be admitted, however, that some doubt is thrown on Osman Digna's story of the capture of Emin Bey by the fact that he had no writing to show from Emin or Stanley. If either of them were a prisoner, he would eagerly embrace an opportunity to communicate with the European world, such as his captors could have offered him, and such as it would have been to their interest to offer. Osman Digna has sent in a paper, which he says was found on Stanley, as proof positive that Stanley has been captured; but he could just as easily have obtained a letter from Stanley himself, which would have settled the matter.

A writer in the *Figaro* calls attention to recent publications of the German African Colonization Society. Dr. Max Büchner, formerly German Consul at Cameroon, for instance, in his "Sketches and Reflections," proposes that if the Society "finds an opportunity to buy slaves in the interior, it should do it, as it will improve their lot. To the English missionaries must be left the sophism of talking of liberating, instead of buying"; and he suggests that the Society should "purchase their prisoners of war from the tribes in the interior, and use them as serfs held to labor. If it binds itself not to sell them, it is all that a reasonable humanity can ask." Another writer, Herr Zoller, says, in a book dedicated to Bismarck, that the negroes ought to be told that if they will not work for Europeans they must starve; and still another, Herr Hermann Bibo, thinks that in trying to civilize the negroes the children should be totally separated from the parents, and become the property of the planters. The truth is, that it is almost impossible to prevent Europeans who go to Africa for trading purposes, or with the view of making money, from thinking of some sort of negro slavery. The labor difficulty in those climates is in all undertakings a very serious one; the negro is able-bodied and enduring and submissive as no men of any other race are; and the sight of him basking in the sun and living on yams is more than an ordinary capitalist can bear.

There is a very curious piece of legislation at this moment before the Austrian Reichsrath—neither more nor less than the application of the law of primogeniture, which governs the descent of landed property among the nobility, to the farms and other property of the peasantry. Under the bill now under discussion, at the death of the head of a family his land and the means of cultivating it would all go to the oldest son. The promoters of the measure seek in this way to prevent the further division of the soil, which they think is working so much mischief in France, while its opponents maintain that it would enormously increase the number of the disinherited and penniless class, and drive the younger children into the ranks of Anarchy. The tendency in Austria is all towards the disappearance of small proprietors. The great landholders ruin them by competition or buy them out, and this bill would make an end of them, if it passed.

AN EXTRA SESSION.

PROBABLY most of the matter telegraphed from Indianapolis daily, as to the sayings and thinkings of the President-elect, is pure invention. It is very likely, however, that he did intimate on Monday, as several newspapers report, that an extra session of Congress would probably be necessary. The progress making on the Tariff Bill in the Senate is so slow that it is now almost certain that no measure for tax reduction will be passed before the 4th of March. A measure of such importance, going to the roots of the only vital party differences of the time, must be debated and fought over *ad libitum*. A difference of one-tenth of a cent per pound in the duty on structural iron, for example, is of sufficient consequence to warrant and justify two or three days' discussion. It is important in a pecuniary sense, it is even more so in an educational sense; and if it turns out, as in this case, that the Senate Committee were in the wrong, and had to acknowledge that they were so, the value of the debate becomes clear to everybody. But the possibilities of debate and delay are equally great on every item in the bill, and upon some vastly greater. The holiday recess is approaching. After Congress reassembles, there will be scarcely eight weeks left for all the necessary work of the session. The Tariff Bill must give way to the appropriation bills, at all events. The end of the session will find all the problems in finance that confronted President Cleveland a year ago confronting President Harrison, but in an aggravated form.

The surplus anticipated in December, 1887, is now a reality. It has exceeded the estimate by six and a half millions. It has been kept within bounds by large disbursements for premiums on the public debt, $26,000,000 having been expended for this object during the year, of which $8,000,000 was for premiums on the sinking-fund bonds, and $18,000,000 for those appertaining to the surplus proper, leaving a Treasury balance on hand December 1, 1888, of upwards of $76,000,000. This surplus, the Secretary of the Treasury says, will be augmented by $75,000,000 on the 30th of June, 1889, so that Mr. Harrison will have to face an accumulation of more than $150,000,000 in the first four months of his term.

In the presence of facts of such magnitude, the new President can hardly avoid calling an extra session of Congress. He will not court the responsibility of continuing to buy bonds at advancing premiums when there is a mode of avoiding that responsibility. It is the duty of Congress, and not of the Executive, to dispose of surpluses. No blame can attach to the latter for playing into the hands of bond speculators if all other means have been exhausted. Much blame will attach if the most obvious means has been left untried. The calling of an extra session is the lawful and only reasonable solution of the difficulty.

It follows, of course, that the problem of tax reduction will be taken up where the present Congress leaves it. A new bill will be reported in the new House and a new debate will begin on the principles which should govern the policy of the nation. That the next House is Republican by a small but sufficient majority seems to be now conceded on all hands. It would have been a great misfortune if it had been otherwise. It is most important that the responsibility for all that happens in the next two years should be upon one party, and not upon two. A divided responsibility is no responsibility at all. What is wanted above all things is that the Republicans should play their game out, whatever it may be. They have carried the election in the mode prescribed by the Constitution. They have the right to govern, and they ought to show their hand. Holding both branches of Congress and the Executive, they cannot avoid showing it, whereas with only one house they would simply be at loggerheads with the other party, and would always be able to put half the blame on their opponents.

It is for the interest of the Democrats, no less than for the interest of the country, that the Republicans should be vested with the entire responsibility of the national finances. If the Republican party is wedded to a tariff policy that the country will not much longer tolerate, it is necessary that that fact should be made clear. Nothing can make it clear but full power to carry their policy into effect. If they are ridden by Trusts and combines and special interests to the degree that their opponents believe and affirm, it is best that all doubts and cavils should be removed. A single session of a Congress wholly controlled by them will throw light upon this question. And since time is important for national training and understanding of the question at issue, the need of an extra session must be regarded as a fortunate circumstance.

BALLOT REFORM IN OPERATION.

THE most disingenuous and unfounded charge which the opponents of ballot-reform legislation bring against every adequate measure that has thus far been proposed is that, as set forth in that particular bill, the remedy is too complex. We are in favor of the change, they say, but give us the remedy in a more simple form. There is nothing new in this objection. It was heard in Australia when the present admirable system of that country was proposed. It was heard again in England when the same system, with slight modifications, was proposed there. It was heard in Wisconsin when the present partial application of the same system was under consideration. It was heard in Kentucky when the new law for the city of Louisville, a much fuller application of the same system, was before the Legislature. It was heard in Massachusetts last year, when the first complete application of the system to the elections of an American State which has been made a law, was under discussion. It has been heard in New York almost continually from the outset of the ballot-reform discussion, and was the burden of the misleading and ill-informed argument against the system which Gov. Hill put into his veto of the Saxton-Yates bill.

In every instance it is a pretence. The men who use it either have not studied the question, or they are at heart against the reform. In no instance has this charge of complexity been heard after the law has gone into effect—a fact which is of itself a conclusive answer to the objection. In Australia there is only one opinion, and that is that the law is in every way a success. There is not the slightest complaint of delay or difficulty in its working, and the testimony of all authorities is that it has stopped bribery and intimidation at the polls, and secured a secret and honest ballot. The verdict in England is the same, as set forth in an interesting and valuable article by Mr. Edwin Goadby, an Englishman, in the December number of the *Political Science Quarterly*. Mr. Goadby gives an exhaustive history of the ballot in England, sums up the discussion which led to the adoption of the Australian system, and, in speaking of its practical working, says:

> "Considering the ferocity of its assailants and the zeal they displayed in prophecy, it is very remarkable that the ballot has so generally and completely fitted itself into the British Constitution. It has worked admirably. There is no wish for any change. . . . The ballot itself is rapidly and quietly taken; and the voter is often surprised to note how quickly the votes are recorded and the voters pass away, whilst the exterior of a polling-station is apparently so lifeless . . . English political opponents never before invented so many dreadful things, to discover that not a single one of them was true, as in the case of the ballot."

We commend this failure of prophecy to those people who have been misled by Gov. Hill's veto message. That is filled with predictions of confusion and disaster which have no real foundation in the provisions of the measure he was pretending to consider. In speaking of the illiterate voters, concerning whom Gov. Hill is especially anxious, Mr. Goadby makes this interesting statement:

> "Blind men are as common in some districts as illiterates, and they are passed on to the care of the policeman at the door. Instead of their infirmity proving a hindrance to them, they are delighted to exercise the franchise. Illiterates are not quite so eager to vote, except during municipal contests; and when they have children attending board schools they have been known to practise reading and filling up, to escape that sense of inferiority they might otherwise feel. Further, where there are only two or three names on a ballot paper, the position of the candidate for whom an illiterate wishes to vote can easily be made clear to a voter by his friends before he enters the booth."

Finally, Mr. Goadby gives this emphatic testimony upon the question of complexity and upon the abolishing of bribery:

> "It is admitted that the English system is simple, protected from fraud, and absolutely successful. There is positively no record of attempts to defeat its secrecy or to organize fraud, and if they were made they would be instantly discovered and punished. . . . The effect of the ballot on corruption has been very great. Treating and direct bribery were at once diminished by it. It is useless to corrupt unless its effects can be clearly traced; and spending money to purchase votes is simply waste when a voter, demoralized enough to take money, can still vote as he pleases without being found out."

Now, this law, which has proved so simple and so effective in practice, is a perfect labyrinth of complexity compared with any adaptation of it which has been proposed in

this country. How does it happen, then, that it proves so successful in operation? Simply because what its critics call complexity is nothing more nor less than the necessary machinery of the system. The English act is most minute in covering every possible point of doubt or uncertainty in the specifications for working the new system. We do not need so minute a measure here, for we have the ballot already, which England had not; but we cannot hope to secure simplicity and success in the working of any system unless we make the act embodying the methods by which the system is to be put in operation, so specific that fraud and confusion will be guarded against at every point. Any "simple" bill which professed to provide for the introduction of so important a change in our election methods as this is, would be a fraud on its face.

But the English and Australian acts are not the only complex ones which have worked simply and well in practice. The Wisconsin law for the city of Milwaukee is "complex" in the same sense, but it has worked admirably in a municipal and national election, and is pronounced by all authorities to be a complete success. It has made elections orderly, has banished the "heelers" and the "workers" from the polls, and has stopped bribery. The Kentucky act for the city of Louisville, passed last winter, is by all odds the most complex of all the adaptations of the English and Australian acts which have been made in America. Yet, in the interesting account of its working in the first election held under it, which we published last week, the writer, a very competent observer, said: "The law, though apparently intricate, is really very simple, and it worked admirably. The election of last Tuesday was the first municipal election I have ever known which was not bought outright. As a matter of fact, no attempts at bribery were made, and a few comparatively unimportant infringements of the law will be severely handled."

THE COMPETITION OF TRUSTS.

All the arguments that we see or hear sustaining the legality of Trusts, end with the statement that they also contain the germ of competition which will eventually relieve the public of any harmful consequences of monopoly. Usually the Standard Oil Trust is pointed out as an illustration of the truth of the proposition, it being generally acknowledged that the price of oil has declined during the existence of the Trust, and has reached as low a figure as it could be produced for even if there had been no such thing as a Trust. The explanation of this phenomenon is very simple. The Standard Oil Trust never had a monopoly of oil territory or any considerable share of it. Oil territory has, in one sense, been unlimited, that is, nobody knew at any one time what the limit was, nor can anybody assign any limit now. Boring for oil has been open to the public at all times. Here competition has necessarily been free. The exuberance of nature has kept down the price of the article. When oil is found it gushes to the surface, and must be stored in tanks or it will be lost. Storage implies the loss of interest on capital. To stop this outgo the oil must be sold. The greater the aggregate gush, the lower the price. The law of supply and demand comes into play, and the Standard Oil Trust could not prevent it if they would. Even if they owned every refinery in the country, and controlled every avenue of transportation, they could not hold up the price against an accumulation of crude petroleum in their rear. Moreover, their market is largely foreign, and here they come into competition with Russian petroleum, which has lately become formidable. This competition reacts upon the home market powerfully; for although there is a small duty on foreign oil, it is of no consequence, under conditions like those now existing, when the pressure of the earth's yield forces a surplus outward at some price.

A Trust is a monopoly, or not a monopoly, according to the particular circumstances of each case. It is harmful or not according to these circumstances. We may grant that there is nothing illegal in these organizations, without conceding anything as to their effects upon society. One thing is certain, namely, that they are a new thing under the sun, and are accordingly to be judged by their effects, and not by rules or dogmas laid down at a period when no such thing existed. Monopolies have existed from the earliest times, but they have been monopolies of a different character, most commonly established by Governments—whether despotic or free makes no difference. A monopoly of the trade in salt granted by an absolute monarch is the same in its origin and foundation as a monopoly of an invention granted by our Patent Office, although differing greatly in moral character. A monopoly of trade with the East Indies or with the Hudson's Bay territory is of the same nature, being a grant from the supreme power of the State.

Trust monopolies are new things under the sun in the fact that they do not have their origin in any act of Government. They are, as Mr. Blaine said, "largely private affairs." He might have said wholly private affairs. They are an outgrowth of modern development of the means of communication. It has become possible for anybody to know the state of the markets and the conditions of supply and demand all over the world for any particular article. Some articles are of such diverse production, or are produced in such large quantity, that they cannot as yet be controlled by any aggregation of capital or by the possession of the most accurate knowledge of their quantities. Others, however, are of such a character, as to sources of supply or manipulation of product, that they can be controlled. All these are gradually passing under such control, and the process involves a redistribution of the rewards of industry of the whole people on a basis as artificial as a government monopoly could produce.

To say that competition will overthrow Trusts is a wholly unwarranted assumption. It may overthrow some and not others, and it may overthrow none. If it had been said in the beginning that competition would prevent the formation or successful operation of any Trusts whatsoever, that idea would have met with general acceptance, because it would have been in harmony with all experience; but now that experience has proved the contrary, the burden of proof is shifted upon the other side to show *how* competition will do the thing which is admitted to be best for the interests of society. This best thing is that no trade should yield unfair profits, because that implies that all others should yield less. By fair profits is meant the return that would be yielded under the influence of absolutely free competition, under which nine-tenths of mankind must always earn their living. In this discussion nobody can be allowed to indulge in generalities, because the Trusts have overcome generalities at the outset. Having abolished competition, they are required to show how it will come back in spite of everything they can do to prevent it. What remedy shall be devised to abolish them is another question. Probably no one remedy will altogether suffice; but in order that any may be adopted, it is first necessary to know where we stand.

THE WOOING OF CANADA.

Mr. Butterworth's resolutions to authorize the President to institute negotiations "looking to the assimilation and unity of the people of the Dominion of Canada and the United States under one government—such unity and assimilation to be based upon the admission of the several provinces of the Dominion, or any one of them, into the Union of States upon the same terms and equality with the several States now composing the Union," will probably strike the people of the Dominion as a too hasty change of front after the wrangle of the past three years over the fishery question. Mr. Butterworth would probably acknowledge that the present time is not propitious for anything more serious than a debate in Congress on his resolutions. It is not likely that they will even be debated on the other side of the line, and it is doubtful whether Congress will take up the matter seriously at this session. Mr. Butterworth has been the spokesman of commercial union in the House as Mr. Sherman has been in the Senate, and both are probably moved by the same impulse. The motive is commendable, and the project may be feasible at some future time; but we consider the present a most inopportune occasion for bringing it before the public—inopportune here as well as in Canada.

The opponents of political union—or annexation as they call it in Canada—are nearly all the influential classes in the Dominion. These are opposed also to commercial union, because they look upon the latter as a stepping-stone to the former, which indeed it is. Nevertheless, there is a respectable body of opinion in Canada, favorable to commercial union, which is not ready to entertain the thought of political union. Mr. Goldwin Smith explained the situation very candidly

in his speech at the Chamber of Commerce dinner a few weeks ago. He said that the Commercial Union Club of Toronto embraced members of both political parties in Canada—the Conservatives, or Government party, and the Opposition—and that no question of political union was allowed to interrupt the harmony of their movement. No such question was ever raised or considered in their councils. They were making gains, especially among the agricultural classes, because they were able to show advantages of a material sort from commercial union. He believed that the idea would eventually, and at no distant day, prevail in the Canadian elections, despite the opposition of the protectionists and the office-holding class, if it were not mixed up with the question of separation from Great Britain in the political sense. That question, he said, should be left to the operation of time and natural causes. If the two countries should at some future period, by free choice, decide that political union was for their best interests, he believed that Great Britain would not only interpose no obstacle, but would bless the union. But all such talk was now premature or worse, because it was an obstacle to a fair and unbiassed consideration of commercial union.

If Mr. Butterworth's motion is premature, and therefore not helpful, on the other side of the line, how is it to be regarded on this side? If the protectionists of Canada are opposed to both kinds of union, what view will the same class take of it here? Mr. Butterworth is himself a protectionist of a rather pronounced type. In the recent campaign he acknowledged himself to be the first discoverer of the quotation from the London *Times* about the Celt who is serviceable to England only when he emigrates to America and votes for free trade. How anybody can sustain at the same time the double rôle of a defender of protective duties on Canadian products and of an annexationist, is one of those mysteries of the human mind that baffle all attempts at analysis. If it is profitable for us to keep out Canadian lumber, coal, fish, salt, and potatoes, or to load them with heavy duties in order to discourage their coming into our markets, how can it be profitable to admit them under articles of political union? Does this mean that the producers of these articles in our own country should be sacrificed for the general good? If so, it would seem to be the requirement of justice that all such persons should receive pensions equal to the amount of their sacrifices.

Mr. Butterworth and those who agree with him, if any, are perhaps protectionists in sentiment merely, not having any pecuniary interest to subserve. Those who belong to the latter class will be heard from to some purpose whenever political union or commercial union becomes a really burning question. The American Fishery Union will claim that they supplied an important part of the ammunition in the Harrison campaign. The lumber barons will want to know whether they are to be cheated out of their share of the victory. The market gardeners along the New England and New York border will be fierce and unyielding in proportion to the smallness of their size. All the interests which derive, or think they derive, an advantage from the tariff against Canada will make the usual proclamation that, if we are to have free trade in these things, we must have it in all; they will transfer their standard to the other camp. This threat, which has been so successfully employed in the past by the wool-growers, by the copper-miners, and by the lumber barons themselves, will rally the other protected classes to their side; and in the end Mr. Butterworth will find himself in an unequal match, contending with his own friends.

MODERN LAW-MAKERS.

THE quality of modern legislators—that is, their standing in the communities which they represent—as well as their fitness for the special work they have to do, is engaging the attention of those philosophers all over the world who are just now studying democracy. That the work of legislation is no longer done in parliamentary countries by the same kind of men who did it fifty, or even thirty, years ago, seems to be admitted on all hands. The *Evening Post* printed the other day a letter from a very competent observer, touching the change which has taken place in this particular in the State of Connecticut, and one passage is so descriptive of what has happened in nearly all the older States that it is worth reproducing:

"In the early part of the present century, during the more rational era of town rule, our grandfathers chose their country squires and prosperous, hard-headed farmers as legislators, and selected them over and over again. Those old-fashioned representatives were doubtless opinionated enough in religious or party matters, but they were rigidly honest, of high personal character, and tried legislators.

"How changed are the Legislatures which the town idea gives us now! The rural constituencies have diminished in population, in wealth, in voting character. The Yankee farmers have, many of them, gone West, and their places have been filled by the foreigner. The tide of rural corruption has swelled until it dashes over the ballot-box and pollutes the very fountain-head of electoral purity. Worst of all in its effect on our Legislatures, the pernicious rotative idea has entered our rural constituencies. The position of a Representative is become a thing of material import, a perquisite to be 'passed around' in the dominant party from session to session. Once holding it is deemed a bar to holding it again, instead of a credential for reëlection. Our town idea, therefore, in nine cases out of ten, gives us at each term a callow, second-rate countryman as a legislator.

"It is before such a House, vitiated by the town idea, that there must come the complex legislation of Connecticut—a State with large cities, great railroad, insurance, and manufacturing interests, and with all the ramified problems that modern civilization imposes on a law-making body."

There is perhaps not one of the old thirteen States which has not this same story to tell, in a greater or less degree. The change at the South has of course been precipitated and emphasized by the war, but it is as visible in New York and Pennsylvania, as in Massachusetts. The politician in all of them — that is, the man who either goes to the Legislature himself or has the greatest influence in selecting those who do go—is much more rarely now than formerly a man prominent in business, or agriculture, or the professions, is much more apt to be an unsuccessful man in private life, and to be unknown or very little known outside political circles. In other words, fifty years ago, as a general rule, communities were governed by men who won their eminence outside politics, or would be eminent if they never touched politics. This is no longer the case. Society, trade, commerce, law, medicine, have parted company with politics, and are more or less in the hands of men who do not share conspicuously in the other work of their time.

A well-known French writer, M. Gaston Jollivet, has recently been discussing this subject in connection with the French Chambers, of course with the usual heat of a French politician. His illustrations in examining the composition of the French Chambers, in its relation to the various callings, as it is now and as it was twenty-five years ago, make rather a dismal showing, even if we leave out of account the numerous charges of corruption which are hurled at the heads of the members. For instance, the bar has, ever since the Restoration, been in the habit of sending its leading men to Parliament. Even under the Empire there were Berryer, Marie, Sénard, and Grévy in the ranks of the Opposition, and, on the side of the Government, Delangle, Baroche, and Chaix-d'Est-Ange, and many others from the very top of the profession. Now the Chamber contains only half-a-dozen of the very obscure, and two of these have been disciplined for professional irregularities. The present leader of the bar, the "bâtonnier," as he is called—M. Durier—could not be induced to go into politics, and neither could his more eminent confrères, Falateuf, Bétolaud, Rousse, and Martini. In the provinces the same story: the lawyers of note stay at home, or are left at home by the people.

The French doctors, too, in bygone days occupied no mean place in the Chamber. Many of the more eminent members of the profession, both in Paris and the departments, were converted into legislators by enthusiastic patients. Men like Bouillaud, Trousseau, Malgaigne, and Trélat were eager to serve, and served faithfully. There are not many doctors in the present Chamber, and none of them conspicuous. One of those who are there has been accused of corruption by the notorious Numa Gilly in connection with the baths of Royat; the charge is probably false, M. Jollivet says, but many people believe it about Dr. Blatin, while they would smile if it were made against Dr. Péan or Dr. Charcot. Turning to finance, the Chamber for the first time does not contain a single regent of the Bank of France, or a director of any leading financial corporation. The prominent merchants and manufacturers are also conspicuous by their absence. In old times the great wine districts, which contain so much of the wealth of France, sent up their leading wine-growers to the Chamber, as the best possible representatives of their industry. In the present Chamber there is only one. The silk industry of Lyons does not elect a single silk-

manufacturer, or the cotton industry of Rouen a single cotton-manufacturer. The great port of Marseilles sends up a crazy old Communist in the person of Félix Pyat.

As to literature and science, the places of the Broglies, of Jules Simon, of Haussonville, Guizot, Villemain, Saint-Marc-Girardin, are occupied by M. Compayré and Dupuy. The retired list of the army no longer furnishes famous soldiers. A major (*commandant*) or two is all the electors get from it, and these unknown to fame, as military men who grow old in the inferior grades are apt to be.

What does it all mean? The Conservatives would, of course, say that it is all due to the Republic, and that if a monarchy were set up, illustrious Frenchmen would come back to politics. But unprejudiced observers say they know better, that the true cause of the change is to be found in a certain jealousy or suspicion on the part of democracy everywhere of men who have risen to eminence in other ways than through popular favor; and they have a great many facts to support them. The mere fact, however, that conspicuous men do not find their way any longer into the Legislature would be of no consequence if they were not missed — if the work of legislation was done as well or better without them. Whether the new phenomenon is to be deplored or not, depends, therefore, on the kind of laws the new men turn out. Legislatures are not made that men who have grown great elsewhere may shine in them. But does the world get on as well without their services as before? This seems to be a question which the next generation will have to answer.

THE SUDAN NEWS.

It is of course possible that Osman Digna has got hold of the Khedive's letter to Emin Bey in some other way than by the capture of Stanley, and that if he were really sure of his game, he would have accompanied it, when sending it to the British commander at Suakim, with some threat or demand. It is also possible that the reports of the successes achieved by the Mahdi's lieutenant, Omar Saleh, towards the equator are exaggerated. But there does not seem to be much doubt that Emin Bey at least has been captured, and that, although the "white traveller" captured with him may be somebody else than Stanley, Stanley's mission is a failure, and he himself is at least in great danger.

It will probably be some weeks before the whole truth comes out; but in the meantime the news, such as it is, will infuse an immense ferment into British politics. The truth is, that the Tories are now face to face with exactly the same problem that Gladstone had to solve when the rising against the Egyptians in the Sudan cut off Gordon at Khartum. It will be extremely interesting to see how they will solve it. If the present Mahdi has got hold of either Emin Bey or Stanley, he will use his power over him to try to extract concessions, such as the evacuation of Suakim, from Lord Salisbury; and Lord Salisbury will have to decide whether he will allow two brave men to be butchered without trying either to rescue them or avenge them by retaliation. Gordon's going to Khartum was not Gladstone's doing. It was Gordon's own act, born of his confidence in his influence over the Sudanese, and of his ignorance of the new spirit of fanaticism which the Mahdi had aroused. He went there believing that his presence would suffice to restore order. When he discovered his mistake, and began to demand help from home, the very facts which made his situation precarious made the task of rescuing him one of extraordinary difficulty. Nobody who saw what it was when Lord Wolseley attempted it can, in his heart, have wondered that the Gladstone Ministry hesitated about entering on it. It proved both the glory and shame of England. Hundreds of valuable English lives were sacrificed, and some thousands of naked savages were slaughtered.

Since then, in spite of all the fresh light which Lord Wolseley's operations have thrown on the subject, nothing has been done to change the situation. No attempt has been made to rescue or succor Emin Bey, whose efforts have been just as heroic as Gordon's, and whose success in maintaining himself alone in the heart of Africa for several years shows him to be, in the very highest sense of the term, a great commander. It is true he is a German, and not an Englishman; but he has really been defending the English cause at his lonely post down there at the equator. He held, as Gordon held, the Khedive's commission, and flew the Egyptian flag; but Egypt is now an English dependency: its troops are under English orders, its debt is managed by English financiers, and its future is absolutely in English hands. The greatest question in Egyptian politics is whether the claim of dominion over the Sudan shall be abandoned or not. The Egyptians would probably have abandoned it long ago, through sheer force of circumstances, if they had been independent. The question with them, if they stood alone, would be to-day, not whether they could reconquer the Sudan, but whether they could keep the Mahdi from coming down to Cairo, as the Shepherd Kings did for their conquest, 4,000 years ago. Nothing, as far as can be seen, stands now between Egypt and a conquest by the dervishes, except the British troops; for it seems to have been demonstrated that the Egyptian army will not stand up against the Arab charge, either in small or great numbers, even under the command of Europeans.

In short, the Egyptian problem is not one whit nearer solution than it was when Gladstone left office. Suakim has been held by a British garrison, but not as a British possession; and it probably could not be held at all without the assistance of a naval squadron, which lies constantly in the harbor, to help the troops to keep the Arabs out. No attempt has been made to occupy any territory outside the walls. No one can venture 500 yards from the fortifications without risk to his life. In fact, the place is besieged. The object of the occupation is said to be to prevent the use of the town and harbor as a slave emporium; and this is achieved, but the cost of this advantage is prodigious, considering that it is now maintained by the best authorities that the exportation of slaves across the Gulf of Aden and the Red Sea is and has long been but a small portion of the whole trade, and that the rack and ruin still wrought in central Africa by the slaveholders is wrought mainly to supply the inland market, that is, upper Egypt and the great oases. The slave-dealers have to make prodigious captures in order that their caravans may bear the losses incident to their long marches and scanty fare.

It will thus be seen that a magnificent opportunity for the display of the courage and statesmanship in which the Conservatives found Gladstone so wanting is now about to be forced on the Tory Ministry, and it will be interesting to see what they will do with it. Either they must submit to having Emin Bey, and perhaps Stanley, killed, and thus eat the humblest of humble pie in the eyes of the Mahdi's followers, or they must sally out and attempt to catch the Mahdi and conquer him. There must be no Gladstonian dilly-dallying with this business. If the Mahdi will not come to be conquered in a convenient place, where there is plenty of wood and water, they must pursue him into his deserts, and show him the difference between being attacked by Radicals and by genuine Imperialists.

THE JOHNS HOPKINS UNIVERSITY.

The *Nation* for January 28, 1875, at which time the plans of the Johns Hopkins University were beginning to take shape, contained a note discussing the possibilities of the new foundation, in which the following sentences occur:

"The endowment may, therefore, be called unprecedented in both its freedom and its liberality. The trustees can found any kind of university they please, and they have thus a power which has never before been lodged in the hands of any body of men in this country. When we first heard of it we confess we felt little interest in it, concluding that we were simply to witness the addition of one more to the huge array of high schools which the country already possesses, in which poorly paid professors would labor year after year in the dull routine of giving a 'university education,' by teaching Latin, Greek, and mathematics, and perhaps a smattering of natural science, to half-prepared boys or girls, or both. But luckily this great endowment has fallen into the hands of men who have a higher idea of their responsibilities, and they intend to use it for the foundation of a real 'seat of learning,' or, in other words, for enabling the country to play its proper part in the best intellectual work of the day, feeling assured that the preparation of boys and girls to earn a livelihood will be abundantly looked after by other institutions. . . . It is a great opportunity, and we hope and believe it will be rightly used."

It did not require many years of the working of the new University to demonstrate the founder's wisdom in leaving the trustees unhampered in their choice of the paths by which the University might be made most conducive to the advancement of learning in this country. The trustees, in their turn, chose for President a man in whose judgment and in whose vigilant energy they could place the most complete reliance, and who has been practically unhampered in determining, with the aid of the Faculty, all the perplexing and many-sided questions which successively confront the directors of a new university, as the trustees themselves had been unhampered in determining, with the aid

of the President whom they had chosen, the broad lines upon which the work of the University was to be built. No one who has taken any interest in the progress of the higher education in this country needs to be told of the outcome. Before half of its first decade had been completed, the Johns Hopkins University was universally recognized to be one of the most potent of the intellectual forces of this country. It was even welcomed abroad, especially in Germany and in England, as a worthy ally of the great foundations in which the highest learning was fostered in the Old World. All this is now a familiar story; but when the new institution was entering upon its career, the most sanguine of its friends could not have expected the work of its early years to be attended with such signal success. We fancy that President Gilman would have been as much astonished as the rest of us if he had been told in 1876 that on the 12th of July, 1883, the leading scientific journal of England would conclude a review of the year's work at the Johns Hopkins University with this sentence: "We should much like to see such an account of original work done and to be done issuing each year from the laboratories of Oxford and Cambridge."

But the service which the Johns Hopkins University has done to the advancement of learning in America cannot be measured by the instruction that has been given within its own walls and the researches that have been carried on by its own members. The standard of university work, throughout the length and breadth of the country, has been advanced in the past ten years with a rapidity and steadiness never before paralleled. That the example of the Johns Hopkins University has been a great stimulus to every college which has taken part in this forward movement, none will question. It is impossible to trace the origin of each particular measure of progress, but every one knows the contagion of a good example, especially when it is emphasized by conspicuous success. When we see a gentleman in Milwaukee endowing with great liberality a laboratory and journal of biological research, we may not be able to assert that the biological work at Johns Hopkins has had anything to do with determining the direction of his munificence; when we see a university in Nebraska issuing a series of historical monographs, we may be unable to trace any connection between this and the work done at Baltimore; when we observe that in the last eight or ten years nearly every one of our stronger colleges and universities has done its best to develop its opportunities for post-collegiate study, it may be impossible to show that this would not have been going on just as vigorously if the Johns Hopkins University had never been instituted. But while things of this kind are not susceptible of downright demonstration, there can be no doubt that the historian of education in America will designate the opening of the Johns Hopkins University as the event which marked the entrance of the higher education in America upon a new phase in its development.

The thirteenth annual report of the President of the University lies before us. It is of the same general character as its predecessors, being chiefly a history of work done and a record of additions to the laboratories and libraries; but it closes with a passage which, though brief and inconspicuous, is full of grave significance to the friends of the University:

"Our only cause of anxiety is one of which you are fully aware—the loss of income from the stocks which were given to the University by its founder. Your wisdom, gentlemen of the Board of Trustees, will no doubt devise some efficient relief. I believe it to be a reasonable expectation that the efforts which you have put forth, and which you have encouraged others to put forth, for the establishment of a university will receive financial support when you are ready to ask for it."

The country-seat of the founder, now within the city limits of Baltimore, and comprising about three hundred acres of land, forms an important part of his legacy to the University, and one which at some future day may have a market value approaching or exceeding that of the railroad securities at their best; but this property cannot now be made a source of income. The great bulk of the available endowment of the University was left to it by the founder in the form of Baltimore and Ohio Railroad stock. Johns Hopkins enjoyed the reputation of being perhaps the shrewdest financier and man of business in the city of Baltimore; and in his will he distinctly recommended the trustees to keep these Baltimore and Ohio shares. It is certainly a striking instance of the irony of fate that the one injunction which the founder laid upon his trustees should have proved, though relating to a matter in which his sagacity was undoubted, to be so ill-judged. The directions of the will on this point were not, indeed, mandatory; but Baltimore and Ohio shares are seldom in the market except in small quantities, so that any attempt of the trustees systematically to diminish their investment in them would—especially in view of the founder's recommendation—at once have excited suspicion, and greatly lowered the market value of the shares. The trustees have thus been in a position of great difficulty; and since they number among them some of the ablest and most successful men of business in Baltimore, and since the whole body has shown the most zealous interest in the welfare of the University, he would be a bold man who should say that the present unfortunate condition of the finances of the University has been brought on by the fault of its managers.

The University is not dependent upon this source of income alone. Other funds of a moderate amount were included in its original endowment, and the trustees have made further investments out of the annual excess of income over expenditure, besides providing buildings and apparatus out of this excess. There is now also a considerable income from tuition fees. But the main source of income has been cut off for the past two years, during which the 15,000 shares of Baltimore and Ohio stock have brought no dividends. How long it will be before matters mend in this direction no one can tell. The use of part of the surplus accumulated in former years has thus far enabled the work of all the principal departments to be continued in full force; but in the nature of the case this cannot go on indefinitely, and the outlook seems to be that, unless it shall receive aid from outside, the University, instead of expanding as it should from year to year, will be compelled to diminish its activity in some of the departments in which its work has been of the greatest service to the cause of the higher learning in this country.

But we feel sure that when the University appeals to the country for aid in its truly national work, the country will show that it numbers among its men of wealth some who are not indifferent to its intellectual glory. The collegiate department of the University may be considered as chiefly of local interest and utility, and the people of Baltimore should be counted on to see that this department does not suffer for want of the necessary funds; but in the benefits of the post-collegiate work of the University, the whole country has shared, both directly and indirectly, without distinction of sections. He would do the greatest possible service to the cause of learning in America at this juncture who should come to the aid of this lusty champion of the highest knowledge while yet its vigor is unimpaired and its courage undiminished; and he who would build a lasting monument to his memory might do well to consider whether he would not be more likely to accomplish this by identifying his name with that of some department of a foundation already famous the world over, than by beginning an entirely new institution of which he cannot foretell the success.

The success of the Johns Hopkins University has not been due simply to its liberal endowment. One may go further, and say that it is not exhaustively accounted for by the wisdom and good judgment of its directors, combined with their ample means. Napoleon used to say that after everything had been provided—men, materials, position—one thing more was still needed to secure victory, viz., good luck. Whatever the sources of the University's success, and whatever defects may be pointed out in its operations, it has somehow succeeded in accomplishing the one thing needful: it has laid hold of the spirit which ought to dominate a true University. This spirit will not embody itself for the asking; we cannot be sure of getting it for the sum of $3,000,000, more or less. We have got it at the Johns Hopkins University, and there are not so many centres of this kind of influence in the country that we can afford the loss or impairment of one of the chief of them. Whether by a single magnificent gift or by the contributions of many men of wealth—in one way or another we are confident that this great people will see to it that an institution which has done so much towards "enabling the country to play its proper part in the best intellectual work of the day" shall not be compelled to slacken its activity or to lower its standard.

CÆSAR BORGIA.

PARIS, November 30, 1888.

M. YRIARTE delights to live in Italy—not so much in modern Italy as in the Italy of the fifteenth and sixteenth centuries. We owe to him various books of great interest—'The Patriciate of Venice in the Sixteenth Century,' written out of the state papers of the archives of the Frari; 'Rimini,' 'A Condottiere in the Fifteenth Century,' 'A Study of the Malatestas,' 'Francesca di Rimini in Legend and in History,' 'Venice,' a great volume on the city of the Lagoons. He publishes to-day a 'Cæsar Borgia,' written with the help of documents found in the archives of Romagna, of Simancas, and of Navarre. There is a legend of the Borgias, and history finds it difficult to separate the fable from the truth in it. "Nothing," says Yriarte, "remains intact of them; the implacable reaction provoked by their crimes has pursued them beyond the tomb; their sepulchral stones, with their pompous epitaphs, have been broken, their images have been mutilated. In Navarre, a bishop of Calahorra, thinking he was accomplishing a pious work, threw away the bones of the Duke of Valentinois; at Ferrarra, the names engraved on the funereal stones have been effaced; traditions are lost, and we do not know to this day where repose the remains of Lucretia Borgia."

Gregorovius was the first who attempted to find the truth in the legend, and great is the contrast between the judgments passed on Cæsar Borgia by him and by Machiavelli.

The author of 'The Prince' sees in the son of Alexander VI. a man of genius, conscious of accomplishing a great work: Gregorovius cannot forgive Machiavelli for representing the Duke of Romagna as the prophetic representative of Italian unity, and will only look on him as a bold and criminal adventurer. "Cæsar," says Gregorovius, "was only a monstrous fruit of nepotism. The development of his power was rapid and vehement, like the growth of a poisonous plant; it embraces only a period of three years."

M. Yriarte seems to place himself somewhere between these extreme views of Machiavelli and of Gregorovius. "Without forgetting," he says, "the horrible ways through which he passed, it remains proved that when he had hardly reached the age of manhood, Cæsar conceived a dream of splendid ambition; the soldier was, in him, combined with the politician, and a politician armed with an extraordinary energy." He says also: "Quite recently it has been ascertained, by contemporary evidence collected at Pesaro, at Forli, Imola, Cesana, Faenza—wherever, in short, Cæsar left his trace during his reign of three years—that the soldier who kept the strictest discipline in his camp was besides an able administrator, a prompt and implacable judge, always ready to give satisfaction to his people, who, under him, did not suffer from arbitrary measures. In short, with all the acts of frenzy which he certainly committed, and murders (which will hereafter be better proved than ever), and his constant contempt of divine and human laws, this sombre hero left some benefits behind him."

The work of M. Yriarte is not a rehabilitation: he confesses that it would be idle to try to rehabilitate Cæsar; that compared with the Sforzas, the Malatestas, the Medici, he is a more determined, a more lawless criminal—a very artist in crime. He also could have said, like Nero: "Qualis artifex pereo!" Indeed, in order to understand truly these extraordinary characters of the Italian Renaissance, I believe that we must return to the traditions of the Roman Empire. The Cæsars of ancient Rome were the gods of the imagination. The crimes, the vices painted by Tacitus and Suetonius seemed virtues to Cæsar Borgia, to the "unico Cesare." He copied Nero, he copied Caligula, he copied Tiberius; he also could go down into the arena, he could imprison, he could murder, he could defy the gods, he could make a god of himself. He was handsome, and had the strength of an athlete. He acted like a magnet on the women of his time, and he never allowed a woman to have any influence over him. He never felt the tenderness of love; nothing could distract him from the objects of his ambition. "Aut Cæsar, aut nihil," was his device.

Had the young captain who conquered nearly the whole of Central Italy, a positive plan, or was he merely led by chance from victory to victory, from crime to crime? He certainly was eating the Italian "artichoke, leaf by leaf." (The expression is his; it was repeated in our time when Piedmont made the successive annexations of Tuscany, Parma, Modena, Naples, etc.) Cæsar started on his campaign at the beginning of the winter of 1499; he goes first to the north, and operates against Imola and Forli, then adds city to city, province to province; he dethrones successively the last Sforza, the Malatestas, the Manfredis, the Montefeltros. We see him soon master of all the Adriatic shore from Rimini to Sinigaglia, in possession of the duchies of Urbino, of Camerino, of Cagli; he is in communication with Rome by way of Spoleto, where Lucretia Borgia is Regent; he turns towards the western shores of Italy by way of Siena and Perugia, to Pisa, which invites him, to Piombino, which he takes by force. He is now on both sides of the Apennines, he has really created a state; he chooses Cesana for a capital; his father gives him the investiture of this great domain, and places on his head the ducal crown.

It is not enough: he attacks Bologna, and he threatens Florence itself. He surrounds on all sides the Tuscan territory, and he is only arrested in his career by his ally, the King of France. How many towns did he take by assault in his constitution of a new state? Let us name some of them: Sutri, Piombino, on the western side of the Apennines; Imola, Faenza, Forli, Meldola, Savignano, Sarsina, Pesaro, on the eastern side. Florence knew well what a terrible adversary he was, and she sent him one of her secretaries, Machiavelli. The famous author of 'The Prince' saw in the bloody adventurer a precursor of what our time has called Italian unity. Villari, in his 'Machiavelli e suoi tempi,' thinks that Machiavelli saw his own thoughts in Cæsar Borgia, and idealized him; that Cæsar, like Alexander VI., merely sought the aggrandizement of the domains of his children—that father and son were purely selfish. It may be; the fact is that they reconstituted the temporal power of the papacy, a power which was maintained afterwards for three centuries, and which now still subsists in germ in the Vatican. Do we not hear every day the protests of the Pope? Have we not seen even the Emperor of Germany, when he made his visit to the King of Italy, respecting the principle of the temporal power, or, at least, acting in such a manner as to leave the question of the temporal power "sub judice"?

Alexander Borgia, when the Spaniards tried to prevent him from entering the Neapolitan provinces, said that he wished to make Italy all of one piece; Cæsar Borgia once said that he had resolved to make himself "King of Italy." Machiavelli recommended Florence not to look upon Cæsar as a mere condottiere, but as a new potentate in Italy, with whom it was advisable to conclude a league and a treaty; he noticed that Cæsar had more guns than all the other princes of Italy put together; he was struck by his character, and painted him as "molto segreto," as "gran conoscitore della occasione." The political work of Cæsar was too sudden, too artificial; he had made too many enemies, and when he lost Pope Alexander, he lost everything. All his enemies —those who had not been put to death or succumbed in prison—rose against him. The contemporaries of Cæsar Borgia saw a judgment of God in the death of the captain who, born in the Vatican, and having conquered a great part of Italy, came to die in Spain, at the age of thirty-one years only, on the 12th of March, 1507, the anniversary day of his premature promotion to the bishopric of Pampeluna—and to die there in what was his own diocese.

This last part of the life of Cæsar is not so well known as the first; the historians have neglected the three years between his captivity and his death. M. Yriarte has thrown much light on this part of his subject, and he shows us the convulsions of the monster behind the high walls of the Castle of Medina del Campo. He gives us, in the second volume, pictures of this castle—a most terrible prison, with its high walls and its towers. It was a royal residence. Cæsar was treated with the greatest severity; legal documents were collected for his trial, concerning the death of the Duke of Gandia, his brother, and of Alfonso of Bisceglie, his brother-in-law, with the intention to inflict on him capital punishment. But Cæsar escaped from this formidable prison, and, after extraordinary adventures, he appeared suddenly "like the devil," says the chronicle of Moret, at the court of the King, his brother-in-law, in Pampeluna. His flight made an immense sensation; Pope Julius II. trembled on his throne, Venice was alarmed, as well as the King of France; the cities of Romagna recovered a hope of escaping from the domination of Julius II.

Yriarte's chapter on the flight from Medina del Campo reads like a novel, and is written with the aid of documents many of which were quite unknown before. Cæsar rode from Medina, which is in the centre of Spain, not far from Segovia, Valladolid, and Santander. He embarked at Santander and landed again at La Roda, from which place he went through Bilbao to Pampeluna, where he was received by the King and Queen of Navarre. A new career was opening before him; the King of Navarre had a turbulent vassal, Luis de Beaumonte (Louis de Beaumont). Cæsar was sent against him, as Captain-General of the royal forces, and was mortally wounded at Viana, and buried in the church of this town. At the end of the seventeenth century, the sepulchre which contained his remains was destroyed. M. Yriarte made some researches in the street of Viana, where, according to tradition, the remains of the Duke of Romagna, who had been in his youth a Prince of the Church, were thrown by order of the Church. He found, at the place where these remains were supposed to be, a skeleton and a skull; but were these the remains of Cæsar Borgia? Nothing was found which could prove it.

The iconography of Cæsar and Lucretia Borgia will be found among the most interesting parts of the work of M. Yriarte, as well as the curious details which he gives on the magnificent sword of Cæsar, made by an artist of Ferrara, now in possession of the Duke of Sermoneta, the chief of the family of the Gaetani. This admirable work of art, covered with engraved compositions, bears the inscription "Cum numine Cæsaris omen." It was reproduced and described in detail in March and April, 1886, in *Les Lettres et les Arts.*

Correspondence.

CAUSE AND EFFECT.

To the Editor of The Nation:

Sir: In your lamentation over the increase of bribery at elections, you will probably think that only a madman would say that it was the natural and necessary result of the movement for civil-service reform; yet I have always maintained that precisely that result would follow. On the 6th of July, 1885, I wrote in your paper as follows:

"Neither party has any policy or any means of carrying one out. At present the only means of stimulating united action is the hope of office. If you take away that without substituting any other, you simply destroy the basis of cohesion. If one party renounces the use of the offices, it will surrender power to the other; and if both parties renounce it, then the resort will be to the use of money in elections to be made up out of the Government in some way."

The reason of this is, that all our politics, national, State, and local, are worked, not from above, but from below—not as relating to something to do, but to something to get. All individuality is disappearing from public life, there is no unity of action and no responsibility, no possibility of gaining reputation and almost the certainty of losing it. At Washington the President, especially since he has been deprived

of the control of the offices, has no power whatever except the empty negative of a veto. The Cabinet officers, as far as any legitimate power is concerned, are merely clerks. Members of Congress, and even Senators, are nothing but units in a mob, the best of them struggling hopelessly to evolve some order out of shifting and irresponsible committees, and the worst cynically making themselves comfortable and feathering their nests—these last, by the way, alone having the chance of reaping anything but disappointment and crushed hopes. The whole business resembles building houses from the inside with loose sand, a process which men of honor and ability will sooner or later renounce, though there will always be a plenty of candidates for it while there are pay and position in sight. The fall from Adams, Hamilton, and Madison, from Webster, Clay, and Calhoun, to Blaine and Wanamaker is, no doubt, great; but the latter are natural fruits of the system and by no means its worst.

From all I have heard of Mr. Wanamaker, he is a sufficiently respectable and well-meaning man, who has adopted the only means available for success, just as our earlier generation used the offices. If the present system is continued, we may yet look back to such as he with regret. Is it not significant of the state of things in Washington that out of twelve Massachusetts Representatives, eight declined renomination? Meantime, the seat of government is in the lobby. It is in the secrecy of the committee rooms, and covered from the public view, that are wrought out those bargains and intrigues which, when offices formed the political lever, were confined to politicians, but, now that money is coming to the front, are in the hands of a different class, who intend to be repaid for their outlay. The next step is that the voters, disgusted with the whole spectacle, and finding that politics is merely an instrument of self-interest, lose their sense of responsibility and regard their vote as merchandise. What would be the use of a Congressional investigation into bribery? Supposing members to be anxious only for the truth (which, considering both sides are tarred with the same stick, may be doubted), they would merely disclose the hideous facts without offering the slightest guarantee for the future. It seems to me very strange to expect that, with voters anxious to sell and politicians anxious to buy, a mere change in the method of casting ballots can accomplish anything.

Are we then, like the Indian chief whose canoe got into the rapids of Niagara, to fold our arms and silently go to our fate? Certainly it would be more dignified than shrieking and howling, unless we can adopt some efficient remedy. Fortunately we are not left for this to conjecture, but have a living example before our eyes. In England the process of changing Parliament from the foulest corruption to perfect pecuniary purity has been accomplished, and the same result promises ere long to be secured in the elections. If anybody supposes that this wonderful transformation has been brought about by a particular mode of casting ballots, he must have given the subject very little attention. The first step was to induce the House of Commons to surrender the most potent instrument of corruption, the right to be the judge of its own elections; and the next to place all questions relating to elections in the hands of independent judges, in courts so constituted as to be beyond suspicion. This is the saving principle, all else being matter of detail. And how was the House of Commons brought to such an immense sacrifice of power? Through that beautiful arrangement which places the initiative in legislation in the hands of the executive Ministry, leaving to Parliament the functions of suggestion and veto, which, by the organization of business thus obtained, dispenses with all standing and secret committees, and allows all business to be conducted in open session; which, by thus placing members in full view of their constituents, not only frees their seats from an inherent taint of suspicion, but makes them objects of the highest social ambition, and therefore secures the services of the best men in the community; and which, by enforcing official leadership, at once compels members to act together under pressure of public opinion, and furnishes a motive of enthusiasm in the electors sufficient to replace the use either of offices or of money.

All this it is in our power to have by the adoption of the Senate Report of February 4, 1881, as the only thing which can check us on the downward road. As to whether we shall thus solve the problem of popular government, I feel less hopeful with advancing years; but one thing I do know—that unless we do solve it by some such application of principle, just as the French republic is at this moment (and from this identical cause of the abuse of legislative power) rushing on to civil war and military despotism, so that is the goal at which we, however long the road may be, shall ultimately arrive. G. B.

BOSTON, December 15, 1888.

CHOOSING THE ELECTORS.

TO THE EDITOR OF THE NATION:

SIR: Regarding the Constitutional Amendment suggested by "H." in your issue of December 6, I wish to state an objection. After each census is taken, legislatures re-district States to make their Congressional representation accord with the new apportionment. In doing this, counties, or wards, are put on or taken off in order to equalize districts, or to suit the interests of the party controlling the Legislature. Did each district vote for an individual elector, as it does for representative, almost invariably the political standing of the elector chosen would be determined beforehand, and the vote of the minority might as well be uncast and unrecorded.

Such an amendment would offer constant opportunities for evil legislation, and would show at once the localities where corruption funds could be used to the greatest advantage. As at present, better to have a State express the will of its people as a unit, but in proportion to its population, than to have the elections thrown directly into the hands of parties and party organizations. HUGH EILUS.

THE TEACHER OF FREE TRADE.

TO THE EDITOR OF THE NATION:

SIR: I was much interested by the letter in your issue of December 6, headed, "A Farmer on the Missionary of Free Trade." I fully agree with the views of your correspondent as to the necessity of dwelling upon the moral side of the tariff question, and I wish to say a few words on the subject from another standpoint. However important the education of the farmer in political economy may be, it can hardly be denied that the education of the youths who are to cast their maiden votes in 1892 is equally important, especially if, as seems too likely, this tariff problem is to harass us for many an election to come; for in the latter case the younger generation will have to furnish the good cause with leaders. But how are these youths to be taught? Are they to have statistics shoved at them, or elaborate reasonings, aimed at specialists on the subject, fired over their heads? Or are they to have their hearts touched with enthusiasm for a noble cause? Surely every one will choose the latter method. But how is this to be followed unless the moral aspects of the problem receive the larger share of attention? And how is a man to proceed who finds himself teaching political economy in a community largely wedded to protection? This is a problem which is confronting many teachers, old and young, at the present day; and I hope you will pardon me if I venture to give your readers a leaf out of my own experience in this connection.

Some time since I was elected to teach history and political economy in a Southern university. When I entered upon my duties, I was aware that this was the chief problem before me. I was convinced that protection is morally wrong, and I knew that many of my class were connected with protection, either through sugar in Louisiana, or iron in Alabama, or rice in South Carolina. How was I to tell these young men that their fathers were clamoring for something morally wrong? But tell them I must; honor required it of me, and it was the only way to teach them anything definite. Elaborate argumentation, statistics based on research among endless public documents—these, even if I could have brought myself to deliver them, would have either left my class untouched or left them in chaos. So I resolved to have at the hydra, and at least cut off one head. The result was highly gratifying. The student of history, if he is at all skilful, can easily show his class that a majority of the citizens of a nation can daily practise something highly immoral without once suspecting that it is immoral; he can show them how first one man sees sin in the practice, then a few, then, after a weary struggle, the many. He need not, with your correspondent, necessarily take slavery as his subject: the latitudinarianism of the English Church in the eighteenth century will furnish a good example. Thus he will take the sting out of his subsequent attack upon protection. This done, he will—but I will not insult your readers by proving protection wrong. I shall, however, give one incident to show how gratifying the result of my experiment was:

One of my pupils was a man nearly as old as I was, who had given up a business life to prepare himself for the ministry. He was a Republican, dyed in the wool, and a thoroughgoing protectionist. He winced a little at first, when I attacked protection, and, after a private argument, we agreed to drop the subject. But did he like me the less because I denounced his pet theory as immoral? Not a whit. We are not only good friends, but, some time after, having a desire to write an essay in favor of protection, he consulted me about the books he should read and the proper arrangement of his materials. I may add that, out of a class of thirty-five young men, not one showed any disposition to resent the presentation of my honest opinions, and a large number are enthusiastic free-traders because *free trade is right.*

W. P. T.

DECEMBER 10, 1888.

TO THE EDITOR OF THE NATION:

SIR: The excellently well-written communication of Farmer "H." in the *Nation* of December 6, is substantially correct in placing upon the same plane of morals the institution of slavery in the Southern States and the iniquitous and exorbitant system of tariff taxation now in force in the United States; but, like most analogies, the parallel comes to naught at a

certain point. Assuming that Farmer "H." is right in the statement that the emancipation of the negro was the result of the finally successful education of the majority of the people of the North up to the realization that slavery was a great moral wrong, he seems to forget that the slaves themselves never needed any education upon that particular point—the fact being that they longed for freedom with an intensity that probably far exceeded their appreciation of it when it was obtained; and that the Southern people, their masters, never realized the blackness of that foul blot upon their civilization until some time after fate had removed it. The lawmakers, and not the people, need to be educated in the moral principles that bear upon this momentous question. The great mass of the American people need to be instructed and enlightened as to their true individual interest—to be made fully to realize that they are daily and hourly paying an enforced tribute to a privileged class of their fellow-citizens.

That they will finally realize this fact, and reform the vast abuse that has grown from the seed of a theory that has become almost obsolete, I firmly believe; and that it is to the farmers that the country must look for relief from this grinding oppression, is a hope grounded upon the fact that, as a class, they receive fewest of the incidental benefits of protection. As was well said in one of your late editorials, farmers are exceedingly slow to grasp new ideas or be converted to doctrines subversive of convictions long established in their minds. Remote from the centres of restless intellectual agitation, and averse to mental adventure, belief with them is more a growth than a conviction. They devoutly believe every statement made by orators and newspapers of their own party, and as devoutly disbelieve every statement and argument made by orators and newspapers of the opposite party. But once convince them that their hard-earned dollars are systematically abstracted from their pockets by the hand of legalized fraud, and they may be depended on to protest in no uncertain terms. Once convince them that even 25 per cent. of the price of what they consume goes to swell the private profits of a few monopolists, and it may be safely predicted that even that minority of them who are known to be venal, will discard the comparatively small price that any party can afford to pay for their votes.

Upon this great crusade against ignorance the *Nation* has set forth; and a great, wise, and brave warrior, most calamitously for the country deposed from his leadership, has sounded the battle-cry that shall ring and reverberate with ever-increasing volume throughout the entire breadth of this continent, till the great mass of human intelligence will respond to it and march to triumph led by its martial music. Even as "beauty unadorned is adorned the most," so truly may it be said of this great monster of protection, that no power of fancy, no skill of logic, no cunning of metaphysical invention, can clothe it in more hideous garments than its own nakedness, laid bare by the ruthless hand of Truth. G.

Asheville, N. C., December 10, 1888.

WHEN TO INDOCTRINATE THE FARMER.

To the Editor of The Nation:

Sir: I have lived most of a long life in a farming population—in fact, was a farmer myself until of late years. Having been in the habit of thinking and reading rather more than most of my worthy country neighbors, I am now going to offer you some remarks which, though perhaps based upon a rather crude generalization, I am convinced are not without value.

To the dwellers in small towns and villages, and in more or less isolated groups throughout the country, Washington, for at least three years out of every four, is a great way off. When the fourth year arrives, though it is a period of much excitement and interest in political subjects, it is a time when the sort of sturdy independence of a life removed from the mobile influences of the centre of civilization is the very least susceptible of changes of opinion, and the most suspicious of the literature offered that seems designed to make any such change. There are reasons for this with which I will not seek to consume your space.

With regard to tariff reform, in which we overtaxed citizens of whatever political persuasion most devoutly wish to see some organized recruiting set on foot, it seems to some of us that efforts should at once be begun. There should be a distribution of short, plainly (if cheaply) printed tracts containing clear, forcible paragraphs of sound views, both original and copied. Many from the files of our late campaign editorials and portions of our political addresses were far too good to be wasted. Such things, with everything eliminated that savors of *political bias*, sown broadcast over the country, would not fail to be read and pondered. The farmer has as much capacity for thought as any man: he only is not going to be "chevied" into any thinking that is proposed to him with a view to influencing his vote on the eve of election. I myself made (or decided) two converts by silently showing a little slip cut from I forget what paper, stating that if the manufacturers *really* believed that the tariff made high wages, they would be the last men in the world to cry protection—a fact, by the way, which I think will bear further circulation.

Many of us, Republicans as well as Democrats, would, I believe, gladly spare a small sum, a fraction of the amount we are taxed by the unjust tariff laws, in the direction that has been suggested, and tariff-reform committees should have no lack of support.

Farmer.

Boston, December 4, 1888.

THE OLD ROYAL LIBRARY IN BERLIN.

To the Editor of The Nation:

Sir: Being a rather faithful reader of your paper, I couldn't help noticing what was said in Nos. 1217 and 1219 about the new library to be given to the city of New York from the bequest of Mr. Tilden; and as it is evident that a country so far behind in learning and civilization as America will not be able to manage so vast a literary or scientific undertaking without the help of those whom in all such matters we acknowledge to be our superiors—I mean the Germans—I would respectfully call the attention of the persons concerned to a model institution, the Royal Library of Berlin. The excellency of this establishment is vouched for by the fact that, for some time past, it has been running in opposition to the University Library proper, till, finally, it has got nearly the entire trade of the students. Indeed, the University Library is as good as boycotted.

Let me acknowledge, however, before I proceed with what might otherwise sound too much like the advertisement of a "Königlicher Hof-Lieferant," that my acquaintance with libraries is not very large, and that I am perfectly willing that the men charged with organizing the Tilden Library should look about elsewhere in Germany, for there might be better patterns. In fact, I have heard it rumored that there are such. The reason why I feel so much like recommending the royal institution in the German capital is that it is so "grossstädtisch," you know, and also because, as I said before, I have seen so little of other libraries. The great ones in Paris and in London, I have only had a glimpse of; but both, as you are aware, belong to countries that are not thoroughly "wissenschaftlich" in the German sense of the word, and hence they cannot enter into our consideration. As for the Public Library and the Athenæum in Boston, and the Library of my own Fair Harvard—why, highly as I used to think of them, they are just nowhere in comparison with this one here in Berlin. And the same thing, I dare say, may be set down in respect to the Newberry Library at Chicago and the Pratt Library at Baltimore—good enough, you know, for a rough nation with antiquated notions about self-government, without a court, and without either army or navy, but really inadequate if we ever want to fall into line with the advanced nations of Europe. It may seem incredible, but it is true, I knew a sensible college professor here last year who had come all the way from New England to edit a classical author in this Royal Library, and he was so immensely pleased with the workings of it that he came very near staying here altogether, so that his book would have become a German one, and would have had to be naturalized in America at the rate of 25 per cent. of its original cost.

But I am wandering from my subject; let me return to it. You understand, of course, that what I could chiefly recommend in this German library is the management and the working of it, not the books themselves or the way they are selected. In these latter respects we beat the Germans all hollow; for the books, for example, of the Boccaccio and Zola type, which some of our American libraries don't get under the administration of an orthodox board, they will probably get under one that is more liberal; and the books on free trade, which a Republican board might keep out till '92, will come in under their Democratic or Mugwump successors after '92. No, I don't refer to those aspects of a library. But what, then, would I point out as the most prominent features in the management of this well-nigh ideal institution of Berlin?

First of all, let a library be, as everything ought and in this country fortunately is getting to be—military. At Harvard and in Boston—I know comparisons are odious, but really, institutions of so young a country as ours ought not to feel hurt if they are told they too are still young—at Harvard, I say, and in Boston, the libraries are not run according to military methods; nor are there, I fear, a sufficient number of learned professors and Ph.D.'s represented in the management, which would be the next requisite to success. Hence you have not that precision and that conservatism over there which lend stability and dignity to a library as well as to every other public institution.

Contrast for a moment also the external features of the respective libraries. What strikes one immediately at Harvard and Boston is the large number of boys and young women employed. The presence of neither can be very conducive to the deepening and strengthening of studious habits of mind. Not to speak of the incontrovertible fact that the sight of so many books and so many educated "males" must necessarily estrange these

young "females" from home and family life (a fact corroborated by one of the latest utterances of the Prussian Minister of Education), one must also consider that books are sometimes heavy—at least all Church Fathers are—and that only full-grown and able-bodied persons ought to be engaged in the handling of them. Hence the Prussian way of doing things. None but men weighing fully 200 avoirdupois and having served from six to ten years in the army, seem to be chosen for that part of the work; and when they are of that description, they can manage the most ponderous tomes (one at a time, of course) with perfect safety to themselves and to others. What with their steady, thoughtful gait; what with the absolute precision with which they have been taught to take a book from the shelf where it has been waiting for you since yesterday when you ordered it, and lay it on the desk of the Doctor who is to deliver it to you; what with the Doctor's careful final examination of the book and your order-slip on which you have previously put down title, author, date, and place of publication, date and place of application for the loan of the book, your name, your residence, and your calling or title; what with an occasional pathetic appeal of the Doctor to a careless student to write a little more legibly; what with the same painstaking, loving, fatherly care that relieves you of the book when you have done with it and insists upon your taking a receipt or voucher for the return of it—what, I say, with all these exquisite, precise, and thoroughly military methods, I have known even our untutored and half-civilized Americans to stand with mouths and eyes wide open, and spontaneously express their wonderment by saying that this was a royal library indeed, nay, as some put it, a "darned" royal library, and that there was nothing like it—no, nor ever would be!

And that's just my opinion, and the reason why I recommend the study of it, and of military and scholastic methods in general, before anything more is done about the Tilden Library. There are other suggestions in regard to minor points, such as airing the delivery-room only on high-feast days and on the Emperor's (say, the President's) birthday; it will prevent a great many people from catching cold, and keep the books from being eaten by that mysterious library moth. I might also mention the subject of cataloguing, but I will only say, by all means avoid the foolish card system. Get good large folios, three or four for every letter, and put them up high enough where the blue-stockings can't get at them. Avoid also a double catalogue, one for subjects and another for authors: they involve too great a loss of valuable time on the part of the officials, who will constantly be obliged to explain to students which is which. But these are considerations of less importance. Only look to it that the thing is done up in a military and scholastic fashion, and the rest will take care of itself.

I have no doubt that the Library authorities here will be glad to assist a committee from New York if notice is given of their arrival a semester beforehand. In fact, I myself shall deem it a privilege to be of any further service in thus indirectly diffusing knowledge and true inwardness of theory. I confess, with somewhat of a blush, that it is nothing but native modesty, or rather democratic prejudice, that keeps me from putting my full name and address to this communication; for if the authorities here knew of my zeal for so noble a royal institution, they might single me out as a fit subject to be decorated with a medal or "Orden," which, as a citizen of a republic, I could not very well accept. However, I send you my address privately, and remain yours truly,

X.

BERLIN, November, 1888.

ISAIAH AND MONTESQUIEU.

TO THE EDITOR OF THE NATION:

SIR: In a review of a new edition of Montesquieu's 'Esprit des Lois,' you say that the division of government powers into three departments, now so generally accepted, is due to his thought, and that it was "not dreamt of" in antiquity.

It must have been in the mind of Isaiah about 730 B. C., when he wrote (ch. 33, v. 22): "For the Lord is our judge, the Lord is our lawgiver, the Lord is our king."

Truly, L. N. D.

LOUISVILLE, KY., December 13, 1888.

[Not so. Isaiah can only be quoted to show that he thought the three functions properly united in one person. It is the differentiation of them—the vesting them in separate and independent persons—that is modern.—ED. NATION.]

Notes.

AN early copy of Prof. James Bryce's 'American Commonwealth' has come to hand through the courtesy of the publishers, Macmillan & Co. It is in two compact volumes of convenient size and fair aspect, and, if only to be digested deliberately, is readable throughout. We must defer any extended notice of it for a little while; but, both from the author's exceptional mastery and from the collaboration he has secured from American specialists, we have no hesitation in placing this book at the head of those which pretend to treat of our form of government in theory and in its practical working. We bespeak for it the largest possible circulation, and at this season no more fitting gift could be made to any one interested in political inquiry, whether young or old. Taken as a whole, it is an incomparable mine of information and philosophic observation.

J. B. Lippincott Co. have in press a 'Life of Henry M. Stanley,' by H. W. Little; a 'History of the Celebration of the One Hundredth Anniversary of the Promulgation of the Constitution of the United States,' edited by Hampton L. Carson; and 'A Shocking Example, and Other Sketches,' by Frances Courtney Baylor.

Miss Sally P. McLean, author of 'Cape Cod Folks,' has written a new novel, 'Lastchance Junction,' to be published directly by Cupples & Hurd, Boston.

Longmans, Green & Co., 15 East Sixteenth Street, will be the American publishers of the late Lord Stanhope's 'Notes of Conversations with the Duke of Wellington.' They also promise a collection of the later lyrics of the Englishwoman who writes under the name of "E. Nesbit," entitled 'Leaves of Life.'

Early in the new year will appear the work on 'Remarkable Bindings in the British Museum' (New York: J. W. Bouton), for which Mr. H. B. Wheatley has prepared the text, and which is to contain sixty photogravure plates. This is evidently intended to do for the British collection what M. Bouchot's sumptuous work did for the French; and in recognition of the fact that the French interest in the art of bookbinding is greater than the English, there will be a simultaneous edition published in French by MM. Gruel & Englemann. The edition is limited to two hundred copies in English and two hundred in French. Lovers of the art in America may be interested to know that the catalogue of the recent Arts and Crafts Exhibition Society contained a note on bookbinding as an art and as a handicraft by Mr. Cobden-Sanderson, perhaps the most accomplished binder living; and a report of a recent lecture of his is condensed in the number of the *Bookbinder* dated November 28.

Mr. Richard le Gallienne, author of 'My Ladies' Sonnets' in which there were several poems in praise of books, will issue early in 1889 a volume of bookish verse to be called 'Volumes in Folio,' of which there will be but 250 copies in 16mo and 50 on large paper.

The pleasant announcement comes from Paris that M. Jules Lemaitre, perhaps the most brilliant of the younger French authors, will publish early in the new year a volume of short stories, to be called simply 'Des Contes,' and to be illustrated by M. Clairin and others.

Any one who wishes to see how far the United States lag behind in copyright legislation, as compared with the effete monarchies of despotic Europe, may be referred to a comprehensive French work recently compiled (not always quite accurately) by M. Charles Constant, 'Code Général des Droits d'Auteur' (Paris: Pedone-Lauriel; New York: F. W. Christern), in which he will find the full text of the Berne international convention, and French translations of the copyright laws of all the leading states of Europe. An examination of it shows that almost every country in Europe acknowledges the principle of international copyright, and that many of them make no inquiry as to the nationality of an author, extending the protection of their laws as fully to the alien as to the citizen. In no country of Europe (except Greece, Turkey, Bulgaria, and Servia) is the duration of copyright less than the life of the author. In England it is forty-two years after publication, or seven years after the author's death, whichever period is the longer. In most of the Continental nations, copyright does not expire until thirty years after the author's death. In France and in Belgium the term extends to fifty years after the author dies, and in Spain to eighty years; and this reminds us that even in Mexico the rights of authors are far more carefully guarded by law than in the United States. It is a curious and anomalous fact that the United States should be the first and the most liberal in caring for the inventor by their patent laws, and the last and the least liberal in caring for the author by their copyright laws.

We have already praised the editions of Hugo and Dumas now being issued by Little, Brown & Co., Boston. Two volumes each of 'The Toilers of the Sea' and of 'The Man Who Laughs' have just been added to the former series, and two of 'Twenty Years After' in the D'Artagnan romances. The binding is simple but of rich effect, and the typography is capital.

The seventh and eighth volumes of the 'Poetical Works of Robert Browning' have just appeared in the author's latest edition (Macmillan). They contain "In a Balcony" and "Dramatis Personæ," and the first volume of "The Ring and the Book." These attractive volumes are embellished with the familiar Talfourd portrait of Browning (1859), a *scudo* of Innocent XII. with his effigy, and an old title-page in facsimile.

We are glad to greet again Prof. Child's selection of two tales from Malcolm's 'Sketches of Persia'—'Stories from the Persian: Abdûlla of Khorassan, and Ahmed the Cobbler' (Cam-

bridge: C. W. Sever; New York: Brentano). They have a perennial freshness.

Gen. H. B. Carrington's 'Patriotic Reader; or, Human Liberty Developed in Verse and and Prose' (Lippincott & Co.) awakens expectations by no means fulfilled. It contains nothing whatever drawn from the moral agitation to rid this country of the incubus of slavery. Wendell Phillips is quoted only for his tribute to O'Connell; Sumner for "The Reign of Peace Foreshadowed"; Whittier for "The Battle of Lexington" and his "Centennial Hymn"; Pierpont for "The Pilgrim Fathers" and "Warren's Address"; Beecher for his "Eulogy on Grant;" Seward for "America's True Greatness"; John Quincy Adams for historical utterances; Lowell not at all, Giddings not at all, and so forth. The section (XIII) in which the subject is squinted at is euphemistically entitled, "America Survives the Ordeal of Conflicting Systems"; but ought not "the youth of America" to have had a glimpse of the "irrepressible conflict"? With much good matter, there is a deal of rubbish and padding in this book.

Longfellow's well-known ballad translation from Uhland furnishes the starting-point of a dainty holiday brochure, 'The Story of the Luck of Edenhall,' by Amanda B. Harris (Boston: D. Lothrop Co.). Miss Harris traces from his diaries the first promptings of Longfellow's muse in this instance, compares several ballads in which the "Luck" is commemorated, and tells a little about the Hall and the Musgrave family. Mr. E. H. Garrett supplies appropriate and pleasing designs made on the spot, as well as some imaginative ones (not so commendable) to accompany a metrical moral on the old theme, by Susan Coolidge.

Longfellow's 'Village Blacksmith,' illustrated in colors, with the American imprint of E. & J. B. Young & Co., is a neat little production, in which it is curious to see an English designer give a transatlantic complexion to the hero of the poem and his environment.

Though a commercial enterprise, the idea of 'Some Noted Sculptures and their Homes,' compiled by Mary Graham Duff, and published by the Soule Photograph Co., Boston, is not bad. Some fifty masterpieces of ancient art are described in the words of sundry writers possessing all sorts of qualifications as critics, and are provided each with a blank leaf for mounting the proper photographs—which can be had at such a price of the publishers, or can be procured in any other way. The work is in two volumes.

A new edition of H. D. Sleeper's 'Songs of Harvard' (Cambridge: C. W. Sever; New York: Brentano) has just appeared, with a pretty rubricated cover. The collection is out of the ordinary, and very tastefully printed.

The "George Eliot" and the "Schiller" Calendars are issued by Nims & Knight, Troy, N. Y., each equipped with appropriate background in chromolithograph, with portraits of the respective authors and typical characters from their works. The Schiller pad conveys extracts in the original German and in literal translation. This calendar is given the shape of a fan. The same firm's "Sunshine Calendar" is of a different sort—illuminated monthly cards hung upon a steel rod, with a Cupid design in front and a poem upon the back.

Pretty and novel is the "Author's Calendar" brought out by Greenough, Hopkins & Cushing, Boston—a rose-spray device on a white and gold cover, with each weekly leaf given up to extracts from a single author, Tennyson leading off. Sometimes the month is hit in the quotations, but not always. Yet there was room for a little aptness here—Herrick for May, Lowell for June, Tom Hood for November, etc.

Sun and Shade for December, according to promise, shows the photogravure, photolithographic, and photogelatine processes applied to a baker's dozen of paintings, engravings, etc., representing children, one being a portrait from life in colors.

L'Art for November 1 opens with a chapter on the "Damnation of Faust," from Adolphe Jullien's new work on Berlioz. The noble volume itself has quickly followed: 'Hector Berlioz: sa Vie et ses Œuvres' (Paris: Librairie de *l'Art*; New York: Macmillan). We should miss the golden moment of the gift season if we waited to say our full say about it, after having read it carefully. Its externals in the way of very profuse illustrations—portraits, caricatures, facsimiles of music, and fourteen symbolic lithographic drawings to fit the quarto page, by M. Fantin-Latour—ensure the worth of the purchaser's investment. But M. Jullien's similar monograph on Wagner proved that in matters musical he speaks with large knowledge and authority. Hence our advice is, to buy first of all, and judge afterwards.

The well-known Austrian traveller, Ernst von Hesse-Wartegg, contributes to *Petermann's Mitteilungen* an entertaining account of his recent explorations in Northern Venezuela, and especially of the Lake of Tacarigua or Valencia, interesting as being one of the three fresh-water lakes of any size in South America. He notes but few changes in the country since the time of Humboldt's visit, except that the cultivation of indigo and cotton, its principal productions then, has been entirely supplanted by coffee and cacao, the amount exported of the former having increased from one million pounds in 1804 to forty million in 1886. In some districts, agriculture is being relinquished for cattle-raising, with a consequent destruction of the forests and a material decrease of the waters of the lake. This is now thirty miles long by about nine broad, and, though sixty thousand people live near its shores, is almost deserted, only four small canoes being upon it. Prof. O. Krümmel discusses in the same number, with the aid of some admirable charts, the old "problem of the Euripus," the cause of its irregular currents or tides, a phenomenon frequently mentioned by ancient writers and used proverbially by Æschines and Aristotle to designate an unstable man; and Emil Schlagintweit explains the meanings of the names of the principal Himalayan peaks, suggesting for the sake of uniformity that the highest should be called Gaurisankar-Everest. A supplemental number contains an unusually well-written description, by H. Michaelis, of his travels in central and western China.

A fine wall-map for students and teachers of Cæsar and later Roman history is that by H. Kiepert of Hither and Farther Gaul and the adjacent countries, just issued by Dietrich Reimer, Berlin. Its range may roughly be described as from Rome to Liverpool and Vienna.

There is a sensible article to be noted in the (Syracuse) *Academy* for December on "Who Shall Teach French or German?" by Dr. A. N. Van Daell of Boston.

In the current *American Journal of Philology* Mr. M. D. Learned continues his papers on the Pennsylvania German Dialect, and Mr. J. D. Prince contributes some interesting observations on the language of the Eastern Algonkin tribes.

The "Ten-Year Book" of Cornell University appears for the second time. It is a list of matriculates as well as graduates, and adds present addresses and (in the case of graduates) a brief summary of the post-graduate career. In those particulars, the register is, we believe, unique. The labor of preparing it may be estimated.

Two significant "circulars of information" have just issued from the Bureau of Education: the one, "Industrial Education at the South," by the Rev. A. D. Mayo; the other and more extensive, "Thomas Jefferson and the University of Virginia," by Dr. Herbert B. Adams. The latter brochure is beautifully illustrated, and is a monograph of permanent historical value. It combines with its main topic authorized statistics of the chief Southern colleges.

The last of the holiday books come to us from Nims & Knight (Troy, N. Y.), in the form of four thin volumes. The first three of these, 'Celebrated Artists,' 'Gems of Art,' and 'Gems of French Art,' are all built upon the same lines. The first is a collection of etchings, and the two others are collections of photogravures, and the grouping is made on no discoverable principle. As is apt to be the case in such collections, the "gems" are largely paste, though a real stone is to be found here and there. The fourth volume is an edition of Bryant's 'Autumn Pastoral,' with photogravure reproductions of drawings by C. E. Phillips. There is little good to be said of it.

—Mr. Halliwell-Phillipps thus writes to an American friend: "I have done nothing in a literary way all this summer, nor have I been capable of doing anything except adding to my collection of Shakespeare rareties. [It is much to do that.] Among my recent acquisitions are a copy of the printed original music to 'Farewell, Dear Heart, since I must needs be gone,' quoted in 'Twelfth Night' (act ii., 3), only one other copy being known; and a manuscript book of travels of the last century containing the earliest account of the interior of Shakespeare's birth-room that has yet been discovered." Bears hibernate through the winter. Mr. Phillipps reverses their habit. As he has, to use his own phrase, "lain fallow all summer," Shaksperian students who remember his activities during so many a year are sanguine that he will not let the winter pass without adding to the weighty debt they owe him.

—It will be gratifying to students of science in this country to know that the Cuvier Prize of the French Academy of Sciences, which is awarded triennially for the most important researches in the domain of general natural history and geology, and which has associated with it, among others, the names of Von Baer, Ehrenberg, Richard Owen, Agassiz, and Heer, has been this year decreed to the distinguished president of the Academy of Natural Sciences of Philadelphia, Professor Joseph Leidy. Following closely upon the award to the same scientist of the Lyell Medal of the Geological Society of London, and of the Walker Grand Prize of the Boston Society of Natural History, this recognition is a just tribute to the worth of one who has, with a degree of modesty uncommon to men of such eminence, kept himself well in the background among aspirants for fame and honors. There are probably few among the distinguished naturalists of this country who are less generally known than Professor Leidy, yet it is safe to say that during the last quarter of a century he has had no peer among the native-born, nor any co-laborer whose works have been held in higher repute by the savants of both Europe and America. As a comparative anatomist and microscopist, he easily leads the field; and if in the department of vertebrate palæontology he has seen rivals grow about him, it can yet be said that Dr. Leidy was the founder of

the science in this country, and that to his pen belong the records of the first important researches made into the extinct life of the Western Territories. To Dr. Leidy, likewise, humanity is indebted in great part for the determination of the nature of trichina.

—About a year ago, in speaking of the commemoration of the thirtieth anniversary of Mommsen's Berlin professorship, we remarked regretfully that we could see no sign of the completion of his long-delayed work on Roman constitutional law. When we wrote these words, the wished-for work was, no doubt, already completed, and it has since been published as Vol. III., in two thick parts, making in all 1,336 pages. This great work, in Mommsen's strong and condensed style, in which there is never a word too much, but which is not devoid of the intolerable complexities of German construction, with exhaustive citations and illustrative extracts, and provided with abundant cross-references, may well daunt the most enthusiastic reader in this busy age. It is, nevertheless, whether for reading or for reference, indispensable to all students of the Roman Constitution; and, indeed, it renders unnecessary a great deal of previously necessary reading, at the same time clearing up points which have heretofore been obscure. It is to be noted that in this treatise Mommsen's point of view is that of the lawyer rather than the historian —a point of view which explains, for example, his theory of the relations of the plebs to the clients, in which we cannot but think that the historical question is somewhat obscured by his purely legal treatment. This explains, too, the order of the work—the theory of the magistracy occupying the first volume, the several magistrates the second, the people and the Senate the third. We should, for our part, be tempted to reverse the order, or at least commence the subject with the discussion of the people and their organization. The present volume, after treating of the body of citizens (*Bürgerschaft*), their organization, rights, and duties (assemblies, equites, nobles, etc.), proceeds to take up the classes of qualified citizens and dependent bodies—Latins, *Socii*, etc.—together with the important subject of municipal organization. Part II. (why not call it a separate volume, as it really is?) is devoted to the Senate. In this part, contrary to his usual custom, which is to omit mention of rival theories, Mommsen makes constant mention of Willems's great work, 'Le Sénat de la République Romaine,' which he treats with the respect due to an able antagonist.

—An interesting proof of the widespread interest in the study of that branch of folk-lore relating to popular tales reaches us from the south of Spain, in the shape of a work devoted to Catalan tales. It is entitled, 'Rondallística: Estudi de Literatura Popular ab mostres catalanes inédites' (Barcelona, 1888), and received the extraordinary prize in the Floral Games at Barcelona in the same year. The author, Pan Bertran y Bros, has prefixed to his text an excellent treatise on folk-lore, in which he gives a very clear account of the various theories of the origin and diffusion of popular tales, and proposes a scheme of classification into three classes: sub-human (animals, plants, inorganic natures), super-human (fairies, witches, giants, etc.), and human (man). The twenty-five stories that follow have not been previously published, and are a welcome contribution to our somewhat scanty stock from the Iberian peninsula. Some of the stories are already familiar in other versions: No. 1, *Compare Llop y comare Guineu* is Grimm No. 2, "Cat and Mouse in Partnership" (in the Catalan tale the wolf and fox are the actors); No. 2, *La Gallina, 'l Gall, la Cabra, 'l Porch, el Llop y la Guineu* is Crane's 'Italian Popular Tales,' lxxxvii, "The Cock"; No. 4, *El Corp, la Guineu, y 'l Llop* is Uncle Remus's "Old Mr. Rabbit, he's a good Fisherman" (La Fontaine xi, 6); No. 5, *La Guineu y 'l Gripau*, is Uncle Remus's "Mr. Rabbit finds his Match at Last" (the Amazonian myth of how the tortoise outran the deer); No. 6, *L'Aucellet*, is Grimm No. 47, "The Juniper Tree"; No. 7, *Boquet, Boquill*, is Crane's lxxviii (the story so well known in English of the old woman who found a little crooked sixpence and went to market and bought a little pig); No. 8, *Pere Xich*, is Grimm No. 20, "The Valiant Little Tailor"; No. 10, *Sant Vicens Ferrer y 'l Aprenent*, is Crane's li, "The Lord, St. Peter, and the Blacksmith"; No. 11, *Sant Pere y 'l Ronyó del Bé*, is in the *Cento Novelle* No. lxxv, and Grimm No. 81, "Brother Lustig"; No. 14, *La Endevinalla*, is Grimm No. 22, "The Riddle"; No. 15, *El Soldat del llibre Maravellós*, is (partly) Grimm No. 61, "The Little Farmer"; No. 18, *El Mitx-Amich*, is the *Disciplina Clericalis* (ed. Schmidt, p. 35). The other stories are of the class of jests, several of them belonging to the cycle of our Lord's travels upon earth, in which St. Peter, as usual, plays a sorry part.

—The title of the work demands notice. It is a new creation from the Catalan word *rondalla* (tale), a term derived from the habit of narrating tales at the winter evening meetings of neighbors, where the stories go round the fire from one mouth to another. The editor states that what he has published constitutes but a small part of the stock he has collected. It is to be hoped that he may be able to publish the rest as a supplement to Maspons y Labros's collection ('Lo Rondallayre,' Barcelona, 1871–75, 3 vols.), which contains nothing but fairy tales—fables, legends, and anecdotes being entirely wanting.

—There is a certain solitary wasp which regularly lays in a store of five half-dead caterpillars for its coming male grubs and ten for its female. Mr. Galton has lately found out in his Anthropometrical Laboratory, that women who do not wear corsets have a breathing capacity nearly half as great again as that of women who do wear them. An investigation by Lowenfeld, noticed in the last number of the *Journal of Psychology*, makes it plain that neither the weight of the brain nor the convolution of its surface is to be considered as a reliable expression of intellectual development, for they are modified by the length and weight of the body and the thickness of the cortex, but that the supply of blood to the brain is so very variable as to be a matter of great importance. He finds that the relative diameter of the cerebral blood-vessels, per 100 grammes of brain, is in some cases nearly twice as great as in others, and that it increases with increase of age; and he draws the natural conclusion that the capability of continuous mental exertion and the development of talent must depend very largely upon this factor. These three facts are not without a connection. A large amount of food is necessary for the production of a large amount of energy. But the amount of food which the human machine can transform into work depends upon the breathing capacity of the lungs, and that depends upon the amount of air which can be supplied for its combustion, and that depends upon the wearing or the not wearing of corsets. With a generous supply of blood, the proportion of it which can be turned in upon the brain is very variable, and must be capable of being largely influenced by habit. Hence the amount of intellectual work which can be done by woman it is within her own power to regulate, to a much greater extent than might have been supposed possible. It has been noticed that college women have largely given up the wearing of the corset, and it is doubtless a custom that will become more and more widespread; it would seem strange that any one should care to pour into himself intellectual food at the same time that he carefully shuts off the draft of his furnace and so prevents its utilization.

RECENT POETRY.

If this age does not build the tombs of the prophets, it at least edits anthologies from the poets, combining and recombining their material in endless repetition. Fortunately, the work is almost always done well, with ample editorial labor in the way of annotating and indexing. We are somewhat tardy in noticing Mr. Sharp's admirable 'Sonnets of this Century' (Whittaker), which includes, indeed, only English poets, yet brings the list down to recent years, and furnishes an indispensable supplement to the collections of Caine, Waddington, and others. A still more valuable work is that of Samuel Waddington, 'Sonnets of Europe' (White & Allen), giving copious translations, not merely from the Italian, Spanish, and Portuguese, but also from realms where the sonnet seems exotic—the French, German, Swedish, Dutch, and Polish. Many of his translations are the work of Americans—Brooks, Bryant, Higginson, Longfellow, Lowell, Norton, Parsons, and Madame Ossoli. It is a volume which recalls curiously the period when the sonnet, in its strict form, came to be temporarily distrusted as un-English; so that Coleridge, writing in 1797 a preface to his own sonnets, declared an English composition on the Italian model to be too difficult and artificial a thing to attempt, and maintained that a sonnet-writer should "consult his own convenience" as to metre, and have "rhymes many or few, or no rhymes at all." This he proceeded to illustrate by publishing a "sonnet" in sixteen lines, with alternate rhymes, composed while climbing Brockley Coomb—although the composition appears in later editions only as "Lines," with all claims to sonneteering discreetly withheld. If Coleridge thought even the Italian sonnet too artificial, what would have been his verdict on the little volume 'Ballades and Rondeaus, Chants Royals, Sestinas, Villanelles, etc.,' by Gleeson White (Appletons)? Here we have a cyclopædia of the so-called French forms of poetic art, with many American contributions from Oscar Fay Adams, Bunner, Brander Matthews, Scollard, and others. There is much wit and some wisdom, as well as a great deal of grace and ingenuity, in this little book; but we fancy that Coleridge would have closed it with a slight feeling of *après moi la déluge*. Even the modern reader may turn with some mental unbending to the pretty little volume called 'Elfin Music: An Anthology of English Fairy Poetry,' by Arthur Edward Waite (London: Walter Scott; New York: Whittaker). All the versified fairy tales which charmed his youth will here be found; but why did not the editor include the pretty Irish legend of "The Fairy Reaper," which appeared, some years since, in an English magazine? Mr. Henry F. Randolph has edited 'The Book of Latter-Day Ballads (1858–1888)' (A. D. F. Randolph & Co.), a well-printed and well-edited collection, but somewhat miscellaneous in character. It seems curious that he should omit Kingsley from his list of poets; his omission of Longfellow and some other

Americans is apparently due to the non-consent of publishers. 'Heroic Ballads,' edited by Mrs. Tileston (Roberts Bros.), is a better collection, which we notice rather tardily; but the illustrations are poor and the binding hideous.

The series of poetical compilations issued by White & Allen is, however, so liberal and ample as to dwarf all others. They issue ten volumes, printed apparently in London, and grouped as follows: 'Ballads of the North Countrie'; 'Jacobite Song'; 'Early English Poetry'; 'Sonnets of the Century'; 'Irish Minstrelsy'; 'A Century of Australian Song'; 'Women's Voices'; 'Songs of the Sea'; 'Sacred Song'; 'Children of the Poets.' The last three volumes include the work of American authors, to some extent; while the Australian volume includes Mr. Boyle O'Reilly, and the Irish volume has both him and Colonel Halpine. These books are very unequal, both in material and selection, but they are all well printed and edited, with a good bibliographical apparatus; although they need, by reason of their extent and merit, a general index to the whole, which might well appear in a small supplementary volume. It is really an *embarras des richesses* to have so extensive an anthology and yet no key to it. The absence of American writers in the women's volume is a peculiar drawback upon it; and the Australian collection, though faithfully edited, gives an impression of making the most of rather thin material. Not one of all Mr. Sladen's poets shows anything like the ring and fire which appeared, fifty years ago, in Thomas Pringle's poems written in South Africa.

In the way of translations, the leading place must be given to 'The Kalevala,' the epic poem of Finland, done into English by John Martin Crawford (Alden), in two handsome octavos—the first complete rendering of this remarkable poem. Attention was first attracted to it, as may be remembered, when it was found to have suggested the metre of Longfellow's 'Hiawatha.' It must be confessed that this metre is a positive drawback, so monotonous does it become in the reading; nor can the lay reader quite go along with the opinion of Max Müller, who thinks that the 'Kalevala' possesses merits not dissimilar to those of the 'Iliad,' and ranks it as the fifth national epic of the world. Yet it is full of striking thoughts, as when the songs of Wainamoinen not merely disarm his opponents, but give warmth to the new sun and the new moon, when they are made; or when the same great wonder-worker, having made a magic vessel, cannot complete it until he can find the three lost words of his master Wipunen. He seeks them in the brains of the wild birds and on the tongues of wild animals; but it is not until, after untold dangers, he finds the elder enchanter himself, that the three words are obtained and the boat floats. The three words tell the causes of things, and, as an old man informs Wainamoinen,

> "Greater things have been accomplished,
> Much more wondrous things effected,
> Through but three words of the master;
> Through the telling of the causes
> Streams and oceans have been tempered."
> (I, 105.)

The 'Kalevala' is indeed one of those primeval epics which, as Thoreau said, silence a man for a while, since it has thoughts which go deep.

We should, perhaps, also include among translations the works of Edward Fitzgerald (2 vols.; London: Quaritch; Boston: Houghton, Mifflin & Co.), which we have delayed noticing, waiting for what is understood to be the authorized edition. The present publication is said to have been arranged by Mr. Quaritch, who holds most of Fitzgerald's copyrights, while Mr. W. Aldis Wright is preparing the recognized biography. The memoir in this volume is somewhat hasty and off-hand; the powerful poem of Omar Khayyám is given from the first and fourth editions, thus contrasting Fitzgerald's extremes of variation, but without presenting that collection of all the four variants which is still a desideratum. The editor of these volumes hazards some versions of his own in his notes, and these hardly win our gratitude or enhance the dignity of Omar Khayyám. It is a melancholy fact that Fitzgerald so dwarfs all other translators of the old tent-maker that their attempts in that direction must meet with indifference. Even Mr. John Leslie Garner's 'Strophes of Omar Khayyám' (Milwaukee: Corbett) will obtain but little gratitude from the public, although the version is to all appearance made from the original, and has some interesting parallel passages from various languages; but the fire of Fitzgerald's rare genius is wanting, though we see no reason why Mr. Garner's attempts are not as satisfactory as Whinfield's. For the rest, the two Fitz gerald volumes include his translations from Jámi and Æschylus, but not from Sophocles, and only a portion of his admirable renderings from Calderon. They include also a curious, old-fashioned literary dialogue, entitled "Euphranor," which may best be described by saying that the participants are named Phidippus, Lexilogus, and the like; a paper called "Polonius," which is only a collection of rather trite quotations; and a racy series of papers on "Suffolk Sea Phrases," which give us more of Fitzgerald's individuality than all other sources combined, and afford some glimpse of the school in which he learned his unsurpassed vigor of language. It is curious, as a matter of comparison, to find among all his phrases only two or three which are in use on our seacoast, some of these being *ship's husband*, *sou'wester* (hat), and *to shin up* (a mast). But the whole result of these two handsome volumes is to tantalize, and to awaken the desire to know more and more of Edward Fitzgerald.

Among other translations we note 'Poems by Alexander Pushkin, translated from the Russian; with an Introduction and Notes,' by Ivan Panin (Cupples & Hurd). It is preceded by a singular preface, in which the translator concedes that he has sought only literalness, and disavows all attempts at melody. We cannot test his success in the former direction, but his disavowal is extremely well founded. The inexhaustible Sir Edwin Arnold gives us another volume of oriental translations, 'With Sa'di in the Garden; or, the Book of Love' (Roberts Bros.), carrying on a series which is perhaps becoming a little cloying, and giving us a Saadi (or Sa'di) in verse who is certainly a little less impressive than when he speaks in the prose versions of Captain Clarke or James Ross. The Rev. Oliver Crane, D.D., of Middletown, Conn., adds another to the translations of Virgil, choosing the English hexameter as his medium (Baker & Taylor Co.). As a result he gives us a book which is more readable, on the whole, than the blank-verse translations, but strikes the reader, after all, as being rather the work of a schoolmaster than of a poet. It is marred, too, by abrupt and ungraceful expressions, as

> "Plundered the sacred bust, and with hands still reeking with carnage,
> Ventured profanely to fumble the virginal wreaths of the goddess." (Æn. ii, 167–8.)

Among translations should also be classed the volume, 'Poems and Translations,' by Lewis Frederick Starrett (Boston: Rand Avery Co.); for the greater part of the volume is occupied by versions from the German lyric poets, and these are of more interest, on the whole, than the original poems that precede them. The same discrimination must also be made in the little volume, 'Metrical Translations and Poems,' by Frederick H. Hedge and Annis Lee Wister (Houghton, Mifflin & Co.), where the German translations are far better than those of Mr. Starrett.

Among the volumes of "Poems" that come to us from England, that bearing the name of the Rev. Stopford A. Brooke (Macmillan) most arrests attention, from its surprising freshness and vigor, seeming like the production of an impetuous youth rather than of a London clergyman who has passed his half-century of years. It serves, however, to recall the fact that he took prizes for poetry at Dublin University, and it is evident from the varied contents of this volume that the Muse has been a lifelong companion. He shows an unusual capacity of sustained vigor through some of the longer poems, as "The Lioness" (p. 139), and gives us both the moralist and the poet in these strong verses, which recall Barry Cornwall's "Within and Without," drawing a similar contrast:

JUSTICE.

> Three men went out one summer night,
> No care they had, or aim,
> And dined and drank—"Ere we go home
> We'll have," they said, "a game."
>
> Three girls began, that summer night,
> A life of endless shame;
> And went through drink, disease, and death
> As swift as racing flame.
>
> Lawless and homeless, foul, they died;
> Rich, loved, and praised, the men;
> But when they all shall meet with God,
> And Justice speaks—what then? (p. 85.)

In 'Glen Desseray, and Other Poems,' by the late John Campbell Shairp (Macmillan), we see how much can be contributed towards the making of a poet by the mere fact of living among poetic localities, and we also see the limitations of that influence. In the case of Principal Shairp, it cannot quite be said to have succeeded; and it is doubtful whether any poem in the volume will afford so much pleasure, out of Scotland, as will be given by the admirable preface of Dr. Palgrave. To the general reader the two compositions entitled "Balliol Scholars" and "Highland Students" may perhaps have more interest than any of the rest, and this for other than poetic reasons. 'Dreams to Sell,' by May Kendall (Longmans) is a dainty little book, with much grace and a good deal of strength in the verses, as, for instance, in the following:

LOST SOULS.

> They passed before my threshold,
> The lost souls, one by one.
> I watched them from the daybreak
> Unto the set of sun.
>
> I said, "My soul's unshaken
> Because I have not sinned.
> Surely, they reap the whirlwind,
> They who have sown the wind."
>
> The burden of their failure,
> It was no more my own
> Than a far distant struggle
> Lost in a land unknown.
>
> Till it seemed a sudden shadow
> Over my threshold crossed,
> And I knew the play was ended,
> And my own soul was lost. (p. 133.)

Another English volume is that by Mr. Henry G. Hewlett, 'A Wayfarer's Wallet—Dominus Redivivus' (London: Redway). We once had occasion to speak warmly of this author's previous volume, 'A Sheaf of Verse'; and the present work keeps in some degree the promise of that, although we cannot think the longer poem equal to some of the slighter ones that precede it. The following plainspoken sonnet is even more applicable to-day than in the year 1870, when it was written:

TO GERMANY.

> O source of God! if that dread name be thine,
> Art thou not cozened by the cheat of sense
> That prompts the fated tool's blind confidence
> Itself doth wield its destiny? The Rhine,
> Unity, Fatherland, a fortressed line,
> Of these, thy righteous armor of defence,
> Hast thou wrought arms of fraud and violence.
> Unity masks the intricate design
> Of one cool gamester's will, whose daring stake
> Risks all for empire. Fatherland doth make

Ten thousand children fatherless. Where stood
The Cæsars, clomb the conquering kings o' the North
And fell! Beware, lest some new scourge go forth,
And Rhine, thy Tiber, roll with German blood!
(p. 22.)

'The Banshee, and Other Poems,' by [Dr.] John Todhunter (London: Kegan Paul), handles well some of those fine old Irish legends in which Aubrey de Vere has found such rich material. 'From West to East,' by Henry Rose (London: Stott; New York: Scribner & Welford), is one of those poetic volumes we often receive from the much-travelling Englishman—books marked by no great genius, yet with the blossoms of many lands pressed between the leaves.

Among recent American volumes, Mr. Curtis May gives us in 'Moly' (Putnams) some pleasing sketches of travel, but when he tries to be jocose, as in "The Old Maids' Club," he is simply coarse. Mr. Thomas E. Van Bibber's 'The Holy Child; or, the Flight into Egypt' (Putnams) is a long blank-verse poem, somewhat after the Lew Wallace style, but in a quieter and less turgid vein. Mr. D. J. Donahoe, in 'Idyls of Israel' (Alden), goes over the same ground. Mr. Arlo Bates's 'Sonnets in Shadow' (Roberts Bros.) have in truth the sadness they proffer in their title, and this not quite so much lighted by faith as is the 'In Memoriam' of Tennyson. Of this, one ought not perhaps to complain; but there is also some want of that controlling simplicity of structure which is needed to balance the somewhat artificial character of the Italian sonnet. Mr. Elwyn A. Barron's play of 'The Viking' (Chicago: McClurg) is vouched for by Edwin Barrett as being really available for acting. So many good dramas are unsuitable for the stage that it is pleasant to find one which promises to be better in acting than in reading. 'Mask and Domino,' by David L. Proudfit (Philadelphia: Porter & Coates), so suggests Edgar Fawcett in its style that one has to look at the title-page to make sure of the authorship. 'Madeleine, a Poem in Fragments,' by Daniel Chauncey Brewer (Putnams), is rendered perplexing by the fact that there seems nothing to explain the title, or to make the volume other than a collection of miscellaneous poems. It seems curious that a man educated at Williams College should call a poem written in the following metre a "sonnet":

"'Tis when the wealth of summer life
Merges into cool autumnal days,
And golden harvests o'er the land
Bespeak the great Creator's praise."
(p. 116.)

That he should, in the same poem, rhyme "more" with "law" is perhaps less strange, in view of the bad example given in this respect by Mr. Aldrich and others.

As Dr. Palgrave's preface is the best part of the volume of Mr. Shairp's poems, so is Mr. Leslie Stephen's preface the best part of 'A Marriage of Shadows,' by the late Margaret Veley (Lippincott). The rest is a tribute to affection rather than to genius; but many of the poems by this young English poetess are familiar to Americans, as having been published in our own magazines. 'The Dead Doll, and Other Verses" by Margaret Vandegrift (Ticknor) has lively poems for children, but is it desirable to put the thought of death into such prominence for those young things, even as embodied in a doll? Miss Jessie F. O'Donnell's 'Heart Lyrics' (Putnams) is graceful, tender, and innocent. Innocence is evidently not the aim of Mrs. Ella Wheeler Wilcox's 'Poems of Pleasure,' but we feel bound to say, even at the risk of impairing its sale, that there is no great harm in it: it is simply flat. It is hard to see why the distressful and somewhat maudlin effusions of Adah Isaacs Menken (Lippincott) are reprinted; but it may be that the cheap laurels of Mrs. Wilcox and Mrs. Rives-Chanler will not suffer that poor outcast to sleep in her grave. 'Poems by Josiah Allen's Wife' (Funk & Wagnalls) has the good intentions and the commonplaceness which mark all the writings of this popular author. She is one of those who in prose cultivate a homeliness bordering on vulgarity, but in verse demand as heroines nothing less than the Lady Maud, the Lady Cécile, Gladys, Lemoine, Gloria, and Isabelle. On the whole, we prefer her with Jane and Samantha. Mrs. Rose Terry Cooke has a talent of much higher grade, but in the enlarged edition of her poetical works (Gottsberger) we find with regret that little is added—except in quantity—to her earlier volume of 1861, which contained poems such as "Bluebeard's Chamber" and "Basile Renaud," to which her later contributions afford no parallel.

In the way of local coloring, an attribute which often makes even commonplace poetry interesting, we have 'Legends of the Susquehanna,' by Truman H. Purdy (Lippincott), with illustrations by Darley, whose style was once so popular; 'Andiatorocté; or, the Eve of Lady Day on Lake George,' by the Rev. Clarence A. Walworth (Putnams), a poem on an Indian theme, with attractive studies from nature and some glimpses of French Canadian convent life; 'Monadnock,' by J. E. Nesmith (Cambridge: Riverside Press), with unusually vigorous sketches of Emerson's favorite mountain; and 'The Western Wanderer,' by Richard P. Parrish (Allison), giving a traveller's itinerary across the continent. Each of these authors adds miscellaneous verses to his title-poem, but never with very valuable results. In 'Letters from Colorado,' by H. L. Wason (Boston: Cupples & Hurd), we have a series of rhymed letters, with quite a variety of aspects of camp life and experience on plain and mountain. Mr. Thomas C. Amory, the well-known Boston historian and philanthropist, gives us two twin volumes in verse, 'Charles River: A Poem' and 'The Siege of Newport' (Cambridge: University Press), which make a pleasant blending of historic legend and the personal reminiscence of half a century. Mr. D. M. Henderson's 'Poems, Scottish and American' (Baltimore: Cushings & Bailey) have a pleasant Scotch flavor, and 'Songs of the Celt,' by Charles Cashel Connolly (Baltimore: Murphy), have something of the Irish fervor. The Rev. Dr. Thomas Hill's volume "In the Woods and Elsewhere' (Cupples & Hurd) is full of spicy suggestions of the forests of Maine, as is the Rev. John W. Chadwick's 'A Book of Poems' (Roberts Bros.) of the sea breezes of Marblehead. And as a farther bit of local coloring, we like nothing in 'Orestes, a Dramatic Sketch, and Other Poems,' by Harry Lyman Koopman (Buffalo: Moulton) so well as this stirring lay "Isle au Haut," which thus begins:

Highland island of the deep,
Isle au Haut!
Where the storm winds wailing sweep,
And the breakers flash and leap
All a-row,
Echoing up thy rocky steep,
Isle au Haut!"
(p. 49.)

We have felt disposed to interest ourselves in the little volume of Mr. Madison J. Cawein, 'The Triumph of Music, and Other Lyrics' (Louisville, Ky.: Morton) were it only that it comes from a part of the country which has hitherto done itself too little justice in song; but it is spoiled for us by a weak and pervasive imitativeness that makes page after page of it seem mere Swinburne-and-water. We take almost at random the following:

FOREVERMORE.

O heart that vainly follows
The flight of summer swallows
Far over holts and hollows
O'er frozen buds and flowers;
To violet seas and levels,
Where lone Time's locks dishevels
With merry mimes and revels
The aphrodisiac Hours.

O love who, dreaming, borrows
Dead love from sad to-morrows,
The broken heart that sorrows,
The blighted hopes that weep;
Pale faces pale with sleeping,
Red eyelids red with weeping,
Dead lips dead secrets keeping,
That shake the deeps of sleep.
(P. 65.)

And so on through seven stanzas of words, words, words!

In a pretty little volume of Edinburgh imprint, Mr. William Winter has collected many of his poems under the title 'Wanderers' (Ticknor). They reveal him always as a man of essentially poetic mind and sometimes as a poet. There is some, but not very great, promise in 'Iona, a Tale of Ancient Greece,' by Payne Erskine (Cupples & Hurd). The modest little volume, 'Fourteen Sonnets,' by Warren Holden (Lippincott), also indicates some promise; and 'A Story of the Sands, and Other Poems,' by Dr. E. L. Macomb Bristol, "The Flower Poet" (Brentano), none at all. It, however, offers, like others of the very poorest volumes which reach us, the author's picture and autograph.

If we have reserved to the last the volume by Walt Whitman, 'November Boughs' (Philadelphia: McKay), it is partly because it is mainly prose and not verse, and so a little outside of our subject; and partly because, while the battle still wages between his worshippers and his foes, it is difficult either to dismiss him briefly or to do him ample justice. His portrait, at the beginning, is an infinitely sad spectacle, as must be the case with that of every poet who looks eighty at seventy, and whose very last notes are such a wail of sadness:

"Soon to be lost for aye in the darkness—loth, I so loth to depart,
Garrulous to the very last."
(P. 38.)

When we compare this with the brave and cheerful old age of Longfellow, Holmes, and Whittier, it certainly has a bearing on the total estimate of that individuality which Whitman himself has made so inseparable from his poems. There are doubtless those to whom every line of this volume will be precious; but we confess to turning with a sense of relief to the cooler atmosphere offered by Mr. Alfred Pollard's new and delightful edition of Sir Philip's 'Astrophel and Stella' (London: Stott; Chicago: McClurg). Sidney also dared to speak of those physical aspects of humanity on which Whitman still calls, in old age, for "heroic nudity" (p. 16), but in how different a tone! In a sonnet which may well be placed beside Shakspere's "The Expense of Spirit" he thus takes up that theme so difficult:

Desire, though thou my old companion art,
And oft so clings to my pure love that I
One from the other scarcely can descrie,
While each doth blow the fier of my hart;
Now from thy fellowship I needs must part;
Venus is taught with Dian's wings to flie;
I must no more in thy sweet passions lie;
Vertue's gold now must head my Cupid's dart.
Service and honor, wonder with delight,
Feare to offend, will worthie to appeare,
Care shining in mine eyes, faith in my sprite;
These things are left me by my only Deare:
But thou, Desire, because thou wouldst have all,
Now banisht art; but yet, alas, how shall?
(P. 75.)

RECENT NOVELS.

The Rogue. By W. E. Norris. Henry Holt & Co. 1888.

A Mere Child.—Her Great Idea. By L. B. Walford. Henry Holt & Co.

The Septameron. Philadelphia: David McKay.

Madame Silva. By M. G. McClelland. Cassell & Co.

In War Times at La Rose Blanche. By M. E. M. Davis. Boston: D. Lothrop Co.

Ninette: An Idyll of Provence. By the Author of 'Véra.' D. Appleton & Co.

In 'The Rogue' Mr. Norris has attempted a difficult task—to make us sympathize at one and the same time with a rogue and a rogue's victims; at least, if this was not his object, it is certainly true that our sympathies need to be thus evenly balanced in order to enjoy the book. One of the difficulties in enjoying it lies in the fact that such an even balance is not productive of pleasure. The hero—rogue, villain, blackguard, and felon—a gentleman who pulls horses, gambles with other people's money, and tries very hard to sell his sister to a fellow rascal who has a "pull" on him, is made to appear a pleasant, good-humored man, a little down on his luck, but well-meaning in the main, whom we are supposed to find very agreeable company at the same time that we are wrung with anguish by the poor sister's sufferings at his hands. To make the story interesting, it should have ended as a tragedy. As it is, it turns out a flat farce. It contains an American—what English novel is nowadays complete without one?—who promises to be a worse creature than the hero, but, strange to say, develops at a critical moment an extraordinary turn for generosity, and lets the sister out of the trap which he had prepared for her with the most cold-blooded and diabolical ingenuity. This is unnatural, though it is a pleasant proof of the novelist's belief in the inherent goodness of the American nature. Mr. Fisher disappears in a blaze of glory, perhaps because it is necessary that an American, at the climax of his career, should be made to do something princely. Nevertheless, with all these drawbacks, we must admit that there is a certain verisimilitude about Fisher, and interest enough in the Rogue's checkered career to enable us to endure the angelic goodness of the sister, and the monstrous priggishness of the good man of the tale.

Mrs. Walford has not fulfilled in 'A Mere Child' the hopes which may justly be entertained by all readers of 'Mr. Smith' and 'Troublesome Daughters.' 'The Baby's Grandmother,' to our thinking, showed a decided falling off from the agreeableness of those earlier novels, and 'The History of a Week' was positively detestable. 'A Mere Child,' while certainly an improvement over its immediate predecessor, bears marks of manufacture which are delightfully absent from Mrs. Walford's best books, and make one feel that while, as always, she does her saying cleverly, she in this case had very little to say that was either new or useful.

In 'Her Great Idea, and Other Stories' the same author has shown the resources of a versatile pen in the making of short sketches and trifling verse. It is hardly possible to read a story from the hand of an expert novel-writer without unjustly high expectations, which often throw the reader's mind at the end into the unsatisfied attitude of one who has hoped for bread and got a marsh-mallow. To be just, Mrs. Walford's stories are as good as the average magazine story, her verses as sparkling as many which grace the weekly humorous papers; yet, being hers, they are unsatisfactory, with an exception or two. We pray this keen observer, this indefatigable note-taker, this graceful humorist, to rest her tired pen and then give us another 'Mr. Smith.'

Of the tales in 'The Septameron'—a curiously polyglot title, by the way, much as if one should say "The Cinqueteuch"—"An Old Town Tale" is easily the least inane, being a sketch laid in Philadelphia during the War of 1812, of which pretty Betty Pringle is the heroine. "Parthenope's Love" is a not ungraceful little fable. The other stories in the volume contain most of the faults one has ever met before in stories, and some which bring astonishment to the mind of the hardened reader, well seasoned to preposterousness of style and substance, so-called.

"Madame Silva" and "The Ghost of Dred Power" are stories of Southern characters concerning whom the literature of the present day is leaving nothing to the imagination. "'All women are fond of children,'" says the Southern heroine of "Madame Silva." "'You are unsophisticated,'" replies the hero, while "an amused smile passes over his face; 'most Southern women are.'" Along with this idiosyncratic fact we have, as ingredients in the story, magnetism, Indian adepts, the mind-cure, and serpents—a somewhat too heavy burden of properties for the slender strength of the story to sustain. A division of labor by farming out these weird mysteries among a larger number of stories would be to the advantage of the stories, and would afford more elbow-room to the mysteries. The matter would be quite worthy the present author's consideration, as he has the art of writing interestingly, and with a certain restrained strength which challenges the reader's attention.

Yet another flower on the now free-blooming tree of Southern literature, and one of utmost delicacy of perfume, is 'In War Times at La Rose Blanche' here republished from its original magazine form. It stands among the best of the lighter war books in its graphic pictures of plantation life during the Rebellion, from a strictly domestic point of view—even from a nursery standpoint; for it is a child's observation and experience and memory that give form to these charming sketches—a child who sees her young brothers go off to the war, and who sits upon the fence to wave them a good-bye as they march down the lane; who sees the work of the sugar plantation devolving on her mother's shoulders; who finds that a Yankee boy among those encamped on the lawn can "play ladies" with her and make delightful wooden dolls. An unaffected pathos and simplicity make these pages seem, not descriptions but experiences; the figures that move through them, old and young, white and black, live and have a veritable being. The whole book, in its truth and tenderness, is like one of its own pictures—a morning-glory growing on a soldier boy's grave.

'Ninette' is a story of Provence—a Provence, according to the author, thrown into ruinous confusion by radicalism and anti-clericalism. The increase of crime is traced to the increase of the liquor traffic and to the suppression of religious teaching. Statistics are given to show that since the "laicisation" of the hospitals in Paris, the consumption of brandy therein has quadrupled. Modern progress, depriving the peasant of superstitions, and giving him instead "lascivious pieces, nudities, and songs to make one blush," gambling in the morning hours, lottery-ticket selling, socialism, in which boys of seventeen are adepts, "increase of crime, madness, suicides, divorces, bankruptcies, and vagabondage," are among the evils which Paul Bert's catechism has let loose upon France, and for which the remedy is to be the return of the reign of kings and priests. For this "deep is already calling unto deep." Against the gloom of this special pleading are thrown the comparatively cheerful shadows of private crimes and vengeance, glimpses into the perfume factories and violet farms of Province, and the delicate tracery of a graceful little love story.

CHILDREN'S BOOKS.

One can hardly imagine how it would be possible to write a sweeter story than 'The Birds' Christmas Carol,' by Kate Douglas Wiggin (Houghton, Mifflin & Co.). It does not—though the name seems to imply so—tell of the feathered tribe, but of a little invalid girl whose sick-room is the centre of the love and devotion of a household. She is a Christmas child and rejoices in her birthday, and it is fitting that from her should radiate bright and tender influence, not only to her near and dear friends, but to other suffering children and to her poorer neighbors. An artistic foil to the pathos of the narrative is the humorous description of the Ruggles family, and of the Christmas dinner given them, at her urgent wish, in the sick child's own chamber. The sadness of the concluding chapter has been softened with exquisite grace and delicacy.

The same publishers give us 'The Chezzles,' by Mrs. Lucy Gibbons Morse. The author lays her scene alternately on Cape Cod and in France, and details the adventures of Mrs. Chezzle's two little boys at Nipsit, under the charge of Capt. Pepper, and of Mrs. Chezzle herself in her brother's house in a Parisian suburb. These transitions produce an impression of disjointedness in the reader's mind. The Cape Cod part of the story is the more suitable to children, and is doubtless drawn from life; the foreign part, though undeniably entertaining, is open to the objection of making a great point of most iniquitous charlatanry. As a whole, the book is interesting, amusing, and wholesome. The illustrations are small but apt.

Mrs. Molesworth's 'Christmas Posy' (Macmillan) is made up of eight short stories, refined, as usual, told in good English, and illustrated by Walter Crane. There is a fairy story and a true story; one of a lost watch, and another of a lost dog, and a third of missing bonbons. The children addressed are usually of tender age, and they will be satisfied with the simple narrative devoid of plot, with its wholesome moral not obtrusively enforced.

Mrs. Heald's simple little Christmas story, 'Mother Kate and the Brownies' (Philadelphia: Sunshine Publishing Co.), naïvely transfers New England local color to the nominal scene of action—Alsace. The small children who read it or have it read to them will not remark this; and the New England virtues of thrift, industry, and good cheer in straitened circumstances are undoubtedly to be met with in the New Rhine provinces of Germany. For the Brownies it was clearly necessary to go abroad.

One does not know what to say of Ida Waugh's 'Bonny Bairns' (Worthington Co.) except that it will probably please the children for whom it is intended. It would be doing it an injury to take it seriously or to discuss its claims as art or literature; but it is full of pretty childish verses and pretty childish pictures, and that is perhaps all that it need contain to answer its purpose,

The two pages of genuine description of a bit of Maine scenery which preface 'Charley's Wonderful Journeys,' by C. F. Amery (New York: *Forest and Stream* Publishing Co.) are the best thing about the book, which is one of the legion for which the author of 'Alice in Wonderland' is responsible. Despite considerable ingenuity, these dream chapters, with their kaleidoscopic shifting of situations and labored humor, animal and human, are too monotonous to be entertaining. The book is illustrated by a number of hands, sometimes cleverly.

Kate Greenaway's illustrations of the 'Pied Piper of Hamelin' (George Routledge & Sons) show the old qualities and the old defects—the former not enhanced, and the latter exaggerated. The pretty color and the decorative sense of arrangement are much the same as ever, but the weakness of form is greater, or seems so. Miss Greenaway is incapable of drawing weirdness, and the subject of the present little volume is therefore not well suited to her talent; and an abundance of pretty faces and pretty dresses does not make up for the feebleness of conception of the principal figure. The artist has a curious fashion of suspending her figures in the air, as if on strings, which is very noticeable in the drawing on page 46.

The author of 'Scotch Caps' (T. Y. Crowell & Co.), J A K, has attempted the difficult task of portraying a boy as thoroughly good without making him a prig. From this point of view alone the result can hardly be called successful, for in most respects the hero is a fair specimen of the latter type of character. As a story, however, despite some heavy opening chapters, 'Scotch Caps' is interesting and will doubtless exert a good influence. This would have been greater but for the improbability of some of the main incidents, which we trust are pure fiction and not founded on fact.

To speak here of Prof. J. R. Soley's 'The Sailor-Boys of '61' (Estes & Lauriat) is to take the title literally. This clear, spirited, and authoritative narrative is indeed quite within the comprehension of children, but it is not at all "written down" to them or with any special reference to them. It can therefore be read with interest by adults, and we know of no better brief picture of the naval features of our civil war. The spirit in which Prof. Soley writes is admirable, and Southerners can read his pages from beginning to end without offence. So good a text merited better illustrations. For the variety secured, the publishers are indebted to French artists, working, as we suspect, for the civil-war novel of Jules Verne. There are numerous portraits, and some truthful representations of ships and engagements.

Mr. Elbridge S. Brooks's pictorial 'Story of the American Sailor' (D. Lothrop Co.) is still less intentionally adapted for the juvenile understanding, though offered to young and old. It begins with the prehistoric canoeist and ends with the yachtsman, and manages to suggest the naval history of the United States without being closely bound in its selection or proportionate treatment of topics. There is the merest hint that a sailor's life in the past was not altogether pleasant, to say nothing of what it is in our day. For the proper priming on this subject, Mr. Brooks should have resorted to a work not found in his list of the "best hundred books on the American Sailor," namely, McNally's 'Evils and Abuses in the Naval and Merchant Service Exposed' (Boston, 1839). We observe, by the way, that Mr. Brooks follows Mr. Griffis in linking Commodore Matthew Perry's name with the abolition of flogging in the navy—a distinction, it seems to us, not fairly made out for this officer.

Apparently there was room for a new translation of the 'Swiss Family Robinson,' and Mrs. H. B. Paull has undertaken it (Frederick Warne & Co.). She finds fault with her predecessors' renderings, as being either too literal or too free—un-English and obscure, or unfaithful to the original. We have not put her version to a like test, but it is at least good English. To tamper with the time-honored title was probably deemed imprudent; 'The Swiss Crusoes' would be both more idiomatic and more intelligible. The illustrations are very numerous.

When we meet on every page of Mrs. J. H. Walworth's 'History of New York' (Belford, Clarke & Co.) sentences like this: "The Brit-ish sent a splen-did young of-fi-cer named An-dre (*sic*) on this dan-ger-ous er-rand," we must confess that it is written, not in words of one syllable, but in syllables of one word. There is a curious pro-Southern chapter on the late war, not true to the facts, and naïve in its implied horror of immediate emancipation and constitutional opposition to the extension of slavery into the Territories. If it was necessary to touch the causes of the war at all, something different should have been prepared for infants north of Mason and Dixon's line.

Slavery is also the weak point of Mr. Edward Eggleston's 'History of the United States and its People' (Appletons). We include the book in the present list, although it professes to be "from first to last a school-book"; for it has readable qualities, and its distracting excess of illustrations for school-children is well calculated to lure any voluntary young rover. Mr. Eggleston has endeavored to make cause and effect visible, and has, therefore, avoided a strictly chronological arrangement, or "the rigid grouping by epochs." But how does this work when applied to slavery? He admits that the civil war, which reconstructed Constitution and Union, was caused by slavery; but whereas he is at pains to show the nature of Indian life and warfare, he nowhere pictures the condition of the slaves. The only slave-burnings he specifies were in this city in the middle of the last century, and he intimates that this stage of cruelty was got over, whereas there was a slave-burning in Georgia in 1860, on the very eve of secession. He briefly outlines the Constitution, but makes no mention of the pro-slavery compromises in it on which the Union depended. He omits to notice that Texas revolted against a Government which prohibited slavery, and treats the morality of the Mexican war, which was one of pure slaveholding aggrandizement, as an open question to this day. In fact, all that is said of Texan independence is very misleading. Mr. Eggleston discovers "something given to each side" in the compromise of 1850. There is no account of the organization of the anti-slavery sentiment of the country in its various forms. In short, we are always shown the effect, but never the cause. This history has no preëminence over those which have preceded it as a chronicle of events or a picture of tendencies. It is strongest on the non-political side, in its antiquarianism and in its illustrations, which are mostly of a high order. Some statements, like some of the portraits, are open to question. Is it settled that December 21 is the true Forefathers' Day? Is it true that we have "no religious establishment in any part of the country" so long as there are army and navy chaplains, with formal compulsory religious services?

Vassili Verestchagin, Painter, Soldier, Traveller. Autobiographical Sketches translated from the German and the French by F. H. Peters, M.A. New York: The American Art Association. 1888.

It will probably be said that this little book is published as an advertisement for Mr. Verestchagin's pictures now on exhibition in this city. Even granting this, it is nevertheless very remarkable, and deserves to be read for its own sake. It is full of observation, experience, and adventure, and sets forth in a vivid way, not only the horrors of war, which are shown as well in some of the pictures, but the intrigues and petty spirit of rivalry which may exist in an army during a war together with absolute devotion to a great cause. As an exposition of some of the faults of Russian management during the Turkish war, it is very remarkable. It shows with great freedom the shortcomings of the commissariat and staff management, the bad generalship and even the personal weaknesses of many of the officers; yet the reader will scarcely have his sympathy with some of the characters lessened by the picture given of their personalities. The author does not spare himself more than others, as when he admits trying to have two Albanians hanged (although they probably richly deserved it), chiefly for the purpose of sketching something that he had never seen.

This is a genuine, and evidently a true record of personal experience. Even where the author has a little the air of praising himself, he is merely trying to tell the exact truth in a simple Russian way. The character of Verestchagin for straightforwardness is well known. The reviewer happens to have been in every place which he describes, though not on the occasions mentioned, and to have known the majority of persons spoken of (though he has never met the author), from General Kaufmann and the Grand Duke Nicolas down to Khristo, the Bulgarian cavass of General Ignatieff; he has heard Captain Skrydloff tell their adventures when attempting to blow up a Turkish ship, and in the very citadel of Samarcand has heard from Verestchagin's comrades of his bravery during the siege and of his modesty after it, as well as what he does not himself tell—that when General Kaufmann gave him the Cross of St. George, the most coveted distinction in the Russian army, he refused it, saying that he had come to Central Asia "as an artist and not as an officer."

Verestchagin began life as a naval cadet, but had subsequently devoted himself to painting, and, when he wished to go to Central Asia, was given a commission simply that he might wear a uniform and thus have a distinct status and greater freedom of action; but he was not called upon for military duty. He brought back a great collection of sketches as well as some very remarkable pictures—remarkable not only for their freedom from the conventions which then hampered Russian art, but for their truth to nature and life. They made the traveller breathe again the air of Turkestan. These pictures were exhibited in London in 1873 and in St. Petersburg in 1874, and were finally sold to Botkin, the great tea merchant of Moscow, as a nucleus for a public gallery. They excited great enthusiasm in Russia, but the Emperor on his visit to them objected to one called "The Forgotten," which represented a Russian soldier dead in the desert and birds of prey hovering over and attacking him. The Emperor said, "That picture is false; no Russian soldier can ever be forgotten." Subsequently, General Kaufmann took the artist aside and scolded him in severe terms — such as Russians sometimes allow themselves to use — for having dared to paint pictures which displeased the Emperor and brought him in dishonor, after so much kindness had been shown to him and he had received so much Government money, and accused him of want of patriotism that he had so often portrayed the barbarians as victorious Verestchagin replied by taking his knife and cutting three pictures—"The Forgotten," "The Surrounded," and "The Attack on the Fortress"—from their frames, which were left empty for the remainder of the exhibition. Photographs of them, however, still remained on sale at the print-sellers. It was about this time that the writer had occasion to communicate with Verestchagin on an affair of busi-

ness which could be more easily managed by a personal interview. Application was therefore made for his address to Beggrow, his agent, the great printseller on the Nefsky Prospect. Beggrow replied that he did not know it himself; that Verestchagin had refused to give it, and had even requested him not to receive any letter or communication for him.

The Emperor—for admiration had evidently prevailed over fault-finding—asked to have Verestchagin brought to him. A new uniform was ordered expressly for the occasion; but, when the day came, although the barber was in attendance, Verestchagin could not bring himself to sacrifice his beard—for beards were not then allowed in the army—pretended a sudden and violent illness, and stayed at home.

In consequence of the exhibition of his pictures of Central Asia, the Russian Academy of Fine Arts conferred on Verestchagin the honorary title of Professor. This he refused because, as he stated in a brief letter to the *Golos*, he considered all grades and conditions in art to be unconditionally hurtful. Immediately after this he started off on his first journey to India; and then a perfectly unknown Academician attacked him in the newspapers for daring thus to insult the Academy, and accused him of not having painted the pictures himself, but of having had them done by a sort of firm of which he was the head. He declared the pictures devoid of all artistic value, and made a variety of other absurd charges. Verestchagin's friends threatened an action for libel. The Academy declared that the Academician in question spoke for himself only; and he finally retracted all that he had said, implying only that Verestchagin had been led astray by the examples of Raphael and Rubens.

Proverbs, Maxims, and Phrases of All Ages. Compiled by Robert Christy. 2 vols. G. P. Putnam's Sons. 1881.

It is doubtless true, as is affirmed by the author of these volumes, that all notable collections of proverbs hitherto published include very many tainted with impurity. It may be added that the ordinary conversation of the common people of all races—who are the great preservers, if not creators, of proverbs—is affected by the same taint. This is not to be attributed altogether to prurience, but is due, in part at least, to the necessity of calling a spade a spade, imposed upon those who deal directly with the great processes of nature. Polite society ignores the existence of many of the functions of animal life, and regards any allusion to them as coarse ; but the working world cannot blink them, and talks of them, as of its other business, in proverbs and comparisons whose raciness and humor are indisputable. The grossness is often more prominent than the wit, but if we would know men as they are, we must not be fastidious.

Still, there is such an obvious convenience in having a book of proverbs suitable for family use that we were favorably disposed towards this collection because of its professions of purity. This disposition was increased by the promise of a topical instead of an alphabetical arrangement of proverbs which was held forth in the preface, and by the extent of the index, which occupies seventy-five pages. We were somewhat disheartened by discovering, after a time, that the list of abbreviations employed was inserted after the title-page of the second volume, that this list comprised only fourteen words, and that only three of this number were names of men, to wit : the Earl of Beaconsfield, Publius Syrus, and William Shakspere. The abbreviation "Maga." applies only to *Blackwood's Edinburgh Magazine*, that periodical having been found by the author to be "stored with literary jewels." Not having regarded Lord Beaconsfield precisely as an author of proverbs, we thought to prove the collection by looking for what is perhaps the most striking of his epigrams, "Youth is a blunder, manhood a struggle, old age a regret"; but to our consternation it did not appear. It was only by accident that we subsequently found that in addition to the rubric "Youth" in its proper alphabetical place, and that of "Youth (age)," which followed it, it was necessary to refer to the sixteenth page of the first volume, where, among the A's under the heading "Youth, Age," our epigram was hidden. As there is no such rubric in the index, and as "Blunder" gave us no help, we felt that our author was not altogether to be trusted—the more that, looking by the way for "It was worse than a crime, it was a blunder," it seemed to have been omitted or concealed.

What hope we still felt in our author's scholarship was turned to despair by the following statement : "Asses' bridge. (*Pons Asinus.*) *The fifth proposition of Euclid*," and by finding that he had credited to Byron "He makes a solitude and calls it peace." Nor were we comforted by learning that Stilson Hutchins had declared that abstinence was the mother of competence, that Dr. Angus Smith had said that foul air slays like a sword, or that C. C. Baldwin had advised the readers of his 'Moral Maxims' to disdain the bitter bread of dependence. The very first line of the book—"There are many rare abilities in the world that fortune never brings to light"—is an index to its character. Platitudes are not proverbs, and were it not for the elasticity of the term "Phrases" which the author uses in his title, we should say, in the language of the law, that half of his collection ought to be struck out as irrelevant and immaterial.

As illustrations of the author's insensibility to the importance of brevity in a household manual, we take the threefold repetition of the maxim concerning the building of a bridge for a flying enemy (vol. i., pp. 297-300), the fourfold repetition of the proverb about touching pitch (vol. 2, p. 127), and the double recurrence of the saying about "little pitchers" *sub voce* "Pitcher" after it had been given under "Child."

In a work of this kind omissions are inevitable, but we have failed to find so large a number of what are really household words that we are convinced of the worthlessness of the book to most purchasers. We had marked as omitted the proverb "Don't cross the bridge before you come to it," having failed to discover it under "Cross" or "Bridge," but afterward stumbled upon it under "Conduct (Rules of)." Even worse as a rubric is "Every," especially as many proverbs beginning with that word are to be found under other heads. There is a notable lack of the commonest of all proverbs, those from the Bible ; we find no "needle's eye," nor, in that connection, any reference to the needle in the haystack. But it would be a waste of space to put down all that we have not found, or further to point out the defects and errors of the index. We cannot regard the author as qualified for such a work as he has undertaken. His scheme is a good one, but he has carried it out so poorly as to produce only disappointment and exasperation. The book is neatly bound and handsomely printed, but upon paper so heavy as to make it fatiguing to handle.

B. C., 1887 : A Ramble in British Columbia. By J. A. Lees and W. J. Clutterbuck. Longmans.

This is decidedly a readable book. The country described is as unknown to the general reader as the interior of Africa, and the description of its physical peculiarities, and of its inhabitants, both biped and quadruped, gains greatly from a number of excellent illustrations. The writers are possessed of a love of nature and an appreciation of its charms, a lack of which would prove fatal to any adequate account of the magnificent Selkirks ; and they possess, moreover, a sense of the humorous which is conspicuous by its absence in most English travellers. On the other hand, the reader has a right to complain of the incessant introduction of puns—such puns as a man may be guilty of in camp, but only on condition that they be not recorded. The following account of the noble red man is not particularly new, but is probably true :

"To begin with, he is *not* noble; his impassive dignity and austere reserve are pure inventions—in fact, one of his most amiable characteristics is a tendency to play practical jokes and to be intensely amused at trifles. . . . He is *not* red—at least we don't think he is ; but he has so many layers of dirt on him that, though in summer time he has very little clothing to cover his geology, still we cannot swear that our vision has ever penetrated his stratification down to the real skin : what we *have* seen is a smoky kind of tan color. And, finally, about half the time he is *not* a man, for as the women all ride on both sides of a horse at once, and are if possible plainer, and in other respects more like them in every way, than the men, who on earth is to express any decided opinion about it ?"

The tendency of the dwellers among mountains to use strong language is thus explained :

"At home we are all sorts of respectable things, such as church-wardens, book-makers, sons-in-law to rural deans, etc., and don't use fifteen shillings' worth of wicked swear-words in a year. But put us out here in B. C. (and we don't need to be much put out either), and the language we habitually use at the top of our voices would disgrace a meeting of teetotalers. The curious thing is, that we are not ashamed of it, mean nothing by it, and pay no attention to it; so we are convinced the blame rests with those centres of imaginative energy, the mountains, and are happy."

After reading about the infinite discomforts of camping out in all weathers, about the disasters that attend baking in the dark, the horrible taste of tea made with alkali water, the vexation of spirit that follows an accidental mingling of the curry powder, the tooth powder, and the flour—the stay-at-home reader marvels at the courage and perseverance of these travellers, and probably comes to the conclusion that they must be very young. This conclusion becomes a certainty when he discovers at page 328 an elaborate criticism of the American people as a whole, based on a very casual acquaintance with some of the Western States. It is the old story of physical deterioration resulting from hot cakes, iced water, want of exercise, etc., etc., the falsity of which cannot be made clear to a certain class of intellects either by life-insurance statistics or by any of the other equally well-known arguments. In spite of such crudities, however, the book will interest and amuse sportsmen and others who have heard of this little-known region, now brought within reach by the Canadian Pacific Railway.

From Flag to Flag: A Woman's Adventures and Experiences in the South during the War, in Mexico, and in Cuba. By Eliza McHatton-Ripley. D. Appleton & Co.

This is one of the books that make writers blush for their craft ; for what is the use of

practice, they may be tempted to ask, if a mere cadet can thus come forward and excel many a *vieux sabreur?* Heavy odds might be laid that a skilled maker of books would not have succeeded in producing so charming a result as that wrought by this inexperienced writer. What in her is a delightful simplicity and straightforward movement—delightful because so evidently natural and unconscious—could only have come from the severest self-restraint in the case of a veteran, whose very expertness would be continually seducing him into excursions and disquisitions and moralizings, all suggested over and over again by the situations of her story, but ignored by her with the artless art of those who know not the doctrine of ill-doing nor dream that any do. Even her literary inexperience falls out to the pleasure of the reader, since the minor defects of her style are water-marks of genuineness, and prepare him to yield himself unsuspiciously to the real attractiveness of her writing. But, of course, literary inexperience does not mean the absence of the literary gift, and Mrs. McHatton-Ripley has some qualities of style which mark her as the possessor of it. Vividness of description is one of them, and her pictures of the panic-stricken flight from Baton Rouge and of the tornado in Cuba stamp themselves on the reader's mind so as not easily to grow blurred.

In a word, the book is an account of personal adventures which would be called extraordinary did not one remember that the civil war must have brought similar ones to many. We are told of a woman, tenderly reared and accustomed to luxury, driven from her beautiful home on the Mississippi by Federal gun-boats, seeking refuge in remote parts of Texas, for several months flitting back and forth across the Rio Grande, and finally settling down with husband and children on a sugar plantation in Cuba. Her hardships are endured with the rarest pluck and good-humor, and her shifty way of meeting difficulties seems almost to point to a Yankee strain in her blood. Best of all, she can write of all that is past without the shadow of bitterness, and tells of the fading of the Confederacy and of Confederate hopes, only to add in retrospect: "We prayed for victory—no people ever uttered more earnest prayers—and the God of hosts gave us victory in defeat. We prayed for only that little strip, that Dixie-land, and the Lord gave us the whole country from the Lakes to the Gulf, from ocean to ocean—all dissensions settled, all dividing lines wiped out—a united country for ever and ever!"

We have read the book with great interest, and would hail it as a contribution to the new Southern literature much more worthy of the name than some writings that are now running their course.

Pen and Ink: Papers on Subjects of More or Less Importance. By Brander Matthews. Longmans, Green & Co. 1888.

MOST of the papers contained in these volumes first appeared in magazines. One of them—the paper "On the French spoken by those who do not speak French"—printed now for the first time in its present form, contains passages from briefer articles contributed during several years to the *Nation* and other publications. The last essay, called "Poker-Talk," is apparently wholly new. All the papers are written in the essayistic vein, once so common and now so rare, the leisurely, half-serious, half-humorous method of treating a subject which relieves both writer and reader of a certain amount of responsibility, and carries the latter gently along in the path which the former wishes him to take, without actually driving him along it with a logical or moral lash. There is a great deal of sound sense and reason behind what Mr. Matthews has to say, as, for instance, in the article on the "Ethics of Plagiarism," which ought to be read—if reading it would do them any good—by the hosts of simple-minded persons who see a theft in every literary coincidence. Mr. Matthews's proposed canon of plagiarism—that "a writer is at liberty to use the work of his predecessors as he will, provided always that (1) he does not take credit (even by implication) for what he has not invented, and (2) that he does not in any way infringe on the pecuniary rights of the original owner"—is only open to this objection, that it is too broad and indisputable. The really difficult cases are those where there is some actual resemblance in external form, and here the verdict must often depend on the question of intent, though the second branch of Mr. Matthews's rule will frequently furnish a very valuable practical test. For example, in one of the great modern fields of the plagiarist, the drama, how repeatedly have the courts been called to decide whether this or that wonderful piece of sensational art—the railroad scene, let us say, in which the victim, bound to the track and left for dead by the villain, is suddenly snatched from the jaws of death by the avenger, amid the roar and rush of the approaching train and the plaudits of a sympathizing audience; or the castle scene, where the brave Irish boy climbs the castle wall from moat to battlement before our eyes, to grapple with his dastard foe in the beautiful moonlight above, and hurl him over the parapet to richly merited death on the rocky shore beneath — whether such scenes as these infringe some copyright or other.

Mr. Matthews contrives to put into his essays a good deal of criticism and information, and if we do not agree with him at all points, it is partly because there are so many that there is room for difference of opinion here and there. His style is always clear, and if he is sometimes a little over-ingenious, as in his "Philosophy of the Short Story," he can plead in defence that this is the defect of his quality—that is, of a keen and discriminating intelligence.

Moralphilosophie gemeinverständlich dargestellt von Georg von Gizycki. Vol. I. Leipzig: Wilhelm Friedrich. 1888.

THE general spirit and drift of the present work are very well indicated in the names of the chief men whom the author acknowledges as his masters. They are stated to be Bain, Coit, Salter, Sidgwick, and Spencer. Germans generally prefer the fatherhood of Kant, and it is not difficult to perceive that Prof. Gizycki, whatever he attributes to the influence of others, has some debts which he owes to the great Königsberger; for a man is always affected by his environment, and Kant, like the great and grand figure of Augustine, has his shadow stretched upon Europe still. Germans cannot escape his influence, for his ideas are a part of their intellectual heritage. But the intelligibility of the work under notice, with or without the perceptible contributions from Kantian thought, is the natural result of its acknowledged parentage. It does not profess to go profoundly into the subject, but it performs a good service by not doing so; for the less recondite mode of presenting ethics is the only successful means of reaching the largest number of those interested in its problems.

Prof. Gizycki is an invalid whose case is comparable to Hartmann's. We therefore turned with special interest to what he had to say of pessimism. The morbid sensitiveness to pain so prevalent in the present age keeps up in minds like Carlyle's and Schopenhauer's a perpetual cry at the existence of evil and suffering. But we naturally expect complaints from those to whom Nature has not been kindly. Moreover, pessimism is the present passion of German thought, due to social causes on the one hand, and to the reaction against the philosophy of Hegel on the other. Prof. Gizycki's philosophy has not taken the color of his misfortune. He preserves his equanimity when the odds of nature are against him. Although in a recent brochure he apologized for the life and philosophy of Schopenhauer, he now makes that brilliant philosopher's pessimism the subject of some very sensible strictures and criticism. These strictures are all couched in terms intelligible to ordinary experience.

Schopenhauer, revolting against the lazy optimism of the eighteenth century, as formulated in Pope's maxim, "Whatever is, is right," showed that ethics were unnecessary or impossible if optimism were true. But he was not content with this: he was bent on the proof of the opposite, notwithstanding the actual existence of some pleasures. He therefore contended that the mere existence of any pain at all was enough to decide the case, no matter what might be the balance between pleasure and pain. But he overshot the mark; for, holding that ethics originated in the sentiment of pity, he assigned to morals an existence which is as incompatible with pessimism as with optimism. If things are incurably evil, social and moral efforts that grow out of pity are useless and irrational. This is all shown very clearly by the author. The truth is, that neither optimism nor pessimism is exclusively defensible. Schopenhauer, however, had to be one-sided or nothing. The causes of his pessimism are many and deep, but they are very well summarized by the author in two remarks, applying to that class of thinkers in general—namely, that it grows out of too extravagant claims on life and the favor of fellow-men; and that a solitary life of brooding over existence, without any experience in human love, and without sharing in mankind's hopes and efforts, can only generate the most morbid sentiments. Sitting down in the universe to see it go, will only jaundice the intellectual and moral vision. It is work, not thinking, that will cure the disease. Goethe saw this, and wrote in Schopenhauer's own album for his behoof:

> "Willst du deiner Werthe freuen,
> So musst der Welt du Werth verleihen."

It is gratifying to see this wholesome criticism of pessimism, especially from one who has less reason to be grateful to nature than Schopenhauer. It is a timely and forcible remonstrance against the unhealthy reaction from the romanticism of the eighteenth century that culminated in the 'Sorrows of Werther.' Life will not be made any better by the belief that existence is incurably evil. Indeed, the very possibility of "meliorism," as George Eliot would call it, seems to be the correlate of knowing that things are not what they ought to be; so that the extravagant assertions of pessimism must be qualified by those contingencies which make the efficiency of the human will available in efforts, at least, to proximate the ideal. The great trouble, outside the sphere of science, is that this is a sentimental age. We cannot live and fight and die, like Homer's warriors. We are all crying about the sufferings of others, like Sterne over the dead ass, never stopping to reflect that half the evils we deplore are the imaginary pains which we *might* suffer

if we were in somebody else's place. There are pain and evil enough, it is true; but we borrow trouble, and exaggerate the amount of suffering in existence, by confusing the possibility of pain with its reality. All this and many other interesting points are brought out by the author with admirable good sense and judgment.

Nearly one-third of the volume is occupied with the relation between theology and ethics, and exhibits the usual radicalism of German writers upon this subject. With the argument we have no fault to find, but the spirit is sometimes unjust, and is in danger of carrying over to the new position the bigotry which is everywhere deplored in theological and dogmatic systems of ethics. Nevertheless, the author's remarks are very instructive regarding a tendency with which all moralists must sooner or later make their peace. It is remarkable that Prof. Gizychi says very little about the relation of evolution to ethics, a question much more vital to the interests of the present age than the one just mentioned. The subject was open to him under the topic "Nature and Morals." The chapters upon this topic have some interest in a critical way, but deal a little too largely with scholastic questions.

The chief faults of the present work are those which characterize all ethics of the chair. It does not occupy itself sufficiently with the problems for which the science of ethics exists. In other respects it is very interesting. It is rich in literary allusions and historical incidents of opinion, calculated to make the subject popular.

History of Insurance in Philadelphia for Two Centuries (1683–1882). By J. A. Fowler. Philadelphia.

THE history of insurance in Philadelphia is, to a large extent, the history of insurance in the United States; for the prudence and frugality of its people have made that city a favorable field for the agencies of companies chartered outside of Pennsylvania, so that the interests and history of other insurance centres are closely interwoven with those of Philadelphia. The work before us is divided into four parts: I. Marine, II. Fire, III. Life, and IV. Miscellaneous Insurance. In each of these parts we find a more or less detailed statement of the conditions existing two hundred years ago, and the circumstances which produced the necessity for some provision for the distribution of loss by fire or marine disaster, and finally led to the formation of organizations for pursuing the business of insurance. It was not until 1759, however, that any corporation bearing the semblance of a life-insurance company was formed, and that was limited to the relief of needy Presbyterian ministers and their families by means of survivorship annuities. From this germ, but largely within the last half-century, has been developed the vast business which now counts its obligations by the thousands of millions of dollars, with more than sufficient assets to meet them as they mature.

The volume is a bulky one, with a complete index to each part, which would seem to obviate the necessity for such elaborate headings to each of the many chapters, by which the size of the book has been materially increased. It is, however, a work of value and interest to the whole insurance fraternity.

MACMILLAN & Co.'s NEW BOOKS.

Mr. Bryce's Work on the American Commonwealth.

The American Commonwealth.

By James Bryce, author of "The Holy Roman Empire," M.P. for Aberdeen. In two volumes, large 12mo, $6.

Vol. 1, pp. xx–750; The National Government—The State Government—The Party System. Vol. 2, pp. vii–743: The Party System—Public Opinion—Illustrations and Reflections—Social Institutions.

PRESS NOTICES.

"Both from the author's exceptional mastery, and from the collaboration he has secured from American specialists, we have no hesitation in placing this book at the head of those which pretend to treat of our form of government in theory and in its practical working. We bespeak for it the largest possible circulation, and at this season no more fitting gift could be made to any one interested in political inquiry, whether young or old. Taken as a whole it is an incomparable mine of information and philosophic observation."—*Evening Post.*

"It is not only treated (by the English press) as the most important study of the subject since De Tocqueville, but as the greatest work of recent years in the whole field of serious literature."—*London Correspondent New York Times.*

"Professor Bryce himself is so well known in literature and in public life that any book from him is sure to be seriously discussed. Especially is this true of an elaborate work on American institutions. . . . The *Standard* . . . acknowledges his ability, learning, and scholarship, and accepts him as a most instructive and philosophic guide through the mazes of American politics. . . . The *Pall Mall Gazette* calls it the event of the year in the literary world."—*G. V. Smalley in New York Tribune.*

"Great books, great men, great deeds, and great discoveries are not everyday occurrences. When a book is pronounced 'great' by competent writers, all which relates to it is of intense interest. . . . That the 'American Commonwealth,' by Prof. James Bryce, M.P., must be a work of more than common interest is evident from the reviews and notices in the great London journals. . . . There is but little doubt that Prof. Bryce's book will make as much of a sensation in the United States as it has in England."—*New York Herald.*

Beautifully Illustrated by Herbert Railton and Hugh Thomson.

Coaching Days and Coaching Ways.

By W. Outram Tristram. Profusely illustrated by Herbert Railton and Hugh Thomson. Extra crown 4to, cloth, elegant, $6.

"Herbert Railton and Hugh Thomson, who have done the illustrations, stand in the first rank of English designers on wood, and their work in this volume can hardly be surpassed in its kind for clear, definite outlines, vivacity, and dramatic effect. The volume makes a whole gallery of English life, manners, and landscape, as they stood in the last century."—*Independent.*

"It was the good fortune of the writer to have the coöperation of two such illustrators as Herbert Railton and Hugh Thomson, who have done for the eye quite as much as the text has done for the mind. Delicious bits of scenery, glimpses of old homes, old streets, and old towns; bits of exteriors; scenes from the roads: all the movement and stir and fashion and accident of coach life are effectively introduced to give point and charm to the text. It is difficult for one who has an eye for picturesque England to speak moderately of such a volume as this."—*Christian Union.*

THE LIFE OF CHARLES LAMB. By the Rev. Alfred Ainger, M.A., LL.D., Canon of Bristol, etc. New and revised edition. Globe 8vo, $1.50.

THE COUNTESS EVE. By J. H. Shorthouse, author of 'John Inglesant,' 'Sir Percival,' etc. 12mo. $1.00.

ESSAYS IN CRITICISM. Second series. By Matthew Arnold, D.C.L. With an Introductory Note by Lord Coleridge. Globe 8vo, $1.50.

THOMAS POOLE AND HIS FRIENDS. By Mrs. Sandford. With portrait. 2 vols. Crown 8vo, $5.

THE CIVILIZATION OF SWEDEN IN HEATHEN TIMES. By Oscar Montelius, Ph.D. Translated from the Second Swedish Edition (revised and enlarged by the author) by the Rev. F. H. Woods, B.D., with Map and 205 Illustrations. 8vo, $4.00.

GLEANINGS IN SCIENCE. A Series of Popular Lectures on Scientific Subjects. By the Rev. Gerald Molloy, D.D., D.Sc., Sometime Fellow of the Royal University. With illustrations. 8vo, $2.25.

A New Story by Mrs. Molesworth.

A CHRISTMAS POSY. By Mrs. Molesworth, author of 'Carrots,' 'The Cuckoo Clock,' 'Tell Me a Story,' etc., etc. With illustrations by Walter Crane. 16mo, $1.25.

"Instead of telling a single long story, as her custom has been, Mrs. Molesworth favors her young readers this year with eight short stories, all in her refined, sympathetic, and agreeable style. It is one of the peculiarities of Mrs. Molesworth's stories that older readers can no more escape their charm than younger ones."—*Christian Union.*

Books Suitable for Holiday Presents.

With Engravings after Samuel Palmer.

MILTON'S MINOR POEMS. With twelve engravings after Samuel Palmer. Extra crown 4to, $7.50. A few copies can be had on large paper, bound in vellum. Folio, $37.50.

MEMOIR OF PETER DE WINT. By Walter Armstrong, B.A., Oxon., author of 'Alfred Stevens,' 'Scotvish Painters,' &c. With 24 full-page illustrations in Photogravure. Super royal 4to, $10.50.

"Mr. Walter Armstrong's short account of the life of De Wint is a model biography in its way, and the 24 charming photogravures with which the book is adorned illustrate in an admirable manner the different styles of this great artist."—*London Times.*

With 15 Etchings and Other Illustrations.

SCOTTISH PAINTERS. A Critical Study. By Walter Armstrong, B.A., Oxon., author of 'Alfred Stevens,' 'Memoir of Peter De Wint," &c. With many Illustrations, including Fifteen Etchings, by Rajon, Geddes, C. O. Murray, and others. Folio, cloth, gilt, $7.50.

With Colored Plates and Wood Engravings.

THE ART OF SKETCHING FROM NATURE. By Philip H. Delamotte, Professor of Fine Arts in King's College, London, and Ladies' College, Kensington. With Examples from English Masters and well-known water-color Artists. Second Edition. With Twenty Colored Plates and numerous Wood Engravings. Folio, cloth, gilt tops, $7.50.

LANDSCAPE. By Philip Gilbert Hamerton, author of 'Etching and Etchers,' 'The Graphic Arts,' &c., &c. With about Fifty Illustrations. Columbier 8vo, $35. Also an edition on large paper, with proofs of the illustrations, and bound in vellum. Folio, $70.

"The illustrations of 'Landscape' are of a kind to which a special and distinguishing praise must be given. In complete artistic quality no book-illustration of the day equals them. They are, as the preface asserts, at the high-water mark of what can be done in this vein, and in consonance with the purpose of the book. . . . The get-up of 'Landscape' is superlative; the art of book-making in our day can go no further."—*Nation.*

Library Edition of 'Robert Elsmere.'

ROBERT ELSMERE. By Mrs. Humphry Ward. New Library Edition. 2 vols., globe 8vo. $3.

THE

Youth's Companion.

ESTABLISHED 1827.

PERRY MASON & COMPANY, Publishers, Boston, Mass., U. S. A.

PRIZES FOR SHORT STORIES.

THE YOUTH'S COMPANION is the oldest and most successful paper for young people in the world. It was established sixty-one years ago, and now has a circulation of over 400,000 copies weekly. The most famous authors of Great Britain, France, and the United States are among its original and paid contributors.

Recent Contributors.

AMONG OTHER EMINENT WRITERS ARE

Lord Tennyson,	William Black,
Rt. Hon. W. E. Gladstone,	Thomas Hardy,
Gen. Viscount Wolseley,	Mrs. Oliphant,
Prof. Huxley,	The Earl of Lytton,
Prof. Tyndall,	The Marquis of Lorne,
J. A. Froude,	The Princess Louise,
E. A. Freeman,	Archdeacon Farrar.

To Authors.

While the COMPANION engages the services of the most famous authors, the editors recognize the advantage of encouraging new and unknown contributors. With this purpose in view, and also with a desire to stimulate more experienced authors by giving them an opportunity to compete for much more than the usual compensation, the publishers have several times offered and paid large sums for the best short stories submitted in an open competition. They now offer Nine Prizes in money, amounting in all to more than Five Thousand Dollars,

$5,000,

For the best short stories adapted to their use, to be divided as follows:

FOR BOYS' STORIES:

First Prize - - -	*$1,000*
Second Prize - - -	*500*
Third Prize - - -	*250*

FOR GIRLS' STORIES:

First Prize - - -	*$1,000*
Second Prize - - -	*500*
Third Prize - - -	*250*

STORIES OF ADVENTURE:

First Prize - - -	*$1,000*
Second Prize - - -	*500*
Third Prize - - -	*250*

☞ All stories to which a prize is not awarded, but which are adapted to THE COMPANION, will be purchased and paid for at once at liberal rates.

All stories intended for the competition must conform to the terms and conditions set forth in a circular which may be had by sending a stamp to the publishers.

Specimen copies of THE COMPANION will be sent, postpaid, on application to the publishers,

*VII. LEIBNIZ'S NEW ESSAYS CON*CERNING THE HUMAN UNDERSTANDING. By Prof. John Dewey, Ph.D., of the University of Minnesota.

WHAT IS SAID OF THE SERIES:

Christian Intelligencer, New York: "'Griggs's Philosophical Series' is the most valuable philosophical publication for popular purposes which has appeared in this country. It is not a mere translation or republication of the great German masters, but a critical exposition."

Boston Traveller: "One of the most valuable literary enterprises of the day. Each volume is a condensed presentation made by an author who combined thorough philosophical study with literary talent, and who has made a specialty of the philosopher whose work is interpreted."

Chicago Tribune: "The most important contribution that has been made to our knowledge of the greatest philosophical movement in the world's history."

Philadelphia Lutheran Observer: "Griggs's Philosophical Classics will serve a valuable purpose, and will make accessible to the English student much of the wealth hidden in the treasury of German philosophy."

Chicago Times: "The best compendium—as far as it has gone—of German philosophic thought to be found in the English tongue."

Mind, London, England: "This series of Philosophical Classics, Edited by Prof. George S. Morris of Michigan, and published in the enterprising city of Chicago, . . . deserves to be much better known than it has hitherto been to students of German philosophy, on this side of the Atlantic. . . . The exposition of the works taken in hand is full and minute. The student . . . will find in these volumes welcome and profitable aid."

RECENTLY PUBLISHED:

The Aryan Race:

ITS ORIGIN AND ITS ACHIEVEMENTS. By Charles Morris, author of 'A Manual of Classical Literature.' 12mo, $1.50.

"In scientific carefulness, fulness of knowledge, sobriety of judgment, clearness of style, and sustained interest, his book is worthy of all praise."—*The American, Philadelphia.*

"The man that wants to know all about his own race and the ancestry of modern nations, such as the Teutons, the Slavs, the Celts, the Saxons, and others, should study this very learned work. It is learned without being pedantic, and profound without being unintelligible. It gives a mass of information and interesting data."—*Evangelical Messenger, Cleveland, O.*

Poetry and Philosophy of Goethe.

Edited by Marion V. Dudley. 306 pages. $1.50.

"We know of no other volume in English which comprises so much information and such profound criticism of the greatest figure in German literature as this collection of essays and discussions."—*The Christian Union.*

Development of English Literature and Language.

By Prof. A. H. Welsh. 2 vols., crown 8vo, 1,100 pages, $4.; University edition, 1 vol., $3.

"We commend these volumes as a valuable thesaurus of all that pertains to the subject of English literature. In all the qualities of literary workmanship they speak for themselves, and as to their scholarly accuracy and worth they have the indorsement of such names as Edwin P. Whipple, J. G. Whittier, Oliver Wendell Holmes, and Edmund Clarence Stedman."—*American Church Review, New York.*

"It is a book that will be largely read by students of esoteric philosophy, theosophists, and investigators of recondite branches of thought and philosophy."—*Boston Transcript.*

The Life and Times of Girolamo Savonarola.

By Prof. PASQUALE VILLARI. Translated by Linda Villari. Portraits and Illustrations in Photogravure. New Edition, Revised and Enlarged. 2 vols., royal 8vo, cloth, $9.00.

This is the work of an eminent scholar, who has made a special study of the period of the Renaissance. It is founded on the results of much original research, not only in the archives of the Government, but also among papers preserved by the families of the old Italian nobility. The search has brought to light many new documents of great importance, and in the light of them the author has considered Savonarola both as philosopher and as statesman. The work may be considered the only one that does full justice to the life and public services of one of the most remarkable men of his time, and one of the most brilliant lights of mediæval history.

Jerusalem.

The City of Herod and Saladin. By WALTER BESANT and E. H. PALMER. Map and Frontispiece. New edition, revised and enlarged. Crown 8vo, cloth, $3.00.

John Leech's Pictures of Life and Character.

From the collection of "Mr. Punch." Containing nearly 900 pages of pictures. Complete in one magnificent volume. In an extremely handsome and appropriate cloth binding, $10.00.

"The genius of Leech has never been seen to greater advantage than in this gallery."—*Morning Post.*

Old Chelsea:

A Summer Day's Stroll. By Benjamin Ellis Martin. Illustrated by Joseph Pennell. Sq. 12mo, cloth, $2.50.

Studies in the Poetry of Robert Browning.

By James Fotheringham. Second edition, revised and enlarged. Crown 8vo, cloth, $2.25.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CHARLES SCRIBNER'S SONS,

743–745 Broadway, New York.

The Nation

VOL. XLVII.—NO. 1226. THURSDAY, DECEMBER 27, 1888. PRICE 10 CENTS.

Professor Bryce's New Book.

THE

AMERICAN COMMONWEALTH.

By James Bryce, M.P., D.C.L., Regius Professor of Civil Law in the University of Oxford, author of "The Holy Roman Empire." In two volumes, large 12mo, $6.

PART 1.—The National Government. PART 2.—The State Governments. PART 3.—The Party System. PART 4.—Public Opinion. PART 5.—Illustrations and Reflections. PART 6.—Social Institutions.

PRESS NOTICES.

"It is not only treated (by the English press) as the most important study of the subject since De Tocqueville, but as the greatest work of recent years in the whole field of serious literature."—*London Correspondent New York Times.*

"Professor Bryce himself is so well known in literature and in public life that any book from him is sure to be seriously discussed. Especially is this true of an elaborate work on American institutions. . . . The *Standard* acknowledges his ability, learning, and scholarship, and accepts him as a most instructive and philosophic guide through the mazes of American politics. . . . The *Pall Mall Gazette* calls it the event of the year in the literary world."—*G. W. Smalley in New York Tribune.*

"Both from the author's exceptional mastery, and from the collaboration he has secured from American specialists, we have no hesitation in placing this book at the head of those which pretend to treat of our form of government in theory and in its practical working. We bespeak for it the largest possible circulation, and at this season no more fitting gift could be made to any one interested in political inquiry, whether young or old. Taken as a whole, it is an incomparable mine of information and philosophic observation."—*Evening Post.*

"Great Britain here, for the first time on a large scale, has had placed before her a study of American institutions that is based on exhaustive and disinterested investigation presented by one of her own gifted sons. . . . His work rises at once to an eminent place among studies of great nations and their institutions, It is, so far as America goes, a work unique in scope, spirit, and knowledge. There is nothing like it anywhere extant, nothing that approaches it. . . . Without exaggeration it may be called the most considerable and gratifying tribute that has yet been bestowed upon us by an Englishman, and perhaps by even England herself. . . . One despairs in an attempt to give, in a single newspaper article, an adequate account of a work so infused with knowledge and sparkling with suggestion. . . . The mother country of this colossal child among nations could not have sent over the ocean a more welcome or a more auspicious Christmas present than this. Every thoughtful American will read it, and will long hold in grateful remembrance its author's name."—*New York Times.*

"This work will be invaluable not only to the foreign student, . . . but also to the American citizen who wishes something more than a superficial knowledge of the political system under which he lives and of the differences between it and those of other countries. . . . The fact is that no writer has ever attempted to present so comprehensive an account of our political system, founded upon such length of observation, enriched with so great a mass of detail, and so thoroughly practical in its character. . . . We have here a storehouse of political information regarding America, such as no other writer, American or other, has ever provided in one work. . . . Prof. Bryce was conspicuously qualified to carry this important work to a successful conclusion. As Professor of Civil Law at Oxford and member of Parliament for Aberdeen, he possesses the combination of scholarly and practical characteristics most needed for a correct understanding of the American political system. What is only less remarkable than the comprehensiveness and amplitude of the work is its accuracy in statements of fact. . . . On this side of the Atlantic it will be esteemed for its cordial appreciation of all that is bright and hopeful in American life, as well as for the learning, ability, and skill with which the political institutions of the United States have been portrayed. . . . It will remain a standard even for the American reader."—*The New York Tribune.*

"No newspaper article is likely to do entire justice to the wonderfully intelligent and comprehensive work which Prof. James Bryce has recently finished. . . . With very much more than the ordinary emphasis must it be said that 'The American Commonwealth' deserves a very careful reading among the sixty millions of Americans whom it concerns. The lucidity of its style will enable it to instruct the ignorant; its impartial temperament will invite the keenest and most dispassionate scrutiny of the intelligent and critical; and the fact that so much justice is done to our virtues, while so searching yet unmalignant an analysis has been applied to our faults, will secure for it that cordial good-will which should induce us to a closer introspection of ourselves as a nation."—*Morning Journal.*

"Great books, great men, great deeds, and great discoveries are not everyday occurrences. When a book is pronounced 'great' by competent critics, all which relates to it is of intense interest. . . . That 'The American Commonwealth,' by Prof. James Bryce, M.P., must be a work of more than common interest is evident from the reviews and notices in the great London journals. . . . There is but little doubt that Prof. Bryce's work will make as much of a sensation in the United States as it has in England. . . . It has been reviewed there by the leading dailies, several of which pronounce it the most important work on the subject since De Tocqueville. It is the literary sensation of the hour."—*New York Herald.*

The Forum continues to hold its place as the foremost of our magazines.—N. Y. Times.

THE FORUM.

CONTENTS FOR JANUARY:

IS UNION WITH CANADA DESIRABLE?—Senator J. S. Morrill.—Union inevitable, but not so desirable for the United States as for Canada; practical difficulties of turning Provinces into States; clash of financial systems, race prejudices, and political methods.

THE NEED OF ANOTHER UNIVERSITY.—Andrew D. White.—Evolution of the American university; the bad teaching of a generation ago; Columbia College's neglected opportunity; what an American university should be.

AN EASY LESSON IN STATISTICS.—Edward Atkinson.—Occupations and earnings of every class in a typical township of 6,000 people; their commerce and taxes; the luxury and poverty of a few, and the small margin over the necessities of the many; a nation in epitome.

THE RECALL OF MINISTERS.—Pres. James B. Angell.—Ministers that have been recalled from our Government and by it, and the reasons for their recall down to the Sackville West incident.

DEFEATED PRESIDENTIAL CANDIDATES.—James Parton.—Who they were; why they were defeated; our many narrow escapes from dangerous Presidents; Clay, Birney, King, Seward, Greeley, Tilden, McClellan, Cleveland.

UNFINISHED WORK OF THE WAR.—George B. Cowlam.—The eradication of sectionalism by the industrial development of the South.

THE CHINESE EXCLUSION BILL.—Senator Henry L. Dawes. History of our dealings with China for twenty years, and the evil of the present exclusion act.

A RAID UPON THE TREASURY.—Leonard Woolsey Bacon.—The growth of pension legislation; a conspiracy for plunder and the demoralization of the "soldier element"; our pension burdens compared with European war taxes.

GETTING INTO PRINT.—James Payn.—Advice to young writers by the editor of *Cornhill Magazine.*

JOTTINGS ON AMERICAN SOCIETY.—Max O'Rell.—What the author of 'John Bull and His Island' saw during a six months' visit; the Irish in America; politics, newspapers; American vs. French manners; a résumé of his forthcoming book.

The Nation.

Established in 1865, THE NATION was a pioneer as a weekly journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort, and has long been a recognized authority at home and abroad. The list of contributors who have been employed more or less frequently during the twenty-three years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad.

Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.

Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.

Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.

Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.

Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.

Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.

Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

The form and style of the paper are chosen with a view to the most suitable shape for binding, and a set of THE NATION preserved, bound, and indexed, makes the most complete and readable record of current events of importance in the political and literary world available for the American public. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

Subscription price, $3 per annum. Specimen copies sent at any time on request. Address

THE NATION,

208 Broadway, New York.

CURIOSITIES OF THE U. S. PATENT Office. New, entertaining, illustrated book. Cloth, $1.50. Descriptive pamphlet *free*.

FOREIGN BOOKS.—Russian, Polish, Hungarian, Swedish, Danish, Hebrew, French, German, etc. H. ROSENTHAL & CO., 14 Cooper Union, N.Y.

THEODORE MUNDORFF, OPTICIAN. Care of the sight. Brazilian pebbles, eyeglasses, opera-glasses, field-glasses, etc.
1167 Broadway, New York, under Coleman House.

DAILY WORDS—1889.—70,000 sold annually. English, German, or Danish. 30 cts. paper; 40 cts. bound. THE BOOK ANTIQUARY, Easton, Pa.

Littell's Living Age.

Jan. 1, 1889, THE LIVING AGE enters upon its 100TH VOLUME.

Approved in the outset by Judge Story, Chancellor Kent, President Adams, historians Sparks, Prescott, Ticknor, Bancroft, and many others, it has met with constant commendation and success.

A WEEKLY MAGAZINE, it gives more than THREE AND A QUARTER THOUSAND double-column octavo pages of reading-matter yearly; and presents, with a combined freshness and completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

It is therefore invaluable to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature—*indispensable* because it embraces the productions of the

ABLEST LIVING WRITERS

in all branches of Literature, Science, Politics, and Art.

OPINIONS.

"No man who understands the worth and value of this sterling publication would think of doing without it. . . . Nowhere else can be found such a comprehensive and perfect view of the best literature and thought of our times."—*Christian at Work, New York.*

"It is one of those few publications, weekly or monthly, which seem indispensable. . . . There is nothing noteworthy in science, art, literature, biography, philosophy, or religion, that cannot be found in it. . . . It contains nearly all the good literature of the time."—*The Churchman, N. Y.*

"Replete with all the treasures of the best current thought, the best fiction, and the best poetry of the day. It stands unrivalled."—*The Presbyterian, Philadelphia.*

"It maintains its leading position in spite of the multitude of aspirants for public favor."—*New York Observer.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"By the careful and judicious work put into the editing of THE LIVING AGE, it is made possible for the busy man to know something of what is going on with ever increasing activity in the world of letters. Without such help he is lost."—*Episcopal Recorder, Philadelphia.*

"In it we find the best productions of the best writers upon all subjects ready to our hand."—*Phila. Inquirer.*

"The readers miss very little that is important in the periodical domain."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"It is edited with great skill and care, and its weekly appearance gives it certain advantages over its monthly rivals."—*Albany Argus.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"For the amount of reading matter contained, the subscription is extremely low."—*Christian Advocate, Nashville.*

"In this weekly magazine the reader finds all that is worth knowing in the realm of current literature."—*Canada Presbyterian, Toronto.*

"It is indispensable to all who would keep abreast of our manifold progress. . . . It is absolutely without a rival."—*Montreal Gazette.*

Published WEEKLY at $8.00 a year, free of postage; or for $10.50, THE LIVING AGE and any one of the American $4.00 Monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, postpaid; or, for $9.50, THE LIVING AGE and the *St. Nicholas* or *Scribner's Magazine.*

Now is the time to subscribe, beginning with the New Year. Address

Dreams and Dream-Stories

By ANNA BONUS KINGSFORD, M.D., of Paris, President of the Hermetic Society, author of 'The Perfect Way in Diet,' etc., etc.; and part author of 'The Perfect Way; or, The Finding of Christ.' Edited by EDWARD MAITLAND. Crown 8vo, cloth, $2.25.

The Perfect Way;
Or, THE FINDING OF CHRIST.

By ANNA BONUS KINGSFORD (M. D. of the Faculty of Paris) and EDWARD MAITLAND (B. A. Cantab). Revised and enlarged edition, being the first with the authors' names. Square 8vo, cloth, uncut tinted paper, $3.75.

"It is a book that will be largely read by students of esoteric philosophy, theosophists, and investigators of recondite branches of thought and philosophy."—*Boston Transcript.*

The Life and Times of Girolamo Savonarola.

By Prof. PASQUALE VILLARI. Translated by Linda Villari. Portraits and Illustrations in Photogravure. New Edition, Revised and Enlarged. 2 vols., royal 8vo, cloth, $9.00.

This is the work of an eminent scholar, who has made a special study of the period of the Renaissance. It is founded on the results of much original research, not only in the archives of the Government, but also among papers preserved by the families of the old Italian nobility. The search has brought to light many new documents of great importance, and in the light of them the author has considered Savonarola both as philosopher and as statesman. The work may be considered the only one that does full justice to the life and public services of one of the most remarkable men of his time, and one of the most brilliant lights of mediæval history.

Jerusalem.

The City of Herod and Saladin. By WALTER BESANT and E. H. PALMER. Map and Frontispiece. New edition, revised and enlarged. Crown 8vo, cloth, $3.00.

John Leech's Pictures of Life and Character.

From the collection of "Mr. Punch." Containing nearly 900 pages of pictures. Complete in one magnificent volume. In an extremely handsome and appropriate cloth binding, $10.00.

"The genius of Leech has never been seen to greater advantage than in this gallery."—*Morning Post.*

Old Chelsea:

A Summer Day's Stroll. By Benjamin Ellis Martin. Illustrated by Joseph Pennell. Sq. 12mo, cloth, $2.50.

Studies in the Poetry of Robert Browning.

By James Fotheringham. Second edition, revised and enlarged. Crown 8vo, cloth, $2.25.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'" —Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

AN EGYPTIAN PRINCESS. An Historical Novel. By Georg Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but Academic English."—*St. James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M.A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M.A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS, THE THOUGHTS OF M. AURELIUS. $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon). 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

**** *The above sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested. New catalogue of choice and rare books ready. New Holiday Juvenile Catalogue ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Scribner's Magazine.

January Number Now Ready.

Robert Louis Stevenson's

Serial novel, "The Master of Ballantrae," is continued by a most interesting instalment, with an (frontispiece) illustration by William Hole. The Philadelphia *American* says: "As an example of a novel of action, Mr. Stevenson's new fiction is certainly to be marked. There is movement in it indeed. . . . The story is very absorbing, and is to run through a greater part of 1889."

The End Paper

Is this month contributed by Thomas Bailey Aldrich, and is entitled "Odd Sticks, and Certain Reflections Concerning Them," a most charming sketch in an autobiographical vein.

Castle Life

In the Middle Ages is the subject of a superbly illustrated article by E. H. and E. W. Blashfield. The 22 engravings are from new designs by Mr. Blashfield.

Railway Management,

By Gen. E. P. Alexander, President of the Georgia Central Railroad, is the seventh article in the successful "Railway Series." Gen. Alexander describes the governing of the armies of railway employees, and the methods employed in managing a great railway system. Fully illustrated.

The Invalid's World.

By A. B. Ward, author of "Hospital Life." The article is divided into three sections: THE DOCTOR, THE NURSE, and THE VISITOR. Illustrated by Denman, Sterner, and Broughton.

Japanese Art Symbols.

By William Elliott Griffis. Illustrated by many unique drawings by Nankoku Ozawa, especially made for *Scribner's Magazine* at Tokio, Japan.

Essays

By W. C. Brownell, who adds a paper on "French Women," in continuation of his series, "French Traits"; and by Dr. George P. Fisher, who contributes a sound paper on "The Ethics of Controversy."

Sarah Orne Jewett

Writes a charming short story of Irish-American city life, "The Luck of the Bogans," with two full-page illustrations by C. D. Gibson.

Poems

By Edith M. Thomas, H. S. Sanford, Jr., and Richard Hovey.

TERMS: { $3.00 A YEAR; 25c. A NUMBER.

SPECIAL OFFER to cover numbers for 1888, including all the RAILWAY ARTICLES:

A year's subscription (1889) and the numbers for 1888, $4.50.

A year's subscription (1889) and the two cloth bound vols. for 1888, $6.00.

A Subscription makes the best present.

The Nation.

NEW YORK, THURSDAY, DECEMBER 27, 1888.

The Week.

THERE appears to be more or less anxiety in England about Lord Salisbury's delay in filling Lord Sackville's place at Washington, lest it should cause some sort of irritation here. Lord Dunraven's pathetic appeal in the House of Lords was based on the assumption that the American public is waiting eagerly for news of a new appointment, and will exhibit vexation in some serious form if their wishes remain much longer ungratified. In fact, he appeared to think that the good relations of the two countries might be put in grave peril by further postponement. Similar alarm has been expressed on behalf of the British people by that irascible old Tory gentleman, Mr. George W. Smalley, who is evidently suffering a good deal from suppressed emotion about the whole matter. We feel bound to say that we see no sign whatever of any deep concern about it in this country. We think it would be very difficult to find a dozen Americans having any work to do, who care one straw whether the vacancy in the British Legation is filled now or six months hence, or who are in the smallest degree opposed to Lord Salisbury's consulting his own convenience in the matter. Indeed, we might go further, and say that probably nine-tenths of the American public do not know at any given date whether there is a British Minister in Washington or not, and would be unable to say, without preparation, what the use of a British Minister resident in Washington was. Lord Sackville's life there during the last six or seven years was so quiet, unobtrusive, and uneventful, he said so little and did so little, that we think his absence from his post during the whole period would have passed unnoticed outside the newspaper offices. The idea, therefore, that the public here will feel angry or ill-used if a successor to him be not promptly sent out, is almost amusing. Lord Salisbury may feel assured that he runs no risk of unpleasantness of any description in taking all the time he needs. The only British representative in Washington who attracts popular attention is the special envoy who is sent out when there is any important business to be transacted, like the Marquis of Ripon and Sir Stafford Northcote, who came out to negotiate the Treaty of Washington, or Mr. Chamberlain, who came out to negotiate the Fisheries Treaty. The permanent representative who remains here in ordinary times for ordinary purposes, is not the object of any interest or curiosity, and is seldom mentioned except in the "society column" of the newspapers.

The bill which Mr. Holman has introduced in Congress, designed to prevent the use of money in national elections, lacks the one provision which is vitally necessary to its success in practice, in case it ever becomes a law. As it stands, the measure is simply a sweeping prohibition of both the raising and the using of money for other than the necessary expenses of elections. It makes it unlawful for any person to solicit or receive, directly or indirectly, or be in any manner connected with or concerned in soliciting or receiving, any assessment, subscription, or contribution of money or of anything of value, to be expended, used, or employed in any manner whatever in any national election, or in the political canvass immediately preceding the same, to control in any manner or to in any wise influence any such election or the result thereof. It also makes it unlawful for any person to contribute in any manner either money or any other thing of value to be used to influence an election. The provisions are very stringent, and the penalty which is fixed for their violation is very heavy, namely, disfranchisement and disqualification from holding office for five years, and also liability to a fine of not more than $5,000 and imprisonment for not more than three years.

Yet, stringent as the measure is, it is scarcely more so than one which has been on the statute-book of the State of New York since 1842, and has been practically a dead letter since the hour of its enactment (Chapter 130 of the Law of 1842, sec. 400.) This law, if enforced, would secure precisely what Mr. Holman's bill aims at; but it has never been enforced, for the simple reason that, while it allows for defraying certain necessary expenses of elections, it places no limit to such expenses, and requires no publication of them after election. Mr. Holman's bill, after absolutely prohibiting all contributions and expenditures, in its first two sections, opens wide the door to both by saying in its third section that "the foregoing sections shall not be construed as applying to any money received and expended in good faith under the laws of any State or Territory for the necessary expenses of any election, or to money so received and expended for the printing of tickets, or in the publication of any newspaper or other publication, or for the distribution thereof." The Wanamakers and Quays would not have the slightest difficulty in continuing their operations on the old plan in future campaigns under this section of Mr. Holman's bill. They could say, as they do now, that they were merely attending to the "necessary expenses," could burn their records and vouchers, and snap their fingers at the stringent prohibitory provisions of the first two sections. There is only one thing which they and their kind would fear, and that would be a law requiring the publication, after election, of a sworn statement, accompanied by vouchers, showing every dollar received, and the use to which it was put. The English Corrupt Practices Act is an excellent guide to follow on this point, for it has worked most successfully from the moment of going into operation. The requirement of publication of expenditures did what the most stringent prohibitory measures against bribery could not do and never can do—abolished the corrupt use of money immediately; the secret ballot, of course, aiding greatly in the work. Unless Mr. Holman puts a similar requirement into his bill, it will not be worth the paper it is written on.

The American Copyright League is about to make an effort to have the Chace-Breckinridge International Copyright Bill taken up again in the present session of Congress. It has issued a deadly parallel, showing who are the principal supporters and who the principal opponents of the bill. The showing is rather a poor one for the latter. We have before us an anonymous circular, probably issued by some one of the parties of the second part in the parallel, dated December 4, containing a characteristic appeal to the working printers against the bill. We do not know where to look for such direct incitements to dishonesty as are to be found in documents of this character. In our day, incitements to theft or fraud are all given orally, except among the opponents of international copyright. They now monopolize the discredit of issuing printed arguments in support of the doctrine that dishonesty is the best policy. The paper before us shows how much money working printers make, and how much American readers save, by robbing foreign authors. Almost every word of it, however, could be used in support of a well-conceived plan for swindling clothiers, supposing there were no legal penalty for such an offence. That is, the clothiers are a small body, while the wearers of the clothing are an immense body. Men must have clothing, they cannot go naked; and the practice of charging money for clothes puts an impediment in the way of the satisfaction of an absolutely necessary and most salutary want on the part of people of small means. One of the funniest parts of the circular is that which pleads against depriving the foreign author of the "popularity" he now enjoys through the cheapness of his printed books. If he were paid for his copyright, says the pamphleteer, fewer of his books would be read, and then where would be his "popularity"? This argument might also be turned against the clothier. A clothier who got nothing for his goods would, if he stayed in the business, soon be the most popular man in the United States. The practice of paying for them necessarily limits the extent to which he is known and admired, and exposes him to the charge of selfishness.

We do not believe such appeals can have any effect on working printers or any other class of intelligent men. The only way they can be led astray is by having it represented to them that international copyright in some way offends against the doctrine of pro-

tection to native industry. This the Chace bill does not do. It compels foreign authors to print their books here; it reduces the amount of printing to be done in this country only in so far as it respects the ordinary laws of morality. It is, of course, cheaper to steal a book than to buy one. There is no getting over the fact that goods in the open market cost more than goods in the store of "a fence"; but we do believe they are mistaken who think they can make this consideration a powerful one in the eyes of American workingmen. They are, like all men following honest callings, interested above all things in seeing that every one gets the reward of his labor, and that the stranger is not stripped of his possessions as soon as he touches our shores.

In one of the 'Political Essays' by James Russell Lowell, written years ago, which have recently been gathered together, he said: "To be told that we ought not to agitate the question of slavery when it is that which is forever agitating us, is like telling a man with the fever and ague on him to stop shaking and he will be cured. The discussion of slavery is said to be dangerous, but dangerous to what?" Then, to illustrate the absurdity of the slaveholders' position by presenting an even greater absurdity, he added: "The manufacturers of the Free States constitute a more numerous class than the slaveholders of the South: suppose they should claim an equal sanctity for the protective system." Less than thirty years have passed since these words were written, but the illustration no longer serves its purpose. A sanctity is now claimed for the protective system which makes its supporters deprecate agitation and discussion as dangerous.

Some of the Washington newspaper correspondents are seeking to belittle the efforts of the Democratic Senators to resist the progress of the Senate Tariff Bill. We see no justice in this criticism. It was a misfortune that Senator Beck, to whom the leadership of the opposition had been committed, should have fallen ill just as his services were most wanted in that capacity. But a surprisingly good defence under the circumstances has been made by Senators Vest, Reagan, Saulsbury, Vance, and McPherson, although the latter has been overweighted by his own bias in favor of protection. It is not necessary that every item should be fought over, nor is it desirable that a factious opposition should be made to the bill. It is only requisite that the character of the measure should be duly exposed. This has been done so far as progress has been made, and will be done, we have no doubt, as long as the bill remains in the Senate.

In the debate on the Senate Tariff Bill, the duty on wire rods being under consideration, Senator Vest read a communication from the New Haven Wire Company asking for a reduction of the duty on steel rods from six-tenths to four-tenths of a cent per pound. The New Haven company represented that they and about twenty other wire-mills in the country were compelled to pay either a duty of 45 per cent. ad valorem to the Government on imported rods, or a bonus of that amount to American manufacturers of the same; that the wire-mills employed more labor than the rod-makers, and that they had learned that a movement was on foot to increase the duty on rods to 55 per cent., or a specific rate equivalent to that, against which they desired strongly to protest. They said that "they now need protection, not against foreign competition, but against the high charges of the American rod-mills." The cost of steel from which rods are made was stated to be $28 to $28.50 per ton, and the cost of turning the steel into wire rods $8 per ton, making the cost of the rods $36 to $36.50 per ton, while the selling price of rods is $41 to $41.50 per ton—a profit of $5 per ton. A rod-mill can turn out easily seventy-five tons per day, and under such conditions can make a net profit of $100,000 per year—in other words, can nearly pay for itself in one year. There are now nine rod-mills in operation in the country, with an aggregate capacity of 250,000 tons per annum, and they are all fully employed. If the present duty on wire rods were reduced one-half, say the petitioners, the Pittsburgh rod-mills could still sell their rods at a profit and keep the foreign rods out of the market west of the Alleghenies, "while at the same time the seaboard wire-mills, which are prevented by inland freights from using American rods, and are compelled to pay the present duty on their foreign rods, would have some hope of life." This appeal for life met no countenance on the part of the Senate. Although the petitioners were manufacturers, and therefore presumably entitled to more consideration than other people, although they were larger employers of labor than the rod-mills, and therefore presumably more in sympathy with the working classes, yet, as they were plainly opposed to the prevailing practice of robbing Peter to pay Paul, they were sent away with nothing but a piece of cold shoulder. All this while the Government is straining every nerve to reduce the revenue.

The movement among American actors to have themselves covered by the Contract Labor Act would probably have been regarded as a practical joke if men like Edwin Booth and Lawrence Barrett were not found taking part in it. Observing this, one begins to feel that they were not unduly alarmed who saw in the warfare of the mechanics' trades unions against superior excellence or diligence among their own members, the beginning of an attack on civilization itself. The human race has been carried out of forest savagery into peace and comfort by the success of some men in effecting improvements in the arts which the bulk of their fellows would never have thought of; and nations have been carried forward in the same way by letting in light from every surrounding nation. The reason China has been stagnant for four or five thousand years is that each generation has insisted on doing what its fathers did, and has treated any one who proposed to do better or differently as a "foreign devil." The reason why Europe has gone forward is that Greece learned from Egypt, and Rome learned from Greece, and all the modern European nations have learned from each other, and are learning more and more every day. One finds it very difficult, therefore, to treat seriously any proposal to take the United States out of this magnificent competition of civilized peoples for the foremost places in the arts, in the sciences, and in literature.

The insatiableness of protection has always been one of the favorite arguments of free-traders against high tariff. They have always maintained, and they maintain every year with increasing force, that you can never satisfy a protected industry with anything short of prohibition; that the more it is protected, the more timid, inert, and unenergetic it becomes, and the greater the terror of "the foreigner" in which it lives. But we believe no free-trade apostle ever dreamed, until the demand for protection against foreign pictures was made in this country a few years ago, that the protectionist doctrine was so contagious that it would make its way into the world of ideas, and would demand the exclusion of foreign truth, and beauty, and eloquence, and poetry, and wit, by custom-house officers. American artists have actually come forward and demanded that the law shall prevent American citizens from owning or even seeing any better pictures than their own. We have heard an American publisher of high standing argue warmly in favor of the exclusion of English books, on the ground that adult Americans would read them and have their minds injured thereby. And now we have American actors demanding a protected stage, so that American adults shall not be permitted to see any actors who are more carefully trained, or whose manners or elocution are better than their own. To bring this about we are told Edwin Booth is "putting his shoulder to the wheel"; and Lawrence Barrett is "entering heart and soul." In other words, we are threatened with a new China towards the close of the nineteenth century, on the soil occupied by "Time's latest offspring."

"A member of the [theatrical] profession" said last week in the *Tribune*:

> "Our attitude towards the foreign actor is precisely that of the American people towards the Chinese. Why do we keep out the Chinese? Not that we've got any personal feeling against the little Mongolian. Why, bless you, the little fellow is quiet, industrious, unobtrusive, raises no rows, always attends to his own business, and lets ours alone; but he simply comes here to get our money and take it home when he gets enough. He never becomes one of us, therefore we don't want him."

The "member" knew well that he was departing from the truth when he said this. He does not really want the English actor to settle here and become "one of us," simply because he thinks the Englishman is the better actor, and for that reason and no other would "get our money." Besides, it is not bad actors' money the good foreign actor gets,

but the money of playgoers who want the best acting the money will bring, and have no idea of going to a play simply in order that bad American actors may be able to earn a livelihood. The truth is, a bad actor, such as the "member" probably is, is not entitled to a livelihood or to anybody's money. He is one of the most useless of created beings—far more useless than any Chinaman—and ought to be hunted into some honest calling, if in no other way, by open competition.

Washington is full of rumors about the political future of Mr. James G. Blaine, the sum and substance of which are that he cannot have a "Cabinet position," but can have, and probably will be content with, the Mission to England. The Mission to England will not, however, be completely at the disposal of President Harrison. The English Government have to be satisfied with the appointee, and it is very certain that Mr. Blaine would not be received at the Court of St. James, even if he had the brass to present himself there. The Madison Square speech at Pat Ford's meeting, and his notorious alliance with that particular dynamiter, would make it difficult for any civilized Government to receive him, and impossible for that of Great Britain. We feel sure he knows this very well himself, and if he is working for the English Mission it is probably simply in order to have the honor of refusing it before going into retirement. The Turkish Mission would probably suit him better than any, because Constantinople is the only capital in Europe where he would not be found out and where his stories would pass current.

Gen. Harrison was harassed with a particularly pertinacious batch of politicians on Friday, who went to him to urge the claims of various Cabinet aspirants. To one of them who had told him that nine-tenths of the Republicans in New England desired to see Mr. Blaine in the Cabinet, he exclaimed: "I don't think I ought to be crowded into appointing men because other men think they have a claim on me on account of their services to the party." To that precious pair of Platt advocates from New York, ex-Speaker Erwin and Senator Vedder, who were trying to convince him that "Tom" had carried the State for him, Gen. Harrison said: "I propose to recognize no factions in the Republican party. I shall do all I can to heal factional disputes and make the Republican party united and harmonious." These two utterances, which are sent out by many correspondents, and are apparently of undoubted authenticity, had the natural effect of dampening the ardor of the whole army of place-hunters. The man who was advocating Blaine as the Favorite Son of New England admitted sorrowfully, after the interview was over, that the General's manner when Blaine was under discussion was not favorable. "I got the idea," he said, "that Mr. Blaine will not go into the Cabinet."

If the great Republican principle that Cabinet office should be given first of all to those aspirants whom the Mugwumps most severely criticise were to prevail, President Harrison's Cabinet would necessarily include the following: James G. Blaine, John Wanamaker, T. C. Platt, W. W. Dudley, William Mahone, Pat Ford, and Wharton Barker. That is a full set; they are all candidates, and are all known to be looked upon with more or less disapproval by the Mugwumps; and yet we are afraid that there is not a Republican newspaper in the country sufficiently loyal to advocate the adoption of the entire batch by the President. Now, this ought not to be the case, if Mugwump hostility be the true guide to Republican goodness and greatness which such cool and sagacious minds as that of Charles Emory Smith have solemnly assured us it is. There must be something wrong in a principle which breaks down under so simple a test as this.

The way the Philadelphia newspapers throw their shields round "John Wanamaker," as they affectionately call him, is both touching and diverting. Even those who are most opposed to bribery and corruption at elections, and are readiest to suspect it in other places, cannot be persuaded that any of the money which their John raised went in any such wicked ways—he is such a "respectable business man," you know, and such a "valuable church member." Of course the uncharitable smile when one expresses surprise or sorrow at this, and remark that the quality of advertising is not strained; that it droppeth like the gentle rain from heaven on the place beneath; that it is thrice blessed, it blesseth him that gives, and him that takes; or, in other words, that John surrounds himself with a subsidized public opinion, which holds him harmless in Philadelphia. How far this is true, we have no means of knowing, and do not care to discuss; but we will make one remark at which no one can take offence. In all other great civilized Christian cities that we know of, a respectable business man and valuable church member, when his use of a large sum of other people's money is criticized, answers his assailants and confounds them by *publishing his accounts and vouchers*. This is the rule and practice of religion and morality, as well as the custom of merchants. It ought to be the rule of politics; and any Christian man who, handling political money, refuses to obey it, because it is not the law of the land, brings reproach upon himself, on his church, and his country, and makes his journalistic apologists ridiculous.

The South Carolina Legislature adjourned on Saturday night without having adopted the proposition to submit a constitutional amendment establishing an educational test, and the same fate appears likely to befall the similar scheme in Alabama. Outside those States the project has not received much support, and there has been no little opposition in the press of the two States. The general opinion appears to be that, suffrage having been once given to everybody, no attempt at placing an educational restriction upon its exercise will ever be carried through.

Apparently the bulk of Osman Digna's forces were not engaged in the fight at Suakim on Wednesday week, but the British success has certainly steadied public opinion in England as to the expediency of holding the town, and will very likely determine the Government to take possession of it, in the Queen's name, instead of keeping it as now in the Khedive's. The neighboring tribes, it is supposed, would not object to its becoming British territory. What they — apart from the slave-dealers—are resisting in attacking it, is an attempt to reëstablish Egyptian domination on the upper Nile. To this all accounts agree they will never submit. It was the badness of the Egyptian rule which produced the Mahdi, and converted the Sudanese into the fierce warriors they have shown themselves to be ever since 1882. Sir John Adye, the chief of Lord Wolseley's staff in the Egyptian campaign, and sometime Governor of Gibraltar, writes to the London *Times* to say that, while Zebehr Pasha, a noted Sudanese chief, was a prisoner at Gibraltar he repeatedly told him that this was the real root of the hostility of the tribes to the British garrison at Suakim, and intimated that if it were known to them for certain that the British were not acting for the Egyptians, accommodation might be easy.

The triennial elections for the Norwegian Storthing have resulted disastrously for the Sverdrup Ministry. The two groups of the Left, the Moderates or Ministerialists and the Radicals, have been waging war to the knife in the press and on the hustings, and have preferred to wreck their party rather than to unite on a policy which both might be able to support. The next Storthing, which will meet in February, 1889, will have 54 Conservatives, 22 Moderates, and 38 Radicals. Efforts will undoubtedly be made to patch up some sort of compromise between the two groups of the Left, and some of the objectionable members of the Ministry, notably Jacob Sverdrup, the Premier's nephew, Minister of Ecclesiastical Affairs, will probably be sacrificed in order to save the rest. Such a compromise would, however, be a precarious experiment, and would scarcely be respected long. The hostility of the Radicals to Sverdrup is so bitter that they will let no opportunity slip to repay him for the humiliation he has inflicted upon them. They attribute to his machinations the defeat of their three ablest leaders, who all failed of reëlection. The middle course which the Ministry has chosen, between clamorous demands of the Radicals for manhood suffrage and ecclesiastical reform and the conservative sentiment of the peasantry, who demand economy in administration and lightening of the burden of taxation, has apparently failed to satisfy either party. The probable result will be a return of the Conservatives to power before the session is far advanced.

OUR POOR UNPROTECTED STAGE.

THE infantile cry for protection raised by some of our native actors amounts to nothing less than an acknowledgment of hopeless inferiority, and no other interpretation will be put upon it by the general public. All pretences of a patriotic or philanthropic motive are too shallow to deceive any intelligent or unprejudiced person for a moment; and it is to be hoped that the few eminent performers who have permitted their names to be associated with this extraordinary exhibition of pusillanimity may be able to appreciate this fact, and reconsider their course before further damage is done to their artistic reputations. It is useless to try to befog the point at issue. The restrictions asked for must operate, and are doubtless intended to operate, not only against "leading men," as they are called in theatrical jargon, and companies imported for the support of foreign stars, but against the foreign stars themselves. There is not a manager in the country who does not understand this fully, and the managers who support the movement do so because the only possible result of it must be the exclusion of all first-class foreign dramatic performances from these shores.

Their policy is based upon an argument as simple as it is selfish and despicable. Put into plain words, it would be something like this: "Mr. Irving comes here, and takes away money which ought to go into our pockets. His success is due largely to his splendidly trained company. To legislate against him personally would be too barefaced an outrage; let us rather shut his company out, and then offer him a hearty fraternal welcome." They know, of course, that Mr. Irving, or any other player of his rank, would scout the idea of collecting a new cast out of the theatrical odds and ends floating about in Union Square, and that, even if he could be willing to descend to an expedient so unworthy of his high aims, he could not afford the time for organization and rehearsal. They know too, none better, that this unhappy public has suffered too greatly from the domestic combinations of stars and sticks to hunger after foreign mixtures of a similar kind. The rule which they propose would apply equally to all nationalities, and they would be well pleased, doubtless, if they could compel M. Coquelin, Herr Possart, and others to draw their support from the waiters in the restaurants or the beer-saloons.

The complaint that "leading men" are imported from England in large numbers, to the exclusion of native "talent," would be justified if there was any evidence of favoritism in the matter. But there is nothing of the sort, the fact being that the supply of the American article falls far short of the demand. Nor is the reason far to seek. There is no natural quality in an Englishman to make him peculiarly fit to impersonate the heroes of old or modern comedy. The American is as fair to look upon, is as well equipped in respect of lungs and limbs, and is certainly not inferior in respect of average intelligence. How, then, does it come about that young Englishmen succeed in securing so many of the best positions in a business conducted by men notoriously devoid of sentiment? The only possible answer is that they are more competent than their American brethren; and it is equally clear that their superiority must be due, in most cases, not to natural gifts, but to their training.

It has been suggested that the English actor carries with him a certain air of social distinction, traceable to his familiarity with the more formal manners of an older civilization; but in this there is a large element of humbug. The fiction that the stage-player is the idol of the British court or camp has no surer foundation than the fancy of the press-agent. Some of them have been educated in the public schools, a few in the universities, one or two at Sandhurst; but, speaking generally, the English actor has no social opportunities beyond the reach of the American actor. There is no monopoly of good manners nowadays on either side of the Atlantic, and the main difference between a London and a New York drawing-room is geographical. The vital point, moreover, is not whether an actor is a gentleman in his behavior in his private capacity, but whether he can deport himself as a gentleman upon the stage, where his conduct is not natural, except in appearance, but artificial. The veriest Chesterfield in a ballroom might be mistaken for a boor before the footlights. What is wanted here is not so much a school for actors as a school for managers. There are plenty of apt pupils, but there is a most woful dearth of teachers.

The force of this remark will scarcely be appreciated except by those readers who chance to have some personal knowledge of the intellectual and moral character of the men who now control the destinies of the American stage. There are not, in the whole country, more than half-a-dozen managers (three of whom are in this city) who are in the least degree entitled to that name in its proper sense, as it would be applied, for instance, to Phelps, Irving, Charles Kean, or Macready. The rest are speculators pure and simple, who know nothing and care nothing about the art by which they make their living; whose sole idea is to make money, "honestly if they can, but by all means to make money"; and who "run" their theatres as the Bowery man "runs" his museum—by sheer force of advertising. Of literature, of history, of archæology, of architecture, of painting, of costume, or of acting, they are as ignorant as Macaulay's fourth-form schoolboy, and they would laugh at anybody who hinted to them that education of any kind was essential to their profession. All they care about is a sensation which will "draw." There is not one of them who would know what to do with a stock company, if he had one, or who could presume to select a play or give a direction at rehearsal. If a piece has been successful in Paris, Berlin, or London, they contract for its production in one or more of their circuit of theatres, and are interested in nothing but the scene plan, which, as a matter of carpentry, they can comprehend. With the play they get their company; or if by any chance they have to cast the piece themselves, they select one or two prominent performers, and fill up the remainder of the list almost at haphazard from such actors as may happen to be disengaged. If the play, on account of a tank, a horse-race, horse-play, dirt, or what not, chances to make a hit, it is sent the round of the country until the receipts fall off, when it is shelved for something else. In the whole experiment there is no thought of art, either with respect to the play or the manner of its representation. At the end of the season, be it long or short, the actors are scattered to pick up their next employment where they can.

Thus it comes to pass that the American actor, except in a few theatres where the stock system still prevails, is never subject for any length of time to intelligent supervision and direction, but is left to his own resources. If he betrays special aptitude for one line of work, he follows that line exclusively, and either becomes a "star" in the narrowest of orbits—before he has learned the rudiments of real acting, whose aim is general impersonation—or drifts into the abysses of general inutility. If he is lucky, he makes a small fortune in a year or two, and becomes too conceited to play second fiddle to anybody. If he is unlucky, he disappears in inglorious and laborious oblivion. From this latter class comes the despairing wail for protection.

The speculative "manager" is at work in England too, but there he is yet in the minority. In that old theatrical centre there is some virtue in the spirit of conservatism. This it is that keeps alive the memories of tradition and forbids the total abandonment of the stock-company system. The actors who come here to be "leading men" are not in the front ranks at home, but they have served some apprenticeship in schools not altogether dead to the influences of the past. They have learned to read moderately well, to assume an air of repose, and to control the rawest impulses of the beginner; they have enjoyed, in short, in some degree, the advantages which are denied to the beginners here. Some of them, perhaps, although this is not so certain, have been benefited by a more liberal general education. In natural ability, however, they are in no way superior to the American raw material. Many of them do not even speak their own language as well as their American rivals; but they are more expert in detail, are more at home in a dress-coat or in ruffles, and are able to mimic, often very feebly, the comedy style handed down from generation to generation. But there is no tradition in London which does not exist here, and there is not the least reason why America should not lead the way in the theatre as in other paths of civilization. After more than a century of acting, with some of the most glorious names on the roll of theatrical fame, to whimper for protection is more than cowardly—it is disgraceful.

THE CAUSES OF RAILROAD MISMANAGEMENT.

WITHIN the past three weeks the railroad situation has been publicly reviewed by two of the highest authorities in the country—first by the Inter-State Commerce Commission in its annual report to Congress, and next by Mr. Adams in his speech to the Commercial Club of Boston.

Up to a certain point the two are in harmony. Both agree in laying severe blame upon many of the present methods of railroad management. In a large number of cases, rates are not made with any intelligent regard to the interests of the property. Sometimes the subordinate agents act without control from the general management; oftener still the general management acts without control from the stockholders, if not in open defiance of their interests. The agent, in his desire to do a thriving business, is only too ready to meet a cut rate of a rival, however low. In this system of rate-cutting he is sometimes directly encouraged by his superiors. The directors of our large corporations have other means of making money besides the legitimate operation of the property under their control. Fortunes are more quickly made by stockjobbing than by the slow accumulation of dividends. By borrowing other people's money to build and run railroads for speculative purposes, the manager obtains a chance of gain out of all proportion to his own personal risk. The present loss falls almost wholly on the investor: the ultimate gain, whether the stock rise or fall, will accrue largely to the speculators.

Mr. Adams and the Inter-State Commerce Commission are in full agreement as to the serious character of these evils. Both make them a fundamental cause of existing troubles; but the Commission draws the inference that the Inter-State Commerce Act has not had much to do with producing the present state of things, while Mr. Adams believes that it has. Some critics have gone so far as to accuse him of inconsistency in assigning two separate causes for the same result, sometimes making it depend upon one and sometimes upon the other. We do not think that this criticism is well founded. Mr. Adams's explanation may seem less consistent with itself than that of the Commission; but it is more consistent with the facts. For really there are two sets of causes operating to produce the present crisis: one dependent on the errors of railroad managers, and another upon those of the Inter-State Commerce Act. The two are so closely intermixed that the predominance of one set or the other will largely depend upon the point of view chosen by the observer.

If all railroad managers were angels, the Inter-State Commerce Law would not have the bad effect upon railroad property which it has at present. So much we may readily concede to the Commission; and so far we are justified in laying the blame upon the sins of the managers, rather than upon the act itself. But nobody makes laws upon the supposition that all the people subject to them are going to be angels. In point of fact, railroad managers show the same mixture of good and bad qualities as do other people, some of them being thoroughly honest and competent, some indifferently so, and some conspicuously lacking in one or the other of these respects. Now, taking human nature as we find it, was the law adapted to the needs of the case? Experience indicates that parts of it, at least, were not. The prohibition of pooling destroyed more safeguards than the pains and penalties of the rest of the law were able to create. It has actually resulted in the building of parallel lines and in the demoralization of rates. The Commission tries to show that these were not in any way attributable to the operation of the act; but Mr. Adams gives clear indications that they were.

Pools were by no means an ideal means of securing amicable relations between different roads; but they were the best which the experience of half-a-century had been able to devise, and the only one which had accomplished the object in view with even moderate success. When these were made illegal, the railroad system of the country was placed at the mercy of its most reckless members. If one road inaugurated a fighting policy, it inflicted losses upon other roads, which were equally serious whether they entered the fight or kept out of it. The Commission was unable to grant any relief, and simply went about crying, "Peace, peace!" when there was no peace. This is the state of things today; and it is one for which the law is in one sense largely responsible.

We do not attempt to palliate for a moment the action of the more reckless railroad managers; in a recent issue we have ourselves criticised it most severely. But we believe that the effect of the law is to increase these evils, giving the reckless managers more influence, and the conservative managers less, so that the former can dictate the policy to be adopted in large sections of the country. Nor is the prospect for improvement at all promising. To repeal the pooling clause seems out of the question for the present, to reform human nature is almost equally so; but the immediate outlook for the latter is better than for the former. Any means which shall secure real publicity in railroad rates or railroad management is to be welcomed as a powerful aid in this respect.

The proposal for a railroad clearing-house is one which is worthy of careful attention. As far as its operations could go, it would do much good and no possible harm. It is not so radical a measure as many people imagine. When the Southwestern clearing-house was proposed, many of the newspapers described it as a railroad Trust. This was far from the truth. It was not even a railroad pool. It was simply an administrative measure by which rival roads could keep track of one another's operations, and common action could be secured for common ends. So far from being a consolidation of interests, it was intended as a means for rendering such consolidation unnecessary.

Such clearing-houses have existed for about fourteen years in the Southern States, and for over forty years in England. In both cases they have been highly successful. But it should also be said that each of these clearing-houses, in the early stages of its development, was accompanied by a highly organized system of pools. The two things helped one another. It remains to be seen what would be the success of a clearing-house without a pool. So much of our competitive traffic—say from Chicago to New York—is carried over but one system, that it would not enter the clearing-house at all. One set of roads would be held to a greater measure of publicity than another, and the latter would be an object of suspicion to the former. It would require all the ingenuity of our best railroad administrators to meet this difficulty.

Publicity of accounts is no less desirable than publicity of rates. In this respect the workings of the Inter-State Commerce Law may be of decided benefit; but in matters of railroad financiering the public conscience needs education quite as much as the public intellect. Even if stockholders are told pretty accurately what has gone on during the past year, the information often comes too late to do any good. The directors know that it will come too late; and the possibility of future action on the part of the stockholders has little or no deterrent effect. If the public came to regard breach of a director's trust in its true light, it would be quite another thing. When the man who has knowingly, though indirectly, converted investors' funds to his own uses, receives the penalty of social ostracism, and can no longer be associated with financial enterprises of good standing, then the most important of all steps towards railroad reform will have been accomplished. However remote the prospect of this result, it is well worth making the effort to attain it.

THE RAGE FOR OFFICE.

THE cause of the American eagerness to hold office under the Government has been analyzed a great deal, both by political and social philosophers, without any very satisfactory result. It used to be considered a peculiarly American passion, but this theory has, we think, been disposed of by the experience of France under the Third Republic, which indicates that the passion exists in every democracy, and will show itself with great violence whenever the opportunities for gratifying it are sensibly increased. That is, as soon as it becomes plain that everybody who uses certain means has a fair chance of getting into the public service, under any popular government an enormous increase in the number of candidates takes place—an increase so great that it sometimes seems as if half the voting population were place-hunters. Nothing seems to hold this passion in check except absolute hopelessness. The vacancies have to be rare, and the conditions of appointment hard, in order to turn the popular attention away from this mode of gaining a livelihood.

It is not by any means, however, in the character of a means of livelihood that

office-holding most inflames the popular imagination. As a means of livelihood, in fact, it has but little to recommend it to any man who has character, or capacity, or friends, and is still in the prime of life. The pay is small, and the tenure very precarious, and in this country there is no pension for the superannuated or disabled civil servants. In fact, if it offered nothing but the salary, it would probably lose one-half of its attractiveness. What makes it so seductive in democracies is undoubtedly the fact that it is the only place or business within the reach of the ordinary citizen which confers *distinction*, or, in other words, which seems to raise him above his fellows or mark him out from them as a person peculiarly situated. The same salary in the grocery or dry-goods or hardware business would not confer distinction. It would not mark out the recipient as a man above his fellows. It would not clothe him with any dignity or authority, or put him forward as the representative, or type, or symbol of anything. But as soon as he becomes a postmaster, or custom-house officer, or revenue collector, or marshal, or sheriff, he is at once raised on a pedestal : he seems to stand for the State or nation, and to have been selected by it to bear responsibility and speak with its voice. He is no longer a simple villager, or farmer, or storekeeper ; he is raised above them, and forms a separate class, of which he may be the only member.

To appreciate the force of these considerations one has only to remember how ordinary people in a democracy suffer from obscurity. No one knows as much about this as newspaper editors and reporters. Men and women often manage to conceal their passion for notoriety from their immediate friends and acquaintances ; but to the editor and reporter it is often revealed, with startling simplicity, that perhaps the worst of human ills, after poverty, disgrace, or disease, is to be "nobody in particular," that is, to be a person who is not talked about, who has no mark of difference from his fellows, and of whom the world outside his home circle has never heard. As a general rule, men and women do not ask or hope for anything that can be called fame ; but they live in eager desire for some slight elevation above their neighbors, some distinctive mark, if not of eminence, of meritorious peculiarity or segregation, some sign that by somebody somewhere they are more honored or trusted or observed than the other individuals who compose the public. An office, however humble, furnishes this mark. It makes a man peculiar. It clothes him with a little brief authority. It makes him on some subjects an oracle to his neighbors. It takes him out of the crowd. It secures him the certainty of being pointed out in any small company as a person to whom something off the common has happened, whose life does not run in the ordinary groove, and who is, in short, a local notable.

There is, however, one peculiarity of American office-holding which has the effect in this country of deepening the office-holding passion beyond anything of the kind elsewhere. We mean the theory, born of the spoils system, that every office-holder, however lowly his place, assists in "making the Administration a success," and that, therefore, every administration must, in order to be a success, fill all the offices with "its friends," meaning by "friends" men of the same party. This theory was, in fact, necessary from the beginning, in order to justify the Jacksonian "clean sweep." It would be difficult to justify the wholesale expulsion of clerks, postmasters, letter-carriers, custom-house inspectors, and scrubbing women without maintaining that Democratic clerks would not keep books, and Democratic postmasters would not despatch mails, and Democratic letter-carriers would not sort and deliver letters, and Democratic custom-house officers would not prevent smuggling, and Democratic scrubbing women would not scrub floors, in a proper and efficient manner for a Republican President, or vice versa. Consequently, all the underlings of the Government, however obscure or unimportant their duties may be, are, under the spoils theory, supposed to be sharers with the President and the Cabinet in the work of carrying out the policy of the Administration.

This view took firm hold of the office-holding class in this country, and, though somewhat weakened of late years, is still strong and rife. In England, or even in France, it would seem very ridiculous. If a Liberal post-office clerk in London were to proclaim that he was unwilling to do his letter-sorting properly lest it should help Lord Salisbury to maintain his hold on power, it would be received with shouts of laughter, and he would probably be dismissed as a crank. But there are still thousands of subordinates in our Government service who sincerely hold that they can hardly be expected to discharge their duties properly, and are really unwilling to be efficient, if they do not belong to the same party as the Administration.

The self-importance this gives even a small office-holder is easily understood. It can hardly help lending a little extra strut to his walk, and heightening his tone when he is laying down the law at his boarding-house table. To have a real part in directing or carrying out the policy of a great government makes even $500 a year seem a great salary, and gives dignity, if not splendor, to the duty of scrubbing the floor and cleansing the spittoons. If, too, it makes it hard for a Republican to sort letters or cast up accounts correctly under a Democratic President, it gives the task some of the glorious bitterness of martyrdom. The fact that the work is odious lends it a certain nobleness and elevation, and makes the man who does it feel himself a sufferer in a great cause. It is, of course, just the same, a ridiculous and mischievous delusion which has to be destroyed. The civil service will never be thoroughly reformed until all subordinates in it feel themselves to be heart and soul the servants of the American people, or, in other words, of all taxpayers.

THE CONDITION OF IRELAND AS EXHIBITED BY OFFICIAL STATISTICS.

DUBLIN, December 1, 1888.

THE opening address to the Irish Statistical and Social Enquiry Society was delivered last week by Dr. Thomas Grimshaw, the President, who, both in his official capacity as Registrar General of Ireland and Chief Census Commissioner, and as a private individual long versed in vital and other statistics, is probably the most competent authority on such matters in this country. After reviewing at length the statistics of population, agriculture, trade, education, pauperism, and taxation from 1841 down to the present time, he arrived at the conclusion that, since the great famine of 1846-7, Ireland has advanced more rapidly, and has recovered from a condition of almost total wreck more completely, than any country ever has done. This conclusion is so completely at variance with the popular judgment that one may well hesitate to accept the inference he draws from facts and figures which, if not indisputable, approximate to accuracy as closely as such statistics are capable of doing.

The population of Ireland has fallen from 8,300,000 in 1845 to 4,900,000 in 1888. The decrease was most rapid in the years of famine and those immediately succeeding, but it has been continuous, and still continues. The result is, that per head of population we have more acres of land, more pounds of assessment, more cattle, sheep, pigs, and poultry, more agricultural produce, more tons of shipping, more manufactures, more deposits in banks, more capital in every shape, more pupils attending schools, more miles of road and railway, fewer paupers, fewer inferior houses. If this is not progress and prosperity, what is it? The enormous decrease in population is the most striking fact; but a stationary or even diminishing population is not necessarily an evil. The condition of the Irish people before the great famine was deplorable ; population undoubtedly was excessive in this sense, that, as property was constituted—that is, under the existing system of land tenure—the produce available for the subsistence of the mass of the people was insufficient for health, comfort, or happiness. It has frequently been estimated by skilled agricultural authorities and economists that the produce of the soil of Ireland would be sufficient for the support of from ten to fifteen million people. It is an undoubted fact that the produce from the soil has always been far less than it might; even now a vast proportion of the country is capable of reclamation and permanent improvement that would make it infinitely more productive than it is. The chief agent required is labor, and the wages of labor have been for the last century lower here than in most European countries. There has always been a dearth of employment for the poor in Ireland, and there never has been a time since the days of Swift when the Irish population was not considered redundant by the official and land-owning classes; whether the population was three, eight, or five millions, emigration for the "masses" has been the universal panacea of the "classes," to whom the poverty of the peasantry has been a puzzle, a nuisance, a problem, and a crime.

The condition of the country has been and is an economic paradox. The means of subsistence are, if not abundant, sufficient; they might be largely increased by the expenditure of capital in employing labor, which is abundant and cheap: but poverty, squalor, wretchedness, and want of employment prevail. Few years pass without Government grants being made or private funds being raised for the relief of distress; yet the causes of distress are not removed, and these chronic grants serve only to confirm and develop habitual pauperism.

Dr. Grimshaw's interpretation of the official

figures is simple. The mass of the people were dependent on one crop: it failed, hence the famine. Ireland is almost wholly dependent on agriculture, which has ceased to be as remunerative as formerly, hence the continuous decline of the population, with the result that there is more material wealth for the residue. The explanation is insufficient: why should the peasantry have been dependent on the potato crop alone, when corn, cattle, sheep abounded, when the land was but half cultivated? Other European peasantries suffered dire distress from the potato failure, but were not swept away in millions, like the Irish. The true cause of the dire effects of the famine, of the unceasing annual decline of the Irish agricultural population, consisted in the constitution of property, in the system of large estates cultivated by tenant occupiers on the frailest tenure by which a peasantry ever lived in their native country—a tenure under which it was impossible that capital could accumulate among the people, who had therefore, in a time of sudden calamity, no resources in the shape of savings to fall back upon. No economic law operated in the distribution of wealth or land-ownership in Ireland, or in causing the disappearance of nearly half the population.

Mr. Senior, the well-known economist, and poor-law commissioner for many years in Ireland, told a Committee of the House of Commons that a smaller portion of the produce remained with the tenant in Ireland than in England or Scotland. Morally, the Irish tenant was entitled to a larger share of the produce, inasmuch as he provided all the fixed capital and equipments of his farm—house, fences, roads, drains, and so on. The rest and best of the produce—corn, butter, beef, mutton, wool, leather—was applied in paying absentee rents and charges amounting to eight million pounds sterling, in paying an excessive proportion of imperial taxation, and in maintaining an unproductive and improvident class whose existence was a necessary accompaniment of the large-estate system—the landlord himself, who in most cases rendered no services in return for his rent, agents, bailiffs, rent-warners, process servers, and a whole host of legal functionaries whose chief business was the collection of rent.

The less remunerativeness of agriculture is not so evidently the *causa causans* of the disappearance of the Irish people as Dr. Grimshaw suggests, for the decline continued in times of prosperity as well as adversity. In England Prof. Thorold Rogers tells us that his researches show that the "principal lever in the elevation of rents was the loss consequent on dispossession." Prosperity led to this elevation of rent in England, and to dispossession on a large scale in Ireland. The principal agent of depopulation in Ireland has been the power which the possession of vast estates gave to individuals. The owner could use his power either to depopulate absolutely, or to make the conditions of life such that the people fled. At the end of the last century, when land rose suddenly in value, an increase of rent on the estate of a London company in County Derry produced an almost total emigration from the district. The "clearance" system was in full swing before the famine, after which the fact of farming becoming more profitable led to the population being removed from some of the most fertile lands in the country. Alan Pollok, an Englishman, bought an estate in Galway for two and a half million dollars; it was then covered with a peasantry of small farmers; the correspondent of the London *Times* said "he made a *tabula rasa* of it by a process, not ungentle indeed, but rather painful." T. G. Adair cleared 30,000 acres in Donegal, the pretext being a murder, now believed to have been committed by one of his Scotch servants; he turned the district into a ranch. In 1873 fifty families were dispossessed off 2,000 acres of fertile land in Meath, the use of which at that time had become very remunerative. By chance I met this year, in another county, three brothers, elderly men, who had been among the dispossessed. Men of unusual energy and rare thrift, though struck down and deprived of their home and business in middle life, they had with their savings purchased other farms, and, after a painful struggle and much self-denial, again attained to moderate competence.

In these instances, which are types of what went on all over the country, it was not distress and non-payment of rent, or even excessive rents, that led to the clearances, but the power which an owner can arbitrarily exercise over vast tracts under our system of landlordism. A nobleman who used to boast he was the largest meat manufacturer in Ireland, pursued on his estate in Kildare the policy of getting rid of every small farmer near him; he was the terror of his neighbors and tenants. "There wasn't a cabbage garden but he must have it," said one of them to me lately. He took a pride in pursuing this course: "It's the only way to improve the country," I heard him say some years ago. He thus obtained the occupation of some 3,000 acres of fertile, fattening land, on which 150 families might have lived, thriven, and paid rent. In such districts there may be statistical progress—more cattle, sheep, and assessment per head; but towns and villages decay, there are roads without traffic, schools without scholars, posts without letters, tradesmen without customers, for "bullocks wear no breeches."

The population of fertile Meath has diminished 56 per cent. since 1841, and is still diminishing, while that of Mayo, where the people are more dependent on the potato, is increasing. The population of Achill Parish has increased 36 per cent. since 1851, and the assessment per head is one-twentieth of what it is in Meath. The dispeopling of Meath is distinctly due, not to any economic law, but to the power vested in the landlords of resuming occupation and use of the land almost at will. The result is an enormous decrease of people in those districts where the landlord, either from caprice or avarice, chose to oust the peasantry. The only economic tendency illustrated is that men may choose, regardless of moral considerations, to do that which will bring them the greatest money return. Population in Ireland remains most dense where cultivation in small parcels yields the greatest return in rent, and where it would not have benefited the landlord to have seized on the occupation. Lords Lucan and Sligo cleared vast tracts of land in Connaught; a farm of 30,000 acres exists on one of their estates still wearing traces of extensive eviction.

To the question whether the condition of the peasantry has improved, the answer as to some districts is that there are no peasants in them now. Yet the desolation of these districts is one factor in the result deduced from Irish statistics. In districts where the land is poor there is doubtless an overdense population. How to deal with them is one of the Irish problems. How they contrive to live is a puzzle; but as they have not only done so, but paid rent as regularly, until recent years, as the tenantry on better lands, the problem cannot be insoluble. Effects remain after their causes have apparently passed away; and one cause of the dense population in poor districts was the direct encouragement of the owners. In former days a numerous population gave political strength to the owner of the district, and spade labor produced from the poorest moorland five times the rent it would have yielded in its natural state. It was profitable to the owners to dispeople the rich lands, and such districts have been cleared; it would have been unprofitable to do so with the poorer districts, and they remain "congested." A low standard of living was begotten by the conditions in which they lived; and the independence which is the peculiar characteristic of a freeholding peasantry, has never had a chance of being developed.

The standard by which the prosperity and progress of Ireland should be gauged is found in comparison with other European countries. Such a comparison recalls a letter written in 1843 by Smith O'Brien, a landlord, and until then a Conservative, on the occasion of his joining the Repeal Association. He said, "After visiting Belgium and all the principal capitals in Germany, I return impressed with the sad conviction that there is more human misery in one county in Ireland than in all the populous cities and districts which I have visited." In each of the last six years I have visited agricultural districts of France and Switzerland, and country towns of from 10,000 to 50,000 inhabitants. One person can see but little. The observer of agricultural economy is at a disadvantage; the area is vast, the population scattered, the habits of rural life and the conditions of individuals are more varied than those of city life and of the industrial classes. But the observer may supplement his own observation by conversation with others, and extend his experience by the study of books, statistics, and laws. A traveller comparing the Irish peasantry of to-day with those of Belgium, France, or Switzerland, could not fail to come to the same conclusion as O'Brien in 1843. The appearance of the children of the poor is a good test; and the following sentence, from a report of Matthew Arnold in 1884, sums up the whole matter:

"What has been said of the general equality of conditions in Switzerland supplies an answer to the question whether there are *separate schools for dirty and neglected children*—THERE IS NO SUCH CLASS OF CHILDREN."

In the United Kingdom we are so accustomed to look on the landlord and tenant system as the natural state of society that its economic evils are never thoroughly appreciated. In Ireland it means a tax amounting to ten million sterling pounds a year paid by the peasantry, comprising 500,000 families, to a class consisting at most of 20,000 individuals and their creditors, in return for which scarcely any services whatever are rendered. The ideal landlord—a father to his tenantry, fulfilling magisterial duties, promoting education, an example in agriculture, a wise dispenser of charity—has rarely existed in Ireland. The power vested in this class over the homes, lives, and industry of the peasants has been and is a cause of continual unrest and disturbance. More than half the enormous civil-service expenditure in Ireland is incurred in maintaining and regulating this system.

Until the system of large estates and landlordism is broken up, I believe there can be neither progress nor prosperity for the peasantry in Ireland. That which is exhibited by official statistics simply means that the people have been removed or have fled, and that their homes and farms have been converted into ranches.

AN IRISHMAN.

THE MONUMENTS OF AREZZO.

AREZZO, December 1.

IF anything will teach a man how much more than two one and one make, it is the pass-

ing a day alone in an Italian mediæval city, where the civic importance is diminishing and the civic vitality consequently waning. The narrow, poverty-stricken intellectual life in these spent *municipia*, once such flaming, volcanic centres of patriotic fervor, has so little in it which interests the active Western mind that it is of no use to get letters of introduction to the magnates of the city: a half-hour's conversation on the provincial characteristics will, at best, exhaust all there is in common between the American and the Italian, and then the formal politeness of the race makes a mutual torture of tedium obligatory for the rest of the stay. And so it is better to know nobody.

Thus it happens that I am here in the gray of the deepening twilight, having left Florence in the early morning and gone thoroughly through the round of interesting material—as thoroughly, at least, as one can do it alone at one visit—and seen all that calls for seeing in this cradle of great men; and as I must continue on to Rome by the morning train of to-morrow, I am absolutely stranded, what with the ebbing day and exhausted matter for examination—and hours yet to sleeping time! I had hoped to find here Gamurrini, the explorer of Falari and master of Etruscan archæology; but he is at Rome, probably, helping to arrange his findings in the new museum of Papa Giulio, and so the only Arretian with whom I could have had an hour's conversation is gone. Two people in this case can multiply indefinitely, and not merely by two, the attraction of a subject held in common.

Moreover, Arezzo is a place that has but few points of attraction on the decline of a gloomy autumn day, with a cold tramontana wind blowing after the rain, and the sunless landscape shivering off the last few sere leaves from its trees. There are some churches of interest, and especially that of the Madonna della Pieve, certainly one of the earliest and most original of Italian churches, reputed to be of the seventh century, and as free from Byzantine influence as if Ravenna had not existed; and it is perhaps as striking an instance of the barbaric state of the arts in Italy while the artists of the Eastern Empire were preparing the way for St. Mark's at Venice. This barbarism renders it the more interesting. It suggests, perhaps, Pisa, but not logically. It has a long façade with four stories of colonnade; but the motive is different, for the Pisan front is obedient to the motive of the basilica, the colonnades diminishing upwards, while the façade of the Arretian church is one immense front, a massive mask with four colonnades—the lower one having six columns, the second twelve, the third twenty-four, and the fourth thirty-two; each colonnade being terminated by the ponderous pier which, at the right, rises as a part of the campanile to the full height of the same. Most of the columns have, I think, been taken from temples or other early structures, for the variety is curiously accentuated by occasional repetitions, and the sculpture, which is evidently *ad hoc*, is of the rudest possible style. The central archway, which holds the great gate, is supported by two piers, and the inner surface of the arch bears sculptures in detached relief, which, like those over the other doors and a votive relief in the church, are of the most archaic work and evidently local. The "rule of thumb" is written on it all.

The interior is delightful—a large, simple disposition of the members, a broad nave, and two diminished aisles; on the left, four immense columns, and three on the right, besides the pier which helps carry the campanile, and which takes the place of the fourth. The capitals are ornamented with human heads, animals, and foliage—sculpture which, to me at least, gives the impression of having been done by men who had seen the work of the Byzantines, and tried to emulate it without much training. It is of a large and attractive mould. The choir is elevated about ten feet above the floor of the church, with a spacious staircase leading to it on each side, and a circular apse. The treatment throughout is admirably simple and large, and so different from most work of the region that one is led to wonder by what channels it has drifted down to us. Of course, there could have been no part of Italy which, from the time of the supremacy of the Church, has not had its artistic traditions, and, in architecture, in painting, and in mosaic, some kind of continuity; but it would be interesting to see how the Roman basilica led to this church, which is distinctly basilical in type, yet differs from all basilicas by a marked individuality.

The exterior, except the façade, has been restored with great care, and with all the fidelity to the detail of the original which is characteristic of the work done under the care of the present Ministry of Public Instruction. But the stone of which the church is constructed is a most friable sandstone, which has yielded to the elements so completely that it is difficult to find the details for restoration; and were it not for the keeping with the work of the interior, which has not suffered, one might doubt if the restorers had not worked by a moral consciousness. On the exterior of the apse there is a charming colonnade, like all the rear and flanks of the church, quite renewed; but, owing to the delightful gray of the material, there is nothing of the crudeness of the restorations of Pisa and other marble-built churches which so offends the pictorial sense of the followers of Mr. Ruskin. This is a building which the student of ecclesiastical architecture cannot neglect.

Then the Duomo, by Lapo, though still without a façade, has a great architectural interest, not only from its noble proportions, but, to me, from the suggestion in its external ornament of the Duomo of Orvieto, confirming, *pro tanto*, my attribution of the latter church to Arnolfo di Lapo (in the *Nation* of a year or more ago), while its interior is full of interest. The high altar has a magnificent screen, with the life of St. Donatus in bas-reliefs framed in Gothic ornament. Murray attributes it to Giovanni Pisano, but it is certainly earlier than his work. The tomb of Gregory X. by Margaritone is an example of the most chaste simplicity, the effigy of the Pope lying straight and stiff, with his face partially turned to the spectator, and not cut from the same block as the lid of the sarcophagus, so that it lies free, and his head is simply in contact with the marble pillow on which it lies, as a marble head must be on a marble pillow. The trefoil arch above him has at its apex a bas-relief of Christ blessing the Pope as he lies. Gregory died in Arezzo, on his way back from the proclamation of the crusade in 1276. The immense and imposing tomb of Guido Tarlati, the warrior Bishop of Arezzo, who defied the Pope and was excommunicated by him, but immortalized by his fellow-citizens, was the work of Agostino and Agnolo of Siena, and designed, Vasari says, by Giotto. Like the reliefs of the monument of Gregory, it shows how far sculpture was in advance of painting at the time it was executed.

But what I came chiefly to see was the frescoes of Spinello Aretino and Piero della Francesca, in which Arezzo was once so rich. The former decorated his native city with a profuseness which indicates that the little republic was a lover of the arts, for it was immediately after the popular revolution in 1360 that he was called into this work. He was the greatest in direct line of the artistic successors to the traditions of Giotto; for Orcagna, the greatest of all the painters between Giotto and Michael Angelo, was not in the legitimate descent from Giotto, and had qualities so entirely his own that he must be set apart from any school as completely as, at a later period, must Correggio be. Spinello was strictly orthodox, and in his art there is nothing that will not be found in some form in that of the head of his school; but in this line of succession there was no one who can be compared to him for the energy and fertility of invention with which he covered the walls assigned to him. Called to Siena, to Pisa, to Florence, and continually recalled to Arezzo, the authorities of which seem to have reluctantly allowed him to serve other cities, he covered entire walls with a power which had no equal in his day. Of all his work, we have only enough to justify his contemporary reputation. In San Domenico of Arezzo he had evidently covered the entire space offered by the almost unbroken walls of the church with his compositions; for we can still see here and there, in the waste of dreary whitewash, fragments of frescoes—a head here and a confused indication of a group there; and in one place there remains, apparently as part of a series of sacred personages, a portion of one of those architectural decorations which framed the minor subjects, in this case representing two apostles, St. James and St. Philip, standing under Gothic canopies and with, on each side, two stories from their lives, and overhead, subjects from the life of St. Catherine. But the whole is surrounded—perhaps for protection, perhaps in ignorant mutilation—by an absurd frame of relatively recent times, which cuts off a part of all the subjects, yet leaves the Apostles and their Gothic framing intact. This is extremely interesting, as showing to what an extent the character of the architecture and the mingling of sculpture with the purely architectural ornament had influenced the character of painting; for sculpture, as the elder art, had had possession of the field long enough to determine the type of decoration, just as in prehistoric archæology we find the shape of stone implements determining that of the bronze which superseded them. The pictures were introduced into a painted framing just as the sculptures had been into the architectural ornamentation of the façades of the churches, and the imitated relation was carried out in the interiors. Of this, which seems to have been a rule in the early art, even carried out in the panels and altar-pieces, there is a good example in the Boston Museum, in a picture of one of the scholars of Lorenzetti, which has its original framing complete.

It may be supposed that Spinello gave his best efforts and perhaps his best art to his native city, and these two figures are certainly of the best he has left, the composition of the draperies and the pose of the figures being very fine, and all the more interesting that they are still in the purely conventional style of Giotto, which is the legitimate development of the Byzantine motive of decoration. The intervention and use of the model, either as a person or as the material of accessories, is as yet unknown, and this is a consideration which must never be lost sight of in comparing the results of ancient and modern art, whether it be Greek sculpture or mediæval painting; for it is impossible to put in the same category the work of a man who is a mere copyist of nature, and who follows the model, or makes

a cast of the drapery he wants in his picture, and then draws or paints what he sees before him, and that of the man who has the whole repertory of his art in his mind, and works from pure invention, and consequently obtains a unity and harmony in the entire creation which the worker on the modern system can never hope to obtain, and can only imitate superficially. Italian painting, from Cimabue to Masaccio, was purely ideal in the sense that it was the reproduction of mental images unaided by the use of studio properties. It would have been probably considered as sacrilege for any man (and still more so for a woman) to pose as a saint for the use of the painter of sacred subjects, just as it was in the case of Phidias, who was condemned to death for having put his portrait in one of the sacred sculptures. It is a curious coincidence that it was not till Fra Filippo—who committed the more palpable form of sacrilege in eloping with a nun—broke over the conventions of sacred art by using individual types, that the direct use of nature appears. We have orthodox painters after him; but practically Spinello is the last great painter who had been untouched by the heresy, and preserved unbroken the sacred traditions of religious art. His importance is therefore very great in the history of art.

The frescoes of Piero in Arezzo are also very important, but except one figure, a Magdalen in the Duomo, they are not to be seen at present; the Church of San Francesco, in which is the remainder, being converted into a barrack, and not accessible to the public. There are there also some frescoes of Spinello, which are involved in the same danger and the same seclusion. W. J. Stillman.

UNION WITH CANADA.

To the Editor of The Nation:

Sir: Your remarks in to-day's *Nation* on the prematureness of Mr. Butterworth's resolutions on union with Canada lead me to express the hope that the politicians will let the question severely alone. It is not one to make capital out of, for the blindest ought to see that such action only antagonizes the object which it proposes to further. I suppose that there are few thoughtful men who do not regard the eventual extension of the Republic to the Arctic Circle as inevitable, and that there are none who desire it until it is sought by our neighbors. Until that time comes, we are better off without such addition of territory.

What renders Mr. Butterworth's action especially ill-advised is, that peaceable union with Canada will scarce be brought about in any such way as his resolutions contemplate. In all probability it will be preceded by a disintegration of the ill-assorted provinces constituting the Dominion, which are bound together by a political organization destitute of any *raison d'être* save historical accident. Self-interest will act with different attractive powers upon the different provinces, and with gradually increasing force, until first one and then another will break loose and seek incorporation with the territory to which it naturally belongs. Some years since I had an opportunity of learning something as to the popular sentiment in the Maritime Provinces, where the desire for annexation to New England seemed general. We have recently witnessed the resolute purpose of Manitoba to have free access to her natural markets to the south. Suppose the Maritime Provinces secede, and offer themselves to us, thus cutting off Quebec and Ontario from overland access to the sea; suppose their example followed by Manitoba, thus bisecting the remaining territory: what, then, is left for the isolated fragments save to make the best terms they can? Natural forces will bring all this about quite as soon as it is desirable, and meanwhile all such demonstrations as Mr. Butterworth's only aggravate the chances of rupture by irritating national pride.

Very respectfully, H. C. L.

Philadelphia, December 20, 1888.

ELECTION BRIBERY IN INDIANA.

To the Editor of The Nation:

Sir: The character of the frequent comments which I have seen concerning a recent letter in the *Nation* by my colleague, Mr. R. H. Dabney, suggests the propriety of my adding a word to this discussion of bribery in elections: First, for the reason that there are those who *cannot*, as well as those who will not, believe the testimony offered by Dr. Dabney in regard to the state of things in this locality, it would seem that a corroborative statement, together with a few more or less important additions, ought to be in a measure convincing to the former; while of the latter there are a few, perhaps many, who will be more inclined to accept the witness of one born and bred a Republican in the Wooden Nutmeg State. In the second place, I write because I conceive that the duty as well as the self-interest of all honest men and women demand an earnest and entirely impartial search for and public exposition of the truth in matters political as well as industrial, social, or religious—this, in spite of the fact that, between the marked indifference or exceptional caution of one class in the community and the bitter intolerance of others, one gets but little credit for his efforts in the interest of good government through good citizenship, be he ever so honest and earnest.

In the present instance I would say that I was with Dr. Dabney for some time on election day, saw the same disgusting and, to an American citizen holding even moderately high ideals, the rather disheartening sights that he did, and feel very much as he does in regard to the whole matter. While he was voting—in Perry township—I held a brief conversation with a "worker," who proved to be a Democrat. In reply to some questions from me, he said substantially: "No, they are gaining on us a little this morning. They have more money to spend than we have. We try to be *economical* and get votes as low as we can, but they have three dollars to our one." He seemed to think that from $3 to $5 ought to be enough—that is, he was a buyer at that rate; and our conversation was twice interrupted that he might receive reports from his assistants. This gives, however, only a partial view of the direct use of money. A goodly body, perhaps the majority, of those who can be "influenced" by pecuniary considerations are not open to offers from the other party. *If they vote*, they will vote the Republican or Democratic ticket, but they are not disposed to vote at all unless the way is made easy for them. It must be paved, so to speak, or they will not exercise this sovereign right of casting a ballot. This first came to my notice two years ago, when a student, himself an ardent Republican, remarked to me on the morning following the election that the Republicans were *awfully mad* because they had to pay two dollars each to a large group of otherwise good Republicans in order to induce them to vote. The Democrats may have had a similar experience. I am not informed.

Why not convict some of the more prominent of the guilty ones in each party? Evidence ought not to be lacking, for certainly the business was conducted in a sufficiently open and high-handed manner here on November 6. One of our most ardent politicians said early in the day that he had evidence which would beyond question convict a certain notorious manipulator of Democratic votes; but he has not as yet made any use of the evidence, so far as the public generally is informed. Given an entirely proper court, it is really very difficult to bring acceptable legal proof. Take, for instance, an illustration from my own observation. About eleven o'clock I was conversing with "worker" No. 2; this time, I knew beforehand that he was a Republican. We were standing near the polling-place when a stranger came up and inquired for Mr. —— from Richland Township (I did not recognize the name). He stated that *he had made an arrangement* with Mr. —— *concerning voting* before moving from Richland, and was now anxious to see him. In less than two minutes I saw what looked to me very much like an actual payment made him there on the square by two men who were also unknown to me. This may be good circumstantial evidence, satisfactory to the individual, but hardly reliable in court.

I may say that it is not surprising to me that men should sell their votes. For a great many people the national Government is a long way off, and the local governments only known for their taxes on property, which, of course, makes them odious in proportion as taxes seem high. The lack of interest in the one and strong dislike to the other each urge the acceptance of a new suit of clothes, a barrel of flour, or a new pair of boots in exchange for one straight vote. Moreover, the moral code cannot be expected to require so-called honest voting. Is it not as right for the individual to sell his vote as for "Statesman X" or "Statesman Y" to go to the Legislature or to Congress and make laws in the interest of this railroad or that bank or the other industry? Agitators tell of how conventions are manipulated, and there are many who cannot avoid the conclusion that if manufacturers and mine-owners and railway stock gamblers do not themselves accept the honor conferred by the popular choice, they hire their attorneys to do it for them. If we are actually governed by those most heavily interested in the game, why should the individual voter take a personal interest in the question as to which of two nearly equal contestants really wins? What does the average citizen care who nominally "represents" him? The impression once abroad, surely this philosophy must become more and more widely spread, for it is not difficult to comprehend, much as it may be out of harmony with our notions of democratic government and republican institutions. Much as we may lament its prevalence—and this by some is of course grossly exaggerated—vote-buying is the necessary outcome, the invariable accompaniment, of the extensive exercise of the right of suffrage in the presence of extreme industrial inequalities. Men not equal, either in moral or social energy or the product of both, cannot be brothers in politics; whether women could be sisters is at least doubtful.

In conclusion, I will confess that I recognize the futility, the immorality even, of exposing a public evil, a social disease, unless there is a straight road along which we can see the good, and are willing to struggle towards it. But if I read the signs of the times aright, such roads are opening before us. Politically, the suffrage question is one of the legal restraints which honest men, interested solely in good government for everybody, may be able to put upon

trading politicians, or that these may be inclined to put upon each other. Morally, it is a question of impressing alike upon young and old, upon natives and foreigners, the duties and responsibilities of good citizenship in this democratic republic. There is much to encourage in both directions; but it seems to me that the chief source of danger (and hence it may be the most feasible point of attack) is the purse of those Pharisees, as Judge Gresham has called them, who supply the villains with the means of carrying on their nefarious traffic.

Very truly yours,

A. B. WOODFORD.

BLOOMINGTON, Indiana.

CANON TAYLOR AND THE SPREAD OF CHRISTIANITY.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* has the reputation of being willing to grant a hearing to both sides upon any question, and therefore I trust that what I have to say may find a place in your columns. In the issue of December 13 (p. 479) you say: "In the interest of those who give, and especially of those who give mistakenly, cannot a similar study to that of Canon Taylor in the October and November *Fortnightly Review* be undertaken in regard to the management, operations, and results of the various American Missionary Societies, by some one who is interested and yet not prejudiced?" This sentence assumes that Canon Taylor's work is that of an unprejudiced observer, and is to be trusted. It is well to remember that there is a prejudice of negation as well as of affirmation. Canon Taylor made the statement that for every additional Christian in Asia and Africa there are one hundred and eighty-three additional heathen and Moslems, and that "it would take all the agencies put together [including the Catholics] sixty-four years to overtake the increase of the non-Christian people in a single year." It does not take much insight to see the fallaciousness of such reasoning. It is something like the old riddle of the dog chasing the squirrel around the tree. The squirrel always keeps ahead of the dog: how can the latter go around him? In the days of early Christianity the increase of those who were not Christians in the Roman Empire must have been fully as great if not greater proportionately than the increase of which Canon Taylor speaks; and yet Christianity conquered the Roman empire. Statistics have no value, and are very deceptive in estimating the progress of great movements, unless they are comparative. Canon Taylor overlooks the fact, also, that there must be years of preparation before the years of ingathering on the missionary fields can come. We must not forget that in Japan, at the end of five years' work, only one Japanese had been baptized; at the end of twelve years, only ten. But during the next seventeen years, down to 1886, the Christians increased more than one thousand-fold. A short chapter in the history of the American Board concerning the closing of high-schools on the mission fields, and its effect on the work, will also teach the value of civilizing agencies as instruments of Christianization.

But I do not wish to answer Canon Taylor's statements by words of my own. Two witnesses of great authority have spoken during the past year as to the value and progress of missionary work in India—one of them, Sir Charles Aitchison, late Lieutenant-Governor of the Punjab, in an address at Simla, India,* in June, and the other Sir William Hunter, for twenty-five years a high official in the English service in India, in an address before the Society of Arts in London, February 24,* and also in an article in the *Nineteenth Century* of July. The former says:

"One of the most hopeful results of mission work is the lesson which is silently infusing, through native society and vernacular literature, ideas of integrity, honor, philanthropy, truth, purity, and holiness, that are distinctively Christian. In every movement for the welfare of the people, too, Christian missionaries have led the van. . . . In a thousand ways preparation is being made for the coming of the kingdom, and the blessed influences of gospel teaching and preaching are manifest to all who have eyes to see."

Sir William Hunter adds words like these:

"To a man like myself who, during a quarter of a century, has watched the missionaries actually at their work, the statistics of conversions seem to form but a small part of the evidence. . . . I know of no class of Englishmen who have done so much to awaken the Indian intellect, and at the same time to lessen the dangers of transition from the old state of things to the new. . . . The careless onlooker may have no particular convictions on the subject, and flippant persons may ridicule religious effort in India as elsewhere. But I think that few Indian administrators have passed through high office, and had to deal with the ultimate problems of British government in that country, without feeling the value of the work done by the missionaries. Such men gradually realize, as I have realized, that the missionaries do really represent the spiritual side of the new civilization and of the new life which we are introducing into India. . . . The opinion of a Viceroy like Lord Northbrook, or of a clear-headed administrator like Robert Cust, on the actual value of Indian missionary work is beyond suspicion. Such men range themselves unhesitatingly, as at the late International Conference, on the side of the missionaries."

But these men do not merely state their own observations: they also give official statistics as to the growth of Christianity in India, and these figures agree on one result. Sir William Hunter's statistics show that the Christian population of India from 1872 to 1881 increased at the rate of 30 per cent., and the total population at the rate of only 8 per cent. In the province of Bengal, which contains one-third of the population of India, "the general population increased in the nine years preceding 1881 at the rate of 10.89 per cent., the Mohammedans at the rate of 10.96 per cent., the Hindus at some undetermined rate below 13 64 per cent., the Christians of all races at the rate of 40.71 per cent., and the native Christians at the rate of 64.07 per cent." Sir Charles Aitchison sums up the whole matter when he says:

"It may surprise some who have not had an opportunity of looking into the matter to learn that Christianity is spreading four or five times as fast as the native population, and that the native Christians now number nearly a million of souls. . . . How is it that, turn where we will, north or south, east or west, in our oldest provinces or in our more recently acquired possessions, we find the Christian community spreading at a rate unknown since the apostolic times? You and I know the true explanation: it is the breath of the Spirit of the Lord. . . . The gospel message has not lost its power."

Perhaps if some one "interested and yet not prejudiced" would study deeply into the facts of the missionary work in Turkey, and especially into the facts of the work of the American missionaries throughout the world, which is spoken of in such high terms by foreign travellers, some of the facts which these eminent Indian officials have set forth might be found to be paralleled.

EDWARD S. PARSONS.

GREELEY, COLORADO.

Notes.

OUR readers already know something of the great enterprise for which Mr. B. F. Stevens of London lately asked, through Secretary Bayard, the support of Congress. Congress having adjourned without heeding either the application or its hearty endorsement by the State Department and by our learned societies, Mr. Stevens lays aside for the moment the thought of publishing his Indexes to the American historical manuscripts in the European archives (on which he says he is still vigorously engaged), and solicits subscriptions for what he calls his Transcripts. He purposes publishing facsimiles of the papers in question, carefully selected for their importance to American history, and accompanied (as we judge from a sample) by a fair copy in our modern hand with the needful description of each paper. These will be of a uniform foolscap size, and the price asked will include a box-cover for the "volume" of documents (say 500 pages to the volume). The price is $25 each, or, what is preferred, $100 for five volumes as an initial subscription, with the privilege of continuing at $20, and discontinuing whenever sated. A hundred subscribers will put the enterprise in motion; a few more will make it profitable. We can hardly doubt that the libraries and historical societies of this country will furnish that number; but we may drop a hint to men having plenty of money, that the obscurest of the small public libraries dotted over the country can, by the gift of a "volume," or for $100, be placed *pro tanto* on a par with the archives themselves as a source of original investigation by students. Mr. Stevens's address is 4 Trafalgar Square, London, W. C.

Under the title of 'Oude Kunst in Nederland,' a collection of etchings by W. Steelink, after notable paintings by the old Dutch masters in private galleries, is to be published in thirty parts (Amsterdam: T. Van Holkema; New York: F. W. Christern). The accompanying text will be furnished by J. F. Van Someren, assistant librarian in the University Library at Amsterdam. The form will be that of Arendzen's 'Moderne Kunst in Nederland.' There will be the usual variety of impressions—artist's proofs on Japanese paper, proofs before letter, etc.

The exceptional character of the past twelvemonth as regards sovereigns is shown by the portraits in the new *Almanach de Gotha* for 1889 (New York: B. Westermann & Co.). Usually four, they are now six—President Sadi-Carnot being one, the Crown Prince of Italy another, and the rest being all German—the late Emperor Frederick and his wife, and the present Emperor and Empress. But, as the editors remark, the change of President in France has caused them more trouble in recording the displacement of office-holders than the death of two Emperors across the Rhine. Otherwise, they call attention mainly to the army and navy statistics as showing the tendency of Europe at this moment. We need say nothing more of this latest issue of a time-honored authority, but our eye chances to fall on an error on p. 522, by which Senator Sherman is set down as Vice-President of the United States. This was done, of course, in virtue of his former Presidency of the Senate—a post he no longer holds; and meanwhile a new statute of Presidential succession makes Mr. Bayard, as Secretary of State, the heir-expectant.

For the third time, M. Jules Lemaitre has gathered into a volume a selection from his weekly *feuilletons* in the *Journal des Débats*; and this third series of 'Impressions de Théâ-

tre' (Paris: Lecène & Oudin; New York: F. W. Christern) is quite as interesting and quite as amusing as its predecessors. M. Lemaitre, although he has not the profound and intimate knowledge of the stage and of the principles of dramatic art which is M. Sarcey's chief characteristic, resembles the latter in having a great fondness for the theatre, and in bringing to dramatic criticism a mind at once learned and original. His 'Impressions' are very "personal," as the French say; that is, they are his own. He looks at the stage with his own eyes, and not through the opera-glass of his neighbor or the spectacles of tradition. His playful wit and his frequent satire serve only to set off his solid understanding. His analysis here of M. Georges Ohnet's "La Grande Marnière" is a masterpiece of irony; and it is not a mere repetition of the crushing discussion of M. Ohnet's popularity to be found in the first series of his 'Contemporains.' Among the best criticisms in the present volume are those on the "Œdipus" of Sophocles, the "Polyeucte" of Corneille, the "Misanthrope" of Molière, and the "Mariage de Figaro" of Beaumarchais.

A. C. McClurg & Co., Chicago, issue an interesting little volume on 'Cousin,' by Jules Simon, translated by M. B. and E. P. Anderson. It depicts with considerable force the philosophy and the man who, in 1828, electrified French audiences with the idealism of Schilling and Hegel in the reaction against the materialism of Condillac and Baron d'Holbach. There are some good reflections on Cousin's political views. For technical students the work has no value—the latter part of it especially is fragmentary and "phrasy"; but for the general reader it has merits, because Cousin, who had suffered for philosophy, is a very interesting man in a very interesting period; and Jules Simon, himself no ordinary man, has looked at his master through the medium of the present day.

The characteristic fault of 'A Brief History of Greek Philosophy,' by B. C. Burt (Boston: Ginn & Co.) is that it is too meagre for the student and unnecessary for the teacher. The author is at least half conscious of this when he apologizes for writing a mere history, by saying that the problems of philosophy are in a large measure always the same, and that Greek solutions of them have a value not possessed by others, because of their originality and freshness. This is true enough; but to imply that they are still problems makes their history much less important than their solution. The great want of philosophy at present is some earnest effort to solve these problems. Even as a text-book the work is defective, because it is almost exclusively narrative, with little or no attempt at philosophic construction or systematic interpretation.

We have neglected mention in its proper place and time of the new edition of Mrs. Helen Campbell's 'American Girl's Home Book of Work and Play'—a lineal descendant of Mrs. Lydia Maria Child's 'Girl's Own Book.' It embraces a great variety of themes, from dolls' furniture to lawn tennis, swimming, wax flowers, wood-carving, and now—by the addition of two chapters—homemade candy and broken-china tiles. The book is freely illustrated and has undoubted utility.

That rival of Niagara, the great Falls of the Snake River, is the subject, together with "other Western wonders," of 'Shoshone,' an unconventional guide-book by Edwards Roberts (Harpers). Americans are used to making plans long in advance for their summer pleasuring, and hence the present season is a good time for making a trip with Mr. Roberts on paper. Mr. Charles Francis Adams furnishes a preface by way of endorsement, and bids the tourist in search of uncivilized nature to hurry up. He points to the prophecy of a companion of Mr. Parkman's at Pike's Peak, when on "the Oregon trail" forty years ago, about the future settlement of the region, and to its overfulfilment—if we may use the word. Mr. Adams ventures on one of his own about a great hotel at Henry's Lake in Idaho, and a frequenting like that witnessed by the White Mountains or the Catskills. This little book is pleasingly illustrated. The Yellowstone Park is within its scope.

We have received a new edition, the third, of the 'New York Charities Directory'—"a descriptive catalogue and alphabetical analysis," published by the Charity Organization Society of this city.

The *Andover Review* announces, among other topics for forthcoming papers in 1889, "Socialism in its Present Aspects," "Religious Instruction in Common Schools and in Colleges," and "Is the West becoming secularized?" (by the Rev. Dr. J. T. Duryea.)

Kneass's *Philadelphia Magazine for the Blind*, now in its twenty-second year, and *Music Journal for the Blind*, now in its thirteenth year, make appeal for an endowment fund to give them stability and a wider circulation. The publisher may be addressed at No. 219 Church Street, Philadelphia.

The principal paper in the *Scottish Geographical Magazine* for December is Sir Wm. W. Hunter's suggestive address on the "Historical Aspects of Indian Geography." He first draws attention to the influence of the overwhelming forces of nature upon the native of India, giving form to his mythology, shaping his history, and above all developing his gregarious instinct from his conscious inability to "stand alone against nature." From this cause sprang the "many sorts and degrees of mutual insurance, from a joint responsibility for keeping up the continuous embankments against the river, or for maintaining the common reservoir or irrigation lake, to a joint liability for the revenue or even a joint distribution of the crops." He adds that, under the protection of the British rule, the villager grows more self-reliant and less anxious about his individual risks. "One of the strongest solvents of corporate village rights in India," he remarks, "has been found to be canal water." After rapidly reviewing the sources of Indian history and the work of the various scientific surveys of the English Government, the Trigonometrical with its 3,472 stations, the Geological, Botanical, and Statistical, the results of the latter contained in 128 volumes of 60,000 printed pages, he sketches the four seats of ancient Indian civilization, in the deltas of the Ganges, the Indus and the southeastern rivers, and in the north in the upper valleys of the Ganges. In conclusion he answers the question: "Will there ever be a united India?" by saying that he does not look forward to an India which will be a single State, but "to an India firmly knit together into a great empire."

—In the history of the legal profession there can be but few cases, recorded or unrecorded, of continuous practice for sixty-seven years, or nearly the proverbial term of the life of man. Such could have been the boast of the late Samuel Edmund Sewall, who died in Boston on Thursday, having completed last month the eighty-ninth year of his age. That great ancestor of his, Judge Samuel Sewall, who died about a century and a half ago, lived to be seventy-eight, and, bequeathing the sinews of longevity and an aptitude for the law, bequeathed also, as the author of that early anti-slavery tract, 'The Selling of Joseph,' those humane and tender instincts which made the subject of this notice an indefatigable opponent of American slavery. Mr. Sewall was born in Boston November 9, 1799, graduated at Harvard College in the distinguished class of 1817—George Bancroft and Caleb Cushing being among his classmates; entered the first class at the Harvard Law School, and graduated in 1820—being at the time of his death the oldest surviving graduate of the School; and was admitted to the bar in the next year. He had been practising for ten years when William Lloyd Garrison, just released from the Baltimore jail, came to Boston and delivered a lecture "to vindicate the rights of two millions of American citizens who are now groaning in servile chains in this boasted land of liberty; and also to propose just, benevolent, and constitutional measures for their relief." Mr. Sewall, in company with his cousin and classmate, the late Samuel Joseph May, attended this unpatronized lecture, and were instantly overcome by the force of argument and the personality of the speaker, and enlisted among his life-long friends. It was in Mr. Sewall's office that the meetings were held in November, 1831, which resulted in the organization of the first society avowing its aim to be immediate emancipation. Though scruples kept him from being one of the actual twelve founders of the Massachusetts Anti-Slavery Society, he quickly became one of the board of managers, and was fully identified with the "Garrisonian abolitionists." His benefactions to the *Liberator* and its editor kept that paper alive in its first struggle for existence, and were never afterwards withheld. When in 1839 the agitation for a political anti-slavery party, subsequently known as the Liberty party, began, Mr. Sewall took a warm interest in it, notwithstanding its antagonism to some of his old associates, and he passed through all the phases of the same movement under different names, casting his vote and being voted for (as a candidate for Governor), and all the time coöperating with the abolitionists and maintaining the most friendly relations with Mr. Garrison. In the midst of the current idolatry of the Republican party, it is significant that Mr. Sewall was not too old to give his public adhesion to the cause of reform as impersonated in Mr. Cleveland, both in 1884 and in 1888.

—Mr. Sewall's legal activity was exerted for two public ends of lasting importance. He was, in company with the late Ellis Gray Loring, counsel in the famous Med case, which led to the judicial decision that slaves brought voluntarily to Massachusetts by their owners were free. The *fugitive* slave was equally the object of his gratuitous services, and no man did more than he to promote legislation intended to prevent the kidnapping of freemen and to hinder the recapture of fugitives in Massachusetts—the so-called Personal Liberty laws, which South Carolina put in the forefront of her grounds of secession in 1860. Long before this occupation was taken away from him, Mr. Sewall effectively busied himself with the amelioration of the laws affecting the rights of women (including the suffrage). The very last session of the Legislature was a witness of his efforts at improvement in this direction in a number of minor details. In 1868 he published a treatise on 'The Legal Condition of Women in Massachusetts,' which has passed through several editions. With

all this conspicuity before the public (he was elected a State Senator in 1852), Mr. Sewall was one of the most modest and retiring of men; and those who saw his pale, intellectual face, white locks, and frail figure could not suspect the fire, elasticity, and persistency which lurked beneath. His liberality to all good causes was incessant, and it may be said that no nobler Bostonian has died within the present century. He was twice married, and leaves a widow and two daughters, with a posterity which may yet prolong the strain if not the name of Sewall.

—The provinces of Southern Italy are at present engaged in an effort to place the ancient University of Naples upon an equality, so far as material equipment goes, with its northern sisters. Founded in the first half of the thirteenth century by the Emperor Frederick II., its first professors were members of the Dominican and Franciscan orders, and a little later it numbered among them the learned Thomas Aquinas. At that time the lectures were delivered in the old Dominican Monastery, where the cell of the Angelic Doctor is still pointed out to visitors, and a marble tablet records that the famous theologian received as his salary an ounce of gold monthly. In 1780 the University was reconstituted, and is now composed of the five faculties of philosophy, law, mathemathics, natural science, and medicine, and the number of students in attendance is about four thousand. The present building was erected in 1557 as a Jesuit college, and, though large, by no means affords adequate accommodation for the present needs of the University. It is situated, too, in a narrow, gloomy street of the old city, and presents more the appearance of a prison than an institution of learning. The plan now proposed is to sell the old buildings, which are estimated to be worth eleven million lire, and to this five million lire are to be added by contributions from the southern provinces and the central Government. With this sum it is intended to erect and equip sixteen new buildings. One of these, to be known as the University Palace, will provide quarters for the rector and the offices of administration, and will also be the home of the faculties of philosophy and law; another will be shared by the library and the chemical department, while a third will contain the natural-history and medical museums, with suitable lecture halls, and others will be given up to the departments of mathematics, botany, pharmacy, etc. The new buildings will be situated on the high ground in the new quarter of the city near the present Botanic Garden, and are expected to be completed in about ten years.

—One of the most ancient works of fiction that have come down to us, if not the very oldest, is the Egyptian story known under the title of 'The Tale of the Two Brothers.' First described at length, and in part rendered into English by C. W. Goodwin in the last one of the "Cambridge Essays" for 1858, it owes its wide reputation to-day to the complete translation contributed by P. Le Page Renouf to the second volume of 'Records of the Past.' Though simple, or even childish, in conception, yet no more so than we should naturally expect of such high antiquity, this little romance at once became famous again for the insight it affords us into Egyptian life and notions at the very period of the Hebrew bondage and exodus, and for some remarkable parallelisms—in the Bible, to the story of Joseph and Potiphar's wife, also to the creation of Eve (or, in classical legend, to the fashioning of the fair Pandora, endowed with all the gifts of the gods); and in late Egyptian mythology, to the fable of Rhodope and her Cinderella-like slipper. Its hieratic original is called the "D'Orbiney Papyrus," from the fact of its having been acquired from Madam d' Orbiney, an English lady in whose possession it had been during many years previous, by the Trustees of the British Museum in the year 1857. Being very clearly written, and admitting of easy understanding except in a few passages, Mr. Wm. N. Groff, an American student of Egyptology in Paris under MM. Grébaut and Guieysse, has brought out an edition (Paris: E. Leroux) designed to aid *débutants* in the study of the ancient Egyptian language, styling it an "Étude." On the one side, the left-hand page, he presents a transcription of the text, and on the other, the right-hand page, he gives a translation in French interlined with references to authorities, supplementing both of these by explanatory notes and a complete vocabulary of the words occurring in the papyrus. In so doing he has placed at the service of others the text-book and the instruction he himself has enjoyed at the École des Hautes Études—a service that will be still more available to beginners in the Egyptian language with us when an English edition shall have appeared. The present work, being a compilation as Mr. Groff acknowledges, has allowed its author no opportunity for original work, and so presents no result new to its science, as was the case in his recent Memoir upon 'Jakob-el and Joseph-el, or the Tribes of Jacob and Joseph,' which, since the moment of its issue, has not ceased to provoke comment, even though it has gained for its proposal only limited acceptance.

—To the linguistic families of America which were explored at an early day belongs the Carib group, spoken in dialects almost innumerable along the northern coast of South America, and to the eastward about as far as the mouth of the Marañon. The extinct historic and the extant dialects are difficult to classify on account of their multitude and ever shifting habitats, and new dialects of this stock are being discovered even in our epoch. Many Indians speaking these dialects are distinguished from other American natives by their complexion, which approaches nearer to the color of metallic copper than that of any other Indians. The grammars and dictionaries of the earlier missionaries settled upon the coast have been long out of print, and Dr. Julius Platzmann has therefore thought it advisable to reprint them. His beautiful facsimile editions have just been sent abroad by his customary publisher, B. G. Teubner, and amount to five large octavo volumes. They are as follows: Fr. de Tauste, 'Arte, vocabulario, doctrina cristiana y catecismo de la lengua de Cumaná;' M. de Yangues, 'Principios y reglas de la lengua cumanagota, con un diccionario;' Matias Ruiz Blanco, 'Arte y tesoro de la lengua cumanagota;' Diego de Tapia, 'Confesionarios en lengua cumanagota: (1) mas lato (2) mas breve.' Each of these two fill a whole fascicle of about 220 pages, and, as will be seen from the above titles, three grammars and as many vocabularies are contained in the first three volumes. Moreover, the dictionary of Fray Blanco is arranged etymologically in such a manner as to serve as a powerful help to any linguist wishing to compose a grammar of the coast dialects in the modern scientific way. Blanco was a missionary among the Piritú Indians, and in his volume he treats of their language more especially. The manual of De Tauste was first published in Madrid in 1680, that of De Yangues in Burgos in 1683. The Chayma Indians appear to have spoken a dialect identical with that heard at Cumaná during the seventeenth century, and the large majority of the syllables within the word end in vowels, whereas many final syllables have -n, -t, -r and other consonants as their terminal sounds. Of the closely related dialects of the Carib group, the Tamanaco was formerly spoken on the banks of the Orinoco River, at the Encaramada mission, whereas the Cumanagotas lived in and around the present seaport of Cumaná, and the Chaymas on the rivers Guarapiche, Areo, and Caripe, in the province of Cumaná.

—An eclipse of the sun will exhibit the phase of total obscuration in parts of the northwestern United States on the afternoon of January 1. This important phase lasts nearly two minutes in Northern California, and, as it occurs before two o'clock, the sun is at an altitude very favorable for delicate observation. The area within which the total eclipse may be seen is nearly one hundred miles broad, northerly and southerly; and this shadow-track, as the astronomer terms it, extends easterly, at the same time veering towards the north, thus traversing parts of Nevada, Idaho, the Yellowstone Park, and Montana. Weather probabilities in this tract are not encouraging to the eclipse observer. Having regard for considerations astronomical and geographical, the best stations are in California, not far from the coast; but while there is chance of little but fogs and cloud there, further to the east the prospect is more hopeful, though by no means ideal. In the general area to the north of Sacramento, meteorological averages make cloudy skies somewhat more likely than clear ones, while in the favored region of Nevada it would seem to be about an even chance whether the eclipse can be observed or not. Many years have elapsed of late without large astronomical results from solar eclipses; and instruments and observers have thus a fine representation in the field, for the most part in California. No foreign astronomers have yet appeared, but American observatories are well represented. Chief among them is that of Harvard University, located at Willow, California, nearly two hundred miles north of San Francisco, at an elevation of about 2,000 feet above sea level. Mr. W. H. Pickering is in charge, and the variety of complex apparatus for eclipse work has probably never been equalled. Many novel devices will be brought into operation, among them a quadruplex photographic spectroscope for determining the nature and constitution of the solar atmospheres and appendages. A 13-inch photographic telescope will picture the sun's corona on a scale never before tried with success. A special 8-inch lens will be used to photograph the stellar regions about the eclipsed sun, in the hope of getting the outlying streamers of the solar corona, and of affording new light on the existence or non-existence of supposed intra-Mercurial planets. While the spectroscopes have been so arranged as to photograph the lines in every part of the spectrum of the corona, and with a completeness unsurpassed, the preparations for photometry of this mysterious object are almost equally full. With clear skies, the extended capabilities of the apparatus will in large measure make up for the rather short duration of the total phase. No telescopes whatever will be used in ocular observations.

—Most unfortunately, the bulk of the Harvard apparatus is necessarily at a single station; local cloud may thus cause nearly entire defeat. Other parties are in the field, with equipments of more or less significance. Professor Swift, the comet astronomer of Rochester, will attempt to verify his supposed discoveries of

intra-Mercurial planets in 1878. Professor Upton of Brown University and Mr. Rotch will undertake the prosecution of important research, mainly meteorological, on much the same plans they were thwarted in executing in Russia a year or two ago. Mr. Keeler of the Lick Observatory, nearer the Pacific Coast than any of the foregoing, will employ a six-inch telescope with spectroscope attached, for investigating the diffraction theory of the sun's corona. Mr. Barnard of the same institution will photograph the corona with ample apparatus. Other members of the Observatory staff remain on Mount Hamilton, where the eclipse is not total, to observe such phenomena as may be seen there. California parties will visit the eclipse-track with apparatus of varying capability, and glean much in the way of precise record of the phenomena of lesser interest. Professor Young, eclipse observer for a score of years, will be unable to see this eclipse. Mr. Brashear of Pittsburg goes out with special means for research into Hastings's theory of the corona. The opportunity of intelligent residents along the shadow-path will not be lost to science. Operating under the auspices of the National Academy of Sciences, and on a plan similar to that successfully carried out on previous eclipses, Professor Todd has prepared a series of instructions for simple observations of the eclipse, which is expected to bring in results of importance. Detailed directions are given for sketching the sun's corona in whole or in part, and for seeing the zodiacal streamers discovered by Langley and Newcomb in 1878, but never seen since, though looked for by Norman Lockyer in 1886, and regarded by him as of the first significance. Certain geometric observations of value are also included. The instructions have been amply distributed at every available point along the line of totality, from the Pacific to Manitoba; so that, while the astronomers themselves may be in part unsuccessful through clouds at individual stations, the entire area of total eclipse is not likely to be hidden from the sun completely, and everything thus be lost.

THE ENCYCLOPÆDIA BRITANNICA.

The issue of the twenty-fourth volume of the 'Encyclopædia Britannica' (Boston: Little, Brown & Co.; New York: Charles Scribner's Sons) brings to practical completion this monumental work. It may safely be said that no other publication in the English language of the present century has had enlisted in its behalf such varied and eminent talent as is enrolled among the list of contributors to the ninth edition—talent borrowed not only from the mother country, but also from France, Germany, Italy, Russia, and America; and it may be equally safe to venture the assertion that no such combination of intellectual strength will again be found until the preparation of a new edition of the same work. Sixteen years or thereabouts have now intervened since the inception of the enterprise, a period that carries us back almost to the foundation of the present German Empire, and to within seven years of the close of our own civil war. Since that time four Emperors—Napoleon III., Alexander II., William I., and Frederick the Noble—and two Kings of first-class Powers—Italy and Spain—have followed in the footsteps of their forefathers; one monarchy—Turkey—has been all but theoretically effaced from existence, while three petty kingdoms—Servia, Rumania, and Bulgaria—have been launched into the foreground of history. We mention these facts merely to point out what compass of changes may be involved in the space of only a few years, and to indicate the disadvantages which must necessarily follow such a protracted publication.

The 'Britannica,' while eminently useful, is in reality a combination of an old book and a new book, and it must be said it is more old than new. The reader who turns to the article "Africa," in the first volume, and finds there but a bare mention of Stanley's first explorations, and no mention whatever of his famous march across the "dark continent" in 1874-77, nor of the labors and researches of Oscar Lenz, Holub, and De Brazza, may reasonably ask himself if he is consulting the latest edition of a cyclopædia only just completed. He will probably be equally startled at finding, under "Botany" (vol. iv), no reference to the now classical labors of the late M. De Bary, and by the statement in "Chemistry" (vol. v) that oxygen and hydrogen have thus far resisted all attempts at condensation and liquefaction. But it is, after all, the time-honored custom of omitting the biographies of living people which gives the flavor of antiquity to the 'Britannica.' History without our contemporaries is only half-history; and it seems ludicrous, to say the least, that a work which aims at comparative completeness in presenting the intellectual activity of the world, should bar out the very men whose deeds, in one form or another, attract the greatest amount of general attention. To present history without Bismarck, Moltke, Grant, Beaconsfield, Gladstone, Kossuth, and Garibaldi, or Darwin, Huxley, Tyndall, and Spencer, or Carlyle, Tennyson, Arnold, and Hugo, is a task which lies well beyond the abilities of the editor-in-chief and his assisting corps of editors. True, it is argued that the deficiencies arising from such omissions may in a measure be made good by expanding details in the special fields of activity with which our contemporaries are associated; but this has not been done in the case of the 'Britannica.' We have already had occasion to point out, for example, that the name of Moltke does not occur a single time in either the articles "Germany" or "France," and that the name of Tyndall is similarly missed from "Heat" and "Light." Gambetta, if we mistake not, receives but a single mention in the article "Germany," and he is barely less summarily disposed of under "France." The eventful career of Jules Favre, extending over a period of half a century, is permitted only a single mention in French history, and that in connection with his participation in the Government of National Defence in 1870. The biographer of George Henry Lewes finds no word for George Eliot, who consequently drops from vision entirely; nor can recourse be had to the article "English Literature," since that production ceases with the epoch of Walter Scott. Huxley, who has for a full quarter of a century held a foremost place among the naturalists of our day, and who has probably done more to further the "new biology" than any other person, with the exception of Darwin himself, is given hardly more than passing mention in the rather elaborate article "Zoölogy"; nor do we find, either here or under "Vertebrata" (both from the pen of Prof. Ray Lankester), the name of a single American naturalist or anatomist, if we except a simple allusion to the younger Agassiz. These are serious omissions, and they limit materially the general usefulness of the work. It is to be hoped that in succeeding editions the purely personal considerations which appear to have actuated both editors and publishers in pursuing the narrow course which they have chosen, will be abandoned in favor of a more intelligent method.

The volume before us, like its predecessors, shows a goodly array of strong articles, but most of them belong to the departments of natural and physical science. Among these we may enumerate "Variation and Selection," by Prof. Geddes, "Vascular System," by Prof. M'Kendrick, "Vegetable Kingdom," by Prof. Sydney Vines, "Ventilation," by Prof. Ewing, "Veterinary Science," by George Fleming, and "Vertebrata" and "Zoölogy," by Prof. Lankester. Profs. Flower and Newton continue, as heretofore, the minor and usually admirable notices in mammalogy and ornithology. The *pièce de résistance* of the volume is the article on "Wave Theory of Light," an essentially mathematical dissertation by the present Professor of Physics in the Royal Institution of Great Britain, Lord Rayleigh, from which the reader will learn that the modern conception of light-propagation, which is so neatly and clearly delineated in school text-books, has still about it much that is vague and incomprehensible to the learned specialist. We have already referred to certain anomalies in the, on the whole, able article on Zoölogy by Prof. Lankester—the omission of the labors of many of the foremost naturalists of the age; but they will scarcely surprise those who know what importance the author attaches to his own labors, and the low estimate in which he holds the labors of those who have ventured to differ largely from him. They will be prepared for the observation that "great accuracy in work, as well as great abundance of production, has only distinguished one among all the great names of zoölogy—that of Johann Müller." Prof. Lankester dissents from the notion which traces back the ancestral forms of the true vertebrates to the tunicates, inclining rather in the direction of the nemertean worms; and he likewise opposes the contention of Dohrn and others, that metameric segmentation indicates special affinity among the different animal groups in which it is developed. The article "Vaccination," by Dr. Charles Creighton, is largely an elaborate statistical review tending to prove the negative results of inoculation, or, at any rate, intended to question the positive results that have very generally been claimed. The data presented are certainly abundant and sufficiently reliable, and if they are not held to be conclusive in determining an important question, they are yet of a character that forbids their being passed over in silence. Want of space prevents us from entering into an analysis of the figures presented, but it may be interesting to note, as bearing upon the supposed special efficacy of re-vaccination, that the statistics culled from the civil and military population of the German Empire seem clearly to indicate an increase in the death-rate more or less proportional to the amount of re-vaccination. It would be important to have these data verified, and supplemented by others coming from a possibly less partial source.

The geographical and historical articles of the volume are in the main unimportant, and the same is also largely true of the biographical notices. Altogether, the volume shows distinct traces of crowding, abbreviation, and elimination, manifestly with the desire of closing off the work. Thus, the wholly inadequate article "West Indies," with a historical survey terminating practically with the year 1660, has but two and a half pages devoted to it, or less type-material than is crowded into the article "Westmoreland." The subject of volcanoes is dismissed with a mere reference to "Geology," and we thus fail to find notice of two of the most remarkable eruptions of which we have record—those of the Sandwich Islands of 1886, and of Krakatao in 1883, the latter considered to represent the greatest paroxysm

in nature of which history has rendered account. The White Mountains of New Hampshire are wholly wanting; nor do we find even a reference for Yorktown, Va. Less than one page is permitted to Germany's late ruler, William I.—although six pages are still considered necessary for Wellington—while the Williams of the Netherlands, apart from the dates of birth and death, are referred wholly to "Holland." And even the famous Xerxes of old, barring such history as is contained in the articles "Persia" and "Greece," is limited to three lines, although the various Artaxerxeses are allotted upwards of two pages in vol. ii. No room seems to have been considered necessary for Joseph Warren and Anthony Wayne of Revolutionary fame, and none either for Eli Whitney, the inventor of the cotton-gin, or for our distinguished anatomist, the late Jeffries Wyman.

In turning over the pages of this in many ways remarkable work, one is constrained to ask, For whom were these pages prepared? The inspection of such articles as "Wave Theory," "Mollusca," "Light," and "Geography," where frequently for entire pages the meaning of no two consecutive lines can be comprehended by the average college graduate, not to say the ordinary reader, clearly indicates that the work is intended largely for specialists, and, it might be said, for specialists in science; but, on the other hand, the character of the geographical and historical articles fails to bear out the high standard which is imposed upon the work by the scientific ones, and this is equally true of a large number of essentially trivial biographical sketches and notices of unimportant geographical localities with which the pages are interspersed. The want of even an approximately thorough revision, and the numerous deficiencies, likewise tend towards the less elevated side of the balance. The 'Britannica' is, in short, a highly valuable undigested work for scholars.

VISCOUNT STRATFORD DE REDCLIFFE.

The Life of the Right Hon. Stratford Canning, Viscount Stratford de Redcliffe. By Stanley Lane-Poole. 2 vols. Longmans, Green & Co. 1888.

The attention of competitive examiners and other persons engaged in the devising of educational torments for the rising generation ought to be directed to Mr. Stanley Lane-Poole's 'Life of Lord Stratford de Redcliffe.' It would afford an admirable criterion for testing the toughness and endurance of a student. Any one who can read through this truly formidable work without having recourse to the demoralizing practice of "skipping," may congratulate himself on an achievement hardly less laborious than the building of the Great Pyramid. The two volumes contain one thousand pages of closely printed matter; and a biography running to this inordinate length, unless of quite exceptional interest and importance, could hardly fail to become heavy and unreadable. Neither in the career nor in the character of Lord Stratford de Redcliffe was there anything to justify this excessive prolixity. The large space which at one period of his life he filled in the public eye, was due to circumstances, rather than to any intellectual eminence in the man himself.

But independently of this want of interest in his hero, Mr. Lane-Poole has added to the heaviness of his book in another way. Lord Stratford de Redcliffe was, all his life, a diplomatist. Now, the life of a diplomatist is often interesting by reason of the men and things that he has seen; it never can be interesting in virtue of what he has done. Indeed, a diplomatist can hardly be said to "do" anything at all: he ought rather to be described as a professional card-player on a great scale. The "hands" which he has to play are not of his own making—they are dealt out to him; and all that is left for him to do is the display of more or less *finesse* in the winning of "tricks." These successes affect the course of human history about as much as the dykes which children build on the seashore affect the action of the tides. The consequence is, that there is probably no reading so wearisome and unprofitable as the minutiæ of diplomatic conflicts which occurred a generation or half a century ago. The ultimate result may possibly retain some significance still; but the moves which led up to it—who won this trick, who lost that, and so on—are as devoid of interest to all sane people as the particulars of a game of whist played in the days of our great-grandfathers. Regardless of this, Mr. Stanley Lane-Poole has drawn out with laborious minuteness the details of his hero's diplomatic labors, dating from a period as far back as the beginning of the present century. Intrigues long ago forgotten—Russian, French, Turkish—are recovered, so to speak, from the dust of the ages and galvanized into a semblance of life. It is only a biographer filled with a fine enthusiasm for his subject who is capable of feeling an interest in these attenuated shadows of what were hardly more than shadows in their most vigorous period of existence. Readers generally will be content with a timid glance at these early records, and hurry on to that later period when Lord Stratford de Redcliffe had won a name for himself as "the great Elchi." It is upon the judgment formed of his acts and policy at this crisis of his career that his position in the history of Great Britain will depend. Mr. Stanley Lane-Poole desires to have him regarded as a great and far-seeing statesman. We hold an opposite opinion; and that judgment has been confirmed, rather than shaken, by the eloquent eulogy of his biographer.

Very sudden and unaccountable is the genesis and rapid development of Russophobia in England. It clearly did not exist during the Napoleonic wars, for at that time the Russian Czar Alexander was a supremely popular person in Great Britain. At the battle of Navarino, a Russian squadron actually assisted the French and British ships in the destruction of the Turkish fleet; and in 1828, when the Czar Nicholas invaded European Turkey and forced the Porte to sign the Treaty of Adrianople, although Russian policy was disliked and distrusted in England, there were no indications of that half-frenzied feeling of fear and antipathy which nowadays finds expression in the press whenever half-a-dozen Cossacks are seen moving in the direction of India. Later on, when Mehemet Ali was overrunning Syria, a Russian army, 30,000 strong, was actually encamped in the immediate neighborhood of Constantinople; and so little impression did this appalling spectacle produce upon the British mind that few Englishmen are aware that it ever occurred. Russophobia dates from the Crimean war. It was about this time that the French ceased to be regarded as "our natural enemies," and the Russians, to all seeming, entered in and took possession of the vacant space. The totally unaccountable fact is that, simultaneously with this national antipathy of Russian policy, arose the conviction that it was imperative, in the interests of Great Britain, that Constantinople should not pass into the power of Russia.

In what respect Great Britain is specially interested in the status of Constantinople is a mystery, for the explanation of which we have diligently searched the literature of Russophobia, but wholly without result. Mr. Stanley Lane-Poole is as barren, upon this point, as others whom we have consulted; but of this more presently. It was in the year 1853 that the politicians and people of Great Britain felt that they were "drifting" into a war with Russia in defence of the divine rights of the Turk. About the Turks or the Ottoman empire they knew hardly anything, and turned to Lord Stratford Canning de Redcliffe as the one man in the United Kingdom who possessed the knowledge which was lacking in every one else. His diplomatic connection with Constantinople began so far back as 1808, when he had been appointed Secretary to the Mission. In 1810, still a very young man, he had become Minister Plenipotentiary, and in that capacity had played an active part in negotiating the Treaty of Bucharest, which made peace between Russia and the Sultan in time to set free a large Russian army to act upon the flanks of the French army retreating from Moscow. In 1824 we find him once more at the head of the British Embassy at Constantinople. He was there when the battle of Navarino was fought, and all through the Russo-Turkish war of 1828–29. Three years later he was again sent on a special mission to Constantinople, to arrange the terms on which the freedom of Greece was to be conceded; and for ten years, from 1841 to 1851, he remained, with but a single break, the British Minister at the Court of the Sultan. Thus his experience of the theatre of the coming war had been great and prolonged.

He was fully alive to the evils of Ottoman rule. We find him writing in 1821 to his uncle, the celebrated George Canning: "As a matter of humanity, I wish with all my soul that the Greeks were put in possession of their whole patrimony, and that the Sultan were driven, bag and baggage, into the heart of Asia." In 1841, when he entered upon his post of Ambassador, he saw clearly that the only hope of preserving the life of the Ottoman Empire was to infuse some degree of European justice and liberality into the violent, narrow, and defective methods of Turkish administration. For ten years he labored single-handed at this impossible task. He possessed all the strength and indomitable energy of purpose which spring from the unphilosophic mind. He saw but a single face of the difficulty which he had to overcome, and was convinced that it was the whole. He extracted from the Sultan and his Ministers laws and proclamations which would have changed the face of the Ottoman Empire, given justice to the Moslems, and liberated the Christians from their disabilities—if only there had been any power to carry them into effect. In the absence of such power, they remained little more than a dead letter, and when Stratford Canning resigned his post, it was with a depressing consciousness of failure. The terror which his strong and overbearing character had inspired in the minds of the Sultan and his officials had saved many individuals from injury and oppression, but the influence was altogether personal; the Ottoman Empire had not advanced an inch in the direction of convalescence and lasting improvement. "The great game of improvement," he wrote to Lord Palmerston in April, 1851, "is altogether up for the present; and though I shall do my best to promote the adoption of several measures, it is impossible for me to conceal that the main object of my stay here is all but gone."

He had, however, hardly set foot in England

when the growing difficulties between Russia and the Ottoman Empire occasioned a species of popular demand that he should again return to the scene of his past labors. He reached Constantinople when Prince Menshikoff was there, ostensibly to settle the rights of Russia as regards the sacred places at Jerusalem, but really to extort from the Sultan a secret treaty conferring upon the Czar a protectorate over the Christian subjects of the Ottoman Empire. He remained in Constantinople through the many months during which Great Britain was helplessly "drifting" into a costly and unnecessary war, and it is the endeavor of his biographer to show that he exerted a commanding influence all this time over the Turkish Government. To us it appears, even from Mr. Lane-Poole's narrative, that he exerted hardly any. The Turks, in fact, completely outwitted both the French and English Governments. They temporized until they perceived that France and Great Britain were so deeply committed that retreat was impossible, and then, despite the remonstrances of Lord Stratford de Redcliffe, they rejected all offers of accommodation, and declared war against Russia. The Turkish Government dragged France and Great Britain at its heels. It dictated the policy of which their befooled allies had to pay the cost.

The *casus belli* was the occupation of the Principalities by a Russian army. This unquestionably was an aggression upon the Ottoman Empire which justified a declaration of war. The Turkish Pashas, however, had been much too astute to resent the action of Russia until the possibility of their being left unsupported had disappeared. The reasons which induced the Emperor Napoleon to promise his support are obvious enough. He wanted, no matter at what cost, to become a recognized member of the Royal and Imperial Society into which he had intruded himself by means of the *Coup d'État;* but it passes the wit of man to conjecture why Great Britain should have put herself into that particular galley. The Russian occupation of the Principalities was a menace to the peace and commerce of the Austrian Empire which absolutely prohibited that Power from acquiescing in its continuance; her military position, also, on the exposed flank of the Russian army, enabled her, whenever she chose, to compel the Czar to relinquish his hold, merely by the threat of putting her troops in motion. Under such circumstances, for Great Britain to step in and, at an immense cost in men and money, do the work of Austria was, as Mr. Kinglake truly says, "as though the forces of the United States were to come across the Atlantic to defend Antwerp from the French, while the English looked on, and thanked their enterprising friends for relieving them of their duty."

This, however, was only the beginning of British folly in this matter. Austria, as all the world knows, did at last set her troops in motion, and the instant result of this operation was the evacuation of the Principalities by the army of the Czar. The pretext, such as it was, on which Great Britain had agreed to assist the Turks against Russia thereupon disappeared altogether; and then it was that, without the semblance of a *casus belli*, without reason or provocation of any kind, the British Government decided, in conjunction with France and the Porte, to invade the Russian Empire. This amazing stroke of policy brought about the death of about a quarter of a million of human beings, and when the Peace of Paris was concluded, this frightful carnage was the solitary result which the Triple Alliance could put down to the credit side of their balance-sheet. They had killed that quantity of human beings; they had achieved nothing else. Now, before we are prepared to concede Mr. Stanley Lane-Poole's proposition that Lord Stratford was a great and far-seeing statesman, we should like to know the relation in which he stood to this monstrous policy. But copious and prolix as Mr. Poole is about matters of secondary or no importance, his pages are an absolute blank so far as this critical question is concerned. He does not quote a letter or a despatch of Lord Stratford which shows that the writer was aware of the absurdity of Great Britain taking upon herself the function of cat's-paw to Austria. Lord Stratford, so far as appears in these pages, saw nothing worthy of reproach in the unprovoked invasion of the Crimea, nor anticipated a bit more clearly than the most ignorant British Russophobist the difficulties of the enterprise, or the fragile character of the alliance on which its success absolutely depended. Mr. Stanley Lane-Poole would claim for him that, among the shifting and perplexed counsellors of that time, he was the one man—save and except the Emperor Nicholas—who kept a firm and unshaken grip upon "the great Eastern Question" throughout. This, we maintain, is exactly what Lord Stratford did not. He never apprehended the all-important fact that, outside of the Ottoman Empire, the two Powers inextricably entangled in this question were Austria and Russia. Not having apprehended this, he was blind also to the fact that if Great Britain took action in the matter at all, she could only do so profitably as the ally, not of the Turk, but of the Austrian. He "rejoiced," Mr. Poole tells us, at the determination to lay siege to Sebastopol, not understanding that, even if successful, the ensuing weakness of Russia was not a fresh lease of life to the Turks, but simply an advantage to Austria.

Great Britain, thus forced into a false position, has been unable from that day to this to extricate herself from it. She has been forced to continue acting as the sustaining prop of a hopelessly corrupt and decaying domination. Millions of her wealth have disappeared in the same gulf which swallowed the enormous expenditure of the Crimean War, and it was only by the skin of its teeth that the nation was preserved in 1877 from a repetition of the insanity of 1853. Finally, this persistent and causeless opposition to Russian policy in the East has driven Russia to retaliate by a menacing advance in the direction of India, to the manifest satisfaction of both Austria and Germany. The last British invasion of Afghanistan, with its still incalculable consequence, was linked, in a direct sequence of cause and effect, with the abortive invasion of the Crimea.

VILLAGE COMMUNITY AND FEUDAL MANOR.

A Hand-Book to the Land-Charters and Other Saxonic Documents. By John Earle, M.A., Professor of Anglo-Saxon in the University of Oxford, etc. Oxford: The Clarendon Press; New York: Macmillan. 1888. 8vo, pp. 519.

Professor Earle has contributed a most valuable aid to the study of the early institutions and social condition of England in this well-chosen collection of documents. It will serve to supplement Bishop Stubbs's 'Select Charters,' having for its aim rather social and economical than political and constitutional relations; having also the advantage of an excellent commentary, a feature which Stubbs's collection lacks. The editor explains that his plan was modified and enlarged as he was engaged in his work, so that documents appear in one part which might more properly have gone into another. The largest part of the work consists of what he calls "Primary Documents," being genuine records, chiefly from Kemble's 'Codex Diplomaticus'; these occupy two hundred and seventy-seven pages. Part II., "Secondary Documents," "comprises documents which are preserved in single parchments as the primary records are, but which, unlike those, are not contemporaneous with the date assigned to the transactions, while yet, on the other hand, probably not later than the eleventh century." Of these there are one hundred and sixty pages. They are divided into fifteen groups, some being fabrications, some from special chartularies, and some from other sources. We do not find any statement of the whole number of documents, but it cannot be far from three hundred, perhaps about equally divided between Latin and Anglo-Saxon.

An introduction of one hundred and eleven pages treats first, of the forms of the charters, secondly, of social and land relations, and thirdly, of the language of the documents. The second of these divisions possesses special interest for students of social history, and must be regarded as the most important contribution to this department of English history since the publication of Mr. Seebohm's treatise in 1883. Like Mr. Seebohm, Mr. Earle has advanced the discussion by a distinct step towards the solution of the problem; possibly he has solved it, but there still remain some considerations which he does not appear to have taken fully into account.

The problem to be solved is the conversion of the free village community into the feudal manor. The accepted theory says that this was accomplished by "encroachment on the part of some overgrown ceorl." Mr. Seebohm contends that there never was a free village community at all, but that the manors existed from the first, essentially as they were in feudal times. Mr. Earle accepts the free village community, but by its side, or in connection with it, the manorial system, as "part of the first plantation"; and says that this theory ought to approve itself by "the luminous effect which new truth generally has in lighting up places that were dark." It is certainly so. Mr. Seebohm taught us to recognize the manorial feature which the accepted theory ignored, but, on the other hand, he ignored the free elements of society. Mr. Earle has developed a theory which, in its general character, seems to reconcile perfectly the two contradictory systems.

The starting-point in this theory is Mr. Kemble's words: "There can be no doubt that some kind of military organization preceded the peaceful settlement, and in many respects determined its mode and character." The people of England, like the primitive Germans, were, on their first settlement, organized in military divisions, and the territorial areas which they occupied were based upon and determined by these military divisions: the territorial hundred was simply the district occupied by the numerical hundred. "Upon this military principle," Mr. Earle goes on (p. lv), "I conceive the English settlements were originally founded, that each several settlement was under a military leader, and this military leader is the ancestor of the lord of the manor"—the *thane* of the later Anglo-Saxon period being the connecting link between the two. "The military officer, settled with a suitable provision by the side of his company, is the lord by the side of the free owners" (p. lxii). This theory commends itself as well by its simplicity as by the completeness with which it explains the evolution of the manor. But when we carry the in-

quiry further into detail, and ask with what Anglo-Saxon class we are to identify these military leaders, the question becomes more complicated and the answer more uncertain. Mr. Earle's suggestion may be the right one; it has much in its favor, but, on the other hand, leaves some difficulties to be explained. This theory is that the *gesithas* of the early Anglo-Saxon laws, the *comites* of Tacitus, were the officers of the invading army, and that they, settling "with a suitable provision" of land by the side of their free companions, became a kind of "local police officer. In the Laws of Ine it is assumed and implied that there is in every township a gesith. This is a universal institution: the local administration of public order rests everywhere upon the gesithas" (p. lxviii).

This assertion is more positive than the evidence will warrant. The laws of Ine do not say a word about townships in connection with the gesithas, nor do they in any explicit or certain way attribute to them any police powers. One of the three passages cited (Ine 50) must certainly be omitted, as the word *inhiwan*, rendered 'community,' is in the Latin translation *familia*, and in Schmidt's Glossary, *der Familie angehörig*. The passage (23, 1) which gives the gesith a share of the fines, need not necessarily imply "a magisterial privilege," but may mean that the King shares the fines with his followers. The obligation upon the gesith (30) to pay his wergeld is most naturally explained, as not for the misdemeanor of the ceorl, but for a similar misdemeanor on his own part. This is, at any rate, the only passage which can with any probability be made to support Mr. Earle's view, and this is too obscure to be relied upon with any confidence. On the other hand, the gesithas are distinctly mentioned (Wihtred 5, Ine 50, 63, 68) as a class of dependent followers.

Again, the *comites* of Tacitus—with whom these gesithas should unquestionably be identified, as Mr. Earle, following Kemble, holds—do not appear to correspond to the officers of an army, but to the suite or personal retinue of the chief. This is not by itself a conclusive objection, as such members of a staff, as we may call them, might easily have been assigned to duty as division commanders; but there is no indication that this was the case. They lived in the household of the chief, and served in his company as horsemen, being apparently the cavalry described in the sixth chapter of the 'Germania.' But the infantry of the Germans, as is shown in this and the following chapter, was made up of family groups, and, it is natural to suppose, was commanded by the heads of these family groups. This was the German people in arms; the chief and his followers were an excrescence. We should say that Mr. Earle's military leaders, the ancestors of the lords of the manor, were more likely to be these heads of families than the personal followers of the king or chief. It may be observed, further, that this theory of the police functions of the gesith conflicts with the generally accepted doctrine of the mutual responsibility of the *maegth* or kindred, while this mutual responsibility would be naturally and easily associated with the heads of the family groups.

If there was any class of officers over the free tribesmen, other than the heads of their families, we should incline to think that it was the *eorls*, a class which Mr. Earle, like almost every recent writer, regards as "nobles," but, as we think, without sufficient reason. It is surprising how slight is the ground for this now accepted view. Mr. Earle confesses (p. lxviii): "I do not know that a clear instance of EORL in this original sense can be found after the Laws of Aethelberht, though there are many passages where it might seem so to the unwary reader." If there are no passages after the Laws of Aethelberht, there are certainly none in these laws, for they mention the eorls only twice (chapters 13 and 14), in speaking of an eorl's *tun* (town or farmstead) and *birele* (handmaid), in a connection which might quite as well mean an officer as a noble. This word is found in no laws before the tenth century (where it is admitted to have had a different meaning) except the laws of Kent. Now, the settlers of Kent were Jutes, that is, akin to the Scandinavians, and the Earls of Kent must of course have been the same as the Scandinavian Jarls, who were appointed officers, not an hereditary nobility. Indeed, a speech of Wihtred of Kent, in the 'Saxon Chronicle,' says that the King appointed his *eorlas*.

We are inclined to think, therefore, that Mr. Earle is mistaken in making the gesithas to have been township officers. Their relation to their chief makes it improbable; the laws of Ine do not clearly support it; and it is much more likely that the officers of the infantry were the heads of their own families, or, if appointed, were the eorls. Mr. Earle is himself embarrassed (p. lxxx) by the mention in the laws of Ine (ch. 51) of two classes of gesith—the one landowners, the other having no land. He understands "by the latter such gesithas as had no family estate, whether ethel or bookland, but were provided for in the common field." A much more natural interpretation is to compare them with the two classes of *vassi* mentioned in a capitulary of 825, one, *qui in nostro palatio serviunt*, the other, *qui beneficia nostra habent*.

Whether Mr. Earle is right or wrong in this particular point, it must be admitted that his theory gives a perfect explanation of the origin of the class of thanes, or country gentlemen, as derived out of these natural heads of the village communities. Not that there was any absolute uniformity in the matter. The common theory admits that there may have been manorial estates (*eorl's tuns?*) intermixed with the free communities; and Mr. Earle admits (lxxvi) that there were, at least afterwards, lordless free communities. And it should be noted that his theory requires on the part of the head of the community a process of encroachment such as that usually ascribed to the "overgrown ceorl," by which he was converted into the lord of the manor. We must not forget, too, that we have distinct testimony to the latter process in the provisions "of Peoples' Ranks and Law" by which it is said that a ceorl might become a thane; and "of Wergelds," where it is said that he may become "of gesithcund race."

We think Mr. Earle is mistaken (p. lxiii.) in making the Court Baron "the original court of the free settlers under a president." The Court Baron had no president of its own, but was necessarily presided over by the lord of the manor or his steward. It is true that Sir Henry Maine, Professor Freeman, and Bishop Stubbs make the Court Baron to have been "the ancient gemot of the township"; but this is because they considered the free tenants of the feudal period to have been the survivors of the free proprietors of the early period, while, in fact, they seem only to have made their appearance after Domesday Book, and to have been an integral part of the feudal institution of the manor. The Court Leet, an absolutely democratic institution, and, according to Ritson and Elton, the most ancient court in the land, may probably be identified with the original assembly of the free township—the prototype of the New England town meeting. Neither can we accept Mr. Earle's distinction between *township* and *vill*. *Vill*—a mere abbreviation of *villata*—is the Latin equivalent of *township*, and is regularly so used in medieval documents.

While, however, we cannot—at least, with our present light—agree with Mr. Earle in regarding the *gesithas* as the antecedents of the lords of manors, we gladly recognize that he has put us upon the right track. He has given us the key to the problem, even if he has not himself solved it.

Delia Bacon: A Biographical Sketch. By Theodore Bacon. Boston: Houghton, Mifflin & Co. 1888.

THE task which Mr. Bacon set himself he has performed with success. No one henceforth will question—if any heretofore has questioned—that the subject of his sketch was of rare intellectual force, of absolute sincerity, of self-annihilating devotion in her work. The world henceforth, if it will speak of her, can speak of her with some knowledge of what she was and what she did. We have nothing but admiration for the clear, strong style in which Mr. Bacon has told his story; for the dignified severity with which mere prying curiosity is rebuked; for the skill with which that is presented which ought to be presented; and for the judgment that has directed the omission of what is omitted. There has been, of course, nothing set down in malice, nor has anything been extenuated. The life is laid before us as it was lived; there is but little comment upon it, and the letters speak for themselves.

Yet, with all respect for the pious motives of Miss Bacon's nephew, we question the desirability of this publication. The story is too painful. It is a tragedy without a lesson, a history without a moral. A harsh fate shrouded Miss Bacon's earlier years in the direst poverty, and when her brilliant genius and arduous industry had beaten back this sordid foe, her own fatal perversity exposed her again to its cruel and successful assaults. It is not only charitable, but reasonable, to suppose that she was insane from the time when she first conceived the plan of tearing the laurel from Shakspere's brow; but why should we follow the progress of her delusion and witness its deplorable results? Still, we are bound to say that Mr. Bacon touches these sad details with so gentle a hand as to come well within the limits of the Horatian interdict.

There is one gleam of light upon these dark pages—the almost superhuman goodness displayed by Hawthorne towards a woman sorely smitten by fortune, and yet rendered incapable by her delusion of appreciating what was done for her. We take no account of the attentions of friends and the devotion of relatives; but Hawthorne was a stranger, burdened with family cares, and with heavy drafts upon his income as well as his time. Nevertheless, he responded instantly to Miss Bacon's appeal, reading her manuscript with sympathetic care, giving her the benefit of his literary judgment, relieving her pecuniary distress, and even, it is presumed, supplying the funds without which the publication of the book into which her life had gone would have been impossible. The ingratitude and reproach which rewarded his interest nowise affected the generous flow of his benevolence; and the tenderness and consideration which mark his letters, after as well as before Miss Bacon had spurned his assistance, are incomparable. We have not space to quote from what he has written of her; those

who do not see this book will find an epitome of her story in 'Our Old Home.'

Nor have we space for more than the briefest extracts from Mr. Bacon's account of her "revelation." It does not appear that her family name stimulated her interest in the problem; the suggestion came rather from the literary studies in which she had been for many years engaged:

"Revelation, discovery, or fancy, however—whatever it was, an utterly subordinate part of it all, though an essential part, was that which concerned merely the authorship of the plays. . . . Finding in them a higher philosophy even than in the 'Advancement of Learning,' a broader statesmanship, a profounder jurisprudence, and, above all, a bolder courage than in all the avowed writings of the great Chancellor, she only obeyed the teachings of that inductive system which he had expounded in seeking an adequate authorship for so magnificent a creation. . . . If the plays were really such a system of philosophic teaching, not only was it difficult to accept the competency for it of the Stratford poacher and London horse-boy: it was hardly less trying to credulity to impute so vast an enterprise, added to all the gigantic intellectual labors which he avowed, even to the greatest Englishman of his age. She judged, therefore, that as there had been collaboration before and since in literary work, so here the most brilliant and philosophic minds of the Elizabethan court coöperated in the work which was too great for one, and consented together, for their common safety, to the imputation of their united work to the theatre manager who brought out the plays, and whose property they were because they had been given to him. . . . It is scant justice to her memory to say that . . . she never devoted herself to whims or fancies about capital letters, or irregular pagination, or acrostics, or anagrams, as concealing yet expressing the great philosophy which the plays inclosed."

No one can read the noted article in *Putnam's Magazine* in which Miss Bacon first made known her views, without somewhat yielding to the persuasiveness of her argument, or without feeling the greatest admiration for the brilliancy of her style. It is a masterpiece of irony, and as such deserves a permanent place in our literature. If it is true, as so clear-headed a man and so sagacious a critic as Hawthorne declared, that Miss Bacon's book could have been shaped into a "volume full of eloquence and ingenious dissertation—criticisms which quite take the color and pungency out of other people's critical remarks on Shakspere"; that "this bewildered enthusiast had recognized a depth in the man whom she decried which scholars, critics, and learned societies, devoted to the elucidation of his unrivalled scenes, had never imagined to exist there"; that "she had paid him the loftiest honor that all these ages of renown have been able to accumulate upon his memory"—if this be true, would not the most decorous monument to Miss Bacon have been such a volume as Hawthorne describes?

Modern Methuselahs. By John Burn Bailey. London: Chapman & Hall. 1888.

This is not a practical book. Mr. Bailey discloses no rule for the attainment of a centenary of years, unless such a rule may be deduced from the generalization that most persons who have approximated to that age have been below the average height. But he does not make it clear that this may not have been due to shrinkage, and, moreover, there is very high authority for the futility of attempting to regulate our stature by taking thought about it. So far as precept is concerned, therefore, Mr. Bailey does not have much to offer us, while some of his examples can only be described as pernicious and demoralizing to the last degree. What but evil can result to our young men from reading of William Riddell, who died when one hundred and sixteen, having had "a remarkable love of brandy, of which he drank largely, but he carefully avoided water; for two years before his death he subsisted on bread soaked in spirits and ale"? Even more shocking is the record of the one hundred and four misspent years of Mr. Thomas Whittington, who "actually never took any other liquids, as liquids, into his stomach than ardent spirit—London gin; of which compound, until within a fortnight of his death, he took from a pint to a pint and a half daily." And who can be advised to emulate the woman who preserved her faculties for fifteen years over a century upon a diet of buttermilk and greens, or that other centenarian who attained like results by restricting herself to potatoes?

In other respects the record of the personal habits of some of these worthies is equally unedifying. Mrs. Lewson is said to have reached the age of one hundred and six years without having washed herself, satisfying the requirements of neatness and conventionality by smearing her face and neck daily with lard, while she touched up her cheeks with rose-pink. She entertained the opinion that people who washed themselves always caught cold. These aged persons seem to have been invariably married—some of them, in the language of Artemus Ward, very much so, as, John Weeks, who took his tenth wife when he had attained the age of one hundred and six. Perhaps John Rovin was more fortunate, as his wife was spared to celebrate with him their one hundred and forty-eighth wedding anniversary. Of the celebrated Thomas Parr, who is reputed to have attained the ripe age of one hundred and fifty-two years, nine months, and some days, we blush for humanity in recording that during the lifetime of his first wife, and after he had turned his hundredth year, he was compelled to do penance in Alberbury Church for a violation of his marital vows.

In justice to humanity, however, we must declare, in the words of Mr. Thomas Bailey, the author of 'Records of Longevity,' that "many of these alleged facts are deficient in that strict verification which would enable a man to speak positively as to the truth of the statements." It is perhaps not speaking too positively to say that there is no satisfactory evidence that any human being has ever lived much more than a hundred and five years. The records of the life-insurance companies of London show only one case of a centenarian policy-holder, and they deal only with selected lives. The late Mr. Thoms, editor of *Notes and Queries*, devoted himself to the investigation of a number of these cases of reputed longevity, and found them, with few exceptions, fabulous. It has been maintained by men of science that the natural term of life for every animal is five times the period needed for the full development of the skeleton, a period in the case of man of about twenty-one years. Prof. Owen calculated the term of human life upon this basis at one hundred and three years and a few months, and it is not very probable that this term has been often exceeded. Placidity and regularity of life perhaps help men towards this limit as much as anything; as Dickens says: "Father Time, though he tarries for none, often lays his hands lightly on those who have used him well."

Mr. Bailey's book does not purport to be the result of original investigation, and is of little value to those who take a scientific interest in its subject. So far as he has followed in the footsteps of those who have made a careful study of the records of "long-lasting," and tested them by collateral evidence, he has made an agreeable compilation, and he adds some contributions of his own; but, by an extraordinary freak, he has devoted the larger part of his work to the biographies of a number of more or less distinguished people who lived to be ninety-five years old, but who have absolutely no other claim to be mentioned between the same covers. They range from St. Anthony and Johannes Cantacuzenus, Emperor of the Eastern Empire, to Titian, Mrs. Garrick, Miss Herschel, and Sir Moses Montefiore. In most of these cases it is obviously impossible to assign any cause for longevity; and why Mr. Bailey should care to condense such works as Cavalcaselle's 'Life of Titian,' giving critical estimates of his work as an artist, etc., and pad this volume with the results, we are unable to conceive. He has very nearly spoiled what might have been a useful and entertaining little monograph.

Essays in Criticism. Second Series. By Matthew Arnold. Macmillan & Co. 1888.

In this series of essays Mr. Arnold goes over some very old ground and pronounces some new judgments. The first essay, on the study of poetry, shows that whatever he may have said elsewhere on the subject of "seeing the thing as it is," and in disparagement of abstract standards of criticism, he was always at the core a literary realist—if one more use for this much-abused term may be pardoned. That is, in poetry he believed in permanent, real tests of excellence, apart from questions of fashion or character or local taste. There are two fallacies with regard to poetry, he says, against which we must guard—one the historic fallacy, the other the personal fallacy. By the first he means the tendency to exaggerate the importance of a poet's work on account of the importance of his historic position in the development of poetry—the common fallacy of scholars and specialists; by the other, the tendency to dwell on the personal impression produced by the poet upon ourselves. Mr. Arnold believes that there is a certain classical quality of wisdom and sober earnestness in the very best poetry, moreover, which differentiates it from all inferior poetry; and he holds that this quality may be detected in single lines and even phrases of great masters, such as Dante and Shakspere.

In the main, does not the English or American reader sympathize with the view here expressed? Does he not feel a resentment against those who would maintain that all literature is a matter of impressions, taste, and times? Does he not always in his secret soul adhere to the conviction that the great masters of poetry have had visions of the Real, the True, the essence of things as distinguished from their appearances? It is interesting to find in this latest expression of Mr. Arnold's opinions something which not remotely resembles the view of poetry taken by another great critic of our time, himself also a poet—Mr. Lowell. Mr. Lowell has always maintained the mystic power of poetry to detect and reveal the hidden meaning of things—a view opposed to the skeptical attitude of most modern criticism, and which a critic of the school of Taine would probably explain as being a result of the peculiar characteristics of the earnest and at the same time imaginative race to which both Mr. Lowell and Mr. Arnold belong. And so no doubt it is, and so also (would Mr. Lowell and Mr. Arnold reply) is the incapacity of the most gifted critic of the French school to perceive the true glory of English poetry, a result of the peculiar characteristics of the

skeptical and rationalistic race which produced a Voltaire, but could not produce a Shakspere. Probably the difference can never be settled, for even the arbitration of a third system of criticism would be unsatisfactory to both sides; and we can do no more than note in passing that Mr. Arnold is not to be regarded as a renegade from the old English view.

As a realist, he gives the reader a much needed warning against allowing himself to be carried away by the *personal* test; but here the essay, it seems to us, might have been made stronger. It is not merely the personal relation of the poet to ourselves, but our interest in the character of the poet, that tends to confuse the judgment. The fondness for confusing and debasing literary tests by considerations of a purely personal character is, and we may add probably has always been, one of the marked difficulties in the way of obtaining real judgments of value. Compare the fortunes of Byron and Shakspere. Of Byron we know almost everything that is to be known, and we never think of his poetry now without thinking at the same time of his character. Of Shakspere we know little or nothing, and our feeling about his plays is influenced in the very smallest degree by our estimate of his character. But blot out what we know of Byron's life, imagine the name to be a great shade hovering over his works, like that of Homer over the 'Iliad,' or Shakspere over the Sonnets, forget his cynicism, his immorality, and his unfortunate married life, and then read "Childe Harold," and make up your mind as to what in real essence it is—a great poem or the work of a charlatan. This is practically what time in the long run effects. It makes personal considerations indifferent, and enables us to distinguish, after hundreds of years, perhaps, what is classical from what is impermanent and hollow. Perhaps it is impossible for anything short of the lapse of time to accomplish it; perhaps the real fact is, that criticism is always personal during the lifetime of the poet and for a long time afterwards, that then comes the period of real criticism, when character counts for little and the work for everything. But if criticism were what it ought to be, we should surely be better able than we are to discriminate; and Mr. Arnold, with his clear insight, almost persuades us that under his guidance we may learn to pick out what is "classical" in poetry, as an expert in a different line will unerringly pick out the real coin from the counterfeit.

The volume contains a number of essays previously published, but not generally known, on Byron, Keats, Milton, Wordsworth, and, in a wholly different field, Tolstoi and Amiel. Those on English subjects are more or less pervaded by the same central idea—that of distinguishing between the classical and the non-classical, between the true and the false, between the soberly serious and the frivolous or superficial. Here Mr. Arnold is a sure guide. Making all due allowances for his hortatory tendency to iteration, there has been no such keen insight, no such delicate and true taste, no such mastery of style in our day. Perhaps he is better when he is severe than when he is lenient, but then we must remember that he is always a preacher. As a specimen of analysis, we should like to quote from the essay on Byron; but after reading and rereading it, we find that no detached paragraph gives any fair idea of the whole. And this is true of most of Mr. Arnold's writing. Isolated passages are false, because they so often bring out his peculiarities without giving a true idea of his strength. To the mass of readers he has been too much already known by catchwords, "sweetness and light," "Philistinism," etc., etc.; but to his real admirers it is not such matters as these that constitute his interest. It is as a poet, as a master of a prose style unmatched for beauty, delicacy, force, and point, and finally as perhaps the greatest critic of a critical generation, that he has left a deep and lasting mark on our literature.

Around the World on a Bicycle. Vol. II.—From Teheran to Yokohama. By Thomas Stevens. New York: Charles Scribner's Sons. 1888.

Mr. Thomas Stevens is a wholesome and sturdy young fellow, whose hand we are proud to have shaken as we encountered him once at a meeting of wheelmen. His achievement is an extraordinary feat of perseverance and pluck, and the book in which he records it is a nonchalant, unaffected account of interesting adventures. We have already paid our respects to his first volume. We have the same good opinion of his second volume, which appears now after an interval of more than a year. In fact, the second part of the record contains even more to enchain the reader than the first part. The incidents related take place in lands less known to us, and filled with wilder men; while the cyclist's courage and adroitness are even more marked than in his earlier journey. The great fault of the book is that it is twice too large. Even the most enthusiastic cyclist will not care to mark every turn of Stevens's wheel during the 13,500 miles of its rolling from San Francisco eastward to Yokohama; yet it is almost this that the reader is called upon to do. One cannot contemplate such a panorama of gyration without feeling his head swim uncomfortably.

After spending the winter in Teheran, Stevens pushed northeastward in the spring of 1886, hoping to cross the Siberian frontier, and, after reaching the valley of the Amoor, pass that way to the Pacific. He travelled hundreds of miles only to have permission refused him at last by the Russian officials, whereupon, turning southward, he forced his way through Afghanistan to Herat, with the idea of proceeding thence into northwestern India. Here, too, his path was blocked, leaving him no recourse but to turn back from the heart of Asia, which he had so fully pierced, to the Mediterranean, and proceed ingloriously by steamer to Kurrachee. Thence ascending the Indus, he conscientiously mounted his bicycle at the nearest possible point to the Afghan fastness he had before succeeded in reaching, and spun by Lahore, Delhi, Agra, and Benares, through the whole breadth of Hindostan to Calcutta. Another sea voyage carried him by way of Singapore to Hong Kong, where, taking his life in his hand, he dashed into China, penetrating to a tributary of the Yang-tse-Kiang. Here, after other hairbreadth escapes, he was rescued from the murderous rabble of an interior town by good-natured officials, who, out of mercy to him, sent him under guard to Shanghai. Reaching the southern border of Japan, he traversed that land from south to north through a friendly population, and reached San Francisco at last from Yokohama, by the *City of Pekin*, rather more than two years and a half from the time of setting out.

If it had been done for some great cause, Stevens would be a hero worthy of an epic. Since it came about only from a spirit of adventure, no more can be said than that he was marvellously dexterous and cool. How often his neck was in danger it would not be easy to say. The peril is of various kinds—headers from his machine in pathless wildernesses, the fingers of stranglers who have him at their mercy, the swords of barbarians angry at his intrusion into their dens. The record, however, is by no means entirely of hardship and risk. He rides through many a lovely landscape, and often sees a pleasant side of human nature; as, for instance, in the picturesque Afghan nomads who fling the backsheesh he offers them contemptuously on the ground, in hospitable Orientals who entertain him with tea and tom-toms, and in expatriated Europeans glad to welcome a white face. Here is a good touch of humor from page 243:

"Among other distinguishing qualities, Mr. M. shines in Teheran society as the only Briton with sufficient courage to wear a chimney-pot hat. Although the writer has seen the stove-pipe of the unsuspecting tenderfoot from the Eastern States made short work of in a far Western town, and the occurrence seemed to be scarcely out of place there, I little expected to find popular sentiment running in the same warlike groove, and asserting itself in the same destructive manner, in the little English community at Teheran. Such, however, is the grim fact; and I have ventured to think that after this there is no disputing the common destiny of us Anglo-Saxons, whatever clime, country, or government may at present claim us as its own. Having seen this unfortunate headgear of our venerable and venerated forefathers shot as full of holes as a colander in the West, I come to the East only to find it subjected to similar indignities here. . . . More than our common language, methinks; more than common customs and traditions; more than all those characteristic traits that distinguish us in common, and at the same time also distinguish us from all other peoples—more than anything else does this mutual spirit of destructiveness, called into play by the sight of a stove-pipe hat, prove the existence of a strong, resistless undercurrent of sympathy that is carrying the most distant outposts of Anglo-Saxony merrily down the stream of time together, to some particular end; perchance a glorious end, perchance an ignominious end, but certainly to an end that will not wear a stove-pipe hat."

Here is a scene upon a Chinese river, page 388:

"Anon there come along men, poling with surprising swiftness slender-built craft on which are perched several solemn and important-looking cormorants. These are the celebrated cormorant fishers of the Chinese rivers. Their craft is simply three or four stems of the giant bamboo turned up at the forward end; on this the naked fisherman stands, and propels himself by means of a slender pole. His stock-in-trade consists of from four to eight cormorants, that balance themselves and smooth their wet wings as the lightsome raft speeds along at the rate of six miles an hour from one fishing-ground to another. Arriving at some likely spot, the eager aspirant for finny prizes rests on his oars and allows his aquatic confederates to take to the water in search of their natural prey, the fishes. A ring around the cormorants' necks prevents them swallowing their captives, and previous training teaches them to balance themselves on the propelling pole that the watchful fisherman inserts beneath them the moment they rise to the surface with a fish; captive and captor are then lifted aboard the raft, the cormorant robbed of his prey and hustled quickly off again to business."

With a touch now of humor, now of pathos, and an unlimited amount of picturesque description, the story, though over-long, is seldom dull, and is to be heartily commended as certain to afford much incentive to manliness in the youth by whom it is sure to be read.

Names and Places: Studies in Geographical and Topographical Nomenclature. By J. D. Whitney. Cambridge, 1888. 8vo, pp. 239.

This is such a satisfactory and admirable little book that it is to be regretted that the author has limited the edition to a hundred copies; but, whatever the size of the edition, there is little doubt that the contents will, through the compilers, speedily find their way beyond its pages. The geographical studies include only

"Appalachian and Cordilleran" and "Oregon and Pend' Oreilles." The topographical section is divided into four parts: (1.) Introductory; (2.) Mountains, Peaks, and Sierras; (3.) Valleys, Gorges, and Cañons; and (4.) Plains, Prairies, and Savannas. A couple of the letters of the index, of average comprehensiveness, will best illustrate the range of topics. Under M are Marsh, Meal, Mesa, Meseta, Montaña, Montañuelo, Monte, Monument, Moor, Morass, Moss, Mound, Mount, and Mountain; under T appear Table, Table-land, Table-mountain, Talus, Terrace, Teton, Todi, Tooth, Tor, Tower, Tundra, Tuque, and Tuquet.

The term Appalachian is derived from Appalache, applied by De Soto, 1538-43, to the southern end of the chain, the northern extremity of which was discovered by Cartier in 1535. The name has various forms, as Palassi, Apalchen, and Apalatcy, in different writings, and was no doubt the aboriginal name of a locality, or of a tribe of Indians of the neighborhood. To the conclusions of the author confirmation may be added from Rochefort, 1658, with another form of the name: "L'État des Apalachites contient six Provinces, trois déquelles sont en cette belle et spacieuse vallée qui est entourée des montagnes d'*Apalates*, au pied déquelles ces peuples habitent" (p. 354). Appalachian is now applied to the entire system, while Alleghany, preferred by some geographers, designates but a portion of it.

Cordilleras and Cordilleran were chosen by Prof. Whitney, 1868, for the complex of ranges west of the Mississippi basin, Andes and Andean being by common consent restricted to the western system of South America. This seems to have met with favor on all hands, though the Spanish word "cordillera," a mountain range, is of very general application. The name "Rocky," from Arrowsmith's map, 1802, and "Sierra Nevada," from Verrazzano's chart, 1582, are fixed respectively upon the eastern and the western portions of the Cordilleran system.

The chapter on "Oregon and Pend' Oreilles" may commend itself rather more to others than to Oregonians. The latter, however, will find it difficult to subvert the argument. Lieut. Symons, in his report on the Columbia, suggested that the origin of the word "Oregon" might have been in the Spanish *oreja*, the ear, or a derivative. Our author goes farther, and proves the original to have been *orejon*, big ear. To do so, he first establishes the presence of the Spaniards in the region, by means of the testimony of the early French explorers, of Lewis and Clarke, and others. In this the use and abundance of horses play an important part. The next step is to show the existence of a tribe of Indians in the region to which the Spaniards would apply the name Orejones, big ears. The "ear-bobs" of the English and the "Pend'Oreilles" of the French supply what is needed here. Certain Indians of South America, who enlarge the ear by ornaments, are at present called Oregons by the English or Orejones by the Spaniards. Commenting on the paper by J. H. Trumbull, who states that the name is not Spanish, the Professor claims to have answered every argument advanced. As he puts it, he has shown that the name *was* recognized on the Columbia as of Spanish origin; the Spaniards *did* inhabit the region; there *is* a tribe of Indians dwelling on one of the main branches of the river to which the name is peculiarly appropriate; the word "Orejon" *would* naturally be written "Oregon" in English, as at the present time, by persons writing about South American Indians; and the *g* more nearly renders the sound of the Spanish *j*, for instance, Vallego for Vallejo.

To give the results in this way conveys no idea of the excellence of the style or of the amount of information in the author's discussions of usages, causes, and conditions in the different localities. An example will better illustrate the treatment of topographical names.

"*Marsh* is a word in common use in both England and the United States, with a meaning not essentially different from that of 'swamp.' Skeat defines it as 'morass, swamp, fen,' and says that it has the form in middle English of 'mersche,' and in Anglo-Saxon of 'mersc,' which latter is a contraction of 'mer-isc,' originally an adjective signifying 'full of meres or pools.' As used in the United States, the word 'marsh,' often pronounced 'ma'sh,' is heard much more frequently along the seacoast in New England than it is in the interior and farther south. The low lands along the New England coast liable to overflow by the tide are always called 'salt-marshes.' The same word 'marsh' is one commonly used in Northern Germany in almost exactly the same way in which it is used in this country. The 'Marschländer' (called also simply the 'Marsch') form an important topographical feature along the coasts of the Baltic and North Seas, and especially in the vicinity of the Elbe. They are uniformly level, the monotony of the surface being hardly broken by the dikes by which they are traversed at regular intervals, and the ditches which accompany them. On the dikes grow magnificent trees, the soil is very fertile, the cattle superb, and farming highly successful. The contrast between these marsh lands and the region of sand and gravel —the 'heath' and 'moorland'—which lies adjacent to them on the south is most striking."

Within the limits indicated by the headings of the chapters the omissions are very few. A prominent case which occurs to us is that of the word "slough," in common use westward, instead of marsh or swamp. For example, in a late number of *Shooting and Fishing* (a Boston periodical), there is a notice of the "excellent duck and goose shooting the slough ponds and lakes afford." Naturally under the name "Hole" there is no mention of the recently coined "Holl" (in "Wood's Holl"), the *o* in which is asserted by ironical mariners to have been originally an *e*. Among the more than three hundred names in the work that have become generalized and applicable to class or form of scenic feature, there is not one of Indian origin. Our names of this character are nearly all derived from three languages, the English, the French, and the Spanish. The scholarship required to trace the evolution of the terms, as is done in the studies before us, is not by any means to be measured by a knowledge of these three. The thoroughness with which literature has been ransacked by the author is evidenced by abundant quotation and reference, largely poetical, from the early writers. The reader who is led by its title to expect dryness and lack of interest in this book will be most agreeably disappointed.

The Soul of the Far East. By Percival Lowell. Boston: Houghton, Mifflin & Co.

Mr. Lowell entitles his study of the social life, language, art, religion, and general characteristics of the Chinese, Coreans, and Japanese, 'The Soul of the Far East.' This is on the principle of *lucus a non lucendo*, for, on approaching his subject, he found that the mind of the Eastern Asiatic is almost entirely destitute of that principle of individualization which is so marked a trait in the Western man. To the Chinese and their pupils in civilization, the Coreans and Japanese, he denies all mental initiative. They are copyists who cannot originate anything. The stimulus of individuality being absent, so also is the principle of progress. The individual is nothing, and the community is itself the unit. The youth who is born and reared amid the numbing impersonality of the Far East is never truly "born again" into that self-consciousness which marks the second entrance into life of the Occidental. The degree in which the various races of men have felt the force of this birth of mind not only differs vastly, but it registers its effects in facts, fancies, faiths, and indeed in all those outward shadows of the mind which make up civilization; or, to put it in Mr. Lowell's own words, as the thesis which he would prove by a study of the Chinese and their pupils: "The degree of individualization of a people is the self-recorded measure of its place in the great march of mind" (p. 195).

With a literary skill and facility and copiousness of choice language equal to his thorough analytical power, Mr. Lowell gives first the results of the examination of the Far-Eastern family and the institution of adoption. He then puts their language, art, and religion under dissection, only to find these expressions of thought strikingly deficient in the elements of personality. His are not the resources of a scholar familiar with the vernaculars or literatures of the nations who still use ideographs, and some of his statements, meant to be expressions of facts, may be challenged; yet these trifling defects do not invalidate the general force of his conclusions. He is careful to quote as authorities only those whose names carry their own guarantee of accuracy. As at least one very large side of truth, his little book is an original and fascinating contribution to our knowledge of the extreme Orient. The rising young men of Japan should read, learn, mark, and inwardly digest its contents, and reveal to us, if they can, the other side of the shield. It seems very certain that if Newtons and Shakesperes are to be grown on the soil of Japan and China, the inhabitants must change their course of thought. For lack of vision, they are in danger of perishing before the onset of the self-asserting individuals who make up the nations of the West. Building better than he knew, Mr. Lowell has either innocently, or covertly with a purpose, slipped into the hands of the scientific and religious missionary a most powerful argument and warrant. Not only should the Mission Boards furnish a copy to their clerical emissaries, but the governments of China and Corea, not to say of Japan, might well recommend its study as a text-book.

The volume is a reprint of the author's papers contributed to the *Atlantic Monthly*, and is exquisitely bound in white, with modest Japanese symbols on the cover, the typography being of that elegant and satisfying sort with which the Riverside Press has made us long familiar.

The Boyhood of Christ. By Lew Wallace, author of 'Ben Hur' and 'The Fair God.' Harper & Bros. 1889.

If magnificence of type and paper could atone for lack of matter in a book, it would do so here. Some of the wood-engravings, also, are excellent in their design and execution. Those which reproduce well-known old or modern pictures are easily the best; some of the others are extremely weak. That the child in these illustrations always has the halo must be a grief to Gen. Wallace, who has a theory that this was a development of his maturer years. Gen. Wallace cannot be congratulated on the success of his performance. From beginning to end he has written in the most stilted manner. His dedication and his preface do not escape the general inflation. The setting of the story is absurd. Uncle Midas, whose name indicates the luxurious character of his surroundings, gives a Christmas-eve party to his young friends.

Puss and Nan leave the dancing, and, penetrating his study, where he sits magnificent as the good Haroun al-Rashid, beg him for a story, and give him a subject, "The Boyhood of Christ." Strauss's waltz music cannot beguile them when once the story has begun. Other young people come to drag them off, but stay to listen, until only the fiddlers are left — but no, they have followed the rest. Gen. Wallace has also kindly indicated the interest of his narration by a running fire of exclamations of delight from his young friends. And what is the story that could delight so much and make a youthful company indifferent to Strauss's music? It is not, as many will anticipate, an attempt to conceive the life of a little Jew of Galilee in the time of Jesus. It is mainly a rehash of the Apocryphal Gospel of the Infancy. The senseless stories of that book are told at first in Gen. Wallace's own gaudy style. It is a great relief when Uncle Midas takes the book and reads.

The lecture upon Snakes in Iceland was prophetic of Gen. Wallace's 'Boyhood of Christ.' He comes to the conclusion that Christ had no boyhood to speak of, only a "marginal time in which to taste something of natural boyish freedom." For one thing, "his precocity was miraculous. At a time when other children are muling in their mother's arms, the cells of his understanding began to enlarge and fill with knowledge." He does not think Christ was reared in poverty. "It is to be remembered that among the gifts of the Magi there was gold, and I please myself thinking there was enough of it to support the holy family while it was in Egypt and afterwards in Nazareth." "As to the social position of the family, it is enough to remark that, besides being a just man, Joseph was a lineal descendant of David the King." It is evident that Gen. Wallace is troubled by no critical considerations. He passes by, as idle wind which he respects not, the fact that, between David and Jesus, Luke has fourteen more generations than Matthew, and that the lines of descent are different. Gen. Wallace does not, however, feel obliged to accept all the statements of the New Testament. That says "Mary kept all these things in her heart," but Gen. Wallace thinks she did not—that she told Jesus that he was to be the Christ, and so made any further boyhood for him impossible. He has done his best to make his book as agreeable to Roman Catholics as to Protestants. He tells us that he is with Cyril against Nestorius in their great controversy, and that he has a kindly feeling for Pope Gregory because he made it lawful to call Mary the "Mother of God," and with the worship of Mary he has "no quarrel." The bathos of the book reaches its lowest depth when Byron's line,

"Soft eyes looked love to eyes that spoke again,"

is quoted as if pertinent to the relations of Jesus and his mother. But worst of all is the 100th page, where one of the boys has asked the meaning of the term "my Father's business." The answer is substantially, though it is couched in polysyllabic rhetoric, that the Father's business is something with which we have no concern.

The Five Talents of Woman. By the author of 'How to be Happy though Married.' Charles Scribner's Sons. 1888. 8vo, pp. 301.

We often wonder where those women live who like to think of themselves as having been created for the purpose of making man's existence pleasant to him. It is plain that there must be such women, from the fact that one now and then comes upon books written expressly for them; but it is probable that they are to be found in the inland towns, and that they attend the good old-fashioned orthodox churches. It has never been our fortune to number them among our personal acquaintances. Most American women have rather the opposite way of thinking: they believe that the world was made for them, and that it is the function of man to provide ways for them to enjoy the pleasures of living. A juster way than either, and one less likely to wound the sensibilities of men or women, is to consider, as the older theologians ought in consistency to have done, that both were created for the glory of God, and that each is forbidden, by a high sense of duty, from making the other the sole end of his existence.

The style of the author of 'The Five Talents of Women' has not the dignity and moderation that one usually expects to find in a writer on morals. One is at a loss to know what his nationality may be: from such phrases as "the American Girls' University at Vassar," one would infer that he is, as he seems to be, an Englishman, or more probably a Scotchman; but why should his book be largely made up of quotations from obscure American newspapers? This question is hard to answer.

One chapter in the book—that on bravery—is admirable. There is one story which is given as authentic, and which is alone almost a sufficient excuse for the existence of the book. It is this:

"A herd of wild cattle was being driven through the town [of San Diego]. A little child was playing in the street not far from the spot where the cattle were passing, when one of the bulls—a huge creature with large horns—made a sudden rush at the poor bairn. To add to the terror of the scene, the drover was tipsy, and in trying to turn the furious animal he fell off his horse. Warning yells arose from the spectators, as they beheld the terrible fate from which, as it seemed, nothing could save the child. At this very moment a lady happened to come into the street, and the noise of the tumult at once attracted her attention. She saw the child's appalling danger at a glance, and immediately sprang into the empty saddle. She succeeded in catching up with the wild bull, and threw her shawl over its head just as it was about to charge the child. She then, without leaving the saddle, lifted the child to her lap, and took it away to a place of safety. This brilliant act of bravery awoke round after round of hearty applause from every one who witnessed it. . . . As was said at the time, this gallant deed of Miss Lawrence's—for such was the lady's name—was not only heroic, but a feat of horsemanship which few people could equal."

BOOKS OF THE WEEK.

Andrews—Stoddard. A Grammar of the Latin Language. Revised by Henry Preble. Boston: Houghton, Mifflin & Co. $1.12.
